Estimada ingeniera Romero:

Estudio Hidrológico-Hidráulico
Extensión PR-5
Desde PR-167 a PR-199
Bayamón

O-HH-EJP07-SJ-01118-12112021
AC-000533

El Departamento de Recursos Naturales y Ambientales (DRNA) evaluó la Revisión Núm. 3 al estudio hidrológico-hidráulico (HH) de referencia preparada por el Ing. José A. Carro en febrero de 2022. La misma es en respuesta a la carta que emitió el DRNA el 20 de enero de 2022, mediante la cual se le requirió información adicional. De la evaluación surge que el profesional que preparó el estudio HH deberá presentar o aclarar, según corresponda, lo siguiente:

- En el estudio se indica que las obras propuestas no tendrán efectos adversos en la inundabilidad del área. Sin embargo, conforme a los resultados del modelo hidráulico hay aumentos en las elevaciones de la superficie del agua tanto para el Río Minillas (Sección 280) como para el tributario de este Río (Secciones 5000 y 6000). Ante lo expuesto, deberá proveer y documentar la justificación de estos aumentos y cuál sería el efecto de los mismos en los colindantes. Deberá demostrar que la obra propuesta no afecta a terceros.

Se le conceden treinta (30) días calendario contados a partir de la fecha de esta notificación para presentar la información solicitada directamente a la Oficina de Secretaría. De no recibir la misma en el periodo de tiempo otorgado, se entenderá que no mantiene interés en la tramitación de su caso y procederemos a archivar su solicitud. No obstante, de confrontar alguna limitación para cumplir con este término, deberá mantener informado al DRNA y solicitar tiempo adicional.

Cordialmente,

Ing. Luis Sierra
Secretario Auxiliar
Secretaría Auxiliar de Permisos,
Endosos y Servicios Especializados

Re: Extensión Carretera Estatal PR-5, Bayamón
O-HH-EJP7-SJ-01118-12112021
AC-000533

Estimado ingeniero Sierra:

Hacemos referencia a su carta de comentarios del 22 de abril de 2022 referente al Estudio Hidrológico – Hidráulico y su subsecuente revisión (Estudio H/H) presentado para el proyecto de referencia. En la misma solicita se documente la justificación a los aumentos en las elevaciones de la superficie del agua tanto para el Rio Minillas (Sección 280) como ara el tributario de este Río (Secciones 5000 y 6000), y el efecto de estos en los colindantes.

A su solicitud se procedió a reexaminar las estructuras hidráulicas propuestas, así como los efectos, si alguno, en las comunidades colindantes con la servidumbre propuesta (right of way) del proyecto en las áreas cercanas al Río Minillas, Tributario Río Minillas, y Río Hondo, particularmente en las secciones antes señaladas.

Según los resultados de los modelajes realizados y resumidos en las Tablas 11 y 12, *Hydraulic Study Results Río Minillas – 100 years storm y Hydraulic Study Results Río Minillas Unnamed Trbutary – 100 years storm* respectivamente, del Estudio H/H, solo la sección 280 en el Río Minillas y las secciones 5000 y 6000 en el Tributario del Río Minillas reflejan aumentos en el nivel de agua. Los aumentos son:

Cuerpo de Agua	**Sección**	**Nivel de Agua Evento de Inundación 100 años (Metros)**			**Elevaciones (Metros) Terrenos Privados Colindantes***
		Pre-Proyecto	Post-Proyecto	Cambio	
Rio Minillas	280	79.77	80.06	+0.29	90 a 94
Tributario Rio Minillas	5000	96.44	97.24	+0.80	105 a 112
	6000	97.59	98.43	+0.84	

***Ver Planos con topografía y servidumbres (ROW) del proyecto, adjunto.**

1509 F.D. ROOSEVELT AVE. GUAYNABO, PR 00968-2612
PO BOX 11490 SAN JUAN, PR 00922-1490

T 787.792.1509
cmapr.com

El Reglamento de Planificación Número 13 – Reglamento sobre Áreas Especiales de Peligro de Inundación, 9 de enero de 2021 en su sección 7.04 indica:

> *"7.04 - Desarrollos en Terrenos en Zona AE (donde se conoce el Nivel de Inundación Base y no se ha delimitado el Cauce Mayor)*
>
> a. *Para todos los usos se permitirán nuevas construcciones, mejoras sustanciales, u otro tipo de desarrollo (incluyendo relleno), siempre que se demuestre, mediante el Estudio Hidrológico – Hidráulico correspondiente, que el efecto acumulativo del desarrollo propuesto, combinado con otros desarrollos existentes o anticipados no habrá de aumentar la elevación superficial de las aguas de inundación base por más de 0.15 metros (medio (1/2) pie) en cualquier lugar dentro de la comunidad.*
>
> b. *El estudio correspondiente, deberá ser radicado en el DRNA y cumplir con la Sección 7.01 y sus subsecciones.*
>
> c. *Las elevaciones del nivel de piso más bajo para uso residencial en las subsecciones anteriores estarán 0.30 metros (1 pie) por encima del nivel de inundación base."*

Por tanto, a tenor con los resultados del Estudio H-H:

- el efecto acumulativo anticipado de las estructuras hidráulicas propuestas para el proyecto, en la mayoría de las secciones, mantienen o reducen la elevación superficial de las aguas de inundación;

- el efecto acumulativo anticipado de las estructuras hidráulicas propuestas del proyecto para la Sección 280 en el Río Minillas y en las secciones 5000 y 6000 del Tributario del Río Minillas habrá de aumentar la elevación superficial de las aguas de inundación base por más de 0.15 metros (medio (1/2) pie).

- Las comunidades existentes fuera de la servidumbre propuesta y cercanas al Río Minillas en la sección 280 están ubicadas a una elevación entre 90 a 94 metros y la elevación de inundación con el proyecto propuesto es de 80.06 metros. Ver Plano -Figura 10 con topografía y servidumbre propuesta (ROW) del proyecto adjunto.

- Las comunidades existentes fuera de la servidumbre propuesta y cercanas al tributario del Río Minillas están ubicadas a una elevación entre 105 a 112 metros y la elevación de inundación con el proyecto propuesto es de 98.43 metros. Ver Plano – Figura 11 con topografía y servidumbre propuesta (ROW) del proyecto, adjunto.

- Las comunidades existentes fuera de la servidumbre propuesta y cercanas al del Río Hondo, están ubicadas a una elevación de 34.5 a 50 metros y la elevación de inundación con el proyecto propuesto es de 27.73 metros para eventos de 100 años.

Basado en lo antes expuesto se puede concluir que las estructuras hidráulicas propuestas para el proyecto en su mayoría mantienen y/o reducen el nivel superficial de las aguas de inundación. Además, en aquellas áreas donde hay un aumento de niveles, el mismo se mantiene dentro de la servidumbre propuesta (Right of Way) del proyecto. A tales efectos las comunidades adyacentes localizadas cercanas a los cuerpos de agua de los tributarios del Río Minillas, Río Minillas y Río Hondo localizadas fuera de la servidumbre propuesta (Right of Way) del proyecto, en general, se beneficiarán de niveles superficiales de inundación iguales o menores; y en aquellas secciones donde hay aumentos mayores a 0.15 metros, éstas no se verán afectadas, pues éstos se mantienen dentro de sus cauces en la servidumbre del proyecto.

Sin nada más sobre el particular y en espera de su favorable respuesta, quedo,

Atentamente,

1 Introduction

Overview

1.1 Steer Davies & Gleave Limited (or "Steer") was commissioned by CMA Architects and Engineer LLC (or the "Client") to undertake a traffic analysis study for the PR-5 Extension (or the "Project"), located in Bayamón, Puerto Rico.

1.2 The methodology applied for the traffic assessment included three sub-tasks:

- Data collection and analysis;
- Model development; and
- Traffic forecasts.

1.3 Steer has experience modeling this corridor as advisors to the PR Public Private Partnership Authority (PPPA) in 2012, where a macrosimulation model was developed to support the analysis of the traffic and revenue forecast of the Project.

1.4 Moreover in 2017, Steer developed a macrosimulation model for the 2045 Puerto Rico Long Range Transportation Plan (or "2045 LRTP) for Puerto Rico Highway and Transportation Authority.

1.5 This Report describes the methodology applied, analysis undertaken and results for the PR-5 extension traffic forecast.

Project summary

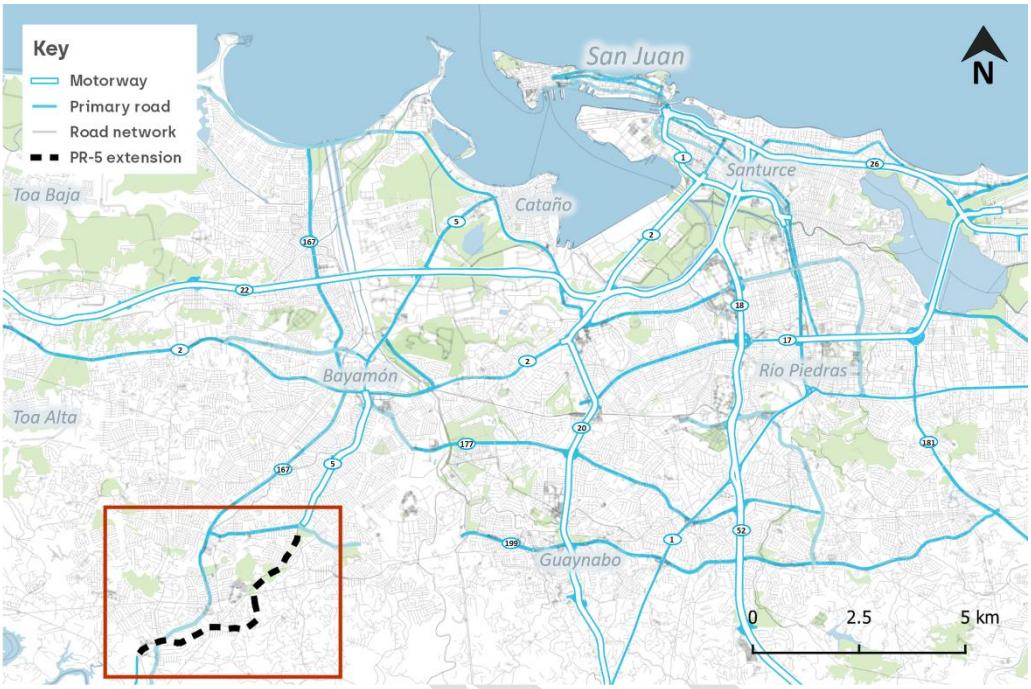
1.6 According to the alignment provided by the Client in June 2021, the PR-5 extension is a tolled 2-way freeway of 3.8 miles of length, with two lanes per direction, that connects the current PR-5 and PR-199 in the north and PR-167 in the south, passing through the municipality of Bayamón. The Project is divided in two sections.

- The north section of 1.73 miles, begins in the intersection of PR-5 and PR-199 south to the PR-830 intersection.
- The south section is 2.11 miles, continues from the PR-830 intersection towards the south and ends in the intersection with PR-167.

1.7 The Figure 1.1 and Figure 1.2 show the location of the Project and the proposed alignment.

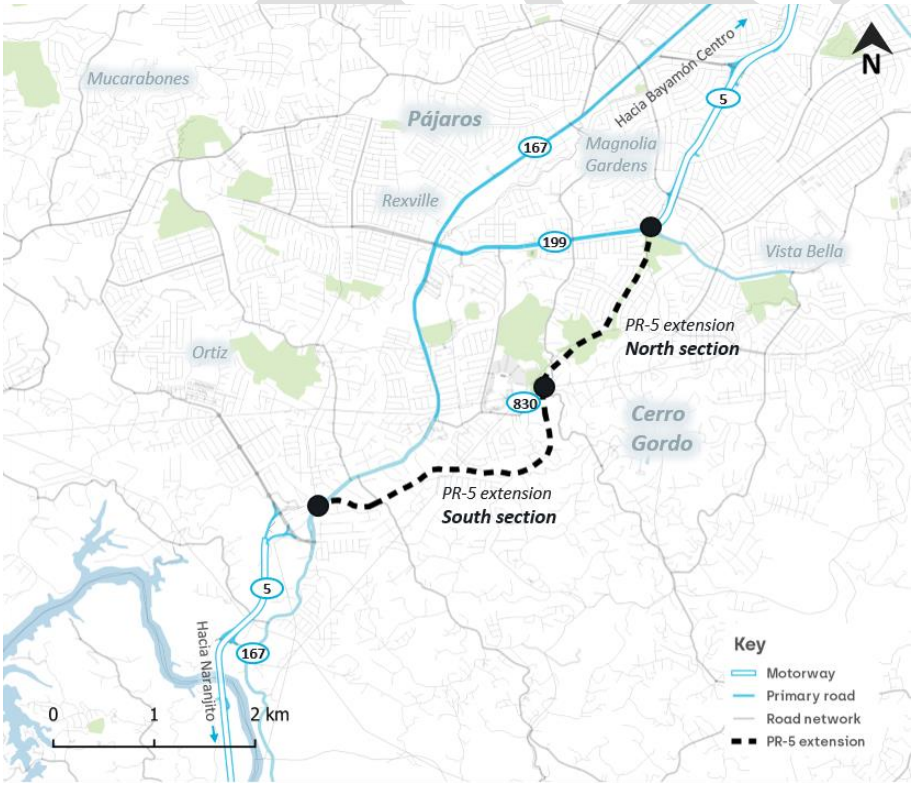
DRAFT

Figure 1.1: Location of the Project



Source: Steer

Figure 1.2: Proposed PR-5 Extension



Source: Steer

1.8 The Project would compete mainly with the existing segment of PR- 167, which is an arterial highway with characteristics of a typical collector highway (i.e. tow lanes per direction) with access points to residential and commercial areas of the municipality of Bayamón, mainly from the neighborhoods of Pájaros, Cerro Gordo and Buena Vista.

DRAFT

2 Traffic conditions

Overview of data collection

2.1 To understand the traffic conditions in the PR-5 extension area in 2019 (pre-COVID-19 period), secondary data was collected from public sources and previous studies undertaken by Steer. The data collection included three elements:

- Traffic counts;
- Travel times and speeds; and
- Trip patterns.

2.2 Once data was collected, it was analyzed and validated to ensure it is representative of the road conditions and useful for modeling purposes. Since Steer's approach was to use the existing 2045 LRTP network model as the starting point to extract the study area, the data was analysed for the four periods assumed in the model: AM Peak (7:00 – 8:59 hrs), Midday (9:00 – 14:59 hrs), PM Peak (15:00 – 17:59 hrs) and Nighttime (18:00 – 6:59 hrs).

2.3 This chapter presents the data analysis performed: traffic counts profile, average road speeds and trip patterns.

Traffic counts 2019

2.4 The traffic counts of the area of study were gathered from the Office of Traffic Studies and Data Collection of the Puerto Rico Highway and Transportation Authority (PRHTA) database. From this database, we extracted weekday traffic counts in seven locations along the PR-167 highway, divided in the four periods of the weekday and per vehicle type (cars, medium trucks and heavy trucks).

Table 2.1: Traffic count station location

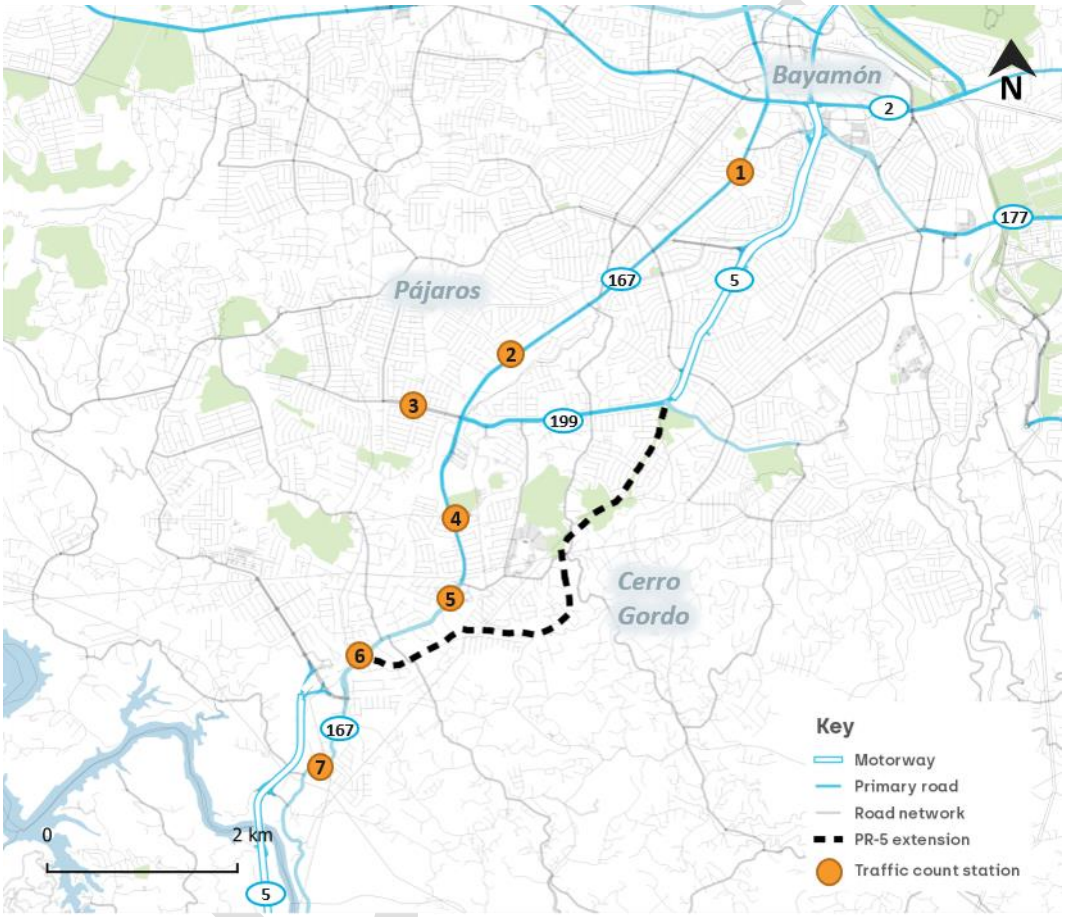
Station	Location	Directions	Date
1	PR-167 Bayamón Between PR-2 & Magnolia Av.	Northbound / Southbound	Apr-19
2	PR-167 Bayamón Between PR-840 & Cumbres Av. (Km 18.2)	Northbound / Southbound	Apr-19
3	PR-199 Bayamón Between PR-167 & Los Dominicos Av.	Eastbound / Westbound	Sep-19
4	PR-167 Bayamón Between PR-830 & PR-199 (Km 16.1)	Northbound / Southbound	Nov-20
5	PR-167 Bayamón Between PR-829N & PR-830 (Km 15.3)	Northbound / Southbound	Apr-19

DRAFT

Station	Location	Directions	Date
6	PR-167 Bayamón Between PR-829 & D. Boundary (Km 14.1)	Northbound / Southbound	Apr-19
7	PR-167 Bayamón Between PR-827 & District Boundary	Northbound / Southbound	Apr-19

Source: Steer with information of PRHTA

Figure 2.1: Traffic count station location



Source: Steer with information of PRHTA

2.5 The monthly average weekday traffic for the PR-167, shown in Table 2.2, registers the highest traffic levels at station 5, between PR-829N and PR-830, with an average weekday traffic of approximately 37,700 vehicles. The northern section has approximately 31,000 vehicles, since the current PR-5 is an alternative route towards San Juan; and finally, the southern section of PR-167 highway has lower levels of traffic with around 5,500 vehicles daily.

2.6 Regarding the vehicle composition, cars are the predominant type of vehicle averaging 86% of the total traffic of all the stations. Medium trucks represent the 8%, and heavy trucks the 5% of the total traffic.

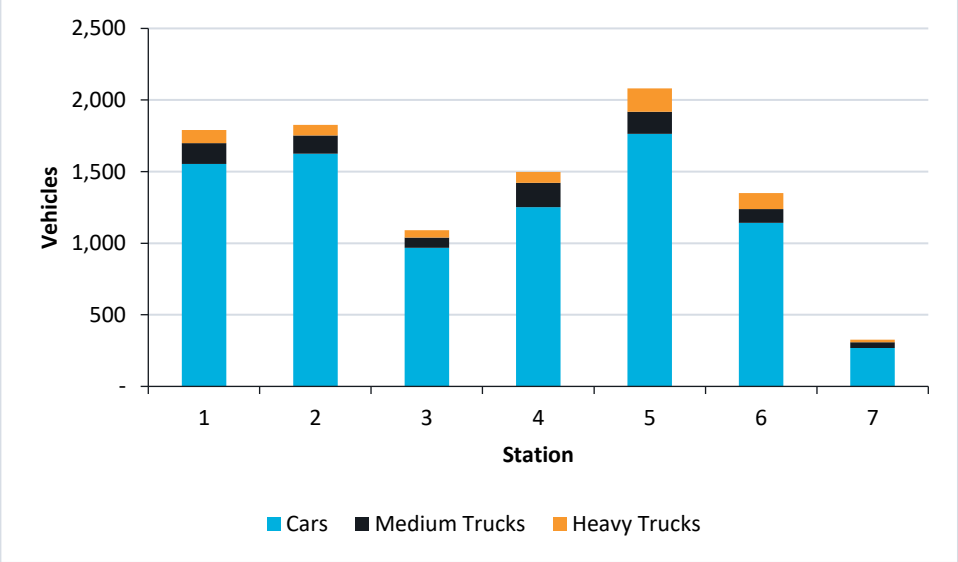
Table 2.2: Monthly average weekday traffic in 2019

Station	Cars	Medium Trucks	Heavy Trucks	Total
1	27,200	2,194	1,558	30,952
2	27,060	2,322	1,314	30,695
3	20,508	1,252	1,022	22,782
4	23,068	2,922	1,217	27,206
5	32,121	3,141	2,479	37,741
6	23,424	1,728	1,470	26,622
7	4,525	694	308	5,527

Source: Steer with information of PRHTA

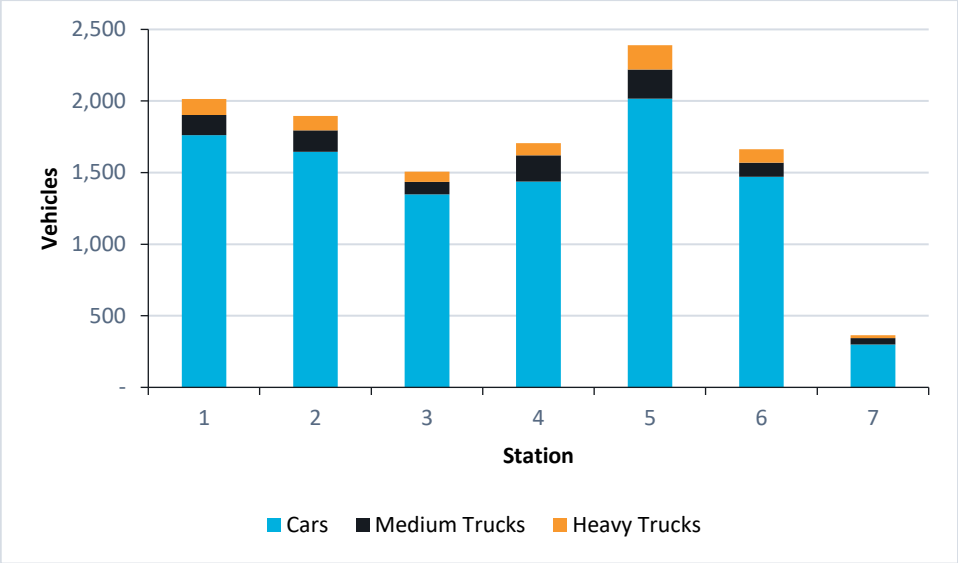
2.7 Figure 2.4: A and Figure 2.5: show the average hourly traffic for each station broken down by vehicle type, for AM and PM peaks. Traffic data from stations 1, 2, 4 and 5 show the commuting pattern, with higher levels of traffic travelling northbound during the AM peak and southbound during the PM peak.

Figure 2.2: AM Peak (7:00 – 8:59 hrs) average hourly traffic per station



Source: Steer with information of PRHTA

Figure 2.3: PM Peak (15:00 – 17:59 hrs) average hourly traffic per station



Source: Steer with information of PRHTA

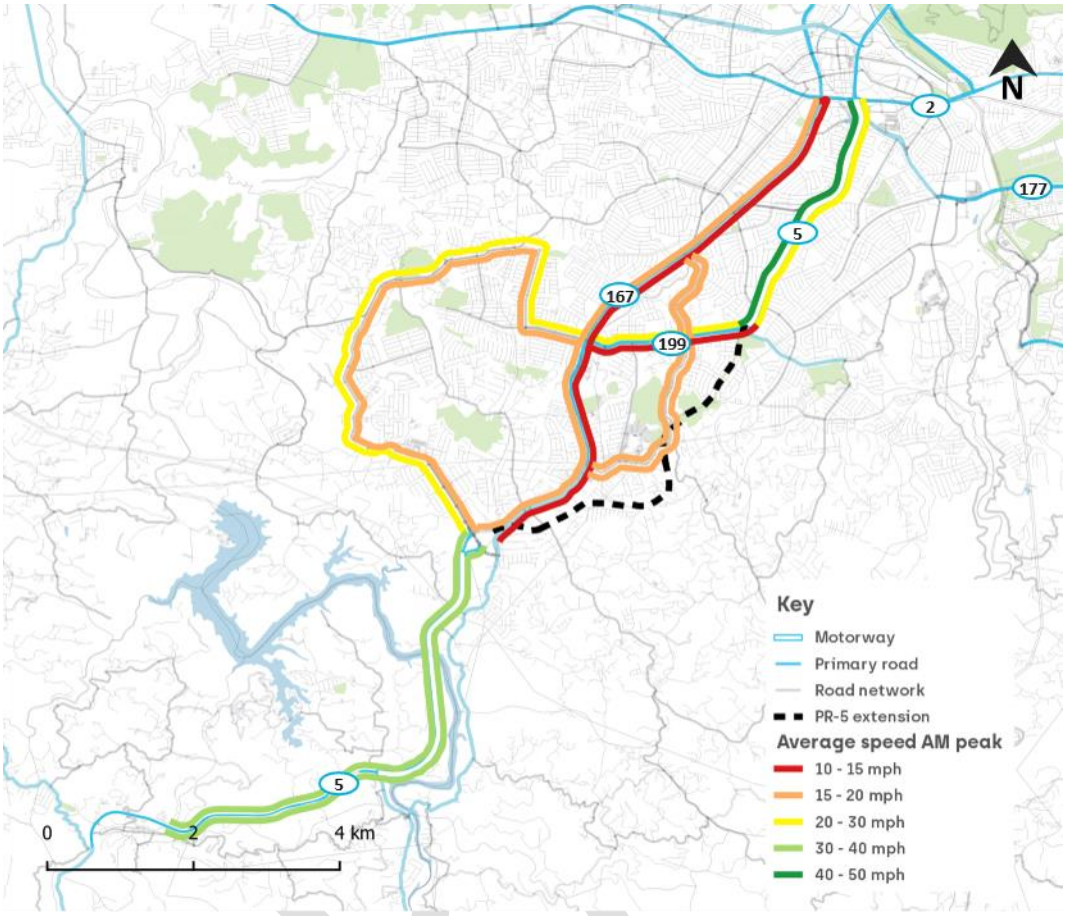
Travel time and speeds

2.8 Travel time and speeds were also used as an input to calibrate the model. This information was obtained for a network of highways close to the project using the Google Maps© routing tool for a weekday of October 2019 every 15 minutes. These speeds were averaged to obtain the mean speed for the four periods in a day defined for the traffic model.

2.9 During the AM peak the slowest speeds were recorded along the highways that would compete with the PR-5 extension. PR-199 eastbound averaged a speed of 13 mph followed by the PR-167 northbound with a 14 mph average speed. The highest speeds were found along the PR-5 highway. The northern section of PR-5, southbound direction, recorded the highest speeds of 46 mph. The southern section of the PR-5 averaged speeds for the 2-ways of approximately 35 mph in both directions (Figure 2.4: A).

DRAFT

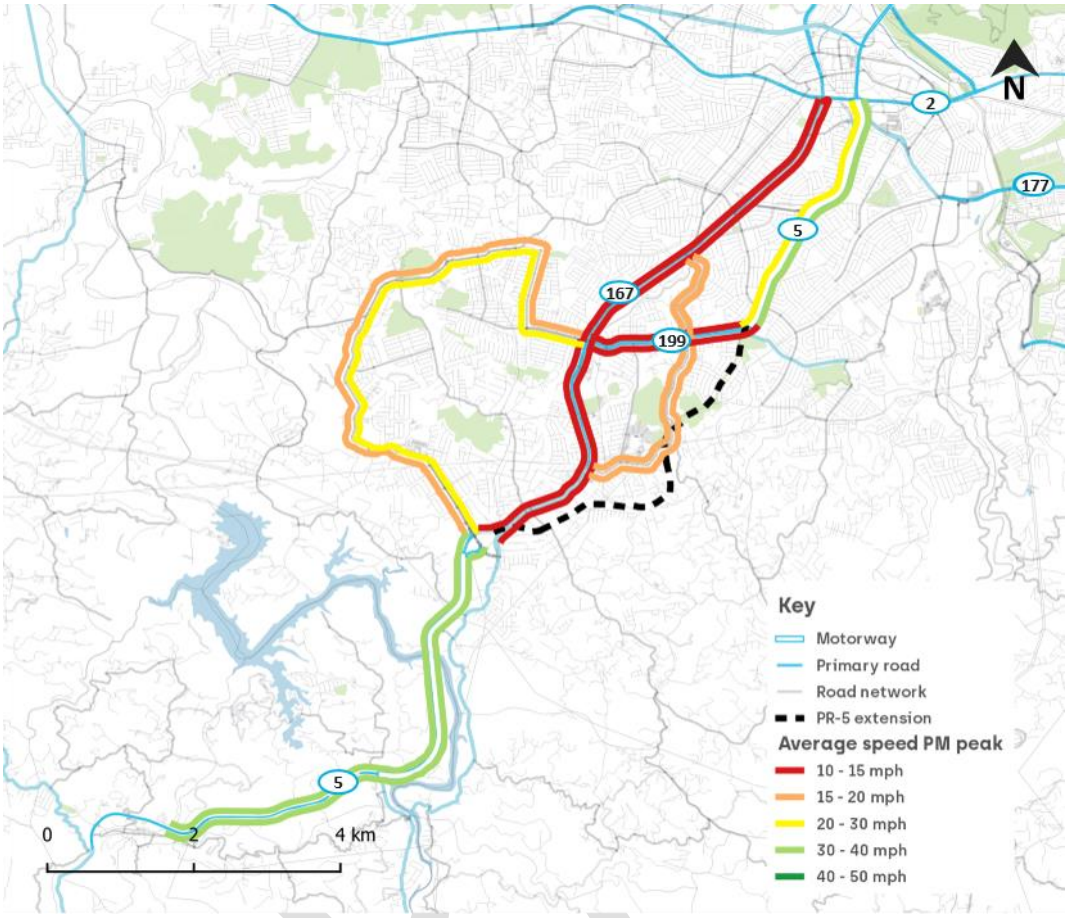
Figure 2.4: Average speed AM peak (7:00 – 8:59 hrs)



Source: Steer with information of Google Maps© routing tool.

2.10 For the PM peak speeds registered were slower compared with the AM peak. Both PR-199 and PR-167 are the most congested highways of the area of study, with the lowest recorded speed of 12 mph at the southern section of PR-167 in both directions. The PR-5 registered speeds of 35 mph during the PM peak at its northbound direction (Figure 2.3).

Figure 2.5: Average speed PM peak (15:00 – 18:00 h)



Source: Steer with information of Google Maps© routing tool.

Trip patterns

2.11 Since the 2012 traffic study carried out traffic counts and Origin – Destination surveys in the PR-5 extension area, the trip patters were analyzed from Steer's 2012 Origin-Destination matrix for the AM and PM peak periods of the weekday. Trip patterns were compared with the matrix obtained from the 2045 LRTP model with 2016 data and as a result, the patterns were similar for 2012-2016 period.

2.12 Figure 2.6: presents the trip patterns for the PR-5 extension area of study. The main trip patters are between the municipalities of Dorado, Toa Baja, Toa Alta and other municipalities from the west of the Island and Bayamón, and between Bayamón and Rio Piedras Urban Center (most of the trips from the west to east).

2.13 Moreover, other trip patterns are between the municipalities of Toa Baja, Bayamón, Guaynabo and Toa Alta municipalities and the Old San Juan Urban Center (from the west to northeast). These trip patterns are consistent with the travel to major commercial and employment activity from the suburbs and other municipalities outside of the metropolitan area of San Juan.

Figure 2.6: Trip patters for peak period

DRAFT

3 Traffic model

Overview

3.1 The transportation modelling process begins with the development and use of computational tools to adequately represent the conditions of the existing transportation system, by constructing what is known as the baseline scenario. The objective of the baseline scenario model is to represent, within reasonable margins of error, the reality of the operation of the existing system. In that sense, it is necessary to represent the supply, demand, and the relationships that govern the processes of balance in the trip consumption.

3.2 To achieve this, we use a model that is conceptual or mathematical and provides a simplified representation of the reality with methodological approximations that support decision making processes.

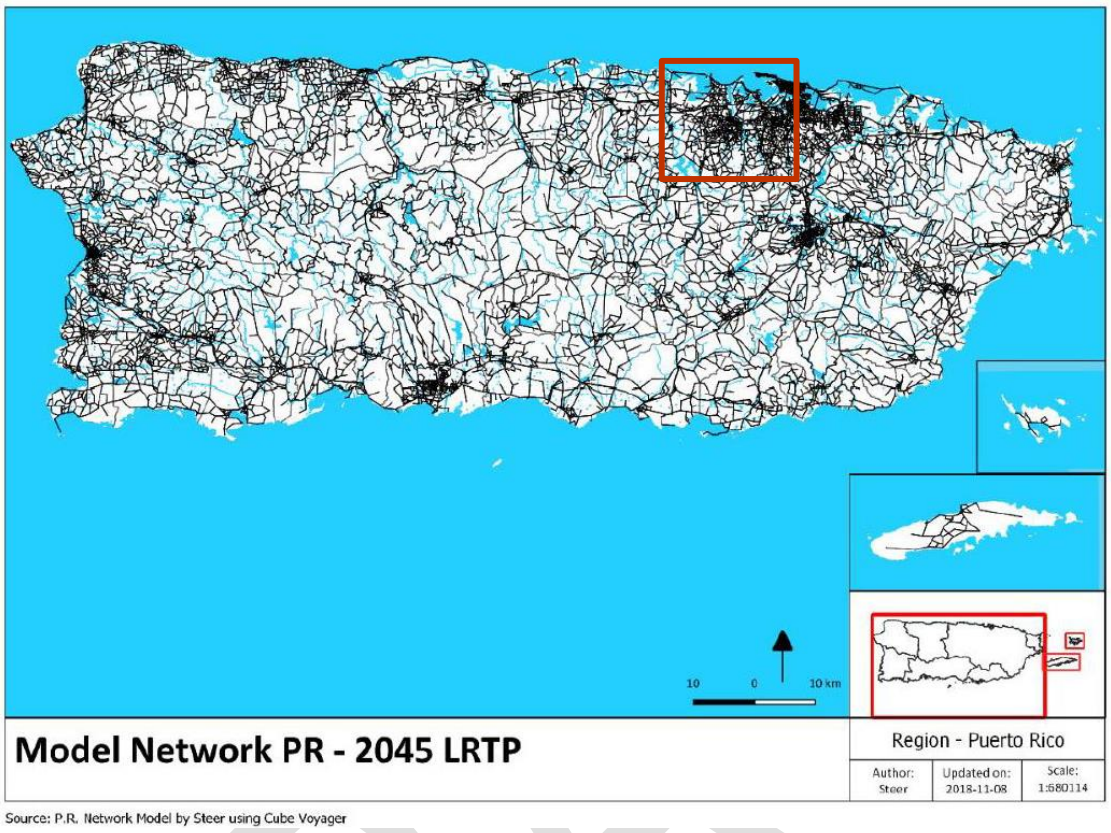
3.3 The model created for this study was prepared based on the data collection presented in Chapter 2 and the existing 2045 LRTP network model. The model was calibrated and validated against the traffic counts and travel time information to ensure the model represents current conditions within its reasonable margins of error.

Model Construction

3.4 Steer's approach was to use the existing 2045 LRTP network model, implemented in the software CUBE Voyager, as the starting point to extract the study area model (see Figure 3.1). For the purpose of this analysis, we extracted a subarea to represent the area of interest, obtaining the corresponding highway network and trip matrices. From there, we constructed a simple traffic assignment model.

DRAFT

Figure 3.1: 2045 Puerto Rico Long Range Transportation Plan (LRTP) Model Network



Source: Steer

Model Base and Future Year

3.5 The current situation assessment assumes as a base year 2019, an opening year for the Project in 2026, and a future year in 2036.

Road Network

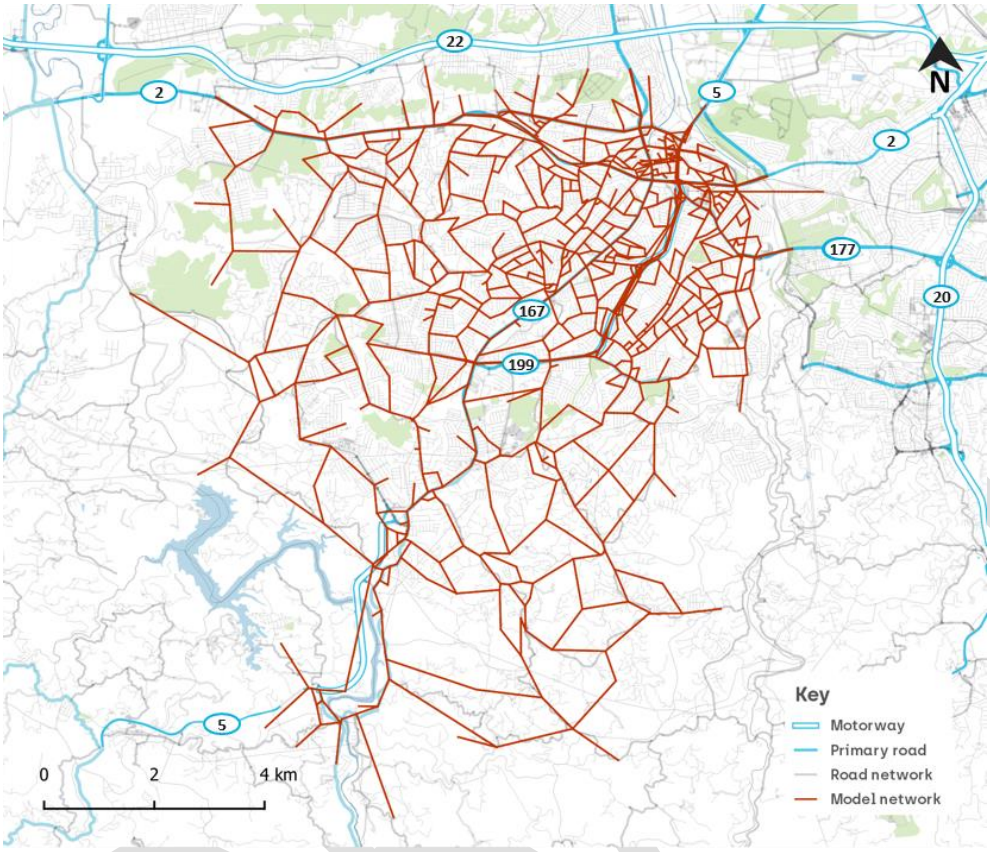
3.6 A highway network for the study area was defined with an adequate level of detail to simulate the route selection of the main travel patterns within the influence area. The network used to simulate the travel demand was created by Steer using the 2045 LRTP Model. The model was updated with information from literature review of road network upgrades, and available online tools, as Google Street View©.

3.7 Each link in the network is described by a set of attributes that were entered into the model after verification. The following elements were considered:

- Origin-destination nodes;
- Link length;
- Number of lanes per direction;
- Relationship of demand-speed specific to each section;
- Capacity of each section; and
- Functional classification of roads (freeways, arterials, corridors, local; urban, rural).

3.8 Table 3.2 illustrates the road network considered in the base scenario.

Figure 3.2: Existing PR-5 Extension Study Area Subarea Road Network



Source: Steer

Demand

3.9 Trip demand, in the form of matrices, were also obtained from the 2045 LRTP Model and were later adjusted as part of the calibration process to reflect current conditions (see Model Calibration section).

3.10 Four different matrices for each modeling year were extracted from the 2045 LRTP Model and the same time periods assumed in the LRTP were used for the PR-5 extension model:

- AM Peak: 7:00 am to 9:00 am;
- Midday: 9:00 am to 3:00 pm;
- PM Peak: 3:00 pm to 6:00 pm; and
- Night: 6:00 pm to 7:00 am.

3.11 The 2045 LRTP Model also includes six (6) trip tables:

- Single Occupant Vehicles (SOV);
- Two Person Shared Ride Vehicles (SR2);

- Three-or-more Person Shared Ride Vehicles (SR3);
- Commercial Vehicles (COM);
- Medium Trucks (MTRK); and
- Heavy Trucks (HTRK).

3.12 These trip tables were aggregated in the PR-5 extension model to reflect three (3) vehicle types: cars (SOV, SR2, and SR3), commercial vehicles, and trucks (medium and heavy trucks).

Base Data of Existing Conditions

3.13 As mentioned, we used the 2045 LRTP Model which was developed under a local context that was affected by the economic situation and the effect on local mobility and socioeconomic trends after Hurricane María:

- In 2016, the Financial Oversight and Management Board for Puerto Rico was created under the Puerto Rico Oversight, Management and Economic Stability Act. The Board consists of seven members appointed by the President of the United States and one ex officio member designated by the Governor of Puerto Rico. The Board is tasked with working with the people and Government of Puerto Rico to create the necessary foundation for economic growth and to restore opportunity to the people of Puerto Rico. The PRHTA was required to issue a Fiscal Plan for the approval of the Oversight Board by end of 2017.
- The 2045 LRTP Model based its short-term projections, capital improvement plan and funding assumptions on the approved Fiscal Plan.
- Hurricane María affected Puerto Rico on September 20th, 2017. This powerful Category 4 hurricane with 150 mph winds bisected the entire island having catastrophic effects on the entire island. The PRHTA has prepared an inventory of the effect on the transportation infrastructure.

3.14 The conditions after the hurricane did not allow for traffic counts and surveys to be undertaken to develop the 2045 LRTP Model. Therefore, data from 2015-2016 was used as the base year for the plan and were updated using the projections from the fiscal plan.

3.15 Given the above, the 2045 LRTP Model has a base year of 2016 and forecasting year of 2045. Trip tables for 2016 were adjusted to reflect 2019 patterns as described in the Model Calibration section.

Behavioral and Assignment Parameters

3.16 The PR-5 extension model uses the same behavioral and traffic assignment parameters as the 2045 LRTP Model which includes:

- **Equilibrium Convergence**: equilibrium solutions are found using Cube Voyager's Bi- Conjugate Frank-Wolfe algorithm with closure achieved at a relative gap of 0.001.
- **Period Capacity Factors**: hourly capacities converted to an appropriate period capacity to be consistent with the period demands. Period capacity factors were calculated to represent both the highest one-hour in each period and the highest two hours in each period. Both cases returned the same factors, because there is very little difference between the highest and second highest hourly shares. Factors are presented in Table 3.1.

DRAFT

Table 3.1: Period Capacity Factors

Period	Hours	Capacity Factors
AM Peak (AM)	2	2
Midday (MD)	6	5.8
PM Peak (PM)	3	2.9
Night (NT)	13	6.2

Source: Puerto Rico's 2040 Long Range Multimodal Transportation Plans Model Documentation

- **Passenger Car Equivalents (PCE):** medium and heavy trucks have a greater impact on highway capacity than smaller vehicles; medium trucks PCE is equivalent to 1.5, while heavy trucks PCE is equal to 2.0.
- **Volume Delay Function (VDF):** functions were developed using the traditional Bureau of Public Roads (BPR) formulation, with modified alpha (α) and beta (β) coefficients. The BPR formula is most commonly shown and used in time forms. Separate curves were used for limited access roads (freeways/toll roads) and other roads. Special beta parameters were also used when the volume/capacity ratios exceeded the volume delay function takes the following form:

$$Tc = Tf * \left(1 + \alpha * \left(\frac{V}{C}\right)^{\beta}\right)$$

Where:

- Tc = congested travel time
- Tf = free-flow travel time
- α, β = alpha and beta coefficients
- V = traffic volume in PCE
- C = Period capacity

Table 3.2: BPR Formula VDF Parameters

Facilities	Alpha	Beta (V/C <= 1.0)	Beta (V/C > 1.0)
Limited access highways	1.78	6.0	4.0
Other highways are roads	1.5	5.0	4.0

Source: Puerto Rico's 2040 Long Range Multimodal Transportation Plans Model Documentation

3.17 A summary of these parameters is shown in Table 3.3.

Table 3.3: Decision Model Parameters Summary

Parameter	Value
Equilibrium Convergence	Bi-Conjugate Frank-Wolfe, 0.001
Period Capacity Factors	AM Peak: 2 Midday: 5.8 PM Peak: 2.9 Night: 6.2

DRAFT

Parameter	Value
Passenger Car Equivalents (PCE)	Medium trucks = 1.5 Heavy trucks = 2.0
Volume Delay Function (VDF)	Limited access & toll roads: alpha = 1.78, beta varies by V/C Other roads: alpha = 1.5, beta varies by V/C

Source: Puerto Rico's 2040 Long Range Multimodal Transportation Plans Model Documentation

Choice Parameters

3.18 The route choice of vehicles through the model depends on the congested time (described above) and monetary costs which are primarily tolls and fuel costs. To convert these into common units in the route choice assumptions are applied as follows:

- A value of time expressed in dollars per hour, is the amount a user is willing to pay to save an hour of time; and
- Vehicle operating costs in dollars per mile, is the cost the user pays when travelling one mile.

3.19 The values of times are based on those in the 2045 LRTP Model but converted into 2019 values, and then distributed over 15 income groups to reflect different users' willingness to pay a toll. The distribution of the different income groups is based on data from the 2045 LRPT Model for the Bayamon municipality, and is shown in Table 3.4 below.

Table 3.4: Car Value of Time ($ per Hour, 2019 Values)

Group	VoT ($ per Hour)	Proportion of Car Demand
1	0.8	7.5%
2	1.2	7.5%
3	1.6	7.5%
4	2.7	9.4%
5	4.1	9.4%
6	5.5	9.4%
7	4.8	4.1%
8	7.2	4.1%
9	9.6	4.1%
10	8.3	9.2%
11	12.4	9.2%
12	16.5	9.2%
13	19.9	3.1%
14	29.8	3.1%
15	39.8	3.1%
Average	8.5	100%

Source: Puerto Rico's 2040 Long Range Multimodal Transportation Plans Model Documentation

DRAFT

3.20 For the 3 vehicle types primarily used for business purposes the Values of Time are again derived from the 2045 LRPT Model and split into 3 willingness to pay groups as shown in Table 3.5.

Table 3.5: Other Vehicles Value of Time ($ per Hour, 2019 Values)

Group	Commercial Vehicle	Medium Truck	Heavy Truck
1	7.2	10.8	14.4
2	12.4	18.6	24.8
3	19.9	29.8	39.8
Average	13.2	19.7	26.3

Source: Puerto Rico's 2040 Long Range Multimodal Transportation Plans Model Documentation.

3.21 The vehicle operating costs are shown in the Table 3.6.

Table 3.6: Operating Costs ($ per mile, 2019 values)

Vehicle	Operating Cost ($ per mile)
Car	0.2
Commercial	0.2
Medium Truck	0.8
Heavy Truck	1.0

Source: Puerto Rico's 2040 Long Range Multimodal Transportation Plans Model Documentation.

3.22 The tolls are entered into the network as in monetary values for cars and then a multiplier applied for the different vehicle classes. These values are based on the toll charges for the existing PR-5 tolled section, with the multipliers shown in Table 3.7 below.

Table 3.7: Toll Multiplier

Vehicle Type	Toll Multiplier
Car	1.00
Commercial	1.00
Medium Truck	1.75
Heavy Truck	4.00

Source: Steer based on PR-5 data (https://metropistas.com/mapas-y-tarifas/, August 2021).

3.23 In addition to the toll multiplier a further adjustment is made to the tolls by factoring the input toll by 0.8, as in the 2045 LRTP Model. This reflects the reliability and 'quality' of the toll road over the alternatives, often described as a 'motorway bonus' and typically used in toll road studies to reflect users valuing the road other than the journey time savings.

Model Calibration

3.24 A model calibration exercise was then carried out following standard procedures to ensure that the model and represents observed conditions to a satisfactory level. The modelled flows have been compared traffic counts and the modelled speeds against observed journey times.

DRAFT

The primary traffic volume acceptability criteria used in the calibration is the GEH (Geoffrey E. Havers) statistic, which is a common measure used to determine how well modelled traffic matches observed traffic. GEH follows a Chi-square distribution, considering the order of magnitude of the compared values, so that for example large percentage differences in small values are irrelevant, compared to small differences in large values.

$$GEH = \sqrt{\frac{(M-C)^2}{0.5 * (M+C)}}$$

Where:

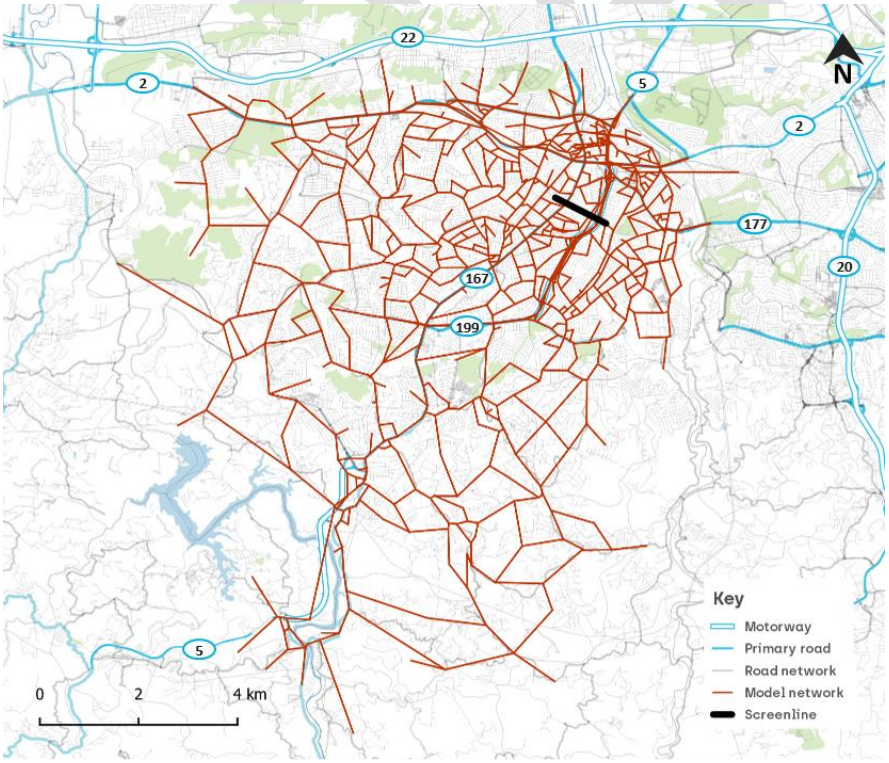
- M = is the volume measured in the model
- C = is the volume measured in the field

3.25 The counts have been assessed over two levels:

- Across a screen line covering the existing PR-5 toll plaza and the parallel count on the PR-167 (see Figure 3.3). This highlights the extent to which the north-south movements are well calibrated, with a % difference of less than 5 or a GEH of less than 4 considered a well calibrated model.
- For individual counts where GEH values between 0 and 5 indicate a good fit; between 5 and 10 are acceptable; and greater than or equal to 10 indicate a poor fit to observed data.

3.26 We also provide a comparison of the journey time speeds to show how the model is reflecting observed conditions.

Figure 3.3: Screenline Locations



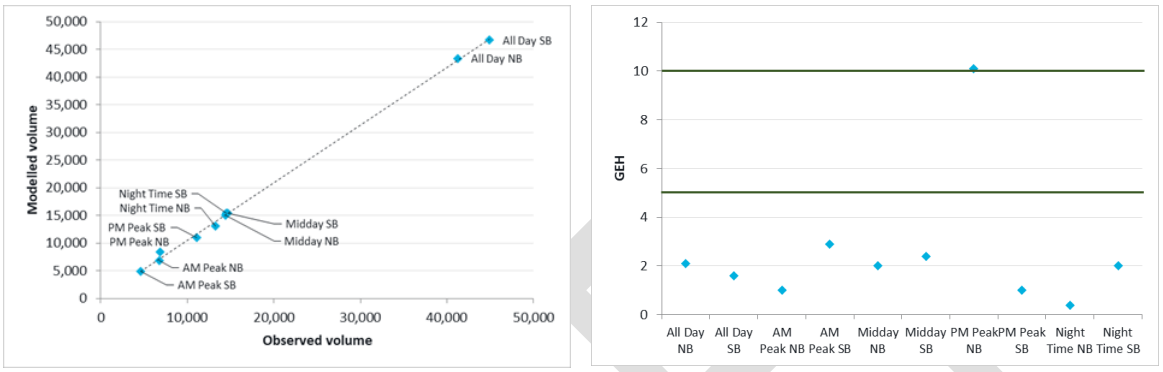
Source: Steer

Calibration Results

Screenline

3.27 The screenline flows show a good match against the observed data with all but one of the time periods passing the GEH criteria and the majority within or close to 5% of the observed values, demonstrating that the strategic north-south movements in the corridor are well validated.

Figure 3.4: Existing PR-5 Screenline Observed and Modelled Calibration statistics by period

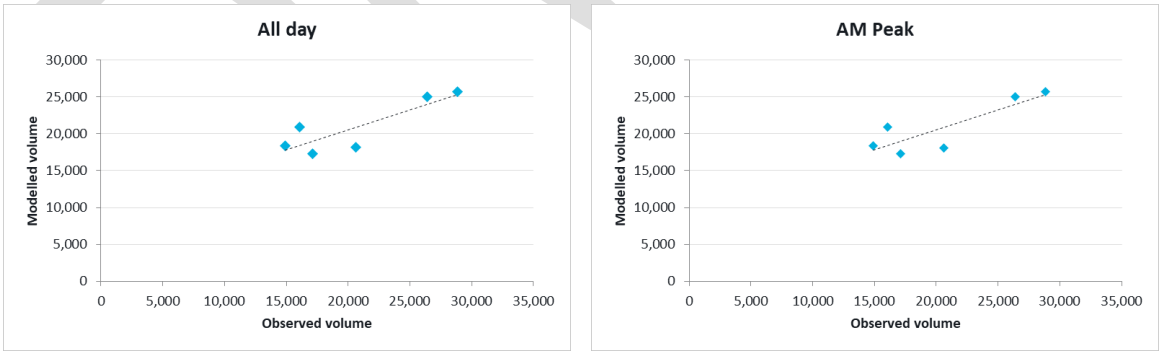


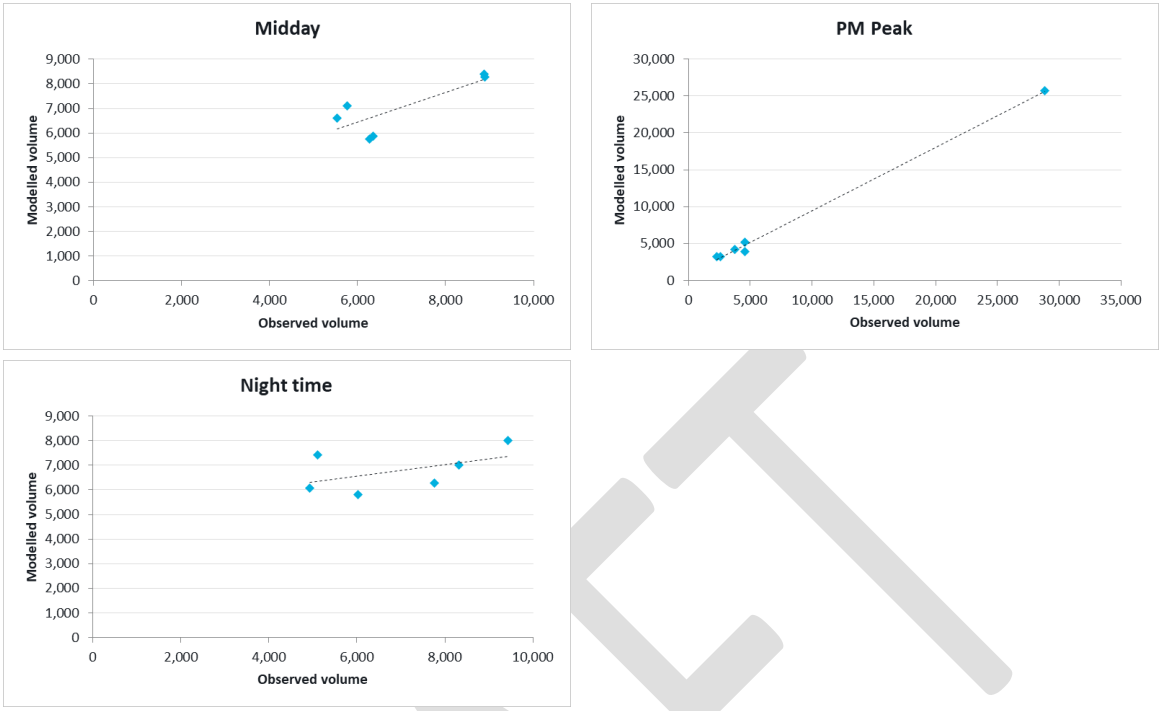
Source: Steer.

Key Counts

3.28 Figure 3.5 and Figure 3.6 below show the count calibration for key traffic counts for the study. The counts displayed shows the two links used in the screenline calibration above and the parallel link on the PR-167 in the middle of where the extension will be built to demonstrate that the key parallel competing road has good levels of count calibration. The results show that the majority of links are within GEH 10 with most of these also being within GEH 5.

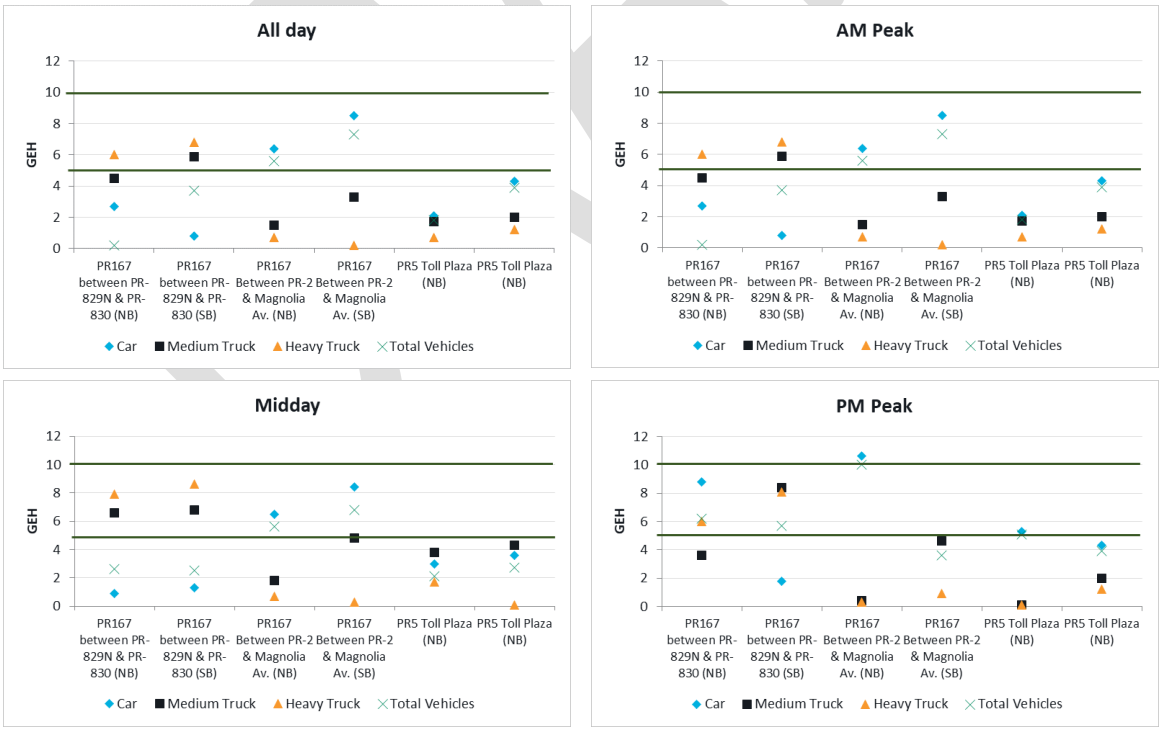
Figure 3.5: Observed and Modelled Key Count Calibration by period

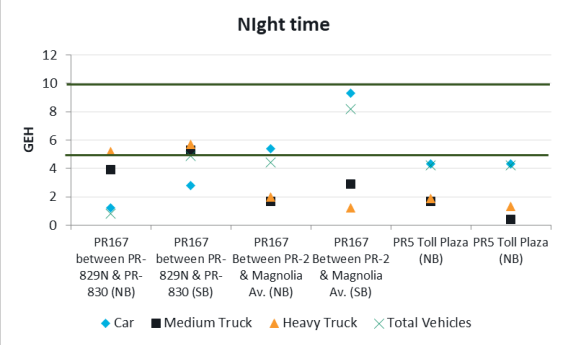




Source: Steer.

Figure 3.6: GEH for Observed and Modelled Key Count Calibration by period





Source: Steer.

Overall Count Calibration

3.29 Table 3.8 below shows the GEH pass rates for all 14 count sites for the different time periods. For most periods the GEH pass rate is over 85% for GEH<10. For count sites close together where there are inconsistencies between sections the calibration across these sites can be difficult in large scale model, therefore the focus has been on good calibration at the key count sites and the screenline.

Table 3.8: GEH Calibration for All Count Sites (Total Vehicles)

GEH	All Day	AM	MD	PM	NT
GEH < 5	57%	29%	57%	36%	71%
GEH < 10	86%	57%	86%	71%	93%

Source: Steer.

Speeds

3.30 Figure 3.7 shows the speed comparisons for the various key routes. The modelled speeds generally follow the observed patterns indicating the model is replicating the delay on the network to a reasonable level.

4 Traffic forecast

Overview

4.1 This chapter describes the methodology applied to estimate the future growth rates to forecast traffic on the Project. The future growth rates were estimated based primarily on changes in the Gross Domestic Product (GDP) and its impact on the Value of Time.

2045 LRTP Forecast

4.2 The 2045 population and employment forecast follow standard practice in regional economic forecasting focusing on the relationship between population growth (or decline) and economic growth (or decline). The 2045 LRTP Model also considers the interaction between population, employment, and cost of doing business, measured by regional wage rates.

4.3 The analysis considered several factors in relation to the island current situation:

- A significand decline in birth rates;
- A decline in manufacturing employment, tied to changes in federal taxation policy, international competition and the fact that manufacturing productivity growth with tend to decrease employment through automation;
- An increase in the rate of out-migration to the rest of the United States;
- The recent Hurricane Maria that disrupted economic activity; and
- A long-running fiscal imbalance that culminated in the declaration of quasi-bankruptcy appointment of the federal oversight board in 2017.

4.4 The main forecast results to highlight is that Puerto Rico is expected to lose nearly 520,000 persons and over 90,000 jobs by 2045, equivalent to a 15.2% decline in population and 10.4% decline in employment.

PR-5 forecast

4.5 The traffic model calibrated for this Project was used as a starting point.

Road Network

4.6 The base year 2019 road network was considered for 2026 and 2036 future networks with the proposed PR-5 extension alignment (Figure 1.2). There were no improvements or changes considered in the future years.

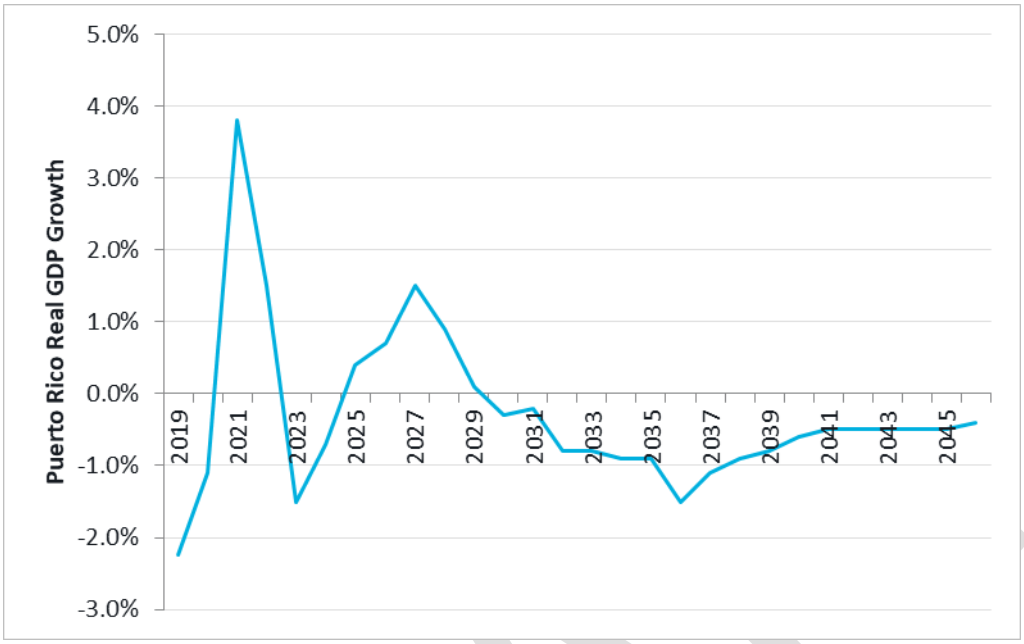
Demand

4.7 Given the decline in population and employment described above, total travel demand in the Project area declines in the future years. For the purposes of this study, the 2019 matrices were

DRAFT

not increased for the future years, but it was assumed an increase of the Value of Time as a proportion of the GDP growth.

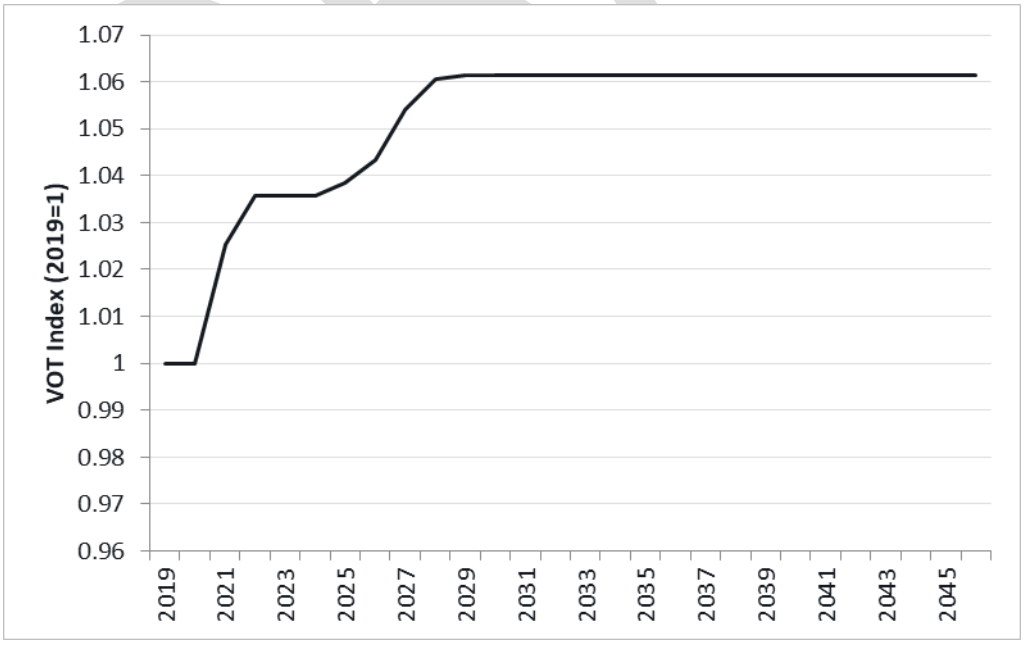
Figure 4.1: Puerto Rico Real GDP YoY Growth (%)



Source: Steer with information provided by Puerto Rico Government.

4.8 Based on the GDP YoY growth, Figure 4.2 shows the VOT growth assumption indexed to base year 2019.

Figure 4.2: Value of Time index (2019 = 1)

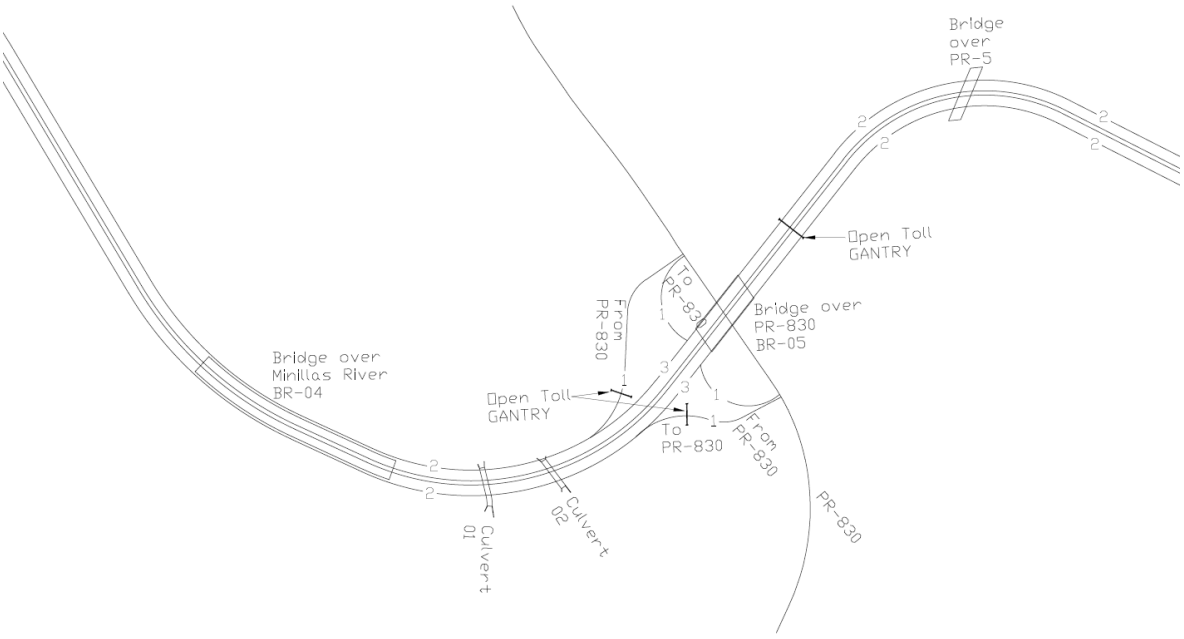


Source: Steer with information provided by Puerto Rico Government.

Tolls

4.9 Three different toll scenario schemes were evaluated for this study, considering the location of toll booths in the mainline in the north section and in the access/exit ramps in the south section, as shown in Figure 4.3.

Figure 4.3: PR-5 extension proposed location of the toll booths



Source: Information provided by the Client.

4.10 Based on the proposed location of the toll booths in the main line and ramps, the scenario considered the tolls shown in Table 4.1.

Table 4.1: Scenarios and toll schemes

Scenario	Toll (cents)	
	Main line toll booth	Access / exit toll booth
75 cents	75	41
70 cents	70	38
45 cents	40	22

Conclusions

From the LOS and travel times analysis, the results show that the PR-5 extension will improve the future operation on the PR-199 and PR-167, as they are currently the main access roads to the PR-5, the extension will provide an alternative access to the PR-5.

Moreover, the PR-167 north section analysis shows that the speeds will be improved, since it is expected that the extension and the current PR-5 will capture current PR-167 traffic.

1.0 Introduction

Carbon monoxide, or CO, is a colorless, odorless gas that is formed when carbon in fuel is not burned completely. The figure below shows the contribution of various sources to the emissions of CO:

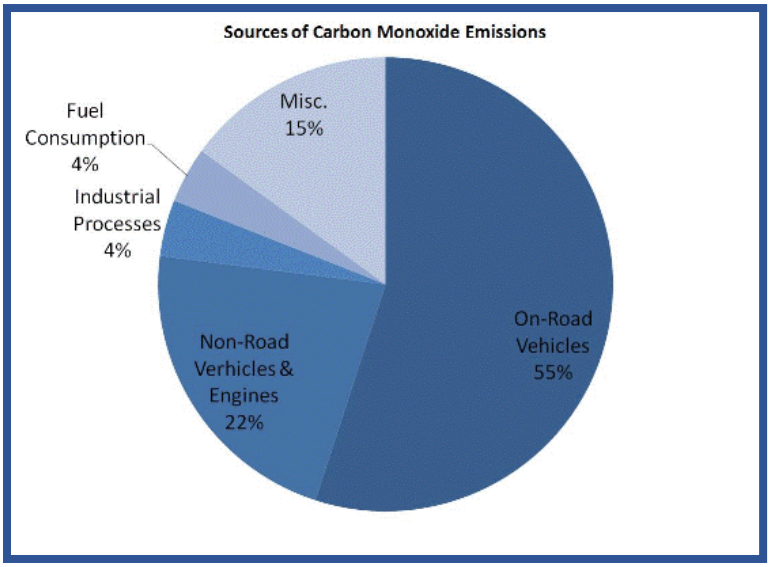

Figure Number 1 – Sources of Carbon Monoxide

Carbon Monoxide is a component of motor vehicle exhaust, which contributes about 55 percent of all CO emissions nationwide. Other non-road engines and vehicles (such as construction equipment and boats) contribute about 22 percent of all CO emissions nationwide. Higher levels of CO generally occur in areas with heavy traffic congestion. In cities, 85 to 95 percent of all CO emissions may come from motor vehicle exhaust.

The Puerto Rico Highways and Transportation Authority (PRHTA) proposes the extension of State Road PR-5 between the existing PR-5 and PR-199 intersection and PR-167. Figure Number 2 shows an aerial photo depicting the project area.

PRHTA has retained the services of CMA Architects & Engineers LLC to carry out a Carbon Monoxide Emissions Study at the project area. For this purpose, CMA technical personnel visited the area on September 14, 2021 to obtain the necessary field data to estimate the future carbon monoxide levels. The data used was temperature, current CO concentration, wind velocity and direction, the current conditions drawings, proposed project drawings provided by CMA and the mathematical models Caline 4 and MOVES3.

This study presents the current carbon monoxide levels along the area to be occupied by the project, the future levels estimates and the recommendations to reduce the expected levels in the receivers near the project.

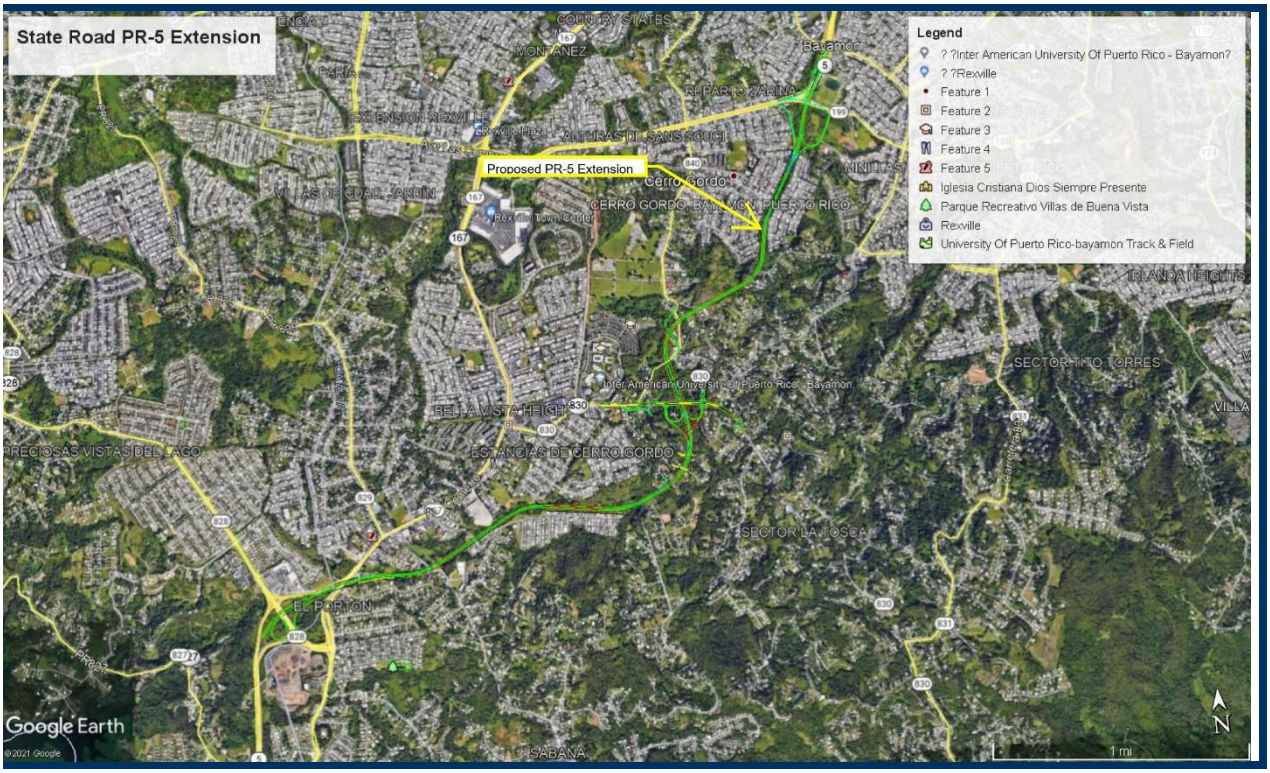

Figure Number 2 – Aerial Photo

2.0 Regulatory Background

The Clean Air Act, which was last amended in 1990, requires EPA to set National Ambient Air Quality Standards (40 CFR part 50) for pollutants considered harmful to public health and the environment. The Clean Air Act established two types of national air quality standards. Primary standards set limits to protect public health, including the health of "sensitive" populations such as asthmatics, children, and the elderly. Secondary standards set limits to protect public welfare, including protection against decreased visibility, damage to animals, crops, vegetation, and buildings.

The EPA Office of Air Quality Planning and Standards (OAQPS) has set National Ambient Air Quality Standards for six principal pollutants, which are called "criteria" pollutants. They are listed below. Units of measure for the standards are parts per million (ppm) by volume, parts per billion (ppb - 1 part in 1,000,000,000) by volume, milligrams per cubic meter of air (mg/m^3), and micrograms per cubic meter of air (µg/m^3). Table Number 1 shows these standards.

Table Number 1 – National Ambient Air Quality Standards[1]

Pollutant	Primary/Secondary	Averaging Time	Level
Carbon Monoxide	primary	8 hour	9 ppm
		1 hour	35 ppm
Lead	Primary and secondary	Rolling 3 month average	0.15 µg/m^3 [(2)]
Nitrogen Dioxide	primary	1 hour	100 ppb
	Primary and secondary	Annual	53 ppb [3]

[1] As of October 2011.
[2] Final rule signed October 15, 2008. The 1978 lead standard (1.5 µg/m3 as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.
[3] The official level of the annual NO_2 standard is 0.053 ppm, equal to 53 ppb, which is shown here for the purpose of clearer comparison to the 1-hour standard.

Table Number 1 – National Ambient Air Quality Standards[1]				
Pollutant		**Primary/Secondary**	**Averaging Time**	**Level**
Ozone		Primary and secondary	8 hour	0.075 ppm [4]
Particle Pollution	$PM_{2.5}$	Primary and secondary	24 hour	35 µg/m^3
	PM_{10}	Primary and secondary	24 hour	150 µg/m^3
Sulfur Dioxide		Primary	1 hour	75 ppb
		Secondary	3 hour	0.5 ppm [5]

The control strategy for this Plan, relating motor vehicles, is principally based in the federal emissions control program in which pretends to maintain the contaminants concentrations in compliance with the national air quality standards without regarding the future increase in miles run by a vehicle.

The plan classifies Puerto Rico in Category III in relation with the CO, HC and NO_x emissions. This one provides for the designation of areas covered by the following three classifications:

- **Category I -** Applies in areas in which any change in air quality is considered significant.
- **Category II -** Applies in areas in which the air quality deterioration is accompanied by an ordered growth, is considered insignificant.
    - **Category III -** Applies to areas in which the air quality deterioration, to reach the established rules, is considered insignificant.

[4] Final rule signed March 12, 2008. The 1997 ozone standard (0.08 ppm, annual fourth-highest daily maximum 8-hour concentration, averaged over 3 years) and related implementation rules remain in place. In 1997, EPA revoked the 1-hour ozone standard (0.12 ppm, not to be exceeded more than once per year) in all areas, although some areas have continued obligations under that standard ("anti-backsliding"). The 1-hour ozone standard is attained when the expected number of days per calendar year with maximum hourly average concentrations above 0.12 ppm is less than or equal to 1.

[5] Final rule signed June 2, 2010. The 1971 annual and 24-hour SO2 standards were revoked in that same rulemaking. However, these standards remain in effect until one year after an area is designated for the 2010 standard, except in areas designated nonattainment for the 1971 standards, where the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standard are approved

The proposed project is located at the municipality of Bayamón. This area is in compliance with the air quality primary and secondary emissions standards for all the contaminants.

The Department of Natural and Environmental Resources (DNER) operates three (3) carbon monoxide (CO) sites in the air-monitoring network. All CO samplers are operated year-round and the measurements are sent to the EPA Air Quality System (AQS) on an hourly basis. These sites are located at the Buchanan Toll Plaza (Station EQB #10), Bayamón Regional Penitentiary (Station EQB #37), and Baldorioty de Castro Avenue (Station EQB # 30).

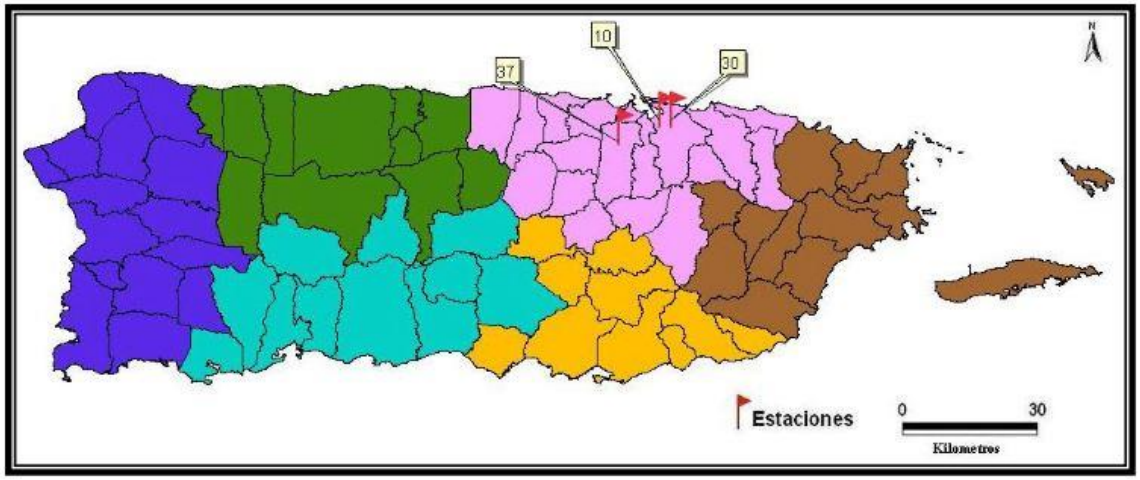

Figure Number 3 – CO Stations Operated by EQB

DNER regularly notifies to the public the monthly averages of the air sampling activities carried out for criteria pollutants around Puerto Rico. The last notification was published on the fourth quarter of 2008. The results are shown in the following figure obtained from the public notice. The results shows that the CO levels are below the NAAQS levels established by EPA.

Tabla de Concentración de Monóxido de Carbono (ppm)						
	Octubre		Noviembre		Diciembre	
Estación	Promedio 8 hrs.	Máx. 1hr.	Promedio 8 hrs.	Máx. 1hr.	Promedio 8 hrs.	Máx. 1hr.
10 San Juan	0.98	0.97	1.15	1.2	1.03	1.0
30 San Juan	1.75	1.77	1.93	2.06	2.09	2.07
37 Bayamón	1.98	1.6	1.96	1.8	1.54	1.5

Figure Number 4 – 2008 CO Average Monthly Concentrations

3.0 Methodology

To analyze the carbon monoxide concentrations at the site, a site visit was conducted. Using a CO meter, the current concentrations were measured. calculations in which estimated concentrations for one (1) hour and eight (8) hours were made for the proposed PR-5 for the design year, 2046. The current CO concentration was measured at the site.

Today's passenger cars are capable of emitting 90 percent less carbon monoxide over their lifetimes than their uncontrolled counterparts of the 1960's. As a result, ambient carbon monoxide levels have dropped, despite large increases in the number of vehicles on the road and the number of miles they travel. With continued increases in vehicle travel projected, however, carbon monoxide levels will begin to climb again unless even more effective emission controls are employed.[6]

The procedure used to estimate the carbon monoxide concentrations was using the CALINE4 ("California Line Source Prediction Model") computer model. This model disperses mathematically, in the surrounding road area, a carbon monoxide quantity emitted by the vehicles localized in the area. In this model EPA emissions factors are used, the site geometry and the local dispersion conditions that are established by the site meteorology.

To obtain the carbon monoxide emission factor for the design year (2046) the mathematical model MOVES3 was used. EPA's **MO**tor **V**ehicle **E**mission **S**imulator (MOVES) is a state-of-the-science emission modeling system that estimates emissions for mobile sources at the national, county, and project level for criteria pollutants, greenhouse gases, and air toxics.

[6] Environmental Protection Agency, Office of Mobile Sources, Automobiles and Carbon Monoxide, EPA 400-F-92-005, January 1993.

The following table presents the necessary parameters for the carbon monoxide emissions estimation in the project area. Project data was obtained from the engineering preliminary drawings prepared by PRHTA and the traffic data obtained at the site during a site visit.

Table Number 2 - Necessary Parameters	
Parameter	**Units**
Road segment coordinates	Meters
Road width	Meters
Traffic Volume	Vehicles by hour
Carbon monoxide emission factor	Grams/mile
Emission source elevation	Meters
Receivers coordinates with respect the road	Meters
Average wind velocity	Meters/second
Wind direction	-----
Atmospheric stability	-----
Mixing area elevation	Meters
Surface roughness	Centimeters
Average exposition time	Minutes
Settling Velocity	Centimeters/second
Deposition velocity	Centimeters/second
CO level in the environment	Parts per Million

3.1 Receivers

Six (6) sensitive areas were determined at the site. The receivers are comprised residential areas located adjacent to the project corridor. These receivers are:

- Receiver 1 – Amor Street, Buena Vista Ward
- Receiver 2 – Villa Rica St, Villa Rica
- Receiver 3- Ciudad Interamericana, Main Street
- Receiver 4 - Valles de Cerro Gordo, Diamante Street
- Receiver 5 – El Cortijo, Street 6
- Receiver 6 - El Cortijo Street 21

4.0 Results

The computer models used in this study, estimate the carbon monoxide emissions to be produced by the motor vehicles that will use the proposed road. To estimate the future emissions, we use the computer model with existing data to obtain an estimate of the environmental CO levels. The computer model was used to estimate the current CO levels. The current measured CO levels are 0.0 parts per million (ppm). Table Number 3 presents some data used to model the proposed project.

Table Number 3 - Data Used For Modeling	
Data	**Value**
Road width	13.30 m
Traffic Volume	3,964 vph (2046)
Average wind velocity	0.5 m/s [7]
Mixing elevation	1,000 meters [8]
Average temperature	27°C [7]
Emission factor	1.86 g/mi [9] (2046)
Settling velocity	0 cm/s [6]
Deposition velocity	0 m/s [6]
Surface roughness	108 c1.86m [10]

Table Number 4 presents the CALINE 4 modeling results. Appendix A shows computer outputs from the Caline 4 and MOVES 2014 models.

[7] From the "Climatological Data Annual Summary", 2020.
[8] Mathematical modeling standard value.
[9] From MOVES3 results.
[10] From the Caline 4 User Manual

Table Number 4 - Future CO Concentrations in Parts per Million (Year 2046)				
Receiver	CO Levels			
	1 Hour Period	National Standard	8 Hours Period	National Standard
1	0.0	35.0	0.0	9.0
2	0.0	35.0	0.0	9.0
3	0.0	35.0	0.0	9.0
4	0.0	35.0	0.0	9.0
5	0.0	35.0	0.1	9.0
6	0.0	35.0	0.1	9.0

According to the results obtained by the mathematical modeling, the increase in motor vehicles flow will not cause an exceedance of the CO levels above the NAAQS.

The Department of Transportation and Public Works (DTPW) has implemented as part of the process the motor vehicles inspection, measuring the vehicles CO emissions. As establish, any vehicle that exceeds the established CO emissions limits will not be allowed to travel until the necessary vehicle improvements are made to reduce it emissions.

4.1 Particulate Matter

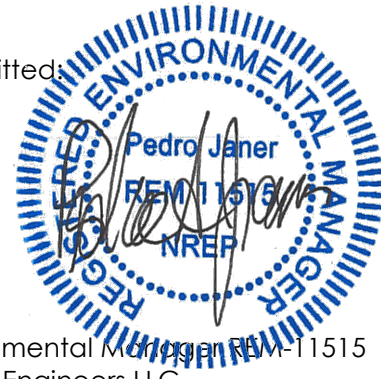
Historically, the transportation systems contribution to particulate matter emissions is of 18 % (DTPW, 1998). These emissions are produced by loaded trucks without the appropriate protection and lack of roads maintenance. To reduce these emissions it is recommended to include accumulated particulate matter cleaning. By cleaning this accumulated material, the possibility that the wind lift the smaller particles is reduced; increasing the particulate matter concentration in the area.

5.0 Conclusions and Recommendations

Based on the obtained CALINE 4 computerized modeling results, it is not expected that the proposed project significantly affects the area carbon monoxide concentration. To maintain and/or reduce the area carbon monoxide concentration it is recommended to make the people fulfill the motor vehicles laws and regulations.

This carbon monoxide study was prepared with the information available to the date of publication. The available information was a project alignment design dated and traffic data provided by CMA and the results of a Traffic Study dated September 2021 prepared by Steer. The study results and recommendations could be impacted if the project conditions changes.

Respectfully submitted,



Pedro A. Janer, PE

1.0 INTRODUCTION

The Puerto Rico Highways and Transportation Authority (PRHTA) proposes the extension of State Road PR-5 between the existing PR-5 and PR-199 intersection and PR-167. Figure Number 2 shows an aerial photo depicting the project area.

PRHTA has retained the services of CMA Architects & Engineers LLC to carry out a Noise Levels Study at the project area. For this purpose, CMA technical personnel obtained the current noise levels on September 14, 2021. Using the obtained field data, the results of the Traffic Study prepared by Steer, and information provided by The Highway Capacity Manual or HCM (Transportation Research Board, 2010), the future noise impacts of the proposed project were estimated. Condition with projected future volumes (year 2046 for the existing configuration and for the alternatives considered.

This noise study includes the segment from PR-5 intersection with PR-199 to PR-167 intersection with PR-5 in the municipality of Bayamón. The segment has a length of approximately 5.40 kilometers. Figure Number 1 shows an aerial photo depicting the project area.

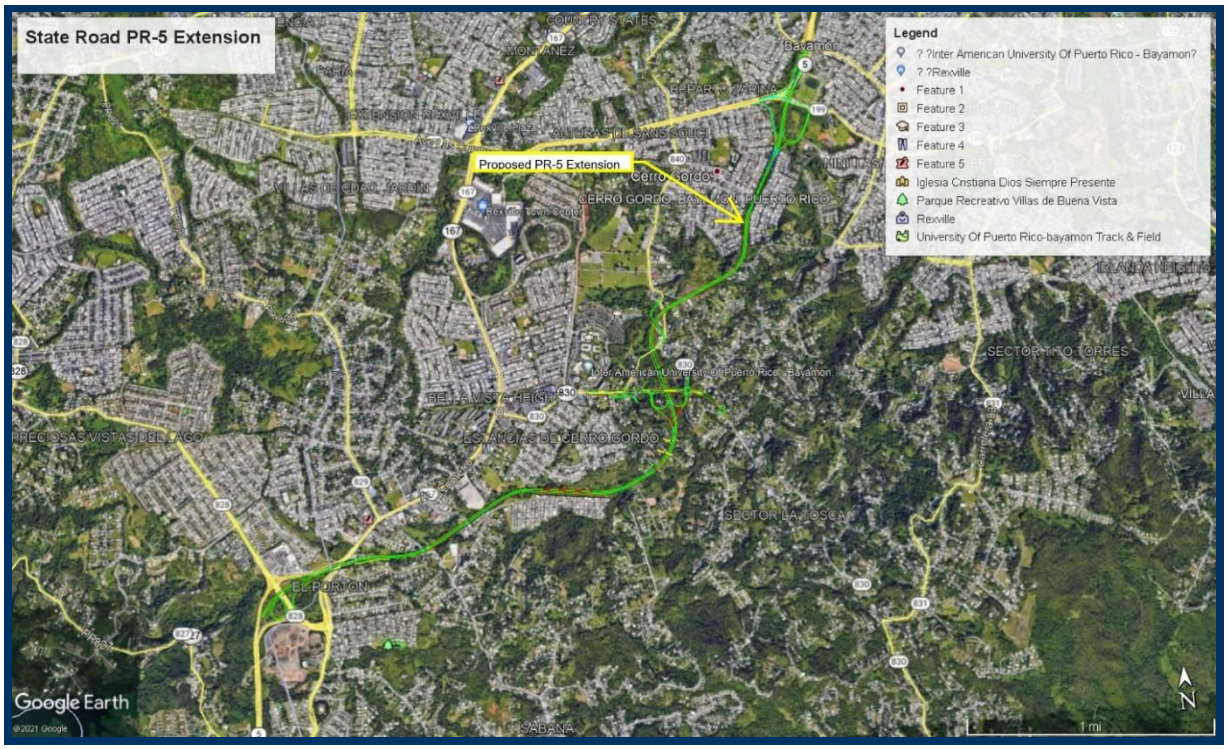

Figure Number 1 – Aerial Photo

2.0 REGULATORY BACKGROUND

On May 5, 2011, the Puerto Rico State Department approved the Noise Pollution Control Regulation, as amended, and prepared by the Environmental Quality Board (EQB) in order to establish the regulations for the control, reduction and elimination of the noxious noise to the public health and public welfare, according with the Public Policy Environmental Act.

Rule 27 of this Regulation establishes noise emission limits in different zones. Table Number 1 presents the limits.

Table Number 1 - Noise Level Limits [dB(A)]

Emitting Source	Zone I (Residential)		Zone II (Commercial)		Zone III (Industrial)		Zone IV (Quiet)	
	Day Period	Night Period	Day Period	Night Period	Day Period	Night Period	Day Period	Night Period
Zone I	60	50	65	55	70	60	55	50
Zone II	65	50	70	60	75	65	55	50
Zone III	65	50	70	65	75	75	55	50
Zone IV	65	50	70	65	75	75	55	50

The area under study includes residential and commercial areas classified as Zone I, and Zone II.

Rule 31 of the after mentioned regulation establishes criteria to identify conditions that would need traffic noise mitigation. To evaluate the traffic noise, it is required to obtain the one hour equivalent noise level that corresponds to the time of the day when the traffic noise is higher. The following table shows this criterion.

Table Number 2 – Rule 31 Noise Measurement Criteria		
Category	**L_{eq} 1hr (1HL)**	**Description of Activity Category**
A	57_E	Places that requires exceptional tranquility and environment preservation.
B	67_E	Residences, hotels, parks, churches, schools, libraries, hospitals
C	72_E	Developments not included at categories A and B.
D	No established limits	Undeveloped lands
E	52_I	Residences, hotels, public buildings, churches, schools, libraries, hospitals, auditoriums, commercial buildings

The Federal Highway Administration approved Noise Abatement Criteria for different types of activities on July 13, 2011. The following table shows this criterion.

Table Number 3 - Noise Abatement Criteria Hourly A-Weighted Sound Level in Decibels		
Activity	**$L_{eq}(h)^1$**	**Description of Activity Category**
A	57_E	Lands on which serenity and quiet are of extraordinary significance and serve an important public need and where the preservation of those qualities is essential if the area is to continue to serve its intended purpose.
B	67_E	Residential
C	67_E	Active sports areas, amphitheaters, auditoriums, cemeteries, day care centers, hospitals, libraries, medical facilities, parks, picnic areas, places of worship, playgrounds, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, recreation areas, Section 4 (f) sites, schools, television studios, trails, and trail crossings.
D	52_I	Auditoriums, day care centers, hospitals, libraries, medical facilities, places of worship, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, schools, and television studios.

Table Number 3 - Noise Abatement Criteria Hourly A-Weighted Sound Level in Decibels		
Activity	**$L_{eq}(h)^1$**	**Description of Activity Category**
E	72_E	Hotels, motels, offices, restaurants/bars/and other developed lands, properties and activities not included in A & D

Notes:

1. The L_{eq} (H) Activity Criteria values are for impact determination only and are not design standards for noise abatement measures.
2. Includes undeveloped lands permitted for this activity category

$_E$ External areas of the receptors included in this study fall in Category B, C & E.

3.0 METHODOLOGY

To carry out the study, a field visit was conducted to measure current noise levels. The obtained results were used to determine the impact of the proposed project alternatives on the receivers. Seven (7) receivers were chosen physically along the proposed project corridor for the simulation of the program TNM 2.5. The data used for these seven (7) representative receivers were obtained of the nearest similar characteristic sampling point.

These seven receivers are representative of the residential areas located in the project. All receivers are located near to the proposed PR-5 corridor at no more than 500 feet (152 meters) measured from the proposed project. **Appendix A** shows the proposed route and the selected receivers. **Appendix B** shows a copy of the Noise Study Field Data Sheet and **Appendix C** the TNM 2.5 Print Out.

The following procedure was followed to conduct the noise level measurements in the field:

1. The sound level meter calibration was verified prior to taking measurements in each of the receivers. The sound level meter is calibrated annually by the manufacturer to maintain the efficiency of the measurements. **Appendix D** shows a copy of the of the annual calibration certificate.
2. The location of the receiver was determined and the distance from the equipment to the emission source was measured.
3. The sound level meter was attached to a 4 feet high tripod.
4. Noise levels were obtained in each receiver by measuring the noise for a period of 30 minutes. At the end of each period, the L_{eq} level of the sound level meter was recorded.
5. The following equipment was used to perform this procedure:
    - Global Positioning System (GPS) Garmin GPS 62stc.

- Brüel & Kjær 2238 Mediator Sound Level Meter
- Brüel & Kjær model 4231 Calibrator
- 4 feet high aluminum tripod

3.1 Receivers

The following receivers were used to determine the current noise levels.

- Receiver Number 1- Residential Area located adjacent to the Fire House.

- Receiver Number 2 – Villa Rica

- Receiver Number 3 – Ciudad Interamericana

- Receiver Number 4 – Cerro Gordo Diamante Street

- Receiver Number 5 – El Cortijo Street 21

- Receiver Number 6 – El Cortijo Street 16

Receiver Number 7 – Cerro Gordo Street 8

4.0 RESULTS DISCUSSION

To carry out the study, a field visit was conducted on September 14, 2021, to obtain existing noise levels during typical works day. The obtained results were used to determine the impact of the proposed project on the selected receivers. All receivers are located adjacent the proposed roadway at no more than 500 feet (152 meters) measured from centerline of the proposed project. **Appendix A** shows Layout Plans for the proposed project showing the receivers location.

The following table shows the existing noise levels. These levels will be used as the environmental background noise.

Table Number 4 – Current Noise Levels

Receiver	Noise Levels L_{eq}[dB(A)]
1	55.4
2	60.4
3	55.0
4	55.0
5	55.2
6	55.0
7	57.8

Using the previously described methodology at Section 3.0, future noise levels in the receivers were obtained. To use TNM, vehicular flow data obtained from the field visits and the traffic study prepared by Steer. The following table shows the peak hour traffic volumes for current and design years. The mathematical model was developed using a maximum velocity of 55 mph for each type of vehicle modelled.

Table Number 5 – PR-5 Estimated Traffic Flow					
AADT North to South	**Peak Flow [vph] Year 2046**	**Autos**	**Medium Trucks**	**Heavy Trucks**	**Motorcycles**
21,829	2,183	2,074	44	44	21
AADT South to North	**Peak Flow [vph] Year 2046**	**Autos**	**Medium Trucks**	**Heavy Trucks**	**Motorcycles**
17,811	1,758	1,670	35	35	18

According to the data obtained from the Noise Field Study Data and Traffic Study the existing peak hour's traffic volume[1] for design year 2046 is a traffic flow is 2,183 vehicles per hour in north to south directions and 1,758 on south to north direction. To estimate the different type of vehicles volume, we used a 95 % of the peak flow for the regular automobiles flow, 2% of the peak flow to be the medium trucks flow, 2% for heavy trucks and 1% for motorcycles.

4.1 TNM Model Results

As described earlier in this report, the project under evaluation has three (3) possible alternatives. The following table shows the TNM model results highlighting the points were the PRHTA maximum noise levels are exceeded.

Table Number 6 – TNM 2.5 Future Noise Levels					
Receiver Number	**Current Noise Level**	**TNM 2.5 Future Noise Level 2046 [dB(A)]**	**Difference [dB(A)]**	**Noise Abatement Criteria [dB(A)]**	**Difference [dB(A)]**
Amor Street	55.4	67.3	11.9	67	0.3
Villa Rica	60.4	63.9	3.5	67	-3.1
Ciudad Interamericana	55.0	74.7	19.7	67	7.7
Cerro Gordo Diamante	55.0	63.7	9.9	67	-4.3

[1] Peak volume was estimated to be 10% of the AADT.

Table Number 6 – TNM 2.5 Future Noise Levels					
Receiver Number	**Current Noise Level**	**TNM 2.5 Future Noise Level 2046 [dB(A)]**	**Difference [dB(A)]**	**Noise Abatement Criteria [dB(A)]**	**Difference [dB(A)]**
Cortijo Street 21	55.2	64.9	8.5	67	-2.1
Cortijo Street 16	55.0	62.2	7.2	67	-4.8
Cerro Gordo Street 8	57.8	70.4	12.6	67	3.4

4.2 Impacted Receivers and Noise Abatement Measures

Section VI.C of the PRHTA Noise Policy indicates that a traffic noise impact occurs when the predicted existing or future highway traffic noise levels in a receptor approach or exceed the NAC or when predicted existing or future highway traffic noise levels are substantially exceeded the existing traffic noise level, even though the predicted levels may not exceed the NAC. This definition reflects the FHWA position that traffic noise impacts can occur under either of two separate conditions:

- Future noise levels approach or exceed the NAC; or,
- Future noise levels result in a substantial increase over the existing noise environment (substantial increase).

4.2.1 Receiver Number 1 – Amor Street

The existing noise level at this receiver is 55.4 dB(A), which do not exceed the PRHTA Noise Abatement Criteria (NAC) of 67 dB(A) for Activity B. The projected future noise level at this receiver was estimated to be 67.3 dB(A), 0.3 dB(A) above the NAC but 11.9 dBA over the current level. This is a substantial increase. We recommend the installation of a noise attenuation wall 4.2 meters (14 ft) high, a length of 413 meters and an area of 1,753 square meters. This noise attenuation wall will reduce the traffic noise to 57.6 dBA or 2.7 dBA above the noise reduction goal of 7 dBA.

Based in a cost of $400.00 per square meter, the noise attenuation wall cost would be $701,200.00 or $38,956.00 per benefited receiver (18 benefited receivers). As per PRHTA criteria, abatement costing $42,244.00 or less per benefited receiver as deemed reasonable.

4.2.2 Receiver Number 2 – Villa Rica

The existing noise level at this receiver is 60.4 dB(A), which do not exceed the PRHTA Noise Abatement Criteria (NAC) of 67 dB(A) for Activity B. The projected future noise level at this receiver was estimated to be 63.9 dB(A), 3.1 dB(A) below the NAC. No noise attenuation wall is recommended for this area.

4.2.3 Receiver Number 3 – Ciudad Interamericana

The existing noise level at this receiver is 55.0 dB(A), which do not exceed the PRHTA Noise Abatement Criteria (NAC) of 67 dB(A) for Activity B. The projected future noise level at this receiver was estimated to be 74.7 dB(A), 7.7 dB(A) above the NAC but 19.7 dBA over the current level. This is a substantial increase. We recommend the installation of a noise attenuation wall 5.45 meters (18 ft) high, a length of 581 meters and an area of 3,165 square meters. This noise attenuation wall will reduce the traffic noise to 65.7 dBA or 2.0 dBA above the noise reduction goal of 7 dBA.

Based in a cost of $400.00 per square meter, the noise attenuation wall cost would be $1,265,944.00 or $43,653.00 per benefited receiver (29 benefited receivers). As per PRHTA criteria, abatement costing $42,244.00 or less per benefited receiver as deemed reasonable. But, when the predicted levels are above 70 dBA an additional $2,000.00 per receiver can be added. Then, the cost per benefited receiver is reasonable.

4.2.4 Receiver Number 4 – Cerro Gordo Diamante Street

The existing noise level at this receiver is 554 dB(A), which do not exceed the PRHTA Noise Abatement Criteria (NAC) of 67 dB(A) for Activity B. The projected future noise level at this receiver was estimated to be 64.9 dB(A), 2.1 dB(A) below the NAC. No noise attenuation wall is recommended for this area.

4.2.5 Receiver Number 5 – El Cortijo West (Streets 14 and 17)

Four different receivers were modeled along the proposed corridor to evaluate the area. This receiver includes the area covered by Streets 14 and 17 at El Cortijo. The projected future noise levels at these receivers were estimated from 64.7 to 66 dB(A). These levels are below the NAC but are a substantial increase above the existing levels. We recommend the installation of a noise attenuation wall 3.65 meters (12 ft) high, a length of 800 meters and an area of 3,359 square meters. This wall will reduce the traffic noise to 59.7 dBA or -0.3 dBA above the noise reduction goal of 7 dBA.

Based in a cost of $400.00 per square meter, the noise attenuation wall cost would be $1,343,891 or $19,763.00 per benefited receiver (68 benefited receivers). As per PRHTA criteria, abatement costing $42,244.00 or less per benefited receiver as deemed reasonable.

4.2.6 Receiver Number 6 – El Cortijo East (Streets 21 and 16)

Three different receivers were modeled along the proposed corridor to evaluate the area. This receiver includes the area covered by Streets 21 and 16 at El Cortijo. The projected future noise levels at these receivers were estimated from 56.1 to 60.5 dB(A). These levels are below the NAC. No noise attenuation wall is recommended for this area.

4.2.7 Receiver Number 7 – Cerro Gordo Street 8

The existing noise level at this receiver is 57.8 dB(A), which do not exceed the PRHTA Noise Abatement Criteria (NAC) of 67 dB(A) for Activity B. The projected future noise level at this receiver was estimated to be 70.4 dB(A), 3.4 dB(A) above the NAC and 12.6 dBA over the current level. This is a substantial increase. We recommend the installation of a noise attenuation wall 3.33 meters (11 ft) high, a length of 475 meters and an area of 1,580 square meters. This noise attenuation wall will reduce the traffic noise to 61.7 dBA or 1.7 dBA above the noise reduction goal of 7 dBA.

Based in a cost of $400.00 per square meter, the noise attenuation wall cost would be $631,931 or $30,091.00 per benefited receiver (21 benefited receivers). As per PRHTA criteria, abatement costing $42,244.00 or less per benefited receiver as deemed reasonable. But when the predicted levels are above 70 dBA an additional $2,000.00 per receiver can be added. Then, the cost per benefited receiver is reasonable.

5.0 CONCLUSIONS AND RECOMMENDATIONS

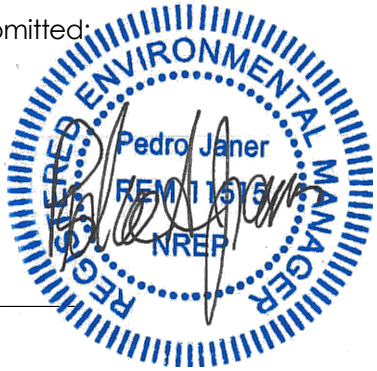
Existing noise levels were estimated in different strategic points that can be affected by the proposed project. The PRHTA recommended maximum levels limits are exceeded at receivers' number 1, 3, and 7.

When traffic noise impacts are identified, noise abatement were considered and evaluated for feasibility and reasonableness. This report determined and analyzed alternative noise abatement measures to abate identified impacts by giving weight to the benefits and costs of abatement and the overall social, economic, and environmental effects by using feasible and reasonable noise abatement measures for decision-making. **Appendix A** shows the approximate location of the proposed noise attenuation wall.

Noise attenuation walls are recommended for the areas covered by receivers 1 (Villa Rica), 3 (Ciudad Interamericana), 6 (El Cortijo West) and 7 (Cerro Gordo). These barriers have an approximate cost of $3,942,986.

This report was carried out based on the conceptual drawings prepared by CMA and dated September 1, 2021, field visit and the Traffic Study prepared by Steer September 2021. Any changes on the above referenced documents could be affect the obtained results and a new study would need to be prepared.

Respectfully submitted;



Pedro A. Janer

6.0 GLOSSARY

AADT	Average Annual Daily Traffic
dB(A)	The total sound pressure of all the sounds in decibels as measured in a sound meter with a 20 micro-Pascal reference pressure using the sound meter measuring scale A and the unit is expressed as dB(A).
Decibel (dB)	A measuring unit to quantify the sound intensity, equal to 20 times the base 10 logarithm of the sound pressure ratio, measured at the reference pressure, which is 20 micro-Pascal.
L_{10}	Scale A sound level that is exceeded by 10% of time during a consideration period.
Equivalent Sound Level (L_{eq})	Equivalent continuous sound level. In other words the constant level, dB(A), that can produce the same sound energy as a variant sound specified in a specified time.
Diurnal Period	Period between 7:01 AM y 10:00 PM
Nocturnal Period	Period between 10:01 PM y 7:00 AM
Noise	Undesired sounds that affect humans in a psychological or physical manner or exceed the limitations established in the Regulation.
NRC	Noise Reduction Coefficient
vph	Vehicles per hour

Project Name: PR-5 Extension From PR-167-PR-9		Date: 09-14-21
Receiver Description & Location: R-1 Taco Maker	GPS-953	
CMA No.: 21095		Start: 8:05am End: 8:35am
Results:	L_{10} = 55.5 L_{max} = 76.9	L_{eq} = 55.4 L_{min} = 51.3
*Equipment: B&K 2238	Calibrator: B&K 4231	Response: Fast
A-Weighting ☑	Battery Check ☑	Calibration ☑
Weather Data:	Wind Direction:	Temperature: 88.7 RH-69.2
	**Wind Velocity: 1.1	Elevation:
Coordinates	Latitude:	Longitude:

*Equipment placed 1.5m (5 feet) above the ground on a tripod.
** No noise reading were recorded when the wind speed exceed a sustained 10 mph.

Background *Noise Sensitive Receivers	Commercial Areal Fast Food Restaurant.
	PR-167
Unusual Events Noise Contamination	Ambulance. / Extraction / AC.

N/A Default ground: X pavement ___water ___Hard Soil ___Loose Soil ___Lawn ___Field Grass

* Noise sensitive areas typically include residences, school, libraries, churches and temple, hospitals, recreation and sports area, playground, hotel, motels and parks.

PR-167 5 min.

TRAFFIC COUNTS AND VEHICULES CLASSIFICATION		
Vehicles	Directions	Quantity
Automobiles	167 Sur	47
	167 Norte	37
Medium-duty trucks	167 Sur	4
	167 Norte	0
Heavy-duty trucks	167 Sur	0
	167 Norte	6
Motorcycle	167 Sur	0
	167 Norte	1

N/A

Carbon Monoxide Meter 000 ppm

Speed limit on the main line highway: N/A

Automobile – two axles and four tires
Medium duty trucks –two axles and six tires
Heavy duty trucks – three or more axles

Data Obtained By: Juan A. Fernandez / Jose Gonzalez.

CALIBRATION CERTIFICATION

Brüel & Kjær
North America Inc.

The Bruel and Kjaer Calibration Laboratory
3079 Premiere Parkway Suite 120
Duluth, GA 30097
Telephone: 770-209-6907
Fax: 770-447-4033
Web site address: http://www.bksv.com

ACCREDITED

Calibration Certificate # 1568.01

CERTIFICATE OF CALIBRATION

No.: CAS-475940-Y0L2Y2-901

CALIBRATION OF:

Microphone: Brüel & Kjær Type 4188 Serial No. 2951151

CUSTOMER:

CMA Architects & Engineers
1509 F.D. Roosevelt Avenue
Guaynabo, PR 00968

CALIBRATION CONDITIONS:

Environment conditions:	Air temperature:	23	°C
	Air pressure:	98.676	kPa
	Relative Humidity:	41	%RH
Applied polarization voltage:	0 Vdc		

SPECIFICATIONS:

This document certifies that the instrument as listed under "Type" has been calibrated and unless otherwise indicated under "Final Data", meets acceptance criteria as prescribed by the referenced Procedure. Statements of compliance, where applicable, are based on calibration results falling within specified criteria with no reduction by the uncertainty of the measurements. The calibration of the listed transducer was accomplished using a test system which conforms to the requirements of ISO/IEC 17025, ANSI/NCSL Z540-1, and guidelines of ISO 10012-1. For "as received" and "final" data, see the attached page(s). Items marked with one asterisk (*) are not covered by the scope of the current A2LA accreditation. This Certificate and attached data pages shall not be reproduced, except in full, without written approval of the Bruel and Kjaer Calibration Laboratory-Duluth, GA. Results relate only to the items tested. The transducer has been calibrated using Measurement Standards with values traceable to the National Institute of Standards and Technology, National Measurement Institutes or derived from natural physical constants.

PROCEDURE:

The measurements have been performed with the assistance of Brüel & Kjær Microphone Calibration System B&K 9721 with application software WT9649 and WT9650 version 5.2 using calibration procedure: 4188-S-251-FF-01

RESULTS:

- [X] "As Received" Data: Within Acceptance Criteria
- [ ] "As Received" Data: Outside Acceptance Criteria
- [X] "Final" Data : Within Acceptance Criteria
- [ ] "Final" Data : Outside Acceptance Criteria

The reported expanded uncertainty is based on the standard uncertainty multiplied by a coverage factor k =2 providing a level of confidence of approximately 95%. The uncertainty evaluation has been carried out in accordance with EA-4/02 from elements originating from standards, calibration method, effect of environmental conditions and any short term contribution from the device under calibration.

Date of Calibration: 19 October, 2020

Certificate issued: 19 October, 2020

Harold Williams
Calibration Technician

Visual inspection

The unit is visually inspected to check the suitability for calibration.

	Result
Visual inspection	OK

Absolute Acoustical Sensitivity Level

The response of the sound level meter to a sinusoidal sound pressure signal at the calibration frequency and at the calibration level of the sound level meter is registered.

	Coupler Pressure Lc	Mic. Correction C4226	Body Influence Cbi	Expected	Measured	Accept - Limit	Accept + Limit	Deviation	Uncertainty
	[dB SPL]	[dB]	[dB]	[dB SPL]	[dB SPL]	[dB]	[dB]	[dB]	[dB]
Ref. Conditions	94.14	0.20	0.00	93.94	94.0	-0.7	0.7	0.1	0.28

Frequency Response Measured in Acoustic Coupler, FW A

The response of the sound level meter to sinusoidal sound pressure signals at the calibration level at 1 kHz and at other frequencies is registered. From this the free field frequency response or the diffuse field frequency response is calculated. The frequency response is calculated for other frequencies than 1 kHz relative to the response at 1 kHz. Expected response is calculated as Sound Pressure Level in the Acoustic Calibrator minus Free-Field-Correction or Random-Incident-Correction. The results are compared to the nominal frequency weighting.

Frequency Response Measured in Acoustic Coupler, FW C

The response of the sound level meter to sinusoidal sound pressure signals at the calibration level at 1 kHz and at other frequencies is registered. From this the free field frequency response or the diffuse field frequency response is calculated. The frequency response is calculated for other frequencies than 1 kHz relative to the response at 1 kHz. Expected response is calculated as Sound Pressure Level in the Acoustic Calibrator minus Free-Field-Correction or Random-Incident-Correction. The results are compared to the nominal frequency weighting.

Frequency Response Measured in Acoustic Coupler, FW Lin

The response of the sound level meter to sinusoidal sound pressure signals at the calibration level at 1 kHz and at other frequencies is registered. From this the free field frequency response or the diffuse field frequency response is calculated. The frequency response is calculated for other frequencies than 1 kHz relative to the response at 1 kHz. Expected response is calculated as Sound Pressure Level in the Acoustic Calibrator minus Free-Field-Correction or Random-Incident-Correction. The results are compared to the nominal frequency weighting.

Level Range Control, 1000 Hz

The response of the sound level meter to a sinusoidal voltage signal is registered in each of the level ranges of the sound level meter. The relative response to the response in the reference level range is calculated for each level range, and the relative response is compared to the anticipated relative response.

	Expected [dB SPL]	Measured [dB SPL]	Accept - Limit [dB]	Accept + Limit [dB]	Deviation [dB]	Uncertainty [dB]

Linearity Range, IEC60651, 1000 Hz, SPL 1 dB steps - Detector 1

The response of the sound level meter to sinusoidal voltage signals is registered for various levels covering the reference level range, including a level nominally corresponding to Lref at the measurement frequency. From this the response at the other levels is calculated relative to the response at the level corresponding to Lref. The relative response is compared to the anticipated relative response. For each level the difference between the responses at the level and at the previous level is also calculated in order to determine differential level linearity.

Linearity Range, IEC60651, 4000 Hz, SPL 10 dB steps - Detector 1

The response of the sound level meter to sinusoidal voltage signals is registered for various levels covering the reference level range, including a level nominally corresponding to Lref at the measurement frequency. From this the response at the other levels is calculated relative to the response at the level corresponding to Lref. The relative response is compared to the anticipated relative response. For each level the difference between the responses at the level and at the previous level is also calculated in order to determine differential level linearity.

Linearity Range, IEC60804, SEL - Detector 1

The sound exposure level reading of the sound level meter when exposed to single 4 kHz tonebursts of 1 s duration is registered for various levels of the toneburst covering the reference level range and including a burst with a peak level of Vref + 2 dB corresponding to a sound exposure level of Lref. From this the response at other sound exposure levels than Lref is calculated relative to the response at Lref . The relative response is compared to the anticipated relative response.
The signal levels are defined relative to Lmin. The measurements are carried out with A frequency weightings.

Time Weighting, Difference in Reference Level Indication - Detector 1

The response of the sound level meter to a steady 1 kHz sinusoidal voltage signal at the reference level is registered for each timeweighting available in the sound level meter. The differences between the responses are calculated and compared to the maximum allowed differences.

Time Weighting, Response to Single Burst, 200 ms, F - Detector 1

The maximum reading of the sound level meter when exposed to single tonebursts is registered for various burst durations. The toneburst response of the sound level meter is calculated as the maximum reading relative to the response of the sound level meter to a steady sinusoidal signal with the same frequency and peak voltage as the tonebursts.
The response of the Sound Level Meter to a single burst is tested and compared to the anticipated response.

Time averaging, Leq - SEL - Detector 1

The response of the sound level meter to sequences of repeated 4 kHz tonebursts when measuring timeaverage sound level or sound exposure level is registered for various toneburst repetition frequencies and durations of the individual tonebursts. The peak level of the tonebursts is adjusted so that the timeaverage level is constant for all the signals. The responses are compared to the anticipated responses.

Pulse Range, Leq - SEL - Detector 1

The sound exposure level or timeaverage sound level reading of the sound level meter when exposed to single 4 kHz tonebursts superimposed on a low level steady 4 kHz signal is registered for various toneburst durations. The level of the low level signal is the minimum level of the reference range of the sound level meter, and the tonebursts are in phase with the low level signal. The toneburst responses are compared to their theoretical values calculated with the integration time used.

Overload Indication, Sine Signals, Inverse A

The function of the overload detector of the sound level meter is verified with different voltage signals at levels around the limit of overload indication. A signal at a level corresponding to 5 dB below the maximum level of the sound level meter is applied starting at 1 kHz. The frequency of the signal is then lowered in 1/3-octave steps, and at the same time the level of the signal is increased so as to keep the same A-frequency-weighted level, until an overload is detected or the acceptance limits of the routine are exceeded.

	Expected [dB SPL]	Measured [dB SPL]	Accept - Limit [dB]	Accept + Limit [dB]	Deviation [dB]	Uncertainty [dB]

Overload Indication, 4kHz Tone burst

The function of the overload detector of the sound level meter is verified with different voltage signals at levels around the limit of overload indication. The applied signal is a 4-period 4 kHz tonebursts starting 5 dB below Lmax, the signal level is increased until an overload is detected or the acceptance limits of the routine are exceeded.

Taktmaximal

The response of the sound level meter to sequences of repeated tonebursts when measuring Taktmaximal is registered, using a frequency of 4 kHz and a duration of 200 msec. (according to DIN 45657)

	Expected [dB SPL]	Measured [dB SPL]	Accept - Limit [dB]	Accept + Limit [dB]	Deviation [dB]	Uncertainty [dB]	
Ref.	128.0	127.7	-1.0	1.0	-0.3	0.08	*

Linearity Range, IEC60651, 1000 Hz, SPL 1 dB steps - Detector 2

The response of the sound level meter to sinusoidal voltage signals is registered for various levels covering the reference level range, including a level nominally corresponding to Lref at the measurement frequency. From this the response at the other levels is calculated relative to the response at the level corresponding to Lref. The relative response is compared to the anticipated relative response. For each level the difference between the responses at the level and at the previous level is also calculated in order to determine differential level linearity.

RMS Detector, Sine Burst, CF3 - Detector 2

The response of the sound level meter to sequences of repeated tonebursts when measuring timeweighted sound level is registered for various toneburst durations of the individual tonebursts. The peak level is held constant for all the signals and the repetition frequency is 40 Hz i.e. different crest factors. The responses are compared to the anticipated responses.

RMS Detector, Sine Burst, CF5 - Detector 2

The response of the sound level meter to sequences of repeated tonebursts when measuring timeweighted sound level is registered for various toneburst durations of the individual tonebursts. The peak level is held constant for all the signals and the repetition frequency is 40 Hz i.e. different crest factors. The responses are compared to the anticipated responses.

Time Weighting, Response to Single Burst, 200 ms, F - Detector 2

The maximum reading of the sound level meter when exposed to single tonebursts is registered for various burst durations. The toneburst response of the sound level meter is calculated as the maximum reading relative to the response of the sound level meter to a steady sinusoidal signal with the same frequency and peak voltage as the tonebursts.
The response of the Sound Level Meter to a single burst is tested and compared to the anticipated response.

Time Weighting, Peak - Detector 2

The peak level indication of the sound level meter when exposed to rectangular pulses of different duration is registered. The peak level indicated for a rectangular pulse of short duration is compared to the peak level indicated for a rectangular pulse of duration 10 ms. The measurements are carried out with both positive and negative going pulses. The peak level of the signal is 1 dB below the upper limit of the reference range.

	Expected [dB SPL]	Measured [dB SPL]	Accept - Limit [dB]	Accept + Limit [dB]	Deviation [dB]	Uncertainty [dB]

ACCREDITED

Calibration Certificate # 1568.01

CERTIFICATE OF CALIBRATION

No.: CAS-475940-Y0L2Y2-302

Calibration Of:

Model Number : 2238 Filter Serial Number: 2320720

Customer:

CMA Architects & Engineers
1509 F.D. Roosevelt Avenue Suite 201
Guaynabo, PR 00968

CALIBRATION CONDITIONS:

Environment conditions	Air temperature :	23.0	°C
	Air pressure:	98.6	kPa
	Relative Humidity:	43.0	% RH

SPECIFICATIONS:

This document certifies that the instrument as listed under "Model Number" has been calibrated and unless otherwise indicated under "Final Data", meets acceptance criteria as prescribed by the referenced Procedure. Statements of compliance, where applicable, are based on calibration results falling within specified criteria with no reduction by the uncertainty of the measurements. The calibration of the listed instrumentation was accomplished using a test system which conforms with the requirements of ISO/IEC 17025, ANSI/NCSL Z540-1, and guidelines of ISO 10012-1. For "as received" and "final" data, see the attached page(s). Items marked with one asterisk (*) are not covered by the scope of the current A2LA accreditation. This Certificate and attached data pages shall not be reproduced, except in full, without written approval of the Bruel and Kjaer Calibration Laboratory-Duluth, GA. Results relate only to the items tested. The Instrumentation has been calibrated using Measurement Standards with values traceable to the National Institute of Standards and Technology, National Measurement Institutes or derived from natural physical constants

PROCEDURE:

The calibration was performed according to procedure number : 170576 ver.1.21

RESULTS:

"As Received" Physical Condition: Acceptable for Calibration

"As Received" Data: "As Received" = "Final Data" "Final Data": Within Acceptance Criteria

The reported expanded uncertainty is based on the standard uncertainty multiplied by a coverage factor $k=2$ providing a level of confidence of approximately 95%. The uncertainty evaluation has been carried out in accordance with EA-4/02 from elements originating from standards, calibration method, effect of environmental conditions and any short term contribution from the device under calibration.

Date of Calibration: 19 October 2020

Certificate issued: 19 October 2020

Kyle Chancey

Calibration Technician

Quality Representative

The Brüel & Kjær Calibration Laboratory

RESULTS:

Test software: 170576 ver.1.21 Type: ZT0328 Serial No.: 2320720 Date: 19.10.2020
2238 software: BZ7125 Version: 1,1,0

NOTE: Measurements marked with an asterisk (*) are outside our scope of accreditation.
NOTE: Measurements marked with a G has reduced acceptlimits (Guardbanding).

Parameters	Unit	Max.	Min.	Measured		Expan. Unc.
Visual Inspection						
- Switches, Connectors, Indicators & etc.				OK	*	none

Reference Attenuation:
Calculated attenuation Aref is based on measured input level and output level. Input levels are measured by means of the DMM. Output levels are measured by means of DMM or B&K 2238 using digital readout.

Measuring	Input	Unit	Max.	Min.	Measured	Expan. Unc.
Attenuation to Aux 1	120 dBuV	dBuV	6.20	5.80	6.07	0.02
Attenuation measured by 2238	90 dBuV	dBSPL	-3.70	-4.30	-3.84	0.07

1/3 Octave Filter Relative Attenuation:
Attenuation values are calculated from Vin, Vout and Aref. Input levels are measured by means of the DMM. If expected output level are less than 50mVrms, the output levels are measured by means of the 2238 itself, else the output levels are measured by means of the DMM.
In each filterband the Reference Passband Attenuation i.e. the minimum attenuation of the filterband and variation of attenuation around the centerfrequency are calculated.

1/1 Octave Filter Relative Attenuation:
Attenuation values are calculated from Vin, Vout and Aref. Input levels are measured by means of the DMM. If expected output level are less than 50mVrms, the output levels are measured by means of the 2238 itself, else the output levels are measured by means of the DMM.
In each filterband the Reference Passband Attenuation i.e. the minimum attenuation of the filterband and variation of attenuation around the centerfrequency are calculated.

The Brüel & Kjær Calibration Laboratory

Variation of Reference Passband Attenuation:
The variation of reference passband attenuation is calculated as the difference between the minimum and the maximum of Reference Passband Attenuation of the filter set.

Measurement	Unit	Max.	Measured	Expan. Unc.
Max-Min on 1/3 octave filter set	dB	0.30	0.20	0.03
Max-Min on 1/1 octave filter set	dB	0.30	0.08	0.03

ACCREDITED

Calibration Certificate # 1568.01

CERTIFICATE OF CALIBRATION

No.: CAS-475940-Y0L2Y2-401

CALIBRATION OF:

Calibrator:	Brüel & Kjær	Type 4231 IEC Class: 1		Serial No.:	2313932

CUSTOMER:

CMA Architects & Engineers LLP
1509 F.D. Roosevelt Avenue
Guaynabo, PR 00968

CALIBRATION CONDITIONS:

Environment conditions:	Air temperature:	23.1	°C
	Air pressure:	98.604	kPa
	Relative Humidity:	42.6	%RH

SPECIFICATIONS:

This document certifies that the acoustic calibrator as listed under "Type" has been calibrated and unless otherwise indicated under "Final Data", meets acceptance criteria as prescribed by the referenced Procedure. Statements of compliance, where applicable, are based on calibration results falling within specified criteria with no reduction by the uncertainty of the measurements. The calibration of the listed transducer was accomplished using a test system which conforms to the requirements of ISO/IEC 17025, ANSI/NCSL Z540-1, and guidelines of ISO 10012-1. For "as received" and "final" data, see the attached page(s). Items marked with one asterisk (*) are not covered by the scope of the current A2LA accreditation. This Certificate and attached data pages shall not be reproduced, except in full, without written approval of the Bruel and Kjaer Calibration Laboratory-Duluth, GA. Results relate only to the items tested. The transducer has been calibrated using Measurement Standards with values traceable to the National Institute of Standards and Technology, National Measurement Institutes or derived from natural physical constants. The acoustic calibrator has been calibrated in accordance with the requirements as specified in IEC60942.

PROCEDURE:

The measurements have been performed with the assistance of Brüel & Kjær acoustic calibrator calibration application Software version 2.3.4 Type 7794 using calibration procedure 4231 Complete

RESULTS:

- [X] "As Received" Data: Within Acceptance Criteria
- [ ] "As Received" Data: Outside Acceptance Criteria
- [X] "Final" Data : Within Acceptance Criteria
- [ ] "Final" Data : Outside Acceptance Criteria

The reported expanded uncertainty is based on the standard uncertainty multiplied by a coverage factor $k = 2$, providing a level of confidence of approximately 95%. The uncertainty evaluation has been carried out in accordance with EA-4/02from elements originating from the standards, calibration method, effect of environmental conditions and any short time contribution from the calibrator under calibration.

Date of Calibration: October 19, 2020

Certificate issued: October 19, 2020

During the calibration the calibrator has been loaded by the load volume of the Transfer Microphone. The load volumes for a number of different types of Transfer Microphones are listed in the table below.
For Brüel & Kjær Pistonphones types 4220 and 4228 the result of the SPL calibration has been corrected to be valid for a load volume of 1333 mm^3 . For all other types the result is valid with the actual load volume.

Transfer Microphone Type	Fulfils standard IEC 61094-1 LS	Fulfils standard IEC 61094-4 WS	Load Volume 1" (1/2" mic including DP-0776)	Load Volume 1/2"
4180	yes	yes	1126 mm^3	43 mm^3
4192	-	yes	1273 mm^3	190 mm^3
9545	-	-	1333 mm^3	-

I. HALLAZGOS SOBRESALIENTES

El propósito de este estudio de justicia ambiental (EJA) es evaluar si la extensión propuesta al expreso PR-5 desde la intersección PR-199 (Avenida de las Cumbres) representa una carga social y ambiental altamente desproporcionada y adversa para las comunidades ubicadas en el área donde se propone el proyecto. El análisis consiste en la evaluación de las condiciones socioeconómicas de la comunidad con otras unidades geográficas cercanas, para examinar si su condición étnica es distinta o si su condición socioeconómica se encuentra en desventaja en relación con las demás áreas examinadas.

El proyecto propuesto atravesará cuatro (4) barrios entre los municipios de Bayamón y Toa Alta. En Bayamón, el proyecto discurre por los barrios Minillas, Cerro Gordo y Buena Vista, y en Toa Alta por el barrio Ortiz. La extensión propuesta atraviesa 17 grupos de bloques en los barrios mencionados. Para propósitos de este estudio, estos 17 grupos de bloques fueron considerados como la comunidad objeto del estudio de justicia ambiental, mientras que los cuatro (4) barrios antes mencionados se denominan, para propósito del análisis, como la región de referencia.

Para proveer un contexto amplio de análisis, la información socioeconómica de la comunidad de estudio también se comparó con la correspondiente a la de los municipios de Bayamón y Toa Alta y con Puerto Rico. Para este EJA se utilizó la información más actualizada que publica el Negociado Federal del Censo, conocida como la Encuesta de la Comunidad Americana (ACS, por sus siglas en inglés) 2015-2019 y se comparó con la ACS de 2010-2014 en las variables de población y nivel de ocupación de vivienda.

Los hallazgos de la evaluación EJA son los siguientes:

- La comunidad de estudio ha perdido el 6% de la población entre el 2014 al 2019. Sin embargo, en la región de referencia la población se redujo en un 14% para el mismo periodo.
- En términos de ingreso a nivel de individuo ($15,532), familiar ($37,600) y del hogar ($32,690), la comunidad de estudio es muy superior a la región de referencia,

Puerto Rico y los municipios de Bayamón y Toa Alta. Cabe destacar que el barrio Ortiz ostenta los niveles de ingreso más altos, y es parte de los barrios donde transcurre la extensión propuesta.

- Según los datos de pobreza de la ACS (2015 a 2019), el 28% de la población de la comunidad de estudio está por debajo del nivel de pobreza. Sin embargo, al comparar con la región de referencia, el nivel de pobreza es de 32%. A nivel general, el nivel de pobreza para la población de Puerto Rico es de 44%, lo que es significativamente mayor a la comunidad de estudio y la región de referencia.
- El 12% de la población de 25 años o más de la comunidad de estudio no ha obtenido el diploma de cuarto año de escuela superior. Sin embargo, al contrastar la información, se denota que en la región de referencia el 17% no ha completado el grado de escuela superior para esta misma cohorte de edad.
- A tenor con la información obtenida de la ACS (2015 a 2019), la tasa de participación laboral en la comunidad de estudio es de 51.4%, lo que equivale a que cinco de cada diez personas hábiles para trabajar lo están haciendo. Al comparar esta información con la tasa de participación laboral de Puerto Rico (44.4%), la comunidad de estudio tiene una participación laboral más alta.
- Según los datos de la ACS (2015 a 2019), el nivel de desempleo en la comunidad de estudio es de 5.7%. A modo de comparación, la tasa de desempleo en la región de referencia es de 5.9%, levemente mayor si la comparamos con la comunidad de estudio. Sin embargo, al comparar esta información con Puerto Rico, la tasa de desempleo de la Isla es de 7.1%, significativamente mayor a la comunidad de estudio, la región de referencia, y los municipios de Toa Alta (5.9%) y Bayamón (6.3%).
- En la comunidad de estudio, el 83% de las unidades de vivienda se encuentran ocupadas. Este valor es más alto si se compara con Puerto Rico, donde el 76% de las viviendas se reportan como ocupadas.
- La comunidad de estudio tiene el 17% del total de unidades de vivienda vacantes mientras que la región de referencia tiene un 20% de unidades vacantes.

- El 59% de las unidades vacantes en la comunidad de estudio están disponibles y no tienen un uso actual. En cambio, el 13% de las unidades vacantes son de uso ocasional o recreacional mientras que un 10% es de renta, pero no cuenta con un inquilino.
- El 58% del total de las unidades de vivienda en la comunidad de estudio tiene un valor que oscila entre los $100,000 a los $199,999.
- En la comunidad de estudio se encuentra la proporción más alta de viviendas que sobrepasan los $300,000, lo que equivale a un 5.3%. Al comparar con la región de referencia y Puerto Rico, la proporción de viviendas de este valor es menor, representando un 3.1% y 4.7% respectivamente.
- Según la información obtenida de la ACS (2015 a 2019), es menester destacar que el 30% de la población de la comunidad de estudio viaja más de 60 minutos hasta llegar a su destino de trabajo. Esta cifra es superior a la región de referencia (23%), Toa Alta (27%), Bayamón (17%) y Puerto Rico (13%). Lo anterior es muy importante, considerando el tráfico vehicular en el área de la comunidad de estudio, particularmente, el tramo de la carretera 167 que comienza en el centro comercial de la urbanización Los Palacios hasta la intersección de la carretera 199, cercano al centro comercial Rexville Towne Center.

Impacto Económico del Proyecto Propuesto

- Según el análisis de impacto económico, el proyecto de la extensión de la carretera PR-5 creará un total de 2,656 empleos de construcción, de los cuales 1,501 son directos y 1,155 son indirectos o inducidos.
- Según el Departamento del Trabajo de Puerto Rico, el salario medio en la construcción es de $23,610, lo que significa que los ingresos derivados de las actividades de construcción podrían ascender a $81,289,576.
- En cuanto a los ingresos generados a partir de las actividades de construcción, el gobierno municipal y estatal generarán aproximadamente $25,896,247 por concepto de impuestos al consumo, contribuciones de ingreso, arbitrios, patentes, entre otros.

II. INTRODUCCIÓN

Este documento presenta un análisis socioeconómico y de justicia ambiental para la extensión de la carretera PR-5. Este análisis se realiza como parte de los requisitos de contenido del Reglamento para el Proceso de Evaluación Ambiental (RPEA), Reglamento Número 8858 del 23 de noviembre de 2016.

2.1 Marco legal

La Regla 123 del RPEA dispone los requisitos de contenido de las declaraciones de impacto ambiental. Entre dichos requisitos se dispone que las declaraciones de impacto ambiental deben contener:

- Tendencias de desarrollo y población del área bajo consideración y cualquier información relacionada con estas variables que pueda justificar la acción o determinar los impactos resultantes.
- Análisis de Justicia Ambiental que tome en consideración, al menos, los siguientes aspectos:
    - distribución poblacional por grupos étnicos
    - distribución poblacional por parámetros socioeconómicos.

El Reglamento Núm. 8858 define el concepto de Justicia Ambiental como:

> *El tratamiento justo y participación significativa de todas las personas independientes de su raza, color, origen nacional, cultura, nivel de educación o ingreso con respecto al desarrollo, aplicación y fiscalización de las leyes, reglamentos y políticas ambientales.*

2.2 Descripción del proyecto propuesto

La Autoridad de Carreteras y Transportación (ACT) propone la extensión de la carretera PR-5. Esta extensión consiste en un tramo de 5.07 kilómetros que va desde la intersección de la carretera PR-5 con la PR-199 (Avenida Las Cumbres) por el norte, hasta la intersección de la carretera PR-5 con la PR-167 por el sur. La alineación propuesta se presenta en el siguiente mapa.

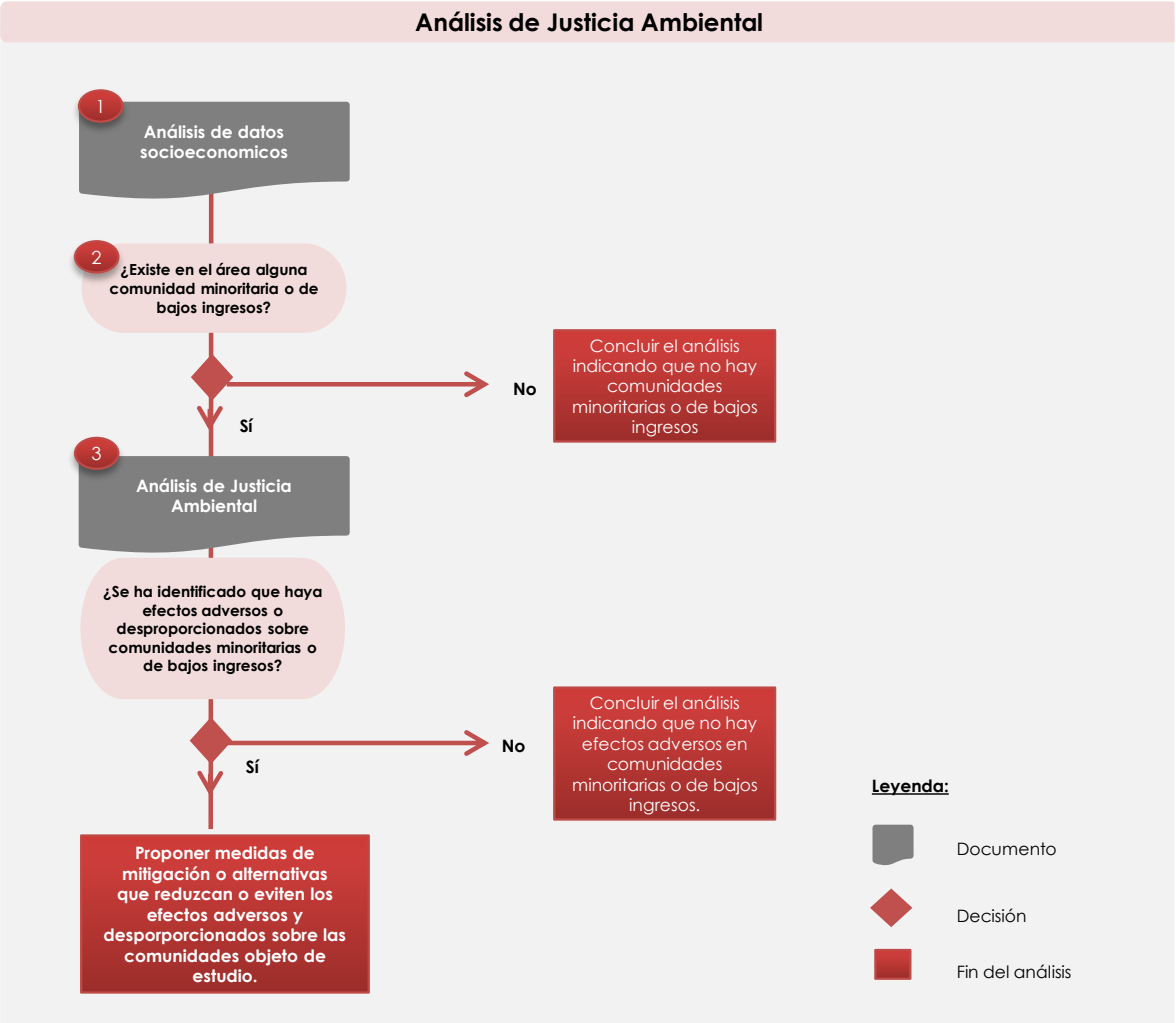
MAPA 1. ALINEACIÓN PROPUESTA PARA LA EXTENSIÓN DE LA CARRETERA PR-5

2.3 Proceso utilizado para el desarrollo del análisis

Para llevar a cabo este análisis socioeconómico y de justicia ambiental se usó como base el proceso establecido por la Administración Federal de Transporte en la Circular Núm. 4703.1. El procedimiento utilizado consistió en tres (3) pasos generales:

- Definir la comunidad que será objeto del análisis de justicia ambiental;
- Comparar los datos demográficos de la comunidad con otra área geográfica apropiada, que llamamos la región de estudio; y
- Determinar si la comunidad presenta características demográficas o socioeconomicas que indiquen que es una comunidad de justicia ambiental, y en la cual se deben aplicar los principios de justicia ambiental.

El propósito principal del análisis de justicia ambiental es evaluar si la acción propuesta representa una carga desproporcionada y adversa para las comunidades que se encuentran próximas a donde se propone el proyecto, debido a su raza, etnia o ingresos. El fin ulterior no es transferir los riesgos, más bien procurar el tratamiento justo de todos los ciudadanos.



Fuente: traducido y adaptado de: USDOT. FHWA. Guidance on Environmental Justice and NEPA. 2012.

2.4 Área de estudio seleccionada

La extensión de la carretera PR-5 propuesta, transcurriría por cuatro (4) barrios entre los municipios de Bayamón y Toa Alta.

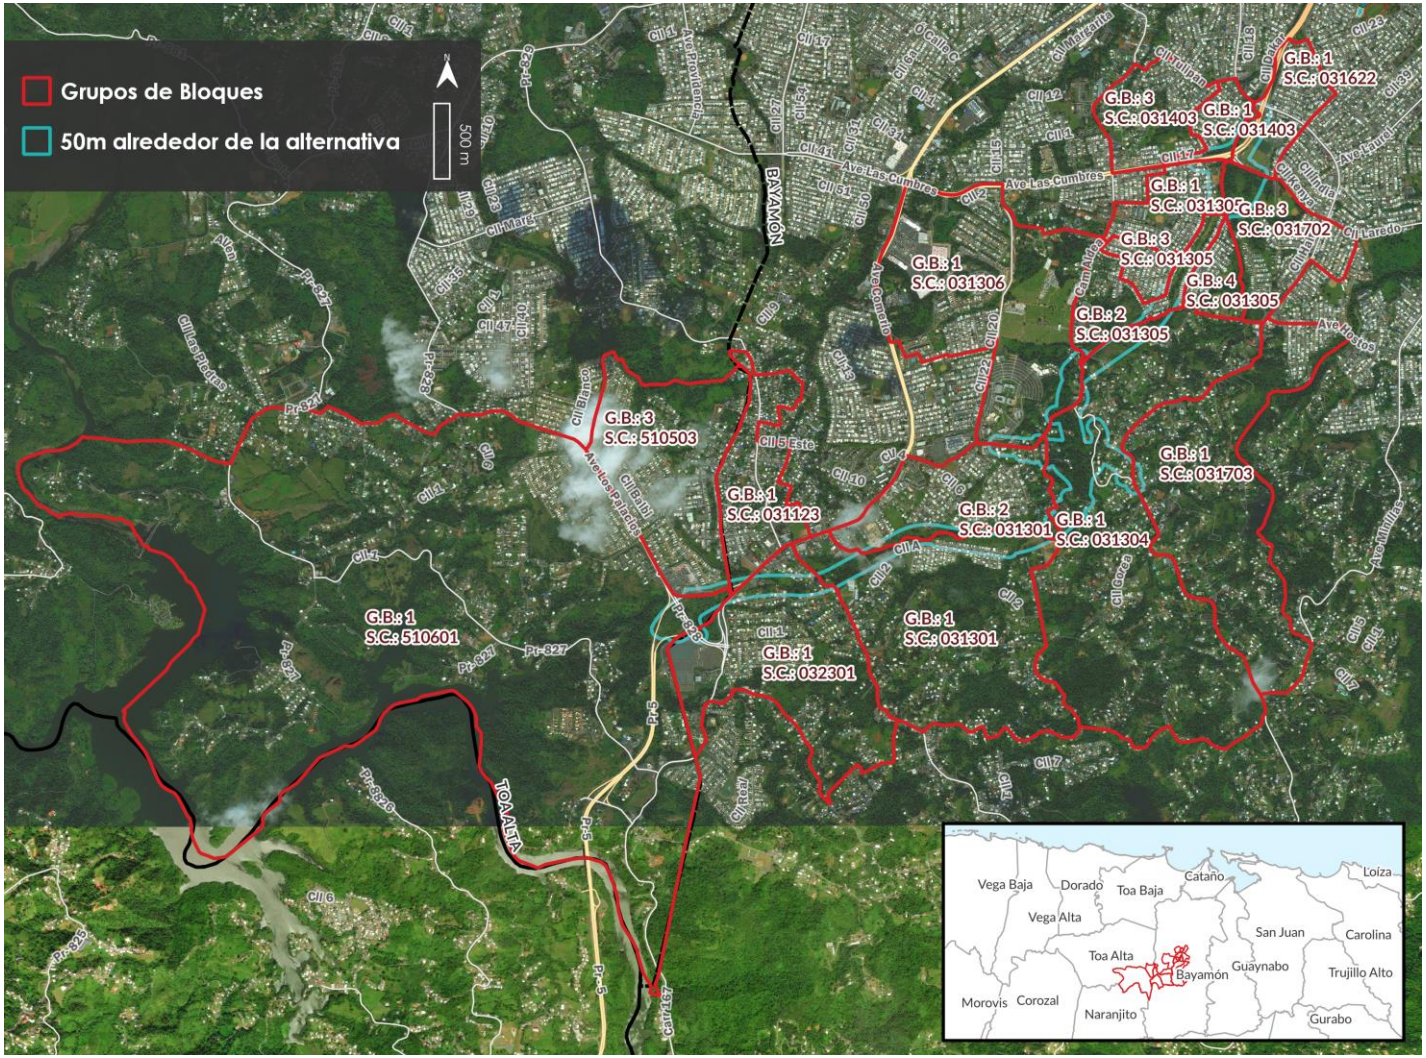
- En Bayamón: barrios Minillas, Cerro Gordo y Buena Vista
- En Toa Alta: barrio Ortiz

Para propósitos del análisis de justicia ambiental, es de interés conocer, en la medida de lo posible, las características de las comunidades que podrían estar directamente afectadas por el proyecto. Por tal razón, se utilizó la información de los grupos de bloques censales. La extensión propuesta atraviesa 17 grupos de bloques en los barrios antes mencionados. Estos 17 grupos de bloques fueron considerados como la comunidad objeto del estudio de justicia ambiental.

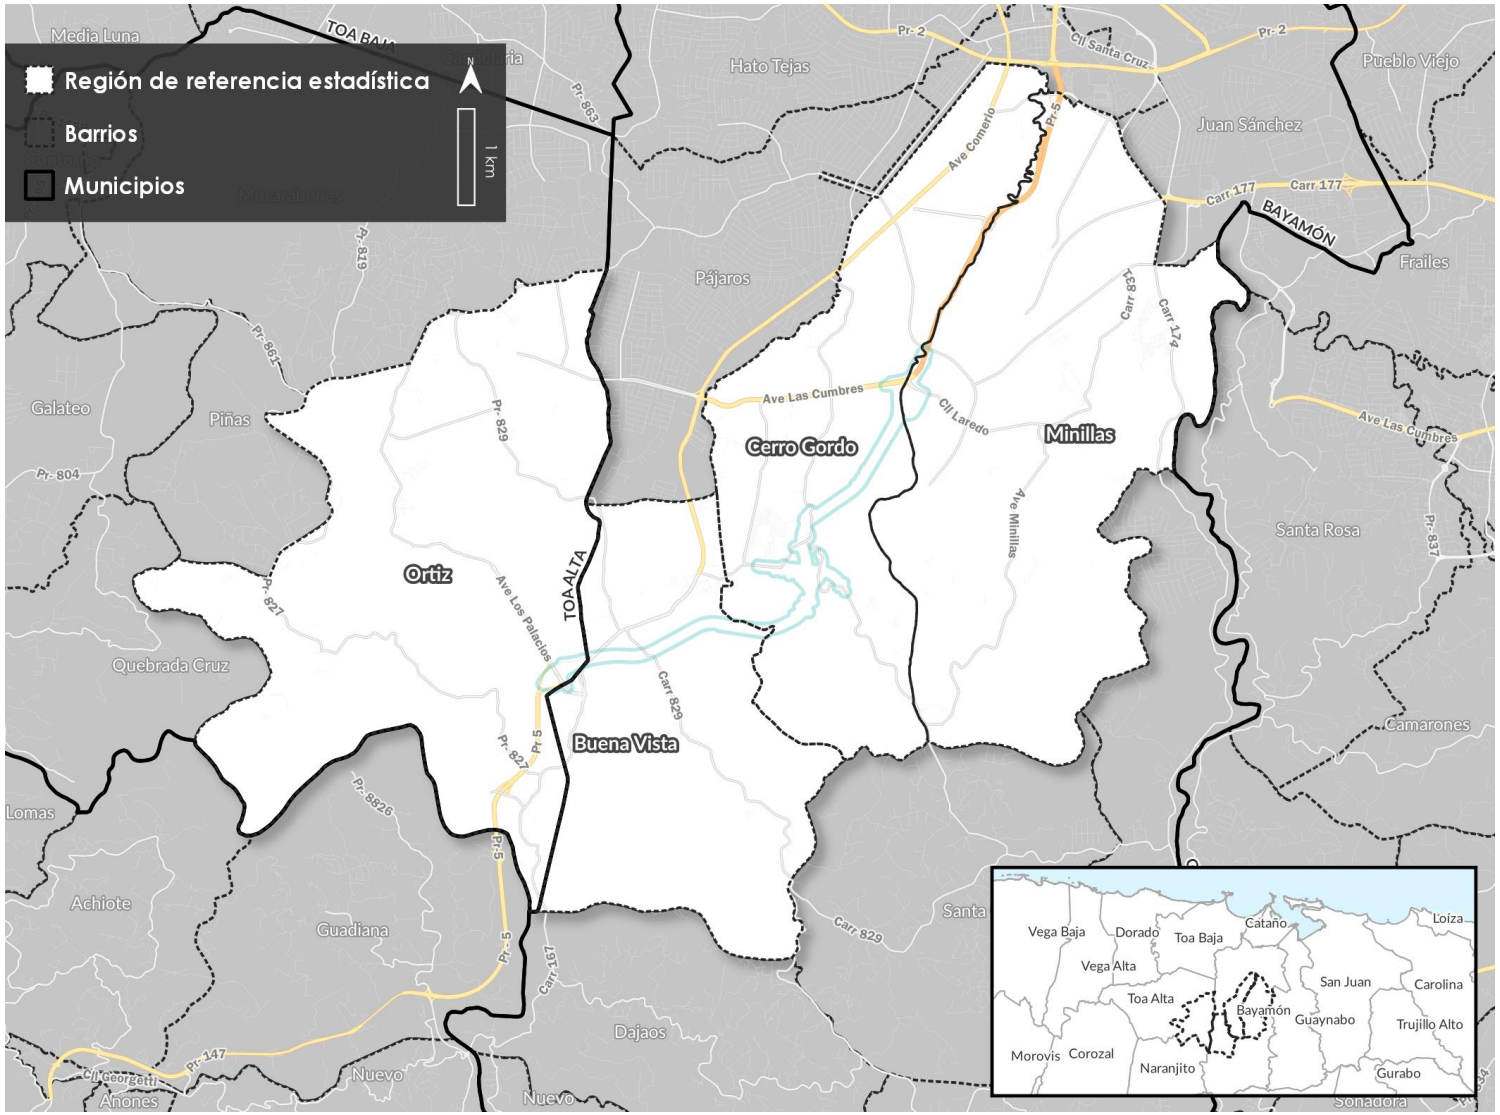
Los datos del censo para esta comunidad de estudio fueron comparados con la información socioeconómica de los barrios por donde transcurriría la ruta propuesta, denominados, para propósito del análisis, como la región de referencia. Para proveer un contexto amplio de análisis, la información socioeconómica de la comunidad de estudio también se comparó con la correspondiente a la de los municipios de Bayamón y Toa Alta y con Puerto Rico.

Para este análisis de justicia ambiental, se utilizaron los datos de la ACS 2015-2019 y se compararon con los datos de la ACS 2010-2014. Estos son los datos del Negociado del Censo federal más actualizados que se encuentran disponibles para el área de estudio.

MAPA 2. COMUNIDAD DE ESTUDIO



MAPA 3. REGIÓN DE REFERENCIA



2.5 Variables utilizadas en el análisis

Las condiciones socioeconómicas de la comunidad de estudio se evaluaron utilizando los datos más recientes que ha publicado la Oficina del Censo de los EE. UU. sobre la Encuesta a la Comunidad Americana (ACS) de 2015 a 2019. Sin embargo, es importante señalar lo siguiente, para el analisis de la variable de cambio poblacional y nivel de ocupación de vivienda se comparó el conjunto de datos de 2015 a 2019 con el 2010 a 2014, de modo que se pueda tener un referente más amplio en cuanto a patrones o tendencias de los últimos cinco años respecto a estas variables. Por tanto, para las condiciones socioeconomicas de la comunidad en general, solo se utilizo como base el conjunto de datos de 2015 a 2019.

Variables socioeconómicas

- Población
- Edad media
- Educación
- Raza
- Ingreso per cápita
- Ingreso medio de los hogares
- Hogares por debajo del nivel de pobreza
- Hogares con ingresos provenientes de asistencia pública
- Distancia de viaje

Variables de empleo

- Situación laboral
- Participación laboral
- Desempleo

Variables de vivienda

- Situación de ocupación
- Condiciones de la vivienda
- Valor de la vivienda

Los datos son analizados y discutidos para la comunidad de estudio, comparados con los barrios de la comunidad de estudio, la región de referencia, Puerto Rico y los municipios de Bayamón y Toa Alta.

III. RESULTADOS

3.1 Variables socioeconómicas

3.1.1 Población

Es preciso destacar el impacto que tiene la extensión del tramo de la carretera PR-5 no sólo en los municipios de Toa Alta y Bayamón, sino que se extiende hasta los municipios de Naranjito, Barranquitas y Comerío. Las relaciones de desplazamiento convergen entre estos municipios, ya sea por razones económicas, de empleo, de accesibilidad, por cercanía, entre otras. Por ello, es menester auscultar el cambio poblacional por los pasados cinco (5) años en estos municipios. Es muy probable que en mayor instancia la población residente de estos municipios pueda transitar por este nuevo tramo.

De acuerdo con los datos de la ACS 2015-2019 y 2010-2014 de la Oficina del Censo Federal, la población del municipio de Bayamón ostenta la disminución poblacional más significativa, para un 11.5%. Así mismo, el municipio de Comerío tiene una reducción poblacional de 6.4%, Barranquitas y Naranjito tienen una reducción de 5.5% cada uno, y Toa Alta tiene una reducción de 2.4%. En la siguiente tabla se desglosa la población entre el 2014 al 2019 para los municipios de referencia.

TABLA 1. COMPARATIVA POBLACIONAL MUNICIPIOS CERCANOS A LA EXTENSIÓN

Área Geográfica	Población Total 2019	Población Total 2014	Cambio Poblacional
Bayamón	178,192	201,273	-11.5%
Toa Alta	72,864	74,688	-2.4%
Comerío	19,224	20,533	-6.4%
Barranquitas	28,393	30,045	-5.5%
Naranjito	28,112	29,751	-5.5%

Fuente: Oficina del Censo de EE. UU., Encuesta de la Comunidad Americana para Puerto Rico 2015-2019, 2010-2014.

Respecto al análisis de la comunidad de estudio y su región de referencia, se encontró que a 2019 la población de la comunidad de estudio ascendió a 30,049. Es preciso destacar la merma poblacional que han enfrentado tanto la comunidad de estudio como los municipios y Puerto Rico entre el 2014 y el 2019. Durante dicho periodo la comunidad de estudio perdió el 6% de la población. Al comparar la comunidad de

estudio con los barrios por donde transcurre la ruta propuesta, se encontró que la población se redujo en un 14%, de 114,268 a 98,578. Esta tendencia se refleja a nivel general en Puerto Rico, en el 2019 la población ascendió a 3,318,447, un 9% menos si se compara con el 2014, equivalente a 3,638,965 habitantes.

Es menester destacar que los barrios de Minillas y Cerro Gordo tienen el cambio poblacional más acentuado, con una disminución de 20% y 16% respectivamente. De los barrios donde trascurre la ruta, el barrio Minillas en Bayamón y el barrio Ortiz en Toa Alta son los más altos en población, con 31,719 y 28,469 habitantes, respectivamente. Al analizar la gráfica inferior notamos que, si no estuviera barrio Ortiz en la comunidad de estudio, el cambio poblacional sería más significativo, ya que solo reflejó una merma de 2%, muy inferior si se compara con el resto de los barrios que componen la comunidad de estudio.

TABLA 2. ESTIMADOS DE LA POBLACIÓN (2019 Y 2014)

Área Geográfica	Población Total 2019	%	Mediana de Edad	Población Total 2014	Cambio
Bayamón	**178,192**	**5%**	**42.1**	**201,273**	**-11%**
Bayamón barrio-pueblo	3,376	2%	46.7	3,787	-11%

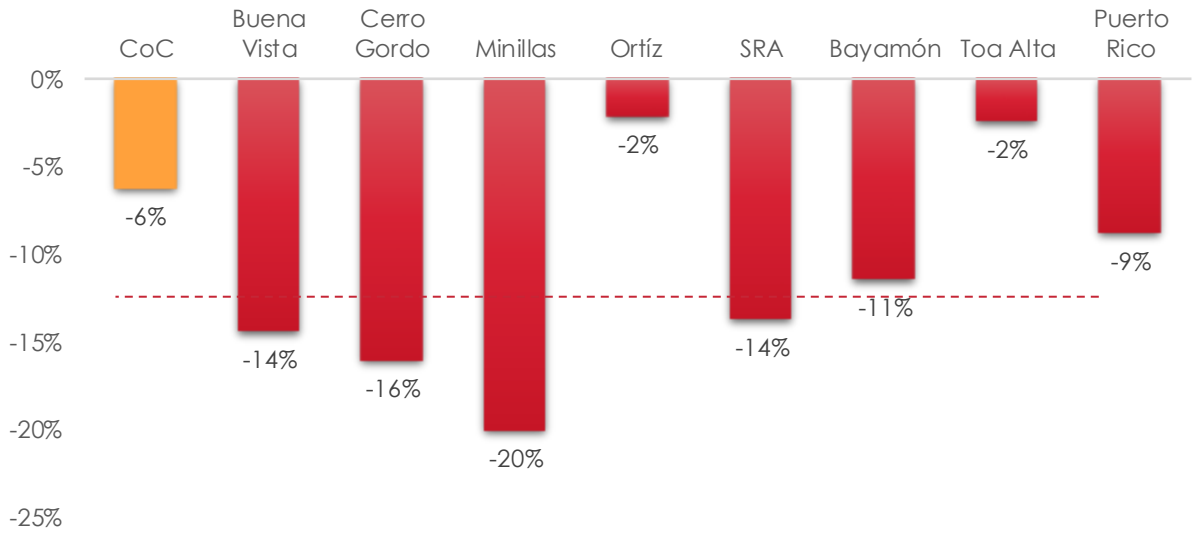
GRÁFICA 1. CAMBIO POBLACIONAL (2014-2019)



Fuente: Oficina del Censo de EE. UU., Encuesta de la Comunidad Americana para Puerto Rico 2015-2019.

3.1.2 Edad de la Población

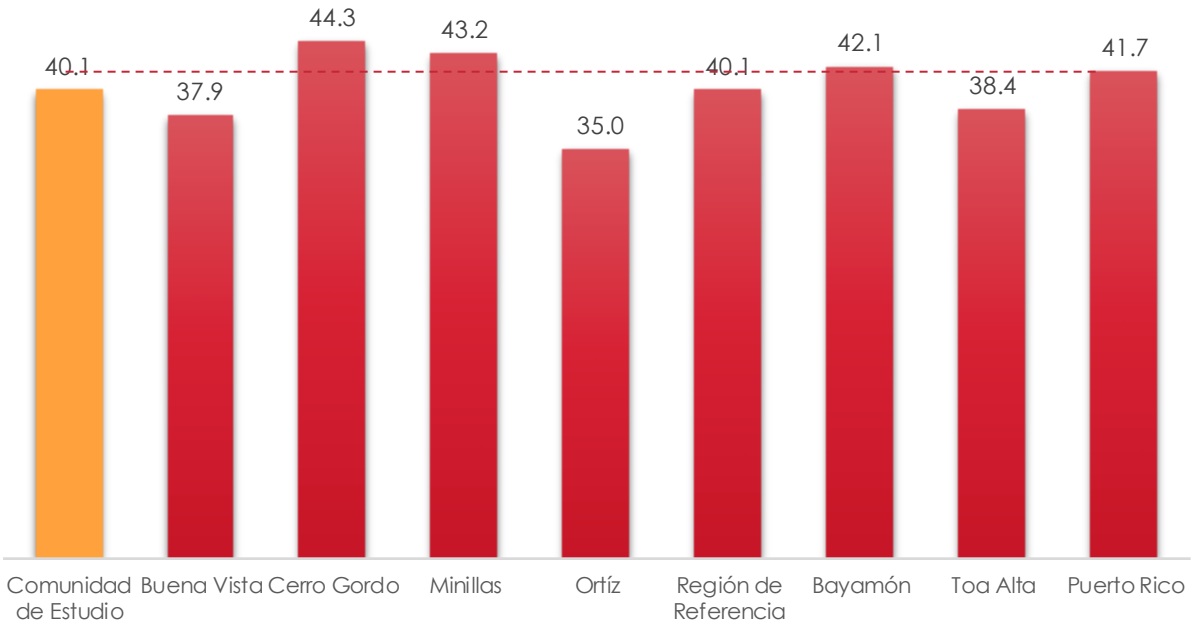
En la comunidad de estudio la mediana de edad se sitúa en 40.9 años. Al comparar con la región de referencia, la mediana de edad es de 40.1, muy similar a la comunidad de estudio. En cambio, al comparar con el municipio de Bayamón (42.1), la comunidad de estudio y la región de referencia tienen una mediana de edad menor. Sin embargo, la mediana de edad en Toa Alta es de 38.4, lo que significa que la población en Toa Alta es menor en edad si se compara con Puerto Rico (41.7), Bayamón, la región de referencia y la comunidad de estudio.

TABLA 3. MEDIANA DE EDAD

Área Geográfica	Mediana de Edad
Bayamón	**42.1**
Bayamón barrio-pueblo	46.7
Buena Vista	37.9
Cerro Gordo	44.3
Dajaos	49.8
Guaraguao Abajo	39.1
Guaraguao Arriba	45.8
Hato Tejas	42.4
Juan Sánchez	39.6
Minillas	43.2
Nuevo	43.2
Pájaros	40.9
Santa Olaya	44.6
Toa Alta	38.4
Contorno	44.4
Galateo	37.1
Mucarabones	38.7
Ortíz	35.0
Piñas	48.1
Quebrada Arenas	44.5
Quebrada Cruz	45.2
Río Lajas	38.3
Toa Alta barrio-pueblo	**35.5**
Comunidad de Estudio	**40.1**
Región de Referencia	**40.1**
Puerto Rico	**41.7**

Fuente: Oficina del Censo de EE. UU., Encuesta de la Comunidad Americana para Puerto Rico 2015-2019.

GRÁFICA 2. MEDIANA DE EDAD (AÑOS)



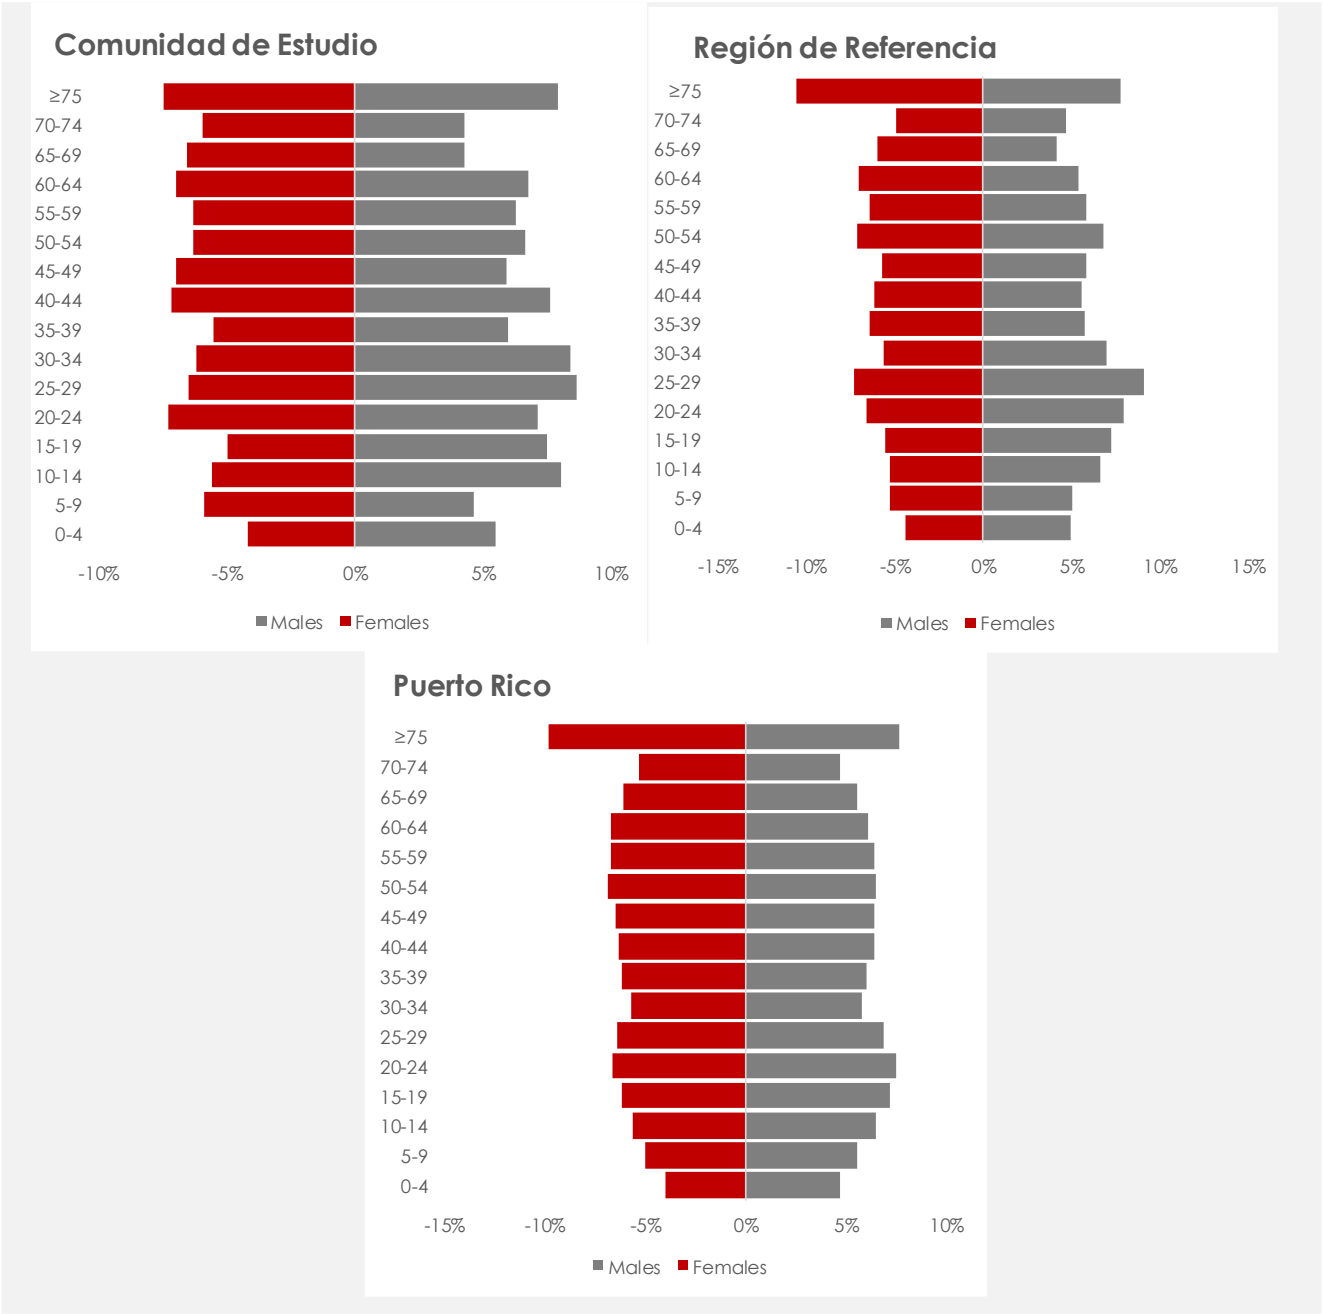
Fuente: Oficina del Censo de EE. UU., Encuesta de la Comunidad Americana para Puerto Rico 2015-2019.

3.1.3 Distribución de la población por edad y género

El análisis de la distribución de la población por edad y género para la comunidad de estudio y la región de referencia muestra una pirámide de población regresiva, en la que la base de la pirámide es más pequeña que las cohortes siguientes. Este tipo de pirámide regresiva se produce cuando la natalidad disminuye con los años. En consecuencia, la población en la región de referencia y en la comunidad de estudio ha envejecido.

En la comunidad de estudio, la proporción más significativa de la población es la de más de 75 años, mientras que la más pequeña es la de entre 0 y 4 años. Es decir, factores como la baja natalidad de los últimos años, combinada con la emigración de familias con hijos, ha impulsado la reducción del número de niños y ha aumentado proporcionalmente la población de adultos mayores. Por otro lado, la región de referencia y Puerto Rico muestran tendencias similares a la comunidad de estudio.

GRÁFICA 3. GRUPOS POBLACIONALES



Fuente: Oficina del Censo de EE. UU., Encuesta de la Comunidad Americana para Puerto Rico 2015-2019.

3.1.4 Ingresos de la Población

Según la información obtenida de la ACS (2015 a 2019) con relación al ingreso de la población, el ingreso per cápita de la comunidad de estudio asciende a $15,532. Al comparar con la región de referencia, los municipios y Puerto Rico, el ingreso per cápita en la comunidad de estudio es significativamente superior. El ingreso per cápita de Puerto Rico es de $12,914, mientras que en la región de referencia es de $14,899, en Bayamón es de $14,782 y en Toa Alta es de $14,661. Por otra parte, la mediana de ingreso familiar en la comunidad de estudio es de $37,600, lo que es significativamente mayor si se compara con la mediana de ingreso familiar de Puerto Rico, que asciende a $24,979. De igual modo, la comunidad de estudio tiene la mediana del ingreso del hogar ($32,690) significativamente superior si se compara con la región de referencia ($28,887), el municipio de Toa Alta ($28,834), el municipio de Bayamón ($26,420) y Puerto Rico ($20,539). El barrio Ortiz tiene la mediana de ingreso familiar y del hogar más alta de la comunidad de estudio, para $39,585 y $35,658.

TABLA 4. INGRESO PER CÁPITA, FAMILIAR Y DEL HOGAR

Área Geográfica	Ingreso per Cápita	Mediana de Ingreso Familiar	Mediana del Ingreso del Hogar
Bayamón	**$ 14,782**	**$ 31,746**	**$ 26,420**
Bayamón barrio-pueblo	$ 8,664	$ 12,064	$ 10,637
Buena Vista	$ 14,719	$ 36,939	$ 31,222
Cerro Gordo	$ 14,107	$ 30,191	$ 25,758
Dajaos	$ 10,778	$ 23,398	$ 20,559
Guaraguao Abajo	$ 14,782	$ 34,282	$ 32,177
Guaraguao Arriba	$ 9,369	$ 24,306	$ 11,250
Hato Tejas	$ 16,254	$ 37,153	$ 31,492
Juan Sánchez	$ 18,823	$ 42,236	$ 34,809
Minillas	$ 14,086	$ 27,527	$ 22,628
Nuevo	$ 11,603	$ 26,213	$ 24,625
Pájaros	$ 13,110	$ 27,549	$ 24,533
Santa Olaya	$ 11,244	$ 27,606	$ 17,411
Toa Alta	**$ 14,661**	**$ 34,269**	**$ 28,834**
Contorno	$ 10,956	$ 26,053	$ 21,220
Galateo	$ 7,540	$ 17,461	$ 17,074
Mucarabones	$ 15,915	$ 37,972	$ 32,040
Ortíz	$ 16,682	$ 39,585	$ 35,658
Piñas	$ 13,696	$ 31,607	$ 22,067
Quebrada Arenas	$ 11,554	$ 30,474	$ 24,104
Quebrada Cruz	$ 13,950	$ 22,650	$ 18,904
Río Lajas	$ 13,336	$ 34,158	$ 27,868
Toa Alta barrio-pueblo	$ 7,038	$ 18,571	$ 19,429
Región de Referencia	**$ 14,899**	**$ 33,561**	**$ 28,817**
Comunidad de Estudio	**$ 15,532**	**$ 37,600**	**$ 32,690**
Puerto Rico	**$ 12,914**	**$ 24,979**	**$ 20,539**

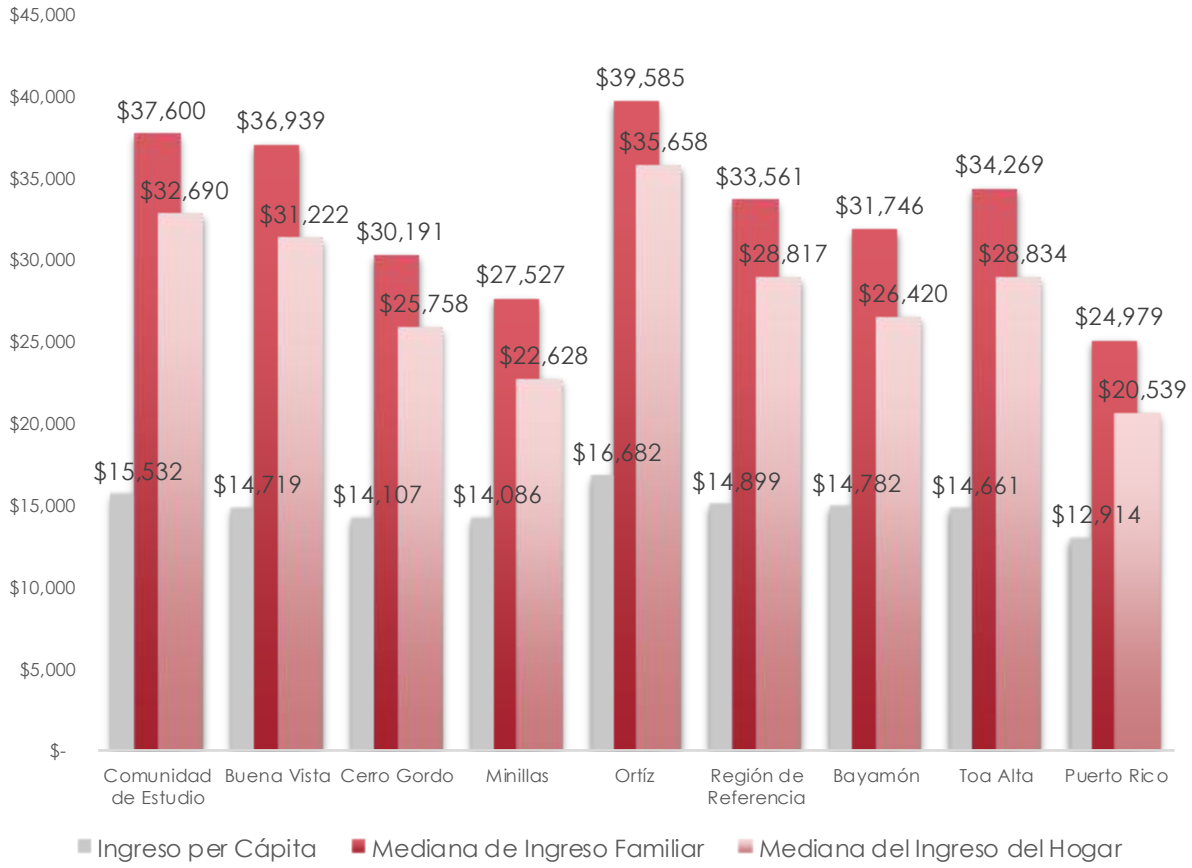
GRÁFICA 4. COMPARATIVA DEL INGRESO PER CÁPITA, POR FAMILIA Y DEL HOGAR ($)

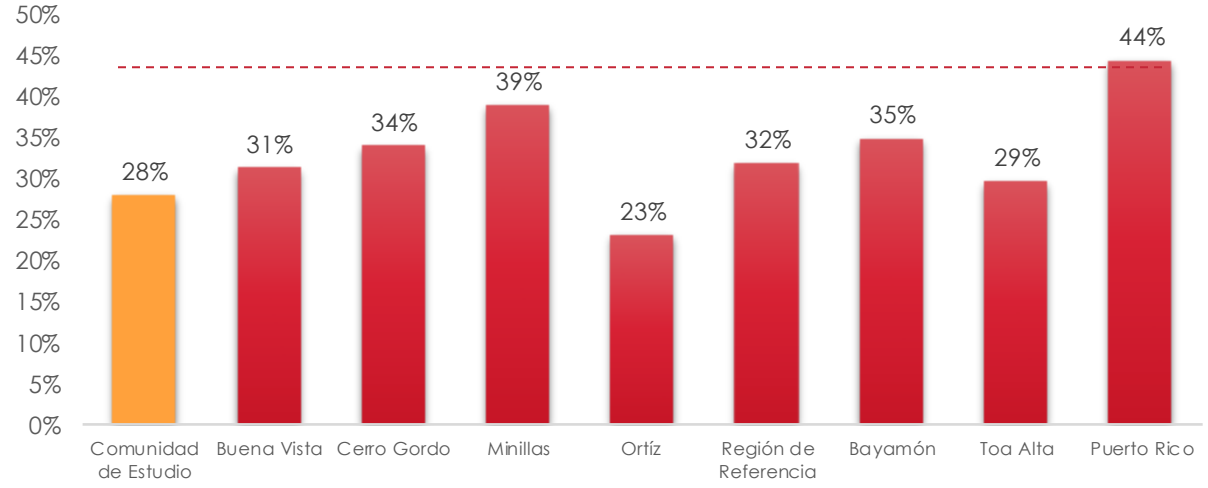


Fuente: Oficina del Censo de EE. UU., Encuesta de la Comunidad Americana para Puerto Rico 2015-2019.

3.1.5 Nivel de Pobreza de la Población

Según los datos de pobreza de la ACS (2015 a 2019), el 28% de la población de la comunidad de estudio está por debajo del nivel de pobreza. Sin embargo, al comparar con la región de referencia, el nivel de pobreza es de 32%. A nivel general, el nivel de pobreza para la población de Puerto Rico es de 44%, lo que es significativamente mayor a la comunidad de estudio y la región de referencia. El barrio con el nivel de pobreza más bajo para la población en general es barrio Ortiz en Toa Alta, con un 23%.

GRÁFICA 5. POBLACIÓN BAJO EL NIVEL DE POBREZA



Fuente: Oficina del Censo de EE. UU., Encuesta de la Comunidad Americana para Puerto Rico 2015-2019.

Por otro lado, al examinar el nivel de pobreza para las familias en la comunidad de estudio, se destaca que el 25% de las familias se encuentra bajo el nivel de pobreza. Sin embargo, al contrastar esta información con la región de referencia (20%) y Puerto Rico (22%), se refleja un nivel de pobreza en las familias mayor para la comunidad de estudio. El barrio Ortiz en Toa Alta ostenta el nivel de pobreza más bajo para las familias, equivalente a un 15%.

GRÁFICA 6. FAMILIAS BAJO EL NIVEL DE POBREZA

3.1.6 Nivel de Escolaridad de la Población

Según los datos sobre nivel de escolaridad de la población de 25 años o más de la ACS 2015-2019, el 12% de la población de la comunidad de estudio no ha obtenido el diploma de cuarto año. Sin embargo, al contrastar la información, se denota que el 17% de la población en la región de referencia no ha completado el grado de escuela superior para esta misma cohorte de edad. A nivel general en Puerto Rico, el 23% de la población no ha completado el grado de escuela superior, lo que es muy superior si se compara con la comunidad de estudio y la región de referencia. La comunidad de estudio tiene un 8% de la población de 25 años o más con estudios graduados o profesionales, lo que es superior si se compara con la región de referencia (7%) y Puerto Rico (7%). El barrio Ortiz en Toa Alta posee el nivel educativo más alto ya que el 90% de su población cuenta con el diploma de escuela superior, bachillerato o estudios graduados o profesionales. A modo ilustrativo, en Puerto Rico el 77% de la población cuenta con un grado de escuela superior, bachillerato o estudios graduados o profesionales, una diferencia sustancial al comprar con el barrio Ortiz.

3.1.7 Raza

Según los datos de la ACS (2015 a 2019), el 74% de la población de la comunidad de estudio se considera de raza blanca mientras que el 7% se considera negro o afroamericano y el 5% se considera de otra raza, lo que es muy similar a la población en la región de referencia. Sin embargo, a nivel general en Puerto Rico, el 66% de la población se considera de raza blanca mientras que un 17% se considera de otra raza y 12% negro o afroamericano. Por lo anterior, se desprende que, en términos de grupos raciales, tanto en la comunidad de estudio como en la región de referencia, hay una menor variabilidad de grupos raciales en comparación a Puerto Rico. En la tabla a continuación se desglosan por barrios los grupos raciales del municipio de Toa Alta y Bayamón.

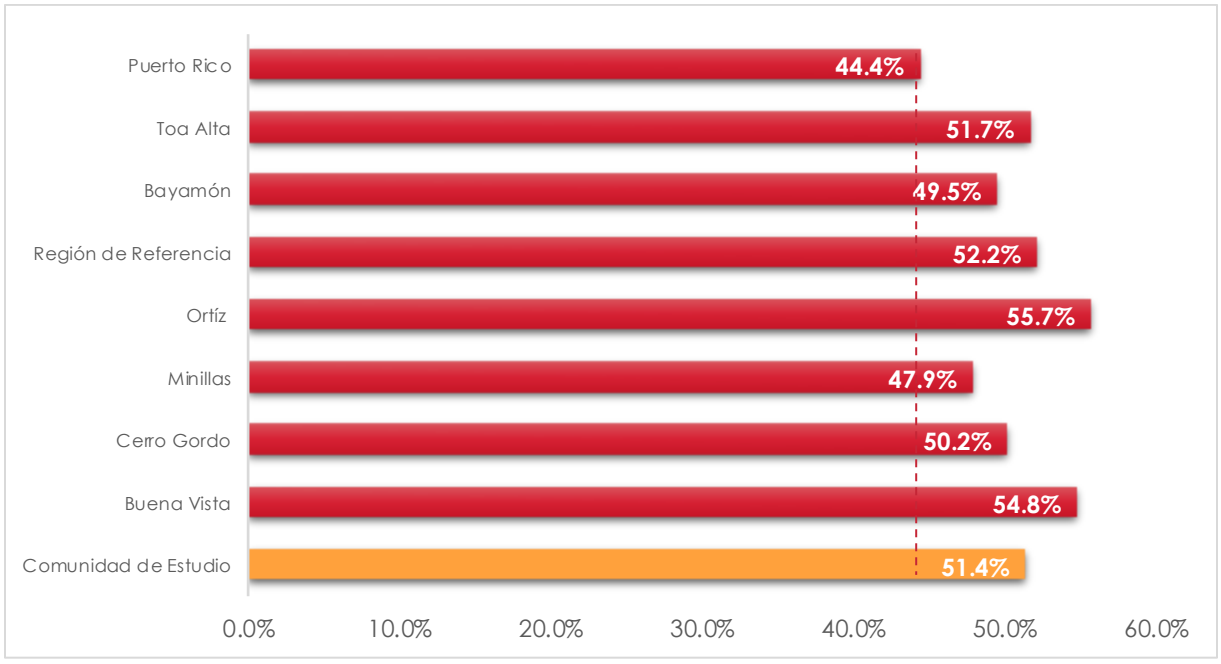
3.1.8 Características de Empleo

a. Población civil y situación de empleo

A tenor con la información obtenida de la ACS (2015 a 2019), la tasa de participación laboral en la comunidad de estudio es de 51.4%, lo que equivale a que cinco de cada diez personas hábiles para trabajar lo están haciendo. La participación laboral en Puerto Rico es de 44.4%, lo que es menor que la comunidad de estudio, la región de referencia, y los municipios de Toa Alta y Bayamón. El barrio de Ortiz en Toa Alta ostenta la mayor tasa de participación laboral, ascendiendo a 55.7%.

GRÁFICA 9. PARTICIPACIÓN LABORAL



Fuente: Oficina del Censo de EE. UU., Encuesta de la Comunidad Americana para Puerto Rico 2015-2019.

El nivel de desempleo en la comunidad de estudio es de 5.7% según los datos de la ACS (2015 a 2019). A modo de comparación, la tasa de desempleo en la región de referencia es de 5.9%, levemente mayor si la comparamos con la comunidad de estudio. Sin embargo, al comparar esta información con Puerto Rico, la tasa de empleo de la Isla es de 7.1%, significativamente mayor a la comunidad de estudio, la región de referencia, y los municipios de Toa Alta (5.9%) y Bayamón (6.3%).

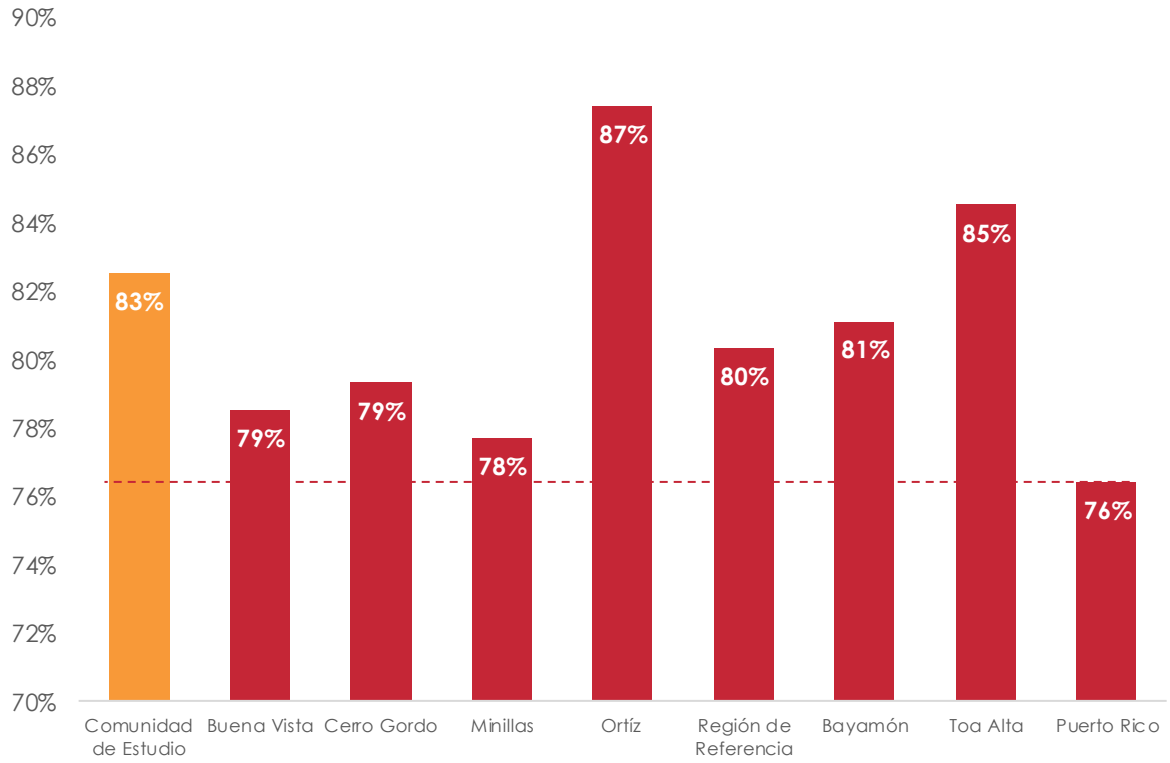
3.1.9 Características de la Vivienda

a. Unidades de vivienda ocupadas

El 83% de las unidades de vivienda de la comunidad de estudio se encuentran ocupadas. Al comparar la información de la comunidad de estudio con la tasa de ocupación de Puerto Rico que asciende a 76%, se ve reflejado una diferencia significativa en comparación con la comunidad de estudio en el tema de viviendas ocupadas. La región de referencia tiene ocupadas el 80% de las unidades de vivienda, lo que es muy similar a la de los barrios y municipios en comparación. El barrio Ortiz refleja la ocupación más alta en comparación a la comunidad de estudio, la región de referencia, Puerto Rico y los municipios de Toa Alta y Bayamón.

GRÁFICA 11. UNIDADES DE VIVIENDA OCUPADAS

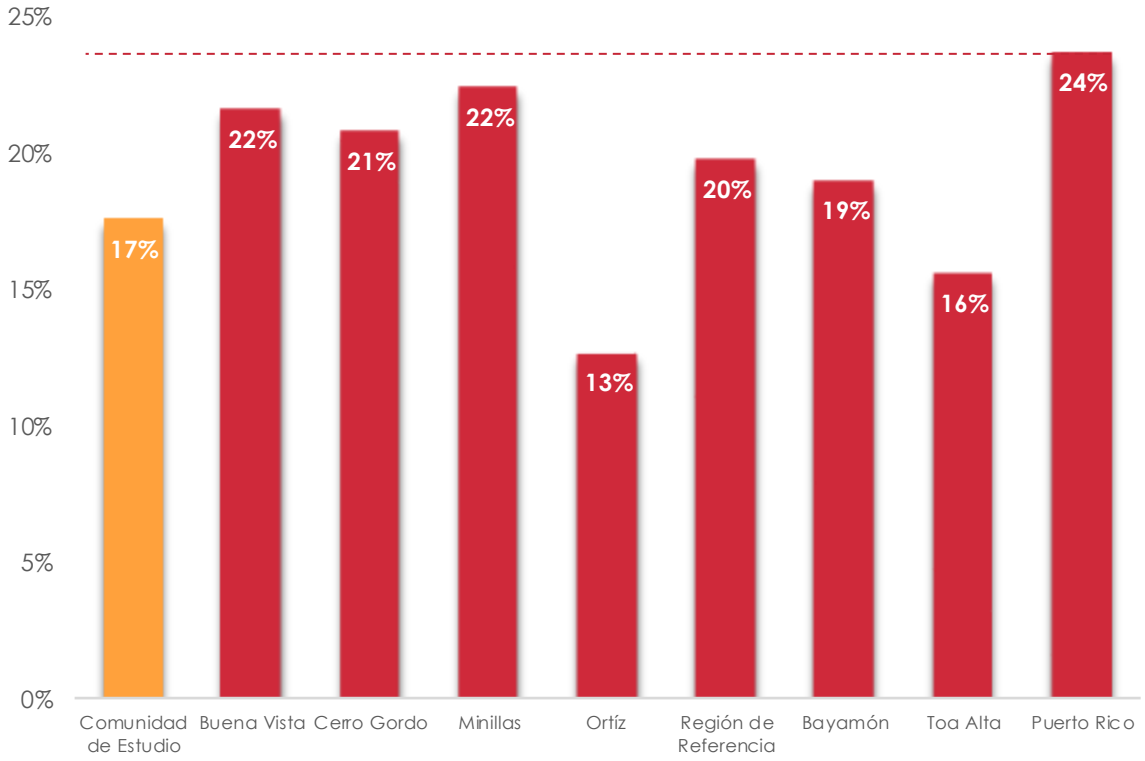


Fuente: Oficina del Censo de EE. UU., Encuesta de la Comunidad Americana para Puerto Rico 2015-2019.

b. Unidades de vivienda vacantes

La comunidad de estudio tiene el 17% del total de unidades de vivienda vacantes, mientras que la región de referencia tiene un 20% de vacantes, para una diferencia de 3%. En cambio, las unidades de vivienda vacantes en Puerto Rico ascienden a 24%, lo que es muy superior a la comunidad de estudio, la región de referencia, los barrios y municipios en comparación.

GRÁFICA 12. UNIDADES DE VIVIENDA VACANTES



Fuente: Oficina del Censo de EE. UU., Encuesta de la Comunidad Americana para Puerto Rico 2015-2019.

Del total de viviendas vacantes, el 59% de estas unidades en la comunidad de estudio están disponibles y no tienen un uso actual. En cambio, el 13% de las unidades vacantes son de uso ocasional o recreativo, mientras que un 10% es de renta, pero no cuenta con un inquilino. En términos comparativos, la región de referencia es muy similar a la comunidad de estudio. Sin embargo, en Puerto Rico, el 20% de las unidades de vivienda vacantes son de uso ocasional o recreativo, lo que significa que esta proporción de unidades no es que estén en estado de abandono, sino que no es la residencia principal de muchos titulares o propietarios.

c. Condiciones de las unidades de viviendas

Según los datos de la ACS (2015 a 2019), en la comunidad de estudio hay un total de 93 viviendas que carecen de instalaciones completas de plomería, lo que equivale a 1% de las unidades de vivienda. Así mismo, 105 unidades de vivienda de la comunidad de estudio carecen de instalaciones completas de cocina y 248 no cuentan con servicio telefónico, lo que equivale al 1% y 2% respectivamente. En contraste, la región de referencia es muy similar a la comunidad de estudio, el 1% de las unidades de vivienda no cuenta con las instalaciones completas de plomería y cocina. Un total de 852 unidades de vivienda en la región de referencia no cuenta con servicio telefónico, lo que equivale al 3% del total de unidades de vivienda.

d. Valor de las viviendas

Según la información de la ACS (2015 a 2019), es menester destacar que en la comunidad de estudio el 21% de las viviendas vale menos de $99,999. En contraste, en la región de referencia el 24% de las propiedades vale menos de $99,999. Sin embargo, en la comunidad de estudio se encuentra la proporción más alta de viviendas que sobrepasan los $300,000, lo que equivale a un 5.3%. Al comparar con la región de referencia y Puerto Rico, es menor la proporción de viviendas de este valor, representando un 3.1% y 4.7% respectivamente. Se debe destacar que el 58% del total de las unidades de vivienda en la comunidad de estudio tiene un valor que oscila entre los $100,000 a los $199,999. En torno a las viviendas de alto valor en contraste con las comparables geográficas, se debe tener en consideración la influencia en el valor de las unidades por parte de las urbanizaciones Los Palacios y Villas de Buena Vista, entre otros complejos de vivienda que se sitúan en la comunidad de estudio.

3.1.10 Tiempo de Viaje

Según la información obtenida de la ACS (2015 a 2019), es menester destacar que el 30% de la población de la comunidad de estudio viaja más de 60 minutos hasta llegar a su destino de trabajo. Esta cifra es superior a la región de referencia (23%), Toa Alta (27%), Bayamón (17%) y Puerto Rico (13%). Estos datos son de particular importancia al considerar el tráfico vehicular en el área de la comunidad de estudio; particularmente, el tramo de la carretera 167 que comienza en el centro comercial de la urbanización Los Palacios hasta la intersección de la carretera 199 cercano al centro comercial Rexville Towne Center. En resumen, el tiempo de viaje de la comunidad de estudio es significativamente mayor en comparación a otros contextos geográficos.

IV. IMPACTO ECONÓMICO

En los documentos de impacto ambiental de los proyectos de transportación se deben analizar las repercusiones económicas que pueden tener los proyectos propuestos. Por lo antes expuesto, en esta sección se presenta el impacto económico del proyecto propuesto en términos de creación de empleo e ingresos públicos.

4.1 Supuestos de impacto económico

El impacto económico considera una inversión en costos de construcción de $120.000.000. El periodo de construcción estimado para la construcción de la extensión de la carretera es de cuatro (4) años. Los supuestos considerados para los estimados de impacto económico se detallan en la siguiente tabla.

TABLA 14. SUPUESTOS UTILIZADOS PARA EL IMPACTO ECONÓMICO

Total de la Inversión en Construcción	$120,000,000
Inflación Proyectada	1.0%
Inflación para Construcción	1.5%
Supuestos sobre Tasas Contributivas	
Tasa contributiva de Ingresos de Corporaciones	15.0%
Tasas Contributivas para Construcción	
Permisos (sellos) de Construcción ($5.35 por $1,000 invertidos)	0.54%
Patentes de Construcción	0.50%
Arbitrio Municipal de Construcción	5.0%
Ganancia Neta antes de Contribución por cada dólar de ingresos	10.0%
% de los soft cost que son ganancias (de arquitectos, etc)	20.0%
% del gasto de construcción que paga IVU	40.0%
% de nómina que paga IVU al gastar	50.0%

Supuestos sobre Multiplicadores y Coeficientes Económicos

Coeficientes de Generación de Empleo para la Construcción	Calculadora JP	Proyectado por Inflación
Coeficiente de Empleo Directo (1)	13.00	13.00
Coeficiente de Empleo Indirecto e Inducido	10.00	10.00
Coeficiente de Empleo Directo, Indirecto e Inducido	23.00	23.00
Año coeficiente empleo construcción	***2017***	***2022***

Nota: se proyectan los coeficientes de la Calculadora de la JP hasta el año de comienzo

Multiplicadores de Ingreso para la Construcción	
Multiplicador de Ingreso Tipo I (Directo + Indirecto)	2.128
Multiplicador de Ingreso Tipo II (Directo, Indirecto en Inducido)	2.26
Sueldo Promedio para construcción:	
Construcción (para el primer año de construcción)	23,610.00

4.2 Impacto económico de la extensión de la carretera PR-5

Teniendo en cuenta los supuestos descritos anteriormente, el proyecto de la extensión de la carretera PR-5 creará un total de 2,656 empleos de construcción, de los cuales 1,501 son directos y 1,155 son indirectos o inducidos. Según el Departamento del Trabajo de Puerto Rico, el salario medio en la construcción es de $23,610, lo que significa que los ingresos derivados de las actividades de construcción podrían ascender a $81,289,576. En cuanto a los ingresos generados por el gobierno a partir de las actividades de construcción, el gobierno municipal y estatal generará aproximadamente $25,896,247. Los ingresos del gobierno se generan principalmente a partir del arbitrio municipal, las contribuciones sobre ingreso, los impuestos a los contratistas y los impuestos sobre el consumo. El desglose del impacto económico del proyecto se detalla en la siguiente tabla.

TABLA 15. IMPACTO ECONÓMICO DEL PROYECTO

Inversión total en la Construcción

dólares ($)	2023	2024	2025	2026	Total	Promedio
Infraestructura	$30,906,750	$31,370,351	$31,840,907	$32,318,520	$126,436,528	$31,609,132
Inversión total en la construcción	**$30,906,750**	**$31,370,351**	**$31,840,907**	**$32,318,520**	**$126,436,528**	**$31,609,132**

Empleos Generados por Construcción

Arbitrio Municipal de Construcción	$1,545,338	$1,568,518	$1,592,045	$1,615,926	$6,321,826	$1,580,457
Contribución s/ Ingreso, Empleos Construcción	$1,491,356	$1,528,863	$1,567,314	$1,606,732	$6,194,266	$1,548,566
Contribución s/ Ingreso,Soft Costs	$720,000				$720,000	$60,000
Impuestos Corporativos de Contratistas	$463,601	$470,555	$477,614	$484,778	$1,896,548	$474,137
IVU pagado por contratistas	$1,421,711	$1,443,036	$946,148	$969,943	$4,780,838	$1,195,209
IVU por los gastos de los empleados	$1,125,367	$1,153,670	$1,182,685	$1,212,429	$4,674,151	$1,168,538
Total de ingresos fiscales	**$7,087,257**	**$6,489,325**	**$6,095,359**	**$6,224,305**	**$25,896,247**	**$6,474,062**
Ingreso al Fisco Municipal	$1,921,356	$1,951,170	$1,936,366	$1,967,290	$7,776,182	$1,944,045
Ingreso al Fisco Estatal	$5,165,901	$4,538,156	$4,158,993	$4,257,015	$18,120,065	$4,530,016

4.3 Impacto económico anual en el mantenimiento de la carretera

El costo de mantenimiento de la extensión propuesta puede calcularse dividiendo el costo de construcción por su vida útil de 18 años. Considerando esta depreciación, se determina que la carretera podría tener un costo de mantenimiento de $6.7 millones por año. Considerando este costo de mantenimiento anual y los multiplicadores de empleo de la Junta de Planificación de Puerto Rico por millón ($) en la industria de la construcción, se determina que el mantenimiento de la carretera podría generar un total de 144 empleos al año, de los cuales 82 serán directos y 63 indirectos. Estos empleos también generarían un salario anual total de $4,351,201 durante la fase de mantenimiento de la extensión de carretera propuesta.

TABLA 16. MANTENIMIENTO DEL PROYECTO

Empleos Generados por Mantenimiento del Proyecto

Número de Empleos Anuales	Anual
Mantenimiento de Carretera	144
Empleos Generados por Construcción	**144**
Empleos directos (#)	82
Empleos indirectos e inducidos (#)	63

Ingreso Generado por el Mantenimiento

dólares ($)	2021
Ingresos directo	$1,926,163
Ingreso indirecto e inducido	$2,425,039
Ingreso generado por la actividad de mantenimiento	**$4,351,201**

V. CONCLUSIONES

A tenor con la información provista de la ACS (2010 a 2014 y 2015 a 2019), la comunidad de estudio presenta indicadores socioeconómicos, en la mayoría de las instancias, superiores a sus comparables geográficas, entiéndase por la región de referencia, los municipios en donde transcurre la extensión y Puerto Rico. La comunidad de estudio presenta los niveles más altos de ingreso, de participación laboral, de escolaridad, de viviendas ocupadas y del valor de la vivienda. Así mismo, presenta una reducción poblacional menor que la región de referencia y Puerto Rico. Es menester destacar que el barrio Ortiz en Toa Alta es el barrio que presenta mejores indicadores, por lo que mejora sustancialmente el promedio de los datos en la comunidad de estudio. Sin embargo, también es importante destacar que la comunidad de estudio presenta niveles altos de pobreza a nivel familiar, aspecto importante en este tipo de análisis.

El concepto de justicia ambiental persigue el objetivo de que un proyecto propuesto no constituya un factor agravante para la situación social y económica de la comunidad bajo estudio. Los datos analizados, no permiten concluir que el proyecto pudiera ser un factor agravante para la comunidad de estudio a base de parámetros étnicos o socioeconómicos. No obstante, se recomienda que se los siguientes principios de justicia ambiental en el proceso de planificación de manera que se provea un tratamiento justo a todos los residentes. Estos principios incluyen:

- Evitar, minimizar o mitigar los efectos desproporcionadamente altos y adversos para la salud humana o el medio ambiente, incluyendo las consecuencias sociales y económicas, en las poblaciones minoritarias y de bajos ingresos.
- Garantizar la participación plena y justa de todas las comunidades potencialmente afectadas en el proceso de toma de decisiones.
- Impedir la denegación, la reducción o el retraso significativo en la recepción de beneficios por parte de las poblaciones minoritarias y de bajos ingresos, ya que el proyecto puede requerir la adquisición de tierras y propiedades.

Además, es altamente recomendable que la ACT coordine procesos participativos con las comunidades para discutir el diseño del proyecto, las alternativas de reubicación, si las hay, y asegurar la participación en el proceso

Preparación del documento

Este documento ha sido preparado por el siguiente personal de Estudios Técnicos, Inc.

Alisa Ortiz Colón, PPL, redacción del documento

Wanda I. Crespo, PPL, revisión del documento y coordinación del proyecto

Carlos Torija, Estadístico, encuesta a estructuras y negocios

Roberto Ríos, Supervisor de trabajo de campo

Roberto Moyano Flores, Analista de Sistema de Información Geográfica (inventario y desarrollo de mapas)

HALLAZGOS PRINCIPALES

El proyecto propuesto consiste en la extensión de la carretera PR-5, la cual discurrirá mayormente por el municipio de Bayamón y una porción de Toa Alta. En el municipio de Bayamón, el proyecto transcurre por los barrios Minillas, Cerro Gordo y Buena Vista, mientras que en el municipio de Toa Alta transcurre por el barrio Ortiz.

Para llevar a cabo el estudio de impacto a la comunidad, se realizó una encuesta a los residentes y comerciantes. A continuación, se presentan los hallazgos principales:

Perfil general de la comunidad

Para propósitos de este estudio se estableció una franja de 50 metros a cada lado de la alineación propuesta. Esta área fue visitada y estudiada para el desarrollo de un perfil de la comunidad, conocer los usos de terrenos y llevar a cabo una encuesta a hogares y negocios, con el fin de conocer cómo las personas perciben la comunidad y cómo entienden que el proyecto propuesto pudiera afectarles.

Los usos de terrenos en esta área son predominantemente urbanos, de uso residencial y, en menor grado, comercial.

Perfil de residentes

Características de los hogares

- En el área se encuestaron 262 viviendas ocupadas. El 90% de las estructuras residenciales estaban en excelentes o buenas condiciones, mientras que el 2.3% estaba en malas condiciones. La mayoría de los residentes indicaron ser dueños del terreno (82.8%) o de la estructura (83.6%). Para los inquilinos, la mediana de la renta mensual era de $550. Para los propietarios, la mediana del valor estimado de la propiedad era de $125,000.

- Los hogares estaban compuestos por un promedio de 2.6 personas. La distribución de género se inclinaba hacia las mujeres con un 55.8%, mientras que los hombres componían un 43.7%.
- La mediana de edad de las personas que residían en los hogares era de 46 años. Solamente el 15.5% de la población era menor de 18 años.
- Un 42.7% de los residentes indicó tener alguna condición de salud o impedimento. Las condiciones de salud indicadas con mayor frecuencia eran condiciones físicas (51.4%), seguido por condiciones cardiovasculares (35.6%), y condiciones respiratorias (24.7%).
- Un 34.8% de los residentes encuestados indicó haber obtenido un grado de educación postsecundario. Un 28.6% alcanzó escuela superior (sin diploma), intermedia, elemental o no obtuvo educación formal.
- Un 43.4% de la población de 16 años o más reportó estar empleada, seguido por la población retirada o incapacitada (31.1%).
- La mediana de ingreso para los hogares encuestados se encontraba entre $15,000 a $19,999.
- El automóvil es el método de transportación utilizado con mayor frecuencia por los residentes. Solamente un 4.2% reportó utilizar transportación pública, y un 4.9% utilizaba métodos de transporte no motorizados, como caminar o bicicleta.

Percepción y relación con su comunidad

- El 86.3% de los residentes clasificaron la calidad de vida en su comunidad como buena o excelente, mientras que un 2.2% la clasificó como mala o pésima.
- El 81.3% de los residentes indicaron que no existen organizaciones comunitarias en su vecindario. Solamente el 5.3% indicó conocer a algún líder comunitario, religioso, deportivo, cultural u otro, dentro de su comunidad.
- Los participantes obtienen la mayoría de los servicios fuera de su municipio y de su comunidad. Los servicios obtenidos con mayor frecuencia dentro de la comunidad eran los de adquisición de artículos de primera necesidad, como comida y medicamentos (32.2%), seguido por los religiosos (30.3%), y los recreativos (27%). Por otro lado, los servicios obtenidos con mayor frecuencia dentro del Municipio incluían los de salud (72.2%), artículos de primera necesidad (60.7%), y seguridad (40.9%).

- Se percibe que a los participantes les gusta su comunidad y municipio de residencia. Además, prefieren ser propietarios. La mayoría de los encuestados indicaron que si tuviesen que mudarse de su vivienda les gustaría que fuera en el Municipio de Bayamón (67.6%), mientras que un 1.9% indicó Toa Alta. De las personas que indicaron que se mudarían a uno de los dos municipios, el 58.2% indicó que se mudaría dentro de su misma comunidad. La mayoría de los participantes indicó que, de tener que mudarse de su residencia, preferiría comprar (56.1%) una propiedad. Un 28.2% no sabía o no indicó.

Perfil de negocios

- Se identificaron 28 negocios, de los cuales 23 (82%) estuvieron disponibles para ser encuestados.
- El 87% de las estructuras con negocios se encontraba en buenas o excelentes condiciones.
- Solamente el 30.4% y el 21.7% eran dueños de la estructura y el terreno, respectivamente.
- El 43.5% de los negocios se enfocaba en la industria de servicios de comida.
- El 78.3% de los comerciantes desconocía la procedencia de su clientela. Estos no pudieron identificar si la clientela pertenecía mayormente a las comunidades vecinas, si eran residentes de la comunidad donde estaban ubicados, o de fuera de su comunidad. Solamente el 17% indicó que su clientela pertenecía a las comunidades vecinas.
- Todos los comerciantes encuestados reportaron emplear al menos una persona a tiempo completo, mientras que aproximadamente la mitad reportó emplear al menos una persona a tiempo parcial.
- Se percibe que a los negocios encuestados les gusta su comunidad y municipio donde se ubican. El 66.7% de los negocios que indicó que, si tuviese que realojarse lo haría dentro del municipio de Bayamón y Toa Alta y dentro de la misma comunidad.
- La mayoría de los comerciantes (56.5%) no sabía o no indicó su preferencia sobre comprar o alquilar, de ser impactado por el proyecto. Solamente el 26.1% y el 17.4% indicaron que comprarían o alquilarían, respectivamente.

INTRODUCCIÓN

Este documento presenta el estudio socioeconómico y de impacto a la comunidad para la extensión de la carretera PR-5 en Bayamón. Este análisis se realiza en apoyo a los requisitos de contenido del Reglamento para el Proceso de Evaluación Ambiental (RPEA), Reglamento Número 8858 del 23 de noviembre de 2016.[1]. Dicho Reglamento define Impacto Ambiental como:

> *Los efectos directos, indirectos y/o acumulativos de una acción propuesta sobre cualquier aspecto o elemento del ambiente, incluyendo factores o condiciones tales como: usos del terreno, ...y aspectos económicos, sociales, culturales o de salud pública (p. 10).*

La Regla-123 del RPEA dispone que las declaraciones de impacto ambiental deben incluir las "tendencias de desarrollo y población del área bajo consideración y cualquier información relacionada con estas variables que pueda justificar la acción o determinar los impactos resultantes" (p. 32).

Debido al impacto que el proyecto propuesto pudiese tener en la comunidad, se llevó a cabo este estudio, el cual incorpora la participación ciudadana desde una etapa temprana del proceso. Para llevar a cabo el estudio se utilizó la guía desarrollada por la Administración Federal de Carreteras (FHWA, por sus siglas en inglés), conocida como "*Community Impact Assessment: A Quick Reference for Transportation"* revisada en el año 2018. La misma contiene pasos e ideas para llevar a cabo el estudio de impacto a la comunidad. Esto permitirá comprender las necesidades de las comunidades y su entorno social, lo que sirve de base para las decisiones de planificación, diseño e implantación.

DESCRIPCIÓN DEL PROYECTO PROPUESTO

La Autoridad de Carreteras y Transportación (ACT) propone la extensión de la carretera estatal PR-5. Esta extensión consiste en un tramo de 5.07 kilómetros, comenzando en la intersección de la carretera PR-5 con la PR-199 (Avenida Las Cumbres) por el norte, hasta la intersección de la PR-5 con la PR-167 por el sur.

El desarrollo del proyecto busca aliviar la congestión vehicular en la carretera PR-167 que une los municipios de Barranquitas, Comerío y Naranjito con el municipio de Bayamón y el resto del Área Metropolitana de San Juan.

METODOLOGÍA

Para llevar a cabo el estudio socioeconómico y de impacto a la comunidad se utilizó como guía el proceso establecido en el documento, *Community Impact Assessment: A Quick Reference for Transportation* de la FHWA. Este proceso consiste en cinco (5) pasos principales, los cuales son presentados en la figura 1.

Figura 1. Proceso para el Estudio Socioeconómico y de Impacto a la Comunidad

Área de estudio

El área de estudio objeto de este análisis de impacto a la comunidad fue delimitada como 50 metros a ambos lados de la alineación provista por CMA, según se presenta en el mapa 1.

Mapa 1. Alineación Propuesta para la Extensión de la Carretera PR-5

Proceso para el desarrollo del perfil comunitario

El equipo de trabajo de campo de Estudios Técnicos, Inc. realizó visitas al área de estudio para recopilar información sobre las características de la comunidad. El trabajo de campo se llevó a cabo del 23 de junio al 11 de julio de 2021, y consistió en tres tareas principales: 1) conteo e inventario de estructuras en el área de estudio, para lo cual se preparó un formulario digital; 2) encuesta a los residentes del área de estudio; y 3) encuesta a los comerciantes del área de estudio. Esta información fue utilizada para

desarrollar un perfil comunitario, el cual es presentado en las próximas secciones de este informe. Las metodologías de las tres tareas antes mencionadas se describen a continuación.

Encuesta a los residentes del área de estudio

Se realizó una encuesta representativa con los residentes ubicados en el área de estudio. Para la encuesta, se utilizó una muestra probabilística sistemática de las residencias identificadas en el inventario, donde el intervalo de muestreo fue de 1 de cada 3 residencias. El tamaño de la muestra consistió en 262 residencias, lo que representa un 34% del total identificado en el conteo (que fue de 777 residencias). El error de muestreo sería de un +4.9% a un nivel de confianza del 95%.

Encuesta a los comerciantes del área de estudio[2]

Además, se llevó a cabo una encuesta representativa con los comerciantes del área de estudio. De los 28 negocios identificados en el conteo, se consiguió encuestar a 23, lo que representa un 82% del total.

Cabe mencionar que se llevaron a cabo visitas de seguimiento en ambas encuestas, Si no había nadie en la residencia seleccionada o en el negocio, se volvió a visitar al menos una vez para intentar completar la muestra. En el caso de las residencias, si no se conseguía realizar la encuesta, se sustituía esa residencia de acuerdo con los criterios del muestreo sistemático.

[2] Para propósitos de este estudio no hay diferencias entre los conceptos comercios y negocios. En ocasiones se hace referencia a estructura comercial para indicar que en esa estructura existe un negocio. Igualmente se hace referencia a comerciante, refiriéndose a la persona entrevistada a cargo del negocio.

PERFIL COMUNITARIO

A continuación, se presenta el perfil comunitario. Para facilitar la discusión, el mismo se divide en tres secciones principales: 1) descripción de la comunidad y usos de los terrenos; 2) perfil de residentes, hogares y comunidades, y 3) perfil de negocios.

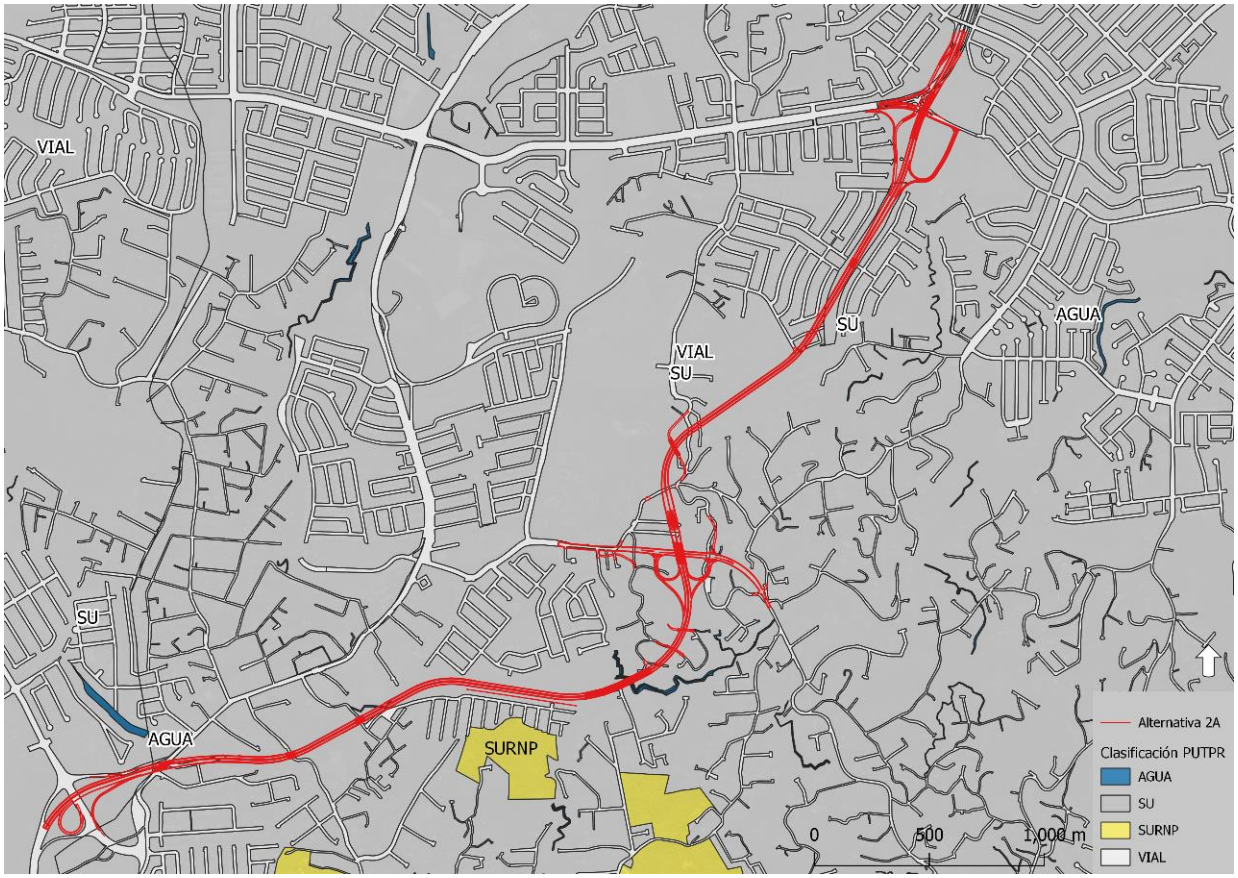
Descripción de la comunidad y usos de los terrenos

En este apartado se describen los usos de los terrenos del área de estudio de acuerdo con el Plan de Usos de Terrenos de Puerto Rico (PUTPR), aprobado en el año 2015, y los Planes Territoriales de los Municipios Autónomos de Bayamón y de Toa Alta, de acuerdo con la información disponible en la página de la Junta de Planificación (JP) de Puerto Rico a julio de 2021.

De acuerdo con el PUTPR los terrenos aledaños y por donde transcurrirá la alternativa provista se clasifican como suelo urbano (SU). El SU se define como aquellos terrenos que cuentan con acceso vial, abastecimiento de agua, suministro de energía eléctrica y otra infraestructura necesaria para las actividades administrativas, económicas y sociales que se llevan a cabo en estos suelos, y que, a su vez, están consolidados por edificación.

Otra clasificación observada en las áreas adyacentes al proyecto propuesto corresponde a suelo urbanizable no programado (SURNP). De acuerdo con el Código Municipal de Puerto Rico, Ley Núm. 107 del 2020, el SURNP es aquel que se prevé sea desarrollado en un período de entre cuatro (4) y seis (6) años, luego de la vigencia del Plan.

Mapa 2. Clasificación del suelo en el Área de Estudio



Fuente: Junta de Planificación de Puerto Rico, 2015.

En términos de la calificación del suelo, el proyecto propuesto está ubicado en área con distritos mayormente residenciales. También prevalece la calificación comercial y dotacional. El distrito residencial predominante es el Residencial Intermedio (R-1) aunque también se observan terrenos con calificación Residencial de Alta Densidad (R-A). Por otro lado, los distritos comerciales incluyen Comercial Intermedio (C-I), Comercial Liviano (C-L), y Centro Comercial (C-C). También existen algunos terrenos Residenciales y Comerciales Mixtos (RC-M), Industrial Liviano (I-L), Dotacional Parque (DT-P) y Dotacional General (DT-G).

Finalmente, es importante mencionar que la imagen incluye algunos terrenos de Conservación de Recursos (CR), como por ejemplo aquellos correspondientes al Río Minillas. No obstante, estos se encuentran ubicados fuera del área de estudio.

Mapa 3. Calificación del Suelo en el Área de Estudio

Fuente: Obtenido de la herramienta de la Junta de Planificación MIPR Mapa Interactivo de Puerto Rico el 29 de julio de 2021.

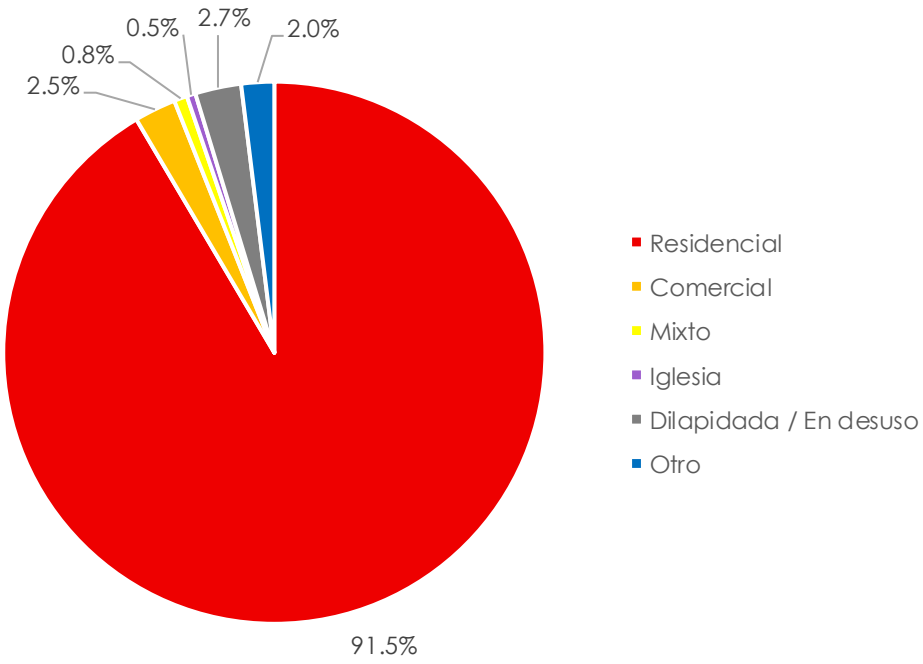
Uso de las estructuras en el área de estudio

Todas las estructuras identificadas dentro del área de los 50 metros a cada lado de la alineación fueron documentadas en el inventario que llevó a cabo el equipo de Estudios Técnicos, Inc. De acuerdo con el inventario, en la zona de estudio existen 765 estructuras. Algunas de las estructuras son de un solo uso, pero otras estructuras albergan más de una residencia, más de un negocio, o son de uso mixto.

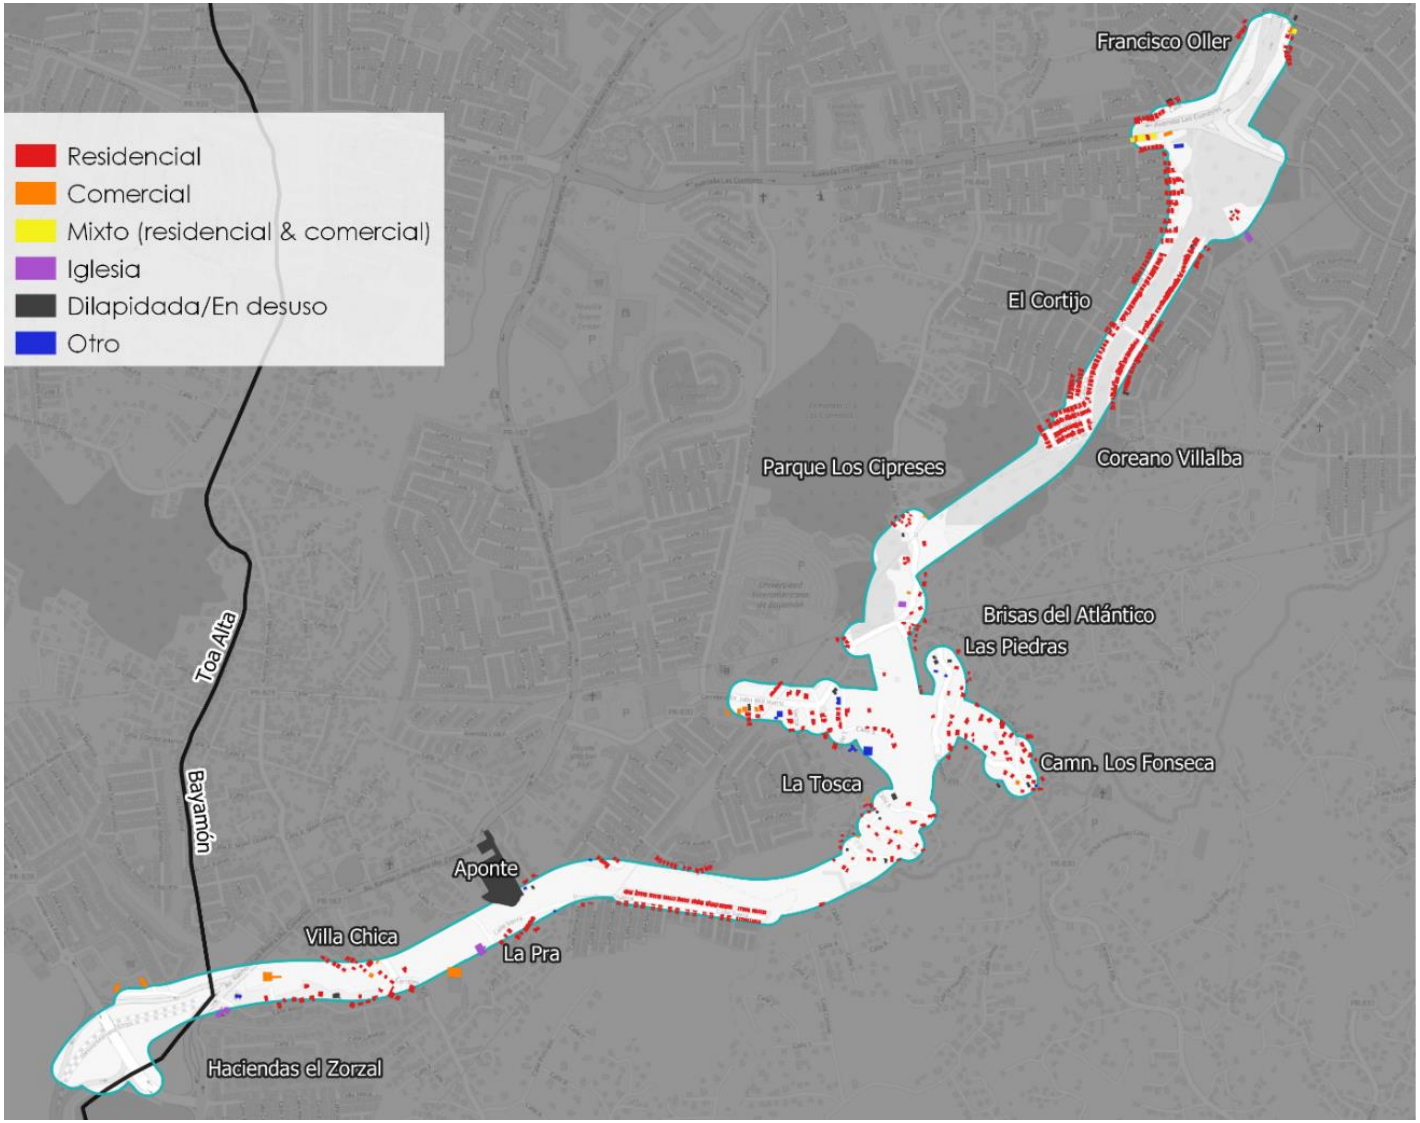
En total se identificaron 706 estructuras, algunas de las cuales tenían más de una residencia, por lo que en total se identificaron 777 residencias. También se identificaron 25 estructuras que contenían negocios. Como antes indicado, algunas estructuras tenían más de un negocio, por lo que el número total de negocios fue de 28.

Es importante indicar que estas no son estructuras que serán impactadas por el proyecto. Más bien, esta información se recoge para tener una idea de qué usos y actividades están en las cercanías del proyecto propuesto. En general, el uso predominante en el área es el residencial con algunos comercios. El siguiente mapa presenta la ubicación de estas estructuras dentro del área de estudio.

Figura 2. Usos de las estructuras en el Área de Estudio



Mapa 4. Usos de las Estructuras en el Área de Estudio (50 metros a cada lado de la alineación propuesta)



Características de las viviendas encuestadas

Según descrito anteriormente, en el área de estudio se encuestaron 262 viviendas ocupadas (u hogares). Unos 261 (99.6%) correspondían a estructuras residenciales y una (0.4%) correspondía a usos mixtos (residencial y comercial). Estos y otros resultados en detalle se presentan a continuación.

En resumen, las viviendas están en buenas condiciones, son estructuras unifamiliares de dos plantas, tienen cerca de 40 años de construcción y son ocupadas por sus dueños. Además, los participantes

- **Material de construcción**: La mayoría estaban construidas con hormigón (92.0%), seguido por materiales mixtos (6.9%) y zinc (6.9%). Las estructuras restantes estaban construidas con madera (3.1%) y acero (1.1%).
- **Niveles**: La mayoría de los hogares encuestados eran estructuras de dos plantas (53.1%), seguido por estructuras de una planta (46.2%). Las viviendas de tres plantas o más solo componían un 0.8% de los hogares encuestados.
- **Condición de las estructuras**: El 90% estaba en excelentes o buenas condiciones, mientras que el 2.3% estaba en malas condiciones.
- **Tenencia de las viviendas**: Durante la encuesta, se les preguntó a los participantes si eran dueños o inquilinos del terreno y la estructura. La mayoría (82.8%) indicó ser dueño del terreno. De igual manera, el 83.6% indicó ser dueño de la estructura, mientras que solamente el 16.4% indicó ser inquilino.
- **Año de construcción**: La mediana del año de construcción de la vivienda correspondía al año 1981. Sin embargo, el mismo variaba entre el 1940 hasta el 2020. La ilustración incluida a continuación presenta un resumen de las características descritas anteriormente.

Máximo	**2021**

Nota: La base numérica de esta tabla son las 257 personas que participaron en la encuesta y que indican en esta pregunta.

En las encuestas, 38 personas indicaron ser inquilinos. Para este grupo, la mediana de la renta mensual era de $550.

Tabla 3. ¿Cuánto es la renta mensual?

Promedio	**$597**
Mediana	**$550**
Mínimo	**$60**
Máximo	**$3,000**

Nota: La base numérica de esta tabla son las 38 personas que indicaron ser inquilinas del hogar donde residen.

Un total de 219 participantes (83.6%) indicaron ser dueños de la propiedad[3]. De este grupo, 124 indicaron el valor estimado de su propiedad, cuyo valor de la mediana fue de $125,000. Un 47.9% (105 personas) de los 219 dueños también reportaron estar pagando hipoteca sobre la propiedad. De los 105 que pagan hipoteca, 74 indicaron cuanto debían, con una mediana de $60,500.

[3] Se les preguntó a los participantes si eran propietarios o arrendatarios, y si eran los dueños de la estructura o del terreno. Los resultados indicados por los participantes fueron diferentes para cada pregunta.

Tabla 4. Si es dueño, ¿cuál es el valor estimado de esta propiedad?

Promedio	**$141,000**
Mediana	**$125,000**
Mínimo	**$50,000**
Máximo	**$300,000**

Nota: La base numérica de esta tabla son las 124 personas que indicaron ser dueñas del hogar donde residen y que especificaron en esta pregunta.

Tabla 5. ¿Está pagando hipoteca sobre esta propiedad?

Por otro lado, el gasto promedio mensual de las utilidades era de $472. Este gasto se refiere al pago por agua, electricidad, cable tv, internet, mantenimiento, entre otros.

Tabla 8. ¿Cuánto es el gasto promedio mensual en todas las utilidades? Ej. agua, electricidad, cable tv, internet, mantenimiento, etc.

Promedio	**$472**
Mediana	**$350**
Mínimo	**$20**
Máximo	**$3,000**

Nota: La base numérica de esta tabla son las 235 personas entrevistadas que residen en hogares e indican cuánto deben.

Características de los residentes encuestados

A través de la encuesta, también se recopiló información acerca de las características de los residentes del área de estudio. La mayoría de las personas encuestadas eran jefes o jefas de familia (38.6%). Otras personas incluían sus hijos o hijas (31.1%), sus esposos o esposas (22.5%), sus nietos o nietas (3.1%), entre otros.

Tabla 9. Parentesco con respecto al jefe(a) de la familia

Nivel educativo y condición ocupacional de los residentes encuestados

Un 34.8% de las personas encuestadas indicaron haber obtenido un grado de educación postsecundario, como un grado asociado (14.6%) o un bachillerato, maestría o doctorado (20.2%). Un 36.7% obtuvo un grado de escuela superior y/o algunos años de universidad sin grado. Por otro lado, 28.6% alcanzó escuela superior (sin diploma), intermedia, elemental o no obtuvo educación formal.

Tabla 13. Nivel educativo alcanzado

	Frec.	%
Ninguno	38	5.6%
Elemental	58	8.5%

Nota: La base numérica de esta tabla son las 262 personas entrevistadas.

Obtención de servicios en la comunidad y el municipio

A los participantes también se les preguntó sobre los tipos de servicios obtenidos dentro de su comunidad o el Municipio. Los servicios obtenidos con mayor frecuencia dentro

de la comunidad eran los de adquisición de artículos de primera necesidad, como comida y medicamentos (32.2%), seguido por los religiosos (30.3%), y los recreativos (27%). Por otro lado, los servicios obtenidos con mayor frecuencia dentro del Municipio incluían los de salud (72.2%), artículos de primera necesidad (60.7%), y seguridad (40.9%). En la mayoría de las categorías de servicios, los participantes indicaron que no los obtienen ni en la comunidad ni en el Municipio.

Para la obtención de servicios, los encuestados usan mayormente el automóvil privado. De estas personas, un 91.2% utiliza el auto propio y un 10.3% utiliza el auto de otra persona. Solamente un 4.2% reportó utilizar transportación pública, mientras que un 4.9% utilizaba métodos de transporte no motorizados, como caminar o bicicleta. (Tabla 26).

Los encuestados perciben a su comunidad como una rural, donde la calidad de vida es buena o excelente. Estos no identificaron líderes comunitarios u organizaciones de base comunitaria que brinden servicios en su comunidad.

La mayoría obtiene servicios fuera de su comunidad y municipio.

Figura 5. Servicios obtenidos dentro de su comunidad o Municipio

	Educativos	Religiosos	Deportivos	Recreativos	Culturales	Artículos de primera necesidad	Transporte colectivo o público	Salud	Cuido de niños	Cuido de envejecientes	Seguridad

Impactos del proyecto: preferencias de realojo

A los participantes se les realizaron una serie de preguntas para conocer sus preferencias sobre permanecer en la comunidad y otras asociadas con la posibilidad de que sea necesario el realojo. La mayoría de los participantes indicó que, de ser impactado directamente por el proyecto, su preferencia sería comprar (56.1%), preferiblemente en Bayamón y dentro de la misma comunidad.

Un 36.3% indicó preferir una comunidad urbana, mientras que un 37.4% indicó preferir una comunidad rural. Sin embargo, nótese que, según antes descrito, la mayoría de los residentes perciben el área como rural, aunque la clasificación reglamentaria es de terrenos urbanos.

Según indicado, la mayoría de los encuestados identificó el Municipio de Bayamón como su preferencia de reubicación (67.6%), mientras que un 1.9% indicó Toa Alta. De las 182 personas que indicaron que se mudarían a uno de los dos municipios, el 58.2% indicó que se mudaría dentro de su misma comunidad.

Tabla 27. De ser propietario y ser afectado directamente por este proyecto, ¿cuál sería su preferencia?

PERFIL DE NEGOCIOS

Características de las estructuras de negocios

Según descrito anteriormente, en el área de estudio se identificaron 28 negocios durante el inventario de estructuras, de los cuales se lograron encuestar 23 (82%). Nuevamente, se reitera que esta cantidad no corresponde a negocios que se encuentran dentro de la alineación propuesta. Es decir, no se refiere a los negocios que serán directamente impactados por el proyecto propuesto, más bien se refiere a los que se encuentran en los 50 metros a cada lado de la alineación que se considera como el área de estudio.

De esta cantidad, 22 (95.7%) correspondían a estructuras comerciales y una (4.3%) a uso mixto (residencial y comercial).

- **Descripción de las estructuras:** La mayoría de las estructuras estaban construidas con hormigón (87%), seguido por acero (43.5%) y zinc (21.7%). Además, una gran parte de los negocios era de una planta (82.6%). En términos de la condición de las estructuras, el 87% se encontraba en buenas o excelentes condiciones.
- **Titularidad**: Durante la encuesta, también se les preguntó a los comerciantes si eran dueños o inquilinos del terreno y la estructura. Solamente el 30.4% y el 21.7% eran dueños de la estructura y el terreno, respectivamente.
- **Año de construcción:** En promedio, el año de construcción de las estructuras correspondía al año 1995. Sin embargo, el mismo variaba entre el 1970 hasta el 2015.

La tabla incluida a continuación presenta un resumen de las características descritas anteriormente.

Características generales de los negocios

Los comerciantes encuestados llevaban un promedio de 14 años operando en las instalaciones, aunque algunos llevaban 40 años. Además, la mayor parte (43.5%) se enfocaba en la industria de servicios de comida.

La mayoría de los comerciantes desconoce de dónde proviene su clientela. El 78.3% de los comerciantes desconocía si la misma pertenece mayormente a las comunidades vecinas, adentro de su comunidad o fuera de su comunidad. Solamente el 17% indicó que su clientela pertenecía a las comunidades vecinas.

Preferencias de reubicación de los comerciantes

A través de la encuesta, también se examinó la preferencia de reubicación de los comerciantes del área de estudio. La mayoría (56.5%) no sabía o no indicó su preferencia sobre comprar o alquilar, de ser afectado. Solamente el 26.1% y el 17.4% indicaron que comprarían o alquilarían, respectivamente.

De igual manera, la mayoría no sabía o no indicó el tipo de comunidad a la que se reubicaría (43.5%) o el municipio específico (47.8%). En términos del tipo de comunidad, el 30.4% indicó su preferencia por una comunidad urbana, mientras que el 26.1% indicó su preferencia por una comunidad rural.

Por otro lado, el 39.1% indicó su preferencia por el municipio de Bayamón, mientras que el 13% indicó su preferencia por Toa Alta. Finalmente, de las 12 personas que indicaron

que se mudarían a uno de los dos municipios, el 66.7% indicó que se mudaría dentro de su misma comunidad.

Tabla 37. De ser propietario y ser afectado directamente por este proyecto, ¿cuál sería su preferencia?

ANÁLISIS DE LOS IMPACTOS Y RECOMENDACIONES

Existen varios factores que indican que los residentes tienen apego o disfrutan de vivir en el lugar de estudio. Su apreciación sobre la calidad de vida y sus preferencias a permanecer dentro de la comunidad, ante la eventualidad que el proyecto requiera que estos sean realojados, son factores importantes que deben ser considerados en el proceso de planificación del proyecto.

En la comunidad no se percibe liderato o grupos que provean servicios dentro de la comunidad. Comúnmente este liderato u organizaciones son indicadores de cohesión comunitaria. La presencia de familiares en la comunidad también puede ser un indicador de cohesión comunitaria. Sin embargo, esto no quiere decir que dicha cohesión o apego al sector no exista.

En el caso de los comerciantes, estos indicaron no conocer la procedencia de su clientela, o si provienen de la comunidad donde están ubicados. Sin embargo, estos preferirían igualmente, permanecer dentro de la mima comunidad.

Dado a la incertidumbre de una gran parte de los participantes, principalmente de los representantes de negocios, se recomienda que la ACT establezca comunicación directa con ambos grupos. Esta estrategia tiene el propósito de proveer e intercambiar información, discutir preocupaciones e identificar posibles soluciones.

Se recomienda que la ACT lleve a cabo al menos una reunión comunitaria con cada grupo (residentes y comerciantes). Además, se recomienda que se les provea información detallada a los municipios impactados, Bayamón y Toa Alta. Es común que las personas contacten a los oficiales municipales para solicitar información de proyectos. De esta manera, estos oficiales estarán en una mejor posición para informar a los residentes y comerciantes, y para identificar posibles soluciones a problemas anticipados.

Es importante mencionar que este estudio presenta un análisis inicial sobre la comunidad y su entorno socioeconómico. Debido a la naturaleza dinámica de los proyectos de transportación, se recomienda que los resultados sean reevaluados a medida que las fases del proyecto y de participación ciudadana continúen.

APÉNDICE B: ENCUESTA REALIZADA

Encuesta a ocupantes

Expansión de PR-5 Bayamón

Questionnaire # _____

Q.1 Introducción:

Buenos días/tardes: Mi nombre es _____ y trabajo para la firma de consultoría Estudios Técnicos, Inc. Nos encontramos realizando un estudio de impacto comunitario para el proyecto de la Autoridad de Carreteras y Transportación relacionado a la extensión del Expreso PR-5. Esta extensión consiste en un tramo de 5.07 kilómetros que va desde la intersección de la PR-5 con la PR-199 (Avenida Las Cumbres) por el norte, hasta la intersección de la PR-5 con la PR-167 por el sur.

El estudio de impacto comunitario tiene la finalidad de conocer mejor la comunidad y cómo la expansión de la carretera puede influir en la comunidad, así como su opinión sobre el proyecto. Como parte de este estudio se está llevando a cabo una encuesta a los hogares y negocios en el área. Participar en la misma es voluntario, y le tomará alrededor de 15 minutos. La información que nos brinde será confidencial y se utilizará solo para propósitos de este estudio.

Q.2 1. Uso actual de la propiedad:

[REQUIRE ANSWER]

Residencial 1
Comercial 2
Mixto (residencial y comercial) 3

Q.3 2. Tipo de construcción:

[REQUIRE ANSWER]

Hormigón 1
Madera 2
Mixto (hormigón/madera) 3
Zinc 4
Acero 5
Otro: 6

[A - IF THE ANSWER TO QUESTION 3 IS NOT 6, THEN SKIP TO QUESTION 5]

Q.4 ¿Cuál otra?

[REQUIRE ANSWER]

_____

Q.5 3. Número de plantas/pisos:

[REQUIRE ANSWER]

1 planta 1
2 plantas 2
3 plantas o más 3

Q.6 4. Condición de la estructura:

[REQUIRE ANSWER]

Excelente 1
Buena 2
Ni buena ni mala 3
Mala 4
Pésima 5

Q.7 5. Dueño o inquilino:

[REQUIRE ANSWER]

Dueño 1
Inquilino 2
(NO LEA) No sabe / No indica 3

Q.8 6. ¿Dueño del terreno?

[REQUIRE ANSWER]

Si 1
No 2
(NO LEA) No sabe / No indica 3

Q.9 7. ¿Dueño de la estructura?

[REQUIRE ANSWER]

Si 1
No 2
(NO LEA) No sabe / no indica 3

Q.10 8. ¿Año aproximado en el que se construyó la estructura?

(ENCUESTADOR: MARQUE 999 SI LA PERSONA NO SABE O NO INDICA)

[REQUIRE ANSWER]

..... _____

Q.11 9. Tipo de comunidad:

[REQUIRE ANSWER]

Comunidad rural 1
Urbanización en área rural 2
Rural 3
Residencial urbana 4
Agrícola 5

Distrito comercial 6
Área industrial 7

Q.12 10. ¿Tiene familiares viviendo en esta comunidad?

[REQUIRE ANSWER]

Si 1
No 2
(NO LEA) No sabe / No indica 3

Q.13 11. ¿Existe algún tipo de organización comunitaria en su vecindario?

[REQUIRE ANSWER]

Si 1
No 2
(NO LEA) No sabe / No indica 3

[A - IF THE ANSWER TO QUESTION 13 IS 2 OR 3, THEN SKIP TO QUESTION 15]

Q.14 ¿Cuál?

[REQUIRE ANSWER]

_____

[A - IF THE ANSWER TO QUESTION 13 IS NOT 1, THEN SKIP TO QUESTION 17]

Q.15 12. ¿Usted o algún miembro de su familia participa o recibe servicios de dicha organización comunitaria?

[REQUIRE ANSWER]

Si 1
No 2

[A - IF THE ANSWER TO QUESTION 15 IS 2, THEN SKIP TO QUESTION 17]

Q.16 ¿Cuál?

[REQUIRE ANSWER]

_____

Q.17 13. Según su apreciación, ¿cómo clasificaría la calidad de vida en su comunidad?

[REQUIRE ANSWER]

Excelente (5) 1
Buena (4) 2
Ni buena ni mala (3) 3

Mala (2) 4
Pésima (1) 5

Q.18 14. ¿Qué medios de transportación utiliza comúnmente para llevar a cabo sus actividades?

[REQUIRE ANSWER]

Auto propio 1
Transportación pública 2
Caminando 3
Bicicleta 4
Auto de otra persona 5
Otro 6

[A - IF THE ANSWER TO QUESTION 18 IS NOT 6, THEN SKIP TO QUESTION 20]

Q.19 ¿Cuál otra?

[REQUIRE ANSWER]

_____

Q.20 15. Le voy a leer una lista de distintos servicios, para que me indique cuáles típicamente usted o algún miembro de su hogar obtiene dentro de su comunidad o dentro de su municipio: ---- (**ENCUESTADOR**: Marque primero si están disponibles en la comunidad y, de no ser así, verifique si obtiene los servicios en el municipio) ----

	Comunidad	**Municipio**	**Ni en la comunidad, ni en el municipio**
Educativos (escuelas o colegio)	1	2	3
Religioso/iglesia	1	2	3
Deportivos	1	2	3
Recreativos	1	2	3
Culturales	1	2	3
Adquisición de artículos de primera necesidad (Ej.) comida, medicinas	1	2	3
Transporte colectivo o público	1	2	3
Servicios de Salud	1	2	3
Cuido de niños	1	2	3
Cuido de envejecientes	1	2	3
Seguridad (cuartel, salud, defensa civil)	1	2	3

Q.24 16. ¿Desde cuándo ocupa la propiedad? ---- (**ENCUESTADOR**: Marque 999 si la persona no recuerda o no indica) ----

[REQUIRE ANSWER]

..... _____

Q.25 17. ¿Cuál es el total de personas en el hogar? **----** (**ENCUESTADOR**: Es importante que la persona le indique el total de personas para poder completar las próximas preguntas del cuestionario. SI NO QUIERE INDICAR MARQUE 99) **----**

[REQUIRE ANSWER]

[REQUIRE ANSWER]

_____

Q.152 Introducción: Según le indiqué al inicio de la encuesta, nos encontramos en el proceso de planificación ambiental del proyecto, por lo que al momento no se han determinado cuál es la ruta final ni las estructuras que serán impactadas. Una vez identificadas dichas estructuras, en una etapa más avanzada, el Gobierno deberá cumplir con las leyes de realojo aplicables. No obstante, es importante conocer la percepción de las comunidades desde una etapa previa, por lo que le pregunto:

Estimada señora García:

COMENTARIOS SOBRE LOS SIGUIENTES DOCUMENTOS SOMETIDOS A LA AUTORIDAD DE TIERRAS: 1. DECLARACIÓN DE IMPACTO AMBIENTAL PRELIMINAR CORREDOR DEL ESTE – CAROLINA – RIO GRANDE (NOVIEMBRE 2001). 2. EVALUACIÓN AMBIENTAL RELOCALIZACION DE LA PR-187 RIO GRANDE, PR AC-918702. 3. ENMIENDA EVALUACIÓN AMBIENTAL – EXPRESO ESTE-OESTE Y EXTENSIÓN CARRETERA ESTATAL PR-9 DESDE PR-10 HASTA AVENIDA BARAMAYA AC-000910-000911,000912. 4. EVALUACIÓN AMBIENTAL DESVIO DE COMERIO DE PR-778 A INT. PR-156/PR-167 COMERIO, PR AC-014813,014814. 5. EVALUACIÓN AMBIENTAL DESVIO DE AGUAS BUENAS, PR208 AGUAS BUENAS, PUERTO RICO AC-020802. 6. DECLARACIÓN DE IMPACTO AMBIENTAL PRELIMINAR EXTENSIÓN CARRETERA ESTATAL PR-5 DESDE PR-167 HASTA PR-199, AVE. LAS CUMBRES BAYAMÓN, AC-000533.

Después de haber analizado y evaluado los documentos ambientales sometidos para los proyectos mencionados en epígrafe, en conformidad con el Artículo 4 (c) de la Ley de Política Pública Ambiental, hemos determinado que estos proyectos no tendrán un impacto significativo, en términos de costos sociales, sobre terrenos agrícolas y otros recursos de nuestros agroecosistemas.

La actual administración de la Autoridad de Tierras está muy comprometida con un proceso de desarrollo balanceado, donde el crecimiento económico, la protección, la preservación y la conservación de nuestros recursos naturales son esenciales para garantizar el bienestar de las presentes y futuras generaciones. Debido a esta razón, endosamos los proyectos propuestos mencionados en epígrafe.

Cordialmente,

Luis Rivero Cubano

RE: Bayamón, Puerto Rico
Declaración de Impacto Ambiental
Preliminar (DIA-P)
Extensión Carretera Estatal PR-5
desde PR-167 hasta PR-199

Nos referimos al documento ambiental mencionado en la referencia el cual fue sometido a nuestra Oficina para evaluación y comentarios.

La Autoridad de Carreteras y Transportación se propone construir una extensión de la Carretera Estatal PR-5. Esta comenzará en el kilómetro 14.9 de la Carretera Estatal PR-167 y terminará en la PR-199. La extensión a la PR-5 conectará por el sur a la propuesta Carretera PR-148 y por el norte con la PR-5, actualmente bajo construcción. También, se construirá una plaza de peaje.

Luego de haber revisado el documento tenemos los siguientes comentarios:

1. El Proponente deberá realizar una consulta con la Oficina de Proyectos Públicos y Privados, Región Norte.

2. El Proponente deberá identificar si existe en el área algunas líneas de tuberías de acueductos o alcantarillados que se puedan afectar. De existir, deberá coordinar con esta Autoridad los trabajos para que nuestra infraestructura no se afecte y por ende el servicio que le brindamos a los residentes del área.

Agradecemos su interés en consultarnos.

Cordialmente,

EXTENSION PR-5 DESDE PR-199
HASTA PR-167, BAYAMON, AC-000533

Evaluamos las alternativas para la alineación de la Carr. PR-5, según su solicitud del 23 de diciembre de 1999 dirigida a nuestro Director Ejecutivo, Ing. Miguel A. Cordero. De acuerdo al estudio realizado recomendamos la alternativa número 2.

Le incluimos copia de nuestro mapa digitalizado de esta zona con el número de las líneas eléctricas más importantes y sus voltajes.

Para la evaluación de este proyecto, una vez se seleccione la alineación, deberán someter un plano preliminal con la localización exacta de las líneas existentes que interfieren a lo largo de la ruta.

De requerir información adicional puede comunicarse con este servidor al 740-7010.

Actualización de Endoso
Proyecto de Extensión de la PR-5

Estimado ingeniero González Montalvo:

En respuesta a su solicitud de actualización de endoso, procedemos gustosamente a emitir la misma.

El proyecto propuesto consiste en la extensión de la PR-5, comenzando en la intersección de la carretera antes descrita, con la PR-199 (Avenida Las Cumbres) y finaliza en la PR-167, km 14.9. El área de ocupación aproximada del proyecto es de 5.07 kilómetros de longitud e incluye la construcción de cuatro carriles divididos, control de acceso, intersecciones y plaza de peaje.

Mediante cartas del 20 de enero de 2000 y 18 de enero de 2002 (consulta 99-15-372-DIA), este Departamento no se opuso a la propuesta original (inicial). Luego de analizar minuciosamente los documentos sometidos ante nuestra consideración, concluimos que, la propuesta actual no contempla cambios significativos que puedan redundar en perjuicio de actividades o unidades agrícolas.

Por consiguiente, el Departamento de Agricultura, reitera la decisión de no objetar el proyecto propuesto.

Cordialmente,

Hemos evaluado el documento ambiental sometido a nuestra consideración en relación con el proyecto descrito en epígrafe.

El Departamento de Recursos Naturales y Ambientales está en conformidad con la Declaración de Impacto Ambiental Preliminar según fue presentada, pues discute los aspectos ambientales satisfactoriamente.

No obstante, cuando se presente la Declaración de Impacto Ambiental Final (DIA-F), deberá incluír como apéndices un estudio hidrológico-hidráulico para las obras de construcción sobre los cuerpos de agua (seis puentes) con los planos y los cómputos hidrológicos-hidraúlicos que determinaron el diseño de la obra. Dichos cómputos deben estar basados en una tormenta con un periodo de recurrencia de cien (100) años. Además un estudio geotécnico para determinar la estabilidad del terreno.

Además, deberá cumplir con lo siguiente:

1. Deberá cumplir con las disposiciones del Reglamento de Planificación Núm. 25, (Reglamento de Siembra, Corte y Forestación de Puerto Rico). El Reglamento dispone, entre otras cosas, que al momento de someter el proyecto ante la consideración de la Administración de Reglamentos y Permisos se deberá someter un documento que incluya la información presentada en el anejo de esta comunicación.

2. Deberá obtener de la Junta de Calidad Ambiental el Permiso para el Control de Erosión y Sedimentación para minimizar la erosión hacia los cuerpos de agua cercanos al proyecto. Además, se deberá obtener cualquier permiso requerido por esa Agencia para realizar el proyecto o actividad.

3. Deberá aplicar las disposiciones del Reglamento de Planificación Núm. 3 (Reglamento de Lotificación y Urbanización).

Esta comunicación no autoriza a mover material de la corteza terrestre ni a realizar ningún trabajo en el área hasta tanto se cumpla con todos los reglamentos y reglas aplicables al movimiento de terreno, Reglamento para la Extracción de Material de la Corteza Terrestre.

REGLAMENTO NUM. 25
REGLAMENTO DE SIEMBRA, CORTE Y FORESTACION
PARA PUERTO RICO

REQUISITOS PARA SOLICITAR UN PERMISO DE PODA, CORTE Y SIEMBRA DE ARBOLES

1. *Plano de mensura con topografía ilustrando la localización exacta de los árboles existentes.*

2. *Inventario incluyendo: nombre común, altura y diámetro a la altura del pecho (DAP) de cada árbol igual o mayor de 4 pulgadas.*

3. *Plan de siembra que incluya:*

   a. *Arboles existentes a permanecer o a ser relocalizados*
   b. *Medidas de protección temporeras y permanentes para los árboles y bosques existentes que no serán removidos*
   c. *Cantidad y descripción de los árboles propuestos a ser sembrados, incluyendo tamaño y nombre científico. Actualmente, el Reglamento Núm. 25 dispone que por cada árbol cortado se requerirá, como medida de mitigación, la siembra de un (1) árbol de una altura mínima de seis (6) pies. De aprobarse alguna enmienda futura al mencionado Reglamento, los proyectos deberán cumplir con lo dispuesto en la enmienda aprobada.*
   d. *Especificaciones y detalles para la siembra y trasplante*
   e. *Plano de siembra ilustrando el proyecto de siembra propuesta.*
   f. *Itinerario de mantenimiento por un mínimo de seis (6) meses.*

P.O. Box 42007
San Juan, Puerto Rico 00940-2007

Estimada señora García:

RE: DECLARACIÓN DE IMPACTO AMBIENTAL
EXTENSIÓN CARRETERA ESTATAL PR-5
DESDE PR-167 HATA PR-199, AVE LAS CUMBRES
BAYAMÓN, AC-000533

Nos referimos a su comunicación del 15 de noviembre de 2001 sobre el proyecto para la construcción de la Extensión de la Carretera PR-5, desde la Carretera PR-167, km. 14.9, Sector El Portón, hasta la Carretera PR-199, Avenida Las Cumbres. La propuesta extensión conectará al norte con la PR-5 y al sur con la relocalización de la PR-167 (futura PR-148).

La Compañía de Fomento Industrial (CFI) no tiene programada la adquisición y desarrollo de terrenos ni la construcción de edificios industriales en áreas cercanas a las Carretera PR-5, PR-167 y PR-199. La CFI tiene dos (2) propiedades industriales, una ubicada en la PR-174, km. 3.0 en el Barrio Minillas y otra, en la PR-167, km. 5.2 en el Barrio Juan Sánchez, las cuales están a una distancia considerable del propuesto proyecto.

De acuerdo a la descripción general del proyecto en la Declaración de Impacto Ambiental Preliminar que nos ha suministrado, el mismo no interfiere en forma alguna con las propiedades de la CFI.

Consideramos que la nueva extensión de la carretera PR-5 será muy conveniente y precisa para mejor conexión con los Barrios Cerro Gordo y Minillas, los sectores El Portón, El Ocho, Van Scoy, Pájaro Puertorriqueño y las urbanizaciones El Cortijo, Estancias de Cerro gordo, Valles de Cerro Gordo y Ciudad Dorada del Municipio de Bayamón.

Le deseamos éxito en sus gestiones.

Cordialmente,

Angel F. Santos

EVAL. ARQLCA. FASE IA-IB
EXT. PR-5, BAYAMÓN, PUERTO RICO
AC-000533

Estimada ingeniera Borges:

Hemos recibido el informe de estudio arqueológico Fase IA-IB, preparado por la Arql. Virginia Rivera Calderón, sobre el proyecto descrito en referencia.

Conforme a los resultados y recomendaciones del referido estudio, no se detectó evidencia significativa, en el sentido de que el desarrollo del proyecto en cuestión pudiera causar algún tipo de impacto adverso con respecto a recursos arqueológicos y/o históricos.

Por lo antes expuesto, no tenemos objeción a este proyecto.

El presente endoso es uno de carácter parcial, en lo que respecta al aspecto arqueológico del proyecto en cuestión, y **NO** constituye un endoso global al mismo de parte del Instituto de Cultura Puertorriqueña.

El proponente, queda, no obstante, sujeto a las responsabilidades y obligaciones que impone la Ley 112 del 20 de julio de 1988-conocida como la Ley de Arqueología Terrestre de Puerto Rico-, en cuanto a que deberá paralizar todo tipo de actividad de excavación, movimiento y remoción de la corteza terrestre, y notificar inmediatamente al Instituto de Cultura Puertorriqueña, en caso de que, durante el desarrollo del proyecto, se descubra o se impacte algún depósito, elemento, estructura o vestigio de naturaleza histórica y/o arqueológica.

Cordialmente,

Ovidio Dávila, Ph.D.

Estimada señora Borges:

EXTENSION PR-5 DESDE PR-199
HASTA PR-167, BAYAMON, PE
AC-000533

Hemos revisado y evaluado los documentos relacionados con el proyecto de referencia, conforme a las disposiciones de la Sección 10 de la Ley 112 del 20 de julio de 1988 —conocida como la Ley de Arqueología Terrestre de Puerto Rico— y en virtud de los requerimientos del *Reglamento para la Radicación y Evaluación Arqueológica de Proyectos de Construcción y Desarrollo* (Departamento de Estado #4643).

Como resultado de este proceso, hemos llegado a la conclusión de que existe la posibilidad de que las actividades de desarrollo que contempla este proyecto pudieran afectar recursos de naturaleza arqueológica y/o histórica.

Por lo antes expuesto, el proponente deberá someter, para nuestra evaluación y determinación, los resultados de una evaluación arqueológica Fase 1A, la cual deberá ser preparada por un arqueólogo cualificado para este nivel de investigación por el Consejo para la Protección del Patrimonio Arqueológico Terrestre de Puerto Rico.

Cordialmente,

Attention: Dr. Jack Allison, P.E., Executive Director
Puerto Rico Highway and Transportation Authority (PRHTA)

Subject: **PR-5 Bayamón**
Environmental Assessment

Dear Mr. Fagundo:

On February 27, 2004 personnel from this office and from the PRHTA's Office of Environmental Studies visited the proposed corridor for the completion of PR-5. The short remaining section of PR-5 is very important since it will complete a freeway from Naranjito to PR-22 in Bayamón. We would like to offer the following comments regarding this project:

The project alignment traverses along a drainage channel in the northern section of the project. It is advisable to perform preliminary design to determine required structures and the extent of right of way requirements.

The proposed layout includes an interchange and toll plaza in a mountainous area requiring extensive land acquisition and relocation of families. We recommend to evaluate alternative locations for the toll plaza and interchange to minimize effects on that community.

Please call Jose Torres at (787) 766-5600, ext. 234, if you need to further discuss this matter.

Sincerely,

Jose Luis Torres

Estimado ingeniero Carro Miranda:

Solicitud de Información Adicional
Certificación para Categorización de
Hábitats Naturales para la Vida Silvestre
Segmento Final Carr. PR-5
Bo. Pájaros, Bayamón & Bo. Ortiz, Toa Alta
O-SE-CCH01-SJ-01998-20092021

El pasado 20 de septiembre de 2021 fue radicada en nuestra Oficina de Secretaría la solicitud de epígrafe. Al evaluar el expediente, encontramos mención de humedales asociados al Rïo Minillas (p. 11 del Estudio de Flora y Fauna[1]), la presencia de especies de flora asociadas a humedales (pp. 43-47 de dicho documento) y de suelos hidrícos (Figura 3 de la Solicitud de Certificación[2]). Consta una carta del Servicio de Pesca y Vida Silvestre (USFWS, por sus siglas en inglés) del 4 de febrero de 2000 solicitando una delineación de los humedales presentes en el predio del proyecto propuesto.

También se reporta la presencia de bosques de galería asociados a los cuerpos de agua a ser impactados por el proyecto (p. 10 del Estudio de Flora y Fauna). Los bosques de galería son estructuras bióticas capaces de reducir la erosión de los lechos y orillas de ríos y quebradas, de mejoran la calidad de las agua y de minimizar los efectos de sequías e inundaciones. También, en áreas urbanas, son hábitat para la vida silvestre y pulmones productores de oxïgeno. En términos de las estrategias indispensables de reducción de los efectos del cambio climático, las áreas forestadas, en general son trampas de carbono y su presencia ayuda a reducir la generación de gases de efecto de invernadero[3]. En la página 7 de la Sección *Validación de la descripción del área del proyecto*, se menciona y cito:

---

[1] CMA Architects & Engineers. Abril, 2000. Estudio de Flora y Fauna. Extensión Carretera PR-5 Bayamón, Puerto Rico

[2] CMA Architects & Engineers. Julio, 2021. Solicitud de Certificación ce Categorización de Hábitat. Autoridad de Carreteras y Transportación. Extensión Carretera PR-5 desde PR-199 hasta PR-167 Bayamón, Puerto Rico

[3] Núñez Avellaneda, L., M. I. Castro, G. Mestre & L. Lozano. 2019. Los bosques de galería conectores de vida. *Ámbito Investigativo*1:3. 19 pgs.

"El cruce de los ríos se hará mediante la construcción de puentes, relleno con atarjeas para mantener el flujo de los mismos y en algunas áreas se canalizarán porciones de las quebradas"

Estas acciones propuestas implican impactos significativos extensos sobre las zonas ocupadas por estos bosques de galería.

Por otro lado, no consta en los documentos sometidos una carta de endoso de este Departamento.

Por consiguiente, deberá, a la brevedad posible, enviarnos lo siguiente:

1. Un plano legible del proyecto donde se identifiquen las áreas de humedal sitas en los predios del proyecto propuesto con un estimado del área que ocupan los mismos, así como una relación de los impactos previsibles a dichos humedales.

2. Una lista de las acciones específicas a efectuarse sobre los ríos y quebradas, así como un estimado del área de bosques de galería a afectarse.

3. Una copia de la carta de endoso emitida por este Departamento.

Una vez recibamos dichos documentos podremos determinar las mitigaciones que procederían y finalizar la evaluación de este caso.

Si tiene alguna pregunta o necesita orientación sobre este asunto, puede escribirnos a la dirección indicada o comunicarse al teléfono 787-999-2200 extensión 2846.

Cordialmente,

Luis R. Sierra Torres
Secretario Auxiliar

Apartado Postal 9024184
San Juan, Puerto Rico 00902-4184

RE: ACTUALIZACIÓN ENDOSO – ESTUDIO ARQUEOLÓGICO FASE 1A-1B
EXTENSIÓN CARRETERA ESTATAL PR-5, BAYAMÓN (AC-000533)

Estimado profesor Ruiz-Cortés:

El proyecto de infraestructura vial, extensión de la PR-5 (AC-000533) ha sido incluido en la agenda de proyectos prioritarios por el Gobernador de Puerto Rico, Hon. Pedro R. Pierluisi para la reconstrucción de Puerto Rico. Mediante comunicación del 29 de noviembre de 2000 el Instituto de Cultura (ICP) emitió un endoso al Estudio Fase 1A-1B (Estudio) presentado para dicho proyecto. Sin embargo, el proyecto ahora incluye mejoras adicionales en la intersección propuesta con la carretera estatal PR-830, así como una pequeña realineación en la extensión propuesta a la PR-5 para evitar impactos en la comunidad El Cortijo. Ver Figuras 1 y 2, adjunta.

Este proyecto fue originalmente propuesto por la ACT a principios de la década del 2000 como una continuación de dicha carretera. La Declaración de Impacto Ambiental de este proyecto fue aprobada por la Junta de Calidad Ambiental mediante la Resolución R-03-22-12 del 21 de agosto de 2003 y recertificada el 1 de diciembre de 2011, JCA-01-0038. (se incluyen copias de ambas comunicaciones).

A tenor con el Estudio preparado y evaluado por el ICP se desprende el bajo potencial de encontrar hallazgos arqueológicos y de estructuras históricas en la zona del proyecto. Esto fue confirmado en la evaluación Fase 1B con resultados negativo. Cabe destacar que en el área de la PR-830 y El Cortijo, Segmentos B y C, se realizaron pruebas todas con resultados negativos. También incluimos carta de la Oficina Estatal de Preservación Histórica (SHPO, por sus siglas in inglés) la cual indica "…. Agency's finding of no historic properties affected is appropriate for this undertaking…". Ver copia cartas ACT y SHPO, adjunta.

Además, según puede confirmar con las fotos áreas recientes y de visitas de campo al área de la PR-830 y la realineación en el área del El Cortijo es una ocupada principalmente por viviendas, taludes, pastizales, impactos de construcción, terrenos expuestos y/o removidos, así como otras actividades y/o desarrollos similares a los observados en las áreas adyacentes evaluadas en el Estudio. Ver Figuras 2A y 2B, adjunta.

Por tanto, entendemos que la posibilidad de encontrar algún yacimiento o asentamiento histórico es poco probable debido al intenso desarrollo urbano en dicho sector y a los movimientos de terreno realizados en el pasado por los desarrollos.

Basado en lo antes expresado, respetuosamente solicitamos del ICP (Programas de Arqueología y Etnohistoria, y Patrimonio Histórico Edificado) la actualización al endoso expedido.

De tener alguna duda o necesitar información adicional puede comunicarse con la arqueóloga Virginia Rivera Calderón al (787) 648-8373 / virginia.arqueologia@gmail.com o con el Ing. José Carro al (787) 792-1509 ext. 2301 / jcarro@cmapr.com.

Sin nada más sobre el particular y en espera de vuestra acostumbrada pronta respuesta, quedo.

Atentamente,

Dr. Angel J. Alicea Rodríguez, PE
Director
Área de Programación y Estudios Especiales

AUTORIDAD DE CARRETERAS Y TRANSPORTACIÓN
PO BOX 42007
SAN JUAN PUERTO RICO 00940-2007

JCA 01- 0038 (ACT) – Re-Certificación
Extensión Proyecto de Carretera Estatal PR-5
(desde la PR-167 hasta la PR-199)
Bayamón, Puerto Rico

Estimado ingeniero Rodríguez:

La Junta de Calidad Ambiental evaluó la petición de re-certificación de vigencia de cumplimiento con el Artículo 4-C (actualmente 4-B3) de la Ley sobre Política Pública Ambiental, sometida en esta Junta el 30 de noviembre de 2011, relacionada al proyecto mencionado en referencia. El proyecto comenzará en el Km. 14.9 de la PR-167 y terminará en la PR-199.

La extensión de la PR-5 conectará por el sur a la carretera PR-148 y por el norte con la PR-5. La extensión propuesta tendrá una longitud aproximada de 5.07 Km. (2.6 millas) y será de 4 carriles divididos con control de acceso total, intersecciones a desnivel y plaza de peaje en ambas direcciones. Se estarán construyendo 6 puentes sobre carreteras existentes, se impactarán 74 estructuras, incluyendo 32 residencias en la Urb. El Cortijo.

La alternativa de la ruta seleccionada (Alternativa 2A) comienza en al Km. 14.9 en la intersección de la carretera propuesta PR-148 con la PR-167 en dirección este, pasando al este de la Calle esmeralda de la Urb. Valles de cerro Gordo y luego desviándose hacia el norte hasta encontrarse con la PR-830. Luego continúa en dirección noreste hasta llegar a la Urb. El Cortijo, donde se utilizará el corredor existente propiedad de la ACT y continuará hasta la intersección con la PR-199 (Ave. Las Cumbres).

Esta Junta determinó mediante la Resolución R-03-22-12, emitida y notificada a todas sus partes el 21 de agosto de 2003, que su entidad cumplió con la gestión de evaluar el posible impacto ambiental de la acción

Edificio Agencias Ambientales Cruz A. Matos
Urb. San José Industrial Park, Ave. Ponce de León 1375, San Juan, PR 00926-2604
Apartado 11488, Santurce, PR 00910 Tel. 787-767-8181 • Fax 787-767-4861

propuesta, de acuerdo con el Artículo 4-C (actualmente 4-B3) de la Ley sobre Política Pública Ambiental vigente en ese momento.

Debido a que el proyecto comenzará su construcción posterior al período de vigencia del documento ambiental, la Autoridad de Carreteras y Transportación ha sometido el trámite de re-certificación de cumplimiento con el Artículo 4-B (3) de la Ley sobre Política Pública Ambiental, mediante el procedimiento y en cumplimiento con lo establecido en la Orden Administrativa OA-OIGPE-2011-14, emitida por la Oficina del Inspector General de Permisos el 11 de marzo de 2011.

Esta Junta, al amparo de dicha orden y de acuerdo a lo establecido en la Regla 106 del Reglamento de Evaluación y Trámite de Documentos Ambientales, ha determinado que se mantiene vigente el documento ambiental evaluado para el mismo siempre y cuando no se incorporen cambios a las acciones ya evaluadas en el documento ambiental sometido. Esta junta se reafirma en la determinación emitida en la Resolución R-03-22-12. No obstante para una mejor realización del proyecto se recomienda:

1. Previo a dar comienzo a la construcción o efectuar algún movimiento de tierra, se debe obtener de la Oficina de Gerencia de Permisos (OGPe), el Permiso General Consolidado que establece el Reglamento para el Trámite de los Permisos Generales, que incluye:

   a. Permiso de Actividad Generadora de Desperdicios Sólidos No Peligrosos.
   b. Permiso para el Control de la Erosión y Prevención de la Sedimentación
   c. Permiso para Operar una Fuente de Emisión

2. Si las estructuras a demolerse tienen material con contenido de asbesto, previo a su demolición deberán obtener en esta Junta, el Permiso General para el Manejo de Materiales con Contenido de Asbesto que establece el Reglamento para el Trámite de los Permisos Generales de la Junta de Calidad Ambiental.

3. Si las estructuras a demolerse contienen pintura con base de plomo, previo a su demolición deberán obtener en esta Junta, el Permiso General para Actividades de Mitigación de Pintura con Base de Plomo que establece el Reglamento para el Trámite de los Permisos Generales de la Junta de Calidad Ambiental.

4. Deberán tomar las medidas necesarias para evitar que residuos de sustancias orgánicas e inorgánicas como aceites, combustibles u otras

sustancias químicas generadas durante la construcción del proyecto, puedan ser arrastradas por la escorrentía y ganen acceso a algún cuerpo de agua (Quebrada Rivera, Quebrada Burgos discurren cercanas al proyecto; Río Hondo y Río Minillas están dentro del área del proyecto) o al sistema pluvial.

5. Si durante el desarrollo del proyecto se encuentran depósitos arqueológicos, los mismos deberán ser informados inmediatamente al Instituto de Cultura Puertorriqueña (ICP).

6. Deberán mantener las vías públicas y alrededores del proyecto libres de acumulación de escombros y desechos de construcción. Los mismos deberán manejarse y disponerse de acuerdo a la reglamentación vigente.

7. Deberán evitar la colocación de relleno excedente en áreas donde se puedan crear zonas de acumulación de sedimentos que puedan afectar áreas circundantes a sectores residenciales o los cuerpos de agua cercanos y dentro de la ruta propuesta.

8. De tener alguna descarga de escorrentía de aguas pluviales provenientes de la actividad de construcción que pueda impactar a cualquier cuerpo de agua, deberán consultar con la Agencia Federal de Protección Ambiental para determinar si dicha descarga requiere un Permiso Federal de Descarga "NPDES". Además, para descargas de aguas de escorrentías durante la fase de operación del proyecto, deberán someter a esta Junta un Plan de Mejores Prácticas de Manejo para prevenir que contaminantes ganen acceso a cuerpos de agua.

9. Para la instalación de algún tanque para almacenar combustible para algún equipo, deberán someter en el Área de Calidad de Agua de esta Junta, un Plan de Emergencia para prevenir y controlar derrames, según el Reglamento de Estándares de Calidad de Agua.

10. De instalarse algún tanque para almacenar aceite usado, se deberá someter en la OGPe una solicitud de Permiso General para Instalaciones de Almacenamiento de Aceite Usado, si almacenan más de 220 galones de aceite usado, según lo requiere el Reglamento para el Trámite de los Permisos Generales.

11. En aquellos lugares donde vehículos o equipo pesado deban cruzar algún cuerpo de agua durante el desarrollo del proyecto, deberán

tomar las medidas de control necesarias para evitar efectos dañinos al cauce de los cuerpos de agua impactados.

12. Si el desarrollo del proyecto requiere el cruce de zonas susceptibles a inundaciones, deberán cumplir con los requisitos del Reglamento Conjunto de la Junta de Planificación o con lo dispuesto por la OGPe.

13. Respecto a cualquier obra hidráulica que se proyecte construir, deberán obtener el correspondiente endoso del Departamento de Recursos Naturales y Ambientales o del Cuerpo de Ingenieros del Ejército de los Estados Unidos.

14. Para las actividades que conlleven depósito de relleno o requieran dragado de material en algún cuerpo de agua, deberán tramitar el correspondiente permiso requerido por el Cuerpo de Ingenieros del Ejército de los Estados Unidos, conforme a la Ley de Ríos y Puertos de 1899 y la Sección 404 de la Ley Federal de Agua Limpia.

15. En la etapa de diseño del proyecto, deberán tomar en consideración medidas de protección respecto al impacto sónico generado por el tránsito en extensión de la carretera PR-5, para garantizar la tranquilidad y bienestar general de los residentes y de los futuros residentes, según lo requiere el Reglamento para el Control de la Contaminación por Ruido de esta Junta.

16. Coordinar con la AAA y la AEE con relación a las mejoras necesarias para suplir la demanda de agua potable y energía eléctrica para las plazas de peaje del proyecto.

17. Deberán consultar al Municipio de Bayamón respecto al manejo de las interrupciones del tránsito y las vías de acceso al proyecto y cumplir con los requisitos y recomendaciones que emita dicha agencia.

18. Las recomendaciones y requisitos presentados en esta comunicación, no eximen de cumplir con cualquier otro requerimiento o permiso de esta Junta u otras agencias concernientes, que sean aplicables a la acción propuesta.

19. Cuando surjan cambios sustanciales a la acción propuesta o nueva información sobre las condiciones o impactos ambientales que no hayan sido considerados y evaluados en el documento sometido, se deberá consultar con la OGPe, si dichos cambios requieren someter un nuevo documento ambiental.

Agradecemos su cooperación por mantener y conservar la calidad de nuestro ambiente.

Cordialmente,

PR

JUNTA DE CALIDAD AMBIENTAL

IN RE:	*	**R-03-22-12**
AUTORIDAD DE CARRETERAS Y	*	**SOBRE: EXTENSION PROYECTO DE CARRETERA ESTATAL PR-5 DESDE LA PR 167 HASTA PR 199 BAYAMON**
TRANSPORTACION	*	
Peticionaria	*	

RESOLUCIÓN Y NOTIFICACIÓN

En reunión celebrada el 21 de agosto de 2003, se sometió ante la consideración de la Junta de Gobierno de la Junta de Calidad Ambiental (en adelante la "Junta"), una Declaración de Impacto Ambiental Preliminar para la extensión del proyecto Estatal PR-5 desde la PR 167 hasta la PR 199 en Bayamón.

ACCION PROPUESTA

La Autoridad de Carreteras y Transportación propone la construcción de una extensión a la Carretera Estatal PR-5. La misma comenzará en el KM 14.9 de la Carretera Estatal PR-167 y terminará en la PR-199. La extensión a la PR-5 conectará por el Sur a la propuesta PR-148 y por el norte con la PR-5, actualmente bajo construcción. La extensión propuesta tendrá una longitud aproximada de cinco punto cero siete kilómetros (5.07 Km), dos punto seis (2.6 millas) y será de cuatro (4) carriles divididos con control de acceso total intersecciones a de nivel y una plaza de peaje.

TRASFONDO PROCESAL

El 19 de octubre del 2001 la Autoridad de Carreteras y Transportación sometió una Declaración de Impacto Ambiental donde propone la construcción de una extensión a la Carretera Estatal PR-2. El 30 de mayo de 2002 ACT solicita que se efectúen Vistas Públicas ante las interrogantes surgidas. La Junta de Gobierno ordenó al Área de Asesoramiento Científico sometiera ante la Junta sus comentarios. El 29 de agosto de 2002 se ordenó la celebración de Vista Pública, la cual fue celebrada el día 4 de noviembre de 2002. El día 13 de agosto de 2003 se presentó el Informe de Oficial Examinador sobre la Vista celebrada.

RESOLUCION

Luego de un análisis de la Declaración de Impacto Ambiental Preliminar, de la evaluación del Informe del Oficial Examinador y los comentarios del Área de Asesoramiento Científico y al amparo de los poderes y facultades que le confiere a esta Junta de Calidad Ambiental, la Ley Núm. 9 de 18 de junio de 1970, según enmendada, conocida como la Ley Sobre Política Pública Ambiental, 12 L.P.R.A, 1121 et seq., por la presente esta Junta

RESUELVE:

Se apruebe el cumplimiento con el Artículo 4 C de la Ley Sobre Política Pública Ambiental de la Junta de Calidad Ambiental, según recomendado por el Área de Asesoramiento Científico. Se acepta el Informe del Oficial Examinador y se instruye a la agencia proponente que proceda con la publicación del Aviso de DIA-Final conforme a la Regla 254 O y P del Reglamento para el Proceso de Presentación, Evaluación y Trámite de Documentos Ambientales.

APERCIBIMIENTO

La parte adversamente afectada por una resolución u orden parcial o final podrá dentro del término de veinte (20) días desde la fecha de archivo en autos de la notificación de la Resolución u Orden presentar Moción de Reconsideración de la Resolución u Orden. La agencia, dentro de los (15) días de haberse presentado dicha Moción, deberá considerarla. Si la rechazare de plano o no actuare dentro de los quince (15) días, el término para solicitar revisión judicial comenzará a correr nuevamente desde que se notifique dicha denegatoria o desde que expiren esos quince (15) días, según sea el caso. Si se tomare alguna determinación en su consideración, el término para solicitar revisión empezará a contarse desde la fecha en que se archive en autos una copia de la de la notificación de la Resolución de la Junta resolviendo definitivamente la Moción de Reconsideración. Tal Resolución deberá ser emitida y archivada en autos dentro de los noventa (90) días siguientes a la radicación de la Moción de Reconsideración. Si la Junta acoge la Moción de Reconsideración, pero deja de tomar alguna acción con relación a la

Dic. 2. 2003 11:38AM N20528 P. 4

Moción de Reconsideración dentro de los noventa (90) días de haber sido radicada, perderá jurisdicción sobre la misma y el término para solicitar revisión judicial empezará a contarse a partir de la expiración de dicho término de noventa (90) días, salvo que la agencia, por justa causa y dentro de los noventa (90) días, prorrogue el término para resolver por un periodo que no excederá treinta (30) días adicionales.

NOTIFÍQUESE por correo certificado con acuse de recibo a: Sra. Irma M. García Directora de Programación, Autoridad de Carreteras y Transportación, PO Box 42007, San Juan, P.R. 00940-2007; y personalmente a los siguientes funcionarios : Biól. Flor Del Valle, Vicepresidenta; Ing. Angel O. Berríos, Miembro Asociado; Biól. Julio Iván Rodríguez, Miembro Alterno; Sra. Iris Cuadrado, Directora de Asesoramiento Científico.

DADA en San Juan, Puerto Rico, a 21 de agosto de 2003.

ESTEBAN MUJICA COTTO
Presidente

CERTIFICO: Que he notificado copia de la presente Resolución por correo certificado con acuse de recibo a las partes mencionadas en el Notifíquese, habiendo archivado el original en autos.

AVISO AMBIENTAL
DECLARACIÓN DE IMPACTO AMBIENTAL FINAL

En cumplimiento con las disposiciones del artículo 4C de la Ley #9 del 18 de junio de 1970, según enmendada, Ley Sobre Política Pública Ambiental y del Reglamento para el Proceso de Presentación, Evaluación y Trámite de Documentos Ambientales de la Junta de Calidad Ambiental; se publica este Aviso. La Autoridad de Carreteras como agencia proponente sometió a la Junta de Calidad Ambiental una Declaración de Impacto Ambiental Preliminar (JCA-01-0038ACT) para la Extensión del Proyecto Carretera Estatal PR-5, ubicada desde la PR 167 hasta la Carretera Estatal PR 199 en la Avenida Las Cumbres de Bayamón, P.R. Mediante Resolución Final (R-03-22-12) notificada en el día de hoy, la Junta de Calidad Ambiental ha resuelto que la DIA-Preliminar sometida cumple con el artículo 4C.

Por este medio notificamos la determinación de la Autoridad de Carreteras y Transportación de acoger la Resolución y considerar el documento como una DIA Final. La publicación de este Aviso se considera como fecha de notificación de la DIA-F y los término para incoar Moción de reconsideración o Recurso de revisión judicial comenzarán a decursar al día de hoy.

La DIA estará disponible para inspección general en la página de internet jca.gobierno.pr, en la Casa Alcaldía de Bayamón, en la Oficina de Secretaría de la Junta de Calidad Ambiental, ubicada en el Edificio National Plaza, Avenida Ponce de León 431, Hato Rey, P.R.y en la Oficina de Estudios Ambientales de la Autoridad de Carreteras y Transportación, ubicada en el Edificio Minillas, Torre Sur en Santurce, P.R. La funcionaria contacto de Autoridad de Carreteras y Transportación es la Sra. Irma García, cuyo número telefónico es el (787)~~721-8787~~. 729-1580

La DIA ha sido preparada incorporando y ofreciendo consideración a los comentarios del público, de la Junta de Calidad Ambiental y de las demás agencias comentadoras. La misma tiene el propósito de asegurar que se tomen en cuenta los factores ambientales en toda acción que en alguna forma puedan tener impacto significativo sobre el ambiente, mediante la descripción y análisis de la acción propuesta.

BAYAMÓN, PUERTO RICO
AC-000533, JCA-01-038 (ACT)

Estimado licenciado Mujica:

En cumplimiento con la reglamentación aplicable, conforme a lo dispuesto por el inciso 4(c) de la Ley de Política Pública Ambiental, se ha preparado una Declaración de Impacto Ambiental Final (DIA-F) en la cual se discute el alcance de la acción propuesta y los compromisos ambientales, asumidos para minimizar el impacto durante la construcción y operación del proyecto.

Consideramos que el documento incluido cumple con las disposiciones de ley aplicables y por lo tanto, sometemos ante su consideración diez (10) copias y el documento grabado en un disco compacto en formato "pdf" para publicarlo en la página de Internet de su Agencia.

Agradeceré su acostumbrada atención a este asunto.

Loa deportiva a la bandera

HOY SE conmemoran los 108 años de la bandera de Puerto Rico. Un acto tan significativo e importante en la vida de un país, no debe pasar inadvertido para nosotros. Son muchos los que a través de diferentes maneras y gestiones cívicas, políticas y culturales han enaltecido a esa bandera, pero son los deportistas los que más alto y lejos han llevado a la monoestrellada.

El deporte ha sido el portaestandarte de la bandera puertorriqueña en el mundo. Los deportistas boricuas han llevado la bandera a los cinco continentes y la han hecho flotar, sola, junto a las otras banderas de los países del mundo. En 39 ocasiones diferentes la bandera de la estrella solitaria ha flotado y desfilado en eventos olímpicos, como los son Juegos Centroamericanos y del Caribe, Juegos Panamericanos y Juegos Olímpicos. Ciudades y culturas tan distantes como son Helsinki, Melbourne, Roma, Tokio, Munich, Seúl, Barcelona, Los Ángeles, Sydney, y pueblos cercanos como Cuba, Venezuela, México y la República Dominicana, la han visto flotar con orgullo, gallardía, custodiada y protegida por los deportistas puertorriqueños.

La primera vez que el deporte usó la bandera de Puerto Rico en un evento internacional deportivo fue en el 1935 en los Juegos CAC del El Salvador. En esa ocasión lo hicieron de manera no oficial, es más lo hicieron retando la orden establecida para aquella época, en donde las autoridades de gobierno, encabezadas por el mal recordado gobernador de turno, Blaston Winship, no reconocía esa bandera y criminalizaba a todos aquellos que se atrevían a usarla en lugares públicos. En esos Juegos, para sorpresa de todos, el ponceño Manuel Luciano entró al Estado Nacional portando la bandera de Puerto Rico, encabezando la exigua delegación de 35 atletas.

Días después, en esos mismos Juegos, los atletas boricuas consiguieron ganar sus primeras medallas de oro en la historia y en el momento de la premiación se izó la bandera monoestrellada bajo los acordes del himno nacional del país sede, El Salvador. La primera medalla de oro ganada fue para Fernando Torres Collac en el evento de la bala y luego le siguieron Heber Sabater, Juan Luyanda, José Antonio Figueroa, todos de atletismo y Jesús Acosta en tiro. Todos ellos recibieron sus medallas de oro y vieron flotar en lo más alto del podio a la bandera de Puerto Rico, al lado de los países hermanos del Caribe. Pero esa atrevida gesta, que pudo haber tenido consecuencias nefastas para esos competidores, no se volvió a repetir hasta el verano del 1952, cuando fue creada la constitución del Estado Libre Asociado, legalizando el uso de la bandera nacional en todos los eventos, incluyendo el deporte. Hasta ese momento cada vez que Puerto Rico competía en un evento internacional déportivo, lo hacía usando el pabellón de los Estados Unidos o la bandera con el Escúdo y el Cordero, bajo un fondo blanco.

Fue durante la celebración de los Juegos Olímpicos de 1952, en la ciudad finlandesa de Helsinki que se arrió la bandera de los Estados Unidos y se izó de manera oficial la bandera de Puerto Rico y desde ese momento ha flotado sola en todos los rincones del planeta, excepto en los Juegos Olímpicos de Moscú en el 1980, que por un error de Germán Rieckehoff se desfiló bajo una bandera blanca y los Aros Olímpicos.

ESOS FUERON los Juegos del llamado boicot del presidente Jimmy Carter po la intervención militar de los soviéticos en Afganistán. Al pasar más de dos décadas de esos sucesos, vemos que son los militares estadounidenses los que están hoy en ese país, sin que se haya solucionado el conflict entre las tribus que viven en ese territorio.

Los deportistas con sus victorias y sus luch en los terrenos competitivos del mundo, ha llevado con dignidad esa bandera. El pueblo ha respondido con su apoyo y es por eso que cuando vemos victorias y celebraciones de nuestro más conotados atletas, surge de inmediato y de forma espontánea el uso de la bandera para significar que somos un pueblo orgulloso de nuestras raíces y de nuestra raza y que es esa bandera de la estrella solitaria y sus tres franjas es la que nos une, más allá de consideraciones políticas, sociales o económicas.

Modificación a la Solicitud de Declaraciones de Cualificación
Construcción de Carretera y Túnel
Expreso PR-53 (Maunabo-Yabucoa)
Sección I, Fase I (PR-901 Sur a PR-901 Norte)
Proyecto Número AC-005313
Maunabo, Puerto Rico

El Departamento de Transportación y Obras Públicas (DTOP); y la Autoridad de Carreteras y Transportación (ACT), notifican al público en general y a los contratistas de obras de infraestructura, que el proceso de Solicitud de Declaraciones de Cualificación previamente publicado para la subasta y construcción de un segmento de carretera y siete (7) puentes; y el Diseño/Construcción de un túnel doble en roca de aproximadamente 610 metros de longitud, ha sido enmendado a una de **Solicitud de Declaraciones de Cualificación** para el método convencional de subasta y construcción. Se prepararán planos finales para esta fase que consistirá de la construcción del segmento de carretera, cinco puentes y la excavación del túnel con la cubierta inicial solamente.

Este proyecto se extiende desde la carretera PR-901 Sur (Est. 74+00), aproximadamente 0.8 kilómetros del centro del pueblo de Maunabo, hasta la estación 102+00 en Emajagua para una longitud total de 2.8 kilómetros. El costo de construcción se estima en aproximadamente $50 millones. Este proyecto comprende el tramo denominado con el número AC-005313.

Los documentos de cualificación pueden obtenerse a partir del viernes, 9 de enero de 2004 hasta el viernes, 16 de enero de 2004, desde las 8:00 de la mañana hasta las 4:00 de la tarde en la Oficina de Estimados y Subastas de la ACT, localizada en el piso 11 del Centro Gubernamental Minillas, Edificio Sur, Avenida de Diego, Santurce, Puerto Rico.

Los contratistas interesados deberán someter sus Declaraciones de Cualificación en la Oficina del Director Ejecutivo en el piso 10 de la ACT en o antes de las 4:00 de la tarde del viernes, 6 de febrero de 2004. Las Declaraciones de Cualificación se evaluarán de acuerdo a los requerimientos especificados en los documentos de cualificación y conforme al Reglamento de Subastas de la ACT, Reglamento 02-001. Como parte de la Declaración de Cualificación, la Autoridad requerirá experiencia en construcción de carretera, puentes y túneles; e información financiera entre otros. El resultado de las evaluaciones será notificado en o antes del lunes, 16 de febrero de 2004. Cualquier pregunta relacionada con este proceso, favor de comunicarse con el Ing. José E. Hernández Borges, Director Ejecutivo Auxiliar para Infraestructura al teléfono (787) 729-1540 o al correo electrónico jhernandez@act.dtop.gov.pr.

Una presentación del Proyecto será efectuado por la Autoridad de Carreteras y Transportación el día martes, 20 de enero de 2004. Compañías y personas interesadas se les notificará del sitio y hora exacta.

AVISO AMBIENTAL
DECLARACIÓN DE IMPACTO AMBIENTAL FINAL

En cumplimiento con las disposiciones del artículo 4C de la Ley Número 9 del 18 de junio de 1970, según enmendada, Ley Sobre Política Pública Ambiental y del Reglamento para el Proceso de Presentación, Evaluación y Trámite de Documentos Ambientales de la Junta de Calidad Ambiental; se publica este aviso. La Autoridad de Carreteras y Transportación como agencia proponente sometió a la Junta de Calidad Ambiental una Declaración de Impacto Ambiental Preliminar (JCA-01-0038ACT) para la extensión del proyecto carretera estatal PR-5, ubicada desde la PR-167 hasta la Carretera Estatal PR-199, en la Avenida Las Cumbres, de Bayamón. Mediante Resolución Final (R-03-22-12) notificada en el día de hoy, la Junta de Calidad Ambiental ha resuelto que la DIA-Preliminar sometida cumple con el artículo 4C.

Por este medio notificamos la determinación de la Autoridad de Carreteras y Transportación de acoger la Resolución y considerar el documento como una DIA Final. La publicación de este aviso se considera como fecha de notificación de la DIA-F y los término para incoar Moción de reconsideración o Recurso de revisión judicial comenzarán a decursar el día de hoy.

La DIA estará disponible para inspección general en la página de internet jca.gobierno.pr, en la Casa Alcaldía de Bayamón, en la Oficina de Secretaría de la Junta de Calidad Ambiental, ubicada en el Edificio National Plaza, Avenida Ponce de León 431, Hato Rey y en la Oficina de Estudios Ambientales de la Autoridad de Carreteras y Transportación, ubicada en el Centro Gubernamental Minillas, Edificio Sur, Avenida de Diego, parada 22, Santurce. EVAL. ARQLCA. FASE IA-IB
EXT. PR-5, BAYAMÓN, PUERTO RICO
AC-000533

Estimada ingeniera Borges:

Hemos recibido el informe de estudio arqueológico Fase IA-IB, preparado por la Arql. Virginia Rivera Calderón, sobre el proyecto descrito en referencia.

Conforme a los resultados y recomendaciones del referido estudio, no se detectó evidencia significativa, en el sentido de que el desarrollo del proyecto en cuestión pudiera causar algún tipo de impacto adverso con respecto a recursos arqueológicos y/o históricos.

Por lo antes expuesto, no tenemos objeción a este proyecto.

El presente endoso es uno de carácter parcial, en lo que respecta al aspecto arqueológico del proyecto en cuestión, y **NO** constituye un endoso global al mismo de parte del Instituto de Cultura Puertorriqueña.

El proponente, queda, no obstante, sujeto a las responsabilidades y obligaciones que impone la Ley 112 del 20 de julio de 1988-conocida como la Ley de Arqueología Terrestre de Puerto Rico-, en cuanto a que deberá paralizar todo tipo de actividad de excavación, movimiento y remoción de la corteza terrestre, y notificar inmediatamente al Instituto de Cultura Puertorriqueña, en caso de que, durante el desarrollo del proyecto, se descubra o se impacte algún depósito, elemento, estructura o vestigio de naturaleza histórica y/o arqueológica.

Cordialmente,

Ovidio Dávila, Ph.D.

I. INTRODUCCIÓN

El presente estudio para la extensión de la Carretera Estatal PR-5 fue realizado conforme a los requerimientos arqueológicos vigentes en Puerto Rico. La legislación estatal, conocida como Ley Para la Protección del Patrimonio Arqueológico Terrestre (Ley Num. 112 del 20 de julio de 1988), requiere que se realicen estudios de impacto arqueológico en proyectos como el propuesto. El proyecto consiste en la construcción de la Extensión de la Carretera Estatal PR-5, en los barrios Minillas y Cerro Gordo de Bayamón **(Figuras 1 y 2).**

El estudio que se presenta a continuación fue preparado de acuerdo a las guías de procedimientos diseñada por el Programa de Arqueología del Instituto de Cultura Puertorriqueña y la Oficina Estatal de Preservación Histórica. Para este proyecto en particular se realizó una evaluación arqueológica conocida como **Fase 1A y Fase 1B**.

Durante la **Fase 1A** se realizó una investigación documental que incluyó el estudio del área en los mapas arqueológicos, inventarios de sitios y otras evaluaciones arqueológicas de Bayamón que se encuentran en los archivos del Programa de Arqueología del Instituto de Cultura Puertorriqueña y la Oficina Estatal de Preservación Histórica. Se realizó también un estudio de mapas topográficos y de suelo para detectar áreas con mayores posibilidades arqueológicas tomando en consideración la topografía, la hidrografía y los suelos del lugar.

Finalmente se llevó a cabo un recorrido preliminar de la ruta del proyecto para corroborar la información obtenida de los mapas topográficos y de suelos. También deseábamos conocer las condiciones actuales del terreno para diseñar nuestra estrategia de investigación.

El informe contiene los resultados de la investigación documental a nivel de **Fase 1A**, al igual que los resultados de los trabajos de campo de la **Fase 1B**. Mediante mapas, planos y fotos se muestra la localización del proyecto así como el área que fue inspeccionada por medio de

pruebas de pala por nuestro equipo de trabajo. A base de los resultados de ambas fases de investigación arqueológica se presentan recomendaciones específicas.

II. LOCALIZACION

El proyecto de la carretera comienza en el Sector El Portón de la PR-167 en los alrededores del Garaje Richard y Zambrana Auto . Luego la ruta continúa hacia el noreste por el Sector El Ocho y atraviesa la PR-829, la PR-830, la PR-840 y finaliza donde termina la construcción del Expreso Rio Hondo al norte de la Urb. El Cortijo **(Figuras 1 y 2).** La propuesta carretera tiene una longitud estimada de 5kms. y ocupará una franja de aproximadamente 50 metros.

III. CONDICIONES ACTUALES

Según pudimos apreciar en nuestra visita inicial, el proyecto atraviesa una zona sumamente desarrollada en cuanto a urbanizaciones, antiguas parcelas, carreteras, comercios y otros movimientos de tierra que han impactado sus condiciones originales. Estos desarrollos son mucho más evidentes hacia el final del proyecto, cerca de las urbanizaciones El Cortijo y Caná, donde la carretera se unirá con el Expreso Rio Hondo que ya ha sido construído.

IV. INVESTIGACION FASE 1A

Las investigaciones **Fase 1A** relativas a este proyecto fueron sencillas, debido a los severos impactos previos sobre la alineación propuesta. Se investigaron los mapas arqueológicos y no existen restos precolombinos conocidos a lo largo de la ruta o en sus

alrededores. Tampoco existen propiedades elegibles o incluídas en el Registro Nacional de Lugares Históricos.

Las únicas evidencias conocidas son unos cimientos de ladrillo de un pozo de agua que se encuentran en el Sector El Portón al oeste de la PR-167. Este elemento arquitectónico ha sido informado en otros informes del autor y no será afectado de ninguna manera por el propuesto proyecto ya que se encuentra a más de 200 metros de distancia de la ruta.

Se revisaron además estudios arqueológicos recientes para la zona de Bayamón, en especial la mitad sur del municipio, pero en ninguno de ellos se informaron yacimientos precolombinos o restos históricos.

A base de todo lo antes señalado en cuanto a impactos y disturbios previos decidimos dar mayor énfasis al recorrido a pie a lo largo del proyecto y al trabajo de campo que implica la **Fase 1B**. De esta manera se determinaría la necesidad de pruebas de pala en algunos segmentos más sensitivos y un recorrido a pie en otros segmentos de menor sensitividad arqueológica.

V. INVESTIGACION FASE 1B

A. Estrategia de campo

Para poder realizar el estudio de campo de la Fase 1B decidimos dividir el proyecto en **cuatro** segmentos utilizando como base las diversas carreteras estatales que atraviesan la ruta del propuesto proyecto. En el caso de este proyecto lo hemos dividido en cuatro segmentos con las letras **A, B, C y D (Figuras 1 y 2).**

Se realizaron pruebas de pala solo en aquellos lugares que se consideraron como de algún potencial. La distancia entre las pruebas de pala varió pero en su gram mayoría no fue mayor de 40 metros entre pruebas, ya que la zona es una de bajo potencial arqueológico.

La información de cada prueba se incluye en el Catálogo de Pruebas de Pala **(Apéndice A)**. En el resto de la ruta se examinaron los terrenos removidos, cortes de carreteras y caminos, así como cauces de drenajes y quebradas.

B. Trabajo de campo

El **Segmento A** tiene una longitud de aproximadamente **.5 km**, siendo el más corto de ellos. Comienza en la propia PR-167 cerca del Garaje Richard y Zambrana Auto **(Foto 1)**, atraviesa un predio de terreno sin estructuras hasta llegar hasta la PR-829 **(Foto 2).** En este tramo se excavaron **10** pruebas de pala cuya localización aproximada se muestra en el mapa de la **Figura 2.** La información de cada prueba se detalla en el **Apéndice A (Catálogo de Pruebas de Pala)**. Todas fueron negativas en cuanto a restos culturales.

El **Segmento B** tiene una longitud estimada de **2.5 km**. Y se extiende desde el cruce con la PR-829 hasta el cruce con la PR-830 del Bo. Cerro Gordo **(Foto 3)**. La ruta propuesta atraviesa solares baldíos, áreas de pastizales y algunas viviendas privadas. En este sector se realizaron **18** pruebas de pala con resultados negativos para restos culturales **(Fotos 4 y 5)**. Se examinaron zonas de cortes del terreno y tambien fueron negativos.

El **Segmento C** comienza en el cruce con la PR-830 y finaliza en la parte sur de la Urb. El Cortijo **(Figuras 1 y 2)**. Estimamos que este segmento tiene una longitud de aprox. **1 km**. Esta es una zona que ha sufrido tambien impactos de construcción recientes y los terrenos se muestran bien expuestos y removidos. Se realizaron 9 pruebas de pala solo en aquellos

puntos donde no se podía observar la superficie y pensamos que existía alguna posibilidad arqueológica **(Fotos 6, 7 y 8)**. Todas las pruebas fueron negativas para restos arqueológicos.

Finalmente recorrimos el **Segmento D**, que se extiende a lo largo de un corredor de aprox. **1 km**. en medio de la Urb. El Cortijo por donde el proyecto une con el actual Expreso Rio Hondo, en proceso de construcción **(Figuras 1 y 2)**. Este el el sector de mayores impactos visibles debido a las construcciones de urbanizaciones, carreteras, tuberías y otros proyectos. Se intentaron realizar algunas pruebas en esta zona y en solo 4 de ellas logramos atravesar terrenos originales. En el resto los terrenos son rellenos de diversos tipos. Las pruebas y la exploración visual fueron negativas para restos culturales.

C. Resultados

El estudio de campo combinó el recorrido a pie y la excavación de 41 pruebas de pala, todas con resultados **negativos** para restos culturales. La zona es una de grandes impactos y movimientos previos por lo que el potencial para descubrir accidentalmente restos arqueológicos con alguna integridad es muy bajo.

VI. CONCLUSIONES Y RECOMENDACIONES

La investigación documental no identificó ningún sitio arqueológico, edificación histórica o resto cultural conocido a lo largo del propuesto proyecto de Extensión de la PR-5 o en sus alrededores inmediatos. No hay propiedades elegibles o inscritas en el Registro Nacional de Lugares Históricos a lo largo del proyecto o en sus alrededores.

Además nuestro equipo de campo realizó el recorrido a pie de la ruta propuesta con una longitud estimada de 5 km. y excavó 41 pruebas de pala en aquellos lugares donde era meritorio excavarlas. Tanto el examen de las superficies y cortes expuestos, así como el resultado de las

pruebas de pala fueron negativos para restos culturales de ningun tipo. Podemos asegurar tambien que dada las condiciones actuales de los terrenos las posibilidades arqueológicas son escasas y que no se ameritan estudios culturales adicionales. A tales efectos recomendamos el endoso del proyecto en sus aspectos arqueológicos.

GOBIERNO DE PUERTO RICO
INSTITUTO DE CULTURA PUERTORRIQUEÑA
Directora | Arqla. Nancy R. Santiago Capetillo, Ph. D.

21 de octubre de 2021

"AUTORIZACIÓN"

Ing. Ángel J. Alicea Rodríguez
Director
Área de Programación y Estudios Especiales
Autoridad de Carreteras y Transportación
PO Box 42007
San Juan, Puerto Rico 00940-2007

PROYECTO: EXTENSIÓN CARRETERA ESTATAL PR-5, DESDE PR-167 HASTA PR-199, BAYAMÓN (AC-000533)
ICP#: BA-21-277

Estimados señores:

El **Programa de Arqueología y Etnohistoria** del Instituto de Cultura Puertorriqueña ha evaluado los documentos relacionados al proyecto de referencia y mejoras adicionales propuestas, recibidos a través de la División de Arqueología y Conservación Histórica de la Oficina de Gerencia de Permisos (OGPe).

La evaluación realizada sugiere que, basado en los datos existentes al presente, las probabilidades de impactar un recurso arqueológico, según definido por la Ley 112 del 20 de julio de 1988, según enmendada, son mínimas.

Por lo tanto, en lo concerniente a recursos culturales de naturaleza arqueológica, **no tenemos objeción** al proyecto según fue radicado y evaluado.

Le notificamos que esta autorización es de tipo parcial y que el proponente queda sujeto a las responsabilidades y obligaciones que impone la Ley 112 del 20 de julio de 1988, según enmendada. Esta establece que, **se deberá paralizar todo tipo de actividad de excavación, movimiento y remoción de la corteza terrestre, y notificar en un plazo de veinticuatro (24) horas al Consejo de Arqueología Terrestre, en caso de que, durante el desarrollo del proyecto, se descubra o impacte algún depósito, elemento, estructura o vestigio de naturaleza arqueológica**.

Este proceso es paralelo al del Programa de Patrimonio Histórico Edificado del Instituto de Cultura Puertorriqueña, permiso que el proponente deberá gestionar, para cumplir con las regulaciones de la Ley 374 de 1949 y la Ley 89 de 1955.

Se le apercibe que el incumplimiento de estos requerimientos podrá ser objeto de sanciones administrativas según lo establecido en las citadas leyes.

Esta autorización tiene vigencia de (1) año.

Cordialmente,

Arqla. Nancy R. Santiago Capetillo Ph.D.
Directora
Programa de Arqueología y Etnohistoria

GOBIERNO DE PUERTO RICO

Departamento de Recursos Naturales y Ambientales

OCT 2 8 2021

ING JOSÉ A CARRO MIRANDA
P O BOX 11490
SAN JUAN, PR 00922

Estimado ingeniero Carro Miranda:

Certificación para Categorización de
Hábitats Naturales para la Vida Silvestre
Segmento Final Carr. PR-5
Desde Carr. PR-5 Intersecciön Carr. PR-199 hasta Carr. PR-167, km 14.8
Bo. Pájaros, Bayamón & Bo. Ortiz, Toa Alta
O-SE-CCH01-SJ-01998-20092021

El Departamento de Recursos Naturales y Ambientales (DRNA) evaluó una Solicitud de Certificación para Categorizaciónn de Hábitats Naturales para la Vida Silvestre para el proyecto de epígrafe. La misma fue evaluada de acuerdo con las disposiciones aplicables relacionadas con la fauna, la flora y sus hábitats de la Ley 416 del 2004, según enmendada (*Ley Sobre Política Pública Ambiental*), su Reglamento 8762 de 2019 (*Reglamento Conjunto para la Evaluación y Expedición de Permisos Relacionados al Desarrollo, Uso de Terrenos y Operación de Negocios*), la Ley 23 del 1972, según enmendada (*Ley Orgánica del Departamento de Recursos Naturales y Ambientales de Puerto Rico*), la Ley 150 de 1988, según enmendada (*Ley del Programa de Patrimonio Natural de Puerto Rico*), la Ley 314 de 1998 (*Ley para Declarar la Política Pública sobre Humedales y Designación de Caño Tiburones como Reserva Natural*), la Ley 292 del 1999 (*Ley para la Protección de la Fisiografía Cársica de Puerto Rico*) y su Reglamento 8486 de 2014 (*Plan y Reglamento del Área de Planificación Especial del Carso*) y la Ley 241 del 1999, según enmendada (*Nueva Ley de vida silvestre de Puerto Rico*) y sus Reglamentos 6765 de 2004 (*Reglamento para regir la conservación y el manejo de la vida silvestre, las especies exóticas y la caza en el Estado Libre Asociado de Puerto Rico*) y 6766 del 2004 (*Reglamento para regir las especies vulnerables y en peligro de extinción en el Estado Libre Asociado de Puerto Rico*), así como de la Orden Administrativa del DRNA 2010-09 y el *Puerto Rico State Wildlife Action Plan* del DRNA, adoptado en Septiembre, 2015. En cuanto al Inventario de flora y fauna incluido en la solicitud, encontramos que cumplió satisfactoriamente con las disposiciones aplicables de la Ley 416 del 2004, *supra,* y su Reglamento 8762, *supra*, documentando de forma representativa la flora y la fauna del lugar.

El predio del proyecto ocupa unos 5.1 kilómetros lineales. Es un predio urbano rodeado de desarrollos que había sido separado para este proyecto desde la década de los 2000. Tiene porciones de pastos, porciones de bosque secundario, especialmente en las laderas escarpadas y bosques de galería asociados a la Quebrada Rivera y otras quebradas sin nombre tributarias de los

ríos Hondo y Minillas. Los bosques de galería son estructuras bióticas capaces de reducir la erosión de los lechos y orillas de ríos y quebradas, de mejoran la calidad de las aguas y de minimizar los efectos de sequías e inundaciones. También, en áreas urbanas, son hábitat para la vida silvestre y pulmones productores de oxïgeno. En términos de las estrategias indispensables de reducción de los efectos del cambio climático, las áreas forestadas, en general son trampas de carbono y su presencia ayuda a reducir la generación de gases de efecto de invernadero[1]. No hay reportes de especies de flora o fauna Vulnerables o En Peligro de Extinción. Se propone la construcción de un tramo de carretera de cuatro carriles con intersecciones y puentes sobre las quebradas.

Como resultado de esta evaluación, hemos categorizado las 13.5 cdas de bosques de galería, según se presenta en los *Conceptual Layout Plans* 01 y 02 (14 oct. 2021) suministrados, como un **Habitat Natural de Valor Ecológico (Categoria 4)**. El Articulo 2,03 del Reglamento 6765, supra, establece lo siguiente para esta Categoria:

"La meta de la mitigación es que no haya perdida en la cantidad y calidad del hábitat a protegerse. El Departamento deberá actuar para proteger el hábitat recomendando o exigiendo:

1. Evitar el impacto mediante alternativas al proyecto propuesto.
2. De ser inevitable el impacto, la mitigación se realizara mediante la cesión de hábitat similar in situ, adyacente o fuera del área a impactarse de manera que no haya perdida neta de la cantidad o calidad del hábitat existente antes del impacto propuesto. Las mitigaciones se realizaran con terrenos de igual o mayor valor ecológico en proporción de cantidad no menor de 1:1.
3. De no ser posible cumplir con los requisitos anteriores, el Departamento no endosara la accion propuesta."

El resto del predio califica como **Hábitat Natural con Alto Potencial de Convertirse en Habitat Esencial, Hábitat de Alto Valor Ecológico o Hábitat de Valor Ecológico (Categoria 5).** El Articulo 2.03 del Reglamento 6765, supra, establece lo siguiente para esta categoría:

"La meta de la mitigación es que haya ganancia en la calidad y cantidad del hábitat a protegerse. El Departamento deberá actuar para proteger el hábitat recomendando o exigiendo:

1. Evitar el impacto mediante alternativas para los proyectos propuestos.

2. De ser inevitable el impacto, la mitigación se realizará mediante acciones que contribuyan al mejoramiento de hábitat esencial, de alto valor ecológico o de valor ecológico...."

---

OCT 2 8 2021

Deberá someter a este Departamento un Plan de Mitigación con las estrategias para cumplir con la mitigación requerida para las áreas calificadas como Categorïa 4. Además, deberá reforestar las áreas verdes del proyecto con especies de flora nativas o endémicas.

Este documento es una calificación de los hábitats naturales sitos en el predio de epígrafe, requerida por los estatutos legales vigentes. **No constituye un permiso para la construcción u operación del proyecto propuesto.**

Esta certificación es solamente aplicable a la situación de hechos según presentados y evaluados en el caso y la Secretaria se reserva el derecho de evaluar, variar o modificar el mismo en cualquier momento anterior a la emisión del permiso o la acción administrativa correspondiente por parte de la agencia solicitante o proponente, de surgir nueva información oficial especifica estableciendo que el derecho aplicable o las condiciones ambientales en el predio han cambiado sustancialmente o cuando la certificación original se emitió bajo premisas falsas o fraudulentas.

Si tiene alguna pregunta o necesita orientación sobre este asunto, puede escribirnos a la dirección indicada o comunicarse al teléfono 787-999-2200 extension 2846.

Cordialmente,

Luis R. Sierra Torres
Secretario Auxiliar

Hon. Rafael A. Machargo Maldonado
Secretario
Departamento de Recursos Naturales y Ambientales
PO Box 366147
San Juan, Puerto Rico 00936
rmachargo@drna.pr.gov

Asunto: Solicitud de Aceptación de la Finca conocida como Las Cabachuelas (Parcela 10-B) para Compensar por Mitigación por el Corte de Árboles y Mitigación para el Hábitat Natural para la Vida Silvestre del proyecto Extensión Carretera de la PR-5, desde la Intersección con la PR-199, hasta la PR-167 Bayamón, Puerto Rico, AC-000533

Estimado señor Secretario:

El proyecto de infraestructura vial, extensión de la PR-5 (AC-000533) ha sido incluido en la agenda de proyectos prioritarios por el Gobernador de Puerto Rico, Hon. Pedro R. Pierluisi para la reconstrucción de Puerto Rico. El proyecto Extensión de la Carretera Estatal PR-5 fue originalmente propuesto por la Autoridad de Carreteras y Transportación (ACT) a principios de la década del 2000 como una continuación de dicha carretera. Véase, foto aérea adjunta.

El mismo comienza en la intersección de las carreteras PR-5 y PR-199 (Avenida Las Cumbres) y finaliza en el kilómetro 14.9 de la carretera PR-167. El propósito es aliviar la congestión en la carretera PR-167 que une los municipios de Barranquitas, Comerío y Naranjito con el municipio de Bayamón y el resto del área metropolitana, además de proveer una vía alterna pues la PR-167 es una vía sumamente transitada con numerosos semáforos y accesos directos.

Según los datos de la Oficina de Recopilación y Análisis de Tránsito de la ACT, para finales de la década del 1990, la carretera PR-167 se encontraba congestionada en las horas pico matutina y vespertina, anticipándose que funcionaba en un nivel de servicio F, donde el volumen de demanda es mayor que la capacidad de la carretera, el flujo vehicular es interrumpido debido en las intersecciones semaforizadas, y sus colas crean demoras significas al movimiento de vehículos.

La Extensión de la PR-5 completaría la ruta alterna propuesta en dirección norte-sur para conectar las áreas densamente pobladas del municipio de Bayamón con otras arterias principales como la PR-199, PR-2, y la PR-22, aliviando de esta manera el tránsito en la PR-167.

El proyecto tiene una longitud aproximada de 5.07 kilómetros y se proponía conectar la extensión en las intersecciones antes mencionadas, por el sur a la carretera PR-148 y por el norte a la carretera PR-5, ambas en aquel momento en construcción, con cuatro carriles divididos, control de acceso total, intersecciones a desnivel y una plaza de peaje.

La ACT propone ahora continuar con el desarrollo de la Alternativa 2A, seleccionada en la DIA JCA-01-0038 (ACT) y para la cual mediante la Resolución Final (R-03-22-12) notificada el 21 de agosto de 2003, la Junta de Calidad Ambiental (JCA) determinó que la DIA sometida por la ACT cumplió con los requisitos establecidos en las disposiciones del Artículo 4C de la Ley Sobre Política Pública Ambiental, Ley Núm. 9 del 18 de junio de 1970 y del Reglamento para el Proceso de Presentación, Evaluación y Trámite de Documentos Ambientales de la JCA.

La Declaración de Impacto Ambiental de este proyecto fue aprobada por la Junta de Calidad Ambiental mediante la Resolución R-03-22-12 del 21 de agosto de 2003 y recertificada el 1 de diciembre de 2011, JCA-01-0038.

No obstante, en aras de aclarar la determinación de vigencia a la determinación de cumplimiento ambiental del proyecto, mediante contestación a la Pre-Consulta Legal OGPe No. 2021-368640-PCL-010767 de 10 de abril de 2021, la OGPe concluyó que la determinación de la JCA de 1 de diciembre de 2011 había perdido vigencia.

A tal efecto, la ACT presentará una DIA a tenor con el procedimiento y los requisitos aplicables del Reglamento para el Proceso de Evaluación Ambiental de 23 de noviembre de 2016 según requerido por la OGPe el 27 de octubre de 2021 en la Solicitud de Agencia Proponente, caso 2021-403771-SAP-000563.

La actualización a la DIA realizada para este proyecto demuestra que los cambios al proyecto y las variaciones en el contexto donde ubica son no sustanciales y los impactos ambientales de la acción propuesta al presente son similares a los evaluados e informados en la DIA-F del 2003.

El 28 de octubre de 2021 se recibió los comentarios del DRNA a la Certificación para Categorización de Hábitat para la Vida Silvestre del proyecto. Debido a que es inevitable el impacto, la mitigación se realizará mediante cesión de terrenos de alto valor ecológico fuera del área a impactarse.

De acuerdo con su comunicación la proporción de la mitigación por Hábitat Natural será de 1:1, o sea 13.5 cuerdas. Por otro lado, el proyecto requiere el corte de árboles, por lo que será necesario cumplir con el Reglamento Conjunto en su Sección 3.4.4.6 sobre "siembra de

árboles mediante la compra o transferencia de terrenos de valor natural con cubierta arbórea".

Luego de conversar con personal del DRNA identificamos una reserva natural de alto valor ecológico para su agencia. La misma es conocida como la Reserva Natural Las Cabachuelas y está situada en la carretera PR-633, kilómetro 4.2 interior (al final de la calle Andrés Narváez), Barrio Torrecillas, Morovis. Según el tasador Esteban Núñez la referida finca consiste de muchas fincas con diferentes dueños. No obstante, el DRNA interesa la parcela número 10-B, cuya propietaria lo es la Sra. Noemi Maldonado Freites.

Para reducir costos relacionados al inventario de árboles, le proponemos la compra de la mencionada finca para compensar por mitigación por el corte de árboles y mitigación para el Hábitat Natural para la Vida Silvestre. Este terreno se encuentra identificado en la lista de terrenos considerados o evaluados para adquisición por el DRNA, y a su vez, es una Reserva Natural de alto valor natural y ecológico.

A base de lo anteriormente expresado, solicitamos del Secretario del DRNA que ejerza su discreción y acepte la adquisición de estos terrenos con un alto valor natural para su conservación a perpetuidad por concepto de mitigación de ambos tipos de impactos del proyecto antes descrito.

Una vez adquirida la referida finca por la ACT, el proceso final será el traspaso de la titularidad, el cual se realizará siguiendo las disposiciones legales aplicables, incluyendo el Reglamento Núm. 8816 del 19 de septiembre de 2016, conocido como el Nuevo Reglamento para la Adquisición de Bienes Inmuebles y Derechos Reales, según enmendado.

De tener alguna duda o necesitar información adicional puede comunicarse con la Lcda. Anie Denise De Jesús Silva, Ayudante Especial del Director Ejecutivo, al (787) 721-8787, Ext. 51015 o a través de su correo electrónico; *andejesus@dtop.pr.gov*.

Sin nada más sobre el particular y en espera de vuestra acostumbrada pronta respuesta quedo.

Atentamente,

Edwin E. González-Montalvo, Ph.D., P.E.
Director Ejecutivo

Re: Actualización Endoso Para la Extensión Carretera Estatal PR-5, Bayamón (AC-000533)
Vía email y correo postal

Estimado Presidente:

El proyecto de infraestructura vial, extensión de la PR-5 (AC-000533) ha sido incluido en la agenda de proyectos prioritarios por el Gobernador de Puerto Rico, Hon. Pedro R. Pierluisi para la reconstrucción de Puerto Rico. El proyecto Extensión de la Carretera Estatal PR-5 fue originalmente propuesto por la Autoridad de Carreteras y Transportación (ACT) a principios de la década del 2000 como una continuación de dicha carretera (ver foto aérea que se incluye).

El mismo comienza en la intersección de las carreteras PR-5 y PR-199 (Avenida Las Cumbres) y finaliza en el kilómetro 14.9 de la carretera PR-167. El propósito es aliviar la congestión en la carretera PR-167 que une los municipios de Barranquitas, Comerío y Naranjito con el municipio de Bayamón y el resto del área metropolitana, además de proveer una vía alterna, pues la PR-167 es una vía sumamente transitada con numerosos semáforos y accesos directos.

Según los datos de la Oficina de Recopilación y Análisis de Tránsito de la ACT, para finales de la década del 1990 la carretera PR-167 se encontraba congestionada en las horas pico matutina y vespertina, anticipándose que funcionaba en un nivel de servicio F, donde el volumen de demanda es mayor que la capacidad de la carretera, el flujo vehicular es interrumpido debido en las intersecciones semaforizadas, y sus colas crean demoras significativas al movimiento de vehículos.

La Extensión de la PR-5 completaría la ruta alterna propuesta en dirección norte-sur para conectar las áreas densamente pobladas del municipio de Bayamón con otras arterias principales como la PR-199, PR-2, y la PR-22, aliviando de esta manera el tránsito en la PR-167.

El proyecto continúa teniendo una longitud aproximada de 5.07 kilómetros y se proponía conectar la extensión en las intersecciones antes mencionadas, por el sur a la carretera PR-148 y por el norte a la carretera PR-5, ambas en aquel momento en construcción, con cuatro (4) carriles divididos, control de acceso total, intersecciones a desnivel y una plaza de peaje.

agosto de 2003, la Junta de Calidad Ambiental (JCA) determinó que la DIA sometida por la ACT cumplió con los requisitos establecidos en las disposiciones del Artículo 4C de la Ley Sobre Política Pública Ambiental, Ley Número 9 del 18 de junio de 1970 y del Reglamento para el Proceso de Presentación, Evaluación y Trámite de Documentos Ambientales de la JCA.

No obstante, en aras de aclarar la determinación de vigencia de la determinación de cumplimiento ambiental del proyecto, mediante contestación a la Pre-Consulta Legal OGPe No. 2021-368640-PCL-010767 de fecha 10 de abril de 2021, la OGPe concluyó que la determinación de la JCA de 1 de diciembre de 2011 había perdido vigencia.

A tal efecto, la ACT presentará una DIA a tenor con el procedimiento y los requisitos aplicables del Reglamento para el Proceso de Evaluación Ambiental del 23 de noviembre de 2016 según requerido por la OGPe el 27 de octubre de 2021 en la Solicitud de Agencia Proponente, caso 2021-403771-SAP-000563.

La actualización a la DIA realizada para este proyecto demuestra que los cambios al proyecto y las variaciones en el contexto donde ubica son no sustanciales y los impactos ambientales de la acción propuesta al presente son similares a los evaluados e informados en la DIA-F del 2003. En adición y conforme a los procedimientos de revisión ambiental, estas determinaciones serán reevaluadas luego del Diseño Final y del Plan de Adquisición, cuyos resultados serán informados a OGPe.

Solicitamos, basado en lo antes expresado, que expida un endoso al proyecto descrito.

De tener alguna duda o necesitar información adicional puede comunicarse con la Lcda. Anie Denise De Jesús Silva, Ayudante Especial del Director Ejecutivo, al (787) 721-8787, Ext. 51015, o vía el siguiente correo electrónico: *andejesus@dtop.pr.gov*.

Sin nada más sobre el particular y en espera de vuestra acostumbrada pronta respuesta quedo.

Re: Actualización Endoso Para la Extensión Carretera Estatal PR-5, Bayamón (AC-000533)
Vía email y correo postal

Estimado Alcalde:

El proyecto de infraestructura vial, extensión de la PR-5 (AC-000533) ha sido incluido en la agenda de proyectos prioritarios por el Gobernador de Puerto Rico, Hon. Pedro R. Pierluisi para la reconstrucción de Puerto Rico. El proyecto Extensión de la Carretera Estatal PR-5 fue originalmente propuesto por la Autoridad de Carreteras y Transportación (ACT) a principios de la década del 2000 como una continuación de dicha carretera (ver foto aérea que se incluye).

El mismo comienza en la intersección de las carreteras PR-5 y PR-199 (Avenida Las Cumbres) y finaliza en el kilómetro 14.9 de la carretera PR-167. El propósito es aliviar la congestión en la carretera PR-167 que une los municipios de Barranquitas, Comerío y Naranjito con el municipio de Bayamón y el resto del área metropolitana, además de proveer una vía alterna, pues la PR-167 es una vía sumamente transitada con numerosos semáforos y accesos directos.

Según los datos de la Oficina de Recopilación y Análisis de Tránsito de la ACT, para finales de la década del 1990 la carretera PR-167 se encontraba congestionada en las horas pico matutina y vespertina, anticipándose que funcionaba en un nivel de servicio F, donde el volumen de demanda es mayor que la capacidad de la carretera, el flujo vehicular es interrumpido debido en las intersecciones semaforizadas, y sus colas crean demoras significativas al movimiento de vehículos.

La Extensión de la PR-5 completaría la ruta alterna propuesta en dirección norte-sur para conectar las áreas densamente pobladas del municipio de Bayamón con otras arterias principales como la PR-199, PR-2, y la PR-22, aliviando de esta manera el tránsito en la PR-167.

El proyecto continúa teniendo una longitud aproximada de 5.07 kilómetros y se proponía conectar la extensión en las intersecciones antes mencionadas, por el sur a la carretera PR-148 y por el norte a la carretera PR-5, ambas en aquel momento en construcción, con cuatro (4) carriles divididos, control de acceso total, intersecciones a desnivel y una plaza de peaje.

La ACT propone ahora continuar con el desarrollo de la Alternativa 2A, seleccionada en la DIA JCA-01-0038 (ACT) y para la cual mediante la Resolución Final (R-03-22-12) notificada el 21 de

agosto de 2003, la Junta de Calidad Ambiental (JCA) determinó que la DIA sometida por la ACT cumplió con los requisitos establecidos en las disposiciones del Artículo 4C de la Ley Sobre Política Pública Ambiental, Ley Número 9 del 18 de junio de 1970 y del Reglamento para el Proceso de Presentación, Evaluación y Trámite de Documentos Ambientales de la JCA.

No obstante, en aras de aclarar la determinación de vigencia de la determinación de cumplimiento ambiental del proyecto, mediante contestación a la Pre-Consulta Legal OGPe No. 2021-368640-PCL-010767 de fecha 10 de abril de 2021, la OGPe concluyó que la determinación de la JCA de 1 de diciembre de 2011 había perdido vigencia.

A tal efecto, la ACT presentará una DIA a tenor con el procedimiento y los requisitos aplicables del Reglamento para el Proceso de Evaluación Ambiental del 23 de noviembre de 2016 según requerido por la OGPe el 27 de octubre de 2021 en la Solicitud de Agencia Proponente, caso 2021-403771-SAP-000563.

La actualización a la DIA realizada para este proyecto demuestra que los cambios al proyecto y las variaciones en el contexto donde ubica son no sustanciales y los impactos ambientales de la acción propuesta al presente son similares a los evaluados e informados en la DIA-F del 2003. En adición y conforme a los procedimientos de revisión ambiental, estas determinaciones serán reevaluadas luego del Diseño Final y del Plan de Adquisición, cuyos resultados serán informados a OGPe.

Solicitamos, basado en lo antes expresado, que expida un endoso al proyecto descrito.

Re: Endorsement Update for the PR-5 State Highway Extension, Bayamón (AC-000533)
Via email and postal mail

Dear Executive Director:

The road infrastructure project, extension of PR-5 (AC-000533) has been included in the agenda of priority projects by the Governor of Puerto Rico, Hon. Pedro R. Pierluisi for the reconstruction of Puerto Rico. The PR-5 State Highway Extension project was originally proposed by the Puerto Rico Highway and Transportation Authority (PRHTA) in the early 2000s as a continuation of that highway (see included aerial photo).

The project begins at the intersection of highways PR-5 and PR-199 (Avenida Las Cumbres) and ends at kilometer 14.9 of highway PR-167. The purpose is to alleviate congestion on the PR-167 highway which connects the municipalities of Barranquitas, Comerío and Naranjito with the municipality of Bayamón and the rest of the metropolitan area, in addition to providing an alternative road, since PR-167 is highly busy with numerous traffic lights and shortcuts.

According to data from the PRHTA Traffic Collection and Analysis Office, by the end of the 1990s the PR-167 highway was congested in the morning and evening rush hours, anticipating that it operated at a service level F, where the volume of demand is greater than the capacity of the highway, the traffic flow is interrupted due to the signalized intersections, and their queues create significant delays to the movement of vehicles.

The extension of PR-5 would complete the proposed alternate route in a north-south direction to connect the densely populated areas of the municipality of Bayamón with other main routes such as PR-199, PR-2, and PR-22, alleviating the traffic on PR-167.

The project continues to have an approximate length of 5.07 kilometers and it was proposed to connect the extension at the aforementioned intersections, to the south to the PR-148 highway and to the north to the PR-5 highway, both at that time under construction, with four (4) divided lanes, total access control, uneven intersections and a toll plaza.

The PRHTA now proposes to continue with the development of Alternative 2A, selected in the DIA JCA-01-0038 (ACT) and for which through the Final Resolution (R-03-22-12) notified on

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

August 21, 2003, the "Junta de Calidad Ambiental" determined that the DIA submitted by the PRHTA complied with the requirements established in the provisions of Article 4C of the Environmental Public Policy Act, Num. 9 of June 18, 1970 and the Regulation for the Process of Presentation, Evaluation and Processing of Environmental Documents.

However, in order to clarify the determination of the validity of the environmental compliance determination of the project, by answering the Legal Pre-Consultation OGPe No. 2021-368640-PCL-010767 dated April 10, 2021, the Permit Management Office (OGPe, by its acronym in spanish) concluded that the determination of the DIA of December 1, 2011had lost validity.

For this purpose, the PRHTA will present a DIA in accordance with the procedure and applicable requirements of the Regulation for the Environmental Assessment Process of November 23, 2016 as required by OGPe on October 27, 2021 in the Proposing Agency Request, case 2021-403771-SAP-000563.

The update to the DIA carried out for this project shows that the changes to the project and the variations in the context where it is located are not substantial and the environmental impacts of the current proposed action are similar to those evaluated and reported in the 2003 DIA-F. In addition, and in accordance with the environmental review procedures, these determinations will be reevaluated after the final design and the acquisition plan, the results of which will be reported to OGPe.

On April 2, 2002, an endorsement of the project was received from your agency. We asked you, based on the aforementioned, to update the endorsement issued.

If you have any questions or need additional information, you can contact Anie Denise De Jesús Silva, Esq., Special Assistant to the Executive Director, at (787) 721-8787, Ext. 51015, or via the following email: andejesus@dtop.pr.gov.

With nothing more on the matter and awaiting your customary prompt reply I remain.

Sincerely,

Edwin E. González-Montalvo, Ph.D., P.E.

Dear Ms. García:

Our Office received correspondence on March 18, 2002 regarding the above referenced project. While we believe that an Agency's finding of **no historic properties affected** is appropriate for this undertaking, the U.S. Army Corps of Engineers will need to submit an official determination for our review in order to complete the Section 106 review.

If you have any questions regarding our comments, please do not hesitate to contact our Office. We appreciate your interest in the rescue and preservation of our national historical heritage and we reiterate our commitment to assist you in this endeavor.

Sincerely,

Enid Torregrosa de la Rosa, MSHP
State Historic Preservation Officer

Re: Actualización Endoso Para la Extensión Carretera Estatal PR-5, Bayamón (AC-000533)
Vía email y correo postal

Estimado Secretario:

El proyecto de infraestructura vial, extensión de la PR-5 (AC-000533) ha sido incluido en la agenda de proyectos prioritarios por el Gobernador de Puerto Rico, Hon. Pedro R. Pierluisi para la reconstrucción de Puerto Rico. El proyecto Extensión de la Carretera Estatal PR-5 fue originalmente propuesto por la Autoridad de Carreteras y Transportación (ACT) a principios de la década del 2000 como una continuación de dicha carretera (ver foto aérea que se incluye).

El mismo comienza en la intersección de las carreteras PR-5 y PR-199 (Avenida Las Cumbres) y finaliza en el kilómetro 14.9 de la carretera PR-167. El propósito es aliviar la congestión en la carretera PR-167 que une los municipios de Barranquitas, Comerío y Naranjito con el municipio de Bayamón y el resto del área metropolitana, además de proveer una vía alterna, pues la PR-167 es una vía sumamente transitada con numerosos semáforos y accesos directos.

Según los datos de la Oficina de Recopilación y Análisis de Tránsito de la ACT, para finales de la década del 1990 la carretera PR-167 se encontraba congestionada en las horas pico matutina y vespertina, anticipándose que funcionaba en un nivel de servicio F, donde el volumen de demanda es mayor que la capacidad de la carretera, el flujo vehicular es interrumpido debido en las intersecciones semaforizadas, y sus colas crean demoras significativas al movimiento de vehículos.

La Extensión de la PR-5 completaría la ruta alterna propuesta en dirección norte-sur para conectar las áreas densamente pobladas del municipio de Bayamón con otras arterias principales como la PR-199, PR-2, y la PR-22, aliviando de esta manera el tránsito en la PR-167.

El proyecto continúa teniendo una longitud aproximada de 5.07 kilómetros y se proponía conectar la extensión en las intersecciones antes mencionadas, por el sur a la carretera PR-148 y por el norte a la carretera PR-5, ambas en aquel momento en construcción, con cuatro (4) carriles divididos, control de acceso total, intersecciones a desnivel y una plaza de peaje.

La ACT propone ahora continuar con el desarrollo de la Alternativa 2A, seleccionada en la DIA JCA-01-0038 (ACT) y para la cual mediante la Resolución Final (R-03-22-12) notificada el 21 de

agosto de 2003, la Junta de Calidad Ambiental (JCA) determinó que la DIA sometida por la ACT cumplió con los requisitos establecidos en las disposiciones del Artículo 4C de la Ley Sobre Política Pública Ambiental, Ley Número 9 del 18 de junio de 1970 y del Reglamento para el Proceso de Presentación, Evaluación y Trámite de Documentos Ambientales de la JCA.

No obstante, en aras de aclarar la determinación de vigencia de la determinación de cumplimiento ambiental del proyecto, mediante contestación a la Pre-Consulta Legal OGPe No. 2021-368640-PCL-010767 de fecha 10 de abril de 2021, la OGPe concluyó que la determinación de la JCA de 1 de diciembre de 2011 había perdido vigencia.

A tal efecto, la ACT presentará una DIA a tenor con el procedimiento y los requisitos aplicables del Reglamento para el Proceso de Evaluación Ambiental del 23 de noviembre de 2016 según requerido por la OGPe el 27 de octubre de 2021 en la Solicitud de Agencia Proponente, caso 2021-403771-SAP-000563.

La actualización a la DIA realizada para este proyecto demuestra que los cambios al proyecto y las variaciones en el contexto donde ubica son no sustanciales y los impactos ambientales de la acción propuesta al presente son similares a los evaluados e informados en la DIA-F del 2003. En adición y conforme a los procedimientos de revisión ambiental, estas determinaciones serán reevaluadas luego del Diseño Final y del Plan de Adquisición, cuyos resultados serán informados a OGPe.

El 18 de enero de 2002 se recibió endoso de su agencia al proyecto por lo que le solicitamos, basado en lo antes expresado, la actualización al endoso expedido.

De tener alguna duda o necesitar información adicional puede comunicarse con la Lcda. Anie Denise De Jesús Silva, Ayudante Especial del Director Ejecutivo, al (787) 721-8787, Ext. 51015, o vía el siguiente correo electrónico: *andejesus@dtop.pr.gov*.

El proyecto continúa teniendo una longitud aproximada de 5.07 kilómetros y se proponía conectar la extensión en las intersecciones antes mencionadas, por el sur a la carretera PR-148 y por el norte a la carretera PR-5, ambas en aquel momento en construcción, con cuatro (4) carriles divididos, control de acceso total, intersecciones a desnivel y una plaza de peaje.

La ACT propone ahora continuar con el desarrollo de la Alternativa 2A, seleccionada en la DIA JCA-01-0038 (ACT) y para la cual mediante la Resolución Final (R-03-22-12) notificada el 21 de

agosto de 2003, la Junta de Calidad Ambiental (JCA) determinó que la DIA sometida por la ACT cumplió con los requisitos establecidos en las disposiciones del Artículo 4C de la Ley Sobre Política Pública Ambiental, Ley Número 9 del 18 de junio de 1970 y del Reglamento para el Proceso de Presentación, Evaluación y Trámite de Documentos Ambientales de la JCA.

No obstante, en aras de aclarar la determinación de vigencia de la determinación de cumplimiento ambiental del proyecto, mediante contestación a la Pre-Consulta Legal OGPe No. 2021-368640-PCL-010767 de fecha 10 de abril de 2021, la OGPe concluyó que la determinación de la JCA de 1 de diciembre de 2011 había perdido vigencia.

A tal efecto, la ACT presentará una DIA a tenor con el procedimiento y los requisitos aplicables del Reglamento para el Proceso de Evaluación Ambiental del 23 de noviembre de 2016 según requerido por la OGPe el 27 de octubre de 2021 en la Solicitud de Agencia Proponente, caso 2021-403771-SAP-000563.

La actualización a la DIA realizada para este proyecto demuestra que los cambios al proyecto y las variaciones en el contexto donde ubica son no sustanciales y los impactos ambientales de la acción propuesta al presente son similares a los evaluados e informados en la DIA-F del 2003. En adición y conforme a los procedimientos de revisión ambiental, estas determinaciones serán reevaluadas luego del Diseño Final y del Plan de Adquisición, cuyos resultados serán informados a OGPe.

Solicitamos, basado en lo antes expresado, que expida un endoso al proyecto descrito.

De tener alguna duda o necesitar información adicional puede comunicarse con la Lcda. Anie Denise De Jesús Silva, Ayudante Especial del Director Ejecutivo, al (787) 721-8787, Ext. 51015, o vía el siguiente correo electrónico: *andejesus@dtop.pr.gov*.

Re: Actualización Endoso Para la Extensión Carretera Estatal PR-5, Bayamón (AC-000533)
Vía email y correo postal

Estimado Secretario:

El proyecto de infraestructura vial, extensión de la PR-5 (AC-000533) ha sido incluido en la agenda de proyectos prioritarios por el Gobernador de Puerto Rico, Hon. Pedro R. Pierluisi para la reconstrucción de Puerto Rico. El proyecto Extensión de la Carretera Estatal PR-5 fue originalmente propuesto por la Autoridad de Carreteras y Transportación (ACT) a principios de la década del 2000 como una continuación de dicha carretera (ver foto aérea que se incluye).

El mismo comienza en la intersección de las carreteras PR-5 y PR-199 (Avenida Las Cumbres) y finaliza en el kilómetro 14.9 de la carretera PR-167. El propósito es aliviar la congestión en la carretera PR-167 que une los municipios de Barranquitas, Comerío y Naranjito con el municipio de Bayamón y el resto del área metropolitana, además de proveer una vía alterna, pues la PR-167 es una vía sumamente transitada con numerosos semáforos y accesos directos.

Según los datos de la Oficina de Recopilación y Análisis de Tránsito de la ACT, para finales de la década del 1990 la carretera PR-167 se encontraba congestionada en las horas pico matutina y vespertina, anticipándose que funcionaba en un nivel de servicio F, donde el volumen de demanda es mayor que la capacidad de la carretera, el flujo vehicular es interrumpido debido en las intersecciones semaforizadas, y sus colas crean demoras significativas al movimiento de vehículos.

La Extensión de la PR-5 completaría la ruta alterna propuesta en dirección norte-sur para conectar las áreas densamente pobladas del municipio de Bayamón con otras arterias principales como la PR-199, PR-2, y la PR-22, aliviando de esta manera el tránsito en la PR-167.

El proyecto continúa teniendo una longitud aproximada de 5.07 kilómetros y se proponía conectar la extensión en las intersecciones antes mencionadas, por el sur a la carretera PR-148 y por el norte a la carretera PR-5, ambas en aquel momento en construcción, con cuatro (4) carriles divididos, control de acceso total, intersecciones a desnivel y una plaza de peaje.

La ACT propone ahora continuar con el desarrollo de la Alternativa 2A, seleccionada en la DIA JCA-01-0038 (ACT) y para la cual mediante la Resolución Final (R-03-22-12) notificada el 21 de

agosto de 2003, la Junta de Calidad Ambiental (JCA) determinó que la DIA sometida por la ACT cumplió con los requisitos establecidos en las disposiciones del Artículo 4C de la Ley Sobre Política Pública Ambiental, Ley Número 9 del 18 de junio de 1970 y del Reglamento para el Proceso de Presentación, Evaluación y Trámite de Documentos Ambientales de la JCA.

No obstante, en aras de aclarar la determinación de vigencia de la determinación de cumplimiento ambiental del proyecto, mediante contestación a la Pre-Consulta Legal OGPe No. 2021-368640-PCL-010767 de fecha 10 de abril de 2021, la OGPe concluyó que la determinación de la JCA de 1 de diciembre de 2011 había perdido vigencia.

A tal efecto, la ACT presentará una DIA a tenor con el procedimiento y los requisitos aplicables del Reglamento para el Proceso de Evaluación Ambiental del 23 de noviembre de 2016 según requerido por la OGPe el 27 de octubre de 2021 en la Solicitud de Agencia Proponente, caso 2021-403771-SAP-000563.

La actualización a la DIA realizada para este proyecto demuestra que los cambios al proyecto y las variaciones en el contexto donde ubica son no sustanciales y los impactos ambientales de la acción propuesta al presente son similares a los evaluados e informados en la DIA-F del 2003. En adición y conforme a los procedimientos de revisión ambiental, estas determinaciones serán reevaluadas luego del Diseño Final y del Plan de Adquisición, cuyos resultados serán informados a OGPe.

El 10 de enero de 2002 se recibió endoso de su agencia al proyecto por lo que le solicitamos, basado en lo antes expresado, la actualización al endoso expedido.

Sra. Irma M. García
Directora
Area de Planificación
Autoridad de Carretera y Transportación
P.O. Box 42007
San Juan, Puerto Rico 00940-2007

Estimada señora García:

RE: DECLARACIÓN DE IMPACTO AMBIENTAL
EXTENSIÓN CARRETERA ESTATAL PR-5
DESDE PR-167 HATA PR-199, AVE LAS CUMBRES
BAYAMÓN, AC-000533

Nos referimos a su comunicación del 15 de noviembre de 2001 sobre el proyecto para la construcción de la Extensión de la Carretera PR-5, desde la Carretera PR-167, km. 14.9, Sector El Portón, hasta la Carretera PR-199, Avenida Las Cumbres. La propuesta extensión conectará al norte con la PR-5 y al sur con la relocalización de la PR-167 (futura PR-148).

La Compañía de Fomento Industrial (CFI) no tiene programada la adquisición y desarrollo de terrenos ni la construcción de edificios industriales en áreas cercanas a las Carretera PR-5, PR-167 y PR-199. La CFI tiene dos (2) propiedades industriales, una ubicada en la PR-174, km. 3.0 en el Barrio Minillas y otra, en la PR-167, km. 5.2 en el Barrio Juan Sánchez, las cuales están a una distancia considerable del propuesto proyecto.

De acuerdo a la descripción general del proyecto en la Declaración de Impacto Ambiental Preliminar que nos ha suministrado, el mismo no interfiere en forma alguna con las propiedades de la CFI.

Consideramos que la nueva extensión de la carretera PR-5 será muy conveniente y precisa para mejor conexión con los Barrios Cerro Gordo y Minillas, los sectores El Portón, El Ocho, Van Scoy, Pájaro Puertorriqueño y las urbanizaciones El Cortijo, Estancias de Cerro gordo, Valles de Cerro Gordo y Ciudad Dorada del Municipio de Bayamón.

Le deseamos éxito en sus gestiones.

Cordialmente,

Angel F. Santos
Subdirector Ejecutivo Interino
Area de Desarrollo de Infraestructura

Re: Endorsement Update for the PR-5 State Highway Extension, Bayamón (AC-000533)
Via email and postal mail

Dear Mr. Álvarez:

The road infrastructure project, extension of PR-5 (AC-000533) has been included in the agenda of priority projects by the Governor of Puerto Rico, Hon. Pedro R. Pierluisi for the reconstruction of Puerto Rico. The PR-5 State Highway Extension project was originally proposed by the Puerto Rico Highway and Transportation Authority (PRHTA) in the early 2000s as a continuation of that highway (see included aerial photo).

The project begins at the intersection of highways PR-5 and PR-199 (Avenida Las Cumbres) and ends at kilometer 14.9 of highway PR-167. The purpose is to alleviate congestion on the PR-167 highway which connects the municipalities of Barranquitas, Comerío and Naranjito with the municipality of Bayamón and the rest of the metropolitan area, in addition to providing an alternative road, since PR-167 is highly busy with numerous traffic lights and shortcuts.

According to data from the PRHTA Traffic Collection and Analysis Office, by the end of the 1990s the PR-167 highway was congested in the morning and evening rush hours, anticipating that it operated at a service level F, where the volume of demand is greater than the capacity of the highway, the traffic flow is interrupted due to the signalized intersections, and their queues create significant delays to the movement of vehicles.

The extension of PR-5 would complete the proposed alternate route in a north-south direction to connect the densely populated areas of the municipality of Bayamón with other main routes such as PR-199, PR-2, and PR-22, alleviating the traffic on PR-167.

The project continues to have an approximate length of 5.07 kilometers and it was proposed to connect the extension at the aforementioned intersections, to the south to the PR-148 highway and to the north to the PR-5 highway, both at that time under construction, with four (4) divided lanes, total access control, uneven intersections and a toll plaza.

The PRHTA now proposes to continue with the development of Alternative 2A, selected in the DIA JCA-01-0038 (ACT) and for which through the Final Resolution (R-03-22-12) notified on

PUERTO RICO
HIGHWAYS & TRANSPORTATION AUTHORITY

August 21, 2003, the "Junta de Calidad Ambiental" determined that the DIA submitted by the PRHTA complied with the requirements established in the provisions of Article 4C of the Environmental Public Policy Act, Num. 9 of June 18, 1970 and the Regulation for the Process of Presentation, Evaluation and Processing of Environmental Documents.

However, in order to clarify the determination of the validity of the environmental compliance determination of the project, by answering the Legal Pre-Consultation OGPe No. 2021-368640-PCL-010767 dated April 10, 2021, the Permit Management Office (OGPe, by its acronym in spanish) concluded that the determination of the DIA of December 1, 2011had lost validity.

For this purpose, the PRHTA will present a DIA in accordance with the procedure and applicable requirements of the Regulation for the Environmental Assessment Process of November 23, 2016 as required by OGPe on October 27, 2021 in the Proposing Agency Request, case 2021-403771-SAP-000563.

The update to the DIA carried out for this project shows that the changes to the project and the variations in the context where it is located are not substantial and the environmental impacts of the current proposed action are similar to those evaluated and reported in the 2003 DIA-F. In addition, and in accordance with the environmental review procedures, these determinations will be reevaluated after the final design and the acquisition plan, the results of which will be reported to OGPe.

On March 17, 2004, an endorsement of the project was received from your agency. We asked you, based on the aforementioned, to update the endorsement issued.

If you have any questions or need additional information, you can contact Anie Denise De Jesús Silva, Esq., Special Assistant to the Executive Director, at (787) 721-8787, Ext. 51015, or via the following email: andejesus@dtop.pr.gov.

With nothing more on the matter and awaiting your customary prompt reply I remain.

Sincerely,

Edwin E. González-Montalvo, Ph.D., P.E.
Executive Director

Attention: Dr. Jack Allison, P.E., Executive Director
Puerto Rico Highway and Transportation Authority (PRHTA)

Subject: **PR-5 Bayamón**
Environmental Assessment

Dear Mr. Fagundo:

On February 27, 2004 personnel from this office and from the PRHTA's Office of Environmental Studies visited the proposed corridor for the completion of PR-5. The short remaining section of PR-5 is very important since it will complete a freeway from Naranjito to PR-22 in Bayamón. We would like to offer the following comments regarding this project:

The project alignment traverses along a drainage channel in the northern section of the project. It is advisable to perform preliminary design to determine required structures and the extent of right of way requirements.

The proposed layout includes an interchange and toll plaza in a mountainous area requiring extensive land acquisition and relocation of families. We recommend to evaluate alternative locations for the toll plaza and interchange to minimize effects on that community.

Please call Jose Torres at (787) 766-5600, ext. 234, if you need to further discuss this matter.

Sincerely,

For: Lubin M. Quiñones
Division Administrator

Re: Actualización Endoso Para la Extensión Carretera Estatal PR-5, Bayamón (AC-000533)
Vía email y correo postal

Estimado Alcalde:

El proyecto de infraestructura vial, extensión de la PR-5 (AC-000533) ha sido incluido en la agenda de proyectos prioritarios por el Gobernador de Puerto Rico, Hon. Pedro R. Pierluisi para la reconstrucción de Puerto Rico. El proyecto Extensión de la Carretera Estatal PR-5 fue originalmente propuesto por la Autoridad de Carreteras y Transportación (ACT) a principios de la década del 2000 como una continuación de dicha carretera (ver foto aérea que se incluye).

El mismo comienza en la intersección de las carreteras PR-5 y PR-199 (Avenida Las Cumbres) y finaliza en el kilómetro 14.9 de la carretera PR-167. El propósito es aliviar la congestión en la carretera PR-167 que une los municipios de Barranquitas, Comerío y Naranjito con el municipio de Bayamón y el resto del área metropolitana, además de proveer una vía alterna, pues la PR-167 es una vía sumamente transitada con numerosos semáforos y accesos directos.

Según los datos de la Oficina de Recopilación y Análisis de Tránsito de la ACT, para finales de la década del 1990 la carretera PR-167 se encontraba congestionada en las horas pico matutina y vespertina, anticipándose que funcionaba en un nivel de servicio F, donde el volumen de demanda es mayor que la capacidad de la carretera, el flujo vehicular es interrumpido debido en las intersecciones semaforizadas, y sus colas crean demoras significativas al movimiento de vehículos.

La Extensión de la PR-5 completaría la ruta alterna propuesta en dirección norte-sur para conectar las áreas densamente pobladas del municipio de Bayamón con otras arterias principales como la PR-199, PR-2, y la PR-22, aliviando de esta manera el tránsito en la PR-167.

El proyecto continúa teniendo una longitud aproximada de 5.07 kilómetros y se proponía conectar la extensión en las intersecciones antes mencionadas, por el sur a la carretera PR-148 y por el norte a la carretera PR-5, ambas en aquel momento en construcción, con cuatro (4) carriles divididos, control de acceso total, intersecciones a desnivel y una plaza de peaje.

AUTORIDAD DE
CARRETERAS Y TRANSPORTACIÓN

La ACT propone ahora continuar con el desarrollo de la Alternativa 2A, seleccionada en la DIA JCA-01-0038 (ACT) y para la cual mediante la Resolución Final (R-03-22-12) notificada el 21 de agosto de 2003, la Junta de Calidad Ambiental (JCA) determinó que la DIA sometida por la ACT cumplió con los requisitos establecidos en las disposiciones del Artículo 4C de la Ley Sobre Política Pública Ambiental, Ley Número 9 del 18 de junio de 1970 y del Reglamento para el Proceso de Presentación, Evaluación y Trámite de Documentos Ambientales de la JCA.

No obstante, en aras de aclarar la determinación de vigencia de la determinación de cumplimiento ambiental del proyecto, mediante contestación a la Pre-Consulta Legal OGPe No. 2021-368640-PCL-010767 de fecha 10 de abril de 2021, la OGPe concluyó que la determinación de la JCA de 1 de diciembre de 2011 había perdido vigencia.

A tal efecto, la ACT presentará una DIA a tenor con el procedimiento y los requisitos aplicables del Reglamento para el Proceso de Evaluación Ambiental del 23 de noviembre de 2016 según requerido por la OGPe el 27 de octubre de 2021 en la Solicitud de Agencia Proponente, caso 2021-403771-SAP-000563.

La actualización a la DIA realizada para este proyecto demuestra que los cambios al proyecto y las variaciones en el contexto donde ubica son no sustanciales y los impactos ambientales de la acción propuesta al presente son similares a los evaluados e informados en la DIA-F del 2003. En adición y conforme a los procedimientos de revisión ambiental, estas determinaciones serán reevaluadas luego del Diseño Final y del Plan de Adquisición, cuyos resultados serán informados a OGPe.

Solicitamos, basado en lo antes expresado, que expida un endoso al proyecto descrito.

De tener alguna duda o necesitar información adicional puede comunicarse con la Lcda. Anie Denise De Jesús Silva, Ayudante Especial del Director Ejecutivo, al (787) 721-8787, Ext. 51015, o vía el siguiente correo electrónico: *andejesus@dtop.pr.gov*.

Sin nada más sobre el particular y en espera de vuestra acostumbrada pronta respuesta quedo.

Atentamente,

Edwin E. González-Montalvo, Ph.D., P.E.

EXTENSION PR-5 DESDE PR-199
HASTA PR-167, BAYAMON, AC-000533

Evaluamos las alternativas para la alineación de la Carr. PR-5, según su solicitud del 23 de diciembre de 1999 dirigida a nuestro Director Ejecutivo, Ing. Miguel A. Cordero. De acuerdo al estudio realizado recomendamos la alternativa número 2.

Le incluimos copia de nuestro mapa digitalizado de esta zona con el número de las líneas eléctricas más importantes y sus voltajes.

Para la evaluación de este proyecto, una vez se seleccione la alineación, deberán someter un plano preliminal con la localización exacta de las líneas existentes que interfieren a lo largo de la ruta.

De requerir información adicional puede comunicarse con este servidor al 740-7010.

Re: Actualización Endoso Para la Extensión Carretera Estatal PR-5, Bayamón (AC-000533)

Estimada Directora Ejecutiva:

El proyecto de infraestructura vial, extensión de la PR-5 (AC-000533) ha sido incluido en la agenda de proyectos prioritarios por el Gobernador de Puerto Rico, Hon. Pedro R. Pierluisi para la reconstrucción de Puerto Rico. El proyecto Extensión de la Carretera Estatal PR-5 fue originalmente propuesto por la Autoridad de Carreteras y Transportación (ACT) a principios de la década del 2000 como una continuación de dicha carretera (ver foto aérea que se incluye).

El mismo comienza en la intersección de las carreteras PR-5 y PR-199 (Avenida Las Cumbres) y finaliza en el kilómetro 14.9 de la carretera PR-167. El propósito es aliviar la congestión en la carretera PR-167 que une los municipios de Barranquitas, Comerío y Naranjito con el municipio de Bayamón y el resto del área metropolitana, además de proveer una vía alterna, pues la PR-167 es una vía sumamente transitada con numerosos semáforos y accesos directos.

Según los datos de la Oficina de Recopilación y Análisis de Tránsito de la ACT, para finales de la década del 1990 la carretera PR-167 se encontraba congestionada en las horas pico matutina y vespertina, anticipándose que funcionaba en un nivel de servicio F, donde el volumen de demanda es mayor que la capacidad de la carretera, el flujo vehicular es interrumpido debido en las intersecciones semaforizadas, y sus colas crean demoras significativas al movimiento de vehículos.

La Extensión de la PR-5 completaría la ruta alterna propuesta en dirección norte-sur para conectar las áreas densamente pobladas del municipio de Bayamón con otras arterias principales como la PR-199, PR-2, y la PR-22, aliviando de esta manera el tránsito en la PR-167.

El proyecto continúa teniendo una longitud aproximada de 5.07 kilómetros y se proponía conectar la extensión en las intersecciones antes mencionadas, por el sur a la carretera PR-148 y por el norte a la carretera PR-5, ambas en aquel momento en construcción, con cuatro (4) carriles divididos, control de acceso total, intersecciones a desnivel y una plaza de peaje.

La ACT propone ahora continuar con el desarrollo de la Alternativa 2A, seleccionada en la DIA JCA-01-0038 (ACT) y para la cual mediante la Resolución Final (R-03-22-12) notificada el 21 de

agosto de 2003, la Junta de Calidad Ambiental (JCA) determinó que la DIA sometida por la ACT cumplió con los requisitos establecidos en las disposiciones del Artículo 4C de la Ley Sobre Política Pública Ambiental, Ley Número 9 del 18 de junio de 1970 y del Reglamento para el Proceso de Presentación, Evaluación y Trámite de Documentos Ambientales de la JCA.

No obstante, en aras de aclarar la determinación de vigencia de la determinación de cumplimiento ambiental del proyecto, mediante contestación a la Pre-Consulta Legal OGPe No. 2021-368640-PCL-010767 de fecha 10 de abril de 2021, la OGPe concluyó que la determinación de la JCA de 1 de diciembre de 2011 había perdido vigencia.

A tal efecto, la ACT presentará una DIA a tenor con el procedimiento y los requisitos aplicables del Reglamento para el Proceso de Evaluación Ambiental del 23 de noviembre de 2016 según requerido por la OGPe el 27 de octubre de 2021 en la Solicitud de Agencia Proponente, caso 2021-403771-SAP-000563.

La actualización a la DIA realizada para este proyecto demuestra que los cambios al proyecto y las variaciones en el contexto donde ubica son no sustanciales y los impactos ambientales de la acción propuesta al presente son similares a los evaluados e informados en la DIA-F del 2003. En adición y conforme a los procedimientos de revisión ambiental, estas determinaciones serán reevaluadas luego del Diseño Final y del Plan de Adquisición, cuyos resultados serán informados a OGPe.

El 11 de enero de 2002 se recibió endoso de su agencia al proyecto por lo que le solicitamos, basado en lo antes expresado, la actualización al endoso expedido.

Estimada ingeniero García :

RE: Bayamón, Puerto Rico
Declaración de Impacto Ambiental
Preliminar (DIA-P)
Extensión Carretera Estatal PR-5
desde PR-167 hasta PR-199

Nos referimos al documento ambiental mencionado en la referencia el cual fue sometido a nuestra Oficina para evaluación y comentarios.

La Autoridad de Carreteras y Transportación se propone construir una extensión de la Carretera Estatal PR-5. Esta comenzará en el kilómetro 14.9 de la Carretera Estatal PR-167 y terminará en la PR-199. La extensión a la PR-5 conectará por el sur a la propuesta Carretera PR-148 y por el norte con la PR-5, actualmente bajo construcción. También, se construirá una plaza de peaje.

Luego de haber revisado el documento tenemos los siguientes comentarios:

1. El Proponente deberá realizar una consulta con la Oficina de Proyectos Públicos y Privados, Región Norte.

2. El Proponente deberá identificar si existe en el área algunas líneas de tuberías de acueductos o alcantarillados que se puedan afectar. De existir, deberá coordinar con esta Autoridad los trabajos para que nuestra infraestructura no se afecte y por ende el servicio que le brindamos a los residentes del área.

Agradecemos su interés en consultarnos.

Atn: *Edwin E. González-Montalvo:*

Estimado ingeniero González:

Luego de estudiado los documentos sometidos ante nuestra consideración, este Departamento no tiene objeción a la actualización del proyecto de referencia, de acuerdo con los documentos sometidos por su agencia del 2 de noviembre de 2021.

No obstante, la firma constructora que vaya a realizar su proyecto deberá obtener y evidenciar con anterioridad al inicio de las obras: ***Certificado de Responsabilidad Pública y Hold Harmless Agreement, con endoso que cubra al Municipio de Bayamón como asegurado adicional con cubierta mínima de $1,000.000.00 por ocurrencia, Póliza del Fondo del Seguro del Estado y pago de Patentes y Arbitrios Municipales*** *para este proyecto.*

De surgir algún cambio que conlleve trabajos que afecten la infraestructura vial del área, el mismo deberá someterse a nuestra consideración para la correspondiente evaluación y requerimientos.

El Departamento de Obras Públicas y/o el Municipio de Bayamón, se reservan el derecho de requerir nuevas condiciones, así como retirar el presente endoso, cuando así el interés público lo amerite.

Sin otro particular, quedo

RE: ENDOSO A EXTENSIÓN CARRETERA ESTATAL PR #5, BAYAMÓN (AC-000533)

Situación:

- Solicita la Autoridad de Carreteras y Transportación de Puerto Rico; por conducto de su Director Ejecutivo, Edwin Gonzalez Montalvo, Ph.D, P.E. endoso de la Ciudad Autónoma de Toa Alta para el asunto en referencia.

Hallazgos:

- La propuesta consiste en la extensión de la Carretera PR #5, específicamente el tramo que comprende a Toa Alta, siendo esta distancia aproximada de 600.00 mts. = 0.5 km; lineales con sus rampas y accesos.

- El proyecto aquí evaluado ha sido incluido en las prioridades del gobierno de turno, en su origen fue propuesto por ACT en los años 2000.

Conclusión:

- La Ciudad Autónoma de Toa Alta entiende la importancia de este proyecto para mejorar los accesos desde y hacía Bayamón y la congestión vehicular de la PR 167; mejorando así la calidad de vida de nuestros ciudadanos.

- La Ciudad Autónoma de Toa Alta no tiene objeción para el proyecto aquí evaluado, según ha sido presentada. No obstante, **el alcalde y/o su representante autorizado se reserva el derecho de reevaluar, modificar o dejar sin efecto esta recomendación,** si se determina que se sometió información falsa, alterada u omisiones que afecten el interés público Municipal o en violación a Reglamentación o Leyes vigentes.

Dear Engineer González-Montalvo,

Our Office has received and reviewed the above referenced project in accordance with 54 U.S.C. 306108 (commonly known as Section 106 of the *National Historic Preservation Act*) and 36 CFR Part 800*: Protection of Historic Properties*.

We believe a finding of **no historic properties affected** would be appropriate for this undertaking.

Please note that should you discover other historic properties at any point during project implementation, you should notify the SHPO immediately. If you have any questions regarding our comments, please do not hesitate to contact our Office.

Sincerely,

Carlos A. Rubio-Cancela
State Historic Preservation Officer

Estimado ingeniero Carro Miranda:

MITIGACIÓN
Certificación para Categorización de
Hábitats Naturales para la Vida Silvestre
Segmento Final Carr. PR-5
Desde Carr. PR-5 Intersecciön Carr. PR-199 hasta Carr. PR-167, km 14.8
Bo. Pájaros, Bayamón & Bo. Ortiz, Toa Alta
O-SE-CCH01-SJ-01998-20092021

El 20 de septiembre de 2021 fue radicada en nuestra Oficina de Secretaría la solicitud de epïgrafe. Luego de la evaluación correspondiente, el 28 de octubre este Departamento emitió dicha certificación.

Como resultado de la evaluación, se categorizaron 13.5 cdas de bosques de galería como un **Habitat Natural de Valor Ecológico (Categoria 4)**. El Articulo 2.03 del Reglamento 6765 de 2004 (*Reglamento para regir la conservación y el manejo de la vida silvestre, las especies exóticas y la caza en el Estado Libre Asociado de Puerto Rico*), establece lo siguiente para esta Categoría:

"La meta de la mitigación es que no haya perdida en la cantidad y calidad del hábitat a protegerse. El Departamento deberá actuar para proteger el hábitat recomendando o exigiendo:

1. Evitar el impacto mediante alternativas al proyecto propuesto.
2. De ser inevitable el impacto, la mitigación se realizara mediante la cesión de hábitat similar in situ, adyacente o fuera del área a impactarse de manera que no haya perdida neta de la cantidad o calidad del hábitat existente antes del impacto propuesto. Las mitigaciones se realizaran con terrenos de igual o mayor valor ecológico en proporción de cantidad no menor de 1:1.
3. De no ser posible cumplir con los requisitos anteriores, el Departamento no endosara la accion propuesta."

En carta fechada el 2 de noviembre de 2021, el proponente (Autoridad de Carreteras y Transportación) comunica su intención de adquirir y donar a este Departamento un predio incluido en la lista de terrenos de valor ecológico considerados para adquisición por nuestra División de

Patrimonio Natural, para cumplir con dicha mitigación y solicita el Visto Bueno de la agencia para proceder con la adquisición del predio y comenzar el proceso de la mitigación requerida.

CALIFICACIÓN DEL PREDIO PROPUESTO

Se propone para donación un predio localizado en la Reserva Natural de las Cabachuelas, Calle Andrés Narváez Final (Carr. 633, km 4.2 Interior), Bo. Torrecillas, Morovis. El mismo, denominado "Parcela 10-B", se compone de tres fincas agrupadas colindantes entre sí, con una cabida aproximada de 35.6 cdas.

El predio está sito en la Zona Restringida del Área de Planificación Especial del Carso (APE-RC). Tiene una Clasificación del Suelo de Suelo Rústico Común (SRC) y una Calificación de Conservación de Recursos (CR).

En este predio encontramos todas las principales estructuras fisiográficas del carso de Puerto Rico: cuevas (se han identificado siete en el predio), sumideros, mogotes (la mayoría forestados) y zanjones. Las primeras tres están reconocidas en el Reglamento 6765, *supra*, como hábitats naturales de valor ecológico. En estas cuevas se han reportado colonias residentes de ocho de las trece especies de murciélagos que habitan en Puerto Rico, incluyendo el murciélago de flores (*Monophyllus redmani*), el murciélago barbicacho (*Mormoops blainvillii*), el murciélago bigotudo mayor (*Ptemorotus parnellii*) y el murciélago colilibre (*Taradida brasiliensis*), especies consideradas como Elementos Críticos de la Vida Silvestre por nuestra División de Patrimonio Natural. En algunas de las cuevas existen petroglifos indígenas. En el predio existen también importantes yacimientos arqueológicos. La boa de Puerto Rico (*Chilabothrus inornatus*), especie clasificada **VULNERABLE** habita el predio, así como el ausu (*Myrcea paganii*), árbol clasificado **EN PELIGRO DE EXTINCIÓN**.

La mitad oriental de la finca, que es la parte más llana, muestra los impactos de actividades agrícolas históricas previas y está ocupada por áreas de pastos y áreas de arbustos y árboles de especies nativas comunes. En la mitad occidental están casi todos los mogotes, la mayoría de los cuales están cubiertos de bosque. Varias quebradas sin nombre transcurren por los valles entre los mogotes.

Por las razones expuestas, el predio califica como un **Hábitat Natural de Alto Valor Ecológico (Categoría 3)** y satisface los requisitos de la mitigación según los criterios del citado reglamento de Vida Silvestre.

Por la extensión de terrenos cubiertos de bosques, el predio también satisface los requerimientos para una mitigación concurrente por concepto de corte, poda y extracción de árboles según los criterios establecidos en la Ley 133 de 1975 (*Ley de Bosques de Puerto Rico*).

NOV 3 0 2021

PROCESO DE CESIÓN AL DRNA

El Reglamento Núm. 8816 del 19 de septiembre de 2016 (*Nuevo Reglamento para la Adquisición de Bienes Inmuebles y Derechos Reales*); Articulo VIII, Sección 2 dispone lo siguiente para comenzar el proceso de adquisición de terrenos por donación

"El cedente presentará a la División de Bienes Inmuebles [de este Departamento] los siguientes documentos relacionados a la propiedad inmueble sujeta a cesión para evaluación:

a. Resolución de OGPE con numero y fecha, si aplica
b. Copia del plano de la propiedad inmueble que incluya su ubicación en coordenadas Lambert.
c. Certificación registral o Estudio de Título con no más de seis meses de expedida antes de la fecha de otorgación de la escritura.
d. Informe de Tasación o de Valoración de la propiedad inmueble a ser cedida con no mas de seis meses de expedido y preparado de acuerdo a lo que se requiere en el Artículo VII, Sección 3, de este Reglamento.
e. Certificación indicando que la propiedad inmueble a ser cedida está libre de cargas y gravámenes hipotecarios o ambientales.
f. Certificación de Deuda Contributiva de la propiedad objeto de cesión emitida por el CRIM de no más de seis meses de expedida al momento de lograse la transacción.
g. Borrador de escritura de cesión.
h. Cualquier otro documento requerido por la División de Bienes Inmuebles.

Estos documentos deberán ser acompañados por una copia de la Certificación de Hábitats Naturales de epígrafe y por una copia de esta carta.

Para obtener más información sobre el predio ofrecido para cesión puede comunicarse con nuestra División de Patrimonio Natural al teléfono 787-999-2200 extensiones 2529 o 2542. Para comunicarse con la División de Bienes Inmuebles puede llamar a las extensiones 2505 o 2500.

Si tiene alguna pregunta o necesita orientación sobre este asunto, puede escribirnos a la dirección indicada o comunicarse al teléfono 787-999-2200 extension 2846.

Cordialmente,

Luis R. Sierra Torres
Secretario Auxiliar
Secretaría Auxiliar de Permisos, Endosos y Asuntos Especializados

C-1-2000-095

El Departamento de Recursos Naturales y Ambientales (DRNA) recibió nueva información en contestación a la comunicación emitida el 5 de agosto de 2022, relacionada al proyecto de referencia. La Autoridad de Carreteras y Transportación (ACT) propone la construcción de una extensión a la carretera estatal PR-5. Según el resumen del documento ambiental presentado, la misma comenzará en el kilómetro 14.9 de la carretera estatal PR-167 en Toa Alta y terminará en la PR-199 (Avenida Las Cumbres) en Bayamón. La extensión a la PR-5 conectará las carreteras antes mencionadas, por el sur a la carretera PR-148 y por el norte la PR-5. La extensión propuesta tendrá una longitud aproximada de 5.07 kilómetros y será de cuatro (4) carriles divididos, con control de acceso total, intersecciones a desnivel y plazas de peaje. Para la construcción del propuesto proyecto, será necesario la construcción de seis (6) puentes y movimiento de terreno. Se estima que se extraerán 850,000 metros cúbicos de material de la corteza terrestre de los cuales se utilizarán aproximadamente 670,000 metros cúbicos como relleno dentro del mismo.

Durante la fase de planificación de este proyecto y discutidas en la Declaración de Impacto Ambiental (DIA) aprobada en el año 2003 e incluidas en la presente DIA, se estudiaron cinco diferentes alternativas, además de la alternativa de No Acción para la alineación de la extensión a la carretera PR-5. La ruta preferida para la extensión de la PR-5 es la identificada como 2A. Esta alternativa ocupará un área estimada de 112 cuerdas, impactará 126 estructuras incluyendo 112 residencias y 16 negocios/ instituciones. Se estima en 13,886 metros cuadrados (3.54 cuerdas) el área de impacto a cuerpos de agua.

La extensión propuesta de la carretera PR-5 requiere la canalización de un nuevo tramo del Río Hondo mediante la colocación de un *box culvert* de 258.6 metros de largo de dos (2) celdas y la extensión de un *box culvert* existente de dos celdas a una distancia de 48 metros, lo cual reemplazará 2 tubos existentes de 84 pulgadas de diámetro. El proyecto propone la colocación de un canal de gaviones entre el extremo aguas abajo del *box culvert* propuesto y el extremo aguas arriba del *box culvert* extendido en la intersección PR-5 y PR-199 para proporcionar protección contra la erosión al alcance del Río Hondo. Además, una rampa en puente propuesta estará cruzando el canal rectangular de gaviones.

El proyecto también incluirá un puente de ocho (8) tramos sobre el Río Minillas. Un segmento de la alineación de la carretera propuesta es paralela al Río. Además, una sección del Río Minillas, según identificado en las capas de información del DRNA, se verá afectado por el terraplén de la extensión de la PR-5 y canalizado mediante atarjeas y un canal trapezoidal. Se estarán impactando 13.5 cuerdas de bosques de galería categorizados como Hábitat Natural de Valor Ecológico dentro de los cuales se encuentran 3.53 cuerdas de cauces/hábitats ribereños.

En las comunicaciones del 26 de enero de 2022 y 5 de agosto de 2022, el DRNA requirió se aclararan varios aspectos relacionados a los cuerpos de agua que serían impactados por el proyecto. La ACT no indicaba la cantidad de quebradas sin nombre que serían impactadas por el proyecto ni describía las obras propuestas en las mismas. Tampoco se contestaba o se aclaraba si se estaría impactando y canalizando un tramo del Río Minillas que corresponde al área de su nacimiento según la base de datos del DRNA y no un afluente como se identifica en los planos y se describe en la DIA.

La ACT presentó una comunicación con fecha de 2 de septiembre 2022 en la cual califican como drenajes pluviales los "streams" identificados en los planos CLP01- al CLP09 para impacto: CA-01A, CA-02A, CA-02B, CA-03A, CA-03B, CA-05A y CA-05B. Asimismo, desglosan los trabajos propuestos en los mismos. Indican en la comunicación y citamos: "Los planos del proyecto, CLP01- CLP-09, ilustran áreas de impacto en cauces de drenaje locales estructuras hidráulica (tuberías) para el manejo de sus aguas en eventos de lluvia los cuales no se discuten en el H-H, aunque se toman en consideración para el comportamiento de las aguas en las cuencas hidrográfica evaluadas." Exponen que una vez se tenga el diseño detallado de los drenajes locales, al igual que el de las estructuras mayores se prepararán los correspondientes cómputos pluviales.

Por otro lado, se presentan varios mapas identificando los cuerpos de agua en el área propuesta para impacto y se informa que, según la interpretación de dichos mapas, lo que se estaría canalizando sería un tributario al Río Minillas, y no el Río Minillas o su nacimiento. No obstante, se aclara que dicha canalización ha sido considerada en el H-H y que una vez el DRNA le informe la designación al mismo, estarán revisando el H-H y las secciones correspondientes en la DIA-F.

Sobre los aspectos antes mencionados el DRNA ha determinado lo siguiente:

- El DRNA reconoce como drenajes pluviales los identificados como C01A, C03A y C05B en los planos CLP01 al CLP09. No obstante, los identificados como CA-02A, CA-02B, CA-03B y CA-05A tienen características de cuerpos de agua o quebradas intermitentes. Por lo tanto, estas quebradas intermitentes deberán ser incluidas en el documento ambiental e identificadas en los planos del proyecto. Además, se deberán incluir en el H-H del proyecto. El DRNA considera que toda obra en o sobre un cuerpo de agua que forme parte de un proyecto debe ser estudiada y analizada en un mismo H-H. La fragmentación pudiera retrasar el proceso de evaluación en las etapas de permisos y endosos con implicaciones en elevar los costos por estudios de esta naturaleza para la ACT.

- En relación con la denominación del Río Minillas o tributario, el DRNA considera que dicho tramo es parte del nacimiento del Río Minillas y así debe ser considerado. Por lo que este aspecto deberá ser corregido en la DIA-F y el H-H. Aunque se reconoce que dicho tramo ha sido estudiado y

analizado en el H-H, su denominación es importante para el contenido de la DIA-F y distintos aspectos en el que DRNA debe ser incluido como custodio de este recurso natural. En esta área debido a la colindancia con las urbanizaciones Ciudad Interamericana y Valle de Cerro Gordo, será necesario el mantenimiento a perpetuidad de la obra y demostrar la no afectación a terceros. Esta responsabilidad de la ACT debe estar incluida en la DIA-F.

- Resulta pertinente resaltar que, toda información que se presente ante la consideración del DRNA en las diferentes instancias del proyecto, incluida su descripción y huella de impacto, deberán corresponder en todos sus detalles. La descripción de los trabajos propuestos para el tramo correspondiente a la canalización del Río Minillas presentada en una tabla de la comunicación del 2 de septiembre de 2022, no concuerda con la presentada en la DIA-F y el H-H. En la comunicación se indica que la obra consistiría en dos segmentos tipo *box culverts* de dos celdas de 2.13 m x 2.13 m 137.40 metros lineales y 256 metros lineales, dos segmentos en canalización en tierra de 189.81 y 97.74 metros lineales. Mientras que en el H-H y la DIA-F se describe la obra como una atarjea de 2 celdas de 2.74 m y 2.13 m y 255 m de largo, una atarjea de 2 celdas 2.44 x 2.13 m y 150 m de largo entre las dos atarjeas un canal trapezoidal en tierra con un ancho en la base de 12 m, taludes 2H:1V y 99 m de largo. La comunicación presentada es posterior al H-H preparado para el proyecto, por lo que se deberán aclarar las diferencias en la descripción presentada. Asimismo, el H-H que se evalúe en el DRNA debe considerar desde un principio el análisis de los cuerpos de agua a impactar debido a que es de los resultados del estudio que surgen los parámetros para el diseño de las obras y no a la inversa. Esto responde al hecho de que las dimensiones de estas obras dependen del caudal determinado en el análisis hidrológico, la rugosidad, las condiciones del flujo, los tipos de control del flujo: *inlet* o *outlet* control, entre otros. Con relación a las canalizaciones, en tierra y con gaviones, para su diseño también se tienen que considerar las velocidades, los esfuerzos cortantes permisibles, entre otros parámetros que se analizan en el H-H. Se aclara que el endoso del DRNA al H-H no es necesario para obtener el cumplimiento ambiental del proyecto. Dicho proceso es uno independiente de la evaluación de los impactos y medidas de mitigación propuestas en el proyecto. De hecho, el H-H está más vinculado al trámite de la solicitud conjunta de permiso.

- La consideración de parámetros también aplica para la selección del diámetro de las tuberías propuestas en los drenajes pluviales, independientemente de sus dimensiones. Lo anterior cobra relevancia ya que el proyecto ubicará en zonas residenciales. Estas obras se deberán diseñar luego de realizar los cómputos correspondientes, de los cuales surgirán los diámetros para evitar que estos componentes del proyecto provoquen inundaciones locales y la afectación a terceros por falta de capacidad hidráulica.

- Es importante destacar, que el DRNA no favorece la canalización de cuerpos de agua, la única excepción es para los proyectos de control de inundaciones. Lo anterior en cumplimiento con las disposiciones de la Ley Núm. 49 de 4 de enero de 2003, según enmendada por la Ley Núm. 55 de 22 de enero de 2004. El proyecto propuesto extendería la canalización del Río Hondo y canalizaría un tramo del Río Minillas en su nacimiento. Aunque se reconoce que el Río Hondo ha sido impactado previamente por canalizaciones y que el tramo del Río Minillas igualmente fue previamente impactado en la construcción de las urbanizaciones colindantes, estas áreas se han regenerado y cuentan con valor ecológico e hidrológico. Para el DRNA es de suma importancia la conservación de los cuerpos de agua, los cuales fungen como conectores hidrológicos naturales que garantizan una mejor calidad de agua y minimizan problemas de sedimentación, erosión e inundaciones. Rellenar y canalizar una sección de un Río resulta en la destrucción de los canales naturales, la degradación del hábitat, la fragmentación del hábitat, aceleración del transporte del agua y los contaminantes tóxicos, al igual que reduce los servicios del ecosistema, tales como retención de nutrientes y retención de sedimentos. A largo plazo, esto puede causar gran desestabilización en

el sistema. La canalización puede alterar las dimensiones originales y la forma del cauce, su pendiente y características naturales, convirtiendo un sistema heterogéneo en uno homogéneo. La consecuencia desde el punto de vista del ecosistema es que la diversidad del hábitat se reduce y las cualidades y funciones de las especies que ocupan el sistema se afectan.

Debido a que el proyecto se encuentra todavía en fase de diseño conceptual, el DRNA recomienda que, si existiera la oportunidad de haber cambios en el diseño, se analicen otras alternativas que no incluya la canalización de los Ríos.

Una vez se atienda y corrija lo anterior, el DRNA no tiene objeción con la alineación propuesta del proyecto. Además, se deberá cumplir con lo siguiente:

- Según la descripción del proyecto en la DIA-F, el proyecto comenzaría en el kilómetro 14.9 de la carretera estatal PR-167 en Toa Alta y terminará en la PR-199 (Avenida Las Cumbres) en Bayamón. Sin embargo, según todas las figuras incluidas en la DIA-F y en los documentos presentados, el proyecto comenzaría en Bayamón y terminaría en Toa Alta. Es importante que se atienda y corrija dicha discrepancia en la DIA-F.

- Según la comunicación presentada los elementos considerados fueron desarrollados a nivel conceptual. Por lo tanto, una vez culmine el nivel conceptual y el proyecto se encuentre en una etapa más adelantada de diseño, se deberá presentar un H-H en el DRNA que incluya el análisis de las obras en las quebradas CA-02A, CA-02B, CA-03B y CA-05 y en el Río Minillas y el Río Hondo. Se reconoce que el DRNA tiene ante su consideración un H-H presentado para el proyecto, sin embargo, el mismo no incluye el análisis de las obras propuestas en todos los cuerpos de aguas a impactarse.

- El DRNA emitió una certificación de Categorización de Hábitat el 28 de octubre de 2021 en cumplimiento con la Ley Núm. 241 de 15 de agosto de 1999, según enmendada (Nueva Ley de Vida Silvestre de Puerto Rico) y el Reglamento 6765 (Reglamento para regir la conservación de la Vida Silvestre, las Especies Exóticas y la Caza en el Estado Libre Asociado de Puerto Rico). En la misma se categorizaron 13.5 cuerdas de bosques de galería a impactar como Categoría 4 (Hábitat Natural de Valor Ecológico). De igual forma, el DRNA categorizó el resto de las áreas a impactar como Categoría 5 (Hábitat Natural con Alto Potencial de Convertirse en Hábitat Esencial, Hábitat de Alto Valor Ecológico o Hábitat de Valor Ecológico). En cumplimiento con el Reglamento 6765, la ACT presentó una propuesta para la compensación por las 13.5 cuerdas clasificadas como Categoría 4 mediante la adquisición para cesión al DRNA de un predio de terreno de 35.6 cuerdas ubicado en la Reserva Natural Las Cabachuelas en Morovis. El DRNA aceptó la propuesta en comunicación del 30 de noviembre de 2021. Asimismo, aceptó que este predio se utilice como una mitigación concurrente por el impacto de cortes de árboles.

  A estos efectos, previo a que la ACT realice la subasta y otorgue los contratos de construcción del proyecto, se deberá presentar una copia certificada de la escritura de cesión y traspaso al DRNA del predio y radicar una copia de la minuta de asiento de la presentación de la escritura en el Registro de la Propiedad. A los fines de conocer el procedimiento a seguir para cumplir con las disposiciones del Reglamento Núm. 8816 de 19 de septiembre de 2016 (Reglamento para la Adquisición de Bienes Inmuebles y Derechos Reales del Departamento de Recursos Naturales y Ambientales), puede comunicarse con la División de Bienes Inmuebles al (787) 999-2200 Ext. 2505 o 2500.

- Implementar todo tipo de medidas disponibles (Plan CES, el "Storm Water Pollution Prevention Plan-SWPPP", filtros, pacas de heno, etc.) para el control de sedimentación y escorrentías que puedan afectar los cuerpos de agua cercanos al predio. Se deberán implantar las mejores prácticas posibles (BMPs, por sus siglas en inglés) a ser ejecutadas durante cada etapa del proyecto. Las BMPs son las técnicas (zonas de amortiguamiento, cortinas de retención de sedimento, estanques de detención, surcos, etc.),

programación de actividades, prácticas prohibidas, y procedimientos de mantenimiento para prevenir o reducir las descargas de contaminantes a los cuerpos de agua cercanos que pudieran afectarse durante la construcción. Asimismo, se deberán tomar medidas para evitar que residuos de sustancias orgánicas e inorgánicas tales como: aceite: combustibles y otras sustancias químicas, puedan ser arrastradas por la escorrentía y ganen acceso a los cuerpos de agua o se infiltren en el terreno.

- Secciones de las áreas propuestas para impacto han sido identificadas como Zona A de acuerdo con la Hoja C0710H de los Mapas de Niveles de Inundación Base Recomendados preparados por la Agencia Federal para el Manejo de Emergencias y adoptados por la Junta de Planificación según la Resolución Núm. ABFE-02 del 11 de julio de 2018. A tales efectos, se deberá cumplir con las disposiciones del Reglamento de Planificación Núm. 13 (Reglamento sobre Áreas Especiales de Peligro a Inundación).

- Deberán integrar al DRNA y al Gobierno de Puerto Rico como Asegurados Adicionales en la póliza de Seguro de Responsabilidad Pública y Daños a la Propiedad de la Autoridad de Carreteras y Transportación y de la compañía constructora, endoso que deberá presentarse, previo al comienzo de los trabajos de construcción. Se le apercibe que, además del endoso, dicha póliza deberá contener una declaración de Acuerdo de Exención de Responsabilidad ("Hold Harmless Agreement"), por medio de la cual se releva al DRNA de cualquier reclamación, demanda o acción judicial o extrajudicial, o combinación de las anteriores, que resultare de la realización de la acción propuesta.

- La construcción de los componentes del proyecto que incida sobre cualquier cuerpo de agua deberá llevarse a cabo en seco, bajo condiciones de flujo mínimo del cuerpo de agua, a fin de facilitar la construcción y disminuir los impactos de la turbidez y sedimentación aguas abajo. Se deberá mantener desaguada el área de construcción durante el mínimo tiempo posible. También se deberá asegurar que los flujos inmediatamente aguas abajo del área de construcción sean iguales a los flujos inmediatamente aguas arriba de la misma área.

- Todos los materiales excedentes y escombros de construcción resultantes deberán haberse removido completamente del lugar, una vez completadas las obras. Se deberá disponer de estos materiales y escombros en un sistema de relleno sanitario certificado u otra facilidad aprobada para la disposición final de desperdicios sólidos.

- Bajo ningún concepto los trabajos a llevarse a cabo podrán reducir la sección hidráulica de los cuerpos de agua.

- El diseño del proyecto considerará los desplazamientos naturales del cauce de los cuerpos de agua.

- Los elementos que se instalen para el control del flujo tienen que limitarse a las dimensiones mínimas necesarias para encausar las escorrentías mínimas normales.

- Durante la fase de construcción se utilizarán procedimientos para mantener el flujo de estiaje de los cuerpos de agua y prevenir daños a terceros en caso de lluvias extraordinarias. Una vez terminada la obra, la sección del cauce de los cuerpos de agua en el punto de los cruces, no podrá ser menor al existente previo al proyecto.

- Se deberá evitar que el material producto de la construcción propuesta o escombros permanezcan en los cuerpos de agua (y de estos materiales y escombros haber caído a la columna de agua, se les deberá remover inmediatamente).

En la eventualidad de que se impacten los taludes de los cuerpos de agua, deberá cumplir con lo siguiente:

- Deberán compactar el material de relleno en los taludes y bancos. Además, deberán restituir la capa de top soil y vegetación. Se deberá minimizar el impacto a la vegetación ribereña asociada a los cuerpos de agua.

Además, se deberá cumplir con lo siguiente:

- Deberá cumplir con las disposiciones de la Regla 3.4.1 ("Permiso Único Incidental Operacional"), la Sección 5.1.9.3 ("Manejo de Aguas Pluviales") y la Sección 5.1.9.4 ("Obras Pluviales) del Reglamento Conjunto 2020, Reglamento Conjunto para la Evaluación y Expedición de Permisos Relacionados al Desarrollo, Uso de Terrenos y Operación de Negocios (Reglamento Núm. 9233 del 2 de diciembre de 2020, con vigencia del 2 de enero de 2021, adoptado por la Junta de Planificación mediante la Resolución JP-RP-39, del 1 de diciembre de 2020).

- Las obras propuestas requerirían de un permiso del Cuerpo de Ingenieros por los impactos temporales y permanentes en aguas y terrenos jurisdiccionales. Las obras que presenten deben coincidir con las presentadas en el H-H.

- Una vez completados los trabajos, entre las alternativas a considerar para evitar la erosión y deslizamientos en taludes asociados a cuerpos de agua, la ACT puede incluir la siembra de hileras del pasto vetiver (*Chrysopogon zizanioides*) repetidamente perpendiculares a las pendientes, en taludes, de tal forma que atrape los sedimentos que se transportan pendiente abajo. La siembra de vetiver (Sistema Vetiver) tiene la particularidad de proteger la superficie de las pendientes, así como su estabilidad, incrementando la resistencia a la ruptura. Las siguientes referencias contienen información y recomendaciones para su uso e implementación en proyectos de estabilización de taludes ribereños: -Oahu Resource Conservation and Development Council. 2012. Vetiver Grass Installation Guide. Prepared in cooperation with USDA Natural Resource Conservation Service (NRCS), Pacific Islands Area. Oahu, HI: Oahu Resource Conservation and Development Council. (Véase especialmente las páginas 12–14 de esta referencia.) -Paul Truong, Tran Tan Van, Elise Pinners. 2008. Vetiver System Applications. Technical Reference Manual. Second edition. San Antonio, TX: The Vetiver Network International. (Véase especialmente las páginas 32–36 de esta referencia.)

- Deberá cumplir con las disposiciones del Reglamento para el Control de Contaminación Atmosférica, el Reglamento para el Control de la Contaminación por Ruido, el Reglamento de Estándares de Calidad de Agua, el Reglamento para el Control y la Prevención de la Contaminación Lumínica y el Reglamento para el Manejo de Desperdicios Sólido No Peligrosos, así como obtener los permisos correspondientes relacionados a dichos reglamentos.

- El Banco de Datos Biológicos y de Conservación de Puerto Rico del DRNA no refleja la presencia en el área de especies de particular rareza o de distribución geográfica limitada, o de aquéllas designadas como vulnerables o en peligro de extinción. Sin embargo, según la página "Information for Planning and Consultation" (IPaC) del Servicio Federal de Pesca y Vida Silvestre (USFWS), el área que cubre este proyecto está situada dentro del alcance de la distribución geográfica de la boa de Puerto Rico (*Chilabothrus inornatus*) especie en peligro de extinción a nivel federal y estatal. Por lo que, de encontrarse individuos de dicha especie dentro de la propiedad los mismos deberán ser removidos y reubicados por los biólogos del DRNA o los miembros del Cuerpo de Vigilantes de Recursos Naturales y Ambientales o por biólogos de vida silvestre bajo contrato con la parte proponente por servicios profesionales que cuenten con un permiso federal del *Fish and Wildlife Service*, y que el DRNA haya designado explícitamente como sus agentes para ese propósito. El proceso para la autorización del biólogo se rige por el Reglamento 6766 de 11 de febrero de 2004 (Reglamento para Regir la

25 de octubre de 2022

Conservación y Manejo de las Especies Vulnerables y en Peligro de Extinción en del Estado Libre Asociado de Puerto Rico). Este proceso se lleva a cabo en el DRNA y no en la Oficina de Gerencia de Permisos o a través de ésta. La reubicación de los individuos encontrados deberá producirse no más tarde de las 24 horas (o el próximo día laborable) a partir del momento en el que se informa el hallazgo y, hasta donde sea práctico y viable, los mismos serán reubicados en terrenos cercanos a la propiedad.

- Es de la entera responsabilidad del proponente el obtener y cumplir con cualquier otro permiso o autorización que puedan ser requeridos por otras agencias, autoridades, departamentos, corporaciones públicas o instrumentalidades gubernamentales.

- Se deberá preparar y cumplir con las recomendaciones y especificaciones del Estudio de Suelos que garantice que el proyecto cumpla con los códigos de construcción.

- Se deberá establecer un programa de reforestación utilizando especies nativas que además de ayudar a minimizar la erosión beneficien la vida silvestre. Esta medida es cónsona con la Ley para Fomentar la Siembra de Árboles Cuyas Frutas y/o Semillas Provean Alimento a Especies de Aves Silvestres de Puerto Rico (Ley Núm. 97 de 24 de junio de 1998), la cual establece lo siguiente: "En todo proyecto de reforestación en que se utilicen fondos públicos o privados, o en una combinación de estos, un 15% en las áreas rurales y un 10% en las áreas urbanas del total de árboles a ser sembrados, serán de especies cuyas frutas y/o semillas sirvan de alimento a las aves silvestres que residan temporal o permanentemente en ésta".

- De descubrirse en los predios objeto de desarrollo algún otro cuerpo de agua superficial o subterráneo sea perenne o intermitente, deberá informarlo inmediatamente al DRNA y demás agencias concernidas. No informar hallazgos de este tipo, así como las medidas de mitigación que se implantarán para proteger estos recursos naturales conllevará una revocación automática de la presente comunicación de no-objeción y podrá ser base para acciones legales por parte de DRNA en los foros disponibles.

Este endoso es solamente aplicable a la situación de hechos y los datos según presentados y evaluados en el caso y la Secretaria se reserva el derecho de reevaluar, variar o modificar los mismos en cualquier momento anterior a la emisión del permiso o la acción administrativa correspondiente por parte de la agencia solicitante o proponente cuando surja nueva información oficial específica estableciendo que el derecho aplicable o las condiciones ambientales en el predio han cambiado sustancialmente, o cuando el endoso original se emitió bajo premisas falsas o fraudulentas.

Cordialmente,

APPENDIX L

GOBIERNO DE PUERTO RICO
LA FORTALEZA
SAN JUAN, PUERTO RICO

Boletín Administrativo Núm. OE-2021-024

ORDEN EJECUTIVA DEL GOBERNADOR DE PUERTO RICO, HON. PEDRO R. PIERLUISI, PARA DECLARAR UNA EMERGENCIA EN LA INFRAESTRUCTURA DE PUERTO RICO POR LOS DAÑOS CAUSADOS POR LOS HURACANES IRMA Y MARÍA, ASÍ COMO POR LOS TERREMOTOS OCURRIDOS EN EL 2020, Y ACTIVAR LAS DISPOSICIONES DE LA LEY NÚM. 76-2000, SEGÚN ENMENDADA

POR CUANTO: Durante los pasados años, la vida de los puertorriqueños ha sido trastocada por los huracanes Irma y María, así como por los movimientos telúricos que han afectado la infraestructura de nuestra Isla. Los daños y las consecuencias sufridas a raíz de estos desastres naturales han creado una situación de emergencia que atenta contra el bienestar, la salud y la seguridad de todos los puertorriqueños. Como consecuencia, se han visto afectadas la infraestructura de Puerto Rico, las viviendas, el sistema eléctrico, el sistema pluvial, los sistemas de relleno sanitario, las escuelas, las carreteras, y los hospitales, entre otros. A pesar de la necesidad de acción, la respuesta gubernamental ha sido lenta y deficiente. El atraso en la recuperación y reconstrucción de Puerto Rico es inexcusable.

POR CUANTO: La infraestructura de los servicios esenciales en la Isla se encuentra altamente vulnerable. Un informe publicado por el Capítulo de Puerto Rico de la Sociedad Americana de Ingenieros Civiles ("ASCE"), le otorgó una clasificación general de (D-) a la condición de la infraestructura en Puerto Rico para el año 2019. La evaluación incluyó las condiciones de los puentes; represas; carreteras; desperdicios sólidos; manejo de aguas negras; así como la infraestructura de agua potable, energía y puertos.

POR CUANTO: La recuperación y reconstrucción de Puerto Rico es la prioridad más apremiante de este Gobierno. La reconstrucción proveerá una mejor calidad de vida a nuestros ciudadanos y será la oportunidad de actualizar parte de la infraestructura crítica. Al mismo tiempo, ello impulsará el comienzo de una nueva era de desarrollo económico para beneficio de todos los puertorriqueños,

el cual es una parte esencial y primordial para la reconstrucción y recuperación de Puerto Rico.

POR CUANTO: Para lograr la reconstrucción de nuestra Isla, tenemos que agilizar y maximizar los más de $50,000 millones de fondos directos de los programas de asistencia pública y de mitigación de la *Federal Emergency Management Agency* ("FEMA", por sus siglas en inglés) y el *U.S. Department of Housing and Urban Development*, *Community Development Block Grant Disaster Recovery* ("CDBG-DR", por sus siglas en inglés). De igual forma, tenemos que asegurar que la Oficina de Gerencia de Permisos ("OGPe"), del Departamento de Desarrollo Económico y Comercio, tenga las herramientas necesarias para tramitar de forma expedita los permisos, endosos, consultas, certificaciones y recomendaciones necesarias para atender nuestra crisis actual.

POR CUANTO: Debemos asegurar que los fondos federales y estatales para la reconstrucción y recuperación de Puerto Rico se utilicen de forma ágil y eficiente, de manera que los puertorriqueños afectados por los huracanes Irma y María, así como los afectados por los terremotos ocurridos en el 2020, puedan finalmente recibir la ayuda que necesitan.

POR CUANTO: Para esta administración es necesaria la pronta rehabilitación y reconstrucción de viviendas y comunidades afectadas; revitalizar los cascos urbanos; mejorar y fortalecer el sistema eléctrico y de acueductos y embalses; construir nuevas instalaciones hospitalarias; rehabilitar las escuelas públicas para que cumplan con los códigos de construcción incluidos en el *2018 Puerto Rico Building Code*; y mejorar y reconstruir la infraestructura vial, entre otras necesidades.

POR CUANTO: Para lograr la referida reconstrucción y viabilizar la correcta utilización de los fondos obtenidos, es necesario agilizar el financiamiento, y lograr la pronta emisión de recomendaciones, consultas, permisos y construcción de los proyectos de infraestructura de carácter crítico y urgente con el fin de atender los daños causados por los desastres naturales.

POR CUANTO: En aras de alcanzar lo anterior, es de extrema urgencia declarar una emergencia en cuanto a la infraestructura de Puerto Rico y activar los mecanismos necesarios para la realización de obras y proyectos críticos de reconstrucción de forma rápida, así como garantizar que la burocracia de permisos no incida en las iniciativas de recuperación en la construcción.

POR CUANTO: A pesar de que los huracanes ocurrieron en el 2017 y los terremotos a inicios del 2020, la dilación en la reconstrucción ha provocado que aún sea necesario que esta administración tome acciones concretas y declare en estos momentos una emergencia en la infraestructura de Puerto Rico.

POR CUANTO: La Ley Núm. 76-2000, según enmendada, también conocida como "Ley de Procedimientos para Situaciones o Eventos de Emergencia", provee para que, luego de una declaración de emergencia, el Gobernador active un proceso expedito para la realización de obras y proyectos necesarios para atender y resolver situaciones críticas en la infraestructura física de prestación de servicios esenciales para la ciudadanía; así como las instancias que pongan en riesgo la vida, la salud y seguridad de la población.

POR CUANTO: El Artículo 5.10 de la Ley Núm. 20-2017, según enmendada, conocida como la "Ley del Departamento de Seguridad Pública de Puerto Rico", me faculta como Gobernador a, luego de decretar un estado de emergencia o desastre, darle vigencia a aquellas medidas que resulten necesarias, durante el periodo que se extienda la emergencia, para el manejo de esta con el fin de proteger la seguridad, salud y propiedad de todos los residentes de Puerto Rico.

POR CUANTO: El inciso (b) del Artículo 5.10 de la Ley Núm. 20-2017, según enmendada, establece que como Gobernador de Puerto Rico puedo dictar, enmendar y revocar aquellos reglamentos y emitir, enmendar y rescindir aquellas órdenes que estime convenientes para regir durante el estado de emergencia o desastre.

POR CUANTO: A su vez, el inciso (c) del mencionado Artículo 5.10 de la Ley Núm. 20-2017 dispone que como Gobernador de Puerto Rico podré darle vigencia a aquellos reglamentos, órdenes, planes o medidas estatales para situaciones de emergencia o desastre o variarlos a su juicio.

POR CUANTO: El propio inciso (b) del Artículo 5.10 de la Ley Núm. 20-2017, según enmendada, dispone que los reglamentos dictados u órdenes emitidas durante un estado de emergencia o desastre tendrán fuerza de ley mientras dure dicho estado de emergencia o desastre.

POR TANTO: Yo, PEDRO R. PIERLUISI, Gobernador de Puerto Rico, en virtud de los poderes inherentes a mi cargo y la autoridad que me ha

sido conferida por la Constitución y las leyes de Puerto Rico, por la presente, decreto y ordeno lo siguiente:

SECCIÓN 1ª: **DECLARACIÓN DE EMERGENCIA**. Declaro una emergencia en la infraestructura de Puerto Rico por los daños causados por los huracanes Irma y María, así como por los terremotos ocurridos en el 2020, los cuales aún no han sido reparados. Por tanto, conforme con el Boletín Administrativo Núm. 2021-011, todo proyecto de reconstrucción y mitigación que el Concilio de Reconstrucción haya identificado como un proyecto crítico deberá ser atendido con agilidad y urgencia, asegurando que se cumplan con las normas ambientales aplicables. Todo proyecto crítico tendrá la más alta prioridad del Gobierno de Puerto Rico, por lo que deberá contar con el apoyo interagencial para lograr que el proceso de reconstrucción se lleve a cabo de manera ágil, así permitiendo la consecución de los objetivos trazados en el menor tiempo posible. Estos proyectos deberán ser atendidos de forma prioritaria, con agilidad en los procesos de permisos y en cumplimiento con las normas de las agencias estatales y federales. En esta tarea, se tendrá como norte el garantizar la salud, la seguridad pública y el bienestar de todos los ciudadanos de Puerto Rico.

SECCIÓN 2ª: **ACTIVACIÓN DE PROCESO EXPEDITO**. Debido a la emergencia decretada, ordeno la utilización del proceso expedito establecido en la Ley Núm. 76-2000, según enmendada, para la construcción y reconstrucción de proyectos críticos, con especial atención a los siguientes proyectos: reconstrucción de viviendas afectadas por los huracanes Irma y María, así como por los terremotos ocurridos en el 2020; revitalización de los cascos urbanos; reconstrucción, modernización y resiliencia del sistema eléctrico y de acueductos y alcantarillados, incluyendo las represas; reconstrucción de los planteles escolares; construcción de nuevas instalaciones hospitalarias; reconstrucción de la infraestructura vial, de puertos y aeropuertos, y proyectos de mitigación, así como otros proyectos críticos, incluyendo la infraestructura de telecomunicaciones. Así pues, todas las agencias afectadas por esta Orden Ejecutiva deberán seguir el procedimiento expedito que permite la Ley Núm. 76-2000, según enmendada, al momento de emitir los permisos pertinentes, consultas, endosos, comentarios, recomendaciones y certificaciones para los proyectos antes mencionados, entre otros.

De esta forma, dispenso a las agencias del cumplimiento de los términos y procesos ordinarios.

SECCIÓN 3ª: **PROCESOS EXPEDITOS ALTERNOS**. Conforme la facultad que concede los Arts. 2 y 7 de la Ley Núm. 76-2000, según enmendada, la Junta de Planificación ("JP") y la OGPe deberán establecer, mediante reglamentos y órdenes administrativas, de no haberlos, los procedimientos expeditos alternos necesarios para conceder los diferentes permisos, consultas, endosos, comentarios, recomendaciones y certificaciones para los proyectos antes mencionados. Estos procesos alternos deberán contener términos expeditos similares a los establecidos en la Ley Núm. 76-2000, según enmendada, y cumplir con los requisitos ambientales pertinentes.

Asimismo, a los fines de agilizar los trámites antes señalados, se faculta a cualquier ingeniero(a), agrimensor(a) o arquitecto(a) licenciado(a) a que emita certificaciones y permisos de carácter ministerial para los proyectos críticos. Para ello, este profesional realizará el proceso de auto certificación en el que se asegure que el solicitante cumple con los requisitos aplicables para una certificación automática de construcción. De este profesional actuar de forma negligente, la JP, al amparo de los poderes de la Ley Núm. 75 de 24 de junio de 1975, según enmendada, y el "Reglamento conjunto para la evaluación y expedición de permisos relacionados al desarrollo, uso de terreno y operación de negocios", Reglamento Núm. 9233 de 2 de diciembre de 2020 (en adelante, "Reglamento Conjunto"), podrá imponerle la multa correspondiente de hasta $10,000.00. Además de lo antes mencionado, podrá ser descalificado como Profesional Autorizado, cuando aplique, y ser referido a la JP, a la junta correspondiente ante el Departamento de Estado, al Colegio de Ingenieros y Agrimensores de Puerto Rico, al Colegio de Arquitectos y Arquitectos Paisajistas de Puerto Rico y al Departamento de Justicia, según aplique, para los trámites administrativos o penales correspondientes, incluyendo pero sin limitarse, a violaciones a los Arts. 211 y 215 del Código Penal de Puerto Rico, y el Art. 6.14 de la Ley Núm. 20-2017, según enmendada. No conforme con ello, la OGPe o las agencias concernidas podrán examinar y auditar el cumplimiento con los requisitos aplicables a una auto certificación, según establecidos en el Reglamento Conjunto, y referir a la JP cualquier permiso que

no cumpla con lo establecido, incluyendo la imposición de multas y sanciones que apliquen.

SECCIÓN 4ª: **CREACIÓN DE SUBCOMITÉ**. Se crea el Subcomité Interagencial de Cumplimiento Ambiental por Vía Acelerada (el "Subcomité"), a tenor con lo dispuesto en el Artículo 4 de la Ley Núm. 76-2000, según enmendada, el cual estará encargado de evaluar los documentos ambientales presentados para cualquier proyecto al amparo de esta Orden Ejecutiva. El Subcomité estará compuesto por:

a) el Secretario Auxiliar de la OGPe, quién será su Presidente;
b) el Miembro Asociado de la Junta Adjudicativa de la OGPe nombrado por su conocimiento en materia ambiental (*environmental subject matter expert*);
c) un representante del Departamento de Recursos Naturales y Ambientales;
d) un representante de la Junta de Planificación;
e) un representante de la Autoridad de Carreteras y Transportación;
f) un representante de la Autoridad de Energía Eléctrica de Puerto Rico, y
g) un representante de la Autoridad de Acueductos y Alcantarillados de Puerto Rico.

De igual forma, toda solicitud de Recomendación de Evaluación Ambiental, Evaluación Ambiental y/o Declaración de Impacto Ambiental, al amparo de la Ley Núm. 76-2000, según enmendada, será presentada ante la OGPe.

SECCIÓN 5ª: **MEDIDAS TRANSITORIAS**. El Secretario del Departamento de Recursos Naturales y Ambientales, el Secretario del Departamento de Desarrollo Económico y Comercio, el Secretario Auxiliar de la OGPe, el presidente de la JP y el Director o el Secretario de cualquier otra entidad gubernamental concernida, deberán adoptar aquellas medidas transitorias y tomar las decisiones necesarias para cumplir con esta Orden Ejecutiva.

SECCIÓN 6ª: **INFORMES SOBRE PROCESO DE PERMISOS**. Para asegurar que se cumplan con los objetivos de esta Orden, se ordena y requiere a la OGPe y a cualquier otra agencia concernida a que, en un término de diez (10) días desde la promulgación de esta Orden, presente ante el Gobernador y la Secretaría de la Gobernación el proceso expedito alterno que pretenden

establecer para los permisos, endosos, consultas, certificaciones y recomendaciones necesarias para atender nuestra actual crisis.

A su vez, se ordena a la OGPe y a cualquier otra agencia concernida a que emita un Informe detallado de la implementación y el funcionamiento de los trámites alternos ordenados en esta Orden Ejecutiva para los permisos, endosos, consultas, certificaciones y recomendaciones necesarias para atender nuestra actual crisis. El referido informe deberá ser presentado ante el Gobernador y la Secretaría de la Gobernación en el término de cuarenta y cinco (45) días desde la promulgación de esta Orden.

SECCIÓN 7ª: **DEFINICIÓN DEL TÉRMINO AGENCIA**. Para fines de esta Orden Ejecutiva, el término "agencia" se refiere a toda agencia, instrumentalidad, oficina o dependencia de la Rama Ejecutiva del Gobierno de Puerto Rico, incluyendo corporaciones públicas, independientemente de su nombre.

SECCIÓN 8ª: **NO CREACIÓN DE DERECHOS EXIGIBLES**. Esta Orden Ejecutiva no tiene como propósito crear derechos sustantivos o procesales a favor de terceros, exigibles ante foros judiciales, administrativos o de cualquier otra índole, contra el Gobierno de Puerto Rico o sus agencias, sus oficiales, empleados o cualquiera otra persona.

SECCIÓN 9ª: **SEPARABILIDAD**. Las disposiciones de esta Orden Ejecutiva son independientes y separadas unas de otra y si un tribunal con jurisdicción y competencia declarase inconstitucional, nula o inválida cualquier parte, sección, disposición y oración de esta Orden Ejecutiva, la determinación a tales efectos no afectará la validez de las disposiciones restantes, las cuales permanecerán en pleno vigor.

SECCIÓN 10ª: **DEROGACIÓN**. Esta Orden Ejecutiva deja sin efecto cualquier otra orden ejecutiva que en todo o en parte sea incompatible con ésta hasta donde existiera tal incompatibilidad.

SECCIÓN 11ª: **PUBLICACIÓN**. Esta Orden Ejecutiva debe ser presentada inmediatamente en el Departamento de Estado y se ordena su más amplia publicación.

SECCIÓN 12ª: **VIGENCIA**. Esta Orden Ejecutiva entrará en vigor inmediatamente y tendrá una duración de seis (6) meses desde la promulgación, la cual podrá ser extendida conforme con la Ley Núm. 76-2000.

EN TESTIMONIO DE LO CUAL, expido la presente Orden Ejecutiva bajo mi firma y hago estampar en ella el sello del Gobierno de Puerto Rico, en San Juan, Puerto Rico, hoy 25 de marzo de 2021.

PEDRO R. PIERLUISI
GOBERNADOR

Promulgada de conformidad con la ley, hoy 25 de marzo de 2021.

LAWRENCE N. SEILHAMER RODRÍGUEZ
SECRETARIO DE ESTADO

GOBIERNO DE PUERTO RICO
DEPARTAMENTO DE ESTADO
Secretario de Estado | Lawrence Seilhamer Rodríguez | secretario@estado.pr.gov

PRIMER INFORME DEL CONCILIO DE RECONSTRUCCIÓN DE PUERTO RICO

Trasfondo Histórico

Tras la devastación de los Huracanes Irma y María en septiembre de 2017 y los posteriores Terremotos del área Sur de la Isla comenzando en diciembre de 2019 y luego con el más fuerte el 7 de enero de 2020, nuestro Puerto Rico sufrió grandes cambios, daños y deterioro. Como parte de los esfuerzos de recuperación, reconstrucción y agilizar las ayudas recibidas del Gobierno Federal, el 8 de enero de 2021, el Hon. Pedro R. Pierluisi Gobernador de Puerto Rico creó, mediante Orden Ejecutiva OE 2021-011, el Concilio de Reconstrucción de Puerto Rico. Dicha Orden se encuentra unida al presente informe e identificada como **Exhibit 1**. La recuperación y reconstrucción de Puerto Rico es la prioridad más apremiante de este gobierno. Con la reconstrucción se proveerá una mejor calidad de vida, será la oportunidad de actualizar parte de la infraestructura crítica y al mismo tiempo provocará el comienzo de una nueva era de desarrollo económico para beneficio de todos los puertorriqueños.

Como Secretario de Estado, ha sido un honor que se me haya designado dicha responsabilidad y que dicha Orden Ejecutiva me designe como Presidente del Concilio de Reconstrucción de Puerto Rico y poder laborar junto a mis compañeros Secretarios; quienes han estado comprometidos día a día para la ejecución de cada una de las labores realizadas y gestiones de seguimiento.

Como parte de nuestro Plan de Gobierno los primeros Proyectos Prioritarios designados por nuestro Gobernador, Hon. Pedro R. Pierluisi son los siguientes:

- **La rehabilitación de los cascos urbanos**
- **La infraestructura de la banda ancha en Puerto Rico 5G y "Smart Cities"**
- **El re-desarrollo de la base Roosevelt Roads**
- **La construcción de un nuevo Hospital de Trauma en las inmediaciones del Centro Médico**
- **Mejoras al sistema de Trauma en Puerto Rico y Centro Médico de Mayagüez**
- **Extensión de la PR-10**
- **Extensión del a PR-5**
- **Extensión de la PR-22**
- **El desarrollo del Puerto y Aeropuerto de Ponce**
- **Desarrollo de Bahía Urbana y Distrito de Convenciones**

- **"Air Hub Strategy" y hub de carga aérea**
- **El Desarrollo Económico de Vieques y Culebra**
- **Proyectos de infraestructura y desarrollo de las comunidades del Caño Martin Peña**

Cabe destacar que adicional a dichos proyectos, próximamente el Concilio de Reconstrucción de Puerto Rico evaluará otros proyectos que debido a su naturaleza serán considerados como prioritarios.

Gestiones Realizadas

El inicio de las gestiones como Presidente de dicho Concilio de Reconstrucción de Puerto Rico, tuvo su origen con las cartas enviadas mediante correo electrónico y postal el 11 de enero de 2021 a todos los municipios y agencias, para que entregaran un informe detallado de los proyectos críticos de cada agencia o municipio respectivamente. Una muestra de dicha carta se une al presente Informe como **Exhibit 2** y como **Exhibit 3** una muestra de la tabla enviada.

El Concilio de Reconstrucción de Puerto Rico, realizó su primera reunión el 2 de febrero de 2021 en el salón de Conferencias del Departamento de Estado, por lo cual se une a la presente la agenda como **Exhibit 4.** Los miembros citados a dicha reunión fueron:

- Lawrence N. Seilhamer Rodríguez, Presidente del Concilio
- Ingeniero Manuel Laboy Rivera, Oficina Central de Recuperación y Reconstrucción (COR3)
- Honorable William Rodríguez Rodríguez, Departamento de la Vivienda
- Señor Eduardo Rivera Cruz, Autoridad para el Financiamiento de la Infraestructura (AFI)
- Licenciado Roberto AJ Méndez Martínez, Secretario Auxiliar de la Gobernación para Proyectos Prioritarios
- Honorable Eileen Vélez Vega, Departamento de Transportación y Obras Públicas
- Honorable Manuel Cidre Miranda, Departamento de Desarrollo Económico y Comercio
- Honorable Rafael Machargo Maldonado, Departamento de Recursos Naturales
- Honorable Elba L. Aponte, Departamento de Educación – Representada por el Sr. Olmedo.
- Ingeniero Efran Paredes Maisonet, Autoridad de Energía Eléctrica
- Ingeniero Doriel L. Pagán Crespo, Autoridad de Acueductos y Alcantarillados

Durante dicha reunión se propuso la creación de un **Task Force** para abrir canales de comunicación en cuanto a la disponibilidad de recursos e inventario en aras de agilizar los proyectos sin tener que recurrir a la importación de productos extranjeros que resultarían en una incrementación de costos.

Todos los asistentes estuvieron de acuerdo y se designó unánimemente a la Honorable Eileen Vélez Vega como presidenta de dicho Task Force y los demás miembros son los siguientes:

Lawrence N. Seilhamer Rodríguez
Ingeniero Manuel Laboy
Lcdo. Roberto AJ Méndez Martínez
Hon. Manuel Cidre Miranda

También se propuso la creación de un comité que asista en la parte técnica y se discutió la posibilidad de una figura que funja como facilitador y coordinador de permisos. Se une al presente informe minuta aprobada en reunión del 16 de febrero de la reunión del concilio de reconstrucción para el 2 de febrero de 2021 en el **Exhibit 5**.

Como parte de las gestiones realizadas por el Concilio de Reconstrucción, el 3 de febrero de 2021 se realizó en el Municipio de Ponce una reunión con los alcaldes del Sur en torno a los Proyectos Prioritarios, por lo cual se une la agenda correspondiente como **Exhibit 6** y minuta de dicha reunión como **Exhibit 7**.

El 5 de febrero de 2021, como parte de las gestiones del Presidente del Concilio se visitó el Municipio de Yauco, allí junto con su Alcalde Hon. Ángel Luis "Luigi" Torres, se visualizó una plataforma que establece digitalmente las áreas de todo el municipio y marca los lugares afectados incluyendo las gestiones realizadas por el municipio. Dicha plataforma presenta áreas de toldos azules, entre otras cosas, también se visitó el área donde se están organizando administrativamente el plan para las demoliciones de estructuras. Se coordinó para presentar dicha plataforma al Concilio y a la Asociación y Federación de Alcaldes para el 8 de marzo.

En seguimiento a las gestiones, el Concilio solicitó que las agencias y municipios identificaran un enlace contacto para agilizar la comunicación. Se une al presente informe una muestra de dicha carta enviada a las agencias y municipios mediante correo electrónico y postal el 8 de febrero de 2021 como **Exhibit 8.** Además, se une la tabla organizada de contactos como ejecutoria de la gestión antes mencionada como **Exhibit 9.**

Como parte de las gestiones con organizaciones no gubernamentales, el 11 de febrero de 2021, en el Conference del Departamento de Estado, se realizó una reunión con OXFAM sobre temas de acuerdos colaborativos para promover la reconstrucción de Puerto Rico. Entre las propuestas de dicho sector se encuentran las siguientes:

- **Recuperación de viviendas y comunidades del Sur:** Es muy importante atender las necesidades de vivienda en las comunidades del Sur de Puerto Rico, afectadas por los terremotos que acontecen desde enero del 2020. Es indispensable que se agilicen las asignaciones y distribución de los recursos disponibles para una recuperación resiliente de nuestros hermanos del sur. Éstos deberán ser los protagonistas, a través de una recuperación participativa donde se priorice el conocimiento y mano de obra de las comunidades a las que se les sirve. También es importante colaborar con grupos que abogan en Washington DC por la asignación de fondos de recuperación CDBG-DR para los afectados por los terremotos.

- **Transportación efectiva para las Islas Municipio:** Urge solucionar los problemas severos de transportación para las Islas Municipio de Vieques y Culebra. La debacle en el sistema (que incluye asuntos de itinerario, falta de acceso a las embarcaciones incluyendo el ferry de carga, lentitud del proceso, etc.), incide en la vida de los residentes de las islas, y provoca situaciones de inseguridad. La vida de muchos residentes que requieren atención médica y tratamientos se ve en peligro. Toda acción para trabajar esta situación debería realizarse en comunicación y participación directa con el liderato comunitario, quienes deben integrarse de inmediato en un grupo de trabajo con los directivos que planifican e implementan las decisiones en torno a la transportación con las Islas Municipio.

- **Acueductos Comunitarios:** En Puerto Rico hay muchas comunidades que no cuentan con agua potable a través de la Autoridad ele Acueductos y Alcantarillados y que dependen de acueductos comunitarios para obtener la misma. Existen 241 acueductos comunitarios identificados por la EPA, y menos del 50% cumplen con las medidas sanitarias necesarias. Solicitamos que se puedan otorgar fondos para atender a las más de 300,000 personas que dependen de estos acueductos.

Dichas Propuestas serán presentadas al Concilio el 8 de marzo de 2021.

A su vez, ese mismo día el 11 de febrero de 2021, se realizó una reunión con FEMA, COR3, Asociación y Federación de Alcaldes para viabilizar y agilizar el status de los municipios ante dichas agencias.

Siguiendo con las gestiones del Concilio de Reconstrucción, el 16 de febrero de 2021, se realizó una reunión y se une al presente informe la agenda de dicha reunión como **Exhibit 10.** En dicha reunión se incluyó a la Asociación de Alcaldes y a la Federación de Alcaldes para que pudieran asistirnos con los municipios e aclarar sus dudas en torno al Concilio de Reconstrucción. Se incluye minuta de dicha reunión como **Exhibit 11.**

El 24 de febrero de 2021, en el Teatro del Departamento de Estado, se realizó otra reunión del Concilio, esta vez con el Cuerpo de Ingenieros de los Estados Unidos para presentar sus proyectos y abrir canales de comunicación con las agencias Estatales para la realización de las obras. Se une la Agenda como **Exhibit 12,** y Presentación como ***Anejo D***.

El 26 de febrero de 2021, se envió carta de seguimiento a la Federación y a la Asociación de Alcaldes a modo de seguimiento a los municipios que aun debían informes, por lo cual se une al presente, carta como **Exhibit 13.**

Es de vital importancia incluir en los trabajos del Concilio el área de telecomunicaciones y sus proveedores. Es por esto que nos hemos reunido y acordado que en la próxima reunión tendremos a los proveedores de dicho servicio para asistir y crear un plan que organice sus trabajos de reconstrucción. Además, próximamente el Concilio de Reconstrucción de Puerto Rico estará coordinando una reunión con el Consejo Asesor Permanente de la Industria de la Construcción.

También hemos recibido una notificación urgente sobre el Faro de Cayo Cardona o Isla Sor Isolina Ferre de Ponce, dicho faro sufrió daño por los terremotos y es un valorable patrimonio histórico. A su vez es quien ilumina la entrada hacia el puerto de Ponce. Por lo cual, hemos establecido un plan para atender la situación y para que sea incluido los daños reportados a FEMA. Las fotos de dichos daños fueron provistas por la Guardia Costera Federal y están incluidas en este informe en el ***Anejo F.***

Se incluye Recortes de noticias relativas a las gestiones del Concilio de Reconstrucción de Puerto Rico en el ***Anejo E***.

Adicional a todas las gestiones antes señaladas se realizaron reuniones y orientaciones con entes privados que ostentan proyectos con intención de ejecución, que son participantes de fondos federales para la realización de proyectos de acuerdo con los diferentes fondos disponibles. Dichos proyectos una vez sean recibidos todos, serán evaluados por el Concilio e incluidos en los próximos informes.

En torno a los municipios, la cantidad que entregó sus proyectos críticos son cuarenta y tres (43) y un (1) municipio pidió prorroga. En torno a las Agencias recibimos los informes de las dieciocho (18). Para ser equitativos se necesita tener la totalidad de los municipios para poder emitir responsablemente a un informe final. Los Informes entregados se encuentran en los *Anejos A, B y C*.

Nuestra última gestión por el momento fue la reunión del Concilio del 8 de marzo de 2021, con motivo de aprobar el primer informe del Concilio de Reconstrucción de Puerto Rico entre otros asuntos, a su vez se incluye la correspondiente agenda en el **Exhibit 14**.

Añadimos a las gestiones antes indicadas la Agenda de Sub Comité de Infraestructura como **Exhibit 15** y las notas de dicha reunión en el **Exhibit 16**.

Recomendaciones:

- Realizar coordinación con la Oficina del Comisionado de Seguros sobre asistencia a los municipios.
- Realizar orientación con Instituto de Cultura Puertorriqueña sobre propiedades incluidas como Patrimonio Nacional que fueron afectadas y los pasos a seguir para su reconstrucción.
- Asignación de recursos a la Administración de Servicios Generales para las subastas de reconstrucción.
- Identificar fondos adicionales para el "Revolving Fund".
- Asistir al foro privado en la ejecución de obras de impacto social.
- Asistir a las agencias y municipios en la identificación de proyectos realmente críticos.
- Establecer requisitos más agiles para que no se dupliquen esfuerzos.
- Realizar informes adicionales en cuanto al establecimiento del Orden de Prioridad de los Proyectos Críticos y llegar a consenso con las agencias y municipios en cuanto a la identificación prioritaria de sus proyectos.

En conclusión y en cumplimiento con el termino establecido en la Orden Ejecutiva OE 2021-011, el cual establece el 9 de marzo de 2021 como fecha para entregar el mismo, se remite informe que incluye los proyectos críticos identificados por agencias y municipios dentro del Primer Informe del Concilio de Reconstrucción de Puerto Rico. La labor dentro de los primeros 60 días ha sido una exhaustiva y de gran avance para nuestro gobierno en provecho de nuestra ciudadanía, pero la misma no ha concluido, grandes retos están por suceder. Me siento sumamente honrado de pertenecer a un gran equipo de trabajo, en conjunto con el Hon. Pedro R. Pierluisi Gobernador de Puerto Rico, mis compañeros Secretarios y todos los que de una forma u otra han contribuido en este comienzo de reconstrucción trazando las primeras líneas de lo que será la más grande reconstrucción de nuestra Isla.

Lawrence N. Seilhamer Rodríguez
Secretario de Estado

SEGUNDO INFORME DEL CONCILIO DE RECONSTRUCCIÓN DE PUERTO RICO

El Concilio de Reconstrucción ha continuado sus esfuerzos para que la recuperación y reconstrucción de Puerto Rico prosiga a un paso acelerado. Todo esto, acorde con la Política Pública del Gobernador de Puerto Rico, Pedro R. Pierluisi. Reiteramos nuestro compromiso con la reconstrucción de Puerto Rico, debido a que proveerá una mejor calidad de vida, será la oportunidad de actualizar parte de la infraestructura crítica y al mismo tiempo provocará el comienzo de una nueva era de desarrollo económico para beneficio de todos los puertorriqueños.

Como parte de, nuestro Plan de Gobierno los primeros Proyectos Prioritarios designados por nuestro Gobernador de Puerto Rico, Pedro R. Pierluisi, son los siguientes:

- La rehabilitación de los cascos urbanos
- La infraestructura de la banda ancha en Puerto Rico 5G y "Smart Cities"
- El re-desarrollo de la base Roosevelt Roads
- La construcción de un nuevo Hospital de Trauma en las inmediaciones del Centro Médico
- Mejoras al sistema de Trauma en Puerto Rico y Centro Médico de Mayagüez
- Extensión de la PR-10
- Extensión de la PR-5
- Extensión de la PR-22
- El desarrollo del Puerto y Aeropuerto de Ponce
- Desarrollo de Bahía Urbana y Distrito de Convenciones
- "Air Hub Strategy" y hub de carga aérea
- El Desarrollo Económico de Vieques y Culebra
- Proyectos de infraestructura y desarrollo de las comunidades del Caño Martín Peña

En una evaluación adicional se han incorporado al presente Informe, otros Proyectos que han sido provistos por los municipios de Aguadilla, Comerío, Dorado, Hormigueros, Jayuya, Naranjito, Río Grande, Lajas, San Germán y Guayanilla; dichos Proyectos Críticos, se encuentran incluidos en el presente Informe y se detallan en el ANEJO A.
Además, se realizó un análisis del caso State of Hawaii vs. Federal Emergency Management 294 F.3d 1152, el mismo se entregó a los miembros del Concilio de Reconstrucción y se adjunta como ANEJO B.

Gestiones Realizadas

Continuando las gestiones como Presidente del Concilio de Reconstrucción de Puerto Rico, realizamos una visita al Faro Cayo Cardona o Islote Sor Isolina Ferré, el cual sufrió daños por los terremotos de enero de 2020. Se incluye evaluación del Ingeniero Estructural al presente Informe, como Exhibit 1. El 15 de marzo de 2021 este servidor participó del Foro de Construcción. El 16 de marzo de 2021 atendimos a representantes de Ayuda Legal de Puerto Rico. Se aneja presentación como Exhibit 2.

El 17 de marzo de 2021 se realizó una Reunión del Comité de Reconstrucción, en la cual la Administración de Servicios Generales hizo una Presentación sobre los procesos relacionados a la reconstrucción en la agencia. Además, la Comisión de Terremotos del Colegio de Ingenieros y Agrimensores de Puerto Rico (CIAPR) le presentó al Concilio de Reconstrucción sus recomendaciones para realizar los arreglos de las escuelas afectadas por los Terremotos y posibles columnas cortas. Se une al presente Informe, como Exhibit 3, la Agenda y Minuta de dicha reunión y la presentación del CIAPR como ANEJO C.

El 25 de marzo de 2021 el Gobernador de Puerto Rico, Pedro R. Pierluisi, emitió la OE-2021-024 (Orden Ejecutiva) con el propósito de agilizar los permisos para las obras de Reconstrucción; la cual se une como ANEJO D. A raíz de esta Orden Ejecutiva se emitió una carta informativa

a las agencias y municipios sobre la misma, la cual se añade como ANEJO E.

El 26 de marzo de 2021 como tema traído a la atención del Concilio de Reconstrucción se solicitó la lista de agencias que pertenecen al Sistema PRIFAS la cual fue notificada por el Departamento de Hacienda y compartida con el Concilio de Reconstrucción. Esta se une como Exhibit 4.

El 31 de marzo de 2021 se realizó una reunión con el Secretario del Departamento del Trabajo y la Federación de Trabajadores de la Construcción en aras de ayudar al reclutamiento de mano de obra. Asimismo, el 5 de abril de 2021 se atendió a la Asociación de Constructores de Puerto Rico en otras gestiones sobre mano de obra para proyectos de construcción.

Nuestra próxima reunión del Comité de Reconstrucción se realizó el 6 de abril de 2021, en la cual, entre otros asuntos, se presentó la posibilidad de implantar una plataforma pública que contenga toda la información de las subastas de los Proyectos de Reconstrucción. Dicha propuesta fue acogida favorablemente, por lo cual se realizarían comunicaciones con PRITS y COR3 para su implementación. Se une al presente Informe, como Exhibit 5, la Agenda y Minuta de dicha reunión.

Continuando con nuestras gestiones la próxima reunión del Comité de Reconstrucción se realizó el 23 de abril de 2021. En esta se presentó el Informe de las escuelas inspeccionadas. Se une al presente Informe, como Exhibit 6, la Agenda y Minuta de dicha reunión y, como ANEJO F, el informe de inspecciones de escuelas. Además, en dicha reunión se realizaron presentaciones de los sistemas de Telecomunicaciones y se presentó el borrador de la lista en Excel de los Proyectos Críticos que será utilizada por la OGPe. Se une al presente Informe como Exhibit 7.

Como parte de las gestiones del Concilio de Reconstrucción, el 27 de abril de 2021 comparecí ante la Comisión para el Desarrollo y la Fiscalización

de Fondos Públicos de la Región Suroeste de la Cámara de Representantes, a la Vista Pública sobre la Resolución Conjunta de la Cámara 13. Se aneja Ponencia como Exhibit 8.

El 4 de mayo de 2021 se realizó una mesa redonda sobre recuperación y turismo, y unimos la presentación como Exhibit 9. El 20 de mayo de 2021 el Comité de Expertos y Asesores de Cambio Climático realizó una presentación al Comité de Reconstrucción. Véase ANEJO G, y como Exhibit 10, la Agenda y Minuta de dicha reunión. Finalmente, el 25 de mayo de 2021 se realizó la última reunión que cierra el presente Informe con Ayuda Legal de Puerto Rico.

También, hemos recibido notificación sobre los daños sufridos por los terremotos en el Faro de la Isla Caja de Muerto, por lo cual como gestión pendiente se calendarizará una visita a dicha Isla para inspeccionar este patrimonio histórico con un ingeniero estructural.

Recomendaciones:

- Dar seguimiento urgente a las reparaciones de las escuelas afectadas por el Huracán María y por los Terremotos. También, identificar cuáles estructuras pueden ser más resilientes.
- Continuar con la implementación de la Plataforma Pública de Proyectos Críticos.
- Calendarizar visitas a los lugares afectados, con la intención de que se incluyan dichos daños ocasionados por los terremotos como reclamación a FEMA antes de que cierre dicha incidencia.

Hoy 25 de mayo de 2021 y en conclusión y cumplimiento con la Orden Ejecutiva OE 2021-011, se remite el informe que incluye los Proyectos Críticos adicionales identificados por agencias y municipios dentro del Segundo Informe del Concilio de Reconstrucción de Puerto Rico. La labor dentro de los noventa (90) días siguientes al Primer Informe ha sido una exhaustiva y de gran avance para nuestro Gobierno en provecho de nuestra ciudadanía, pero la misma no ha concluido, grandes retos están por suceder.

Me siento sumamente honrado de haber podido pertenecer a un gran equipo de trabajo, y poder aportar a Puerto Rico, en conjunto con el honorable Pedro R. Pierluisi, mis compañeros Secretarios y todos los que de una forma u otra han contribuido en estos pasos hacia la reconstrucción de nuestro pueblo; trazando las primeras líneas de lo que será la más grande reconstrucción de nuestra Isla. Les deseo mucho éxito en sus próximas gestiones.

Lawrence N. Seilhamer Rodríguez
Presidente
Concilio de Reconstrucción

GOBIERNO DE PUERTO RICO
DEPARTAMENTO DE ESTADO
Secretario de Estado | Lawrence Seilhamer Rodríguez | secretario@estado.pr.gov

PRIMER INFORME DEL CONCILIO DE RECONSTRUCCIÓN DE PUERTO RICO

Trasfondo Histórico

Tras la devastación de los Huracanes Irma y María en septiembre de 2017 y los posteriores Terremotos del área Sur de la Isla comenzando en diciembre de 2019 y luego con el más fuerte el 7 de enero de 2020, nuestro Puerto Rico sufrió grandes cambios, daños y deterioro. Como parte de los esfuerzos de recuperación, reconstrucción y agilizar las ayudas recibidas del Gobierno Federal, el 8 de enero de 2021, el Hon. Pedro R. Pierluisi Gobernador de Puerto Rico creó, mediante Orden Ejecutiva OE 2021-011, el Concilio de Reconstrucción de Puerto Rico. Dicha Orden se encuentra unida al presente informe e identificada como **Exhibit 1**. La recuperación y reconstrucción de Puerto Rico es la prioridad más apremiante de este gobierno. Con la reconstrucción se proveerá una mejor calidad de vida, será la oportunidad de actualizar parte de la infraestructura crítica y al mismo tiempo provocará el comienzo de una nueva era de desarrollo económico para beneficio de todos los puertorriqueños.

Como Secretario de Estado, ha sido un honor que se me haya designado dicha responsabilidad y que dicha Orden Ejecutiva me designe como Presidente del Concilio de Reconstrucción de Puerto Rico y poder laborar junto a mis compañeros Secretarios; quienes han estado comprometidos día a día para la ejecución de cada una de las labores realizadas y gestiones de seguimiento.

Como parte de nuestro Plan de Gobierno los primeros Proyectos Prioritarios designados por nuestro Gobernador, Hon. Pedro R. Pierluisi son los siguientes:

- **La rehabilitación de los cascos urbanos**
- **La infraestructura de la banda ancha en Puerto Rico 5G y "Smart Cities"**
- **El re-desarrollo de la base Roosevelt Roads**
- **La construcción de un nuevo Hospital de Trauma en las inmediaciones del Centro Médico**
- **Mejoras al sistema de Trauma en Puerto Rico y Centro Médico de Mayagüez**
- **Extensión de la PR-10**
- **Extensión del a PR-5**
- **Extensión de la PR-22**
- **El desarrollo del Puerto y Aeropuerto de Ponce**
- **Desarrollo de Bahía Urbana y Distrito de Convenciones**

- **"Air Hub Strategy" y hub de carga aérea**
- **El Desarrollo Económico de Vieques y Culebra**
- **Proyectos de infraestructura y desarrollo de las comunidades del Caño Martin Peña**

Cabe destacar que adicional a dichos proyectos, próximamente el Concilio de Reconstrucción de Puerto Rico evaluará otros proyectos que debido a su naturaleza serán considerados como prioritarios.

Gestiones Realizadas

El inicio de las gestiones como Presidente de dicho Concilio de Reconstrucción de Puerto Rico, tuvo su origen con las cartas enviadas mediante correo electrónico y postal el 11 de enero de 2021 a todos los municipios y agencias, para que entregaran un informe detallado de los proyectos críticos de cada agencia o municipio respectivamente. Una muestra de dicha carta se une al presente Informe como **Exhibit 2** y como **Exhibit 3** una muestra de la tabla enviada.

El Concilio de Reconstrucción de Puerto Rico, realizó su primera reunión el 2 de febrero de 2021 en el salón de Conferencias del Departamento de Estado, por lo cual se une a la presente la agenda como **Exhibit 4.** Los miembros citados a dicha reunión fueron:

- Lawrence N. Seilhamer Rodríguez, Presidente del Concilio
- Ingeniero Manuel Laboy Rivera, Oficina Central de Recuperación y Reconstrucción (COR3)
- Honorable William Rodríguez Rodríguez, Departamento de la Vivienda
- Señor Eduardo Rivera Cruz, Autoridad para el Financiamiento de la Infraestructura (AFI)
- Licenciado Roberto AJ Méndez Martínez, Secretario Auxiliar de la Gobernación para Proyectos Prioritarios
- Honorable Eileen Vélez Vega, Departamento de Transportación y Obras Públicas
- Honorable Manuel Cidre Miranda, Departamento de Desarrollo Económico y Comercio
- Honorable Rafael Machargo Maldonado, Departamento de Recursos Naturales
- Honorable Elba L. Aponte, Departamento de Educación – Representada por el Sr. Olmedo.
- Ingeniero Efran Paredes Maisonet, Autoridad de Energía Eléctrica
- Ingeniero Doriel L. Pagán Crespo, Autoridad de Acueductos y Alcantarillados

Durante dicha reunión se propuso la creación de un **Task Force** para abrir canales de comunicación en cuanto a la disponibilidad de recursos e inventario en aras de agilizar los proyectos sin tener que recurrir a la importación de productos extranjeros que resultarían en una incrementación de costos.

Todos los asistentes estuvieron de acuerdo y se designó unánimemente a la Honorable Eileen Vélez Vega como presidenta de dicho Task Force y los demás miembros son los siguientes:

Lawrence N. Seilhamer Rodríguez
Ingeniero Manuel Laboy
Lcdo. Roberto AJ Méndez Martínez
Hon. Manuel Cidre Miranda

También se propuso la creación de un comité que asista en la parte técnica y se discutió la posibilidad de una figura que funja como facilitador y coordinador de permisos. Se une al presente informe minuta aprobada en reunión del 16 de febrero de la reunión del concilio de reconstrucción para el 2 de febrero de 2021 en el **Exhibit 5**.

Como parte de las gestiones realizadas por el Concilio de Reconstrucción, el 3 de febrero de 2021 se realizó en el Municipio de Ponce una reunión con los alcaldes del Sur en torno a los Proyectos Prioritarios, por lo cual se une la agenda correspondiente como **Exhibit 6** y minuta de dicha reunión como **Exhibit 7**.

El 5 de febrero de 2021, como parte de las gestiones del Presidente del Concilio se visitó el Municipio de Yauco, allí junto con su Alcalde Hon. Ángel Luis "Luigi" Torres, se visualizó una plataforma que establece digitalmente las áreas de todo el municipio y marca los lugares afectados incluyendo las gestiones realizadas por el municipio. Dicha plataforma presenta áreas de toldos azules, entre otras cosas, también se visitó el área donde se están organizando administrativamente el plan para las demoliciones de estructuras. Se coordinó para presentar dicha plataforma al Concilio y a la Asociación y Federación de Alcaldes para el 8 de marzo.

En seguimiento a las gestiones, el Concilio solicitó que las agencias y municipios identificaran un enlace contacto para agilizar la comunicación. Se une al presente informe una muestra de dicha carta enviada a las agencias y municipios mediante correo electrónico y postal el 8 de febrero de 2021 como **Exhibit 8.** Además, se une la tabla organizada de contactos como ejecutoria de la gestión antes mencionada como **Exhibit 9.**

Como parte de las gestiones con organizaciones no gubernamentales, el 11 de febrero de 2021, en el Conference del Departamento de Estado, se realizó una reunión con OXFAM sobre temas de acuerdos colaborativos para promover la reconstrucción de Puerto Rico. Entre las propuestas de dicho sector se encuentran las siguientes:

- **Recuperación de viviendas y comunidades del Sur:** Es muy importante atender las necesidades de vivienda en las comunidades del Sur de Puerto Rico, afectadas por los terremotos que acontecen desde enero del 2020. Es indispensable que se agilicen las asignaciones y distribución de los recursos disponibles para una recuperación resiliente de nuestros hermanos del sur. Éstos deberán ser los protagonistas, a través de una recuperación participativa donde se priorice el conocimiento y mano de obra de las comunidades a las que se les sirve. También es importante colaborar con grupos que abogan en Washington DC por la asignación de fondos de recuperación CDBG-DR para los afectados por los terremotos.

- **Transportación efectiva para las Islas Municipio:** Urge solucionar los problemas severos de transportación para las Islas Municipio de Vieques y Culebra. La debacle en el sistema (que incluye asuntos de itinerario, falta de acceso a las embarcaciones incluyendo el ferry de carga, lentitud del proceso, etc.), incide en la vida de los residentes de las islas, y provoca situaciones de inseguridad. La vida de muchos residentes que requieren atención médica y tratamientos se ve en peligro. Toda acción para trabajar esta situación debería realizarse en comunicación y participación directa con el liderato comunitario, quienes deben integrarse de inmediato en un grupo de trabajo con los directivos que planifican e implementan las decisiones en torno a la transportación con las Islas Municipio.

- **Acueductos Comunitarios:** En Puerto Rico hay muchas comunidades que no cuentan con agua potable a través de la Autoridad ele Acueductos y Alcantarillados y que dependen de acueductos comunitarios para obtener la misma. Existen 241 acueductos comunitarios identificados por la EPA, y menos del 50% cumplen con las medidas sanitarias necesarias. Solicitamos que se puedan otorgar fondos para atender a las más de 300,000 personas que dependen de estos acueductos.

Dichas Propuestas serán presentadas al Concilio el 8 de marzo de 2021.

A su vez, ese mismo día el 11 de febrero de 2021, se realizó una reunión con FEMA, COR3, Asociación y Federación de Alcaldes para viabilizar y agilizar el status de los municipios ante dichas agencias.

Siguiendo con las gestiones del Concilio de Reconstrucción, el 16 de febrero de 2021, se realizó una reunión y se une al presente informe la agenda de dicha reunión como **Exhibit 10.** En dicha reunión se incluyó a la Asociación de Alcaldes y a la Federación de Alcaldes para que pudieran asistirnos con los municipios e aclarar sus dudas en torno al Concilio de Reconstrucción. Se incluye minuta de dicha reunión como **Exhibit 11.**

El 24 de febrero de 2021, en el Teatro del Departamento de Estado, se realizó otra reunión del Concilio, esta vez con el Cuerpo de Ingenieros de los Estados Unidos para presentar sus proyectos y abrir canales de comunicación con las agencias Estatales para la realización de las obras. Se une la Agenda como **Exhibit 12,** y Presentación como ***Anejo D***.

El 26 de febrero de 2021, se envió carta de seguimiento a la Federación y a la Asociación de Alcaldes a modo de seguimiento a los municipios que aun debían informes, por lo cual se une al presente, carta como **Exhibit 13.**

Es de vital importancia incluir en los trabajos del Concilio el área de telecomunicaciones y sus proveedores. Es por esto que nos hemos reunido y acordado que en la próxima reunión tendremos a los proveedores de dicho servicio para asistir y crear un plan que organice sus trabajos de reconstrucción. Además, próximamente el Concilio de Reconstrucción de Puerto Rico estará coordinando una reunión con el Consejo Asesor Permanente de la Industria de la Construcción.

También hemos recibido una notificación urgente sobre el Faro de Cayo Cardona o Isla Sor Isolina Ferre de Ponce, dicho faro sufrió daño por los terremotos y es un valorable patrimonio histórico. A su vez es quien ilumina la entrada hacia el puerto de Ponce. Por lo cual, hemos establecido un plan para atender la situación y para que sea incluido los daños reportados a FEMA. Las fotos de dichos daños fueron provistas por la Guardia Costera Federal y están incluidas en este informe en el ***Anejo F.***

Se incluye Recortes de noticias relativas a las gestiones del Concilio de Reconstrucción de Puerto Rico en el ***Anejo E***.

Adicional a todas las gestiones antes señaladas se realizaron reuniones y orientaciones con entes privados que ostentan proyectos con intención de ejecución, que son participantes de fondos federales para la realización de proyectos de acuerdo con los diferentes fondos disponibles. Dichos proyectos una vez sean recibidos todos, serán evaluados por el Concilio e incluidos en los próximos informes.

En torno a los municipios, la cantidad que entregó sus proyectos críticos son cuarenta y tres (43) y un (1) municipio pidió prorroga. En torno a las Agencias recibimos los informes de las dieciocho (18). Para ser equitativos se necesita tener la totalidad de los municipios para poder emitir responsablemente a un informe final. Los Informes entregados se encuentran en los *Anejos A, B y C*.

Nuestra última gestión por el momento fue la reunión del Concilio del 8 de marzo de 2021, con motivo de aprobar el primer informe del Concilio de Reconstrucción de Puerto Rico entre otros asuntos, a su vez se incluye la correspondiente agenda en el **Exhibit 14**.

Añadimos a las gestiones antes indicadas la Agenda de Sub Comité de Infraestructura como **Exhibit 15** y las notas de dicha reunión en el **Exhibit 16**.

Recomendaciones:

- Realizar coordinación con la Oficina del Comisionado de Seguros sobre asistencia a los municipios.
- Realizar orientación con Instituto de Cultura Puertorriqueña sobre propiedades incluidas como Patrimonio Nacional que fueron afectadas y los pasos a seguir para su reconstrucción.
- Asignación de recursos a la Administración de Servicios Generales para las subastas de reconstrucción.
- Identificar fondos adicionales para el "Revolving Fund".
- Asistir al foro privado en la ejecución de obras de impacto social.
- Asistir a las agencias y municipios en la identificación de proyectos realmente críticos.
- Establecer requisitos más agiles para que no se dupliquen esfuerzos.
- Realizar informes adicionales en cuanto al establecimiento del Orden de Prioridad de los Proyectos Críticos y llegar a consenso con las agencias y municipios en cuanto a la identificación prioritaria de sus proyectos.

En conclusión y en cumplimiento con el termino establecido en la Orden Ejecutiva OE 2021-011, el cual establece el 9 de marzo de 2021 como fecha para entregar el mismo, se remite informe que incluye los proyectos críticos identificados por agencias y municipios dentro del Primer Informe del Concilio de Reconstrucción de Puerto Rico. La labor dentro de los primeros 60 días ha sido una exhaustiva y de gran avance para nuestro gobierno en provecho de nuestra ciudadanía, pero la misma no ha concluido, grandes retos están por suceder. Me siento sumamente honrado de pertenecer a un gran equipo de trabajo, en conjunto con el Hon. Pedro R. Pierluisi Gobernador de Puerto Rico, mis compañeros Secretarios y todos los que de una forma u otra han contribuido en este comienzo de reconstrucción trazando las primeras líneas de lo que será la más grande reconstrucción de nuestra Isla.

Lawrence N. Seilhamer Rodríguez
Secretario de Estado

SEGUNDO INFORME DEL CONCILIO DE RECONSTRUCCIÓN DE PUERTO RICO

El Concilio de Reconstrucción ha continuado sus esfuerzos para que la recuperación y reconstrucción de Puerto Rico prosiga a un paso acelerado. Todo esto, acorde con la Política Pública del Gobernador de Puerto Rico, Pedro R. Pierluisi. Reiteramos nuestro compromiso con la reconstrucción de Puerto Rico, debido a que proveerá una mejor calidad de vida, será la oportunidad de actualizar parte de la infraestructura crítica y al mismo tiempo provocará el comienzo de una nueva era de desarrollo económico para beneficio de todos los puertorriqueños.

Como parte de, nuestro Plan de Gobierno los primeros Proyectos Prioritarios designados por nuestro Gobernador de Puerto Rico, Pedro R. Pierluisi, son los siguientes:

- La rehabilitación de los cascos urbanos
- La infraestructura de la banda ancha en Puerto Rico 5G y "Smart Cities"
- El re-desarrollo de la base Roosevelt Roads
- La construcción de un nuevo Hospital de Trauma en las inmediaciones del Centro Médico
- Mejoras al sistema de Trauma en Puerto Rico y Centro Médico de Mayagüez
- Extensión de la PR-10
- Extensión de la PR-5
- Extensión de la PR-22
- El desarrollo del Puerto y Aeropuerto de Ponce
- Desarrollo de Bahía Urbana y Distrito de Convenciones
- "Air Hub Strategy" y hub de carga aérea
- El Desarrollo Económico de Vieques y Culebra
- Proyectos de infraestructura y desarrollo de las comunidades del Caño Martín Peña

En una evaluación adicional se han incorporado al presente Informe, otros Proyectos que han sido provistos por los municipios de Aguadilla, Comerío, Dorado, Hormigueros, Jayuya, Naranjito, Río Grande, Lajas, San Germán y Guayanilla; dichos Proyectos Críticos, se encuentran incluidos en el presente Informe y se detallan en el ANEJO A.
Además, se realizó un análisis del caso State of Hawaii vs. Federal Emergency Management 294 F.3d 1152, el mismo se entregó a los miembros del Concilio de Reconstrucción y se adjunta como ANEJO B.

Gestiones Realizadas

Continuando las gestiones como Presidente del Concilio de Reconstrucción de Puerto Rico, realizamos una visita al Faro Cayo Cardona o Islote Sor Isolina Ferré, el cual sufrió daños por los terremotos de enero de 2020. Se incluye evaluación del Ingeniero Estructural al presente Informe, como Exhibit 1. El 15 de marzo de 2021 este servidor participó del Foro de Construcción. El 16 de marzo de 2021 atendimos a representantes de Ayuda Legal de Puerto Rico. Se aneja presentación como Exhibit 2.

El 17 de marzo de 2021 se realizó una Reunión del Comité de Reconstrucción, en la cual la Administración de Servicios Generales hizo una Presentación sobre los procesos relacionados a la reconstrucción en la agencia. Además, la Comisión de Terremotos del Colegio de Ingenieros y Agrimensores de Puerto Rico (CIAPR) le presentó al Concilio de Reconstrucción sus recomendaciones para realizar los arreglos de las escuelas afectadas por los Terremotos y posibles columnas cortas. Se une al presente Informe, como Exhibit 3, la Agenda y Minuta de dicha reunión y la presentación del CIAPR como ANEJO C.

El 25 de marzo de 2021 el Gobernador de Puerto Rico, Pedro R. Pierluisi, emitió la OE-2021-024 (Orden Ejecutiva) con el propósito de agilizar los permisos para las obras de Reconstrucción; la cual se une como ANEJO D. A raíz de esta Orden Ejecutiva se emitió una carta informativa

a las agencias y municipios sobre la misma, la cual se añade como ANEJO E.

El 26 de marzo de 2021 como tema traído a la atención del Concilio de Reconstrucción se solicitó la lista de agencias que pertenecen al Sistema PRIFAS la cual fue notificada por el Departamento de Hacienda y compartida con el Concilio de Reconstrucción. Esta se une como Exhibit 4.

El 31 de marzo de 2021 se realizó una reunión con el Secretario del Departamento del Trabajo y la Federación de Trabajadores de la Construcción en aras de ayudar al reclutamiento de mano de obra. Asimismo, el 5 de abril de 2021 se atendió a la Asociación de Constructores de Puerto Rico en otras gestiones sobre mano de obra para proyectos de construcción.

Nuestra próxima reunión del Comité de Reconstrucción se realizó el 6 de abril de 2021, en la cual, entre otros asuntos, se presentó la posibilidad de implantar una plataforma pública que contenga toda la información de las subastas de los Proyectos de Reconstrucción. Dicha propuesta fue acogida favorablemente, por lo cual se realizarían comunicaciones con PRITS y COR3 para su implementación. Se une al presente Informe, como Exhibit 5, la Agenda y Minuta de dicha reunión.

Continuando con nuestras gestiones la próxima reunión del Comité de Reconstrucción se realizó el 23 de abril de 2021. En esta se presentó el Informe de las escuelas inspeccionadas. Se une al presente Informe, como Exhibit 6, la Agenda y Minuta de dicha reunión y, como ANEJO F, el informe de inspecciones de escuelas. Además, en dicha reunión se realizaron presentaciones de los sistemas de Telecomunicaciones y se presentó el borrador de la lista en Excel de los Proyectos Críticos que será utilizada por la OGPe. Se une al presente Informe como Exhibit 7.

Como parte de las gestiones del Concilio de Reconstrucción, el 27 de abril de 2021 comparecí ante la Comisión para el Desarrollo y la Fiscalización

de Fondos Públicos de la Región Suroeste de la Cámara de Representantes, a la Vista Pública sobre la Resolución Conjunta de la Cámara 13. Se aneja Ponencia como Exhibit 8.

El 4 de mayo de 2021 se realizó una mesa redonda sobre recuperación y turismo, y unimos la presentación como Exhibit 9. El 20 de mayo de 2021 el Comité de Expertos y Asesores de Cambio Climático realizó una presentación al Comité de Reconstrucción. Véase ANEJO G, y como Exhibit 10, la Agenda y Minuta de dicha reunión. Finalmente, el 25 de mayo de 2021 se realizó la última reunión que cierra el presente Informe con Ayuda Legal de Puerto Rico.

También, hemos recibido notificación sobre los daños sufridos por los terremotos en el Faro de la Isla Caja de Muerto, por lo cual como gestión pendiente se calendarizará una visita a dicha Isla para inspeccionar este patrimonio histórico con un ingeniero estructural.

Recomendaciones:

- Dar seguimiento urgente a las reparaciones de las escuelas afectadas por el Huracán María y por los Terremotos. También, identificar cuáles estructuras pueden ser más resilientes.
- Continuar con la implementación de la Plataforma Pública de Proyectos Críticos.
- Calendarizar visitas a los lugares afectados, con la intención de que se incluyan dichos daños ocasionados por los terremotos como reclamación a FEMA antes de que cierre dicha incidencia.

Hoy 25 de mayo de 2021 y en conclusión y cumplimiento con la Orden Ejecutiva OE 2021-011, se remite el informe que incluye los Proyectos Críticos adicionales identificados por agencias y municipios dentro del Segundo Informe del Concilio de Reconstrucción de Puerto Rico. La labor dentro de los noventa (90) días siguientes al Primer Informe ha sido una exhaustiva y de gran avance para nuestro Gobierno en provecho de nuestra ciudadanía, pero la misma no ha concluido, grandes retos están por suceder.

Me siento sumamente honrado de haber podido pertenecer a un gran equipo de trabajo, y poder aportar a Puerto Rico, en conjunto con el honorable Pedro R. Pierluisi, mis compañeros Secretarios y todos los que de una forma u otra han contribuido en estos pasos hacia la reconstrucción de nuestro pueblo; trazando las primeras líneas de lo que será la más grande reconstrucción de nuestra Isla. Les deseo mucho éxito en sus próximas gestiones.

AVISO PÚBLICO

PRESENTACIÓN DE LA DECLARACION DE IMPACTO AMBIENTAL Y CELEBRACION DE VISTA PUBLICA PARA LA EXTENSIÓN DE LA CARRETERA ESTATAL PR-5 DESDE INTERSECCION CON PR-199 HASTA PR-167 KM. 14.9

En cumplimiento con el Artículo 4 B (3) de la Ley Núm. 416 -2004, según enmendada, también conocida como, *Ley sobre Política Pública Ambiental*, la Ley Núm. 161-2009, según enmendada, también conocida como *Ley para la Reforma del Proceso de Permisos de Puerto Rico*, *Reglamento Conjunto para la Evaluación y Expedición de Permisos Relacionados al Desarrollo, Uso de Terrenos y Operación de Negocios* [1] ("*Reglamento Conjunto*"), con la OCPe 2021 (S [2] y supletoriamente el *Reglamento para el Proceso de Evaluación Ambiental* (RPEA)[3], se presenta el borrador de la Declaración de Impacto Ambiental para la acción propuesta abajo descrita.

Caso Número: **2021-033771-EEA-037743**

Agencia Proponente: **Oficina de Gerencia de Permisos**
PO Box 41179, San Juan
Puerto Rico, 00940-1179

Funcionario Responsable: **Sr. Jaime Green Morales**
Director
División de Evaluación de Cumplimiento Ambiental
(787) 758-4747 Ext. 5209

Entidad que promueve la acción: **Autoridad de Carreteras y Transportación (ACT)**

Naturaleza de la Acción: **La Autoridad de Carreteras y Transportación propone la construcción de la extensión a la Carretera Estatal PR-5. La misma comenzará en el kilómetro 14.9 de la Carretera Estatal PR-167 en Toa Alta y terminará en la Carretera PR-199 (Avenida Las Cumbres) en Bayamón. La extensión a la PR-5 conectará las carreteras antes mencionadas, por el sur a la carretera PR-165 y por el norte la PR-5. La extensión propuesta tendrá una longitud aproximada de 5.07 kilómetros y será de cuatro (4) carriles divididos, con control de acceso total, intersecciones a desnivel y plazas de peaje.**

Localización: **Carretera Estatal PR-5**
Desde PR-199 Hasta PR-167 KM. 14.9
Bayamón, PR

Se invita al público en general y entidades gubernamentales a asistir a la Vista Pública y participar en ésta con el propósito de someter sus comentarios o información que pueda ser considerada para la evaluación del documento ambiental.

La Vista Pública, se llevará a cabo en:

Fecha: **25 de enero de 2022**
Hora: **9:30 a.m.**
Lugar: **De manera electrónica mediante la plataforma Microsoft Teams a través del enlace: *www.Aloe.pr.gov/vistapublica***

La presentación de este documento tiene el propósito de asegurar que se tomen en cuenta los factores ambientales en toda acción que en forma alguna pueda tener un impacto significativo sobre el ambiente, mediante una descripción y análisis de la acción propuesta. Copia electrónica de dicho documento está disponible para revisión en el portal de internet de la agencia *ohp.pape.pr.gov* (Documentos/Avisos) y una copia impresa en la Casa Alcaldía del Municipio de Bayamón y Toa Alta.

Se le apercibe las personas que tengan información o comentarios que puedan ser útiles en la evaluación de la acción propuesta, pueden enviar los mismos **en o antes del 25 de enero de 2022** a *docallsupr.pr.gov* y/o PO Box 41179, San Juan PR 00940-1179.

EXTENSION CARETERA ESTATAL PR-5

DESDE LA PR-199 HASTA LA PR-167

BAYAMON-TOA ALTA

PR-5

Enero, 2022

Introducción y Trasfondo

- Este Proyecto ha sido incluido en el Plan de Transporte del Área Metropolitana de SJ ; parte de su alineación solía pertenecer al Corredor de la Autopista Periférico Sur.
- El Estudio de Transportación del 2018 para esta región hasta el 2045, recomienda su construcción debido a que aliviará rutas alternas y mejoraría los tiempos de viaje en dicho sector.
- También reconoce su importancia en el caso de eventos de emergencia.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Alineación Propuesta

- La Autoridad de Carreteras y Transportación propone la construcción de una extensión a la carretera estatal PR-5. La misma comenzará en el kilómetro 14.9 de la carretera estatal PR-167 en Toa Alta y terminará en la carretera PR-199 (Avenida Las Cumbres) en Bayamón. La extensión a la PR-5 conectará las carreteras antes mencionadas, por el sur a la carretera PR-148 y por el norte la PR-5. La extensión propuesta tendrá una longitud aproximada de 5.07 kilómetros y será de cuatro (4) carriles divididos, con control de acceso total, intersecciones a desnivel y plazas de peaje.
- Tendrá un costo aproximado de $150MM.
- Se deben adquirir aproximadamente 126 estructuras.
- La alineación propuesta serviría como una ruta alternativa a las áreas residenciales y comerciales del Municipio de Bayamón.

PUERTO RICO HIGHWAYS & TRANSPORTATION AUTHORITY

Alineación Propuesta

- Como parte de este proyecto se propone la construcción cuatro (4) estaciones-pórticos de peaje de flujo libre (Open Gantry Toll Type), una (1) en cada rampa en la intersección de la propuesta Carretera PR-5 con la Carretera PR-830 y una en cada dirección en la PR-5.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Alineación Propuesta

La carretera propuesta será una con control de acceso total y contará con los siguientes elementos:

- Cuatro (4) carriles divididos con isleta central
- Intersecciones a desnivel
- Cruces en puentes y/o atarjeas
- Mejoras geométricas en las intersecciones de las carreteras PR-830 con PR-167 y PR-199 con la propuesta carretera PR-5
- Paseos para paradas de emergencia y calles marginales
- Cuatro estaciones-pórticos de peaje de flujo libre (Open Gantry Toll Type), una (1) en cada rampa en la intersección de la propuesta carretera PR-5 con la carretera PR-830 y una en cada dirección en la PR-5.

PUERTO RICO
HIGHWAYS & TRANSPORTATION
AUTHORITY

Introducción y Trasfondo

- En la década de los 90, la PR-167 tenía un Nivel de Servicio (LOS) F, con un flujo vehicular de 31,000 vpd. La congestión comenzaba desde la PR-167 cerca del Río de la Plata hasta la PR-22.

- Desde entonces, han surgido varias propuestas con el fin de mitigar y / o resolver el problema de congestión vehicular para esta zona en particular.

Introducción y Trasfondo

Tabla Número 5 – Tiempos de Viaje y Velocidades Horario Pico Vespertino*					
Ruta	Dirección del Tránsito	2019		2026 con PR-5 (peaje de 40 centavos)	
		Velocidad (mph)	Tiempo de Viaje (mins)	Velocidad (mph)	Tiempo de Viaje (mins)
PR-199 y PR-167	Norte	22	10	24	9
PR-199 y PR-167	Sur	16	13	21	10

Tabla Número 4 – Tiempos de Viaje y Velocidades Horario Pico Matutino							
Ruta	Dirección del Tránsito	2013		2019		2026 con PR-5 (peaje 40 centavos)	
		Velocidad (mph)	Tiempo de Viaje (mins)	Velocidad (mph)	Tiempo de Viaje (mins)	Velocidad (mph)	Tiempo de Viaje (mins)
PR-199 y PR-167	Norte	14	17	17	13	22	10
PR-199 y PR-167	Sur	25	9	22	10	24	9

El análisis realizado y los tiempos de viaje y "LOS" resultantes muestran que la ampliación propuesta para la carretera PR-5 mejorará la operación futura en las carreteras PR-199 y PR-167, que actualmente son los principales accesos a la carretera PR-5 existente. La ampliación propuesta proporcionará acceso alternativo a la carretera PR-5 existente; las velocidades y el tiempo de viaje mejorarán. El proyecto propuesto capturará aproximadamente el 50% del tráfico actual en pr-167.

PUERTO RICO
HIGHWAYS & TRANSPORTATION AUTHORITY

Geología y Suelos:

- Los suelos en el área a ser ocupada por la PR-5 tienen clasificación A-7 Suelos con esta clasificación no son aptos para construir la base de la carretera (“roadbed”).
- Este material de suelo podría utilizarse para suavizar las pendientes de los taludes que se formen al construir la carretera.
- En el área rocosa, dicho material podría usarse como relleno si cumple con las especificaciones para material de préstamo.
- Las formaciones geológicas en el área son Kcg (Lava Cerro Gordo), Ke (Formación El Ocho) y Tkd (Diorita Cuarzo).

PUERTO RICO
HIGHWAYS & TRANSPORTATION
AUTHORITY

Cuerpos de Agua y Humedales

- No se identificaron áreas que mostraran las características para ser consideradas como humedales con excepción de un área al sur de la Urbanización Valles de Cerro Gordo por donde discurre el Río Minillas.

- Se estima en 13,886 metros cuadrados (3.4 acres) el área de impacto a cuerpos de agua, Las áreas de impacto temporero serán restauradas a su condición original y las de impacto permanente, de ser requerido, serán mitigadas.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Inundación

- Con el propósito de evaluar el impacto sobre zonas inundables en el área del proyecto, se realizó un Estudio Hidrológico – Hidráulico (Estudio H-H).

- El análisis hidrológico e hidráulico para la extensión de la PR-5 en el municipio de Bayamón analizó los efectos del proyecto sobre el Río Hondo, el Río Minillas y un afluente sin nombre del Río Minillas. La extensión propuesta de la PR-5 también incluirá un puente de ocho (8) tramos sobre el Río Minillas. En esta ubicación la alineación de la carretera propuesta es paralela al Río Minillas.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Inundación

- El estudio H-H demuestra que las mejoras propuestas no tendrán un efecto adverso sobre zonas designadas como inundables en el área del proyecto. Las obras propuestas no tendrán un efecto adverso en los niveles de inundación en el área del proyecto; no obstante, una vez se desarrollen los planos detallados de construcción, el estudio H-H será actualizado de ser necesario, para confirmar el cumplimiento del proyecto con la regulación estatal y federal sobre zonas inundables.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Movimiento de Tierra

- Se llevarán a cabo las actividades de movimiento de material de la corteza terrestre típicas para la construcción de una carretera, las cuales se estiman un volumen de 850,000 metros cúbicos para este proyecto. El material extraído será depositado por el contratista en un área designada y autorizada dentro del proyecto para luego ser utilizado como relleno en el mismo.

- Se utilizarán como relleno dentro del proyecto aproximadamente 670,000 metros cúbicos y el sobrante será transportado en camiones cubiertos con toldos de lona en un área designada aprobada por Ley. Previo a cualquier movimiento de terreno se obtendrá de la OGPe el correspondiente Permiso Único Incidental (PUI) Dicho permiso es para las actividades de construcción

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Arqueología y Recursos Culturales

- Se realizó una evaluación de recursos culturales (Fase IA-IB) para el área que comprende el proyecto. La investigación documental no identificó ningún sitio arqueológico, edificación histórica o resto cultural conocido a lo largo de la ruta del proyecto, y no hay propiedades elegibles o inscritas en el Registro Nacional de Lugares Históricos a lo largo de la ruta o cercana a ella.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Arqueología y Recursos Culturales

- Se recibió una carta de parte del ICP el 21 de octubre del 2021 indicando que en lo concerniente a recursos culturales de naturaleza arqueológica, no tienen objeción al proyecto según fue radicado y evaluado.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Tránsito

- El análisis realizado y los resultantes niveles de servicio y tiempos de viaje demuestran que la extensión propuesta para la carretera PR-5 mejorará la operación futura en las carreteras PR-199 y PR-167, que actualmente son los principales accesos a la carretera PR-5 existente. Además, no solamente la extensión propuesta proveerá un acceso alterno a la carretera PR-5 existente, sino que el análisis en la sección norte de la carretera PR-167 demuestra que las velocidades mejorarán en dicha ruta, ya que se espera que la carretera PR-5 existente y la extensión propuesta capturen el tránsito actual que discurre por la PR-167.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Aire

- Los resultados obtenidos en el estudio realizado basados en el modelaje matemático, el flujo adicional de vehículos motorizados no causará una superación de los niveles de CO en la zona por encima de los estándares nacionales (NAAQS).

- Seis (6) receptores fueron elegidos físicamente a lo largo del corredor del proyecto propuesto para la simulación del programa de calidad de aire.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Ruido

- Utilizando los datos de campo obtenidos, los resultados del Estudio de Tránsito y la información proporcionada por The Highway Capacity Manual o HCM (Transportation Research Board, 2010), se estimaron los futuros impactos de ruido del proyecto propuesto. Siete (7) receptores fueron elegidos físicamente a lo largo del corredor del proyecto propuesto para la simulación del programa de ruido.

- El informe muestra la ubicación aproximada de los segmentos con recomendación de paredes de atenuación de ruido como medida de atenuación de ruido. Esta se recomienda para las áreas cubiertas por los receptores 1 (Villa Rica), 3 (Ciudad Interamericana), 6 (El Cortijo Oeste) y 7 (Cerro Gordo). Estas barreras tienen un costo aproximado de $3,942,986.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Estudio Socioeconómico y Justicia Ambiental

- El proyecto requiere adquirir aproximadamente 110 residencias.
- No se impactan las residencias de los sectores más pobres del municipio.
- Las comunidades del área se beneficiaran con la acción propuesta al brindarles una nueva vía de acceso menos congestionada hacia Bayamón y el área metropolitana.
- Las comunidades del área de estudio presentan unos indicadores socioeconómicos superiores a la región de referencia, los municipios por donde discurre la ruta propuesta, y Puerto Rico.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Estudio Socioeconómico y Justicia Ambiental

- Se registraron niveles más altos de ingreso, participación laboral, escolaridad, viviendas ocupadas, y costos de vivienda.

- Basado en el estudio realizado, no hay evidencia de que el proyecto tendrá un impacto negativo en la comunidad de estudio, así como tampoco presenta una carga social y ambiental altamente desproporcionada y adversa para las comunidades ubicadas en el área donde se propone el mismo.

Mitigación Habitat

- No hay hallazgos de especies de flora y fauna Vulnerables o en Peligro de Extinción.
- El proyecto afectará 13.5 cuerdas de bosques de galería de Categoría 4 (Hábitat Natural de Valor Ecológico).
- El resto del área del proyecto está calificada como Categoría 5 (Hábitat Natural con Alto Potencial de Convertirse en Hábitat Esencial, Hábitat de Alto Valor Ecológico o Hábitat de Valor Ecológico).
- La ACT compensará las 13.5 cuerdas clasificadas como Categoría 4 con adquisición de un hábitat similar de manera que no haya pérdida neta de la cantidad o calidad de hábitat.

TRANSPORTATION
AUTHORITY

Mitigación Habitat

- Dicha mitigación se realizará con terrenos de igual o mayor valor ecológico en proporción de cantidad no menor de 1:1.
- Se contempla la adquisición y para cesión al DRNA de un predio de terreno ubicado en la Reserva Natural Las Cabachuelas en Morovis.
- Para mitigar por el impacto al resto del proyecto, oportunamente se someterá una solicitud de Permiso Único Incidental (PUI) el cual incluirá planos y especificaciones con detalles de la reforestación para las áreas verdes del proyecto que así lo permitan.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Impactos Ambientales Positivos

- Proporcionará una ruta segura para viajar de sur a norte y viceversa dentro del municipio de Bayamón.
- Ayuda a reducir descongestión en otras vais de la región.
- Provee una via adecuada, eficiente y segura para utilizarse durante una emergencia.
- Reducción en el tiempo de viaje hacia y desde el casco urbano de Bayamón.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Impactos Ambientales Positivos

- Reducción en el consumo de combustible como consecuencia de la reducción en el tiempo de viaje.
- Proveerá un acceso hacia las áreas residenciales y la Universidad Interamericana a través de una intersección con la Carretera Estatal PR830.
- Mejorará el acceso y disminuirá el tiempo de viaje desde otros municipios tales como Naranjito, Barranquitas y Orocovis.

PUERTO RICO
HIGHWAYS &
TRANSPORTATION
AUTHORITY

Impactos Ambientales Negativos Inevitables

- Los cortes y relleno necesarios para la construcción afectarán la topografía, la condición de suelos y flora y fauna existente.
- Impacto a 13.5 cuerdas de bosque de galería.
- Impacto a 3.53 cuerdas (3.4 acres) de cuerpos de agua.
- Aumento en el flujo de escorrentía pluvial hacia los cuerpos de agua del área.
- Necesidad de adquisición de unas 126 propiedades (110 residencias y 16 negocios/instituciones) con realojo en las 110 viviendas.

INFORME DE VISTA

Num. Caso
2021-403771-REA-007743

DESCRIPCIÓN Y LOCALIZACIÓN

Localización:
Carretera Estatal PR-5
Desde PR-199 hasta PR-167
Km. 14.9 en Bayamón

Distrito de Calificación:
Dotacional General y Áreas Desarrolladas

Proyecto:
Extensión de la Carretera Estatal PR-5

Agencia Proponente:
Oficina de Gerencia de Permisos

Entidad que promueve la acción:
Autoridad de Carreteras y Transportación

Número de catastro:
113-024-726-06

DETERMINACINES DE HECHO

En cumplimiento con el Artículo 4 B (3) de la Ley Núm. 416 -2004, según enmendada, Ley sobre Política Pública Ambiental, con la Ley Núm. 161-2009, según enmendada, Ley para la Reforma del Proceso de Permisos de Puerto Rico, con el Reglamento Conjunto para la Evaluación y Expedición de Permisos Relacionados al Desarrollo, Uso de Terrenos y Operación de Negocios ("Reglamento Conjunto"), con la OGPe-2021-05 y supletoriamente el Reglamento para el Proceso de Evaluación Ambiental (RPEA); se presentó el borrador de la Declaración de Impacto Ambiental para el Proyecto de Extensión de la Carretera Estatal PR 5. Para evaluar esta solicitud, se citó para vista pública el día 25 de enero de 2022 a las 9:30 de la mañana por *Microsoft Teams 365*.

La vista fue presidida por la Oficial Examinadora Alma H. Acevedo Ojeda. Compareció la Autoridad de Carreteras y Transportación ("ACT"), representantes del Municipio de Bayamón y del Municipio de Comerío, así como un grupo de residentes del área. El aviso de vista fue publicado el 17 de enero de 2022, en el Periódico El Nuevo Dia y Primera Hora. Se certificó y acreditó que el 14 de enero de 2022 se instalaron rótulos conforme a la Orden Administrativa OGPe 2021-05 del 26 de octubre de 2021 y el Reglamento Conjunto 2020; además que, el 19 de enero de 2022 fueron sustituidos por unos de mayor tamaño. Las fotos y documentos que lo acreditan son parte del expediente administrativo.

La ACT propone la construcción de la extensión a la Carretera Estatal PR-5 la cual comenzará en el kilómetro 14.9 de la Carretera Estatal PR-167 en Toa Alta y terminará en la Carretera PR-199 (Avenida Las Cumbres) en Bayamón. Esta extensión a la PR-5 conectará las carreteras antes mencionadas, por el sur a la carretera PR-148 y por el norte la PR-5. Los predios están en áreas calificadas Dotacional General (DT-G) y Áreas Desarrolladas (AD). La extensión propuesta tendrá una longitud aproximada de 5.07 kilómetros y será de cuatro (4) carriles divididos, con control de acceso total, intersecciones a desnivel y plazas de peaje. Esto a un costo aproximado de $150MM. La alineación propuesta serviría como una ruta alternativa a las áreas residenciales y comerciales del Municipio de Bayamón. El corredor está ubicado en una zona desarrollada principalmente en unidades de viviendas. Al presente, la carretera PR-167 es la vía principal que une los Municipios de Barranquitas, Comerío y Naranjito con el Municipio de Bayamón y el resto del área metropolitana. Esta carretera es sumamente transitada, y cuenta con numerosos semáforos y accesos directos.

Se propone una carretera con control de acceso total, de cuatro (4) carriles divididos con isleta central, intersecciones a desnivel, cruces en puentes y/o atarjeas, mejoras geométricas en las intersecciones de las carreteras PR-830 con PR-167 y PR-199 con la propuesta carretera PR-5, paseos para paradas de emergencia y calles marginales. Contará con cuatro estaciones-pórticos de peaje de flujo libre (Open Gantry Toll Type), una (1) en cada rampa en la intersección de la propuesta carretera PR-5 con la carretera PR-830 y una en cada dirección en la PR-5. El tramo típico de la carretera tendrá cuatro (4) carriles, cada uno con un ancho de 3.65 metros; acera pavimentada de 3.0 metros de ancho; mediana de 2.70 metros de ancho; franja mediana (reserva central) de 6.0 metros de ancho. Esta alternativa posee una longitud de 5.07 kilómetros y ocupará un área estimada de 112 cuerdas. Este ha sido incluido en el Plan de Transporte del Área Metropolitana de San Juan y parte de su alineación solía pertenecer al Corredor de la Autopista Periférico Sur. El Estudio de Transportación del 2018 para esta región hasta el 2045, recomienda su construcción debido a que aliviará rutas alternas y mejorará los tiempos de viaje en dicho sector. También reconoce su importancia en el caso de eventos de emergencia. En la

década de los 90, la PR-167 tenía un Nivel de Servicio F, razón por la que se han contemplado varias propuestas para mitigar o resolver el problema. La alternativa nombrada como (2A) fue la seleccionada en la DIA JCA-01-0038 (ACT) y mediante Resolución Final (R-03-22-12) notificada el 21 de agosto de 2003, la Junta de Calidad Ambiental (JCA) determinó cumplimiento con los requisitos establecidos en las disposiciones del Artículo 4C de la Ley Sobre Política Pública Ambiental (Ley Número 9) del 18 de junio de 1970 y del Reglamento para el Proceso de Presentación, Evaluación y Trámite de Documentos Ambientales de la JCA. La solicitud 2021-403771-REA-007743 tiene la finalidad de actualizar los estudios ambientales de este mismo proyecto.

Los suelos en el área a ser ocupada por la PR-5 tienen clasificación A-7. Suelos con esta clasificación no son aptos para construir la base de la carretera ("roadbed"). Este material de suelo podría utilizarse para suavizar las pendientes de los taludes que se formen al construir la carretera. En el área rocosa, dicho material podría usarse como relleno si cumple con las especificaciones para material de préstamo. El uso de estos materiales es posible determinarlo, con mayor certeza, posterior al estudio geotécnico y durante la etapa de construcción. Según el borrador de la DIA el control de erosión es prioridad para el manejo de estos terrenos. A preguntas de esta Oficial Examinadora se explicó que durante la fase de construcción se activará el Plan CES y en la fase operacional del proyecto se sembrará. Las formaciones geológicas en el área son Kcg (Lava Cerro Gordo), Ke (Formación El Ocho) y Tkd (Diorita Cuarzo).

Los impactos potenciales debido a la construcción consistirían principalmente en la remoción de la capa vegetativa existente en el área, incluyendo los árboles existentes. Se llevarán a cabo las actividades de movimiento de material de la corteza terrestre típicas para la construcción de una carretera y se estima un volumen de 850,000 metros cúbicos para este proyecto. El material extraído será depositado por el contratista en un área designada y autorizada dentro del proyecto para luego ser utilizado como relleno en el mismo. Se utilizarán como relleno dentro del proyecto aproximadamente 670,000 metros cúbicos y el sobrante será transportado en camiones cubiertos con toldos de lona en un área designada aprobada por Ley. Previo a cualquier movimiento de terreno se obtendrá de la OGPe el correspondiente Permiso Único Incidental (PUI).

En cuanto a la Flora y Fauna, no hubo un cambio significativo en las áreas que fueron evaluadas durante la preparación de la DIA original. La fauna no abunda en esta área. El DRNA concluyó que el inventario de flora y fauna incluido es de su satisfacción. El proyecto afectará áreas alteradas por la construcción de viviendas y comercios, pero, la documentación presentada establece que durante una investigación documental realizada recientemente para el Municipio de Bayamón el USFWS ha identificado que puede albergar especies en peligro de extinción tales como la Boa puertorriqueña (Epicrates inornatus) y la Paloma Sabanera (Patagioenas inornata). Aunque se trata de un área previamente impactada, dada la movilidad de estas especies, y avistamientos en 13 municipios aledaños, en especial la Paloma Sabanera, existe la probabilidad de encontrar estos elementos críticos en el área. La presencia de la Boa puertorriqueña no ha sido observada y documentada por el DRNA en el área de estudio, pero la misma se encuentra distribuida por toda la isla, de acuerdo con Schwartz y Thomas (1975) y Bird-Picó (1994), principalmente en la zona caliza del norte de la Isla. Se reconoce que esta particularidad podría afectar el tramo entre la plaza de peaje de flujo libre y la intersección con la carretera PR-830 y que podría ser necesario realizar un estudio más detallado del área. Igual discusión fue parte de la DIA original pero no fue observada la boa puertorriqueña en esa área. En el nuevo borrador no está la actualización de esa información.

El 20 de septiembre de 2021 la ACT sometió al DRNA una Solicitud de Certificación de Categorización de Hábitats Naturales para Vida Silvestre (SCCH), caso número O-SE-CCH01-SJ-01998-2009202. El área del proyecto donde se encuentra la vegetación arbórea entre las áreas urbanas puede ser clasificada como Hábitat Natural con Bajo Potencial de Convertirse en Hábitat Esencial, de Alto Valor Ecológico o de Valor Ecológico – Categoría 6. Las áreas donde se encuentran vegetación arbórea junto a los cuerpos de agua o bosques de galería pueden ser clasificadas como Hábitat Natural con gran Potencial de Convertirse en Hábitat Esencial, de Alto Valor Ecológico o de Valor Ecológico – Categoría 5. También hay áreas urbanas ocupadas por estructuras, carreteras, estacionamientos, áreas comerciales, áreas utilizadas como canteras, las cuales no deben considerarse dentro de las clasificaciones antes mencionadas. Se propone compensar los impactos mediante la siembra dentro del predio y en sus alrededores.

El proyecto además afectará 13.5 cuerdas de bosques de galería de Categoría 4 (Hábitat Natural de Valor Ecológico). Para esas 13.5 cuerdas Categoría 4 la ACT compensará las 13.5 cuerdas clasificadas como Categoría 4 con adquisición de un hábitat similar de manera que no haya

pérdida neta de la cantidad o calidad de hábitat. Se contempla la adquisición, para cesión al DRNA, de un predio de terreno ubicado en la Reserva Natural Las Cabachuelas en Morovis. Para mitigar por el impacto al resto del proyecto, oportunamente se someterá una solicitud de Permiso Único Incidental (PUI) el cual incluirá planos y especificaciones con detalles de la reforestación para las áreas verdes.

En los límites del proyecto se encuentra el Río Hondo, Río Minillas, quebrada Rivera y quebradas sin nombre las cuales son tributarias de los diferentes ríos. Las áreas de los diferentes cuerpos de agua que se encuentran en el proyecto están localizadas en la Carretera Estatal PR-199 donde la carretera cruza una quebrada del Río Hondo y en otras en las cuales cruza tributarios del Río Minillas. El cruce de los ríos se hará mediante la construcción de puentes, relleno con atarjeas para mantener el flujo de estos y en algunas áreas se canalizarán porciones de las quebradas. Todas estas estructuras serán diseñadas según las guías de diseño que se proveen en los estudios hidrológicos-hidráulicos del proyecto. Se estima en 13,886 metros cuadrados (3.4 acres) el área de impacto a cuerpos de agua, según definido en la reglamentación del USACE. Las áreas de impacto temporero serán restauradas a su condición original y las de impacto permanente, de ser requerido, serán mitigadas. No especifica formas de mitigación para las de impacto permanente.

No identificaron áreas que mostraran las características para ser consideradas como humedales con excepción de un área al sur de la Urbanización Valles de Cerro Gordo por donde discurre el Río Minillas. No se detalla el impacto del proyecto a esa área identificada con características de humedal, ni el plan de mitigación. A preguntas de la Oficial Examinadora se dijo que el proyecto no se encuentra en zonas restringidas del CARSO, ni en zonas de amortiguamiento.

Se realizó un Estudio Hidrológico – Hidráulico (Estudio H-H) el cual fue sometido al DRNA el 12 de noviembre de 2021 para determinar las estructuras de drenaje requeridas para los respectivos cruces. Según los resultados del estudio H-H, las obras presentadas no tendrán un efecto adverso en los niveles de inundación en el área del proyecto; no obstante, una vez se desarrollen los planos detallados de construcción, el estudio H-H será actualizado de ser necesario, para confirmar el cumplimiento del proyecto con la regulación estatal y federal sobre zonas inundables. En la vista pública se explicó que no habrá efecto adverso en los niveles de inundación en el área del proyecto, ni en áreas aledañas a este. Durante la operación de la carretera propuesta, la escorrentía drenará de forma controlada por medio de la pendiente de la carretera hasta los drenajes que se construirán en el proyecto que a su vez descargarán por medio del alcantarillado pluvial hasta los cuerpos de agua identificados en el área del proyecto. La carretera estará pavimentada por lo que la cantidad de sedimentos provenientes de la operación de esta será mínima. Las áreas que queden expuestas serán sembradas con grama lo que minimizará la erosión de los suelos.

No se identificó ningún sitio arqueológico, edificación histórica o resto cultural conocido a lo largo de la ruta del proyecto, tampoco hay propiedades elegibles o inscritas en el Registro Nacional de Lugares Históricos a lo largo de la ruta o cercana a ella. Se realizó una Fase 1 A y 1 B. Tanto el ICP como SHPO no objetan el proyecto. Si durante el desarrollo del proyecto, se descubre o impacta algún deposito, elemento, estructura o vestigio de naturaleza arqueológica todo tipo de actividad de excavación, movimiento y remoción de la corteza terrestre en el área del hallazgo será paralizado y se notificará en un plazo de veinticuatro (24) horas al Consejo de Arqueología Terrestre.

Se propone la construcción de facilidades temporeras ya que la construcción afectará la infraestructura de agua, luz y telecomunicaciones en el área. Surge del expediente administrativo que las agencias de infraestructura fueron consultadas. En la fase de operación se instalarán un generador en cada plaza de peaje con un tanque de combustible para casos de emergencia.

Durante la construcción se generarán desperdicios sólidos no peligrosos típicos de este tipo de actividad. Estos consistirán principalmente de sobrantes de materiales de construcción (cemento, asfalto, madera, varillas, etc.), materia vegetal sobrante producto de las excavaciones y algunos desperdicios domésticos producidos por los empleados de la construcción. Estiman que se producirán alrededor de 10 yardas cúbicas por semana (7.64 m3), equivalentes a 14.51 toneladas al año (13,163.25 kg/año). La construcción tendrá una duración aproximada de 24

meses, por lo que la generación total de desperdicios sólidos se estima en 29.02 toneladas (26,265.50 kg). Se propone disponer de los desperdicios sólidos no peligrosos en el Sistema de Relleno Sanitario de Toa Alta o Toa Baja, según oportunamente sea autorizado mediante el Permiso Único Incidental. Durante la etapa operacional del proyecto no generará desperdicios sólidos ya que no habrá empleados en las plazas de peajes; para esos propósitos se propone un sistema automatizado. No se generarán desperdicios sólidos peligrosos en ninguna de las etapas del proyecto.

Seis (6) receptores fueron elegidos físicamente a lo largo del corredor del proyecto propuesto para la simulación del programa de calidad de aire encontrando que el flujo adicional de vehículos motorizados no causará una superación de los niveles de CO en la zona por encima de los estándares nacionales (NAAQS). Además, se estimaron los futuros impactos de ruido. Siete (7) receptores fueron elegidos físicamente a lo largo del corredor para la simulación del programa de ruido. El informe muestra la ubicación aproximada de los segmentos con recomendación de paredes de atenuación de ruido como medida de atenuación de ruido. Esta se recomienda para las áreas cubiertas por los receptores 1 (Villa Rica), 3 (Ciudad Interamericana), 6 (El Cortijo Oeste) y 7 (Cerro Gordo). Estas barreras tienen un costo aproximado de $3,942,986.

La construcción impactará aproximadamente ciento diez (110) estructuras residenciales y se implementará un plan de realojo para estos residentes. El análisis de estructuras afectadas fue actualizado al año 2021. El interés primordial de los vecinos que asistieron a la vista es conocer las propiedades que serán objeto de expropiación. La totalidad de las estructuras impactadas son 126 ya que incluye negocios; pero la preocupación mayor es de los residentes en cuanto al proceso de expropiación y el tiempo para ello. El *Estudio Socioeconómico y Justicia Ambiental* demuestra que el proyecto no representa una carga social ni ambiental altamente desproporcional. Estas 110 residencias no corresponden a los sectores más pobres del municipio. Para los meses de junio y julio de 2021, se llevó a cabo el estudio Socioeconómico y de Impacto a la Comunidad. El estudio arrojó que la mayoría de los residentes son dueños del terreno (82.8%) o de la estructura (83.6%). El (86.3%) de los residentes clasificaron la calidad de vida en su comunidad como buena o excelente. Estos residentes prefieren, según el estudio, permanecer en la comunidad. Por su parte, el (87%) de las estructuras con negocios se encontraban en buenas o excelentes condiciones; solamente el 30.4% y el 21.7% eran dueños de la estructura y el terreno, respectivamente; el (43.5%) de los negocios son negocios de comida. El 66.7% de los dueños de estos negocios volverían a abrir en el municipio de Bayamón y Toa Alta, dentro de la misma comunidad.

El Municipio de Bayamón expresó que el proyecto es de beneficio para los residentes de este pueblo; no objeta el proyecto. Coincide con que proporcionará una ruta segura para viajar de sur a norte y viceversa dentro del municipio de Bayamón; ayuda a reducir la congestión vehicular en otras vías de la región; provee una vía adecuada, eficiente y segura para utilizarse durante una emergencia; provoca una reducción en el tiempo de viaje hacia y desde el casco urbano de Bayamón; siendo estos, los impactos ambientales positivos del proyecto.

Sin embargo, el impacto ambiental negativo inevitable es que los cortes y relleno necesarios para la construcción afectarán la topografía, se afectará la condición de suelos, flora y fauna existente; el impacto a 13.5 cuerdas de bosque de galería; impacto a 3.53 cuerdas (3.4 acres) de cuerpos de agua; aumento en el flujo de escorrentía pluvial hacia los cuerpos de agua del área y la necesidad de adquisición de unas 126 propiedades (110 residencias y 16 negocios/instituciones) con realojo en las 110 residencias.

CONCLUSIONES DE DERECHO

La Ley 161-2009 conocida como *Ley para la Reforma del Proceso de Permisos en Puerto Rico*, define Declaración de Impacto Ambiental (DIA) como: *"documento ambiental presentado ante la Oficina de Gerencia de Permisos, quien referirá dicho documento a la División de Cumplimiento Ambiental de la Oficina de Gerencia para cumplir con los requisitos del Artículo 4(B)(3) de la Ley Núm. 416 de 22 de septiembre de 2004, según enmendada, cuando se ha determinado que la acción propuesta conllevará un impacto significativo sobre el ambiente, según definido en el reglamento a ser promulgado a tenor con las disposiciones del Artículo 8.5 de esta Ley;"*

Específicamente, el Articulo 8.5 de la Ley 161 (supra) establece: *"Artículo 8.5.- Evaluación de Cumplimiento Ambiental*

El proceso de planificación ambiental es un procedimiento informal sui generis excluido de la aplicabilidad de la Ley de Procedimiento Administrativo Uniforme. El Director Ejecutivo de la Oficina de Gerencia de Permisos o la Junta Adjudicativa, según corresponda, realizará la determinación de cumplimiento ambiental requerida bajo las disposiciones del Artículo 4(B)(3) de la Ley Núm. 416 de 22 de septiembre de 2004, según enmendada, y el reglamento que a los fines de este Artículo y de esta Ley, apruebe la Junta de Calidad Ambiental en cuanto: (a) las acciones que tome con relación a las determinaciones finales que se le soliciten de conformidad con esta Ley; y (b) cualquier acción sujeta a cumplimiento bajo las disposiciones del Artículo 4(B)(3) de la Ley Núm. 416 de 22 de septiembre de 2004, según enmendada.

La Oficina de Gerencia de Permisos fungirá como agencia proponente con relación al proceso de planificación ambiental, excepto en aquellos casos en los que a los Municipios Autónomos con Jerarquía de la I a la V, se les haya delegado esta facultad como consecuencia del convenio de transferencia establecido en la Ley Núm. 81 de 30 de agosto de 1991, según enmendada, conocida como "Ley de Municipios Autónomos de Puerto Rico".
La Oficina de Gerencia de Permisos dirigirá el proceso de evaluación del documento ambiental a través de la División de Evaluación de Cumplimiento Ambiental. En el caso de que la Oficina de Gerencia de Permisos sea la agencia proponente, el proceso de planificación ambiental a seguir será el siguiente: cuando la solicitud de permiso sea de carácter ministerial, y el documento ambiental sometido sea una Evaluación Ambiental con una Determinación de No-Impacto Ambiental, la División de Evaluación de Cumplimiento Ambiental evaluará la Evaluación Ambiental y remitirá sus recomendaciones al Director Ejecutivo; siendo éste quien determine el cumplimiento ambiental en conjunto con la determinación final sobre la acción propuesta. En caso de que el documento ambiental sometido sea una Declaración de Impacto Ambiental (DIA), la División de Evaluación de Cumplimiento Ambiental evaluará la DIA y remitirá sus recomendaciones al Director Ejecutivo; quien remitirá a la Junta Adjudicativa las recomendaciones de la División de Evaluación de Cumplimiento Ambiental para que sea ésta, quien determine el cumplimento ambiental en conjunto con la solicitud, emitiendo la determinación final.

Cuando la solicitud sea de carácter discrecional, y el documento ambiental sea una Evaluación Ambiental o una Declaración de Impacto Ambiental será evaluado por la División de Evaluación de Cumplimiento Ambiental y remitirá sus recomendaciones al Director Ejecutivo. Este último, remitirá a la Junta Adjudicativa las recomendaciones de la División de Evaluación de Cumplimiento Ambiental para que sea ésta quien determine el cumplimento ambiental en conjunto con la solicitud, emitiendo la determinación final. Sin embargo, cuando el Municipio Autónomo sea la agencia proponente, el proceso de planificación ambiental será el siguiente: el Municipio Autónomo remitirá a la Oficina de Gerencia de Permisos el documento ambiental, sea éste una Evaluación Ambiental o una Declaración de Impacto Ambiental, el cual será evaluado en la División de Evaluación de Cumplimiento Ambiental.

Cuando la solicitud sea de carácter ministerial, la División de Evaluación de Cumplimiento Ambiental remitirá sus recomendaciones al Director Ejecutivo, siendo éste quien determine el cumplimiento ambiental y remita su determinación al Municipio Autónomo, siendo este último quien adjudique la determinación final del permiso solicitado. Cuando la solicitud sea de carácter discrecional, la División de Evaluación de Cumplimiento Ambiental remitirá sus recomendaciones al Director Ejecutivo. El Director Ejecutivo referirá las recomendaciones a la Junta Adjudicativa para que sea ésta quien determine el cumplimento ambiental y remita su determinación al Municipio Autónomo, siendo este último quien adjudique la determinación final del permiso solicitado.

Cuando la solicitud de permiso sea de carácter ministerial y la acción propuesta sea una Exclusión Categórica para fines del proceso de planificación ambiental, el solicitante del permiso certificará por escrito que la acción propuesta cualifica como una Exclusión Categórica, y de este modo la Oficina de Gerencia de Permisos, a través de su Director Ejecutivo, y/o los Profesionales Autorizados, podrán emitir una Determinación de Cumplimiento Ambiental por Exclusión Categórica de forma automática, la cual pasará a formar parte del expediente administrativo y será un componente de la determinación final de la Agencia Proponente o del Municipio Autónomo, sobre la acción propuesta.
Las Entidades Gubernamentales Concernidas podrán fungir como agencias proponentes, cuando la Oficina de Gerencia no esté facultada para expedir determinaciones finales al amparo de esta

Ley. Las Entidades Gubernamentales Concernidas seguirán el mismo proceso de planificación ambiental que seguirán los Municipios Autónomos.

La determinación del cumplimiento ambiental, no se considerará como una decisión revisable de carácter final ni independiente o separado, sino que será un componente de la determinación final del permiso solicitado. Las Declaraciones de Impacto Ambiental podrán ser comentadas por el público en general durante el proceso de planificación ambiental mediante vistas públicas, según aplique y seguirá el procedimiento que establezca la Junta de Calidad Ambiental mediante Reglamento. Además, la determinación de cumplimiento ambiental podrá ser revisada en conjunto con la determinación final según establecido en el Capítulo XII.

En aquellos casos en que la determinación de cumplimiento ambiental solicitada a la Oficina de Gerencia de Permisos no esté relacionada a los permisos que expide la misma al amparo de sus disposiciones o cualquier otra acción cubierta por la ley, la determinación de la Oficina de Gerencia de Permisos sobre este particular no tendrá carácter final y la misma será un componente de la determinación final del departamento, agencia, municipio, corporación e instrumentalidad pública del Gobierno de Puerto Rico o subdivisión política, según aplique, sobre la acción propuesta y revisable junto con dicha determinación final.

En aquellos casos en que la única acción es la expedición o modificación de un permiso, no sujeto a las disposiciones de esta Ley y bajo la jurisdicción única de la Junta de Calidad Ambiental, no será necesaria la evaluación de los impactos ambientales de la acción propuesta por parte de la División de Evaluación de Cumplimiento Ambiental.

En aquellos casos en que la acción propuesta contemple proyectos cuya operación es regulada por la Junta de Calidad Ambiental, la Oficina de Gerencia requerirá a la Junta de Calidad Ambiental recomendación sobre el documento ambiental presentado para dicho proyecto. Dichas recomendaciones deberán ser sometidas dentro del término de treinta (30) días contados a partir de la fecha de notificación de la solicitud de las recomendaciones. De no ser sometidas las recomendaciones dentro de dicho término, la Oficina de Gerencia de Permisos podrá emitir una Orden de Hacer a la Junta de Calidad Ambiental solicitando que emita las recomendaciones dentro del término de quince (15) días. Si la Junta de Calidad Ambiental no emite sus recomendaciones luego de que la Oficina de Gerencia de Permisos haya emitido la Orden de Hacer, entonces se entenderá que no tienen recomendaciones.

La Oficina de Gerencia de Permisos, los Municipios Autónomos, la Junta de Calidad Ambiental y los Profesionales Autorizados evaluarán la viabilidad ambiental mediante una exclusión categórica para Permisos Verdes y Permiso PYMES. El procedimiento de la viabilidad ambiental para la otorgación de un Permiso Verde y un Permisos PYMES será establecido mediante el Reglamento Conjunto.

La Junta de Calidad Ambiental preparará, adoptará, con la aprobación del Gobernador, el reglamento que regirá la evaluación y trámite de las exclusiones categóricas de su propia agencia, la Oficina de Gerencia de Permisos, Municipios Autónomos y los Profesionales Autorizados. Además, el reglamento establecerá los requisitos de evaluación y trámite de los documentos ambientales por la División de Evaluación de Cumplimiento Ambiental de la Oficina de Gerencia de Permisos, según aplique, luego de considerar los comentarios sometidos por la Junta de Planificación. El individuo o el profesional que (a) prepare el documento ambiental; o (b) cumplimente el formulario reclamando la aplicabilidad de una exclusión categórica, certificará, bajo juramento y sujeto a las penalidades impuestas por ésta y cualesquiera otras leyes estatales o federales, que la información contenida en los mismos es veraz, correcta y completa".

El Artículo 4 de Ley Núm. 416 -2004, según enmendada, también conocida como, Ley sobre Política Pública Ambiental establece*: "Deberes y responsabilidades del Gobierno del Estado Libre Asociado de Puerto Rico (12 L.P.R.A. § 8001a)*

A. Para llevar a cabo la política que se establece en el Artículo 3 de esta Ley, es responsabilidad continua del Gobierno de Puerto Rico utilizar todos los medios prácticos, en armonía con otras consideraciones esenciales de la política pública, para mejorar y coordinar los planes, funciones, programas y recursos del Gobierno con el fin de que Puerto Rico pueda:

1. cumplir con las responsabilidades de cada generación como custodio del medioambiente y nuestros limitados recursos naturales para beneficio de las generaciones subsiguientes según dispuesto en la Constitución de Puerto Rico;

2. asegurar para todos los puertorriqueños paisajes seguros, saludables, productivos y estéticos y culturalmente placenteros;

3. lograr el más amplio disfrute de los usos beneficiosos del medioambiente sin degradación, riesgo a la salud o de seguridad u otras consecuencias indeseables;

4. preservar los importantes aspectos históricos, arquitectónicos, arqueológicos, culturales y naturales de nuestro patrimonio y mantener, donde sea posible, un medioambiente que ofrezca diversidad y variedad a la selección individual, tanto para las generaciones presentes así como las futuras;

5. lograr un balance entre la población y el uso de los recursos que permita altos niveles de vida *y una amplia participación de las amenidades de la vida; y,*

6. mejorar la calidad de los recursos renovables y velar por el uso juicioso de aquellos recursos que sufran agotamiento.

B. Todos los departamentos, agencias, municipios, corporaciones e instrumentalidades públicas del Gobierno de Puerto Rico y sus subdivisiones políticas deberán, al máximo grado posible, interpretar, aplicar y administrar todas las leyes y cuerpos reglamentarios vigentes y los que en el futuro se aprueben en estricta conformidad con la política pública enunciada en el Artículo 3 de esta Ley. Asimismo, se ordena a los departamentos, agencias, municipios, corporaciones e instrumentalidades públicas del Gobierno de Puerto Rico y sus subdivisiones políticas que en la implantación de la política pública de esta Ley, cumplan con las siguientes normas:

1. Utilizar un enfoque sistemático interdisciplinario que aseguré el uso integrado de las ciencias naturales y sociales y del arte de embellecimiento natural artístico al hacer planes y tomar decisiones que puedan tener un impacto en el medioambiente del ser humano.

2. Identificar y desarrollar métodos y procedimientos, en consulta y coordinación con el Departamento de Recursos Naturales y Ambientales (en adelante Departamento), que aseguren no solo la consideración de factores económicos y técnicos, sino igualmente, aquellos factores referentes a los valores y amenidades establecidos, aun cuando no estén medidos y evaluados económicamente.

3. Incluir en toda recomendación o informe sobre una propuesta de legislación y emitir, antes de efectuar cualquier acción o promulgar cualquier decisión gubernamental que afecte significativamente la calidad del medioambiente, una declaración escrita y detallada sobre:

a) El impacto ambiental de la legislación propuesta, de la acción a efectuarse o de la decisión a promulgarse;

b) cualesquiera efectos adversos al medioambiente que no podrán evitarse si se aprobase y aplicase la propuesta legislación, si se efectuase la acción o promulgase la decisión gubernamental de que se trate.

c) alternativas a la legislación propuesta, o a la acción o decisión gubernamental en cuestión;

d) la relación entre usos locales a corto plazo del medioambiente y la conservación y mejoramiento de la productividad a largo plazo; y,

e) cualquier compromiso irrevocable o irreparable de los recursos naturales que estarían envueltos en la legislación propuesta, si la misma se implementase; en la acción gubernamental, si se efectuase; o en la decisión, si se promulgase.

Esta disposición no será aplicable a determinaciones o decisiones emitidas por los tribunales y el Departamento, en casos adjudicativos. Tampoco será aplicable a procedimientos de

reglamentación llevados a cabo por el Departamento al amparo de las facultades y responsabilidades delegadas por esta Ley u otras leyes.

Antes de que la Agencia Proponente tome la decisión final sobre la acción propuesta, deberá cumplir con el proceso de planificación ambiental y emitir un documento ambiental, ya sea determinando que la acción de que se trate tendrá un impacto significativo o que no tendrá tal impacto, el funcionario responsable del mismo consultará y obtendrá la opinión que sobre la legislación propuesta, la acción a efectuarse o la decisión gubernamental a promulgarse tenga cualquier otro organismo gubernamental con jurisdicción o inherencia sobre el impacto ambiental de dicha legislación, acción o decisión.

Copia de dicho documento ambiental será enviado a la División de Evaluación de Cumplimiento Ambiental de la Oficina de Gerencia de Permisos. Dicha División será la encargada de obtener las recomendaciones de las unidades y de emitir sus recomendaciones al Director Ejecutivo de la Oficina de Gerencia de Permisos. Además, se tendrán a la disposición del público y se acompañarán a la propuesta de legislación, acción o decisión para los correspondientes procesos de examen y estudio.

El funcionario responsable de emitir la declaración de impacto ambiental entregará una copia de ella en un medio de reproducción electrónica en el formato que el Departamento de Recursos Naturales y Ambientales establezca. La Oficina de Gerencia de Permisos publicará electrónicamente dicha declaración de impacto ambiental a través de un medio de fácil acceso y libre de costo, tal como la Internet. La publicación electrónica de la declaración de impacto ambiental y su disponibilidad al público coincidirá con la fecha de disponibilidad pública de este documento en sus copias en papel.

4. Estudiar, desarrollar y describir las alternativas propias para los cursos de acción recomendados en cualquier propuesta que envuelva conflictos irresolutos relativos a los usos alternos de los recursos disponibles.

5. Aplicar el principio de la prevención, reconociendo que cuando y donde haya amenazas de daños graves o irreversibles, no se debe utilizar la falta de una completa certeza científica como razón para posponer medidas costo-efectivas para prevenir la degradación ambiental. Esto debe hacerse tomando en consideración las siguientes premisas: (1) las personas, naturales y jurídicas, tienen la obligación de tomar acciones anticipadas para prevenir daños o peligros; (2) el peso de la prueba sobre la ausencia de peligros que pueda causar una nueva tecnología, proceso, actividad o sustancia química recae en el proponente de la misma, no en la ciudadanía; (3) antes de utilizar una nueva tecnología, proceso o sustancia química, o de comenzar una nueva actividad, las personas tienen la obligación de evaluar una amplia gama de alternativas, incluyendo la alternativa de no hacer nada; y (4) las decisiones en las que se aplique este principio deben ser públicas, informadas y democráticas, y deben incluir a las partes afectadas.

6. Reconocer el carácter mundial y de largo alcance de los problemas ambientales y donde armonice con la política exterior de los Estados Unidos, prestar el debido apoyo a iniciativas, resoluciones y programas diseñados a llevar al máximo la cooperación internacional al anticiparse a, y evitar el deterioro en la calidad del medioambiente mundial de la humanidad.

7. Prestar a los municipios, instituciones e individuos, consejos e información útiles para la restauración, conservación y mejoramiento de la calidad del medioambiente.

8. Iniciar y utilizar información ecológica en los planes y desarrollos de proyectos de recursos orientados.

9. Ayudar al Departamento, en todo proyecto o gestión dirigida al logro de los objetivos de esta Ley, incluyendo, pero sin limitarse a esto, el prestar particular atención y cumplir con los requisitos de recopilar y proveer periódicamente al Departamento, la información y datos autoritativos que ayuden a este último a determinar e informar el estado del ambiente y los recursos naturales.

C. La Oficina de Gerencia de Permisos fungirá como agencia proponente y como organismo con inherencia o reconocido peritaje, en relación a cualquier acción que requiera cumplimiento con las disposiciones de este Artículo. Cualquier recomendación requerida a entidades gubernamentales con relación al documento ambiental será provisto por los Gerentes de Permisos de la Oficina de

Gerencia de Permisos y por el Director de la División de Evaluación de Cumplimiento Ambiental, excepto por los requeridos a los municipios, la Junta de Calidad Ambiental y la Junta de Planificación, según aplique, de conformidad con las disposiciones legales y reglamentarias aplicables. A los fines de este Artículo, la Junta de Calidad Ambiental establecerá mediante reglamento, el procedimiento que regirá la preparación, evaluación y trámite de documentos ambientales. El reglamento arriba descrito será preparado, aprobado y adoptado por la Junta de Calidad Ambiental, luego de considerar los comentarios de la Junta de Planificación.

En aquellos casos en que la determinación de cumplimiento ambiental solicitada por la Oficina de Gerencia de Permisos no esté relacionada a los permisos que expide la misma al amparo de sus disposiciones o cualquier otra acción cubierta por la ley, la determinación de la Oficina de Gerencia de Permisos sobre este particular no tendrá carácter final y la misma será un componente de la determinación final del departamento, agencia, municipio, corporación e instrumentalidad pública del Gobierno de Puerto Rico o subdivisión política, según aplique, sobre la acción propuesta y revisable junto con dicha determinación final".

Igualmente, aplicable el Reglamento para el Proceso de Evaluación Ambiental (RPEA), Reglamento Núm. 8858 del 23 de noviembre de 2016. En este se define el término "Variaciones o Cambios Sustanciales" como "… aquella variación o cambio ocurrido o por ocurrir en la acción propuesta, no considerado y evaluado en un documento ambiental y que pueda tener un impacto ambiental adicional o diferente, que requiera una modificación a la determinación final emitida o al documento ambiental bajo evaluación." La Regla 139 del RPEA igualmente indica que las variaciones sustanciales a una acción que previamente obtuvo su cumplimiento ambiental requerirán un nuevo trámite de evaluación ambiental, siempre y cuando dichas variaciones conlleven impactos ambientales adicionales. El inciso B de la Regla 139 indica que las variaciones que no sean sustanciales en el concepto original de un proyecto no requerirán ningún trámite adicional de evaluación ambiental; sin embargo, dichas variaciones deberán ser documentas en el expediente del documento ambiental en la OGPe. A su vez el inciso C indica que la agencia proponente, en coordinación con la OGPe, determinará si la variación propuesta es o no sustancial.

En este proyecto se presenta la DIA ante la OGPe, con información aún vigente de la DIA-F del 2003 así como modificaciones necesarias para acomodar cambios en tecnología y en el área de servicio durante los últimos años, incluyendo el crecimiento urbano y los nuevos desarrollos residenciales y comerciales entre otros.

Por otra parte, conforme a la Ley 161-2009 se elaboró el Reglamento Conjunto 2020 el cual establece en el Capítulo 2.5, *Presentación de Trámites Durante Estados de Emergencia* procedimientos y términos alternos para expeditar la concesión de permisos, recomendaciones, consultas y/o certificaciones relacionadas a la solución de estados de emergencia, según definidos mediante Reglamento y la Ley 76. Por su parte, la Ley Núm. 76-2000, según enmendada, también conocida como "Ley de Procedimientos para Situaciones o Eventos de Emergencia", provee para que, luego de una declaración de emergencia, el Gobernador active un proceso expedite para la realización de obras y proyectos necesarios para atender y resolver situaciones críticas en la infraestructura física de prestación de servicios esenciales para la ciudadanía; así como las instancias que pongan en riesgo la vida, la salud y seguridad de la población. A esos efectos el Boletín Administrativo Núm. OE-2021-024, declara una emergencia en cuanto a la infraestructura de Puerto Rico y activa los mecanismos necesarios para la realización de obras y proyectos críticos de reconstrucción de forma rápida. Además, garantiza que la burocracia de permisos no incida en las iniciativas de recuperación en la construcción. Todas las agencias afectadas por esta Orden Ejecutiva deben seguir el procedimiento expedite que permite la Ley Núm. 76-2000, al momento de emitir los permisos pertinentes, consultas, endosos, comentarios, recomendaciones y certificaciones para los proyectos ahí mencionados. Esta Orden Ejecutiva dispensa del cumplimiento de los términos y procesos ordinarios.

OGPe mediante Orden Administrativa OGPe 2021-05, *Para Establecer el Procedimiento Alterno Expedito Para el Trámite Ambiental, Consultas y Permisos ante la OGPe,* establece los procedimientos para estados de emergencia, según la Ley 76; implicando que cualquier solicitud presentada en la OGPe a través del Single Business Portal (SBP) bajo las disposiciones de esa orden administrativa, como lo es esta solicitud, deberá ser evaluada y adjudicada conforme lo ahí expresado.

INFORME DE VISTA

Num. Caso
2021-403771-REA-007743

En cuanto al trámite bajo nuestra consideración (2021-403771-REA-007743) la OGPe 2021-05 establece lo siguiente:

CUARTO: Cualquier solicitud presentada en la OGPe a través del Single Business Portal bajo las disposiciones de la presente Orden Administrativa, deberá ser evaluada y adjudicada conforme a lo siguiente:

Parte I. Tramite Ambiental-
Ley 416-2004, según enmendada - Ley sobre Política Pública Ambiental

1. *Deberá presentar en conjunto con los documentos del trámite aplicable, la determinación de elegibilidad del Proyecto, emitido por el Concilio de Reconstrucción y/o que la acción propuesta fue designada como un Proyecto elegible bajo PROMESA y/o Proyectos de energía renovable al amparo de la Ley 19-2017, Ley de Política Pública Energética de Puerto Rico.*

2. *Cualquier aspecto no contemplado en la presente Resolución tales como: disposiciones generales relacionadas a los documentos ambientales, tales como tipo, contenido, formato y vigencia, serán evaluadas bajos las disposiciones del Reglamento para el Proceso de Evaluación Ambiental ("RPEA")[1], siempre y cuando sea cónsono con las disposiciones y el espíritu de la Ley 76 y la Orden Ejecutiva.*

3. *En la medida que algún aspecto a ser evaluado bajo las disposiciones del RPEA no sea cónsono con las disposiciones de la Ley 76, supra, la OGPe se reserva el derecho de establecer el mecanismo expedito del mismo relacionado al trámite de estos documentos ambientales.*

4. *Las evaluaciones para determinar lo significativo o no de las variaciones para proyectos previamente adjudicados que cumplan con las disposiciones de la Orden Ejecutiva, serán evaluadas bajo el RPEA.*

5. *En caso de que la acción cualifique como una Exclusión Categórica, según definida en la Ley 161 deberá tramitar la determinación de cumplimiento ambiental en cumplimiento con la Orden Administrativa 2021-02 del Departamento de Recursos Naturales y Ambientales (DRNA), la cual pasará a formar parte del expediente administrativo y será un componente de la determinación final sobre la acción propuesta. De lo contrario, deberá someter el documento ambiental correspondiente.*

6. *Toda determinación de cumplimiento ambiental tramitada mediante las disposiciones de la presente Orden Administrativa no será revisable de manera independiente, sino que, como parte de una determinación final. La misma estará sujeta a la Revisión mediante las disposiciones del Articulo 13 de la Ley Núm. 76, supra.*

7. *Cuando la acción propuesta requiere que se evalúen los impactos ambientales mediante la presentación de un documento ambiental, Declaración de Impacto Ambiental ("DIA"), o Evaluación Ambientales ("EA").*

8. *El trámite ambiental se hará de acuerdo a lo siguiente:*

    1. *Recomendación Ambiental ("REA")*

    a. *Tanto para las Declaraciones de Impacto Ambiental ("DIA") y Evaluaciones Ambientales ("EA"), el Proponente de la acción deberá presentar ante la OGPe el borrador del documento ambiental a través del Single Business Portal ("SBP"), que incluya y cumpla con toda la información requerida en el RPEA.*

    b. *La OGPe, a través de la División de Evaluación de Cumplimiento Ambiental ("DECA"), dentro de un término que no exceda de dos (2) días laborables a partir de la presentación del documento ambiental, deberá validar el mismo.*

[1] Reglamento 8858 del 23 de noviembre de 2016.

c. *Una vez validado el documento ambiental, cuando el mismo sea una DIA o una EA NEPA Like, se requerirá en coordinación con la OGPe y conforme a los requisitos de la presente OA, publique un Aviso de Prensa e instale un rótulo anunciando la presentación del documento ambiental.*

d. *A partir de la publicación del Aviso Público e instalación del Rótulo, cuando aplique, comenzará a decursar un término que no excederá de cinco (5) días, para que el público presente a la OGPe sus comentarios sobre la acción propuesta o soliciten la celebración de una Vista Pública. Transcurrido el término de (5) cinco días no se recibirán comentarios ni solicitudes, culminando la etapa.*

e. *Concurrentemente, a partir de la publicación del Aviso Público e instalación del Rótulo, cuando aplique, la OGPe, a través de la DECA, circulará electrónicamente el Documento Ambiental a los Gerentes de Permisos de la OGPe y las agencias a las cuales se les requiere emitir recomendaciones sobre la acción propuesta. Los Gerentes de Permisos de la OGPe y las agencias cuentan con un término improrrogable de cinco (5)[2] días laborables a partir de la radicación de la solicitud, para presentar sus recomendaciones. En caso de que no se requiera participación pública, el término de cinco (5) días laborables comenzará a decursar a partir de la validación del documento ambiental. Transcurrido el término de (5) cinco días sin haberse emitido las recomendaciones, se entenderá que no tienen recomendaciones para la acción propuesta, culminando la etapa de recomendaciones.*

f. *La DECA, dentro de un término no mayor de cuatro (4) días laborables de culminado el proceso de recomendaciones y participación pública, cuando aplique. deberá remitir la Recomendación Ambiental a la atención del Proponente.*

RECOMENDACIÓN

Se dé por culminado el proceso de recomendaciones y participación pública.

En San Juan, Puerto Rico a 26 de enero de 2021.

PONENCIA ESCRITA PROYECTO: EXTENSIÓN CARRETERA ESTATAL PR-5 DESDE LA PR-199 HASTA LA PR-167 (BAYAMÓN Y TOA ALTA) AC-000533
SOLICITUD # 2021-403771-REA-007743

Estimado Ing. Hernández Rodríguez:

Saludos cordiales.

La Administración Municipal de Bayamón tiene sumo interés en que se logre el desarrollo de la extensión de la Carretera PR-5. Este es un proyecto del cual se ha hablado por décadas y finalmente ya se está encaminando para servir directamente a los miles de residentes del área sur de Bayamón, así como de los pueblos de Naranjito, Comerio, Barranquitas y Toa Alta que a diario utilizan las congestionadas rutas de nuestra Ciudad para desplazarse a la zona Metro. La construcción de esta carretera continua siendo una necesidad y ahora más apremiante debido al continuo desarrollo urbano de la zona.

Además, de promover el desarrollo económico de la región y acortar el tiempo de viaje entre destinos, esta vía promoverá el crecimiento de los municipios que ubican al sur de Bayamón y la zona rural de la municipalidad. De igual forma, reducirá grandemente el embotellamiento vehicular en la PR-167- (Ave. Ramón Luis Rivera).

El volumen vehicular diario proviene de los pueblos de la periferia y de la zona sur de Bayamón y genera situaciones de embotellamiento en las horas pico en prácticamente todas las intersecciones de esta, en especial en la Carr. 167 con la PR 199, Carr. 830 y la Carr. 828. Por otro lado, el actual tramo de la PR 5 recibe alrededor de treinta un mil (31,000) vehículos diariamente.

La nueva ruta en desarrollo servirá directamente al menos a treinta mil (30,000) residentes de la zona de los campos de Bayamón y alrededor de ciento diecinueve mil novecientos (119,900) ciudadanos, residentes en los municipios antes mencionados. Estos datos son basados en el Censo de 2020. O sea, que este desarrollo impactará directamente a más de ciento cincuenta mil (150,000) residentes, con una conexión entre el centro de la Isla y el área metropolitana de San Juan. Según la información que hemos recopilado, este corredor entre Naranjito y Bayamón debe ser utilizado por cerca de diecisiete mil (17,600) vehículos diariamente, en la parte sur (Conexión con Puente Atirantado – Naranjito hasta PR- 199) y por más de veintiún mil quinientos cincuenta y cinco (21,555) vehículos, en la parte norte (PR-199 hasta PR-22) de la alineación.

En términos generales se espera que la continuidad del flujo vehicular en el corredor contribuirá a la reducción de la congestión de las vías principales del área. Lo que a su vez se traduce en una reducción de las emisiones de contaminantes atmosféricos proveniente de la combustión de hidrocarburos relacionadas al tráfico.

Es importante señalar que este proyecto forma parte del Plan de Transportación de San Juan de la Organización Metropolitana de Planificación (2045 San Juan TMA – Long Range Multimodal Trasnportation Plan) de diciembre 2018, y en el Statewide Transportation Improvement Program (STIP), año fiscal 2019-2022 de junio 2021. Así como el Plan de Acción de Mitigación de Puerto Rico para el Programa de Subvención en Bloque para el Desarrollo Comunitario de Mitigación (CDBG-MIT) del Departamento de la Vivienda de Puerto Rico. En el Plan CDBG-MIT es uno de los proyectos prioritarios a construirse para brindar mayor resiliencia a las vías de transportación principales del área durante una situación de emergencia y reducir la congestión vehicular de las vías principales del área.

Como indicamos anteriormente en el Gobierno del Municipio Autónomo de Bayamón, entendemos que el desarrollo de este proyecto, contribuirá enormemente a mejorar la calidad de vida de los miles de ciudadanos que acortarán largas horas en tiempo y distancia para moverse diariamente desde y hasta sus hogares. Este importante proyecto de infraestructura aumentará también las posibilidades de desarrollo demográfico y económico de toda la región.

Finalmente, recordamos la importancia de que se cumpla con las prácticas de ingeniería excelentes, así como con la conservación y protección del medio ambiente al momento de desarrollar el diseño y la construcción de las obras.

Cordialmente,

Enrique Figueroa Romanacce
Asistente Ejecutivo Principal

Saludos!

Por la presente deseo informar que en la Vista Pública celebrada el día de hoy no contestó nuestras interrogantes como residentes en mi caso Calle 21 Urb. El Cortijo, Bayamón. Muchos de los que estuvimos conectados en la vista hacíamos la misma pregunta, si ya tienen identificadas 110 residencias por favor indiquen cuales son. Esto como residentes nos está afectando tanto económica como emocionalmente, pues muchos de mis vecinos al igual que yo necesitamos hacer reparaciones a nuestras casas y por esta situación nos hemos limitado a hacerlas. Emocionalmente también nos afecta pues estamos en una incertidumbre diaria sin saber si tendremos o no tendremos casas y muchas familias se han visto afectadas de por sí gracias a los temblores y la pandemia, para también estar con esta inquietud. Por favor, a manera de ruego y abogo por mi y por mis vecinos, hagan la lista de las casas identificadas para poder tener la información completa.

Esperando su respuesta, me suscribo.

Atentamente,

Nydia Serrano

Buenos días

Saludos cordiales,

Soy la Sra. Damara Gonzalez Carlo, Directora de Oblatas del Santísimo Redentor Hogar Fátima, Inc. Por este medio presento nuestra preocupación relacionada al caso 2021-403771-REA-007743 CONTRUCCION DE CARRETERA NÚM. 5 BAYAMÓN.

La Institución es un centro de protección a menores, el cual se encuentra ubicado al final de la Avenida Santa Juanita Final, Camino Esteban Cruz final, Bayamon Puerto Rico 00956.

La construcción de la carretera favorecerá a muchos de los ciudadanos, sin embargo podría presentar riesgos o debilitar nuestro sistema de seguridad para la población y el personal, además sería de adversidad para la calidad de ambiente la cual puede afectarse por contaminación ambiental lo cual puede desencadenar complejidades en la salud de nuestra población o deteriorar la salud de participantes con condiciones existentes. Dicha construcción a su vez puede representar peligros en los cimientos y/o estructuras de las residencias.

Todas estas son de preocupación para nosotros por lo cual solicitamos orientación y alternativas con el propósito de responder de forma favorable para todos. Esperamos su pronta respuesta.

Cordialmente,
Damara González Carlo
Directora

Comentarios de las Divisiones al Permiso

Infraestructura

NETPR 2021-403771-REA-007743 - Requisitos de Estricto Cumplimiento – El Negociado de Telecomunicaciones (NET), tiene los siguientes comentarios: Desde el punto de vista ambiental, el NET no tiene objecion al proyecto propuesto. De ser necesaria una Relocalizacion de Planta, se exige el estricto cumplimiento con la seccion 3.09 del Reglamento 7393, revisado. Esto no constituye un endoso a la referida accion, ni representa un relevo de cumplimiento respecto a todos los reglamentos aplicables. El NET ejercera la autoridad delegada y evaluara cada fase posterior del proceso de permisos. El net tiene la facultad de auditar el cumplimiento de todo requisito aplicable a la otorgacion de permisos y cuando sea necesario impondra multas y penalidades.

ACT contesta REA - El Programa de Construcción y Mejoras Permanentes vigente de esta Autoridad no incluye proyectos programados que pudieran verse afectados por la acción propuesta. En cuanto al aspecto ambiental no tenemos comentarios.

LUMA Servco LLC (LUMA), como operadora y representante de la Autoridad de Energía Eléctrica (AEE) contesta la REA - Desde el punto de vista ambiental LUMA no presenta objeción al proyecto propuesto. No obstante, el proyecto según presentado requiere de una evaluación eléctrica para determinar los impactos que puede representar este en la infraestructura de la AEE operada por LUMA. De acuerdo con el Reglamento para el Proceso de Evaluación Ambiental, Reglamento Núm. 8858, de 23 de noviembre de 2016, la parte proponente deberá discutir el impacto ambiental de cada actividad propuesta que afecte nuestra

Recomendación Ambiental

infraestructura y confirmar su disponibilidad antes de la presentación de un documento ambiental. A esos efectos, deberá incorporar en el Documento Ambiental correspondiente las recomendaciones de la evaluación eléctrica realizada por la LUMA, que se obtenga mediante la Solicitud de Recomendación de Infraestructura (SRI) de la Oficina de Gerencia de Permisos. Le recordamos que la evaluación eléctrica caduca al año de realizada. De no comenzar los trabajos en ese periodo, deberá solicitar una nueva evaluación eléctrica. Este comunicado no constituirá un endoso a la referida acción. Una vez se cumpla con las condiciones que se establezcan en la correspondiente evaluación eléctrica, la acción propuesta se considerará endosada.

La Autoridad de Acueductos y Alcantarillados (AAA) evaluó el documento sometido en cumplimiento de su deber como agencia evaluadora, específicamente los aspectos ambientales exclusivos a nuestra jurisdicción y peritaje. Según los documentossometidos, la Autoridad de Carreteras y Transportación (ACT) solicita una Recomendación Ambiental para la construcción de una extensión a la carretera estatal PR-5. La misma comenzará en el kilómetro 14.9 de la carretera estatal PR-167 en Toa Alta y terminará en la carretera PR-199 (Avenida Las Cumbres) en Bayamón. La extensión a la PR-5 conectará las carreteras antes mencionadas, por el sur a la carretera PR-148 y por el norte la PR-5. La extensión propuesta tendrá una longitud aproximada de 5.07 kilómetros y será de cuatro (4) carriles divididos, con control de acceso total, intersecciones a desnivel y plazas de peaje. De manera preliminar, no se identifica que dicha propuesta según descrita en documentos, presente un impacto en términos ambientales para la Autoridad de Acueductos y Alcantarillados. Destacamos del proyecto requerir servicio de agua potable y/o alcantarillado sanitario, o identificación de utilidades; el Proponente deberá someter una Solicitud de Recomendación de infraestructura (SRI) ante la Oficina de Gerencia de Permisos (OGPe). En la evaluación se determinará la disponibilidad de los servicios de agua y alcantarillado sanitario que puedan servir al mismo, requisitos y/o condiciones de endoso para conectar el proyecto. Dichas condiciones pueden incluir, pero no se limitan a: • Obras de Aumento de capacidad en el sistema potable como de alcantarillado sanitario. • Relocalización de utilidades de la AAA e identificación de servidumbres. • Construcción de obras extramuros. Esta comunicación no implica una autorización para que se conecten los servicios de agua y alcantarillado. El proponente será responsable de identificar y de reparar a su costo cualquier daño que pueda causar a las utilidades existentes de la Autoridad.

Medioambiente

DRNA El Departamento de Recursos Naturales y Ambientales emite sus comentarios y recomendaciones en carta con fecha de 26 de enero de 2022, caso núm. O-NE-EEA03-SJ-00813-21012022. ADS La División de Medioambiente de la Oficina de Gerencia de Permisos (OGPe, DDEC) refirió por correo electrónico la solicitud de recomendación para el proyecto en referencia. La Autoridad de Carreteras y Transportación (ACT) propone la construcción para una extensión a la carretera PR-5. La misma comenzará en el Km14.9 de la carretera PR-167 en Toa Alta y terminará en la carretera PR-199 (Avenida Las Cumbres) en Bayamón. La extensión a la PR-5 conectará las carreteras antes mencionadas, por el sur a la carretera PR-148 y por el norte la PR-5. La extensión propuesta tendrá una longitud aproximada de 5.07 kilómetros y será de cuatro (4) carriles divididos, con control de acceso total, intersecciones a desnivel y plazas de peaje. Al presente, la carretera PR-167 es la vía principal que une los Municipios de Barranquitas, Comerío y Naranjito con el

Recomendación Ambiental

Municipio de Bayamón y el resto del área metropolitana. Esta carretera es sumamente transitada, y cuenta con numerosos semáforos y accesos directos. El proyecto propuesto proveerá además una ruta alterna en dirección norte-sur que conectará las áreas densamente pobladas del Municipio de Bayamón con otras arterias principales como las carreteras PR-199, PR-2, y la PR-22, aliviando de esta manera el tránsito en la carretera PR-167. Además, como parte del proyecto se llevará a cabo la adquisición de unas 126 propiedades (110 residencias y 16 negocios/instituciones) con realojo en las 110 viviendas. Para la construcción del propuesto proyecto, será necesario la construcción de seis (6) puentes y movimiento de terreno. Se estima que se extraerán 850,000 metros cúbicos de material de la corteza terrestre de los cuales se utilizarán aproximadamente 670,000 metros cúbicos como relleno dentro del mismo y el sobrante será transportado en camiones cubiertos con toldos de lona en un área designada debidamente autorizada. Adicional, se propone la construcción cuatro (4) estaciones-pórticos de peaje de flujo libre (Open Gantry Toll Type), una (1) en cada rampa en la intersección de la propuesta Carretera PR-5 con la Carretera PR-830 y una en cada dirección en la PR-5. Para cada pórtico de peaje será necesario conexión a facilidades de energía eléctrica. Además, será necesario la instalación de un generador de energía eléctrica en cada uno para casos de emergencia. El mismo tendrá una capacidad estimada de 30 KW y será suplido por combustible Diesel No.2. Se utilizará un tanque de almacenamiento de combustible de 600 galones con su dique de contención secundaria Este desarrollo localiza en la Carretera PR-5 desde la Intersección con PR-199 hasta PR-167 Km 14.9 en el Municipio de Añasco. La Autoridad de Desperdicios Sólidos (ADS) consolidada con el Departamento de Recursos Naturales y Ambientales (DRNA) emite sus comentarios al proyecto propuesto basados en leyes y reglamentos vigentes promulgados por la antigua ADS ahora DRNA. Las recomendaciones son de aplicabilidad al proyecto propuesto de este obtener la autorización y permisos requeridos para su ubicación y desarrollo. El proponente cumplirá con las regulaciones relacionadas con el manejo y disposición de los desperdicios sólidos y los materiales reciclables y deberá incorporar en el proyecto propuesto las recomendaciones que se especifican adelante: 1. Ley Núm. 70 - 1992, Ley para la Reducción y Reciclaje de los Desperdicios Sólidos, según enmendada, establece el desarrollo e implantación de estrategias económicamente viables y ambientalmente seguras que resulten en la disminución del volumen de desperdicios sólidos que requerirá disposición final. Como parte de estas estrategias, se considera necesario modificar las prácticas de manejo y disposición existentes para reducir la intensidad de uso de los Sistemas de Relleno Sanitario (SRS) del país. 2. Reglamento para la Reducción, Reutilización y Reciclaje de Desperdicios Sólidos (Reglamento Núm. 6825 del 2004), según enmendado. Establecido a tenor con la Ley Número 70 – 1992. a. Desarrollar e implantar reglas y requisitos para establecer estrategias que disminuyan el volumen, cantidad y peligrosidad de los residuos sólidos que requerirán disposición final y propiciar su viabilidad económica y ambiental. 3. Reglamento Conjunto para la evaluación y expedición de permisos relacionados al desarrollo, uso de terrenos y operación de negocios (Reglamento Conjunto). a. Todo desarrollo propuesto deberá cumplir con las disposiciones bajo las Secciones 3.2.1.1 y 3.2.1.2, Regla 3.2.1 Permisos de Construcción, Capítulo 3.2 Edificación y Conservación de energía; Capitulo 3.4 Permisos de Medioambiente, Regla 3.4.1 Permiso único incidental operacional, Capitulo 3.6 Permisos generales del Tomo III Permisos para el desarrollo y negocios del Reglamento Conjunto, según aplique. b. Para la fase de construcción, el proponente/desarrollador deberá cumplir con lo siguiente (según aplique): i. Para los proyectos en los cuales no se emplee más de 10 personas, el desarrollador, proponente o contratista

Recomendación Ambiental

solicitará una Exención para la radicación del Formulario del Plan de Reciclaje para la fase de construcción. Esta solicitud para la exención del Plan de Reciclaje puede hacerla en Formularios en línea a través de la página de DRNA. ii. Para los proyectos que empleen más de 10 personas deberá radicar el Formulario del Plan de Reciclaje para la fase de Construcción, junto a un Memorial Explicativo. El Plan de Reciclaje puede radicarlo a través de la dirección electrónica construccion@ads.pr.gov iii. En caso de demoliciones, deberán radicar el Plan e indicar la cantidad de escombros de construcción a generarse en el proyecto que incluya alternativas para el manejo (reciclaje, reúso) y disposición. c. Se recomienda que todo desarrollo propuesto promueva la recuperación de materiales reciclables y el manejo y disposición tanto de los reciclables como de los desperdicios sólidos sea el adecuado 4. Indicar la entidad responsable (municipio o compañía privada) del recogido y disposición de los desperdicios sólidos y los materiales reciclables. 5. El proponente/desarrollador/contratista del proyecto será responsable de cumplimentar las Leyes y Reglamentos antes mencionadas. 6. Cumplirá con los permisos requeridos bajo las leyes y reglamentos vigentes. Además, de la documentación requerida por las agencias concernidas. Las recomendaciones emitidas aplican a los hechos presentados y evaluados al momento. La ADS consolidada con DRNA se reserva el derecho de reevaluar y modificar los mismos en el caso de surgir información oficial que identifique que las condiciones han cambiado, o cuando los comentarios hayan sido emitidos bajo premisas falsas. Además, la ADS consolidada con DRNA tiene la facultad de solicitar cualquier información adicional que entienda pertinente y que, de conformidad con las leyes y reglamentaciones vigentes, garantice el interés público y la protección del ambiente.

Arqueología y Conservación Histórica

COMENTARIO DACH-ICP A CASO NÚM.: 2021-403771-REA-007743. -- PROYECTO: AC-000533 EXTENSIÓN DE LA CARRETERA ESTATAL PR-5 DESDE INTERSECCION CON PR-199 HASTA PR-167 KM. 14.9 -- El Programa de Arqueología y Etnohistoria del Instituto de Cultura Puertorriqueña Base Legal: La Ley 161-2009, según enmendada, Artículo 19.6, enmienda las Secciones 2 y 3 de la Ley Núm. 112 de 20 de julio de 1988, según enmendada, conocida como “Ley de Protección del Patrimonio Arqueológico Terrestre de Puerto Rico”, a los fines de transferir al Instituto de Cultura Puertorriqueña toda facultad, deber u obligación referente a la evaluación para la otorgación o denegación de determinaciones finales o permisos, esto en coordinación con la Oficina de Gerencia de Permisos. El Reglamento Conjunto para la Evaluación y Expedición de Permisos Relacionados al Desarrollo, Uso de Terrenos y Operaciones de Negocios (RC-2020); registrado en el Departamento de Estado de Puerto Rico bajo el Número 9233 con vigencia de 2 de enero de 2021, establece, entre otros, lo siguiente: (a) Regla 2.1.8, Sección 2.1.8.7, Inciso “b”: Todo proyecto público o privado que conlleve movimiento de terreno, excavación, extracción de corteza terrestre o construcción, reconstrucciones o canalizaciones deberá solicitar a la División o Unidad de Evaluación Ambiental (DECA) la recomendación del ICP sobre Arqueología y Conservación Histórica, ya sea a través de la OGPe, los Municipios Autónomos con Jerarquía 1 a la III o el Profesional Autorizado. (b) CAPÍTULO 10.2, Sección 10.2.1.2 se requerirá la recomendación del ICP en todos los Permisos relacionados con construcción, reconstrucción, trabajos de excavación, extracción o movimiento de tierras en lugar alguno del que haya documentación previa o indicios fidedignos de presencia de material arqueológico. Incluye los centros fundacionales de los municipios, entiéndase, plaza de recreo y bloques circundantes, conforme a la Ley 89-1955, supra, Sección 4. —Propósitos, Funciones y Poderes del Instituto. (18 L.P.R.A. sec. 1198) y la Ley

Recomendación Ambiental

Número 112 del 20 de julio de 1988, conocida como la “Ley de Protección del Patrimonio Arqueológico Terrestre”, según enmendada. •• EVALUACIÓN: -- Actualización de Autorización Parcial al Proyecto -- El Programa de Arqueología y Etnohistoria del Instituto de Cultura Puertorriqueña ha evaluado los documentos relacionados al proyecto de referencia recibidos a través de la Oficina de Gerencia de Permisos. Nuestros registros evidencian que, con fecha del 21 de octubre del 2021, el Programa de Arqueología y Etnohistoria emitió una autorización al mismo. La evaluación realizada sugiere que, basado en los datos existentes al presente, las probabilidades de impactar un recurso arqueológico, según definido por la Ley 112 del 20 de julio de 1988, según enmendada, son mínimas. Por lo antes expuesto, en lo concerniente a recursos culturales de naturaleza arqueológica, no tenemos objeción al proyecto según fue radicado y evaluado y actualizamos nuestra autorización. Le notificamos nuevamente que esta autorización es de tipo parcial y que el proponente queda sujeto a las responsabilidades y obligaciones que impone la Ley 112 del 20 de julio de 1988, según enmendada. Esta establece que, se deberá paralizar todo tipo de actividad de excavación, movimiento y remoción de la corteza terrestre, y notificar en un plazo de veinticuatro (24) horas al Consejo de Arqueología Terrestre, en caso de que, durante el desarrollo del proyecto, se descubra o impacte algún deposito, elemento, estructura o vestigio de naturaleza arqueológica. Se apercibe que el incumplimiento de estos requerimientos podrá ser objeto de sanciones administrativas según lo establecido en las citadas leyes. Esta autorización tiene vigencia de (1) año. •• RECOMENDACIÓN: La División de Arqueología y Conservación Histórica de la OGPe, luego de evaluado los documentos y la base de datos, ACTUALIZA LA AUTORIZACION emitida el 21 de octubre del 2021 para el proyecto según propuesto y bajo las condiciones emitidas por el Programa de Arqueología y Etnohistoria del ICP. Se apercibe que el incumplimiento de estos requerimientos podrá ser objeto de sanciones administrativas según lo establecido en las citadas leyes. Esta autorización tiene vigencia de (1) año. ••.

División de Evaluación de Cumplimiento Ambiental

Se incluyen los comentarios del Departamento de Recursos Naturales y Ambientales (Junta de Calidad Ambiental), emitidos en cartas fechadas 26 y 27 de enero de 2022. Se incluyen los comentarios recibidos por varios residentes, como parte de la participación pública.

En el Documento de la Declaración de Impacto Ambiental (DIA) final que se someta deberán atender todos los comentarios y requerimientos que se hayan emitido por las diferentes agencias comentadoras, Oficial Examinador y público en general.

La DIA deberá ser tramitada a través del Single Business Portal (SBP).

Condiciones Generales

Esta recomendación es solamente aplicable a la situación de hechos y los datos según presentados y evaluados en el caso. La OGPe se reserva el derecho de reevaluar, variar o modificar el mismo en cualquier momento anterior a la emisión del permiso o requerir la acción administrativa correspondiente por parte de la agencia solicitante o proponente cuando surja nueva información oficial específica estableciendo que el derecho aplicable o las condiciones ambientales en el predio han cambiado sustancialmente, o cuando la recomendación original se emitió bajo premisas falsas o fraudulentas.

Habido recibido los comentarios de las agencias gubernamentales concernidas. Esta información será

Recomendación Ambiental

Condiciones Generales

utilizada para la presentación del Documento Ambiental correspondiente a ser evaluado por la División de Evaluación de Cumplimiento Ambiental.

Vigencia

Las vigencias de las diferentes agencias del proceso de recomendación serán los establecidos en las comunicaciones que en estas emitan conforme a sus reglamentos. Esta recomendación ambiental tendrá una vigencia de trescientos sesenta y cinco (365) días a partir de su expedición.

PONENCIA ESCRITA PROYECTO: EXTENSIÓN CARRETERA ESTATAL PR-5 DESDE LA PR-199 HASTA LA PR-167 (BAYAMÓN Y TOA ALTA) AC-000533
SOLICITUD # 2021-403771-REA-007743

Estimado Ing. Hernández Rodríguez:

Saludos cordiales.

La Administración Municipal de Bayamón tiene sumo interés en que se logre el desarrollo de la extensión de la Carretera PR-5. Este es un proyecto del cual se ha hablado por décadas y finalmente ya se está encaminando para servir directamente a los miles de residentes del área sur de Bayamón, así como de los pueblos de Naranjito, Comerio, Barranquitas y Toa Alta que a diario utilizan las congestionadas rutas de nuestra Ciudad para desplazarse a la zona Metro. La construcción de esta carretera continua siendo una necesidad y ahora más apremiante debido al continuo desarrollo urbano de la zona.

Además, de promover el desarrollo económico de la región y acortar el tiempo de viaje entre destinos, esta vía promoverá el crecimiento de los municipios que ubican al sur de Bayamón y la zona rural de la municipalidad. De igual forma, reducirá grandemente el embotellamiento vehicular en la PR-167- (Ave. Ramón Luis Rivera).

El volumen vehicular diario proviene de los pueblos de la periferia y de la zona sur de Bayamón y genera situaciones de embotellamiento en las horas pico en prácticamente todas las intersecciones de esta, en especial en la Carr. 167 con la PR 199, Carr. 830 y la Carr. 828. Por otro lado, el actual tramo de la PR 5 recibe alrededor de treinta un mil (31,000) vehículos diariamente.

La nueva ruta en desarrollo servirá directamente al menos a treinta mil (30,000) residentes de la zona de los campos de Bayamón y alrededor de ciento diecinueve mil novecientos (119,900) ciudadanos, residentes en los municipios antes mencionados. Estos datos son basados en el Censo de 2020. O sea, que este desarrollo impactará directamente a más de ciento cincuenta mil (150,000) residentes, con una conexión entre el centro de la Isla y el área metropolitana de San Juan. Según la información que hemos recopilado, este corredor entre Naranjito y Bayamón debe ser utilizado por cerca de diecisiete mil (17,600) vehículos diariamente, en la parte sur (Conexión con Puente Atirantado – Naranjito hasta PR- 199) y por más de veintiún mil quinientos cincuenta y cinco (21,555) vehículos, en la parte norte (PR-199 hasta PR-22) de la alineación.

En términos generales se espera que la continuidad del flujo vehicular en el corredor contribuirá a la reducción de la congestión de las vías principales del área. Lo que a su vez se traduce en una reducción de las emisiones de contaminantes atmosféricos proveniente de la combustión de hidrocarburos relacionadas al tráfico.

Es importante señalar que este proyecto forma parte del Plan de Transportación de San Juan de la Organización Metropolitana de Planificación (2045 San Juan TMA – Long Range Multimodal Trasnportation Plan) de diciembre 2018, y en el Statewide Transportation Improvement Program (STIP), año fiscal 2019-2022 de junio 2021. Así como el Plan de Acción de Mitigación de Puerto Rico para el Programa de Subvención en Bloque para el Desarrollo Comunitario de Mitigación (CDBG-MIT) del Departamento de la Vivienda de Puerto Rico. En el Plan CDBG-MIT es uno de los proyectos prioritarios a construirse para brindar mayor resiliencia a las vías de transportación principales del área durante una situación de emergencia y reducir la congestión vehicular de las vías principales del área.

Como indicamos anteriormente en el Gobierno del Municipio Autónomo de Bayamón, entendemos que el desarrollo de este proyecto, contribuirá enormemente a mejorar la calidad de vida de los miles de ciudadanos que acortarán largas horas en tiempo y distancia para moverse diariamente desde y hasta sus hogares. Este importante proyecto de infraestructura aumentará también las posibilidades de desarrollo demográfico y económico de toda la región.

Finalmente, recordamos la importancia de que se cumpla con las prácticas de ingeniería excelentes, así como con la conservación y protección del medio ambiente al momento de desarrollar el diseño y la construcción de las obras.

Cordialmente,

Enrique Figueroa Romanacce
Asistente Ejecutivo Principal

C-1-2000-095

El Departamento de Recursos Naturales y Ambientales (DRNA) recibió por medio electrónico, los documentos relacionados a la consulta identificada en el epígrafe. Se propone la construcción de una extensión a la carretera estatal PR-5. La misma comenzará en el kilómetro 14.9 de la carretera estatal PR-167 en Toa Alta y terminará en la carretera PR-199 (Avenida Las Cumbres) en Bayamón. La extensión a la PR-5 conectará las carreteras antes mencionadas, por el sur a la carretera PR-148 y por el norte la PR-5. La extensión propuesta tendrá una longitud aproximada de 5.07 kilómetros y será de cuatro (4) carriles divididos, con control de acceso total, intersecciones a desnivel y plazas de peaje. Para la construcción del propuesto proyecto, será necesario la construcción de seis (6) puentes y movimiento de terreno. Se estima que se extraerán 850,000 metros cúbicos de material de la corteza terrestre de los cuales se utilizarán aproximadamente 670,000 metros cúbicos como relleno dentro del mismo.

Durante la fase de planificación de este proyecto y discutidas en la Declaración de Impacto Ambiental (DIA) aprobada en el año 2003 e incluidas en la presente DIA se estudiaron cinco diferentes alternativas, además de la alternativa de No Acción para la alineación de la extensión a la carretera PR-5. La ruta preferida para la extensión de la PR-5 es la indicada como 2A. Esta alternativa ocupará un área estimada de 112 cuerdas, impactará 126 estructuras incluyendo

112 residencias y 16 negocios/ instituciones. Se estima en 13,886 metros cuadrados (3.54 cuerdas) el área de impacto a cuerpos de agua.

La extensión propuesta de la carretera PR-5 requiere la canalización de un nuevo tramo del Río Hondo mediante la colocación de un *box culvert* de 258.6 metros de largo de dos (2) celdas y la extensión de un *box culvert* existente de dos celdas a una distancia de 48 metros, lo cual reemplazará 2 tubos existentes de 84 pulgadas de diámetro. El proyecto propone la colocación de un canal de gaviones entre el extremo aguas abajo del *box culvert* propuesto y el extremo aguas arriba del *box culvert* extendido en la intersección PR-5 y PR-199 para proporcionar protección contra la erosión al alcance del Río Hondo. Además, una rampa en puente propuesta estará cruzando el canal rectangular de gaviones.

La extensión propuesta de la PR-5 también incluirá un puente de ocho (8) tramos sobre el Río Minillas. Un segmento de la alineación de la carretera propuesta es paralela al Río, pero el puente cruza dos veces este cuerpo de agua. Además, un afluente del Río Minillas se verá afectado por el terraplén de la extensión de la PR-5 a través de una distancia de unos 750 metros y canalizado mediante un *box culvert* de dos celdas de 2.74 m x 2.13 m y 255 metros de longitud, un canal trapezoidal con un ancho de base de 12 metros y un *box culvert* de 2 celdas de 2.44 m x 2.13 m y 150 metros de longitud.

A continuación, nuestros comentarios a la DIA presentada:

- Según nuestros expedientes, el DRNA emitió comentarios a la DIA presentada originalmente en comunicaciones del 22 de febrero de 2002 y 18 de agosto de 2004. Como parte de los comentarios emitidos se requirió la presentación de un Estudio Hidrológico Hidráulico (H-H) y un Estudio Geotécnico. El H-H requerido fue presentado al DRNA el 12 de noviembre de 2021, al cual se le requirió información adicional y correcciones el 20 de enero de 2022. No hay un Estudio Geotécnico como parte de los anejos presentados en el documento ambiental ni se hace referencia al mismo.

- El DRNA emitió una certificación de Categorización de Hábitat el 28 de octubre de 2021 en cumplimiento con la Ley Núm. 241 de 15 de agosto de 1999, según enmendada (Nueva Ley de Vida Silvestre de Puerto Rico) y el Reglamento 6765 (Reglamento para regir la conservación de la Vida Silvestre, las Especies Exóticas y la Caza en el Estado Libre Asociado de Puerto Rico). En la misma se categorizaron 13.5 cuerdas de bosques de galería a impactar como Categoría 4 (Hábitat Natural de Valor Ecológico). De igual forma, el DRNA categorizó el resto de las áreas a impactar como Categoría 5 (Hábitat Natural con Alto Potencial de Convertirse en Hábitat Esencial, Hábitat de Alto Valor Ecológico o Hábitat de Valor Ecológico).

  En cumplimiento con el Reglamento 6765 la ACT presentó una propuesta para la compensación por las 13.5 cuerdas clasificadas como Categoría 4 mediante la adquisición para cesión al DRNA de un predio de terreno de 35.6 cuerdas ubicado en la Reserva Natural Las Cabachuelas en Morovis. El DRNA aceptó la misma en comunicación del 30 de noviembre de 2021. Asimismo, aceptó que este predio se utilice como una mitigación concurrente por el impacto de cortes de árboles.

- Según la DIA se estima un impacto a 3.53 cuerdas (3.4 acres) a Cuerpos de Agua o Áreas Jurisdiccionales bajo el Cuerpo de Ingenieros de los Estados Unidos (COE). Se informa que una vez definidas las obras en planos de construcción y previo a cualquier actividad en dichas áreas se obtendrá el permiso de construcción de obras por parte del Cuerpo de Ingenieros de los Estados Unidos. Sobre esto es importante destacar, que en la etapa de cumplimiento ambiental mediante la DIA debe haber un análisis detallado del impacto propuesto por el proyecto en todos los cuerpos de agua que discurren por

donde ubicaría el proyecto. La DIA debe incluir una sección detallada describiendo los trabajos propuestos en los Ríos, quebradas y los impactos en la hidrología del área. El H-H no sustituye este análisis ni una solicitud de permiso conjunto futura ante el COE. Debe ser el documento ambiental el que discuta adecuadamente los impactos propuestos y las medidas tomadas para evitar, minimizar y mitigar dicho impacto.

Se debe discutir en detalle los impactos a ocasionar por la extensión de la canalización de un tramo del Río Hondo y las quebradas, particularmente el área de nacimiento del Río Minillas. En esta área en particular, las capas de información del USGS identifican que discurre el Río Minillas y no un afluente como se identifica en los planos y se describe en la DIA. Asimismo, los documentos de Validación del Estudio de Flora y Fauna y el Estudio de Flora y Fauna presentado en la DIA indican: *En el área del proyecto no se identificó área alguna que mostrara las características para ser considerada como humedal con excepción de la zona 5 al sur de la Urbanización Valles de Cerro Gordo por donde discurre el Río Minillas.* La DIA debe aclarar o corregir dichas discrepancias. Asimismo, describir las condiciones actuales y características de todos los cuerpos de agua a impactar. Como parte de los impactos a estas áreas se deben discutir los daños al ecosistema de ribera, la calidad de las aguas y a la diversidad dentro de los cauces incluyendo su fauna, al ser estos cuerpos de agua zonas de refugio, fuente de alimentación y dispersión para distintas especies.

El DRNA reconoce la importancia de la construcción de la carretera y de la aceptación de una mitigación por el impacto a la vegetación ribereña de los cuerpos de agua. Sin embargo, la DIA debe discutir en detalle los impactos propuestos y demostrar el por qué los mismos no pueden ser evitados o minimizados.

- Según los planos CLP01 al CLP09 se propone el impacto a 10 quebradas o “streams”. Sin embargo, el documento ambiental no discute los trabajos propuestos en cada una de estas quebradas y cuáles de dichos trabajos fueron y requieren ser contemplados en el H-H, cuáles no y el por qué. El H-H presentado solo discute los trabajos propuestos del Puente sobre el Río Minillas, la extensión de la canalización del Río Hondo y la canalización y relocalización del “afluente” del Río Minillas. Esto deberá ser aclarado y discutido en el documento ambiental presentado.

Una vez presente la información requerida, el DRNA podrá continuar con la evaluación del proyecto propuesto. El DRNA reconoce la importancia de este proyecto de infraestructura pública, sin embargo, debe ser en el proceso de cumplimiento ambiental donde se atiendan los aspectos señalados en esta comunicación.

Cordialmente,

Ing. Luis Sierra
Secretario Auxiliar

GOBIERNO DE PUERTO RICO
DEPARTAMENTO DE RECURSOS NATURALES Y AMBIENTALES

JAN 2 7 2022

Código: DIA 21-0002 (OGPe)

Ing. Gabriel Hernández Rodríguez
Oficina de Gerencia de Permisos
PO Box 41179
San Juan PR 00940-1179

Código Expediente: 2021-403771-REA-007743
Proyecto: AC-000533 Extensión Carretera Estatal PR-5 desde Intersección con PR-199 hasta PR-167, Km. 14.9
Localización: Extensión de la Carretera PR-5 desde la Intersección con PR-199 hasta PR-167, Km 14.9, Municipios de Bayamón y Toa Alta, Puerto Rico

Estimado ingeniero Hernández:

El Área de Evaluación de Documentos Ambientales adscrita a la Secretaría Auxiliar de Cumplimiento Ambiental del Departamento de Recursos Naturales y Ambientales (DRNA) ha recibido la Recomendación de Evaluación Ambiental (REA) del borrador de la Declaración de Impacto Ambiental (DIA) referida electrónicamente por la Oficina de Gerencia de Permisos (OGPe) relacionada con la acción propuesta según dispuesto en el Capítulo III, Regla 117, Inciso I, del Reglamento Núm. 8858 del 23 de noviembre de 2016, conocido como el "Reglamento Para el Proceso de Evaluación Ambiental (RPEA)" y en conformidad con la Regla 14.8 de la Ley 161-2009, según enmendada, conocida como Ley para la Reforma del Proceso de Permisos en Puerto Rico.

La Autoridad de Carreteras y Transportación (ACT) propone la construcción de una extensión a la carretera PR-5. La misma comenzará en el Km 14.9 de la carretera PR-167 en Toa Alta y terminará en la carretera PR-199 (Avenida Las Cumbres) en Bayamón. La extensión a la PR-5 conectará las carreteras antes mencionadas, por el sur a la carretera PR-148 y por el norte la PR-5. La extensión propuesta tendrá una longitud aproximada de 5.07 kilómetros y será de cuatro (4) carriles divididos, con control de acceso total, intersecciones a desnivel y plazas de peaje. Al presente, la carretera PR-167 es la vía principal que une los Municipios de Barranquitas, Comerío y Naranjito con el Municipio de Bayamón y el resto del área metropolitana. Esta carretera es sumamente transitada, y cuenta con numerosos semáforos y accesos directos. El proyecto propuesto proveerá además una ruta alterna en dirección norte-sur que conectará las áreas densamente pobladas del Municipio de Bayamón con otras arterias principales como las carreteras PR-199, PR-2, y la PR-22, aliviando de esta manera el tránsito en la carretera PR-167.

JAN 2 7 2022

Para la construcción del propuesto proyecto, será necesario la construcción de seis (6) puentes y movimiento de terreno. Se estima que se extraerán 850,000 metros cúbicos de material de la corteza terrestre de los cuales se utilizarán aproximadamente 670,000 metros cúbicos como relleno dentro del mismo.

Como parte de este proyecto se propone la construcción cuatro (4) estaciones-pórticos de peaje de flujo libre (Open Gantry Toll Type), una (1) en cada rampa en la intersección de la propuesta Carretera PR-5 con la Carretera PR-830 y una en cada dirección en la PR-5. Para cada pórtico de peaje será necesario conexión a facilidades de energía eléctrica. Además, será necesario la instalación de un generador de energía eléctrica en cada uno para casos de emergencia. El mismo tendrá una capacidad estimada de 30 KW y será suplido por combustible Diesel No.2. Se utilizará un tanque de almacenamiento de combustible de 600 galones con su dique de contención secundaria.

El tiempo de construcción del proyecto es de aproximadamente 3 años y será construido por etapas. Actualmente se contemplan dos etapas, una desde la intersección de PR-5 y PR-199 hasta la PR-830, y otra desde la PR-830 hasta la intersección con la PR-167 y conexión con PR-148 en la parte sur del proyecto.

Durante la fase de planificación de este proyecto y discutidas en la Declaración de Impacto Ambiental (DIA) aprobada en el año 2003 e incluidas en la presente DIA se estudiaron cinco diferentes alternativas, además de la alternativa de No Acción para la alineación de la extensión a la carretera PR-5. La ruta preferida para la extensión de la PR-5 es la indicada como 2A. Esta alternativa ocupará un área estimada de 112 cuerdas, impactará 126 estructuras incluyendo 112 residencias y 16 negocios/ instituciones.

La extensión propuesta de la carretera PR-5 requiere la canalización de un nuevo tramo del Río Hondo mediante la colocación de un box culvert de 258.6 metros de largo de dos (2) celdas y la extensión de un box culvert existente de dos celdas a una distancia de 48 metros, lo cual reemplazará 2 tubos existentes de 84 pulgadas de diámetro. El proyecto propone la colocación de un canal de gaviones entre el extremo aguas abajo del box culvert propuesto y el extremo aguas arriba del box culvert extendido en la intersección PR-5 y PR-199 para proporcionar protección contra la erosión al alcance del Río Hondo. Además, una rampa en puente propuesta estará cruzando el canal rectangular de gaviones.

La extensión propuesta de la PR-5 también incluirá un puente de ocho (8) tramos sobre el Río Minillas. Un segmento de la alineación de la carretera propuesta es paralela al Río, pero el puente cruza dos veces este cuerpo de agua. Además, un afluente del Río Minillas se verá afectado por el terraplén de la extensión de la PR-5 a través de una distancia de unos 750 metros y canalizado mediante un box culvert de dos celdas de 2.74 m x 2.13 m y 255 metros de longitud, un canal trapezoidal con un ancho de base de 12 metros y un box culvert de 2 celdas de 2.44 m x 2.13 m y 150 metros de longitud.

Se estima un impacto a 3.53 cuerdas (3.4 acres) a cuerpos de agua o áreas Jurisdiccionales bajo el Cuerpo de Ingenieros del Departamento del Ejército de los Estados Unidos (COE, por sus siglas en inglés)

Las 112 cuerdas de terreno que ocupará el proyecto están ubicadas en los Distritos DT-G (48%), R-I (47%), y VIAL (5%) de Calificación y en Zonas AE (43.1%) X (30%), y 0.2PCT (26.9%) de Inundabilidad.

JAN 2 7 2022

Tomando en consideración que la consulta de ubicación y de construcción sea aprobada, que las agencias pertinentes autoricen la acción propuesta, y de acuerdo a la información sometida en la REA del borrador de la DIA, el DRNA emite las siguientes recomendaciones:

1. Los comentarios y recomendaciones son de aplicabilidad al proyecto propuesto, siempre y cuando el mismo haya obtenido las autorizaciones o permisos o usos autorizados requeridos para su ubicación, construcción u operación, lo que corresponda; incluyendo el de áreas inundables.

2. La REA del borrador de la DIA se somete ante la OGPe según lo dispuesto en la Regla 116 del RPEA, como parte del procedimiento requerido para la acción propuesta y la misma es circulada a las agencias con inherencia que la OGPe estime pertinente. Según dicho Reglamento, la DIA que finalmente se someta ante la OGPe, deberá:

a. Presentar la información requerida por el DRNA, conforme a lo expresado en nuestra comunicación del 26 de enero de 2022.

b. Cumplir con la Regla 118 en cuanto a formato y con la Regla 123 (lo que determine la OGPe), en cuanto a contenido.

3. Previo a realizar las actividades de demolición propuestas, deberán verificar la existencia de material con contenido de asbesto o pintura con base de plomo. De confirmarse la existencia de dichos materiales y en cumplimiento con el Reglamento Núm. 7308 del 1 de marzo de 2007, conocido como el "Reglamento para el Trámite de Permisos Generales" deberán someter Un Permiso General: (a) para actividades de Mitigación de Pintura con Base de Plomo y (b) para el Manejo de Materiales con contenido de asbesto.

4. Deberá cumplir con las disposiciones de la Regla 3.4.1 ("Permiso Único Incidental Operacional"), la Sección 5.1.9.3 ("Manejo de Aguas Pluviales") y la Sección 5.1.9.4 ("Obras Pluviales") del Reglamento Conjunto de Permisos de 2020, Reglamento Conjunto para la Evaluación y Expedición de Permisos Relacionados al Desarrollo, Uso de Terrenos y Operación de Negocios (Reglamento Núm. 9233 del 2 de diciembre de 2020, con vigencia del 2 de enero de 2021, adoptado por la Junta de Planificación mediante la Resolución JP-RP-39, del 1 de diciembre de 2020).

5. Se deberá establecer un programa de reforestación utilizando especies nativas que además de ayudar a minimizar la erosión beneficien la vida silvestre. Esta medida es cónsona con la Ley para Fomentar la Siembra de Árboles Cuyas Frutas y/o Semillas Provean Alimento a Especies de Aves Silvestres de Puerto Rico (Ley Núm. 97 de 24 de junio de 1998), la cual establece lo siguiente: "En todo proyecto de reforestación en que se utilicen fondos públicos o privados, o en una combinación de estos, un 15% en las áreas rurales y un 10% en las áreas urbanas del total de árboles a ser sembrados, serán de especies cuyas frutas y/o semillas sirvan de alimento a las aves silvestres que residan temporal o permanentemente en ésta".

6. Obtener los correspondientes permisos del Cuerpo de Ingenieros del Departamento del Ejército de los Estados Unidos (COE, por sus siglas en inglés) conforme a la Sección 10 de la Ley de Ríos y Puertos del 1899, y la Sección 404 de la Ley Federal de Agua Limpia (Clean Water Act). Esto incluye obtener del Área de Calidad de Agua del DRNA un Certificado de Calidad de Agua, según los reglamentos y leyes aplicables.

JAN 2 7 2022

7. Para la descarga de escorrentías a los cuerpos de agua, durante la construcción, se deberá obtener de la Agencia Federal de Protección Ambiental (EPA, por sus siglas en inglés) el correspondiente permiso bajo el Sistema Nacional de Eliminación de Descargas de Contaminantes (NPDES, por sus siglas en inglés) conforme a la Sección 402 de la Ley Federal de Agua Limpia. Esto incluye obtener del Área de Calidad de Agua del DRNA un Certificado de Calidad de Agua, según los reglamentos y leyes aplicables.

8. Tomar todas las medidas necesarias para que se cumpla con los estándares de calidad de agua aplicables.

9. En aquellos lugares donde vehículos o equipos pesados crucen cuerpos de agua, deberán tomar las medidas de control para evitar efectos dañinos a los cauces de dichos cuerpos de agua.

10. Cumplir con el Reglamento Núm. 8786 del 9 de agosto de 2016, conocido como el "Reglamento para el Control y la Prevención de la Contaminación Lumínica" en lo relacionado a fuentes emisoras de iluminación exterior y demás requisitos aplicables al proyecto que disponga dicho reglamento.

11. Mantener los camiones de carga que se utilicen para transportar rocas, material extraído o desechos cubiertos con toldos, mientras estén en movimiento para evitar generación de emisiones de particulado y utilizar asperjadores de agua y camión tanque para minimizar las emisiones.

12. Humedecer las vías de acceso y rodaje internas del proyecto y las estibas de material extraído, así como la instalación y operación de asperjadores para controlar el polvo fugitivo en la salida del proyecto.

13. Tomar las medidas necesarias para controlar el área de operación y evitar exponer a los vehículos a recoger lodo, sedimentos, sustancias pegajosas o material viscoso o extraño en las ruedas u otras partes del vehículo, los cuales a su vez puedan ser depositados en las calles o sitio público.

14. Tomar las medidas necesarias para evitar que residuos de sustancias orgánicas e inorgánicas como aceites, combustibles u otras sustancias químicas generadas durante las actividades de construcción, dragado y mantenimiento de equipos, puedan ser arrastradas por la escorrentía a: Ríos Hondo y Minillas, Quebrada Rivera; y quebradas sin nombre tributarias de los Ríos Hondo y Minillas.

15. Los camiones de acarreo que se utilicen para transportar las rocas o cualquier material extraído o desechos, deberán contar con el Permiso para Operar Servicios de Recolección o Transportación de Desperdicios Sólidos No Peligrosos (Permiso DS-1) emitido por esta Junta, para transportarlos hasta una instalación de disposición final o de reciclaje.

16. Para las actividades de almacenaje de rocas o de cualquier material extraído o desechos, se deberá:

a. Someter un Permiso para Operar una Instalación para Desperdicios Sólidos No Peligrosos (Forma DS-2) según se requiere en el Reglamento Núm. 5717 del 14 de noviembre de 1997, conocido como el "Reglamento para el Manejo de Desperdicios Sólidos No Peligrosos" (RMDSNP).

b. El almacenamiento de los desperdicios sólidos debe realizarse en cumplimiento con las Reglas 531 (Incisos H, I, J) y 533 del RMDSNP, donde se establece, entre otras disposiciones, que el lugar

no puede convertirse en albergue de vectores que genere problemas de olores objetables y que sea desagradable a la vista.

17. En cuanto a la operación de generador(es) de electricidad para emergencias con capacidad mayor de diez (10) caballos de fuerza y una operación no mayor de quinientas horas al año:

a. Solicitar el Permiso General a través de la Oficina de Gerencia de Permisos (OGPe) conforme al Reglamento Núm. 7308 del 1 de marzo de 2007, conocido como el "Reglamento para el Trámite de Permisos Generales".

b. Será(n) únicamente utilizado(s) para proveer energía cuando el sistema de energía primario sea interrumpido durante eventos de emergencias.

c. Controlar los olores objetables que puedan afectar la atmósfera comunal.

d. Someter al Área de Calidad de Agua un Plan de Emergencia, reflejando las acciones a tomar para evitar, controlar y remediar derrames del combustible diésel, a tenor con la Regla 1306.5 del Reglamento Núm. 9079 del 26 de abril de 2019, conocido como el "Reglamento de Estándares de Calidad de Agua de Puerto Rico".

18. En lo relacionado al nivel de sonido máximo permitido, cumplir con el Reglamento Núm. 8019 del 9 de mayo de 2011, conocido como el "Reglamento para el Control de la Contaminación por Ruido".

19. El almacenaje, manejo y disposición de los desperdicios sólidos no peligrosos, debe realizarse en conformidad con lo dispuesto en el RMDSNP.

20. De hacer uso de generador(es) temporero(s) durante la fase de construcción, se deberá obtener los correspondientes permisos del DRNA, conforme al Reglamento Núm. 5300 del 28 de agosto de 1995, conocido como el "Reglamento para el Control de la Contaminación Atmosférica".

21. Cumplir con los requerimientos de las agencias estatales y federales concernientes (entre ellas el Cuerpo de Ingenieros del Departamento del Ejército de los Estados Unidos (COE, por sus siglas en inglés) y el Servicio Federal de Pesca y Vida Silvestre (USFWS, por sus siglas en inglés) emitidas para el proyecto.

Las recomendaciones presentadas en esta comunicación, no eximen de cumplir con cualquier otro requerimiento o permiso del DRNA, que sean aplicables a la acción propuesta.

Cordialmente,

Ing. Luis Sierra
Secretario Auxiliar
Secretaria Auxiliar de Permisos
Endosos, y Servicios Especializados

ADL/adl

02/01/2022 11:15 AM	gerente.medioambiente@ddec.pr.gov	DRNA El Departamento de Recursos Naturales y Ambientales emite sus comentarios y recomendaciones en carta con fecha de 26 de enero de 2022, caso núm. O-NE-EEA03-SJ-00813-21012022. ADS La División de Medioambiente de la Oficina de Gerencia de Permisos (OGPe, DDEC) refirió por correo electrónico la solicitud de recomendación para el proyecto en referencia. La Autoridad de Carreteras y Transportación (ACT) propone la construcción para una extensión a la carretera PR-5. La misma comenzará en el Km14.9 de la carretera PR-167 en Toa Alta y terminará en la carretera PR-199 (Avenida Las Cumbres) en Bayamón. La extensión a la PR-5 conectará las carreteras antes mencionadas, por el sur a la carretera PR-148 y por el norte la PR-5. La extensión propuesta tendrá una longitud aproximada de 5.07 kilómetros y será de cuatro (4) carriles divididos, con control de acceso total, intersecciones a desnivel y plazas de peaje. Al presente, la carretera PR-167 es la vía principal que une los Municipios de Barranquitas, Comerío y Naranjito con el Municipio de Bayamón y el resto del área metropolitana. Esta carretera es sumamente transitada, y cuenta con numerosos semáforos y accesos directos. El proyecto propuesto proveerá además una ruta alterna en dirección norte-sur que conectará las áreas densamente pobladas del Municipio de Bayamón con otras arterias principales como las carreteras PR-199, PR-2, y la PR-22, aliviando de esta manera el tránsito en la carretera PR-167. Además, como parte del proyecto se llevará a cabo la adquisición de unas 126 propiedades (110 residencias y 16 negocios/instituciones) con realojo en las 110 viviendas. Para la construcción del propuesto proyecto, será necesario la construcción de seis (6) puentes y movimiento de terreno. Se estima que se extraerán 850,000 metros cúbicos de material de la corteza terrestre de los cuales se utilizarán aproximadamente 670,000 metros cúbicos como relleno dentro del mismo y el sobrante será transportado en camiones cubiertos con toldos de lona en un área designada debidamente autorizada. Adicional, se propone la construcción cuatro (4) estaciones-pórticos de peaje de flujo libre (Open Gantry Toll Type), una (1) en cada rampa en la intersección de la propuesta Carretera PR-5 con la Carretera PR-830 y una en cada dirección en la PR-5. Para cada pórtico de peaje será necesario conexión a facilidades de energía eléctrica. Además, será necesario la instalación de un generador de energía eléctrica en cada uno para casos de emergencia. El mismo tendrá una capacidad estimada de 30 KW y será suplido por combustible Diesel No.2. Se utilizará un tanque de almacenamiento de combustible de 600 galones con su dique de contención secundaria Este desarrollo localiza en la Carretera PR-5 desde la Intersección con PR-199 hasta PR-167 Km 14.9 en el Municipio de Añasco. La Autoridad de Desperdicios Sólidos (ADS) consolidada con el Departamento de Recursos Naturales y Ambientales (DRNA) emite sus comentarios al proyecto propuesto basados en leyes y reglamentos vigentes promulgados por la antigua ADS ahora DRNA. Las recomendaciones son de aplicabilidad al proyecto propuesto de este obtener la autorización y permisos requeridos para su ubicación y desarrollo. El proponente cumplirá con las regulaciones relacionadas con el manejo y disposición de los desperdicios sólidos y los materiales reciclables y deberá incorporar en el proyecto propuesto las recomendaciones que se especifican adelante: 1. Ley Núm. 70 - 1992, Ley para la Reducción y Reciclaje de los Desperdicios Sólidos, según enmendada, establece el desarrollo e implantación de estrategias económicamente viables y ambientalmente seguras que resulten en la disminución del volumen de desperdicios sólidos que requerirá disposición final. Como parte de estas estrategias, se considera necesario modificar las prácticas de manejo y disposición existentes para reducir la intensidad de uso de los Sistemas de Relleno Sanitario (SRS) del país. 2. Reglamento para la Reducción, Reutilización y Reciclaje de Desperdicios Sólidos (Reglamento Núm. 6825 del 2004), según enmendado. Establecido a tenor con la Ley Número 70 – 1992. a. Desarrollar e implantar reglas y requisitos para establecer estrategias que disminuyan el volumen, cantidad y peligrosidad de los residuos sólidos que requerirán disposición final y propiciar su viabilidad económica y ambiental. 3. Reglamento Conjunto para la evaluación y expedición de permisos relacionados al desarrollo, uso de terrenos y operación de negocios (Reglamento Conjunto). a. Todo desarrollo propuesto deberá cumplir con las disposiciones bajo las Secciones 3.2.1.1 y 3.2.1.2, Regla 3.2.1 Permisos de Construcción, Capítulo 3.2 Edificación y Conservación de energía; Capitulo 3.4 Permisos de Medioambiente, Regla 3.4.1 Permiso único incidental operacional, Capitulo 3.6 Permisos generales del Tomo III Permisos para el desarrollo y negocios del Reglamento Conjunto, según aplique. b. Para la fase de construcción, el proponente/desarrollador deberá cumplir con lo siguiente (según aplique): i. Para los proyectos en los cuales no se emplee más de 10 personas, el desarrollador, proponente o contratista solicitará una Exención para la radicación del Formulario del Plan de Reciclaje para la fase de construcción. Esta solicitud para la exención del Plan de Reciclaje puede hacerla en Formularios en línea a través de la página de DRNA. ii. Para los proyectos que empleen más de 10 personas deberá radicar el Formulario del Plan de Reciclaje para la fase de Construcción, junto a un Memorial Explicativo. El Plan de Reciclaje puede radicarlo a través de la dirección electrónica construccion@ads.pr.gov iii. En caso de demoliciones, deberán radicar el Plan e indicar la cantidad de escombros de construcción a generarse en el proyecto que incluya alternativas para el manejo (reciclaje, reúso) y disposición. c. Se recomienda que todo desarrollo propuesto promueva la recuperación de materiales reciclables y el manejo y disposición tanto de los reciclables como de los desperdicios sólidos sea el adecuado 4. Indicar la entidad responsable (municipio o compañía privada) del recogido y disposición de los desperdicios sólidos y los materiales reciclables. 5. El proponente/desarrollador/contratista del proyecto será responsable de cumplimentar las Leyes y Reglamentos antes mencionadas. 6. Cumplirá con los permisos requeridos bajo las leyes y reglamentos vigentes. Además, de la documentación requerida por las agencias concernidas. Las recomendaciones emitidas aplican a los hechos presentados y evaluados al momento. La ADS consolidada con DRNA se reserva el derecho de reevaluar y modificar los mismos en el caso de surgir información oficial que identifique que las condiciones han cambiado, o cuando los comentarios hayan sido emitidos bajo premisas falsas. Además, la ADS consolidada con DRNA tiene la facultad de solicitar cualquier información adicional que entienda pertinente y que, de conformidad con las leyes y reglamentaciones vigentes, garantice el interés público y la protección del ambiente.

GOBIERNO DE PUERTO RICO
INSTITUTO DE CULTURA PUERTORRIQUEÑA
Directora | Arqla. Nancy R. Santiago Capetillo, Ph. D.

27 de enero de 2022

ACTUALIZACIÓN DE AUTORIZACIÓN

Ing. Gabriel Hernández Rodríguez
Secretario Auxiliar
Departamento de Desarrollo Económico y Comercio
Oficina de Gerencia de Permisos
PO Box 41118
San Juan, Puerto Rico 00940

PROYECTO: EXTENSIÓN DE LA CARRETERA ESTATAL PR-5
DIRECCIÓN: DESDE PR-167 HASTA PR-199, BAYAMON (AC-000533)
OGPE #: 2021-403771-REA-007743
ICP PAE#: BA-21-277

Estimados señores:

El **Programa de Arqueología y Etnohistoria** del Instituto de Cultura Puertorriqueña ha evaluado los documentos relacionados al proyecto de referencia recibidos a través de la Oficina de Gerencia de Permisos.

Nuestros registros evidencian que, con fecha del **21 de octubre del 2021**, el Programa de Arqueología y Etnohistoria emitió una autorización al mismo. La evaluación realizada sugiere que, basado en los datos existentes al presente, las probabilidades de impactar un recurso arqueológico, según definido por la Ley 112 del 20 de julio de 1988, según enmendada, son mínimas.

Por lo antes expuesto, en lo concerniente a recursos culturales de naturaleza arqueológica, no tenemos objeción al proyecto según fue radicado y evaluado y **actualizamos nuestra autorización.**

Le notificamos nuevamente que esta autorización es de tipo parcial y que el proponente queda sujeto a las responsabilidades y obligaciones que impone la Ley 112 del 20 de julio de 1988, según enmendada. Esta establece que, **se deberá paralizar todo tipo de actividad de excavación, movimiento y remoción de la corteza terrestre, y notificar en un plazo de veinticuatro (24) horas al Consejo de Arqueología Terrestre, en caso de que, durante el desarrollo del proyecto, se descubra o impacte algún deposito, elemento, estructura o vestigio de naturaleza arqueológica.**

Se le apercibe que el incumplimiento de estos requerimientos podrá ser objeto de sanciones administrativas según lo establecido en las citadas leyes.

Esta autorización tiene **vigencia de (1) año.**

Cordialmente,

Arqla. Nancy R. Santiago Capetillo Ph.D.
Directora
Programa de Arqueología y Etnohistoria

Estimado ingeniero Hernández-Rodríguez:

AAA-RM-22-11-0001 BAYAMÓN – AC-000533 EXTENSIÓN PR-5 DESDE INT PR-199 HASTA PR-167
OGPE: 2021-403771-SRI-051252
(RECOMENDACIONES)

Nos referimos al proyecto de epígrafe, sometido ante la consideración de la Autoridad de Acueductos y Alcantarillados (AAA) para que se informe en cuanto a las facilidades de agua y alcantarillado sanitario existentes, que puedan verse impactadas por las obras propuestas. De acuerdo con el memorial explicativo presentado por el Ing. José A. Carro Miranda (Licencia 12676 PE), la Autoridad de Carreteras y Transportación propone la construcción de la extensión a la carretera PR-5, una longitud aproximada de 5.1 kilómetros y continuará conectándose por el norte la carretera PR-199 en la intersección con la carretera PR-5, y por el sur a la carretera PR-167 en el kilómetro 14.8.

Se incluye como anejo a esta comunicación unas figuras del GIS preparadas en la Oficina de Planificación de Infraestructura donde se sobrepone la alineación del proyecto sobre los sistemas de agua potable y alcantarillado sanitario de la AAA.

Es importante resaltar, que en todo momento se deberá mantener la integridad y funcionamiento de las tuberías existentes, para que no sean afectados los servicios de los residentes o abonados de esta Autoridad, y procurar no invadir ni construir ninguna estructura o monumento sobre infraestructura de esta Autoridad.

Esta Autoridad no tiene objeción a que se relocalice o reemplacen las tuberías y/o cualquier otra infraestructura de la AAA que pueda verse impactada como producto del proyecto propuesto. Sin embargo, es sumamente importante considerar lo siguiente, según aplique:

1. Los trabajos de relocalización o remplazo de las líneas, se deberán diseñar conforme a las Normas de Diseño de la AAA, y los planos deben ser presentados para aprobación de esta Autoridad.
2. Se recomienda que el proponente coordine, a través de la Oficina de Proyectos Públicos y Privados (PPP) – Región Metro, una visita al campo con personal del Área de Operaciones de la AAA, para que se aclare cualquier duda adicional sobre la infraestructura existente y así pueda identificarse en el plano a someter.

3. Cualquier cambio de alineación o relocalización de infraestructura será responsabilidad del dueño del proyecto y esto será sin costo alguno para la AAA, pero a satisfacción de la misma.
4. Si el proyecto contempla cambios de estructura geométrica de la calle, se le requiere que proteja la integridad de toda la infraestructura existente de la AAA. De impactar infraestructura, esta tendrá que ser restaurada a una condición igual o mejor a la existente, sin costo alguno para la AAA.
5. De ser necesario, debe presentar un plan de desvío para mantener el servicio de agua y alcantarillado sanitario sin interrupciones o al mínimo posible.
6. Si los trabajos de trincheras impactan alguna de las tuberías, provocando una interrupción de servicio constante, deberá presentar una tubería alterna provisional para mitigar tal situación hasta que se instale la tubería final.
7. De existir conexiones temporeras o arreglos de rotura, como resultado de la construcción, deberá coordinar las mismas con el Área de Operaciones de Bayamón, a través de la Oficina de Proyectos Públicos y Privados (PPP) – Región Metro.
8. Deberá coordinar la excavación a través de la oficina de Coordinación de Excavaciones adscrita a la Comisión de Servicio Público, para el marcado de las tuberías existentes a fin de evitar roturas o interrupción del servicio durante la construcción.
9. Las interconexiones principales y trabajos que impacten las líneas de servicio en operación de la AAA deberán ser realizados en coordinación con el Área de Operaciones, a través de la Oficina de Proyectos Públicos y Privados (PPP) – Región Metro.

Antes de iniciar el proceso de construcción, deberán someter para aprobación de esta Autoridad, los planos de las obras de acueducto y/o alcantarillado, los cuales deberán estar sellados y firmados por el profesional responsable de los mismos. Estos incluyen, según aplique al caso, planos que contemplen:

- Sistemas de distribución de agua y de alcantarillado sanitario y su conexión a los sistemas de la AAA.
- Relocalización o extensión de obras de acueducto y/o alcantarillado
- Obras Extramuros e Instalaciones para ser transferidas a la AAA para su operación

Deberá cumplirse con los requisitos establecidos en el *Reglamento Conjunto de Permisos para Obras de Construcción y Usos de Terrenos.* Los planos deberán ser sometidos y aprobados por esta Autoridad, de acuerdo al Reglamento para la Certificación de Planos de Construcción, antes de proceder con la construcción de las obras.

El desarrollador someterá los planos del proyecto a escala, orientado al norte y en formato DWG o DXF y en PDF. Éste tiene que incluir un polígono (área) de la extensión territorial del proyecto georeferenciado al sistema de coordenadas North American Datum del 1983 (NAD 83). Además, tiene que indicar si la unidad de medida utilizada es en pies o metros y la revisión del NAD 83 que utilizó.

Al someter el plano final para aprobación, se deberá cumplir también con los siguientes requisitos:

1. Someter los documentos de certificación del ingeniero o arquitecto debidamente cumplimentados
    a. AAA-972 (Solicitud de Aprobación de Planos de Construcción)
    b. AAA-1294 (Certificación de Ingeniero o Arquitecto)
2. Someter un estimado desglosado y por partida de las obras de acueducto y/o alcantarillado a instalarse en el proyecto.

Estas recomendaciones estarán vigentes por el término de dos (2) años, a partir de la fecha de esta comunicación, al cabo del cual, de no haberse sometido planos de construcción de las obras de acueducto y alcantarillado sanitario, el proyecto deberá someterse nuevamente ante la consideración de esta Autoridad.

Cordialmente,

Ing. Ruth D. Díaz Meléndez
Directora Auxiliar Senior
Proyectos Públicos y Privados

Estimada ingeniera Romero:

Estudio Hidrológico-Hidráulico
Extensión PR-5
Desde PR-167 a PR-199
Bayamón

O-HH-EJP07-SJ-01118-12112021
AC-000533

El Departamento de Recursos Naturales y Ambientales (DRNA) evaluó el estudio hidrológico-hidráulico (HH) de referencia preparado por el Ing. José A. Carro en octubre de 2021. El mismo fue presentado ante la consideración del DRNA en noviembre de 2021.

De la evaluación surge que el profesional que preparó el estudio HH deberá presentar o aclarar, según corresponda, lo siguiente:

- Las condiciones hidrológicas existentes fueron modeladas utilizando el programa HEC-HMS. En el caso del Río Hondo se indica en el estudio que se dividió en 7 subcuencas, de las cuales el modelo solo incluye 6. Además, según se aprecia en el modelo solo 4 se unen al punto de interés. Las subcuencas Rio Hondo 2 y Rio Hondo 3 no se conectan aguas abajo con el punto de interés, por lo que el modelo no representa la realidad de la cuenca modelada. Para el Río Minillas se dividió en 6 subcuencas. Las mismas se modelaron independientes y no para representar la convolución de los 6 hidrogramas en el punto de interés. En el estudio se realizó una sumatoria aritmética de los flujos picos resultantes de cada cuenca, lo que no es correcto. Deberá cotejar y realizar los cambios que correspondan.

- Las condiciones hidráulicas existentes y propuestas se simularon utilizando el programa HEC-RAS. En el modelo del Río Hondo se utilizó el flujo pico de la convolución de 4 subcuencas, dejando fuera 2 subcuencas. Para el Río Minillas se hizo una sumatoria de los picos individuales de las subcuencas y no se tomó en cuenta la convolución de éstas. Se utilizaron distintas distribuciones y

20 de enero de 2022

duraciones por subcuenca, lo cual no es correcto. Deberá utilizar el caudal pico mayor que produzca la convolución de hidrogramas entre todos los eventos simulados.

- Deberá incluir una descripción más detallada de la obra propuesta como parte del escrito del estudio que incluya su extensión, dimensiones, ubicación y cómo se representa en los modelos.

- Deberá incluir las fotos de la visita de campo.

Se le conceden treinta (30) días calendario contados a partir de la fecha de esta notificación para presentar la información solicitada directamente a la Oficina de Secretaría. De no recibir la misma en el periodo de tiempo otorgado, se entenderá que no mantiene interés en la tramitación de su caso y procederemos a archivar su solicitud. No obstante, de confrontar alguna limitación para cumplir con este término, deberá mantener informado al DRNA y solicitar tiempo adicional.

Estimada Sra. Romero Ramírez:

Hacemos referencia a carta de comentarios fechada **20 de enero de 2022** (ver copia adjunta) emitida por el Departamento de Recursos Naturales (DRNA). La misma es en respuesta al documento sometido al DRNA el pasado mes de **noviembre de 2021.**

La carta de comentarios que nos ocupa indica que aún cuando en la documentación sometida en **octubre de 2021** se demuestra que la obra propuesta no afecta los niveles de inundación regulatorios (es decir, en cumplimiento con la reglamentación vigente), el DRNA solicitaba, esencialmente, lo siguiente:

> **Comentario#1**: *Las condiciones hidrológicas existentes fueron modeladas utilizando el programa HEC-HMS. En el caso de Río Hondo se indica en el estudio que se dividió en 7 subcuencas, de las cuales el modelo sólo incluye 6. Además, según se aprecia en el modelo, sólo 4 se unen al punto de interés. Las subcuencas Río Hondo 2 y Río Hondo 3 no se conectan aguas abajo con el punto de interés, por lo que el modelo no representa la realidad de la cuenca modelada. Para el Rio Minillas se dividió en 6 subcuencas. Las mismas se modelaron independientes y no para representar la convolución de los 6 hidrogramas en el punto de interés. En el estudio se realizó una sumatoria aritmética de los flujos picos resultantes de cada cuenca, lo que no es correcto. Deberá cotejar y realizar los cambios que correspondan.*
>
> **Respuesta**: De acuerdo con la primera parte del comentario, para el caso de Río Hondo, se reevaluó la división de las subcuencas; tanto en el estudio como en el modelo se consideraron un total de 6 subcuencas: *Rio Hondo 1A, Rio Hondo 1B, Rio Hondo 3, Residential Area El Cortijo, Padre Rufo School* y *PR-5 and PR-199 Intersection*. Así mismo, la reevaluación del modelo incluye la unión de las

1509 F.D. ROOSEVELT AVE. GUAYNABO, PR 00968-2612
PO BOX 11490 SAN JUAN, PR 00922-1490

T 787.792.1509
cmapr.com

CMA

subcuencas en sus respectivos puntos de interés con el fin de representar la realidad de la cuenca modelada. Por otro lado, la segunda parte del comentario hace las mismas observaciones con respecto al Río Minillas. La reevaluación del modelo de Rio Minillas incluyó la unión de las seis subcuencas (*Minillas 1, Minillas 2A, Minillas 2B, Minillas 3, Minillas 4* y *Minillas 5*) en varios puntos de interés representando la realidad de la cuenca modelada y la convolución de los 6 hidrogramas.

Con los cambios antes mencionados se utilizaron los flujos correspondientes de la convolución de las subcuencas en los respectivos puntos de interés.

Comentario#2: *Las condiciones hidráulicas existentes y propuestas se simularon utilizando el programa HEC-RAS. En el modelo del Río Hondo se utilizó el flujo pico de la convolución de 4 subcuencas, dejando fuera 2 subcuencas. Para el Río Minillas se hizo una sumatoria de los picos individuales de las subcuencas y no se tomó en cuenta la convolución de éstas. Se utilizaron distintas distribuciones y duraciones por subcuenca, lo cual no es correcto. Deberá utilizar el caudal pico mayor que produzca la convolución de hidrogramas entre todos los eventos simulados.*

Respuesta: La primera parte del comentario fue atendida con las revisiones y correcciones detalladas en el comentario #1; se utilizó el flujo pico de la convolución de las 6 subcuencas de Río Hondo. Por otro lado, la segunda parte del comentario para Río Minillas también fue atendido con las correcciones realizadas en la respuesta al comentario previo.

En el modelo Río Hondo y Río Minillas, se utilizó el caudal pico mayor que produjo la convolución de hidrogramas entre todos los eventos simulados.

Comentario #3: *Deberá incluir una descripción más detallada de la obra propuesta como parte del estudio que incluya su extensión entre todos los eventos simulados.*

Respuesta: La descripción detallada de la obra propuesta se encuentra en el estudio en la ***Sección 2.0*** del estudio H-H.

Comentario #4: *Deberá incluir las fotos de la visita de campo.*

Respuesta: la sección de apéndices anexa en esta carta muestra las fotos de las visitas de campo realizadas.

Las revisiones solicitadas por el DRNA validan, una vez más, los resultados del estudio H-H fechado Octubre 2021. La extensión de la PR-5 desde la PR-167 a la PR-199 no

CMA

tiene un efecto detrimental a la condición pre-desarrollo del área bajo estudio, para ninguna de los escenarios aquí incluidos y los previamente presentados al DRNA.

Junto con esta carta se aneja el estudio H-H revisado para el proyecto en referencia.

Muy respetuosamente solicitamos que endose el estudio HH presentado para la extensión de la PR-5 desde la PR-167 a la PR-199.

De tener alguna pregunta, se puede comunicar con el que suscribe al (787) 792-1509, ext. 2301, o con la Ing. Argelys Monserrate Cid en la ext. 2920.

Agradezco su atención a nuestra solicitud, quedamos de usted.

Cordialmente,

José A. Carro

La Autoridad de Carreteras y Transportación (ACT) recibió carta del Departamento de Recursos Naturales y Ambientales (DRNA) con fecha del 20 de enero de 2022 en relación con el Estudio Hidrológico-Hidráulico (EHH) del proyecto de referencia. En la misma se le pide a la ACT información adicional para continuar con la fase de evaluación. En el informe adjunto se contestan las preguntas del DRNA y se incluyen los modelos digitales HH en un CD.

De necesitar información adicional favor de comunicarse a nuestra oficina a la atención de la Ing. Miriam Romero Ramírez al teléfono 787-721-8787 extensión 51468 o al correo electrónico miromero@dtop.pr.gov.

El Departamento de Recursos Naturales y Ambientales (DRNA) evaluó la Revisión Núm. 3 al estudio hidrológico-hidráulico (HH) de referencia preparada por el Ing. José A. Carro en febrero de 2022. La misma es en respuesta a la carta que emitió el DRNA el 20 de enero de 2022, mediante la cual se le requirió información adicional. De la evaluación surge que el profesional que preparó el estudio HH deberá presentar o aclarar, según corresponda, lo siguiente:

- En el estudio se indica que las obras propuestas no tendrán efectos adversos en la inundabilidad del área. Sin embargo, conforme a los resultados del modelo hidráulico hay aumentos en las elevaciones de la superficie del agua tanto para el Río Minillas (Sección 280) como para el tributario de este Río (Secciones 5000 y 6000). Ante lo expuesto, deberá proveer y documentar la justificación de estos aumentos y cuál sería el efecto de los mismos en los colindantes. Deberá demostrar que la obra propuesta no afecta a terceros.

Se le conceden treinta (30) días calendario contados a partir de la fecha de esta notificación para presentar la información solicitada directamente a la Oficina de Secretaría. De no recibir la misma en el periodo de tiempo otorgado, se entenderá que no mantiene interés en la tramitación de su caso y procederemos a archivar su solicitud. No obstante, de confrontar alguna limitación para cumplir con este término, deberá mantener informado al DRNA y solicitar tiempo adicional.

Re: Extensión Carretera Estatal PR-5, Bayamón
O-HH-EJP7-SJ-01118-12112021
AC-000533

Estimado ingeniero Sierra:

Hacemos referencia a su carta de comentarios del 22 de abril de 2022 referente al Estudio Hidrológico – Hidráulico y su subsecuente revisión (Estudio H/H) presentado para el proyecto de referencia. En la misma solicita se documente la justificación a los aumentos en las elevaciones de la superficie del agua tanto para el Rio Minillas (Sección 280) como ara el tributario de este Río (Secciones 5000 y 6000), y el efecto de estos en los colindantes.

A su solicitud se procedió a reexaminar las estructuras hidráulicas propuestas, así como los efectos, si alguno, en las comunidades colindantes con la servidumbre propuesta (right of way) del proyecto en las áreas cercanas al Río Minillas, Tributario Río Minillas, y Río Hondo, particularmente en las secciones antes señaladas.

Según los resultados de los modelajes realizados y resumidos en las Tablas 11 y 12, *Hydraulic Study Results Río Minillas – 100 years storm y Hydraulic Study Results Río Minillas Unnamed Trbutary – 100 years storm* respectivamente, del Estudio H/H, solo la sección 280 en el Río Minillas y las secciones 5000 y 6000 en el Tributario del Río Minillas reflejan aumentos en el nivel de agua. Los aumentos son:

Cuerpo de Agua	**Sección**	**Nivel de Agua Evento de Inundación 100 años (Metros)**			**Elevaciones (Metros) Terrenos Privados Colindantes***
		Pre-Proyecto	Post-Proyecto	Cambio	
Rio Minillas	280	79.77	80.06	+0.29	90 a 94
Tributario Rio Minillas	5000	96.44	97.24	+0.80	105 a 112
	6000	97.59	98.43	+0.84	

***Ver Planos con topografía y servidumbres (ROW) del proyecto, adjunto.**

1509 F.D. ROOSEVELT AVE. GUAYNABO, PR 00968-2612
PO BOX 11490 SAN JUAN, PR 00922-1490

T 787.792.1509
cmapr.com

El Reglamento de Planificación Número 13 – Reglamento sobre Áreas Especiales de Peligro de Inundación, 9 de enero de 2021 en su sección 7.04 indica:

> *"7.04 - Desarrollos en Terrenos en Zona AE (donde se conoce el Nivel de Inundación Base y no se ha delimitado el Cauce Mayor)*
>
> a. *Para todos los usos se permitirán nuevas construcciones, mejoras sustanciales, u otro tipo de desarrollo (incluyendo relleno), siempre que se demuestre, mediante el Estudio Hidrológico – Hidráulico correspondiente, que el efecto acumulativo del desarrollo propuesto, combinado con otros desarrollos existentes o anticipados no habrá de aumentar la elevación superficial de las aguas de inundación base por más de 0.15 metros (medio (1/2) pie) en cualquier lugar dentro de la comunidad.*
>
> b. *El estudio correspondiente, deberá ser radicado en el DRNA y cumplir con la Sección 7.01 y sus subsecciones.*
>
> c. *Las elevaciones del nivel de piso más bajo para uso residencial en las subsecciones anteriores estarán 0.30 metros (1 pie) por encima del nivel de inundación base."*

Por tanto, a tenor con los resultados del Estudio H-H:

- el efecto acumulativo anticipado de las estructuras hidráulicas propuestas para el proyecto, en la mayoría de las secciones, mantienen o reducen la elevación superficial de las aguas de inundación;

- el efecto acumulativo anticipado de las estructuras hidráulicas propuestas del proyecto para la Sección 280 en el Río Minillas y en las secciones 5000 y 6000 del Tributario del Río Minillas habrá de aumentar la elevación superficial de las aguas de inundación base por más de 0.15 metros (medio (1/2) pie).

- Las comunidades existentes fuera de la servidumbre propuesta y cercanas al Río Minillas en la sección 280 están ubicadas a una elevación entre 90 a 94 metros y la elevación de inundación con el proyecto propuesto es de 80.06 metros. Ver Plano -Figura 10 con topografía y servidumbre propuesta (ROW) del proyecto adjunto.

- Las comunidades existentes fuera de la servidumbre propuesta y cercanas al tributario del Río Minillas están ubicadas a una elevación entre 105 a 112 metros y la elevación de inundación con el proyecto propuesto es de 98.43 metros. Ver Plano – Figura 11 con topografía y servidumbre propuesta (ROW) del proyecto, adjunto.

- Las comunidades existentes fuera de la servidumbre propuesta y cercanas al del Río Hondo, están ubicadas a una elevación de 34.5 a 50 metros y la elevación de inundación con el proyecto propuesto es de 27.73 metros para eventos de 100 años.

Basado en lo antes expuesto se puede concluir que las estructuras hidráulicas propuestas para el proyecto en su mayoría mantienen y/o reducen el nivel superficial de las aguas de inundación. Además, en aquellas áreas donde hay un aumento de niveles, el mismo se mantiene dentro de la servidumbre propuesta (Right of Way) del proyecto. A tales efectos las comunidades adyacentes localizadas cercanas a los cuerpos de agua de los tributarios del Río Minillas, Río Minillas y Río Hondo localizadas fuera de la servidumbre propuesta (Right of Way) del proyecto, en general, se beneficiarán de niveles superficiales de inundación iguales o menores; y en aquellas secciones donde hay aumentos mayores a 0.15 metros, éstas no se verán afectadas, pues éstos se mantienen dentro de sus cauces en la servidumbre del proyecto.

Sin nada más sobre el particular y en espera de su favorable respuesta, quedo,

Atentamente,

Ing. José A Carro Miranda

El Departamento de Recursos Naturales y Ambientales (DRNA) recibió nueva información en contestación a la comunicación emitida el 5 de agosto de 2022, relacionada al proyecto de referencia. La Autoridad de Carreteras y Transportación (ACT) propone la construcción de una extensión a la carretera estatal PR-5. Según el resumen del documento ambiental presentado, la misma comenzará en el kilómetro 14.9 de la carretera estatal PR-167 en Toa Alta y terminará en la PR-199 (Avenida Las Cumbres) en Bayamón. La extensión a la PR-5 conectará las carreteras antes mencionadas, por el sur a la carretera PR-148 y por el norte la PR-5. La extensión propuesta tendrá una longitud aproximada de 5.07 kilómetros y será de cuatro (4) carriles divididos, con control de acceso total, intersecciones a desnivel y plazas de peaje. Para la construcción del propuesto proyecto, será necesario la construcción de seis (6) puentes y movimiento de terreno. Se estima que se extraerán 850,000 metros cúbicos de material de la corteza terrestre de los cuales se utilizarán aproximadamente 670,000 metros cúbicos como relleno dentro del mismo.

Durante la fase de planificación de este proyecto y discutidas en la Declaración de Impacto Ambiental (DIA) aprobada en el año 2003 e incluidas en la presente DIA, se estudiaron cinco diferentes alternativas, además de la alternativa de No Acción para la alineación de la extensión a la carretera PR-5. La ruta preferida para la extensión de la PR-5 es la identificada como 2A. Esta alternativa ocupará un área estimada de 112 cuerdas, impactará 126 estructuras incluyendo 112 residencias y 16 negocios/ instituciones. Se estima en 13,886 metros cuadrados (3.54 cuerdas) el área de impacto a cuerpos de agua.

La extensión propuesta de la carretera PR-5 requiere la canalización de un nuevo tramo del Río Hondo mediante la colocación de un *box culvert* de 258.6 metros de largo de dos (2) celdas y la extensión de un *box culvert* existente de dos celdas a una distancia de 48 metros, lo cual reemplazará 2 tubos existentes de 84 pulgadas de diámetro. El proyecto propone la colocación de un canal de gaviones entre el extremo aguas abajo del *box culvert* propuesto y el extremo aguas arriba del *box culvert* extendido en la intersección PR-5 y PR-199 para proporcionar protección contra la erosión al alcance del Río Hondo. Además, una rampa en puente propuesta estará cruzando el canal rectangular de gaviones.

El proyecto también incluirá un puente de ocho (8) tramos sobre el Río Minillas. Un segmento de la alineación de la carretera propuesta es paralela al Río. Además, una sección del Río Minillas, según identificado en las capas de información del DRNA, se verá afectado por el terraplén de la extensión de la PR-5 y canalizado mediante atarjeas y un canal trapezoidal. Se estarán impactando 13.5 cuerdas de bosques de galería categorizados como Hábitat Natural de Valor Ecológico dentro de los cuales se encuentran 3.53 cuerdas de cauces/hábitats ribereños.

En las comunicaciones del 26 de enero de 2022 y 5 de agosto de 2022, el DRNA requirió se aclararan varios aspectos relacionados a los cuerpos de agua que serían impactados por el proyecto. La ACT no indicaba la cantidad de quebradas sin nombre que serían impactadas por el proyecto ni describía las obras propuestas en las mismas. Tampoco se contestaba o se aclaraba si se estaría impactando y canalizando un tramo del Río Minillas que corresponde al área de su nacimiento según la base de datos del DRNA y no un afluente como se identifica en los planos y se describe en la DIA.

La ACT presentó una comunicación con fecha de 2 de septiembre 2022 en la cual califican como drenajes pluviales los "streams" identificados en los planos CLP01- al CLP09 para impacto: CA-01A, CA-02A, CA-02B, CA-03A, CA-03B, CA-05A y CA-05B. Asimismo, desglosan los trabajos propuestos en los mismos. Indican en la comunicación y citamos: "Los planos del proyecto, CLP01- CLP-09, ilustran áreas de impacto en cauces de drenaje locales estructuras hidráulica (tuberías) para el manejo de sus aguas en eventos de lluvia los cuales no se discuten en el H-H, aunque se toman en consideración para el comportamiento de las aguas en las cuencas hidrográfica evaluadas." Exponen que una vez se tenga el diseño detallado de los drenajes locales, al igual que el de las estructuras mayores se prepararán los correspondientes cómputos pluviales.

Por otro lado, se presentan varios mapas identificando los cuerpos de agua en el área propuesta para impacto y se informa que, según la interpretación de dichos mapas, lo que se estaría canalizando sería un tributario al Río Minillas, y no el Río Minillas o su nacimiento. No obstante, se aclara que dicha canalización ha sido considerada en el H-H y que una vez el DRNA le informe la designación al mismo, estarán revisando el H-H y las secciones correspondientes en la DIA-F.

Sobre los aspectos antes mencionados el DRNA ha determinado lo siguiente:

- El DRNA reconoce como drenajes pluviales los identificados como C01A, C03A y C05B en los planos CLP01 al CLP09. No obstante, los identificados como CA-02A, CA-02B, CA-03B y CA-05A tienen características de cuerpos de agua o quebradas intermitentes. Por lo tanto, estas quebradas intermitentes deberán ser incluidas en el documento ambiental e identificadas en los planos del proyecto. Además, se deberán incluir en el H-H del proyecto. El DRNA considera que toda obra en o sobre un cuerpo de agua que forme parte de un proyecto debe ser estudiada y analizada en un mismo H-H. La fragmentación pudiera retrasar el proceso de evaluación en las etapas de permisos y endosos con implicaciones en elevar los costos por estudios de esta naturaleza para la ACT.

- En relación con la denominación del Río Minillas o tributario, el DRNA considera que dicho tramo es parte del nacimiento del Río Minillas y así debe ser considerado. Por lo que este aspecto deberá ser corregido en la DIA-F y el H-H. Aunque se reconoce que dicho tramo ha sido estudiado y

analizado en el H-H, su denominación es importante para el contenido de la DIA-F y distintos aspectos en el que DRNA debe ser incluido como custodio de este recurso natural. En esta área debido a la colindancia con las urbanizaciones Ciudad Interamericana y Valle de Cerro Gordo, será necesario el mantenimiento a perpetuidad de la obra y demostrar la no afectación a terceros. Esta responsabilidad de la ACT debe estar incluida en la DIA-F.

- Resulta pertinente resaltar que, toda información que se presente ante la consideración del DRNA en las diferentes instancias del proyecto, incluida su descripción y huella de impacto, deberán corresponder en todos sus detalles. La descripción de los trabajos propuestos para el tramo correspondiente a la canalización del Río Minillas presentada en una tabla de la comunicación del 2 de septiembre de 2022, no concuerda con la presentada en la DIA-F y el H-H. En la comunicación se indica que la obra consistiría en dos segmentos tipo *box culverts* de dos celdas de 2.13 m x 2.13 m 137.40 metros lineales y 256 metros lineales, dos segmentos en canalización en tierra de 189.81 y 97.74 metros lineales. Mientras que en el H-H y la DIA-F se describe la obra como una atarjea de 2 celdas de 2.74 m y 2.13 m y 255 m de largo, una atarjea de 2 celdas 2.44 x 2.13 m y 150 m de largo entre las dos atarjeas un canal trapezoidal en tierra con un ancho en la base de 12 m, taludes 2H:1V y 99 m de largo. La comunicación presentada es posterior al H-H preparado para el proyecto, por lo que se deberán aclarar las diferencias en la descripción presentada. Asimismo, el H-H que se evalúe en el DRNA debe considerar desde un principio el análisis de los cuerpos de agua a impactar debido a que es de los resultados del estudio que surgen los parámetros para el diseño de las obras y no a la inversa. Esto responde al hecho de que las dimensiones de estas obras dependen del caudal determinado en el análisis hidrológico, la rugosidad, las condiciones del flujo, los tipos de control del flujo: *inlet* o *outlet* control, entre otros. Con relación a las canalizaciones, en tierra y con gaviones, para su diseño también se tienen que considerar las velocidades, los esfuerzos cortantes permisibles, entre otros parámetros que se analizan en el H-H. Se aclara que el endoso del DRNA al H-H no es necesario para obtener el cumplimiento ambiental del proyecto. Dicho proceso es uno independiente de la evaluación de los impactos y medidas de mitigación propuestas en el proyecto. De hecho, el H-H está más vinculado al trámite de la solicitud conjunta de permiso.

- La consideración de parámetros también aplica para la selección del diámetro de las tuberías propuestas en los drenajes pluviales, independientemente de sus dimensiones. Lo anterior cobra relevancia ya que el proyecto ubicará en zonas residenciales. Estas obras se deberán diseñar luego de realizar los cómputos correspondientes, de los cuales surgirán los diámetros para evitar que estos componentes del proyecto provoquen inundaciones locales y la afectación a terceros por falta de capacidad hidráulica.

- Es importante destacar, que el DRNA no favorece la canalización de cuerpos de agua, la única excepción es para los proyectos de control de inundaciones. Lo anterior en cumplimiento con las disposiciones de la Ley Núm. 49 de 4 de enero de 2003, según enmendada por la Ley Núm. 55 de 22 de enero de 2004. El proyecto propuesto extendería la canalización del Río Hondo y canalizaría un tramo del Río Minillas en su nacimiento. Aunque se reconoce que el Río Hondo ha sido impactado previamente por canalizaciones y que el tramo del Río Minillas igualmente fue previamente impactado en la construcción de las urbanizaciones colindantes, estas áreas se han regenerado y cuentan con valor ecológico e hidrológico. Para el DRNA es de suma importancia la conservación de los cuerpos de agua, los cuales fungen como conectores hidrológicos naturales que garantizan una mejor calidad de agua y minimizan problemas de sedimentación, erosión e inundaciones. Rellenar y canalizar una sección de un Río resulta en la destrucción de los canales naturales, la degradación del hábitat, la fragmentación del hábitat, aceleración del transporte del agua y los contaminantes tóxicos, al igual que reduce los servicios del ecosistema, tales como retención de nutrientes y retención de sedimentos. A largo plazo, esto puede causar gran desestabilización en

el sistema. La canalización puede alterar las dimensiones originales y la forma del cauce, su pendiente y características naturales, convirtiendo un sistema heterogéneo en uno homogéneo. La consecuencia desde el punto de vista del ecosistema es que la diversidad del hábitat se reduce y las cualidades y funciones de las especies que ocupan el sistema se afectan.

Debido a que el proyecto se encuentra todavía en fase de diseño conceptual, el DRNA recomienda que, si existiera la oportunidad de haber cambios en el diseño, se analicen otras alternativas que no incluya la canalización de los Ríos.

Una vez se atienda y corrija lo anterior, el DRNA no tiene objeción con la alineación propuesta del proyecto. Además, se deberá cumplir con lo siguiente:

- Según la descripción del proyecto en la DIA-F, el proyecto comenzaría en el kilómetro 14.9 de la carretera estatal PR-167 en Toa Alta y terminará en la PR-199 (Avenida Las Cumbres) en Bayamón. Sin embargo, según todas las figuras incluidas en la DIA-F y en los documentos presentados, el proyecto comenzaría en Bayamón y terminaría en Toa Alta. Es importante que se atienda y corrija dicha discrepancia en la DIA-F.

- Según la comunicación presentada los elementos considerados fueron desarrollados a nivel conceptual. Por lo tanto, una vez culmine el nivel conceptual y el proyecto se encuentre en una etapa más adelantada de diseño, se deberá presentar un H-H en el DRNA que incluya el análisis de las obras en las quebradas CA-02A, CA-02B, CA-03B y CA-05 y en el Río Minillas y el Río Hondo. Se reconoce que el DRNA tiene ante su consideración un H-H presentado para el proyecto, sin embargo, el mismo no incluye el análisis de las obras propuestas en todos los cuerpos de aguas a impactarse.

- El DRNA emitió una certificación de Categorización de Hábitat el 28 de octubre de 2021 en cumplimiento con la Ley Núm. 241 de 15 de agosto de 1999, según enmendada (Nueva Ley de Vida Silvestre de Puerto Rico) y el Reglamento 6765 (Reglamento para regir la conservación de la Vida Silvestre, las Especies Exóticas y la Caza en el Estado Libre Asociado de Puerto Rico). En la misma se categorizaron 13.5 cuerdas de bosques de galería a impactar como Categoría 4 (Hábitat Natural de Valor Ecológico). De igual forma, el DRNA categorizó el resto de las áreas a impactar como Categoría 5 (Hábitat Natural con Alto Potencial de Convertirse en Hábitat Esencial, Hábitat de Alto Valor Ecológico o Hábitat de Valor Ecológico). En cumplimiento con el Reglamento 6765, la ACT presentó una propuesta para la compensación por las 13.5 cuerdas clasificadas como Categoría 4 mediante la adquisición para cesión al DRNA de un predio de terreno de 35.6 cuerdas ubicado en la Reserva Natural Las Cabachuelas en Morovis. El DRNA aceptó la propuesta en comunicación del 30 de noviembre de 2021. Asimismo, aceptó que este predio se utilice como una mitigación concurrente por el impacto de cortes de árboles.

  A estos efectos, previo a que la ACT realice la subasta y otorgue los contratos de construcción del proyecto, se deberá presentar una copia certificada de la escritura de cesión y traspaso al DRNA del predio y radicar una copia de la minuta de asiento de la presentación de la escritura en el Registro de la Propiedad. A los fines de conocer el procedimiento a seguir para cumplir con las disposiciones del Reglamento Núm. 8816 de 19 de septiembre de 2016 (Reglamento para la Adquisición de Bienes Inmuebles y Derechos Reales del Departamento de Recursos Naturales y Ambientales), puede comunicarse con la División de Bienes Inmuebles al (787) 999-2200 Ext. 2505 o 2500.

- Implementar todo tipo de medidas disponibles (Plan CES, el "Storm Water Pollution Prevention Plan-SWPPP", filtros, pacas de heno, etc.) para el control de sedimentación y escorrentías que puedan afectar los cuerpos de agua cercanos al predio. Se deberán implantar las mejores prácticas posibles (BMPs, por sus siglas en inglés) a ser ejecutadas durante cada etapa del proyecto. Las BMPs son las técnicas (zonas de amortiguamiento, cortinas de retención de sedimento, estanques de detención, surcos, etc.),

programación de actividades, prácticas prohibidas, y procedimientos de mantenimiento para prevenir o reducir las descargas de contaminantes a los cuerpos de agua cercanos que pudieran afectarse durante la construcción. Asimismo, se deberán tomar medidas para evitar que residuos de sustancias orgánicas e inorgánicas tales como: aceite: combustibles y otras sustancias químicas, puedan ser arrastradas por la escorrentía y ganen acceso a los cuerpos de agua o se infiltren en el terreno.

- Secciones de las áreas propuestas para impacto han sido identificadas como Zona A de acuerdo con la Hoja C0710H de los Mapas de Niveles de Inundación Base Recomendados preparados por la Agencia Federal para el Manejo de Emergencias y adoptados por la Junta de Planificación según la Resolución Núm. ABFE-02 del 11 de julio de 2018. A tales efectos, se deberá cumplir con las disposiciones del Reglamento de Planificación Núm. 13 (Reglamento sobre Áreas Especiales de Peligro a Inundación).

- Deberán integrar al DRNA y al Gobierno de Puerto Rico como Asegurados Adicionales en la póliza de Seguro de Responsabilidad Pública y Daños a la Propiedad de la Autoridad de Carreteras y Transportación y de la compañía constructora, endoso que deberá presentarse, previo al comienzo de los trabajos de construcción. Se le apercibe que, además del endoso, dicha póliza deberá contener una declaración de Acuerdo de Exención de Responsabilidad ("Hold Harmless Agreement"), por medio de la cual se releva al DRNA de cualquier reclamación, demanda o acción judicial o extrajudicial, o combinación de las anteriores, que resultare de la realización de la acción propuesta.

- La construcción de los componentes del proyecto que incida sobre cualquier cuerpo de agua deberá llevarse a cabo en seco, bajo condiciones de flujo mínimo del cuerpo de agua, a fin de facilitar la construcción y disminuir los impactos de la turbidez y sedimentación aguas abajo. Se deberá mantener desaguada el área de construcción durante el mínimo tiempo posible. También se deberá asegurar que los flujos inmediatamente aguas abajo del área de construcción sean iguales a los flujos inmediatamente aguas arriba de la misma área.

- Todos los materiales excedentes y escombros de construcción resultantes deberán haberse removido completamente del lugar, una vez completadas las obras. Se deberá disponer de estos materiales y escombros en un sistema de relleno sanitario certificado u otra facilidad aprobada para la disposición final de desperdicios sólidos.

- Bajo ningún concepto los trabajos a llevarse a cabo podrán reducir la sección hidráulica de los cuerpos de agua.

- El diseño del proyecto considerará los desplazamientos naturales del cauce de los cuerpos de agua.

- Los elementos que se instalen para el control del flujo tienen que limitarse a las dimensiones mínimas necesarias para encausar las escorrentías mínimas normales.

- Durante la fase de construcción se utilizarán procedimientos para mantener el flujo de estiaje de los cuerpos de agua y prevenir daños a terceros en caso de lluvias extraordinarias. Una vez terminada la obra, la sección del cauce de los cuerpos de agua en el punto de los cruces, no podrá ser menor al existente previo al proyecto.

- Se deberá evitar que el material producto de la construcción propuesta o escombros permanezcan en los cuerpos de agua (y de estos materiales y escombros haber caído a la columna de agua, se les deberá remover inmediatamente).

En la eventualidad de que se impacten los taludes de los cuerpos de agua, deberá cumplir con lo siguiente:

- Deberán compactar el material de relleno en los taludes y bancos. Además, deberán restituir la capa de top soil y vegetación. Se deberá minimizar el impacto a la vegetación ribereña asociada a los cuerpos de agua.

Además, se deberá cumplir con lo siguiente:

- Deberá cumplir con las disposiciones de la Regla 3.4.1 ("Permiso Único Incidental Operacional"), la Sección 5.1.9.3 ("Manejo de Aguas Pluviales") y la Sección 5.1.9.4 ("Obras Pluviales) del Reglamento Conjunto 2020, Reglamento Conjunto para la Evaluación y Expedición de Permisos Relacionados al Desarrollo, Uso de Terrenos y Operación de Negocios (Reglamento Núm. 9233 del 2 de diciembre de 2020, con vigencia del 2 de enero de 2021, adoptado por la Junta de Planificación mediante la Resolución JP-RP-39, del 1 de diciembre de 2020).

- Las obras propuestas requerirían de un permiso del Cuerpo de Ingenieros por los impactos temporales y permanentes en aguas y terrenos jurisdiccionales. Las obras que presenten deben coincidir con las presentadas en el H-H.

- Una vez completados los trabajos, entre las alternativas a considerar para evitar la erosión y deslizamientos en taludes asociados a cuerpos de agua, la ACT puede incluir la siembra de hileras del pasto vetiver (*Chrysopogon zizanioides*) repetidamente perpendiculares a las pendientes, en taludes, de tal forma que atrape los sedimentos que se transportan pendiente abajo. La siembra de vetiver (Sistema Vetiver) tiene la particularidad de proteger la superficie de las pendientes, así como su estabilidad, incrementando la resistencia a la ruptura. Las siguientes referencias contienen información y recomendaciones para su uso e implementación en proyectos de estabilización de taludes ribereños: -Oahu Resource Conservation and Development Council. 2012. Vetiver Grass Installation Guide. Prepared in cooperation with USDA Natural Resource Conservation Service (NRCS), Pacific Islands Area. Oahu, HI: Oahu Resource Conservation and Development Council. (Véase especialmente las páginas 12–14 de esta referencia.) -Paul Truong, Tran Tan Van, Elise Pinners. 2008. Vetiver System Applications. Technical Reference Manual. Second edition. San Antonio, TX: The Vetiver Network International. (Véase especialmente las páginas 32–36 de esta referencia.)

- Deberá cumplir con las disposiciones del Reglamento para el Control de Contaminación Atmosférica, el Reglamento para el Control de la Contaminación por Ruido, el Reglamento de Estándares de Calidad de Agua, el Reglamento para el Control y la Prevención de la Contaminación Lumínica y el Reglamento para el Manejo de Desperdicios Sólido No Peligrosos, así como obtener los permisos correspondientes relacionados a dichos reglamentos.

- El Banco de Datos Biológicos y de Conservación de Puerto Rico del DRNA no refleja la presencia en el área de especies de particular rareza o de distribución geográfica limitada, o de aquéllas designadas como vulnerables o en peligro de extinción. Sin embargo, según la página "Information for Planning and Consultation" (IPaC) del Servicio Federal de Pesca y Vida Silvestre (USFWS), el área que cubre este proyecto está situada dentro del alcance de la distribución geográfica de la boa de Puerto Rico (*Chilabothrus inornatus*) especie en peligro de extinción a nivel federal y estatal. Por lo que, de encontrarse individuos de dicha especie dentro de la propiedad los mismos deberán ser removidos y reubicados por los biólogos del DRNA o los miembros del Cuerpo de Vigilantes de Recursos Naturales y Ambientales o por biólogos de vida silvestre bajo contrato con la parte proponente por servicios profesionales que cuenten con un permiso federal del *Fish and Wildlife Service*, y que el DRNA haya designado explícitamente como sus agentes para ese propósito. El proceso para la autorización del biólogo se rige por el Reglamento 6766 de 11 de febrero de 2004 (Reglamento para Regir la

25 de octubre de 2022

Conservación y Manejo de las Especies Vulnerables y en Peligro de Extinción en del Estado Libre Asociado de Puerto Rico). Este proceso se lleva a cabo en el DRNA y no en la Oficina de Gerencia de Permisos o a través de ésta. La reubicación de los individuos encontrados deberá producirse no más tarde de las 24 horas (o el próximo día laborable) a partir del momento en el que se informa el hallazgo y, hasta donde sea práctico y viable, los mismos serán reubicados en terrenos cercanos a la propiedad.

- Es de la entera responsabilidad del proponente el obtener y cumplir con cualquier otro permiso o autorización que puedan ser requeridos por otras agencias, autoridades, departamentos, corporaciones públicas o instrumentalidades gubernamentales.

- Se deberá preparar y cumplir con las recomendaciones y especificaciones del Estudio de Suelos que garantice que el proyecto cumpla con los códigos de construcción.

- Se deberá establecer un programa de reforestación utilizando especies nativas que además de ayudar a minimizar la erosión beneficien la vida silvestre. Esta medida es cónsona con la Ley para Fomentar la Siembra de Árboles Cuyas Frutas y/o Semillas Provean Alimento a Especies de Aves Silvestres de Puerto Rico (Ley Núm. 97 de 24 de junio de 1998), la cual establece lo siguiente: "En todo proyecto de reforestación en que se utilicen fondos públicos o privados, o en una combinación de estos, un 15% en las áreas rurales y un 10% en las áreas urbanas del total de árboles a ser sembrados, serán de especies cuyas frutas y/o semillas sirvan de alimento a las aves silvestres que residan temporal o permanentemente en ésta".

- De descubrirse en los predios objeto de desarrollo algún otro cuerpo de agua superficial o subterráneo sea perenne o intermitente, deberá informarlo inmediatamente al DRNA y demás agencias concernidas. No informar hallazgos de este tipo, así como las medidas de mitigación que se implantarán para proteger estos recursos naturales conllevará una revocación automática de la presente comunicación de no-objeción y podrá ser base para acciones legales por parte de DRNA en los foros disponibles.

Este endoso es solamente aplicable a la situación de hechos y los datos según presentados y evaluados en el caso y la Secretaria se reserva el derecho de reevaluar, variar o modificar los mismos en cualquier momento anterior a la emisión del permiso o la acción administrativa correspondiente por parte de la agencia solicitante o proponente cuando surja nueva información oficial específica estableciendo que el derecho aplicable o las condiciones ambientales en el predio han cambiado sustancialmente, o cuando el endoso original se emitió bajo premisas falsas o fraudulentas.

El Departamento de Recursos Naturales y Ambientales (DRNA) recibió la comunicación suscrita por el Ing. Luis E. Rodríguez Rosa de la Autoridad de Carreteras y Transportación (ACT) el 2 de septiembre de 2022. La misma es en respuesta a la carta que emitió el DRNA el 10 de agosto de 2022, mediante la cual se le requirió información adicional. En dicha misiva el DRNA le requirió incluir los cuerpos de agua que serán impactados por el proyecto y que no fueron analizados en el estudio hidrológico-hidráulico (HH). Además, se le requirió que identificaran como Río Minillas el cuerpo de agua que se denomina tributario en el estudio HH.

Resulta que, durante la revisión a la información presentada por la ACT, el DRNA se encontraba evaluando el proyecto mediante el trámite de cumplimiento ambiental a través de la Oficina de Gerencia de Permisos y emitió un endoso condicionado el 25 de octubre de 2022. En dicha carta el DRNA se reafirmó en que el cuerpo de agua identificado como tributario es el Río Minillas. Además, el Departamento distinguió entre lo que se reconoce como drenajes pluviales y las que constituyen quebradas intermitentes. Estas son: CA-02A, CA-02B, CA-03B Y CA-05A. De hecho, el DRNA determinó que estas quebradas intermitentes deben formar parte del estudio HH del proyecto. Es importante indicar que la ACT manifestó en su carta que los elementos considerados en el estudio HH fueron desarrollados a **nivel conceptual**.

Ante lo expuesto, el DRNA ha determinado dejar en suspenso la evaluación del estudio HH hasta que la ACT cuente con un diseño en una etapa más adelantada. Se resalta que la ACT se deberá asegurar que el estudio HH que presente incluya los cuerpos de agua que el DRNA identificó como quebradas intermitentes

en la carta de endoso condicionado. Es de particular importancia que se demuestre que las obras propuestas en estas quebradas tengan la capacidad adecuada para evitar inundaciones locales y afectación a terceros. Asimismo, las obras propuestas en todos los cuerpos de agua deberán coincidir en todos los documentos y planos del proyecto que presenten ante la consideración del DRNA.

Cordialmente,

Listado de documentos a entregar para Estudio HH

Requisitos de presentación:

__X__ Hoja de solicitud cumplimentada en todas sus partes

__X__ Hoja de Certificación de Ingeniero para Estudio HH

__X__ Solicitud de Recomendación de Medioambiente (SRM) del proyecto por parte de la OGPe. No se aceptará Certificación de Cumplimiento Ambiental por Exclusión Categórica

__X__ Copia legible de la licencia profesional del ingeniero que realizó el estudio y de la credencial como miembro activo del CIAPR

__X__ 1 copia del Estudio HH, certificado por el Ingeniero que realizó el estudio, que incluya la siguiente información:

- ✓ Memorial explicativo y fotos del lugar
- ✓ Modelos hidrológicos e hidráulicos en formato digital (disco)
- ✓ Trabajo de campo que incluya las secciones transversales certificado por un agrimensor licenciado o ingeniero licenciado autorizado a ejercer la agrimensura. Deberá incluir la Estampilla Digital Especial (EDE) del Colegio de Ingenieros y Agrimensores de Puerto Rico, copia legible de la licencia profesional y de la credencial como miembro activo del CIAPR
- ✓ Del estudio ser presentado por un grupo profesional que ofrece servicios de ingeniería, el nombre de la firma debe incluir una de estas abreviaciones: C.S.P., P.S.C., C.P. o P.C.

El Departamento de Recursos Naturales y Ambientales verificó que el peticionario cumplió con los requisitos de presentación del Estudio HH en cumplimiento con la Orden Administrativa Núm. 2025-05, ***"Para establecer el tipo de Estudio Hidrológico e Hidráulico que será avalado por el Departamento de Recursos Naturales y Ambientales; y derogar la Orden Administrativa Núm. 2022-04"***

I. INTRODUCTION

The Puerto Rico Highway and Transportation Authority (PRHTA) proposed the planning and schematic design of the PR-5 freeway extension, which will connect highway PR-167 with highway PR-199 (Las Cumbres Avenue) in the Municipality of Bayamon, Puerto Rico. The proposed project consists of approximately 6.11 km of road along the PR-5 centerline, connecting at its south end with highway PR-167 and its north end with the existing PR-5. Several sections of the proposed route will cross some tributary streams and rivers of the region.

Along the proposed PR-5 freeway extension several bridge structures will have to be provided for creek and roadway crossing. The extension road will cross over Rio Hondo, south of the channelized portion and will impact two (2) local drainage systems. In addition, the proposed alignment will impact Rio Minillas at the confluence with an unnamed tributary and this same tributary for a length of approximately 700 meters. The proposed design considers channeling a tributary stream that converges with Rio Hondo and carrying it through a proposed culvert that will take the flow to the existing Rio Hondo Channel. The Rio Minillas crossing will be done through the construction of a bridge.

As part of the Environmental Impact Statement (EIS) compliance process a Hydrological – Hydraulic Study (H-H Study for the proposed conceptual design structures was prepared and submitted to the Department of Natural and Environmental Resources (DNER). The H-H Study was prepared following the Puerto Rico Planning Board (PRPB) and DNER guidelines titled "Guías para la Elaboración de Estudios Hidrológicos-Hidráulicos", (June 15, 2016)[5]. In addition, the study took into consideration the base flood elevations depicted in the new Advisory Base Flood Elevation (ABFE) Maps developed by FEMA in 2018.

Based on the submitted H-H Study, the DNER issued their corresponding conditional endorsement letters by letters dated October 25, 2022, for case O-NE-EEA03-SJ-00813-21012022 regarding the EIS and November 3, 2022, for case O-HH-EJP07-SJ-01118-12112021 regarding the HH Study dated May 2022 (Rev. 4) version.

Afterward and in response to the H-H Study submitted for the advanced construction design for Project Phase 1, the DNER by letter dated March 17, 2025, granted its acceptance and by letter dated May 2, 2025, issued comments to the same. See attached copy of the above referenced letters in **Appendix A**.

1.1 Objective

Due to its complexity and funding the PRHTA has decided to divide the proposed project design and construction into two (2) single, separate and independent phases:

1. **Phase one (1):** Covers the proposed State Road PR-5 extension from Sta. 34+20 to Sta. 65+66, impacting **Río Hondo watershed**. See **Figure 5**.

2. **Phase two (2):** Covers PR-5 extension from Sta. 1+00 to Sta. 34+20. Impacts of the **Río Minillas watershed,** Phase Two (2), will be addressed in a separate and independent report.

The objective of this report is to present the hydrologic-hydraulic results of the Phase One on the flooding levels within the Rio Hondo watershed, determine the required drainage structures for the respective crossings and their compliance with the state and federal flood rules and regulations.

This study was prepared in accordance with PRTHA Roadway Design Criteria, as well as PRPB Regulation No. 13[6], and the PRPB / DNER

guidelines titled "Guías para la Elaboración de Estudios Hidrológicos-Hidráulicos", (June 15, 2016)[5]. Additionally, it addresses the comments issued by the DNER on May 2, 2025.

1.2 Authorization

This Phase-1 Project extension of PR-5 from PR-167 to PR-199 H-H study was performed by CMA Architects & Engineers LLC as requested by the Puerto Rico Highway and Transportation Authority (PRHTA) under **AC-000533** and the DNER. It is also part of the required design engineering studies and approvals needed prior to the construction of the proposed Phase One project.

II. PROJECT DESCRIPTION

2.1 Project Location (Phase 1)

The project Phase 1 begins at the intersection of Santa Juanita Street with State Road PR-5 overpass. At this location a reconfiguration of the access roads and ramps from Santa Juanita Street and the PR-5 overpass are proposed. The State Road PR-5 extension is part of this roadway reconfiguration and crossing over State Roads PR-199 (Las Cumbres Avenue) ramp towards Laredo Street, adjacent to the former public-school Padre Rufo in the Municipality of Bayamon, Puerto Rico. The proposed alignment (that is part of the designated Phase 1 of the project) moves towards the south direction of the referred intersection, passing through the residential community El Cortijo. The Rio Hondo runs in a South to North direction, East of this same developed area. From this location up to State Road PR-830, project area land use covers consists mainly of residential and woods areas. Those developed areas within the mentioned region are: El Pedregal community, Brisas del Atlántico community, Los Cipreses cemetery and Interamerican University.

The remaining portion of the project area that continues south is part of Phase 2 of this project and will be evaluated and discussed in a different and separate report.

The location of the proposed project is shown in **Figure 1**, which partially reproduces the United States Geological Survey (USGS) Topographic Quadrangle of Naranjito[16] and Bayamón[15]. **Figure 2** shows the location of the proposed project over an aerial image of the site and surrounding areas.

2.2 Existing Topography

A topographic survey was performed along the proposed extension route for the PR-5 freeway. Additionally, cross-sections and profiles of Rio Hondo

were prepared as part of this hydrologic and hydraulic study. These surveys were performed by licensed surveyor Antonio Meléndez. For the topographic information please refer to **Appendix *B*** for topographic surveys.

The lowest point of elevation within the Rio Hondo watershed within the project area is situated in the existing Rio Hondo Channel, adjacent to PR-5 and PR-199 intersection, at around 17.97 meters (Refer to **Figure 1**). The highest elevation point within the Rio Hondo watershed for the study area is approximately 153.5 meters and is located just north of the PR-840 and PR-830 intersection.

2.3 Scope

This hydrologic and hydraulic study focuses on Phase 1 of the PR-5 freeway extension from PR-167 to PR-199 in Bayamón. The study includes the analysis and design of hydraulic structures for the Rio Hondo crossing. The study follows the following tasks:

a) Hydrologic analysis of the Rio Hondo watershed, to determine the 2-, 5-, 10-, 25-, 50-,100-, 200- and 500-year recurrence peak flows. This includes field inspections and the review of available information to compute the required hydrologic parameters.

b) Hydraulic modeling of the existing conditions to determine the flood levels for the discharges obtained in Phase a). Topographic surveys of Rio Hondo at the project site were used to create the river cross sections needed for the hydraulic model.

c) Hydraulic modeling of the proposed conditions to determine the flood levels along Rio Hondo for the discharges obtained in Phase a). The flood levels obtained in this phase will be compared with the flood levels obtained in Phase b) to evaluate the performance of the proposed improvements.

To ensure compliance with flood rules and regulations, the roadway drainage for project construction and operation will be addressed in the corresponding Stormwater Drainage Calculation Report, which shall follow and align with the results and recommendations of this study.

III. PRELIMINARY EVALUATION

3.1 Field Inspection

Several field visits were conducted to inspect the project area and determine some of the hydrologic and hydraulic parameters of Rio Hondo watershed. Some of the tasks performed in the inspections included locating infrastructure, documenting area conditions through photographs, and evaluating the roughness coefficients for the existing Rio Hondo channel.

Additionally, a licensed surveyor prepared a topographic plan of the project area including channel cross sections and profiles of the Rio Hondo (as described in **Section 2.2**).

3.2 Previous Studies / Historical Data Collection

Rio Hondo was a tributary of Rio Bayamón before its channelization. Prior to its construction, the USGS (United States Geological Survey) published in 1972 a Hydrologic Investigation Atlas (HA-77) that documented floods in the Bayamón-Cataño Area in Puerto Rico[14]. This document included elevations of floodmarks for historic floods that occurred along the Rio Bayamón from 1945 to 1961. However, although it documents flood levels on the Rio Hondo, these records correspond to a location just upstream of confluence with Cerro Gordo Creek, which is outside the study area.

The construction of the Rio Hondo Channel was finished in 1977. Its construction was based on a Hydrological and Hydraulic study of the Rio Hondo Basin performed in the 60's by the firm Miguel A. Quiñones y Asociados. The design flow for this channel was 12,350 cubic feet per second (cfs). In 1965 the U.S. Army Corps of Engineers (COE), Jacksonville District, completed a Flood Plain Information report for the Rio Bayamón Basin. They also completed a Flood Plain Information report in 1973, which presented residual flood hazards upstream of the Bayamon Express

Channel and Rio Hondo Local Channel. In 1981 FEMA adopted these studies, and it determined a design flow of 19,900 cubic feet per second (cfs) for the PR-2 crossing.

In 1996, CMA Architects and Engineers presented a hydrologic and hydraulic study of Rio Hondo [2] with the purpose of channelizing the river from the south of State Road PR-2 to Las Cumbres Avenue. This study refers to the study performed by Gregory L. Morris & Associates in 1992, where it was established that at the beginning of the project, upstream of PR-2, the water surface elevation for a storm with a 100-year recurrence was 8.11 meters.

The Federal Emergency Management Agency (FEMA) conducts Flood Insurance Studies (FIS) for communities throughout the United States and Puerto Rico to identify areas subject to flooding. These areas are presented in published Flood Insurance Rate Maps (FIRMs). The last published revision to the Rio Hondo Basin is included as part of Volume 1 of the Flood Insurance Study for the Commonwealth of Puerto Rico and Municipalities, dated November 18, 2009[13].

According to the 2009 FIS, the intersection of PR-5 with PR-199 is located within a Zone AE special flood hazard area according to the FEMA Flood Insurance Rate Maps for the project area (Refer to **Figure 3**). A Zone AE is defined as an area subject to inundation by the 1% annual chance flood where base flood elevations were determined. The base flood elevation downstream of the intersection is 25.2 meters. Along the hydraulic reach analysis, it varies downstream from 20.4 to 25 meters at the crossing with Santa Juanita Avenue. Upstream of the intersection, the 2009 FEMA base flood elevations of Rio Hondo vary from 32.0 to 33.00 meters. The FEMA limit of study is located approximately 347 meters to the south of the of PR-199 and PR-5 intersection. Following the proposed road alignment to

the south, the project area is located in a Zone X, which corresponds to areas outside 0.2 percent annual chance floodplain. The FEMA FIRM for the project area is shown on **Figure 3**, which reproduces a portion of the 72000C0710H[12] Panel.

Following the impact of Hurricane María in Puerto Rico on September 20, 2017, the Federal Emergency Management Agency (FEMA), in coordination with the Puerto Rico Planning Board (PRPB), developed maps of flood areas that will present to the public more up to date information on floods. These maps are known as Advisory Base Flood Elevation Maps ("Advisory Maps")[11], which show the recommended base flood levels developed for Puerto Rico, corresponding to the flood of the 1% probability of occurring in a given year. Advisory Maps identify which areas are in new flood zones, as well as the new flood levels that can affect construction practices. **Figure 4** illustrates a partial reproduction of the FEMA Advisory Base Flood Map. As shown in the figure, FEMA has revised the flood hazard map and provided base flood elevations at the intersection of PR-5 with PR-199 of 26.45 meters. Further downstream, the ABFEs vary from 26.41 to 26.43 meters. Even though, the ABFE map only shows an elevation of 32.02 upstream of the intersection, inspection of the hydraulic model used by FEMA to develop the flood maps shows several additional cross sections with base flood elevations up to a base flood elevation of 36.15.

IV. STUDY APPROACH

A hydrologic analysis was conducted to establish the peak discharges for the Rio Hondo. The hydrologic analysis consisted in determining the runoff generated by Rio Hondo watershed for the 500-, 200-, 100-, 50-, 25-, 10-, 5, and 2-year events. These calculated discharges were then used in the hydraulic study to obtain the water surface elevations for these recurrence intervals under both existing and proposed conditions.

The hydrologic analysis was performed with the rainfall-runoff computer model Hydrologic Modeling System, (HEC-HMS Version 4.12, 2024) developed by the Hydrologic Engineering Center of the U.S. Corps of Engineers (USACE) and following the curve number methodology of the U.S. Dept. of Agriculture Natural Resources Conservation Service (formerly SCS) and presented in their National Engineering Handbook [9] and TR-55[10].

4.1 Hydrologic Parameters

As part of the hydrologic analysis, several key parameters were determined as follows:

4.1.1 Basin Areas and Drainage Pattern

The Rio Hondo watershed at the point of analysis covers a total drainage area of approximately 2.77 square kilometers. This drainage area has been divided into seven (7) sub watersheds. These sub watersheds can be categorized by their location relative to the intersection of PR-5 and PR-199 (any differences or deviations from previous catchment area delineations are attributed to the availability and utilization of updated surveyed topographic information and/or data from GIS sources):

4.1.1.1 Subbasins Located Upstream of PR-5 and PR-199 Intersection (Upper Basin).

Among the seven (7) identified sub-watersheds, five (5) are located upstream of the intersection between State Road PR-5 and State Road PR-199. These watersheds are depicted in **Figure 5**, and their location and drainage patterns are described below:

Rio Hondo 1A (WS-RH1 A)

The Rio Hondo main channel flows within this subbasin. It covers moderately to highly urbanized areas. Downstream, Urb. Estancias del Bosque stands out to the east of the Rio Hondo Channel, while the eastern portion of El Cortijo Community lies to the west.

Further upstream the basin borders Urb. El Pedregal, and extends up to the Brisas del Atlántico community.

Rio Hondo 1B (WS-RH1 B)

This subbasin primarily consists of the central portion of El Cortijo Community. The drainage pattern directs flow eastward toward a natural local storm runoff collection area that eventually channels rainwater into the Rio Hondo main channel. This stormwater drainage area corresponds to the area labeled as CA-02A and CA-02B in previous documentation during the Environmental Impact Statement (EIS) compliance process (see **Figure 8**).

The proposed roadway alignment crosses this entire area, and the storm sewer system will collect runoff from El Cortijo Community, discharging it back into Rio Hondo.

Note that detailed stormwater calculations for the proposed system are beyond the scope of this hydrologic-hydraulic study and will be addressed in future project design stages.

Residential Area El Cortijo (WS-El Cortijo)

Located further west within El Cortijo Community, this subbasin is also heavily urbanized. The drainage pattern mainly flows northward, connecting to a local storm sewer system that ultimately discharges into Rio Hondo main channel.

Padre Rufo School (WS-Padre Rufo)

Situated east of the Rio Hondo main channel, this subbasin borders Santa Juanita Community to the east and Calle Laredo to the north (at the intersection of State Road PR-199 and PR-5). Runoff from this area directly drains into the existing twin 84-inches reinforced concrete pipes (see **Figure 6**).

PR-5 and PR199 intersection

This subbasin corresponds to Royal Town urban area. Bordered by State Road PR-199 to the north and State Road PR-840 to the west, its storm sewer system discharges just upstream of the existing twin 84-inch reinforced concrete pipes (located upstream of the State Road PR-199 ramp toward Laredo Street).

4.1.1.2 Subbasins Located Downstream of PR-5 and PR-199 Intersection (Lower Basin).

The existing twin 84-inch reinforced concrete pipes located upstream of the PR-199 ramp towards Laredo Street are connected at their downstream end to a two (2) cell box culvert with a cross section of 3 meters wide and 3 meter high. The box culvert discharges into the existing Rio Hondo Channel. This downstream portion of the Rio Hondo consists of a rectangular concrete channel with the following dimensions: 6 meters wide and 3 meters high. The remaining two (2) sub basins are illustrated in **Figure 5**. They drain toward the existing rectangular concrete channel and are described as follows:

RH-DS_EAST

Corresponds to the Santa Juanita residential area, eventually discharging into the existing Rio Hondo concrete channel.

RH-DS_WEST

At the opposite side of Rio Hondo rectangular concrete channel, this subbasin is conforms by Urb. Francisco Oller residential area

Located on the opposite side of the Rio Hondo rectangular concrete channel, this subbasin is composed of Urb. Franciso Oller.

4.1.2 Curve Number

The curve number (CN) for the Rio Hondo subwatersheds was determined by considering several factors, including soil types, land

use, vegetation type and the Antecedent Moisture Condition (AMC).

The Rio Hondo watershed contains soils belonging to hydrologic soil groups: B, C and D.

The curve number was determined for each land use area within the watersheds considering the hydrologic soil group of the soil and the hydrologic condition of each land use area. An average curve number value was determined by weighing the curve numbers with their land use areas. Curve number computations can be seen on **Appendix C**. The obtained CN values were adjusted applying an AMC index. The CN value obtained was corrected applying an AMC index.

The Antecedent Moisture Condition, AMC, is an index of watershed wetness at the beginning of a storm used with the runoff estimation method. This index will be used to adjust the weighed CN value obtained previously for the watershed. Three (3) levels of AMC can be used: AMC I, AMC II and AMC III. AMC I is the condition where soils are dry, but not to the wilting point, AMC II is the average condition, and AMC III is the condition where heavy rainfall has occurred within the last five days and the soil is saturated. A condition of AMC III was used for this analysis.

4.1.3 Lag Time

Lag time is defined as the time between the center of mass of the effective rainfall hyetograph and the center of mass of the direct runoff hydrograph. The NRCS Unit Hydrograph methodology is included in the HEC-HMS and requires the input of the basin lag time to compute the direct runoff. The equation used to compute

the lag time in this study, was developed by the former SCS as shown:

$$T_{lag} = \frac{L^{0.8}(S+1)^{0.7}}{1900\sqrt{Y}} \qquad \text{(Eq. 4.1)}$$

Where:

T_{lag} : Lag time in hours

L : Hydraulic length of watershed in feet

S : Maximum retention in the watershed in inches as defined by:

$$S = \frac{1000}{\text{CN}} - 10 \qquad \text{(Eq. 4.2)}$$

Y : Watershed slope in percent

CN : NRCS Curve Number for the watershed as defined by the loss method

The lag time and other hydrological parameters for the Rio Hondo subwatersheds can be seen in **Table 1**. They summarize the main hydrologic parameters used to obtain the flow hydrographs generated at each point of analysis. Input parameters used in the HEC-HMS hydrologic model can be seen in **Appendix C**.

Table 1. Main Hydrologic Parameters – Rio Hondo

Basin Name	Area (sq.km)	Curve Number (CN)		Lag Time (min.)
		AMC II	AMC III	
RH-1A	0.8182	81	92	13.21
RH-1B	0.1662	80	91	9.15
RH-El Cortijo	0.5499	85	94	13.65
RH-Padre Rufo School	0.1743	76	89	5.27
RH-In. PR-5 & PR-199	0.1414	92	97	7.57
RH-DS_EAST	0.4581	92	97	13.66
RH-DS_WEST	0.4599	88	96	8.03

4.1.4 Precipitation

The Puerto Rico Planning Board (PRPB) and the Department of Natural and Environmental Resources (DNER) document titled "*Guias para la Elaboración de Estudios HIdrológicos-Hidráulicos*" (June 15, 2016) [5] requires the use of temporal rainfall distributions for the first (1st) quartile (10% percentile) and the fourth (4th) quartile (90% percentile), which represents where the largest volume of rainfall falls at the beginning and the end of the temporal distribution, respectively. The temporal rainfall distributions (hyetographs) were constructed using precipitation depth values for Rio Hondo, for frequencies of 2-, 5-, 10-, 25-, 50-, 100-, 200- and 500-year and durations of 1-, 6-, 12- and 24 hours were obtained for the project area from the NOAA Atlas 14 Volume III[1] for use with the design storm used in the HEC-HMS model. **Table 2** presents the 2-, 5-, 10-, 25-, 50- and 100-, 200- and 500-year rainfall depths used in the analysis for Rio Hondo. The precipitation frequency estimates

and rainfall distribution calculations for the Rio Hondo watershed is shown in **Appendix *D***.

Table 2. Rainfall Duration and Depths from NOAA Atlas 14 for Rio Hondo.

Duration (hours)	Rainfall Depths (inches)							
	2-year	5-year	10-year	25-year	50-year	100-year	200-year	500-year
1	2.07	2.35	2.57	2.83	3.03	3.21	3.40	3.63
6	3.69	4.65	5.40	6.41	7.20	8.01	8.85	9.99
12	4.34	5.72	6.84	8.39	9.66	11.00	12.40	14.30
24	5.07	6.80	8.23	10.20	11.90	13.60	15.50	18.1

4.1.5 Hydrologic Study Results

As per PRBP and DNER guidelines, the highest peak discharge result of the 1st quartile (10% percentile) and 4th quartile (90% percentile) within the storm durations depicted in **Table 2**, for each of the storm events, will be determined for each watershed analyzed.

The summary of the results of the hydrologic analysis of the Rio Hondo watershed for a recurrence interval of 100 years and its corresponding rainfall distribution simulation (highest value) is shown on **Table 3**. The hydrologic model input report for the 500-, 200-, 50-, 25-, 10-, 5- and 2-year events can be found in **Appendix E**. The hydrologic model results for Rio Hondo are in **Appendix F**

Table 3. Hydrology Study Results Rio Hondo – 100 years.

Sub-watershed	Peak Flow (m3/s)	Rainfall Distribution Simulation
RH-1A	27.46	12-hour_10%
RH-1B	6.683	1-hour_90%
RH-El Cortijo	18.998	6-hour_10%
RH-Padre Rufo School	8.819	1-hour_90%
RH-In. PR-5 & PR-199	7.373	1-hour_90%
RH-DS_EAST	16.697	6-hour_10%
RH-DS_WEST	22.895	1-hour_90%
Up Prop Pipes	51.836	6-hour_10%
Junction	57.571	12-hour_10%
Upstream PR-199	63.651	1-hour_90%
D/S Rio Hondo Channel	102.047	1-hour_90%

A peak flow of 51.836 cubic meters per second (1,830.57 cfs) represents the flow that corresponds to the location of the proposed State Road PR-5 East Ramp towards the intersection with Laredo Street. Downstream of this location, the Rio Hondo River receives additional runoff from the RH-Padre Rufo School sub-watershed, resulting in a combined discharge of 57.571 cubic meters per second (2,033.10 cfs). Further downstream, an additional flow of 63.651 cubic meters per second (2,247.81 cfs) is contributed by the area upstream of PR-199 ramp towards Laredo Street, where the existing twin 84-inch reinforced concrete pipes are located. At this location all the runoff from Rio Hondo upper basin will enter the existing drainage structures crossing the PR-199

and PR-5 Intersection. This flow is the result of pluvial discharges from a highly urbanized zone. After entering this system, a total flow of 102.047 cubic meters per second (3,603.76 cfs) is discharged towards the existing Rio Hondo concrete channel.

Finally, the 8.819 cubic meters per second (311.44 cfs) flow from RH Padre Rufo School basin will define existing hydraulic conditions along the Río Hondo Tributary and help assess capacity requirements for the proposed hydraulic structures needed for the PR-5 extension roadway alignment.

V. HYDRAULIC ANALYSIS

The hydraulic analysis for this project integrates the calculated flows in the hydrologic evaluation to determine the water surface elevations for the existing conditions and modeling the proposed drainage structures at the new PR-5 and PR-199 intersection.

5.1 Methodology

The hydraulic model for the Rio Hondo was developed using HEC-RAS v6.5, a software tool created by the U.S. Army Corps of Engineers. The calculated flows from the hydrologic study were used to determine the water surface elevations for both existing and proposed conditions. Hydraulic structures were designed to ensure that the resulting water surface elevations do not exceed existing levels by more than 0.15 meters (in compliance with Puerto Rico Planning Board Regulation No.13) or encroach beyond the project's right-of-way.

The downstream boundary condition used for modeling the Rio Hondo was the Advisory Base Flood Elevation (ABFE) Map water surface elevation of 26.41 meters, approximately 419 meters downstream of State Road PR-199 and PR-5 intersection. Critical depth was used as the upstream boundary condition.

As previously mentioned, a portion of the proposed roadway alignment is located within FEMA's special flood zone area (Zone AE). Since the base flood elevations of the ABFE Map are more restrictive than those of the Flood Insurance Rate Map (FIRM), the existing condition hydraulic model results will be compared to the base flood elevation results from the hydraulic model used by FEMA to develop the ABFE Maps.

5.2 Stream Modeling Cross Sections

To create the hydraulic model for Rio Hondo, cross sections were taken at the project area by the surveyor. Additionally cross sections were

developed from the topographic survey at several locations to better define the hydraulic model.

The existing condition hydraulic model for Rio Hondo incorporates a total of twenty-one (21) cross sections along the stream. **Table 4** provides the numbering schemes and description for both the survey cross sections and the hydraulic model sections (HEC-RAS River Stations) for Río Hondo. The extension of the proposed State Road PR-5 requires the construction of a bridge above State Road PR-199. This bridge will run parallel to the Rio Hondo River reach upstream of the State Road PR-199 ramp, crossing a small waterway that receives runoff from the Padre Rufo School watershed. Since it will be necessary to perform the corresponding scour calculations as part of the foundation design for the proposed bridge, a river junction was incorporated into the hydraulic analysis. **Table 5** shows the numbering scheme and descriptions for the additional cross sections taken from the topographic as-built survey prepared as part of the proposed project to delineate this tributary to the Rio Hondo River.

Figure 7 and **Figure 8** depict the cross-section locations used in the hydraulic model for Rio Hondo.

Table 4. Equivalence Between Surveyed and Model Cross Sections at Rio Hondo

HEC-RAS River Station	Surveyed Cross Section	Description / Comments
600	X9	Surveyed Cross Section

A certified copy of the field survey prepared for this project is included in **Appendix *B*.** This certified field survey includes the location plan and the cross sections profiles.

5.3 Hydraulic Data - Existing Conditions

The existing conditions at the Rio Hondo area, at the intersection of State Road PR-5 and PR-199 are shown on **Figure 6**. As previously mentioned, the Rio Hondo main channel (Watershed RH-1A), flows from south to north through an area of dense vegetation, surrounded by residential developed areas on its overbanks (Refer to **Figure 2** and **Figure 5**). Storm runoff of Watershed RH1-B, which represents a portion of the residential complex El Cortijo, drains eastward toward a strip of land acting as a local storm runoff collector, channeling rainwater into the Rio Hondo main channel. The remaining developed area of El Cortijo drains northward, converging at the existing twin 84-inch reinforced concrete pipes located upstream of the State Road PR-199 ramp toward Laredo Street. Storm runoff from urbanized Watersheds Padre Rufo School and PR-5/PR-199 Intersection also contributes to these 84-in pipes. These pipes have an upstream invert elevation of 21.96 and 22.07 meters and discharge into a two (2) cell 3.0 m x 3.0 m box culvert, which further discharges into the Rio Hondo channel downstream of the PR-199 and PR-5 intersection. The box culvert has a length of approximately 77 meters, with an upstream invert elevation of 21.53 meters and a downstream invert elevation of 20.57 meters. The 84- inch pipes were placed after the installation of the 3 by 3 box culvert.

Manning roughness coefficients ranging from 0.045, 0.12 and 0.15 were used for the channel, 0.06, 0.1 and 0.2 for the overbanks with dense vegetation, and 0.026 for the proposed trapezoidal channel with erosion

control revetment. The hydraulic model for the existing condition is included in **Appendix G**.

5.4 Verification of Existing Condition - Model Results.

As previously mentioned, a portion of the proposed roadway alignment is located within FEMA's special flood zone area (Zone AE). The hydraulic model results for the existing conditions will be compared to the base flood elevation (BFE) results from FEMA's hydraulic model used to develop the Advisory Base Flood Elevation (ABFE) Maps.

FEMA's hydraulic model for the ABFE Maps is identified as 50615221. The portion of the Rio Hondo reach under study is located within FEMA's ABFE model sections 32467.46 and 37198.94. **Table 6** presents FEMA's 100-year flood elevations at the specified cross sections and their corresponding equivalent locations in the existing condition hydraulic model. **Figure 9** illustrates the locations of FEMA's cross section and those used in the existing condition hydraulic model.

Table 6. FEMA'S ABFE Model Cross Sections and 100-year Water Surface Elevation Results

FEMA's HEC-RAS River Station	FEMA's 100-year ABFE	Hydraulic Model Cross Section - Rio Hondo River Analysis
32467.46	26.41	RS-4
32580.74	26.42	RS-6
32706.89	26.42	RS-10
33190.72	26.43	RS-18

36612.07	33.87	
36844.7	34.62	
37198.94	36.15	

The hydraulic model results for the existing conditions, as depicted in **Section 5.3** using the cross sections described in **Table 4,** are shown in **Table 7**. **Table 7** also includes the corresponding 100-year ABFE values.

Table 7. Rio Hondos's Existing Condition Hydraulic Model Results Comparison to ABFE Model Results – 100-year Storm Event

Section No.	Water Surface Elevation (m)	
	Existing Conditions	ABFE Model Results
600	37.48	
500	32.06	32.11
400	31.92	32.03
350	31.88	32.02
300	31.86	
200	31.85	
150	31.85	
100	31.77	31.78
Existing Pipe	-	
75	27.46	
Existing Culvert	-	
50	26.34	26.44
25	26.38	
20	26.39	
18	26.40	26.43
16	26.41	
14	26.41	
12	26.39	

Section No.	Water Surface Elevation (m)	
	Existing Conditions	ABFE Model Results
10	26.43	26.42
8	26.45	
Existing Bridge	-	
6	26.46	26.42
4	26.41	26.41

Evaluation of **Table 7** shows that the 100-year water surface elevations for the existing conditions are within acceptable range when compared to the FEMA's advisory base flood elevation (ABFE) values. Specifically, all hydraulic model existing results match the ABFE Model values for the 100-year storm event within a ±0.15-meter difference.

Figure 10 illustrates the schematic profile of the studied Rio Hondo River reach, showing both the surveyed riverbed profile and the ABFE riverbed profile taken from the ABFE HEC-RAS model. The figure also depicts the 100-year water surface elevation for both conditions.

It should be noted that the ABFE model reach did not consider the existing bridge at Santa Juanita Ave. nor the existing PR-5 and PR-199 intersection and the associated hydraulic structures. Instead, the ABFE bed profile shows higher elevations (bumps) at these locations. Despite these discrepancies, it was possible to calibrate the hydraulic model results to align with the ABFE model results.

5.5 Hydraulic Data - Proposed Condition

The extension of State Road PR-5 will primarily involve constructing a fill embankment along its 6.5 km route, with some segments requiring cut

excavation and approximately eight (8) bridges of varying spans. This extension will impact parts of the Rio Hondo and Rio Minillas watersheds. In the construction phase addressed in this study (Phase 1), the PR-5 extension will cross the Rio Hondo just south of the intersection with PR-199. To accommodate this crossing, a two (2) cell concrete box culvert measuring 2.4384 m x 2.1336 m (8 feet span, 7 feet rise) with an approximate length of 240 meters will be constructed. This culvert is designed not only to convey the flow from the Rio Hondo main channel but also to collect runoff from the storm sewer system serving El Cortijo and Royal Town. This local storm drainage from the El Cortijo area will be further analyzed in the Stormwater Drainage Calculation Report and addressed in a future project stage.

The location of the two (2) 84-inch pipes currently installed at the PR-5/PR-199 crossing is shown in **Figure 7**, specifically between Section 100 and Section 75. In the proposed condition, the existing box culvert (3.05 m x 3.05 m) illustrated in **Figure 7** between Section 75 and Section 50 (downstream of the existing 84-inch pipes) will be extended upstream by approximately 44 m (equivalent to the length of the 84-inch pipes).

In addition to the box culvert extension, a trapezoidal channel is proposed. This channel will extend from the upstream face of the extended box culvert (3.05 m x 3.05 m) in Section 100 (see **Figure 7**) to Section 200.

Runoff from the Padre Rufo watershed will be conveyed towards Rio Hondo River via a 54-inch diameter pipe that crosses the proposed ramp embankment from Laredo Street toward the proposed highway extension State Road PR-5. Further downstream, a five (5) span bridge is proposed just before connecting with the Rio Hondo. This bridge will have a deck width of approximately 30 meters and a total length of 164.5 meters, with

a minimum low chord elevation of 36.61 meters. The proposed bridge piers will have a width of 1.83 meters. Downstream of the proposed bridge section, runoff will be discharged into the Rio Hondo, where a trapezoidal channel is planned between the new headwall (part of the existing box culvert extension) and the proposed two-cell box culverts along the Rio Hondo river reach.

Figure 11 shows the proposed condition for conveying Rio Hondo runoff near PR-199 & PR-5 intersection. **Appendix H** includes the hydraulic model for the proposed condition.

5.6 Hydraulic Analysis – Comparison Results

In the lower basin of the Rio Hondo (downstream of the PR-199 and PR-5 intersection), the existing 100-year water surface elevations indicate that the Rio Hondo overtops both the existing rectangular concrete channel and the Santa Juanita Street bridge crossing. These findings are consistent with FEMA's Advisory Base Flood Elevation (ABFE) Map, which designates this intersection as being within an AE Zone (Refer to **Figure 4**).

Table 8 for a summary of the hydraulic study results for both existing and proposed conditions along the Rio Hondo.

The existing two (2) 84-inch reinforced concrete (RC) pipes at the upstream end of the intersection lack sufficient capacity to convey the 100-year flow of the Rio Hondo. For the existing condition, the 100-year flood level upstream of the twin pipes was 31.77 m, and the as-built documentation indicates that the minimum elevation of the PR-199 ramp is 31.15 m—causing a street overflow during the evaluated flood event. To address this, the existing box culvert was extended upstream (as described above) to replace the 84-inch pipes. This design update results in a reduced 100-year flood level of 27.49 m, thereby improving the floodability of the area—even though the proposed road alignment exhibits a lower minimum elevation (30.45 m) locally.

As discussed in **Section 5.5**, a trapezoidal channel is proposed from the upstream face of the extended box culvert (3.05 m x 3.05 m) in Section 100 (see **Figure 7**) to Section 200. Under existing conditions for the 100-year event, the base flood levels range between 31.85 m and 31.77 m. In the proposed scenario, water surface elevations along this Río Hondo reach between 27.63m and 27.49 m.

Table 8 shows that flow velocities are increased between sections 200 and 100 under the proposed conditions. To protect against erosion, an erosion control revetment measure will be provided between the downstream end of the proposed culvert and the upstream end of the extended culvert at the PR-5 and PR-199 intersection.

Additionally, the proposed PR-5 extension will require an approximately 240-meter box culvert located upstream of the intersection. This structure, constructed as a two-cell box culvert (2.4384 m x 2.1336 m) spanning approximately 240 m, will allow Río Hondo flows to pass beneath the new road embankment. Under existing conditions, the 100-year flood elevations vary between 31.92 m and 31.85 m, whereas under the

proposed condition, the water level upstream of the box culvert is projected at 31.58 m and downstream at 27.63 m—both showing a significant improvement. In addition, this box culvert will also collect extra drainage from the El Cortijo area. There is also an increase in velocity at section 400 which corresponds to the proposed two (2) cell 2.4384 m x 2.1336 m (8 feet span, 7 feet rise) box culvert headwall entrance. A concrete apron should be provided at the culvert entrance (headwall) to mitigate potential erosion.

Table 9 show the hydraulic results for the Rio Hondo tributary for the existing and proposed condition.

Table 9. Hydraulic Analysis Results Rio Hondo Tributary – 100-year Storm Event

Section No.	Existing Conditions			Proposed Conditions		
	Flow (m3/s)	Water Surface Elevation (m)	Velocity (m/s)	Flow (m3/s)	Water Surface Elevation (m)	Velocity (m/s)
1000	8.82	31.85	0.13	8.82	31.57	0.15
900	8.82	31.85	0.06	8.82	31.57	0.07
875	8.82	31.85	0.06	8.82	31.50	1.14
Proposed Culvert	-	-	-	-	-	-
800	8.82	31.85	0.02	8.82	27.36	3.75
775	8.82	31.85	0.05	8.82	27.71	0.16
750	8.82	31.85	0.09	8.82	27.71	0.33
Proposed Bridge	-	-	-	-	-	-
700	8.82	31.85	0.02	8.82	27.71	0.05

Evaluation of **Table 9** shows that the existing 100-year flood level is 31.85 m along the studied reach. In the proposed condition scenario, the flood level in the bridge area is reduced to 27.71 m. The minimum low chord elevation of the proposed bridge is 36.61 meters. Modeling results demonstrate that the proposed bridge can handle the 100-year storm event without reaching the minimum low chord elevation. This also applies to evaluations of higher storm events (200-year and 500-year). Results for these return intervals are included in **Appendix H** of this report.

For the 54-inch pipe, the upstream water level is calculated at 31.50 m and the downstream level at 27.36 m.

There is an increase in velocity at the bridge cross sections that extends further upstream. To mitigate this condition, erosion control measures should be provided. The conceptual details for these erosion control measures will be included in a separate report as part of the scour analysis to be performed in a later design stage.

Detailed results from of HEC-RAS hydraulic model, for the existing and proposed condition, can be found in **Appendix G** and **Appendix H**, respectively.

VI. CONCLUSIONS & RECOMMENDATIONS

1) The hydrologic and hydraulic analysis for the Phase 1 extension of the PR-5 in the municipality of Bayamon thoroughly examined the project's impact on the Rio Hondo watershed.

2) At the point of analysis for the Rio Hondo extension project, the calculated peak flow for the 100-yr storm is 102.05 m^3/s (3,603.76 cfs).

3) The proposed extension of the PR-5 in the vicinity of the Rio Hondo will require the placement of a two (2) cell concrete box culvert measuring 2.4384 m x 2.1336 m (8 feet span, 7 feet rise) with an approximate length of 240 meters beneath the proposed PR-5 embankment.

4) Additionally, the existing two (2) 84-inch diameter reinforced concrete pipes (RCP) at the upstream end of the PR-5 and PR-199 intersection shall be replaced by extending the existing 2-cell 3.05 x 3.05 box culvert beneath the intersection, covering a distance of approximately 44 meters.

5) A trapezoidal channel with erosion control revetment needs to be installed between the downstream end of the proposed culvert and the upstream end of the extended culvert at the PR-5 & PR-199 intersection to provide erosion protection to Rio Hondo River reach.

6) The highway extension of the proposed State Road PR-5 requires the construction of a bridge above State Road PR-199. This bridge will run parallel to the Rio Hondo River reach upstream of the State Road PR-199 ramp, crossing a small waterway that will discharge into the previously mentioned trapezoidal channel. The proposed bridge deck will have a width of approximately 30 meters and a total length of 164.5 meters, with a minimum low chord elevation of 36.61 meters. The proposed bridge piers will have a width of 1.83 meters. Hydraulic results of the proposed condition model (**Table 9** of this report) show that the 100-year water surface elevation determined at the bridge section is 27.71 m. Therefore, it can be

concluded that the proposed bridge ramp is capable of handling the design 100-year storm event. This also applies to evaluations of higher storm events (200-year and 500-year), with results included in **Appendix H** of this report.

7) The 54-inch diameter pipe across the proposed ramp embankment from **PR-199/**Laredo Street towards the proposed State Road PR-5 extension complies with Planning Board Regulation #13 by ensuring that the water surface elevation along the Rio Hondo does not increase by more than 0.15 meters. The existing water surface elevation was determined to be 31.85 meters, while the proposed condition water surface elevation is 31.50 meters.

8) This hydrologic and hydraulic Demonstrates that the proposed improvements will not adversely affect the floodability of the area and complies with Puerto Rico Planning Board No.13, as flood levels do not increase more than 0.15 meters at any section along the studied reaches and proposed structures.

C-1-2000-095

El Departamento de Recursos Naturales y Ambientales (DRNA) recibió nueva información en contestación a la comunicación emitida el 5 de agosto de 2022, relacionada al proyecto de referencia. La Autoridad de Carreteras y Transportación (ACT) propone la construcción de una extensión a la carretera estatal PR-5. Según el resumen del documento ambiental presentado, la misma comenzará en el kilómetro 14.9 de la carretera estatal PR-167 en Toa Alta y terminará en la PR-199 (Avenida Las Cumbres) en Bayamón. La extensión a la PR-5 conectará las carreteras antes mencionadas, por el sur a la carretera PR-148 y por el norte la PR-5. La extensión propuesta tendrá una longitud aproximada de 5.07 kilómetros y será de cuatro (4) carriles divididos, con control de acceso total, intersecciones a desnivel y plazas de peaje. Para la construcción del propuesto proyecto, será necesario la construcción de seis (6) puentes y movimiento de terreno. Se estima que se extraerán 850,000 metros cúbicos de material de la corteza terrestre de los cuales se utilizarán aproximadamente 670,000 metros cúbicos como relleno dentro del mismo.

Durante la fase de planificación de este proyecto y discutidas en la Declaración de Impacto Ambiental (DIA) aprobada en el año 2003 e incluidas en la presente DIA, se estudiaron cinco diferentes alternativas, además de la alternativa de No Acción para la alineación de la extensión a la carretera PR-5. La ruta preferida para la extensión de la PR-5 es la identificada como 2A. Esta alternativa ocupará un área estimada de 112 cuerdas, impactará 126 estructuras incluyendo 112 residencias y 16 negocios/ instituciones. Se estima en 13,886 metros cuadrados (3.54 cuerdas) el área de impacto a cuerpos de agua.

La extensión propuesta de la carretera PR-5 requiere la canalización de un nuevo tramo del Río Hondo mediante la colocación de un *box culvert* de 258.6 metros de largo de dos (2) celdas y la extensión de un *box culvert* existente de dos celdas a una distancia de 48 metros, lo cual reemplazará 2 tubos existentes de 84 pulgadas de diámetro. El proyecto propone la colocación de un canal de gaviones entre el extremo aguas abajo del *box culvert* propuesto y el extremo aguas arriba del *box culvert* extendido en la intersección PR-5 y PR-199 para proporcionar protección contra la erosión al alcance del Río Hondo. Además, una rampa en puente propuesta estará cruzando el canal rectangular de gaviones.

El proyecto también incluirá un puente de ocho (8) tramos sobre el Río Minillas. Un segmento de la alineación de la carretera propuesta es paralela al Río. Además, una sección del Río Minillas, según identificado en las capas de información del DRNA, se verá afectado por el terraplén de la extensión de la PR-5 y canalizado mediante atarjeas y un canal trapezoidal. Se estarán impactando 13.5 cuerdas de bosques de galería categorizados como Hábitat Natural de Valor Ecológico dentro de los cuales se encuentran 3.53 cuerdas de cauces/hábitats ribereños.

En las comunicaciones del 26 de enero de 2022 y 5 de agosto de 2022, el DRNA requirió se aclararan varios aspectos relacionados a los cuerpos de agua que serían impactados por el proyecto. La ACT no indicaba la cantidad de quebradas sin nombre que serían impactadas por el proyecto ni describía las obras propuestas en las mismas. Tampoco se contestaba o se aclaraba si se estaría impactando y canalizando un tramo del Río Minillas que corresponde al área de su nacimiento según la base de datos del DRNA y no un afluente como se identifica en los planos y se describe en la DIA.

La ACT presentó una comunicación con fecha de 2 de septiembre 2022 en la cual califican como drenajes pluviales los "streams" identificados en los planos CLP01- al CLP09 para impacto: CA-01A, CA-02A, CA-02B, CA-03A, CA-03B, CA-05A y CA-05B. Asimismo, desglosan los trabajos propuestos en los mismos. Indican en la comunicación y citamos: "Los planos del proyecto, CLP01- CLP-09, ilustran áreas de impacto en cauces de drenaje locales estructuras hidráulica (tuberías) para el manejo de sus aguas en eventos de lluvia los cuales no se discuten en el H-H, aunque se toman en consideración para el comportamiento de las aguas en las cuencas hidrográfica evaluadas." Exponen que una vez se tenga el diseño detallado de los drenajes locales, al igual que el de las estructuras mayores se prepararán los correspondientes cómputos pluviales.

Por otro lado, se presentan varios mapas identificando los cuerpos de agua en el área propuesta para impacto y se informa que, según la interpretación de dichos mapas, lo que se estaría canalizando sería un tributario al Río Minillas, y no el Río Minillas o su nacimiento. No obstante, se aclara que dicha canalización ha sido considerada en el H-H y que una vez el DRNA le informe la designación al mismo, estarán revisando el H-H y las secciones correspondientes en la DIA-F.

Sobre los aspectos antes mencionados el DRNA ha determinado lo siguiente:

- El DRNA reconoce como drenajes pluviales los identificados como C01A, C03A y C05B en los planos CLP01 al CLP09. No obstante, los identificados como CA-02A, CA-02B, CA-03B y CA-05A tienen características de cuerpos de agua o quebradas intermitentes. Por lo tanto, estas quebradas intermitentes deberán ser incluidas en el documento ambiental e identificadas en los planos del proyecto. Además, se deberán incluir en el H-H del proyecto. El DRNA considera que toda obra en o sobre un cuerpo de agua que forme parte de un proyecto debe ser estudiada y analizada en un mismo H-H. La fragmentación pudiera retrasar el proceso de evaluación en las etapas de permisos y endosos con implicaciones en elevar los costos por estudios de esta naturaleza para la ACT.

- En relación con la denominación del Río Minillas o tributario, el DRNA considera que dicho tramo es parte del nacimiento del Río Minillas y así debe ser considerado. Por lo que este aspecto deberá ser corregido en la DIA-F y el H-H. Aunque se reconoce que dicho tramo ha sido estudiado y

analizado en el H-H, su denominación es importante para el contenido de la DIA-F y distintos aspectos en el que DRNA debe ser incluido como custodio de este recurso natural. En esta área debido a la colindancia con las urbanizaciones Ciudad Interamericana y Valle de Cerro Gordo, será necesario el mantenimiento a perpetuidad de la obra y demostrar la no afectación a terceros. Esta responsabilidad de la ACT debe estar incluida en la DIA-F.

- Resulta pertinente resaltar que, toda información que se presente ante la consideración del DRNA en las diferentes instancias del proyecto, incluida su descripción y huella de impacto, deberán corresponder en todos sus detalles. La descripción de los trabajos propuestos para el tramo correspondiente a la canalización del Río Minillas presentada en una tabla de la comunicación del 2 de septiembre de 2022, no concuerda con la presentada en la DIA-F y el H-H. En la comunicación se indica que la obra consistiría en dos segmentos tipo *box culverts* de dos celdas de 2.13 m x 2.13 m 137.40 metros lineales y 256 metros lineales, dos segmentos en canalización en tierra de 189.81 y 97.74 metros lineales. Mientras que en el H-H y la DIA-F se describe la obra como una atarjea de 2 celdas de 2.74 m y 2.13 m y 255 m de largo, una atarjea de 2 celdas 2.44 x 2.13 m y 150 m de largo entre las dos atarjeas un canal trapezoidal en tierra con un ancho en la base de 12 m, taludes 2H:1V y 99 m de largo. La comunicación presentada es posterior al H-H preparado para el proyecto, por lo que se deberán aclarar las diferencias en la descripción presentada. Asimismo, el H-H que se evalúe en el DRNA debe considerar desde un principio el análisis de los cuerpos de agua a impactar debido a que es de los resultados del estudio que surgen los parámetros para el diseño de las obras y no a la inversa. Esto responde al hecho de que las dimensiones de estas obras dependen del caudal determinado en el análisis hidrológico, la rugosidad, las condiciones del flujo, los tipos de control del flujo: *inlet* o *outlet* control, entre otros. Con relación a las canalizaciones, en tierra y con gaviones, para su diseño también se tienen que considerar las velocidades, los esfuerzos cortantes permisibles, entre otros parámetros que se analizan en el H-H. Se aclara que el endoso del DRNA al H-H no es necesario para obtener el cumplimiento ambiental del proyecto. Dicho proceso es uno independiente de la evaluación de los impactos y medidas de mitigación propuestas en el proyecto. De hecho, el H-H está más vinculado al trámite de la solicitud conjunta de permiso.

- La consideración de parámetros también aplica para la selección del diámetro de las tuberías propuestas en los drenajes pluviales, independientemente de sus dimensiones. Lo anterior cobra relevancia ya que el proyecto ubicará en zonas residenciales. Estas obras se deberán diseñar luego de realizar los cómputos correspondientes, de los cuales surgirán los diámetros para evitar que estos componentes del proyecto provoquen inundaciones locales y la afectación a terceros por falta de capacidad hidráulica.

- Es importante destacar, que el DRNA no favorece la canalización de cuerpos de agua, la única excepción es para los proyectos de control de inundaciones. Lo anterior en cumplimiento con las disposiciones de la Ley Núm. 49 de 4 de enero de 2003, según enmendada por la Ley Núm. 55 de 22 de enero de 2004. El proyecto propuesto extendería la canalización del Río Hondo y canalizaría un tramo del Río Minillas en su nacimiento. Aunque se reconoce que el Río Hondo ha sido impactado previamente por canalizaciones y que el tramo del Río Minillas igualmente fue previamente impactado en la construcción de las urbanizaciones colindantes, estas áreas se han regenerado y cuentan con valor ecológico e hidrológico. Para el DRNA es de suma importancia la conservación de los cuerpos de agua, los cuales fungen como conectores hidrológicos naturales que garantizan una mejor calidad de agua y minimizan problemas de sedimentación, erosión e inundaciones. Rellenar y canalizar una sección de un Río resulta en la destrucción de los canales naturales, la degradación del hábitat, la fragmentación del hábitat, aceleración del transporte del agua y los contaminantes tóxicos, al igual que reduce los servicios del ecosistema, tales como retención de nutrientes y retención de sedimentos. A largo plazo, esto puede causar gran desestabilización en

el sistema. La canalización puede alterar las dimensiones originales y la forma del cauce, su pendiente y características naturales, convirtiendo un sistema heterogéneo en uno homogéneo. La consecuencia desde el punto de vista del ecosistema es que la diversidad del hábitat se reduce y las cualidades y funciones de las especies que ocupan el sistema se afectan.

Debido a que el proyecto se encuentra todavía en fase de diseño conceptual, el DRNA recomienda que, si existiera la oportunidad de haber cambios en el diseño, se analicen otras alternativas que no incluya la canalización de los Ríos.

Una vez se atienda y corrija lo anterior, el DRNA no tiene objeción con la alineación propuesta del proyecto. Además, se deberá cumplir con lo siguiente:

- Según la descripción del proyecto en la DIA-F, el proyecto comenzaría en el kilómetro 14.9 de la carretera estatal PR-167 en Toa Alta y terminará en la PR-199 (Avenida Las Cumbres) en Bayamón. Sin embargo, según todas las figuras incluidas en la DIA-F y en los documentos presentados, el proyecto comenzaría en Bayamón y terminaría en Toa Alta. Es importante que se atienda y corrija dicha discrepancia en la DIA-F.

- Según la comunicación presentada los elementos considerados fueron desarrollados a nivel conceptual. Por lo tanto, una vez culmine el nivel conceptual y el proyecto se encuentre en una etapa más adelantada de diseño, se deberá presentar un H-H en el DRNA que incluya el análisis de las obras en las quebradas CA-02A, CA-02B, CA-03B y CA-05 y en el Río Minillas y el Río Hondo. Se reconoce que el DRNA tiene ante su consideración un H-H presentado para el proyecto, sin embargo, el mismo no incluye el análisis de las obras propuestas en todos los cuerpos de aguas a impactarse.

- El DRNA emitió una certificación de Categorización de Hábitat el 28 de octubre de 2021 en cumplimiento con la Ley Núm. 241 de 15 de agosto de 1999, según enmendada (Nueva Ley de Vida Silvestre de Puerto Rico) y el Reglamento 6765 (Reglamento para regir la conservación de la Vida Silvestre, las Especies Exóticas y la Caza en el Estado Libre Asociado de Puerto Rico). En la misma se categorizaron 13.5 cuerdas de bosques de galería a impactar como Categoría 4 (Hábitat Natural de Valor Ecológico). De igual forma, el DRNA categorizó el resto de las áreas a impactar como Categoría 5 (Hábitat Natural con Alto Potencial de Convertirse en Hábitat Esencial, Hábitat de Alto Valor Ecológico o Hábitat de Valor Ecológico). En cumplimiento con el Reglamento 6765, la ACT presentó una propuesta para la compensación por las 13.5 cuerdas clasificadas como Categoría 4 mediante la adquisición para cesión al DRNA de un predio de terreno de 35.6 cuerdas ubicado en la Reserva Natural Las Cabachuelas en Morovis. El DRNA aceptó la propuesta en comunicación del 30 de noviembre de 2021. Asimismo, aceptó que este predio se utilice como una mitigación concurrente por el impacto de cortes de árboles.

  A estos efectos, previo a que la ACT realice la subasta y otorgue los contratos de construcción del proyecto, se deberá presentar una copia certificada de la escritura de cesión y traspaso al DRNA del predio y radicar una copia de la minuta de asiento de la presentación de la escritura en el Registro de la Propiedad. A los fines de conocer el procedimiento a seguir para cumplir con las disposiciones del Reglamento Núm. 8816 de 19 de septiembre de 2016 (Reglamento para la Adquisición de Bienes Inmuebles y Derechos Reales del Departamento de Recursos Naturales y Ambientales), puede comunicarse con la División de Bienes Inmuebles al (787) 999-2200 Ext. 2505 o 2500.

- Implementar todo tipo de medidas disponibles (Plan CES, el "Storm Water Pollution Prevention Plan-SWPPP", filtros, pacas de heno, etc.) para el control de sedimentación y escorrentías que puedan afectar los cuerpos de agua cercanos al predio. Se deberán implantar las mejores prácticas posibles (BMPs, por sus siglas en inglés) a ser ejecutadas durante cada etapa del proyecto. Las BMPs son las técnicas (zonas de amortiguamiento, cortinas de retención de sedimento, estanques de detención, surcos, etc.),

programación de actividades, prácticas prohibidas, y procedimientos de mantenimiento para prevenir o reducir las descargas de contaminantes a los cuerpos de agua cercanos que pudieran afectarse durante la construcción. Asimismo, se deberán tomar medidas para evitar que residuos de sustancias orgánicas e inorgánicas tales como: aceite: combustibles y otras sustancias químicas, puedan ser arrastradas por la escorrentía y ganen acceso a los cuerpos de agua o se infiltren en el terreno.

- Secciones de las áreas propuestas para impacto han sido identificadas como Zona A de acuerdo con la Hoja C0710H de los Mapas de Niveles de Inundación Base Recomendados preparados por la Agencia Federal para el Manejo de Emergencias y adoptados por la Junta de Planificación según la Resolución Núm. ABFE-02 del 11 de julio de 2018. A tales efectos, se deberá cumplir con las disposiciones del Reglamento de Planificación Núm. 13 (Reglamento sobre Áreas Especiales de Peligro a Inundación).

- Deberán integrar al DRNA y al Gobierno de Puerto Rico como Asegurados Adicionales en la póliza de Seguro de Responsabilidad Pública y Daños a la Propiedad de la Autoridad de Carreteras y Transportación y de la compañía constructora, endoso que deberá presentarse, previo al comienzo de los trabajos de construcción. Se le apercibe que, además del endoso, dicha póliza deberá contener una declaración de Acuerdo de Exención de Responsabilidad ("Hold Harmless Agreement"), por medio de la cual se releva al DRNA de cualquier reclamación, demanda o acción judicial o extrajudicial, o combinación de las anteriores, que resultare de la realización de la acción propuesta.

- La construcción de los componentes del proyecto que incida sobre cualquier cuerpo de agua deberá llevarse a cabo en seco, bajo condiciones de flujo mínimo del cuerpo de agua, a fin de facilitar la construcción y disminuir los impactos de la turbidez y sedimentación aguas abajo. Se deberá mantener desaguada el área de construcción durante el mínimo tiempo posible. También se deberá asegurar que los flujos inmediatamente aguas abajo del área de construcción sean iguales a los flujos inmediatamente aguas arriba de la misma área.

- Todos los materiales excedentes y escombros de construcción resultantes deberán haberse removido completamente del lugar, una vez completadas las obras. Se deberá disponer de estos materiales y escombros en un sistema de relleno sanitario certificado u otra facilidad aprobada para la disposición final de desperdicios sólidos.

- Bajo ningún concepto los trabajos a llevarse a cabo podrán reducir la sección hidráulica de los cuerpos de agua.

- El diseño del proyecto considerará los desplazamientos naturales del cauce de los cuerpos de agua.

- Los elementos que se instalen para el control del flujo tienen que limitarse a las dimensiones mínimas necesarias para encausar las escorrentías mínimas normales.

- Durante la fase de construcción se utilizarán procedimientos para mantener el flujo de estiaje de los cuerpos de agua y prevenir daños a terceros en caso de lluvias extraordinarias. Una vez terminada la obra, la sección del cauce de los cuerpos de agua en el punto de los cruces, no podrá ser menor al existente previo al proyecto.

- Se deberá evitar que el material producto de la construcción propuesta o escombros permanezcan en los cuerpos de agua (y de estos materiales y escombros haber caído a la columna de agua, se les deberá remover inmediatamente).

En la eventualidad de que se impacten los taludes de los cuerpos de agua, deberá cumplir con lo siguiente:

- Deberán compactar el material de relleno en los taludes y bancos. Además, deberán restituir la capa de top soil y vegetación. Se deberá minimizar el impacto a la vegetación ribereña asociada a los cuerpos de agua.

Además, se deberá cumplir con lo siguiente:

- Deberá cumplir con las disposiciones de la Regla 3.4.1 ("Permiso Único Incidental Operacional"), la Sección 5.1.9.3 ("Manejo de Aguas Pluviales") y la Sección 5.1.9.4 ("Obras Pluviales) del Reglamento Conjunto 2020, Reglamento Conjunto para la Evaluación y Expedición de Permisos Relacionados al Desarrollo, Uso de Terrenos y Operación de Negocios (Reglamento Núm. 9233 del 2 de diciembre de 2020, con vigencia del 2 de enero de 2021, adoptado por la Junta de Planificación mediante la Resolución JP-RP-39, del 1 de diciembre de 2020).

- Las obras propuestas requerirían de un permiso del Cuerpo de Ingenieros por los impactos temporales y permanentes en aguas y terrenos jurisdiccionales. Las obras que presenten deben coincidir con las presentadas en el H-H.

- Una vez completados los trabajos, entre las alternativas a considerar para evitar la erosión y deslizamientos en taludes asociados a cuerpos de agua, la ACT puede incluir la siembra de hileras del pasto vetiver (*Chrysopogon zizanioides*) repetidamente perpendiculares a las pendientes, en taludes, de tal forma que atrape los sedimentos que se transportan pendiente abajo. La siembra de vetiver (Sistema Vetiver) tiene la particularidad de proteger la superficie de las pendientes, así como su estabilidad, incrementando la resistencia a la ruptura. Las siguientes referencias contienen información y recomendaciones para su uso e implementación en proyectos de estabilización de taludes ribereños: -Oahu Resource Conservation and Development Council. 2012. Vetiver Grass Installation Guide. Prepared in cooperation with USDA Natural Resource Conservation Service (NRCS), Pacific Islands Area. Oahu, HI: Oahu Resource Conservation and Development Council. (Véase especialmente las páginas 12–14 de esta referencia.) -Paul Truong, Tran Tan Van, Elise Pinners. 2008. Vetiver System Applications. Technical Reference Manual. Second edition. San Antonio, TX: The Vetiver Network International. (Véase especialmente las páginas 32–36 de esta referencia.)

- Deberá cumplir con las disposiciones del Reglamento para el Control de Contaminación Atmosférica, el Reglamento para el Control de la Contaminación por Ruido, el Reglamento de Estándares de Calidad de Agua, el Reglamento para el Control y la Prevención de la Contaminación Lumínica y el Reglamento para el Manejo de Desperdicios Sólido No Peligrosos, así como obtener los permisos correspondientes relacionados a dichos reglamentos.

- El Banco de Datos Biológicos y de Conservación de Puerto Rico del DRNA no refleja la presencia en el área de especies de particular rareza o de distribución geográfica limitada, o de aquéllas designadas como vulnerables o en peligro de extinción. Sin embargo, según la página "Information for Planning and Consultation" (IPaC) del Servicio Federal de Pesca y Vida Silvestre (USFWS), el área que cubre este proyecto está situada dentro del alcance de la distribución geográfica de la boa de Puerto Rico (*Chilabothrus inornatus*) especie en peligro de extinción a nivel federal y estatal. Por lo que, de encontrarse individuos de dicha especie dentro de la propiedad los mismos deberán ser removidos y reubicados por los biólogos del DRNA o los miembros del Cuerpo de Vigilantes de Recursos Naturales y Ambientales o por biólogos de vida silvestre bajo contrato con la parte proponente por servicios profesionales que cuenten con un permiso federal del *Fish and Wildlife Service*, y que el DRNA haya designado explícitamente como sus agentes para ese propósito. El proceso para la autorización del biólogo se rige por el Reglamento 6766 de 11 de febrero de 2004 (Reglamento para Regir la

25 de octubre de 2022

Conservación y Manejo de las Especies Vulnerables y en Peligro de Extinción en del Estado Libre Asociado de Puerto Rico). Este proceso se lleva a cabo en el DRNA y no en la Oficina de Gerencia de Permisos o a través de ésta. La reubicación de los individuos encontrados deberá producirse no más tarde de las 24 horas (o el próximo día laborable) a partir del momento en el que se informa el hallazgo y, hasta donde sea práctico y viable, los mismos serán reubicados en terrenos cercanos a la propiedad.

- Es de la entera responsabilidad del proponente el obtener y cumplir con cualquier otro permiso o autorización que puedan ser requeridos por otras agencias, autoridades, departamentos, corporaciones públicas o instrumentalidades gubernamentales.

- Se deberá preparar y cumplir con las recomendaciones y especificaciones del Estudio de Suelos que garantice que el proyecto cumpla con los códigos de construcción.

- Se deberá establecer un programa de reforestación utilizando especies nativas que además de ayudar a minimizar la erosión beneficien la vida silvestre. Esta medida es cónsona con la Ley para Fomentar la Siembra de Árboles Cuyas Frutas y/o Semillas Provean Alimento a Especies de Aves Silvestres de Puerto Rico (Ley Núm. 97 de 24 de junio de 1998), la cual establece lo siguiente: "En todo proyecto de reforestación en que se utilicen fondos públicos o privados, o en una combinación de estos, un 15% en las áreas rurales y un 10% en las áreas urbanas del total de árboles a ser sembrados, serán de especies cuyas frutas y/o semillas sirvan de alimento a las aves silvestres que residan temporal o permanentemente en ésta".

- De descubrirse en los predios objeto de desarrollo algún otro cuerpo de agua superficial o subterráneo sea perenne o intermitente, deberá informarlo inmediatamente al DRNA y demás agencias concernidas. No informar hallazgos de este tipo, así como las medidas de mitigación que se implantarán para proteger estos recursos naturales conllevará una revocación automática de la presente comunicación de no-objeción y podrá ser base para acciones legales por parte de DRNA en los foros disponibles.

Este endoso es solamente aplicable a la situación de hechos y los datos según presentados y evaluados en el caso y la Secretaria se reserva el derecho de reevaluar, variar o modificar los mismos en cualquier momento anterior a la emisión del permiso o la acción administrativa correspondiente por parte de la agencia solicitante o proponente cuando surja nueva información oficial específica estableciendo que el derecho aplicable o las condiciones ambientales en el predio han cambiado sustancialmente, o cuando el endoso original se emitió bajo premisas falsas o fraudulentas.

Cordialmente,

El Departamento de Recursos Naturales y Ambientales (DRNA) recibió la comunicación suscrita por el Ing. Luis E. Rodríguez Rosa de la Autoridad de Carreteras y Transportación (ACT) el 2 de septiembre de 2022. La misma es en respuesta a la carta que emitió el DRNA el 10 de agosto de 2022, mediante la cual se le requirió información adicional. En dicha misiva el DRNA le requirió incluir los cuerpos de agua que serán impactados por el proyecto y que no fueron analizados en el estudio hidrológico-hidráulico (HH). Además, se le requirió que identificaran como Río Minillas el cuerpo de agua que se denomina tributario en el estudio HH.

Resulta que, durante la revisión a la información presentada por la ACT, el DRNA se encontraba evaluando el proyecto mediante el trámite de cumplimiento ambiental a través de la Oficina de Gerencia de Permisos y emitió un endoso condicionado el 25 de octubre de 2022. En dicha carta el DRNA se reafirmó en que el cuerpo de agua identificado como tributario es el Río Minillas. Además, el Departamento distinguió entre lo que se reconoce como drenajes pluviales y las que constituyen quebradas intermitentes. Estas son: CA-02A, CA-02B, CA-03B Y CA-05A. De hecho, el DRNA determinó que estas quebradas intermitentes deben formar parte del estudio HH del proyecto. Es importante indicar que la ACT manifestó en su carta que los elementos considerados en el estudio HH fueron desarrollados a **nivel conceptual**.

Ante lo expuesto, el DRNA ha determinado dejar en suspenso la evaluación del estudio HH hasta que la ACT cuente con un diseño en una etapa más adelantada. Se resalta que la ACT se deberá asegurar que el estudio HH que presente incluya los cuerpos de agua que el DRNA identificó como quebradas intermitentes

en la carta de endoso condicionado. Es de particular importancia que se demuestre que las obras propuestas en estas quebradas tengan la capacidad adecuada para evitar inundaciones locales y afectación a terceros. Asimismo, las obras propuestas en todos los cuerpos de agua deberán coincidir en todos los documentos y planos del proyecto que presenten ante la consideración del DRNA.

Cordialmente,

AC-000533

El Departamento de Recursos Naturales y Ambientales (DRNA) recibió su carta del 28 de febrero de 2025, en la cual incluye la justificación de la Autoridad de Carreteras y Transportación (ACT) para dividir el proyecto para la extensión de la PR-5 en dos fases. Esto a su vez apoya la decisión de la ACT para presentar un estudio hidrológico-hidráulico (HH) para cada fase. En dicha comunicación solicita, además, treinta días adicionales para presentar ante el DRNA una información técnica que será provista por el Ing. José A. Carro, profesional que preparó el estudio HH para la fase I.

Sobre el particular se le informa que, para este caso el DRNA acoge lo planteado para justificar dividir el proyecto en dos fases y a su vez un estudio HH para cada una. La determinación de la ACT, en términos generales, se basa en la disponibilidad de fondos, adquisición de propiedades y la magnitud de la construcción. Además de considerar sus argumentos, el DRNA cotejó que para cada fase del proyecto los estudios HH evaluarán y analizarán obras en diferentes cuencas, a saber: la fase I corresponde a la cuenca del Río Hondo, mientras que la fase II a la cuenca del Río Minillas. Ante esto, el DRNA no tiene objeción en que la ACT presente un estudio HH para cada fase del proyecto.

De otra parte, el DRNA en atención a su solicitud, le concede la prórroga solicitada para presentar la información técnica. Por tanto, se le conceden treinta (30) días adicionales

para presentar la información solicitada directamente a la Oficina de Secretaría. Se le recuerda que, de confrontar alguna limitación para cumplir con este término, deberá mantener informado al DRNA.

O-NE-EEA03-SJ-00813-21012022
AC-000533

El Departamento de Recursos Naturales y Ambientales (DRNA) evaluó la información incluida con la carta del 26 de marzo de 2025, firmada por el Ing. José A. Carro Miranda. Dicha información es en respuesta a las comunicaciones emitidas por el DRNA el 31 de enero y 17 de marzo de 2025, mediante las cuales se le requirió información adicional. Junto a esta información se evaluó el estudio hidrológico-hidráulico (HH) preparado por el ingeniero Carro en octubre de 2024, para la fase I del proyecto de la extensión de la carretera PR-5.

De la evaluación surge que el profesional que preparó el estudio HH deberá presentar o aclarar, según corresponda, lo siguiente:

- En el análisis hidrológico se indica que se dividió el área en siete subcuencas y que el área total de la cuenca es de 2.77 Km^2. Sin embargo, el modelo hidrológico digital no fue incluido en el CD. Deberá incluir el mismo para poder realizar la evaluación correspondiente.

- Deberá describir con más detalles las obras hidráulicas propuestas en la Fase I, comparando las mismas con las condiciones existentes en los cuerpos de agua.

- De la evaluación se observó una asignación poco usual de los caudales dentro del modelo hidráulico, donde las Secciones 4 y 6 presentan un aumento casi duplicado del caudal a una distancia menor a 60 metros. Por lo que, deberá incluir una discusión sobre el razonamiento detrás de esta decisión.

- La atarjea en la Sección 837.5 fue modelada sin áreas inefectivas, contrario a lo recomendado en las Guías para la Elaboración de Estudios Hidrológicos-Hidráulicos. Deberá cotejar y realizar los cambios que correspondan.

- No está claro en la hidrología cómo la subdivisión de cuencas fue asociada a sus puntos de descarga dentro del modelo hidráulico. Deberá discutir con más detalles este aspecto.

- Se reitera la responsabilidad, tanto del profesional que prepara el estudio HH como del gerente del proyecto, de asegurarse que se incluyen los modelos hidrológicos e hidráulicos en formato digital cada vez que se presenta información ante la consideración del DRNA.

Se le conceden treinta (30) días calendario contados a partir de la fecha de esta notificación para presentar la información solicitada directamente a la Oficina de Secretaría. De no recibir la misma en el periodo de tiempo otorgado, se entenderá que no mantiene interés en la tramitación de su caso y procederemos a archivar su solicitud. No obstante, de confrontar alguna limitación para cumplir con este término, deberá mantener informado al DRNA y solicitar tiempo adicional.

AREAS HAVE BEEN REVISED AND FIELD COMPLETION HAS BEEN PERFORMED IN ORDER TO UPDATE TOPOGRAPHIC DATA. ALL COORDINATES HAVE BEEN REFERED TO SPCS FOR PR AND THE USVI, NAD83, LAMBERT PROJECTION (EPOCH 2010, ADJUSTMENT 2011, ELEVATIONS HAVE BEEN REFERRED TO PRVD02 DATUM BY THE MEANS OF GPS AND GEOID MODELING, BASED ON GEOID 18 AND TIES TO THE PRVD02 DATUM.

KEY PLAN (1:15,000)

MAIN HORIZONTAL AND VERTICAL CONTROL

(Refer to Sheets 2 and 3)

Station	Northing	Easting	Elevation	Description
4	259304.629	228228.371	33.15	Magnetic Nail with Stamped Washer
15	257091.990	226364.449	113.45	Magnetic Nail with Stamped Washer
34	255710.155	224654.823	121.84	Magnetic Nail with Stamped Washer
32	256304.009	225622.383	113.82	Magnetic Nail
26	256811.877	227198.223	89.22	Magnetic Nail
37	258019.980	227620.923	57.77	Magnetic Nail

NOTES:

1. All distances in meters.
2. Coordinate System is referred to the State Plane Coordinate System for PR and the USVI, Lambert Projection, NAD83, Epoch 2010, Adjustment 2011.
3. All elevations in meters.
4. Elevations are Orthometric, derived by Geoid Modeling (Geoid18) and by GPS ties to PRVD02 Bench Marks.
5. This set of plans is the result of a compilation of current surveys, older surveys and photogrametric surveys, all tied and processed on the same horizontal and vertical datum.
   Special attention and efforts have been made in identifying earthwork, new constructions, demolitions, etc., and identified areas have been revised and field completed, in order to obtain updated results.
6. Photogrametry was prepared and provided by Caribbean Aerial Survey.

NOTES:
1. All distances in meters.
2. Coordinate System is referred to the State Plane Coordinate System for PR and the USVI, Lambert Projection, NAD83, Epoch 2010, Adjustment 2011.
3. All elevations in meters.
4. Elevations are Orthometric, derived by Geoid Modeling using the latest Geoid18 Model.
5. Control was established by GPS-Dual Frequency Receivers.

NOTE: THIS PLAN SHOWS SURVEY AND PHOTOGRAMETRIC DATA OBTAINED IN DIFFERENT EPOCHS DURING THE YEARS 2000, 2012, 2021 AND 2022. COORDINATE AND ELEVATION SYSTEMS OF THE FIELD WORK HAVE BEEN TIED AND TRANSFORMED TO THE SPCS 5200 AND ORTHOMETRIC HEIGHTS DERIVED BY GEOID18 MODELING.
THIS PLAN WAS PREPARED FOR THE PURPOSE OF THE PREPARATION OF PRELIMINARY DESIGNS, AND SHOULD NOT BE USED FOR FINAL DESIGN. SINCE SOME AREAS MAY HAVE CHANGED, SUFERED CONSTRUCTIONS, IMPROVEMENTS, AND LARGE EARTHWORK.
THE SURVEY OF THE YEAR 2000 AND THE PHOTOGRAMETRY WERE ORIGINALLY PREPARED BY OTHERS.

SURVEY: PR5-5
CADD FILE: PR5-5.DWG
COGO FILE: PR5-5.CRD
FIELD DATE: SEVERAL
PLOT DATE: 8/2/22, 11/29/22

EXTENSION OF HIGHWAY PR-5 FROM PR-167 TO PR-199 BAYAMON, PUERTO RICO

SURVEY PLAN

SURVEY SHOWN IS A COMPILATION OF CURRENT SURVEYED DATA, OLDER SURVEYS AND PHOTOGRAMETRIC SURVEYS. AREAS HAVE BEEN REVISED AND FIELD COMPLETION HAS BEEN PERFORMED IN ORDER TO UPDATE TOPOGRAPHIC DATA. ALL COORDINATES HAVE BEEN REFERED TO SPCS FOR PR AND THE USVI, NAD83, LAMBERT PROJECTION. ELEVATIONS HAVE BEEN REFERRED TO PRVD02 DATUM BY THE MEANS OF GPS AND GEOID MODELING, BASED ON GEOID18 AND TIES TO PRVD02 DATUM.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Plan Description:
Rio Hondo Existing Conditions (May 2025)

Plan Summary Information:
Number of: Cross Sections = 27 Multiple Openings = 0
Culverts = 2 Inline Structures = 0
Bridges = 1 Lateral Structures = 0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed at all cross sections
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Program Selects Appropriate method
Computational Flow Regime: Subcritical Flow

Upstream Embankment side slope = 0 horiz. to 1.0 vertical
Downstream Embankment side slope = 0 horiz. to 1.0 vertical
Maximum allowable submergence for weir flow = .98
Elevation at which weir flow begins =
Energy head used in spillway design =
Spillway height used in design =
Weir crest shape = Broad Crested

Number of Bridge Coefficient Sets = 1

Low Flow Methods and Data
Energy
Selected Low Flow Methods = Highest Energy Answer

High Flow Method
Energy Only

Additional Bridge Parameters
Add Friction component to Momentum
Do not add Weight component to Momentum
Class B flow critical depth computations use critical depth
inside the bridge at the upstream end
Criteria to check for pressure flow = Upstream energy grade line

Flow File : C:\2024\2024-09_PR-5 Extension_H-H & Scour_Phase-1 (RIO HONDO)\RAS_MAY-2025\PR-5RioHondo_2025.f03

Plan Description:
Rio Hondo Proposed Conditions (May 2025)

Plan Summary Information:
Number of: Cross Sections = 24 Multiple Openings = 0
Culverts = 3 Inline Structures = 0
Bridges = 2 Lateral Structures = 0

Computational Information
Water surface calculation tolerance = 0.01
Critical depth calculation tolerance = 0.01
Maximum number of iterations = 20
Maximum difference tolerance = 0.3
Flow tolerance factor = 0.001

Computation Options
Critical depth computed at all cross sections
Conveyance Calculation Method: At breaks in n values only
Friction Slope Method: Program Selects Appropriate method
Computational Flow Regime: Subcritical Flow

FLOW DATA

    1.83   37.04       2   37.04

Number of Bridge Coefficient Sets =  1

Low Flow Methods and Data
       Energy
Selected Low Flow Methods = Highest Energy Answer
```

High Flow Method
Energy Only

Additional Bridge Parameters
Add Friction component to Momentum
Do not add Weight component to Momentum
Class B flow critical depth computations use critical depth
inside the bridge at the upstream end
Criteria to check for pressure flow = Upstream energy grade line

APPENDIX I

HYDROLOGIC-HYDRAULIC STUDY CERTIFICATION

CERTIFICATION

I hereby certify that the **"*Hydrologic-Hydraulic Study State Road PR-5 Extension from PR-167 to PR-199" (Phase 1: from Sta. 34+20 to Sta. 65+66)***, located in Bayamón, Puerto Rico, was prepared using the best engineering practices available and applicable to the project, as described in the document itself, and that, based on the studies and field measurements provided by others, the results in this report are true and correct.

Certify today, May 30, 2025.

O-NE-EEA03-SJ-00813-21012022
AC-000533

El Departamento de Recursos Naturales y Ambientales (DRNA) recibió el estudio hidrológico-hidráulico (HH) de referencia preparado por el Ing. José A. Carro Miranda en octubre de 2024. El mismo es en respuesta a la carta que emitió el DRNA el 3 de noviembre de 2022, mediante la cual se le requirió información adicional. En dicha comunicación se le informó a la Autoridad de Carreteras y Transportación (ACT) que se debía asegurar que el estudio HH que se presente incluya los cuerpos de agua que el DRNA identificó como quebradas intermitentes en la carta de endoso condicionado emitida el 25 de octubre de 2022. Estos cuerpos de agua fueron identificados de la siguiente manera: CA-02A, CA-02B, CA-03B y CA-05A.

Sobre este particular se le informa que, de una revisión al estudio HH se encontró que el mismo se realizó para una fase del proyecto y no para su totalidad, como en los documentos previamente evaluados en diferentes instancias en el DRNA. De otra parte, no se incluyó una carta de la ACT mediante la cual se justificara la fragmentación del proyecto para efectos del estudio HH. Se resalta que el DRNA le requirió que las quebradas intermitentes debían formar parte del estudio HH del proyecto. Además, este estudio debía ser presentado una vez el proyecto contara con un diseño en una etapa más adelantada.

Ante lo expuesto, el DRNA requiere que la ACT, como entidad gubernamental responsable del proyecto, presente una carta con la justificación para no presentar un estudio HH para el proyecto en su totalidad. Deberá también incluir una figura que ilustre la alineación de la carretera propuesta y la identificación de las

quebradas intermitentes, utilizando la nomenclatura incluida en la carta del endoso condicionado otorgado al proyecto.

Se le conceden treinta (30) días calendario contados a partir de la fecha de esta notificación para presentar la información solicitada directamente a la Oficina de Secretaría. De no recibir la misma en el periodo de tiempo otorgado, se entenderá que no mantiene interés en la tramitación de su caso y procederemos a archivar su solicitud. No obstante, de confrontar alguna limitación para cumplir con este término, deberá mantener informado al DRNA y solicitar tiempo adicional.

Cordialmente,

Ivelisse Espinosa Lugo

O-HH-EJP07-SJ-01118-12112021
O-NE-EEA03-SJ-00813-21012022
AC-000533

El Departamento de Recursos Naturales y Ambientales (DRNA) recibió su carta del 28 de febrero de 2025, en la cual incluye la justificación de la Autoridad de Carreteras y Transportación (ACT) para dividir el proyecto para la extensión de la PR-5 en dos fases. Esto a su vez apoya la decisión de la ACT para presentar un estudio hidrológico-hidráulico (HH) para cada fase. En dicha comunicación solicita, además, treinta días adicionales para presentar ante el DRNA una información técnica que será provista por el Ing. José A. Carro, profesional que preparó el estudio HH para la fase I.

Sobre el particular se le informa que, para este caso el DRNA acoge lo planteado para justificar dividir el proyecto en dos fases y a su vez un estudio HH para cada una. La determinación de la ACT, en términos generales, se basa en la disponibilidad de fondos, adquisición de propiedades y la magnitud de la construcción. Además de considerar sus argumentos, el DRNA cotejó que para cada fase del proyecto los estudios HH evaluarán y analizarán obras en diferentes cuencas, a saber: la fase I corresponde a la cuenca del Río Hondo, mientras que la fase II a la cuenca del Río Minillas. Ante esto, el DRNA no tiene objeción en que la ACT presente un estudio HH para cada fase del proyecto.

De otra parte, el DRNA en atención a su solicitud, le concede la prórroga solicitada para presentar la información técnica. Por tanto, se le conceden treinta (30) días adicionales

Estimada secretaria auxiliar Espinosa Lugo:

El 17 de marzo de 2025, la Autoridad de Carreteras y Transportación (ACT) recibió su carta aceptando la división del Estudio H-H en dos fases según el proyecto fue fragmentado por disponibilidad de fondos, adquisición de propiedades y la magnitud de la construcción. Además, en dicha carta se concedieron 30 días adicionales para atender los comentarios técnicos emitidos por el Departamento de Recursos Naturales y Ambientales (DRNA) en carta del 31 de enero de 2025. A tales efectos y en miras de atender sus requisitos, anejada a esta carta encontrará la comunicación de parte del Ing. José A. Carro, quien preparó el Estudio H-H presentado. En esta se provee información adicional sobre los cuerpos de aguas identificados por el DRNA como "quebradas intermitentes" para su evaluación y consideración.

De tener alguna duda o necesitar información adicional puede comunicarse con el gerente del proyecto ingeniero Kevin M. Martin Hidalgo al 939-205-1325 (kevin.martin2@atkinsrealis.com), con el Ing. José A. Carro al (787) 792-1509 extensión 2301 (jcarro@cmapr.com) o con esta servidora al (787) 721-8787, extensión 51503 (avelazquez@act.pr.gov).

Re: Estudio Hidrológico-Hidráulico Fase 1, AC-000533
Extensión Carretera Estatal PR-5, Bayamón – Toa Alta, Puerto Rico
O-HH-EJP07-SJ-001118-12112021
O-NE-EA03-SJ-00813-21012022

Estimada secretaria auxiliar Espinosa Lugo:

Hacemos referencia a su carta de comentarios del 31 de enero de 2025 en respuesta al Estudio Hidrológico – Hidráulico (Estudio H-H) sometido para la Fase 1 del proyecto de referencia.

Adjunto carta de la Autoridad de Carreteras y Transportación (ACT) sometida el pasado 28 de febrero de 2025, en la cual se detallan las razones por las cuales la construcción se ha dividido en dos (2) fases, cada una con su utilidad independiente y la cual mediante carta del 17 de marzo de 2025 el DRNA acogió la separación en fases presentada por la ACT. No obstante, deseamos destacar que, para la certificación de cumplimiento ambiental obtenida, el impacto del proyecto fue evaluado en su totalidad. Ver cartas adjuntas en **Anejo A**.

El DRNA en sus comunicaciones del 25 de octubre de 2022 y el 3 de noviembre de 2022 estableció como cuerpos de agua los identificados como CA-02A, CA-02B, CA-03B y CA-05A. Los demás cuerpos de agua identificados en la Declaración de Impacto Ambiental y otros documentos presentados al DRNA los reconoció como drenajes pluviales. El DRNA requirió además que el Estudio H-H, que oportunamente se presente, incluya los cuerpos de agua identificados como quebradas intermitentes. Esto con el fin de demostrar que las obras propuestas en estas tengan capacidad adecuada para evitar inundación locales y afectación a terceros.

Sobre lo anterior solo los cauces identificados como CA-02A, CA-02B, CA-03B, identificados por el DRNA como quebradas intermitentes, corresponden a la Fase 1. Sin embargo, como explicaremos a continuación, por su naturaleza, los mismos consisten en cauces de drenaje pluvial o quebradas efímeras por donde discurren aguas pluviales de descargas de los desarrollos colindantes. Las figuras incluidas en el **Anejo B** de este documento ilustran los mismos como drenajes pluviales. A tales efectos, a continuación, discutimos cada una de ellas con nuestro análisis:

1509 F.D. ROOSEVELT AVE. GUAYNABO, PR 00968-2612
PO BOX 11490 SAN JUAN, PR 00922-1490

cmapr.com

CA-02A & CA-02B

La ubicación de ambos elementos de drenaje se puede observar en la hoja CLP-07, que fue sometida previamente como parte del proceso de cumplimiento ambiental. Estos drenajes se encuentran entre la Sta. 49+40 y la Sta. 58+20 de la alineación propuesta de la Fase 1 del proyecto, específicamente cruzando la comunidad El Cortijo.

La **Figura 1** (en el **Anejo B**) ilustra los diferentes cauces a ser impactados como parte de las obras propuestas en la Fase 1. Por su parte las **Figuras 2A, 2B y 2C** presentan los drenajes pluviales CA-02A y CA-02B superpuestos sobre diversos cuadrángulos topográficos históricos. Estas imágenes permiten apreciar que el alineamiento original del Río Hondo no coincide con el actual. Estos cuadrángulos corresponden a los años **1946**, **1957, 1963, 1969, 1982 y 2018.** Estas evidencian que el origen del Río Hondo, **Figura 2A**, se encontraba en lo que hoy ocupa la comunidad El Cortijo. En el cuadrángulo de **1969**, **Figura 2B**, se observa cómo el desarrollo residencial conocido como Royal Town impactó y alteró el flujo natural del río, interrumpiendo su cauce principal en un área que coincide con la ubicación de un tubo de 60 pulgadas de diámetro, tal como se detalla en el "as-built" del proyecto. Para **1982, Figura 2C**, se advierte que el crecimiento de la comunidad de El Cortijo había eliminado por completo el cauce principal del Río Hondo, transformando un antiguo tributario en el nuevo cauce del río.

Como se muestra en los seis (6) cuadrángulos topográficos históricos, la franja que hoy ocupan los elementos de drenaje CA-02A y CA-02B nunca fue identificada por el USGS como un cuerpo de agua (marcado en color azul claro) por lo cual las aguas que llegan al CA-02A y CA-02B, consisten en descargas controladas puntuales. Hasta antes de los desarrollos residenciales entre finales de la década de 1960 y principios de la década de 1980, esa área fue parte de la cuenca de lo que antes fue una quebrada tributaria al Río Hondo (actualmente identificado como cauce principal del Río Hondo).

El planteamiento antes expuesto respalda el por qué no se incluyó en el Estudio H-H presentado ante la consideración del DRNA en octubre de 2024 el análisis de los cuerpos de agua CA-02A y CA-02B como una "quebrada" tributaria al Río Hondo. El análisis de las obras para el manejo y control de las aguas de escorrentías en estos cuerpos de agua se están realizando mediante cálculos y modelaje del sistema pluvial propuesto. El **Anejo C** (**Hoja CLP-07**) muestra el estado del diseño del sistema pluvial urbano propuesto en dicha área. El diseño pluvial final propuesto se asegurará de demostrar que no se aumenta la descarga existente que llega al Río Hondo.

CA-03B

La ubicación de este drenaje se puede observar en la hoja CLP-05, que fue sometida previamente como parte del proceso de cumplimiento ambiental. A su vez las **Figuras 3A a 3F** ilustran el cauce CA-03B sobrepuesto sobre diversos cuadrángulos topográficos históricos, así como una comparativa del concepto propuesto en la Declaración de Impacto Ambiental (DIA) aprobada en el 2023 y la revisión desarrollada según su actual diseño adelantado. Cabe destacar que la propuesta ubica dentro de la alineación y área de estudio de la DIA, pero con menor impacto.

En particular, el USGS, en concordancia con el DRNA, identifica este cauce como una quebrada en los cuadrángulos correspondientes a **1946** y **1957 (ver Figuras 3A y 3B)**. Sin embargo, a partir de **1963 (Figura 3C)** y en adelante (**1969**, **1982** y **2018; Figuras 3D a 3F)**, solo se delinean los contornos correspondientes al flujo de escorrentía hacia el Río Minillas. Pese a ello, se reconoce y acepta la designación del CA-03B como una quebrada intermitente. Como se observa en las figuras, el nacimiento del CA-03B se encuentra al Este del alineamiento propuesto para la extensión de la carretera PR-5, justo aguas abajo de la porción de la PR-830 que corresponde a una sección elevada proyectada para pasar sobre la PR-5 y el CA-03B.

La quebrada CA-03B desemboca en el Río Minillas, el cual, según lo planteado al DRNA y posteriormente aceptado, será evaluado durante la Fase 2 del proyecto. Sin embardo, debido a esto la evaluación de la cuenca tributaria del CA-03B requiere la recopilación de datos de campo adicionales, tanto en la quebrada como en el Río Minillas, así como una ampliación del área de estudio en este último. Por lo tanto, respetuosamente, se solicita al DRNA que acepte la inclusión de la evaluación de la quebrada CA-03B en el estudio hidrológico-hidráulico (HH) correspondiente a la Fase 2 del proyecto.

Aunque el mismo se mantiene dentro de la misma huella evaluada para el cumplimiento ambiental, según se ilustra en el plano revisado se relocalizan las rampas hacia el lado norte de la PR-830, reduciendo significativamente el impacto. Dicho cambio en diseño se destaca en las **Figuras 3A a 3F** en **Anejo B** y en el plano **CLP-05** incluido en el **Anejo C**.

CA-05A

La ubicación de este drenaje se puede observar en la hoja CLP-02, que fue sometida previamente como parte del proceso de cumplimiento ambiental. Este drenaje se ubica dentro de la Fase 2 del proyecto y es parte de la cuenca del Río Minillas, específicamente entre las estaciones Sta. 16+60 y aproximadamente la Sta. 17+20. Ver ubicación en **Anejo B**, **Figura 4A**.

Aunque la evaluación de la Fase 2 y los elementos que forman parte de la cuenca hidrográfica del Río Minillas no son parte de la programación actual de diseño del proyecto, la inspección de la **Figura 4B** del **Anejo B** de este documento muestra que el drenaje pluvial CA-05A siempre ha sido parte del comienzo de la cuenca tributaria al Río Minillas. El manejo de la escorrentía local de esta porción de la cuenca tributaria al Río Minillas se trabajará en su momento mediante cálculos y modelaje del sistema pluvial propuesto.

A tenor con lo anterior, la siguiente tabla detalla los cauces CA-02A, CA-02B y CA-03B, junto con las acciones propuestas para cada uno. Asimismo, se incluyen como **Anejo C** las hojas **CLP-05 y CLP-07** revisadas conforme al diseño preliminar (35%) y, como **Anejo D,** fotografías correspondientes a esos cauces. Cabe mencionar que la tabla no incluye información relacionada al drenaje CA-05A, ya que este forma parte de la Fase 2 del proyecto.

FASE 1 - CONSTRUCCION		
Referencia Hoja de Plano Anejo C	**Identificación**	**Acción Propuesta**
CLP-05	CA-03B Quebrada Intermitente según USGS	Por su localización, su punto de descarga y el trabajo de campo adicional requerido, se propone que la quebrada CA-03B sea evaluada como parte del estudio hidrológico-hidráulico (HH) correspondiente a la Fase 2 del proyecto.
CLP-07	CA-02A Drenaje / Cauce Pluvial	Se propone un sistema pluvial diseñado para recolectar tanto las escorrentías generadas por el alineamiento propuesto como las descargas existentes que tributan a los drenajes pluviales actuales. Este sistema pluvial desembocará eventualmente en una Atarjea (Box Culvert), la cual descargará en el mismo punto de descarga hacia el Río Hondo.
	CA-02B Drenaje / Cauce Pluvial	

Además, y con el fin de que se demuestre que las obras propuestas para el proyecto: (1) tengan capacidad adecuada para evitar inundaciones locales, (2) la posible afectación a terceros, y (3) dada su naturaleza urbana con un manejo y control a través de obras pluviales los drenajes/ cauces pluviales, los cuerpos de agua antes mencionados fueron consideradas en las áreas de drenaje del Estudio H-H. No obstante, las obras propuestas en los cauces de drenaje pluvial según identificados y detallados en la tabla anterior, proponemos sean atendidas mediante cómputos de alcantarillado pluvial a tenor y en cumplimiento con la Sección 5.1.9.3 (Manejo de Aguas Pluviales) y la Sección 5.1.9.4 (Obras Pluviales) del Reglamento Conjunto del 2023, así como con las guías y directrices de diseño aplicables de la Autoridad de Carreteras y Transportación como la de la Agencia Federal de Carreteras (FHWA por sus siglas en inglés). Estas observarán un diseño de descarga para un evento de lluvia con recurrencia de 100 años en su área de captación.

Dicho diseño con sus correspondientes cómputos pluviales será oportunamente presentado al Municipio de Bayamón para su evaluación y favorable recomendación.

Basado en los resultados del Estudio H-H para la Fase 1 del proyecto y en lo antes expuesto se puede concluir que:

- las estructuras hidráulicas correspondiente al Rio Hondo y la descarga regulatoria esperada fueron evaluadas.

- Las comunidades adyacentes localizadas en el área de Estudio H-H para la Fase 1 se beneficiarán de niveles superficiales de inundación iguales o menores, ya que ninguna sección reflejó aumentos mayores a 0.15 metros en cumplimiento con el Reglamento de Planificación Núm. 13, Octava Revisión del 9 de enero de 2021 (*Reglamento sobre Áreas Especiales de Peligro a Inundación*), por lo cual éstas no se verán afectadas.

- Las otras estructuras propuestas en los cauces/drenajes pluviales serán atendidos mediante cómputos de alcantarillado pluvial a tenor y en cumplimiento con la Sección 5.1.9.3 (Manejo de Aguas Pluviales) y la Sección 5.1.9.4 (Obras Pluviales) del Reglamento Conjunto del 2023, así como con las guías y directrices de diseño aplicables de la Autoridad de Carreteras y Transportación como la de la Agencia Federal de Carreteras (FHWA por sus siglas en inglés).

Los cómputos de drenaje pluvial deben resultar en que el sistema es capaz de manejar la descarga pico de diseño sin causar efectos adversos en los distintos puntos de análisis.

Esperamos que la información provista haya atendido y aclarado la información solicitada, como para poder continuar con la revisión y el eventual endoso al Estudio H-H para la Fase 1 presentado ante vuestra consideración. No obstante, de entenderlo necesario, nos reiteramos a vuestra entera disposición para reunirnos y discutir cualquier aspecto que así entienda pertinente.

Sin nada más sobre el particular y en espera de su favorable respuesta, quedo,

Atentamente,

Ing. José A Carro Miranda
Miembro, Departamento de Transportación

Re: **Estudio Hidrológico-Hidráulico, AC-000533 Fase I**
Extensión Carretera Estatal PR-5, Bayamón – Toa Alta, Puerto Rico
O-HH-EJP07-SJ-001118-12112021
O-NE-EA03-SJ-00813-21012022

Estimada secretaria auxiliar Espinosa Lugo:

Acusamos recibo de su carta del 31 de enero de 2025 en respuesta al Estudio H-H sometido por nuestros consultores para la Fase 1 del proyecto de referencia.

A vuestra solicitud sobre la razón de la Autoridad de Carreteras y Transportación (ACT) para la fragmentación del proyecto para efectos del estudio H-H y para la presentación de este en una etapa de diseño Preliminar 35% deseamos informar que:

1- Para efectos del cumplimiento ambiental, el proyecto fue presentado, evaluado y aprobado por el DRNA en su totalidad, desde la Avenida Las Cumbres - PR-5/PR-199 en Bayamón hasta la PR-167 Km. 14.9 en Toa Alta.

2- Sin embargo, debido a disponibilidad de fondos, adquisición de propiedades y la magnitud de su construcción, el proyecto fue dividido en dos fases de construcción independientes. La Fase 1, a la cual hace referencia el Estudio H-H presentado, comprende desde la PR-5/PR-199 (Avenida Las Cumbres) hasta la PR-830, y la Fase 2 desde la PR-830 hasta la PR-167 Km. 14.9 (ver figura adjunta).

3- Actualmente desarrollamos el diseño preliminar de la Fase I considerando el método de subasta llamado Diseño y Construcción ("Design & Build"), donde se completa el diseño hasta su etapa de planos Preliminares 35% y la fase final del diseño 100%, será completada por el contratista que finalmente se le adjudique la construcción del proyecto. Por esta razón, se presentó el estudio al cual hacemos referencia en esta comunicación para su evaluación, siendo esta etapa de diseño la más adelantada al momento.

Recientemente se comenzó a trabajar con el diseño preliminar de la Fase 2 del proyecto, cuyo estudio H-H estaremos sometiendo para su evaluación en los próximos meses. Ambas fases se trabajan considerando el método de Diseño y Construcción para la fase final de diseño, por lo cual necesitaremos su evaluación y subsiguiente endoso para ambos estudios H-H, con el fin de subastar ambas fases del proyecto por separado.

Respecto a la información técnica solicitada, la misma será provista por nuestro consultor, el Ing. José A. Carro Miranda, para la cual respetuosamente solicitamos una extensión de tiempo de treinta (30) días calendarios adicionales para completar la información y presentarla para su evaluación.

De tener alguna duda o necesitar información adicional puede comunicarse con el gerente del proyecto ingeniero Kevin M. Martin Hidalgo al 939-205-1325 (kevin.martin2@atkinsrealis.com), con el Ing. José A. Carro al (787) 792-1509 extensión 2301 (jcarro@cmapr.com) o con esta servidora al (787) 721-8787, extensión 51503 (avelazquez@act.pr.gov).

Cordialmente,

Ing. Alexandra Velázquez Delgado, PE
Directora, Oficina de Pre-Construcción

Estudio Hidrológico-Hidráulico
Extensión PR-5
Desde PR-167 a PR-199
Bayamón

O-HH-EJP07-SJ-01118-12112021
O-NE-EEA03-SJ-00813-21012022
AC-000533

El Departamento de Recursos Naturales y Ambientales (DRNA) recibió su carta del 28 de febrero de 2025, en la cual incluye la justificación de la Autoridad de Carreteras y Transportación (ACT) para dividir el proyecto para la extensión de la PR-5 en dos fases. Esto a su vez apoya la decisión de la ACT para presentar un estudio hidrológico-hidráulico (HH) para cada fase. En dicha comunicación solicita, además, treinta días adicionales para presentar ante el DRNA una información técnica que será provista por el Ing. José A. Carro, profesional que preparó el estudio HH para la fase I.

Sobre el particular se le informa que, para este caso el DRNA acoge lo planteado para justificar dividir el proyecto en dos fases y a su vez un estudio HH para cada una. La determinación de la ACT, en términos generales, se basa en la disponibilidad de fondos, adquisición de propiedades y la magnitud de la construcción. Además de considerar sus argumentos, el DRNA cotejó que para cada fase del proyecto los estudios HH evaluarán y analizarán obras en diferentes cuencas, a saber: la fase I corresponde a la cuenca del Río Hondo, mientras que la fase II a la cuenca del Río Minillas. Ante esto, el DRNA no tiene objeción en que la ACT presente un estudio HH para cada fase del proyecto.

De otra parte, el DRNA en atención a su solicitud, le concede la prórroga solicitada para presentar la información técnica. Por tanto, se le conceden treinta (30) días adicionales

para presentar la información solicitada directamente a la Oficina de Secretaría. Se le recuerda que, de confrontar alguna limitación para cumplir con este término, deberá mantener informado al DRNA.

Cordialmente,

Ivelisse Espinosa Lugo

Estimada ingeniera Velázquez:

Estudio Hidrológico-Hidráulico
Extensión PR-5
Desde PR-167 a PR-199
Bayamón

O-HH-EJP07-SJ-01118-12112021
O-NE-EEA03-SJ-00813-21012022
AC-000533

El Departamento de Recursos Naturales y Ambientales (DRNA) evaluó la información incluida con la carta del 26 de marzo de 2025, firmada por el Ing. José A. Carro Miranda. Dicha información es en respuesta a las comunicaciones emitidas por el DRNA el 31 de enero y 17 de marzo de 2025, mediante las cuales se le requirió información adicional. Junto a esta información se evaluó el estudio hidrológico-hidráulico (HH) preparado por el ingeniero Carro en octubre de 2024, para la fase I del proyecto de la extensión de la carretera PR-5.

De la evaluación surge que el profesional que preparó el estudio HH deberá presentar o aclarar, según corresponda, lo siguiente:

- En el análisis hidrológico se indica que se dividió el área en siete subcuencas y que el área total de la cuenca es de 2.77 Km^2. Sin embargo, el modelo hidrológico digital no fue incluido en el CD. Deberá incluir el mismo para poder realizar la evaluación correspondiente.

- Deberá describir con más detalles las obras hidráulicas propuestas en la Fase I, comparando las mismas con las condiciones existentes en los cuerpos de agua.

- De la evaluación se observó una asignación poco usual de los caudales dentro del modelo hidráulico, donde las Secciones 4 y 6 presentan un aumento casi duplicado del caudal a una distancia menor a 60 metros. Por lo que, deberá incluir una discusión sobre el razonamiento detrás de esta decisión.

- La atarjea en la Sección 837.5 fue modelada sin áreas inefectivas, contrario a lo recomendado en las Guías para la Elaboración de Estudios Hidrológicos-Hidráulicos. Deberá cotejar y realizar los cambios que correspondan.

- No está claro en la hidrología cómo la subdivisión de cuencas fue asociada a sus puntos de descarga dentro del modelo hidráulico. Deberá discutir con más detalles este aspecto.

- Se reitera la responsabilidad, tanto del profesional que prepara el estudio HH como del gerente del proyecto, de asegurarse que se incluyen los modelos hidrológicos e hidráulicos en formato digital cada vez que se presenta información ante la consideración del DRNA.

Se le conceden treinta (30) días calendario contados a partir de la fecha de esta notificación para presentar la información solicitada directamente a la Oficina de Secretaría. De no recibir la misma en el periodo de tiempo otorgado, se entenderá que no mantiene interés en la tramitación de su caso y procederemos a archivar su solicitud. No obstante, de confrontar alguna limitación para cumplir con este término, deberá mantener informado al DRNA y solicitar tiempo adicional.

Cordialmente,

Ivelisse Espinosa Lugo

Re: Estudio Hidrológico-Hidráulico Fase 1, AC-000533
Extensión Carretera Estatal PR-5, Bayamón – Toa Alta, Puerto Rico
O-HH-EJP07-SJ-001118-12112021 y O-NE-EA03-SJ-00813-21012022

Estimada secretaria auxiliar Espinosa Lugo:

Hacemos referencia a su carta de comentarios del 2 de mayo de 2025 en respuesta al Estudio Hidrológico – Hidráulico (Estudio H-H) sometido para la Fase 1 del proyecto de referencia. La misma indica que el DRNA evaluó la información sometida por quien suscribe en carta fechada 26 de marzo de 2025 en respuesta a las comunicaciones emitidas por el DRNA el 31 de enero y el 17 de marzo de 2025.

Junto con la información y argumentos sometidos el 26 de marzo de 2025 el DRNA evaluó el estudio hidrológico-hidráulico (HH) preparado en octubre 2024, para la fase I del proyecto de la extensión de la carretera PR-5 y emitió los siguientes cometarios que se detallan y responden a continuación:

Comentario #1: "*En el análisis hidrológico se indica que se dividió el área en siete subcuencas y que el área total de la cuenca es de 2.77 Km*^{2}*. Sin Embargo, el modelo hidrológico digital no fue incluido en el CD. Deberá incluir el mismo para poder realizar la evaluación correspondiente.*"

Respuesta: Conforme a lo solicitado, se adjunta el archivo digital del modelo hidrológico (HEC-HMS) para la evaluación correspondiente.

Comentario #2: "*Deberá describir con más detalles las obras hidráulicas propuestas en la Fase I, comparando las mismas con las condiciones existentes en los cuerpos de agua.*"

Respuesta: Se ha ampliado la descripción de las obras hidráulicas propuestas, integrando lo siguiente:

- **Extensión del "culvert: (atarjea) existente:** La localización de los dos (2) tubos de 84 pulgadas actualmente instalados en el cruce de PR-5 y PR-199 se muestra en la **Figura 7** del estudio H-H, ubicándose específicamente entre la Sección **100** y la Sección **75**. Para la condición existente, el nivel de inundación de 100 años en la cara aguas arriba de la atarjea fue de **31.77 m**. Según el as-built preparado para este proyecto, la elevación mínima de la rampa de la PR-199 es de **31.15 m**, lo que ocasiona un desborde de la calle durante el evento de inundación evaluado.

En la condición propuesta, la atarjea existente de 3.05 m x 3.05 m, ilustrada en la **Figura 7** entre la Sección **75** y la Sección **50** (localizada aguas abajo de los tubos de 84 pulgadas existentes), se propone extender hacia aguas arriba aproximadamente 44 m (equivalentes a la longitud de los tubos de 84"). Este diseño propuesto resulta en un nivel de inundación para el evento de 100 años de **27.49 m**, mejorando así la condición de inundabilidad del área, aun cuando el alineamiento propuesto de la carretera presenta una elevación mínima menor (**30.45 m**) en la zona. Es importante destacar que la disminución en el nivel de inundación conlleva un incremento en la velocidad del flujo, situación que se atenderá mediante medidas de control de erosión como el revestimiento en piedra propuesto.

- **Instalación de un canal trapezoidal con protección contra erosión:** Como parte del sistema de control de erosión mencionado anteriormente, se propone la construcción de un canal trapezoidal que se extiende desde la cara aguas arriba de la atarjea extendida de 3.05 m x 3.05 m (ubicada en la Sección **100,** según **Figura 7**) hasta la Sección **200**. Para la condición existente, evaluada para el evento de 100 años, el nivel base de inundación se encuentra entre **31.85 m** y **31.77 m**; en contraste, en la condición propuesta, los niveles de inundación en el tramo del Río Hondo fluctúan entre **27.63 m** y **27.49 m**. Como se indicó previamente, la disminución del nivel de inundación genera un aumento en la velocidad del flujo, situación que será compensada mediante la implementación de un sistema de control de erosión adecuado.

- **Construcción de un box culvert (atarjea) de dos celdas:** Se proyecta la construcción de un box culvert (atarjea) de dos (2) celdas, con dimensiones de 2.4384 m x 2.1336 m (equivalentes a 8 ft de ancho y 7 ft de alto) y una longitud aproximada de 240 m, que descargará en el canal trapezoidal propuesto. Esta estructura hidráulica está diseñada para encauzar de forma efectiva la escorrentía proveniente del canal principal del Río Hondo, tanto a través de la extensión de la PR-5 incluyendo sus respectivas rampas de acceso hacia y desde la carretera PR-199.

  La ubicación determinada para el culvert es entre la Sección **200** — donde comienza el canal trapezoidal — y la Sección **400**, conforme se ilustra en la **Figura 7**.

  En la condición existente, los niveles de inundación para un evento de 100 años varían de **31.92 m** a **31.85 m**. En contraste, bajo la condición propuesta se proyecta que el nivel de agua en la cara aguas arriba de la atarjea se reduzca a **31.58 m**, mientras que en la cara aguas abajo se alcanza un nivel de **27.63 m**, ambos valores inferiores a los de la condición actual.

  Además, este box culvert recogerá el drenaje adicional proveniente del área de El Cortijo.

- **Diseño de puente sobre PR-199 y la instalación de una tubería de 54 pulgadas:** El concepto de diseño requerido para la extensión de la PR-5 contempla una porción elevada sobre la PR-199, paralela a la zona del Río Hondo en la que se propone el canal trapezoidal (véase **Figura 11**). Esta sección del Río Hondo recibe escorrentías provenientes de la antigua Escuela Padre Rufo, ubicada más hacia el este. Dentro de este mismo diseño, se propone la construcción de rampas de acceso hacia y desde la PR-199, situadas aguas arriba del puente proyectado. En esa área también se contempla la instalación de una tubería de concreto de 54 pulgadas de diámetro.

Ambas estructuras —el puente y la tubería— se ubicarán, respectivamente, entre las secciones **700** y **750** (para el puente) y entre las secciones **800** y **875** (para la tubería), según se ilustran en la **Figura 7**.

Para la condición existente, los niveles de inundación para el evento de 100 años resultaron en **31.85 m**. En contraste, en la condición propuesta se proyecta que los niveles en la zona del puente sean de **27.71 m**. Asimismo, el análisis indica que, en la instalación de la tubería de 54 pulgadas, la cara aguas arriba presenta un nivel de **31.50 m** y la cara aguas abajo de **27.36 m**, valores inferiores a los de la condición existente. Como se ha mencionado previamente, cualquier incremento en la velocidad del flujo derivado de la reducción de los niveles se mitigará mediante la implementación de medidas de control de erosión.

La descripción detallada de las obras hidráulicas propuestas y la comparación con las condiciones existentes se encuentran incorporadas en las **secciones 5.5** y **5.6** del estudio, y están respaldadas por los modelos hidráulicos generados con HEC-RAS v6.5.

Comentario #3: "*De la evaluación se observó una asignación poco usual de los caudales dentro del modelo hidráulico, donde las secciones 4 y 6 presentan un aumento casi duplicado del caudal a una distancia menor de 60 metros. Por lo que, deberá incluir una discusión sobre el razonamiento detrás de esta decisión.*"

Respuesta: Con base en el comentario emitido por el DRNA, se reconoce que este caudal de 102.05 m³/s debió haber sido asignado en la sección aguas abajo de la intersección de la carretera PR-199 y la PR-5, es decir, al comienzo del canal rectangular existente del Río Hondo, ubicado en la **sección 50** (aproximadamente 400 m aguas arriba de la **sección 4**). Se adjunta el reporte revisado que incorpora estos ajustes, junto con el archivo electrónico actualizado del modelo hidráulico. Cabe destacar que el modelo hidrológico se ha mantenido sin modificaciones, y su archivo electrónico también se incluye en la documentación acompañante.

Comentario #4: "*La atarjea en la Sección 837.5 fue modelada sin áreas inefectivas, contrario a lo recomendado en la Guías para la Elaboración de Estudios Hidrológicos-Hidráulicos. Deberá cotejar y realizar los cambios que correspondan.*"

Respuesta: Se ha cotejado la modelación de la atarjea en la Sección 837.5 y se han efectuado los ajustes pertinentes para incorporar las áreas inefectivas según Guía para la Elaboración de Estudios Hidrológicos-Hidráulicos. Los resultados actualizados aparecen en el reporte revisado que acompaña este documento.

Comentario #5: "*No está claro en la hidrología como la subdivisión de cuenca fue asociada a sus puntos de descarga dentro del modelo hidráulico. Deberá discutir con más detalles este aspecto*."

Respuesta: La evaluación del archivo electrónico que, por razones fuera de nuestro alcance, no fue sometido junto con el estudio H-H, junto a la revisión derivada del Comentario #3, debe arrojar mayor claridad sobre el procedimiento seguido para asociar la subdivisión de cuencas a sus puntos de descarga dentro del modelo hidráulico.

En la **Sección 4.1.1.1** se describen las siete (7) subcuencas analizadas, mientras que la **Sección 4.1.5**, posterior a la **Tabla 3**, explica la procedencia de los flujos asignados al modelo hidráulico. Adicionalmente, la **Tabla 5** de la **Sección 5.2** detalla la procedencia y la función de las secciones transversales utilizadas en el modelo.

Para mayor claridad, y tomando como referencia el "screenshot" del modelo hidrológico HEC-HMS, se resume a continuación la asignación de caudales:

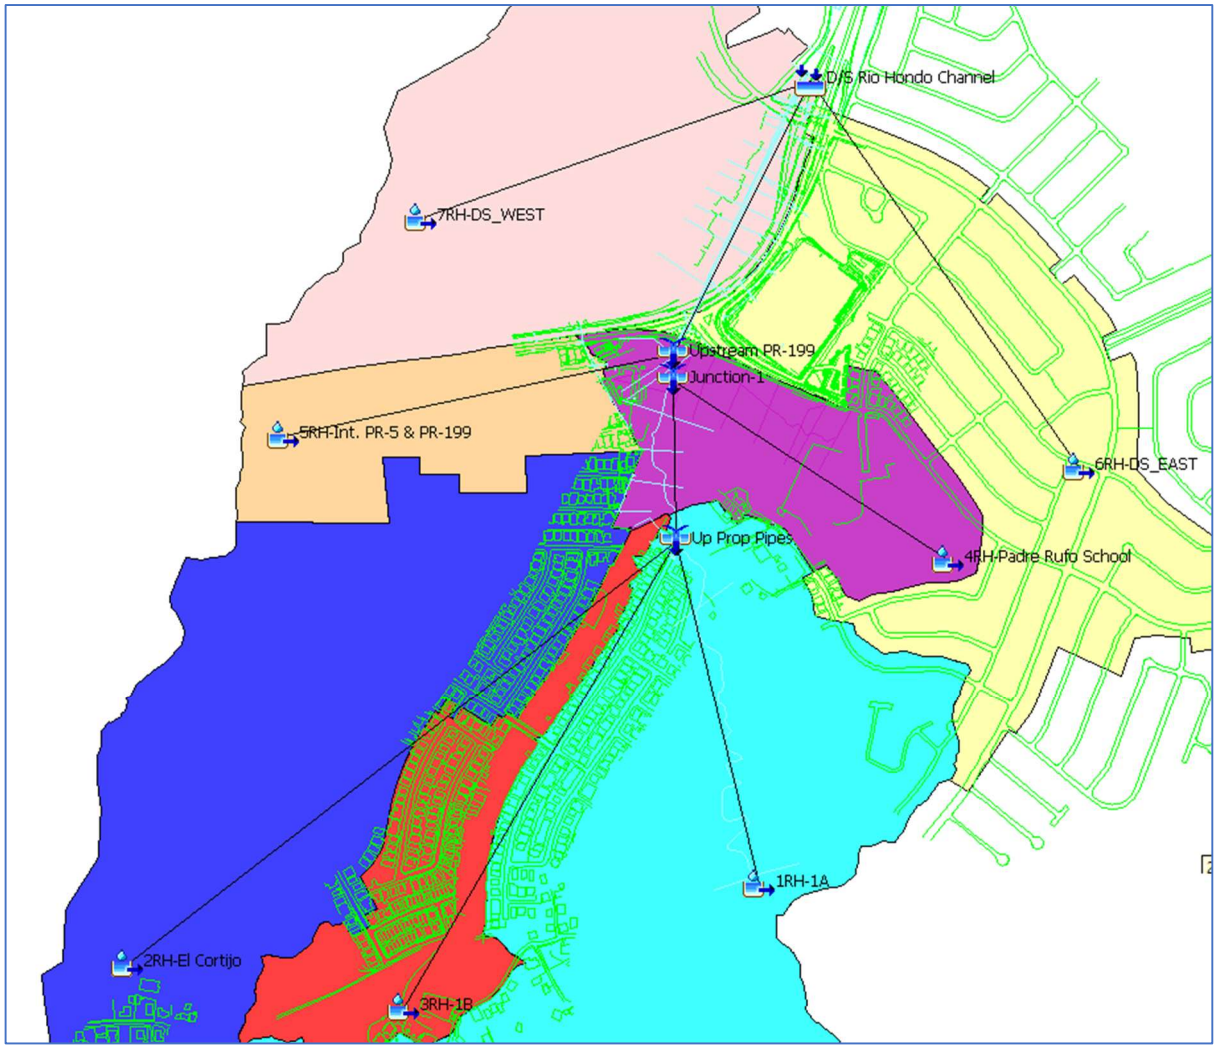
- **Junction Element "Up Prop Pipes" (Sección 600):** Este elemento, con una descarga pico determinada de **51.836 m³/s**, recoge las descargas pico provenientes de las subcuencas **RH-1A**, **RH-1B** y **RH-El Cortijo**.

- **Junction Element "Junction-1" (Sección 150):** En esta sección, se integra la descarga pico de la subcuenca **RH Padre Rufo School (8.819 m³/s)**, asignándole un caudal de **57.571 m³/s**. Cabe destacar que el flujo de **8.819 m³/s** de la cuenca **RH Padre Rufo School** también está asignado a la **Sección 1000**, ubicada en el tributario del Río Hondo.

- **Junction Element "Upstream PR-199" (Sección 100):** A este elemento se añade la descarga de la subcuenca **RH-Int. PR-5 & PR-199**, resultando en una descarga combinada de **63.651 m³/s**.

- **Sink Element "D/S Río Hondo Channel" (Sección 50):** Este elemento, que recoge además las descargas pico de las subcuencas **RH DS_EAST** y **RH DS_WEST**, asigna un caudal combinado de **102.047 m³/s** a la Sección **50**, según se describe en la respuesta al Comentario #3.

A continuación, incluimos "Screenshot" del modelo hidrológico HEC-HMS.



Comentario #6. "*Se reitera la responsabilidad, tanto del profesional que prepara el estudio HH como del gerente del proyecto, de asegurarse que se incluye los modelos hidrológicos e hidráulicos en formato digital cada vez que se presenta información ante la consideración del DRNA.*"

Respuesta: Como mencionáramos anteriormente, por inadvertencia en la radicación, el archivo digital del modelo hidrológico (HEC-HMS) no fue entregado. Tanto quien suscribe esta carta como el gerente del proyecto tomaremos las medidas necesarias para corregir esta situación.

En el estudio revisado que acompaña el presente documento se adjuntan, en formato electrónico, los modelos digitales correspondientes tanto al análisis hidrológico (HEC-HMS) como al análisis hidráulico (HEC-RAS) para vuestra correspondiente evaluación. También incluimos en formato .pdf el Estudio H-H revisado para esta Fase del Proyecto.

Esperamos que las contestaciones esbozadas a los comentarios provistos por el DRNA, junto con la información previamente sometida en la carta fechada el 26 de marzo de 2025, sean de su conformidad como para obtener el endoso al Estudio H-H para la Fase 1 del Proyecto.

Sin otro particular y en espera de su favorable respuesta, quedo.

Atentamente,

Ing. José A Carro Miranda

Estimada secretaria auxiliar Espinosa Lugo:

El 2 de mayo de 2025, la Autoridad de Carreteras y Transportación (ACT) recibió su carta en la cual el Departamento de Recursos Naturales y Ambientales (DRNA) emitió comentarios, luego de haber evaluado el estudio hidrológico-hidráulico (HH) de la fase I del proyecto AC-000533, Extensión PR-5 y en respuesta a comunicaciones emitidas por la ACT el 26 de marzo de 2025. A tales efectos, en miras de atender sus requisitos y aclarar sus dudas y preocupaciones, anejada a esta carta encontrará la comunicación de parte del Ing. José A. Carro, quien preparó el Estudio HH presentado, atendiendo sus comentarios. Además, como parte de esta entrega, se incluye el estudio HH revisado conforme a los ajustes realizados y los modelos hidráulicos e hidrológicos en digital para su referencia y evaluación.

De tener alguna duda o necesitar información adicional puede comunicarse con el gerente del proyecto, el ingeniero Kevin M. Martin Hidalgo al 939-205-1325 (kevin.martin2@atkinsrealis.com), con el Ing. José A. Carro al (787) 792-1509 extensión 2301 (jcarro@cmapr.com) o con esta servidora al (787) 721-8787, extensión 51503 (avelazquez@act.pr.gov).

Cordialmente,

Ing. Alexandra Velázquez Delgado, PE

El 7 de octubre de 2025, el Departamento de Recursos Naturales y Ambientales (DRNA) aprobó la Orden Administrativa Núm. 2025-05, "Para establecer el tipo de estudio Hidrológico e Hidráulico que será avalado por el Departamento de Recursos Naturales y Ambientales; y derogar la Orden Administrativa Núm. 2022-04."

Esta Orden establece que el DRNA avalará los estudios hidrológicos e hidráulicos relacionados con obras en cauces de cuerpos de agua que sean presentados ante la agencia y que estén debidamente certificados por un ingeniero licenciado y colegiado. Asimismo, se avalarán los estudios requeridos para estructuras de mitigación que descarguen en sumideros, humedales, ríos o en la línea de costa. También se aprobarán los estudios para obras en valles inundables, incluyendo aquellos cuyo propósito sea enmendar los Mapas sobre Tasas del Seguro de Inundación.

A continuación, se adjuntan los documentos que deben completarse para culminar el proceso, según lo establecido en la Orden Administrativa 2025-05:

- ✓ Listado de documentos a entregar junto con el Estudio HH.
- ✓ Certificación de Ingeniero para Estudio Hidrológico-Hidráulico del DRNA.
- ✓ Hoja de Solicitud de Consulta para Endoso o Certificación.

DEC - 5 2025

Estos documentos deberán ser presentados en la Oficina de Secretaría, ubicada en el primer piso del DRNA, junto con la nueva solicitud, la hoja de certificación y todos los requisitos incluidos en el listado de documentos correspondiente. El proceso concluirá en el DRNA una vez la Oficina de Secretaría firme el listado de documentos, indicando que se ha cumplido con todos los requisitos de presentación.

Para preguntas o información adicional, puede comunicarse con la Oficina de Secretaría del DRNA al 787-999-2200, extensiones 5117, 5121.

Listado de documentos a entregar para Estudio HH

Requisitos de presentación:

__X__ Hoja de solicitud cumplimentada en todas sus partes

__X__ Hoja de Certificación de Ingeniero para Estudio HH

__X__ Solicitud de Recomendación de Medioambiente (SRM) del proyecto por parte de la OGPe. No se aceptará Certificación de Cumplimiento Ambiental por Exclusión Categórica

__X__ Copia legible de la licencia profesional del ingeniero que realizó el estudio y de la credencial como miembro activo del CIAPR

__X__ 1 copia del Estudio HH, certificado por el Ingeniero que realizó el estudio, que incluya la siguiente información:

- ✓ Memorial explicativo y fotos del lugar
- ✓ Modelos hidrológicos e hidráulicos en formato digital (disco)
- ✓ Trabajo de campo que incluya las secciones transversales certificado por un agrimensor licenciado o ingeniero licenciado autorizado a ejercer la agrimensura. Deberá incluir la Estampilla Digital Especial (EDE) del Colegio de Ingenieros y Agrimensores de Puerto Rico, copia legible de la licencia profesional y de la credencial como miembro activo del CIAPR
- ✓ Del estudio ser presentado por un grupo profesional que ofrece servicios de ingeniería, el nombre de la firma debe incluir una de estas abreviaciones: C.S.P., P.S.C., C.P. o P.C.

El Departamento de Recursos Naturales y Ambientales verificó que el peticionario cumplió con los requisitos de presentación del Estudio HH en cumplimiento con la Orden Administrativa Núm. 2025-05, ***"Para establecer el tipo de Estudio Hidrológico e Hidráulico que será avalado por el Departamento de Recursos Naturales y Ambientales; y derogar la Orden Administrativa Núm. 2022-04"***

Certifico que el Estudio HH contiene toda la información que se encuentra en el listado. I. INTRODUCTION

The Puerto Rico Highway and Transportation Authority (PRHTA) proposed the planning and schematic design of the PR-5 freeway extension, which will connect State Road PR-167 at its southern end with State Road PR-199 (Las Cumbres Avenue) at its northern end in the Municipality of Bayamón, Puerto Rico. The project, divided into two (2) phases, consists of approximately 6.5 km of roadway along the PR-5 centerline.

- **Phase 1** covers the crossing of Río Hondo and associated local drainage systems.
- **Phase 2**, which is the subject of this Hydrological–Hydraulic (HH) Report, addresses the crossing of Río Minillas and its unnamed tributaries.

The Phase 2 alignment impacts Río Minillas at the confluence with an unnamed tributary and follows this tributary for approximately 1,500 meters upstream. Required hydraulic structures include a bridge over Río Minillas and channelization works along the unnamed tributary consisting of interconnected trapezoidal channels and box culverts to accommodate roadway slope embankments and maintain drainage capacity. In addition, the alignment continues northward, crossing State Road PR-830, while adjacent unnamed creek flows parallel to the proposed alignment along its eastern edge before discharging south into Río Minillas.

As part of the Environmental Impact Statement (EIS) compliance process, a Hydrological–Hydraulic Study (HH Study) was prepared and submitted to the Department of Natural and Environmental Resources (DNER) in May 2022 (Revision 4). Based on the submitted HH Study, and after several requests for additional information, the DNER issued a conditioned endorsement with final comments and recommendations. The official correspondence (October 25, 2022, case O-NE-EEA03-SJ-00813-21012022 regarding the EIS, and November 3,

2022, case O-HH-EJP07-SJ-01118-12112021 regarding the HH Study) is included in **Appendix A**.

1.1 Objective

Due to its complexity and funding, the Puerto Rico Highway and Transportation Authority (PRHTA) divided the proposed PR-5 freeway extension project into two (2) separate and independent phases:

1. **Phase One (1):** Covers the State Road PR-5 extension from Sta. 34+20 to Sta. 65+66, impacting the **Río Hondo watershed**.
2. **Phase Two (2):** Covers the PR-5 extension from Sta. 1+00 to Sta. 34+20, impacting the **Río Minillas watershed**.

The objective of this report is to present the hydrologic–hydraulic results of Phase Two (2), specifically addressing flooding levels within the Río Minillas watershed and its tributaries, identifying the required drainage structures for the respective crossings, and verifying compliance with applicable state and federal flood rules and regulations. This study was prepared in accordance with Puerto Rico Planning Board (PRPB) and DNER guidelines titled "*Guías para la Elaboración de Estudios Hidrológicos-Hidráulicos*" (June 15, 2016)[5].

1.2 Authorization

The Phase One (1) project extension of State Road PR-5 Extension, from State Road PR-167 to State Road PR-199, was the subject of a Hydrological–Hydraulic (HH) Study performed by CMA Architects & Engineers LLC, as requested by the Puerto Rico Highway and Transportation Authority (PRHTA) under contract **AC-000533** and in coordination with the Department of Natural and Environmental Resources (DNER). This study formed part of the required design engineering evaluations and approvals necessary prior to advancing the design and construction of the Phase Two (2) proposed project.

II. PROJECT DESCRIPTION

2.1 Project Location (Phase 2)

Phase Two (2) of the proposed State Road PR-5 extension begins at Sta. 34+20, near its intersection with State Road PR-830, and continues south to the intersection with State Road PR-167, where the project terminates (Sta. 1+00). This portion of the alignment traverses urbanized areas that include several established residential communities: Valle de Cerro Gordo, Estancias de Cerro Gordo, Colinas de Cerro Gordo, Ciudad Interamericana, Colinas de Bayamón, Bayamón Hills, El Zorzal, Villas de Buena Vista, and Villa Chica. Within the project area, tributaries of the Río Minillas occur at different locations. One tributary runs parallel to the communities of Villa Chica and Ciudad Interamericana, while another unnamed creek flows parallel to the proposed alignment along its eastern edge. This creek originates east of Universidad Interamericana and north of State Road PR-830, before discharging south into Río Minillas. The Río Minillas itself flows in a south-to-northeast direction.

The location of the proposed project is illustrated in **Figure 1**, which partially reproduces the United States Geological Survey (USGS) Topographic Quadrangles of Naranjito[16] and Bayamón[15]. **Figure 2** presents the project alignment over an aerial image of the site and surrounding areas.

2.2 Existing Topography

A topographic survey was conducted along the proposed extension route of State Road PR-5. In addition, cross-sections and longitudinal profiles of the Río Minillas and its tributaries were prepared as part of this Hydrologic–Hydraulic (HH) Study. These surveys were performed by licensed surveyor Antonio Meléndez. For complete topographic information, refer to **Appendix *B***.

The highest elevation point within the Río Minillas tributary watershed is located in the Santa Olaya Ward, at approximately 240 meters. The lowest elevation point within the watershed occurs along the Río Minillas main channel, at the study's point of analysis near the downstream end of the existing box culvert at State Road PR-830, with an elevation of approximately 65 meters.

2.3 Scope

This Hydrologic–Hydraulic (HH) Study focuses on Phase Two (2) of the proposed State Road PR-5 freeway extension in Bayamón, from State Road PR-167 to State Road PR-830. The study includes the analysis and design of hydraulic structures for the Tributary of Río Minillas, as well as the evaluation of a proposed bridge located at the confluence of Río Minillas with its tributary. It also evaluates a second bridge located over State Road PR-830, which spans both the roadway and an adjacent unnamed creek tributary.

The study involves the following tasks:

a) Hydrologic analysis of the Rio Minillas watershed, to determine the 2-, 10-, 25-, 50-,100-, 200- and 500-year recurrence peak flows. This includes field inspections and the review of available information to compute the required hydrologic parameters.

b) Hydraulic modeling of existing conditions to determine flood levels for the discharges obtained in Task a). Topographic surveys of the Río Minillas at the project site were used to create the river cross sections required for the hydraulic model. Additional cross sections were derived from other available topographic survey data to supplement the model.

c) Hydraulic modeling of proposed conditions to determine flood levels for the discharges obtained in Task a). The flood levels obtained in this

phase will be compared with those from Task b) to evaluate the performance of the proposed improvements.

To ensure compliance with flood rules and regulations, roadway drainage for project construction and operation will be addressed in the corresponding Stormwater Drainage Calculation Report, which shall follow and align with the results and recommendations of this study.

III. PRELIMINARY EVALUATION

3.1 Field Inspection

Several field visits were conducted to inspect the project area and determine hydrologic and hydraulic parameters of the Río Minillas watershed. Tasks performed during these inspections included locating existing infrastructure, documenting site conditions through photographs, and evaluating roughness coefficients for the Río Minillas channel and its tributaries.

Additionally, a licensed surveyor prepared a topographic plan of the project area, including channel cross sections and longitudinal profiles of the Río Minillas and its tributaries.

3.2 Previous Studies / Historical Data Collection

The Federal Emergency Management Agency (FEMA) conducts Flood Insurance Studies (FIS) for communities throughout the United States and Río Minillas Puerto Rico to identify areas subject to flooding. These areas are presented in published Flood Insurance Rate Maps (FIRMs).

The 2009 FIS does not include studies for the Río Minillas. The FEMA FIRM for the project area is shown in **Figure 3**, which reproduces a portion of Panel 72000C0710H[12].

Following the impact of Hurricane María in Puerto Rico on September 20, 2017, FEMA, in coordination with the Puerto Rico Planning Board (PRPB), developed Advisory Base Flood Elevation Maps ("Advisory Maps")[11], These maps provide updated flood information for Puerto Rico, showing recommended base flood elevations corresponding to the 1% annual chance flood. Advisory Maps identify areas in new flood zones and present revised flood levels that can affect construction practices. **Figure 4** illustrates a partial reproduction of the FEMA Advisory Base Flood Map.

IV. STUDY APPROACH

This section presents the methodology used to delineate basin areas and define the drainage pattern for the Río Minillas watershed in relation to the proposed PR-5 extension alignment. The analysis considered both existing and proposed drainage conditions, including the two (2) river junctions evaluated in the hydraulic study. Subbasin delineation was based on updated topographic data, GIS sources, and field survey information.

4.1 Basin Areas Delimitation and Drainage Pattern

The basin areas were delineated to reflect the hydrologic connectivity between the Río Minillas study reach and the PR-5 extension alignment. **Figure 5** illustrates the watershed boundaries used in the analysis of Río Minillas and its tributaries.

4.1.1 Subbasins Located Upstream of Junction-1.

Río Minillas 1 (WS-M1)

The largest contributing area, where a Río Minillas flows northward from the south until its confluence with its tributary. This subwatershed accounts for the initial flow passing through the proposed bridge over Río Minillas.

Río Minillas 3A (WS-M3A)

Headwaters of the Tributary of Río Minillas with mixed land use (urban/semi-rural). Discharges through a 30-in pipe into the Street No. 1 box culvert (3.37 m × 2.09 m).

Río Minillas 2A (WS-M2A)

A predominantly suburban subbasin discharging into the Street No. 1 box culvert (3.37 m × 2.09 m).

Río Minillas 3B (WS-M3B)

Urbanized parcel north of the alignment, including a car dealer ("Cabrera Grupo Automotriz"), formerly known as commercial facility "*Losetas El Italiano*", and surrounding housing.

Río Minillas 2B (WS-M2B)

Moderately urbanized, with residential blocks and paved streets located south of the proposed alignment. Includes a tributary segment of Rio Minillas flowing east. The area features paved streets and vehicular access routes toward Ciudad Interamericana Development. North of this access road, a portion of the Tributary of Rio Minillas flows east, and it will be channelized by box culverts and channels.

Río Minillas 4A (WS-M4A)

Large open green space north of the proposed alignment, pervious and vegetated.

Río Minillas 4B (WS-M4B)

Wooded parcel south of the proposed alignment, traversed by a Tributary of Río Minillas, channelized with culverts and trapezoidal sections.

Río Minillas 5A (WS-M5A)

Mixed-use area: residential in the north, vegetated open space in the south. Includes a fringe of Estancias de Cerro Gordo. Southern boundary bordered by Río Minillas, which discharges into an existing 1.84 m x 1.84 m box culvert.

Río Minillas 5B (WS-M5B)

Primarily residential, with Estancias de Cerro Gordo and Valle de Cerro Gordo occupying most of the basin. Peripheral segments include open terrain and vegetated buffers. A tributary emerges

from the 1.84 m x 1.84 m existing box culvert and flows east to its confluence with Río Minillas, contributing runoff at the proposed bridge crossing (Junction-1).

4.1.2 Subbasins Located Upstream of Junction-2.

Downstream of the proposed bridge (Junction-1), Río Minillas flows northeast while the PR-5 alignment continues north, passing under a new connector road to PR-830. This road crosses an unnamed creek that joins Río Minillas further downstream. The analysis extended to the existing culvert at PR-830.

Río Minillas 6 (WS-M6)

Wooded landscape with a tributary Unnamed Creek flowing southward to Río Minillas downstream.

This drainage area corresponds to the area labeled as CA-03B in previous documentation during the Environmental Impact Statement (EIS) compliance process (see **Figure 5**).

Río Minillas 7 (WS-M7)

Discharges into Río Minillas, which flows eastward along the parcel boundary and continues to its confluence with tributary CA-03B further downstream.

Rio Minillas 8 (WS-M8)

Urbanized residential area with single-family homes and paved streets. Discharges into Río Minillas downstream of Junction-2, ultimately reaching the existing PR-830 box culvert.

In the proposed condition, WS-M2B and WS-M3B discharge into Proposed Concrete Channel-2 south of the alignment; WS-M4A and WS-M4B discharge into Concrete Channel-3 south of the

alignment; and WS-M5A discharges into Concrete Channel-4 north of the alignment.

V. HYDROLOGIC MODELING AND RESULTS

A hydrologic analysis was conducted to establish peak discharges for the Río Minillas watershed under existing and proposed conditions. The analysis evaluated recurrence intervals of 500-, 200-, 100-, 50-, 25-, 10-, and 2-year events. Results were used in the hydraulic study to determine water surface elevations.

The hydrologic analysis was performed using the rainfall-runoff computer model Hydrologic Modeling System, (HEC-HMS Version 4.13, 2025), developed by the Hydrologic Engineering Center of the U.S. Army Corps of Engineers (USACE). The model followed the curve number methodology of the U.S. Department of Agriculture Natural Resources Conservation Service (formerly SCS), as presented in the National Engineering Handbook [9] and TR-55[10].

5.1 Hydrologic Parameters

5.1.1 Basin Areas

The Río Minillas watershed has a total drainage area of approximately 3.66 km² at the PR-830 crossing. Twelve (12) subwatersheds were delineated, reflecting updated topographic and GIS data.

5.1.2 Curve Number

The curve number (CN) for the Río Minillas subwatersheds was determined considering soil type, land use, vegetation cover, and the Antecedent Moisture Condition (AMC). The predominant hydrologic soil group is **D**, with localized areas of **B** and **C** (see **Figure 6**, Soil Map).

CN values were assigned to each land use area based on its soil group and hydrologic condition. A weighted average CN was then computed for each watershed, proportional to land use area. Detailed computations are provided in **Appendix C**.

The weighted CN values were adjusted using the **AMC index**, which reflects watershed wetness prior to a storm. Three levels are defined: **AMC I** (dry soils), **AMC II** (average condition), and **AMC III** (saturated soils following recent rainfall). For this analysis, **AMC III** was applied.

5.1.3 Lag Time

Lag time is defined as the time between the center of mass of the effective rainfall hyetograph and the center of mass of the direct runoff hydrograph. The NRCS Unit Hydrograph methodology is included in the HEC-HMS and requires the input of the basin lag time to compute the direct runoff. The equation used to compute the lag time in this study, was developed by the former SCS as shown:

$$T_{lag} = \frac{L^{0.8}(S+1)^{0.7}}{1900\sqrt{Y}} \qquad \text{(Eq. 4.1)}$$

Where:

T_{lag} : Lag time in hours

L : Hydraulic length of watershed in feet

S : Maximum retention in the watershed in inches as defined by:

$$S = \frac{1000}{\text{CN}} - 10 \qquad \text{(Eq. 4.2)}$$

Y : Watershed slope in percent

CN : NRCS Curve Number for the watershed as defined by the loss method

The lag time and other hydrological parameters for the Río Minillas subwatersheds can be seen in **Table 1**. They summarize the main

hydrologic parameters used to obtain the flow hydrographs generated at each point of analysis.

Table 1. Main Hydrologic Parameters – Río Minillas

Basin Name	Area (sq.km)	Curve Number (CN)		Lag Time (min.)
		AMC II	AMC III	
M1	2.01	81	92	13.86
M2A	0.06	84	93	3.60
M3A	0.11	85	94	4.62
M2B	0.04	84	93	3.60
M3B	0.07	88	95	3.60
M4A	0.03	77	89	4.36
M4B	0.01	78	90	3.60
M5A	0.05	78	90	7.22
M5B	0.55	82	92	8.75
M6	0.21	76	89	6.00
M7	0.43	78	90	9.71
M8	0.10	80	91	3.62

5.1.4 Precipitation

The Puerto Rico Planning Board (PRPB) and the Department of Natural and Environmental Resources (DNER) document titled "*Guias para la Elaboración de Estudios HIdrológicos-Hidráulicos*" (June 15, 2016) [5] requires the use of temporal rainfall distributions for the first (1st) quartile (10% percentile) and the fourth (4th) quartile (90% percentile), which represents where the largest volume of rainfall falls at the beginning and the end of the temporal

distribution, respectively. The temporal rainfall distributions (hyetographs) were constructed using precipitation depth values for Rio Minillas, for frequencies of 2-, 10-, 25-, 50-, 100-, 200- and 500-year and durations of 1-, 6-, 12- and 24 hours were obtained for the project area from the NOAA Atlas 14 Volume III[1] for use with the design storm used in the HEC-HMS model. Table 2 presents the 2-, 10-, 25-, 50- and 100-, 200- and 500-year rainfall depths used in the analysis for Rio Minillas. The precipitation frequency estimates and rainfall distribution calculations for the Rio Minillas watershed is shown in **Appendix *D***.

Table 2. Rainfall Duration and Depths from NOAA Atlas 14 for Río Minillas.

Duration (hours)	Rainfall Depths (inches)						
	2-year	10-year	25-year	50-year	100-year	200-year	500-year
1	2.11	2.62	2.90	3.12	3.32	3.52	3.78
6	3.68	5.42	6.45	7.26	8.09	8.96	10.10
12	4.31	6.85	8.42	9.71	11.00	12.50	14.50
24	5.09	8.34	10.40	12.20	14.0	15.90	18.70

5.1.5 Hydrologic Study Results

As per PRBP and DNER guidelines, the highest peak discharge result corresponding to the 1st quartile (10% percentile) and 4th quartile (90% percentile) within the storm durations depicted in **Table 2**, for each of the storm events, were determined for each watershed analyzed.

Table 3 summarizes the hydrologic analysis of the Río Minillas watershed for the 100-year recurrence interval, including direct

runoff from individual subbasins, cumulative flows at model junctions, and the final discharge at the point of analysis. For each element, the rainfall distribution simulation reported corresponds to the highest peak discharge among the evaluated storm durations (i.e., the selected highest rainfall distribution simulation). Junction flows represent the combined contribution of upstream subbasins and are used to evaluate hydraulic structures such as the proposed bridge crossing.

The hydrologic model input data report for Río Minillas is provided in **Appendix E**, while results for the 500-, 200-, 50-, 25-, 10-, and 2-year events are presented in **Appendix F**.

D/S Junction-1	122.65	1-hour_90%
Minillas 6	10.74	1-hour_90%
Junction-2	133.39	1-hour_90%
Minillas 8	5.77	1-hour_90%
PR-830	139.16	1-hour_90%

Table 3 summarizes the 100-year event results, highlighting significant flows at Junction-1 (106.06 m³/s = 3,745.47 cfs) and Junction-2 (133.39 m³/s = 4,710.62 cfs), which represent the cumulative flows from multiple upstream subbasins and therefore define the design conditions for the proposed bridge crossing and downstream conveyance structures.

The largest single subbasin contribution originates from WS-M1 (69.54 m³/s = 2,455.78 cfs), reflecting its extensive drainage area.

The final peak discharge at PR-830 (139.16 m³/s = 4,913.15 cfs) represents the total outflow of the modeled system and serves as the controlling discharge for downstream floodplain analysis.

Results for other return periods (500-, 200-, 50-, 25-, 10-, and 2-year events) are provided in **Appendix E** and **Appendix F.**

VI. HYDRAULIC ANALYSIS

The hydraulic analysis integrates the discharges obtained in **Section V** to compute water surface elevations under existing conditions and to evaluate the performance of proposed hydraulic structures along Río Minillas and its tributaries.

6.1 Hydraulic Modeling Approach

The hydraulic model for Río Minillas was developed using HEC-RAS v6.6, a software tool created by the U.S. Army Corps of Engineers. The discharges obtained in **Section V** were applied to compute water surface elevations for both existing and proposed conditions. Modeling was performed to ensure compliance with Puerto Rico Planning Board Regulation No. 13, which establishes that water surface elevations must not increase by more than 0.15 meters relative to existing conditions, nor encroach beyond the project's right-of-way.

For boundary conditions, the downstream limit of the model was defined using normal depth to represent the hydraulic gradient at the Río Minillas outlet, while the upstream limit was defined using critical depth to represent flow control at the headwater limits of the modelled reach.

6.2 Cross Section Data and Model Geometry

The hydraulic model for Río Minillas was defined using cross sections obtained from the certified field survey and supplemented with topographic data to refine the representation of the channel and tributaries.

A total of sixteen (16) cross sections were incorporated along Río Minillas and nineteen (19) cross sections along its unnamed tributary upstream of Junction-1, and six (6) cross sections representing the downstream unnamed stream (CA-03B) that discharges into Río Minillas further downstream.

Table 4 through **Table 6** summarize the equivalence between surveyed cross sections and HEC-RAS river stations for Río Minillas, its upstream tributary, and the downstream unnamed creek. **Figure 7** to **Figure 11** shows the cross-section location used in the hydraulic model for Rio Minillas and its tributaries.

The certified survey included in **Appendix *B*** provides the location plan and cross-section profiles used to construct the hydraulic model.

Table 4. Equivalence Between Surveyed and Model Cross Sections at Rio Minillas

6.3 Hydraulic Data - Existing Conditions

Under existing conditions, Río Minillas flows in a south-to-east direction within Watershed M1 (see Figure 5), through an area of dense vegetation

bordered by residential development along its overbanks. The upper watersheds (M3A, M2A, M2B, M3B, M4A, M5A, and M5B) are characterized by residential, commercial, and industrial land uses, with storm runoff from these subbasins draining into the unnamed tributary of Río Minillas. This tributary initially conveys flow through a 36-inch diameter reinforced concrete pipe approximately 95 meters in length, followed by a 3.40 m × 2.01 m box culvert, and then continues as an open channel until reaching the Valle de Cerro Gordo community, where it passes through a 1.84 m × 1.84 m reinforced concrete box culvert approximately 164 meters long. The tributary discharges into Río Minillas approximately 314 meters downstream of this culvert.

Downstream of the confluence, Río Minillas continues northeast for approximately 977 meters before entering the existing curved bridge at State Road PR-830.

To represent the hydraulic characteristics of the Río Minillas system under existing conditions, Manning's roughness coefficients were assigned based on channel type and overbank land cover. A value of n = 0.045 was used for the natural channel, while the overbanks were characterized by values ranging from 0.013 to 0.060, reflecting variations in surface conditions such as asphalt pavement. Concrete, grass, brush, and wooded areas. For the proposed condition, coefficients were also established for engineered channels: n = 0.026 for the trapezoidal channel with erosion control revetment and n = 0.013 for the proposed concrete trapezoidal channel.

The hydraulic model for the existing condition is included in **Appendix *G***.

6.4 Hydraulic Data - Proposed Condition

The extension of State Road PR-5 will primarily involve constructing a fill embankment along its 6.11-kilometer route, with some segments requiring

cut excavation and nine (9) bridges of varying spans. Within the scope of Phase 2, the crossing of PR-5 with Río Minillas will consist of an eight-span bridge. At this location, the alignment of the proposed roadway runs parallel to the river, which flows beneath the bridge twice as it bends eastward before continuing northeast. The bridge will be supported by rectangular columns measuring 4.0 m × 2.5 m. **Figure 12** shows the proposed bridge location over Río Minillas.

A portion of the PR-5 alignment also runs parallel to a tributary stream of Río Minillas for approximately 1,500 meters. To convey runoff, the design incorporates three (3) reinforced concrete box culverts interconnected with three trapezoidal channel segments. Each box culvert is a double-cell structure with a span of 3.05 meters and a rise of 2.44 meters (10 ft × 8 ft). The trapezoidal channels will be constructed in concrete, with a bottom width of 6.5 meters and side slopes of 2H:1V.

The first culvert entrance, located north of the proposed embankment, realigns the tributary channel by means of a trapezoidal channel with erosion control revetment into Box Culvert No. 3, which extends approximately 118 meters before discharging into Channel 2. This channel flows northeast for 95 meters before entering Box Culvert No. 5, which after a short length discharge into Channel 3. Culverts Nos. 4, 5 and 6, together with Channels 2 and 3, continue south of the alignment before discharging into Box Culvert No. 7. This final culvert, 55.31 meters long, crosses the embankment and conveys flow into Channel 4, which runs north of the embankment and ultimately discharges into the existing 1.84 m × 1.84 m reinforced concrete box culvert south of the Valle de Cerro Gordo community. **Figure 13** shows the proposed hydraulic structures along the Unnamed Tributary.

In addition to these structures, another unnamed stream flows parallel to the eastern edge of the alignment before discharging south into Río Minillas. A second bridge located over State Road PR-830 spans both the roadway and this tributary. This bridge will be supported by circular piers with a diameter of 2.10 m. **Figure 14** shows the proposed bridge location.

The hydraulic model for the proposed condition is included in **Appendix H**.

6.5 Hydraulic Analysis – Comparison Results

Table 7 presents the hydraulic study results for the existing and proposed conditions along Río Minillas during the 100-year storm event.

Table 7. Hydraulic Analysis Results Rio Minillas – 100-year Storm Event

Section No.	Existing Conditions			Proposed Conditions		
	Flow (m3/s)	Water Surface Elevation (m)	Velocity (m/s)	Flow (m3/s)	Water Surface Elevation (m)	Velocity (m/s)
500	69.54	100.86	2.96	69.54	100.86	2.96

Proposed Bridge	-	-	-	-	-	-
225	106.06	76.75	3.67	106.06	76.75	3.67
200	122.65	74.58	1.03	122.65	74.58	1.03

Section No.	Existing Conditions			Proposed Conditions		
	Flow (m3/s)	Water Surface Elevation (m)	Velocity (m/s)	Flow (m3/s)	Water Surface Elevation (m)	Velocity (m/s)
150	122.65	74.51	0.62	122.65	74.51	0.62
100	133.39	74.49	0.93	133.39	74.49	0.93
10	139.16	74.49	0.65	139.16	74.49	0.65
6	139.16	74.49	0.48	139.16	74.49	0.48
Existing Local Bridge	-	-	-	-	-	-
5	139.16	74.49	0.50	139.16	74.49	0.50
3	139.16	74.47	0.69	139.16	74.47	0.69
Existing Bridge	-	-	-	-	-	-
2	139.16	69.74	6.11	139.16	69.74	6.11
1	139.16	69.18	3.27	139.16	69.18	3.27

As shown in the table, at Cross Section 280, located upstream of the first bridge segment, the proposed condition produces an increase of 0.10 meters in the water surface elevation. This rise remains within the project's Right-of-Way and complies with the maximum allowable increase of 0.15 meters established by Planning Board Regulation No. 13. Similarly, at Cross Section 230, situated upstream of the second bridge segment, the 100-year water level increases by 0.09 meters, also within regulatory limits. At all other cross sections, the regulatory water surface elevations either remain unchanged or decrease under proposed conditions. Flow velocities increase at Cross Section 275, located at the downstream end of the first bridge segment. To mitigate this effect, the design proposes a

slight realignment of the river using a trapezoidal channel section with erosion-control revetment, ensuring long-term stability and protection against scour.

Table 8 summarizes the hydraulic results for the Río Minillas Tributary.

Proposed Culvert	-	-	-	-	-	-

Section No.	Existing Conditions			Proposed Conditions		
	Flow (m3/s)	Water Surface Elevation (m)	Velocity (m/s)	Flow (m3/s)	Water Surface Elevation (m)	Velocity (m/s)
4500	19.37	96.75	0.43	19.37	96.80	1.38
4250	19.37	96.72	0.72	19.37	96.81	1.04
4009	-	-	-	19.37	96.82	0.83
4000	19.37	96.69	0.63	-	-	-
3750	21.82	96.69	0.20	21.82	96.69	0.52
3250	21.82	96.69	0.33	21.82	96.69	0.27
3000	21.82	96.52	1.71	21.82	96.47	2.00
Existing Culvert	-	-	-	-	-	-
2000	46.31	86.15	6.33	46.31	86.15	6.33
1000	46.31	80.38	3.58	46.31	80.38	3.58

The proposed hydraulic structures cause localized increases in water surface elevation along the channelized reach when compared to existing conditions. The maximum increase occurs at cross section 5000 and 4250, with a rise of 0.09 meters, which is below the regulatory threshold of 0.15 meters. Flow velocities also increase along the reach; however, since the proposed channelization is designed in reinforced concrete, no future erosion problems are anticipated.

Table 9 presents the hydraulic study results for the unnamed stream tributary to Río Minillas (CA-03B).

Table 9. Hydraulic Analysis Results Unnamed Stream Tributary to Rio Minillas (CA-03B) – 100-year Storm Event

Section No.	Existing Conditions			Proposed Conditions		
	Flow (m3/s)	Water Surface Elevation (m)	Velocity (m/s)	Flow (m3/s)	Water Surface Elevation (m)	Velocity (m/s)
145	10.74	89.05	2.31	10.74	89.05	2.31
140	10.74	87.19	2.00	10.74	86.44	2.25
Proposed Bridge	-	-	-	-	-	-
135	10.74	86.22	1.63	10.74	86.36	1.84
130	10.74	83.76	3.06	10.74	83.76	3.06
125	10.74	78.04	2.89	10.74	78.04	2.89
120	10.74	74.52	0.40	10.74	74.52	0.40

At Cross Section 135, the proposed condition produces an increase in water surface elevation of 0.14 meters compared to the existing condition, which complies with the maximum allowable increase. Velocities also increase at the bridge section, which will be provided with a proposed trapezoidal channel and revetment protection. Other sections show negligible changes, confirming that the proposed bridge and channel modifications maintain compliance with regulatory.

Appendix G contains the hydraulic model input and output report for the existing conditions, while **Appendix H** presents the corresponding report for the proposed conditions.

VII. CONCLUSIONS & RECOMMENDATIONS

1) The hydrologic and hydraulic analysis for the Phase 2 extension of PR-5 in the municipality of Bayamón thoroughly examined the project's impact on the Río Minillas watershed, including its tributaries and proposed roadway crossings.

2) At the point of analysis for the Río Minillas extension project, the calculated peak flow for the 100- year storm event is 139.16 m^3/s m^3/s (4,913.15 cfs).

3) The proposed expansion of PR-5 includes the construction of an 8-span bridge over the Río Minillas. At this location, the alignment of the roadway runs parallel to the river. The Río Minillas approaches the bridge from the southwest, bends eastward, and crosses beneath the bridge twice—first towards the east-southeast and then towards the east-northeast. The bridge will be supported by rectangular columns measuring 4.0 m × 2.5 m.. Hydraulic modeling confirms that localized increases in water surface elevation at upstream sections remain within the allowable threshold of 0.15 meters and are confined to the project's Right-of-Way.

4) An unnamed tributary of the Río Minillas will be impacted by the embankment of the PR-5 extension over a distance of approximately 1,500 meters. Flow in this segment will be conveyed through a combination of hydraulic structures, consisting of interconnected trapezoidal channels and box culverts to accommodate roadway slope embankments and maintain drainage capacity. Each box culvert is a double-cell structure with a span of 3.05 meters and a rise of 2.44 meters (10 ft × 8 ft). The trapezoidal channels will be constructed in concrete, with a bottom width of 6.5 meters and side slopes of 2H:1V. These structures provide adequate conveyance capacity and maintain compliance with regulatory standards.

5) The second bridge located over the Unnamed Stream tributary to Río Minillas (CA-03B) produces an increase in water surface elevation of 0.14 meters, which also remains within the regulatory threshold.

6) The hydrologic and hydraulic study demonstrates that the proposed improvements will not adversely affect the floodability of the area. All increases in water surface elevation remain below the maximum allowable rise of 0.15 meters, and localized velocity increases are mitigated through trapezoidal channel realignment, concrete lining, and erosion-control revetments. The project therefore complies with Puerto Rico Planning Board Regulation No. 13 and FEMA floodplain management requirements, ensuring safe and reliable hydraulic performance for the PR-5 Extension corridor.

El Departamento de Recursos Naturales y Ambientales (DRNA) recibió nueva información en contestación a la comunicación emitida el 5 de agosto de 2022, relacionada al proyecto de referencia. La Autoridad de Carreteras y Transportación (ACT) propone la construcción de una extensión a la carretera estatal PR-5. Según el resumen del documento ambiental presentado, la misma comenzará en el kilómetro 14.9 de la carretera estatal PR-167 en Toa Alta y terminará en la PR-199 (Avenida Las Cumbres) en Bayamón. La extensión a la PR-5 conectará las carreteras antes mencionadas, por el sur a la carretera PR-148 y por el norte la PR-5. La extensión propuesta tendrá una longitud aproximada de 5.07 kilómetros y será de cuatro (4) carriles divididos, con control de acceso total, intersecciones a desnivel y plazas de peaje. Para la construcción del propuesto proyecto, será necesario la construcción de seis (6) puentes y movimiento de terreno. Se estima que se extraerán 850,000 metros cúbicos de material de la corteza terrestre de los cuales se utilizarán aproximadamente 670,000 metros cúbicos como relleno dentro del mismo.

Durante la fase de planificación de este proyecto y discutidas en la Declaración de Impacto Ambiental (DIA) aprobada en el año 2003 e incluidas en la presente DIA, se estudiaron cinco diferentes alternativas, además de la alternativa de No Acción para la alineación de la extensión a la carretera PR-5. La ruta preferida para la extensión de la PR-5 es la identificada como 2A. Esta alternativa ocupará un área estimada de 112 cuerdas, impactará 126 estructuras incluyendo 112 residencias y 16 negocios/ instituciones. Se estima en 13,886 metros cuadrados (3.54 cuerdas) el área de impacto a cuerpos de agua.

La extensión propuesta de la carretera PR-5 requiere la canalización de un nuevo tramo del Río Hondo mediante la colocación de un *box culvert* de 258.6 metros de largo de dos (2) celdas y la extensión de un *box culvert* existente de dos celdas a una distancia de 48 metros, lo cual reemplazará 2 tubos existentes de 84 pulgadas de diámetro. El proyecto propone la colocación de un canal de gaviones entre el extremo aguas abajo del *box culvert* propuesto y el extremo aguas arriba del *box culvert* extendido en la intersección PR-5 y PR-199 para proporcionar protección contra la erosión al alcance del Río Hondo. Además, una rampa en puente propuesta estará cruzando el canal rectangular de gaviones.

El proyecto también incluirá un puente de ocho (8) tramos sobre el Río Minillas. Un segmento de la alineación de la carretera propuesta es paralela al Río. Además, una sección del Río Minillas, según identificado en las capas de información del DRNA, se verá afectado por el terraplén de la extensión de la PR-5 y canalizado mediante atarjeas y un canal trapezoidal. Se estarán impactando 13.5 cuerdas de bosques de galería categorizados como Hábitat Natural de Valor Ecológico dentro de los cuales se encuentran 3.53 cuerdas de cauces/hábitats ribereños.

En las comunicaciones del 26 de enero de 2022 y 5 de agosto de 2022, el DRNA requirió se aclararan varios aspectos relacionados a los cuerpos de agua que serían impactados por el proyecto. La ACT no indicaba la cantidad de quebradas sin nombre que serían impactadas por el proyecto ni describía las obras propuestas en las mismas. Tampoco se contestaba o se aclaraba si se estaría impactando y canalizando un tramo del Río Minillas que corresponde al área de su nacimiento según la base de datos del DRNA y no un afluente como se identifica en los planos y se describe en la DIA.

La ACT presentó una comunicación con fecha de 2 de septiembre 2022 en la cual califican como drenajes pluviales los "streams" identificados en los planos CLP01- al CLP09 para impacto: CA-01A, CA-02A, CA-02B, CA-03A, CA-03B, CA-05A y CA-05B. Asimismo, desglosan los trabajos propuestos en los mismos. Indican en la comunicación y citamos: "Los planos del proyecto, CLP01- CLP-09, ilustran áreas de impacto en cauces de drenaje locales estructuras hidráulica (tuberías) para el manejo de sus aguas en eventos de lluvia los cuales no se discuten en el H-H, aunque se toman en consideración para el comportamiento de las aguas en las cuencas hidrográfica evaluadas." Exponen que una vez se tenga el diseño detallado de los drenajes locales, al igual que el de las estructuras mayores se prepararán los correspondientes cómputos pluviales.

Por otro lado, se presentan varios mapas identificando los cuerpos de agua en el área propuesta para impacto y se informa que, según la interpretación de dichos mapas, lo que se estaría canalizando sería un tributario al Río Minillas, y no el Río Minillas o su nacimiento. No obstante, se aclara que dicha canalización ha sido considerada en el H-H y que una vez el DRNA le informe la designación al mismo, estarán revisando el H-H y las secciones correspondientes en la DIA-F.

Sobre los aspectos antes mencionados el DRNA ha determinado lo siguiente:

- El DRNA reconoce como drenajes pluviales los identificados como C01A, C03A y C05B en los planos CLP01 al CLP09. No obstante, los identificados como CA-02A, CA-02B, CA-03B y CA-05A tienen características de cuerpos de agua o quebradas intermitentes. Por lo tanto, estas quebradas intermitentes deberán ser incluidas en el documento ambiental e identificadas en los planos del proyecto. Además, se deberán incluir en el H-H del proyecto. El DRNA considera que toda obra en o sobre un cuerpo de agua que forme parte de un proyecto debe ser estudiada y analizada en un mismo H-H. La fragmentación pudiera retrasar el proceso de evaluación en las etapas de permisos y endosos con implicaciones en elevar los costos por estudios de esta naturaleza para la ACT.

- En relación con la denominación del Río Minillas o tributario, el DRNA considera que dicho tramo es parte del nacimiento del Río Minillas y así debe ser considerado. Por lo que este aspecto deberá ser corregido en la DIA-F y el H-H. Aunque se reconoce que dicho tramo ha sido estudiado y

analizado en el H-H, su denominación es importante para el contenido de la DIA-F y distintos aspectos en el que DRNA debe ser incluido como custodio de este recurso natural. En esta área debido a la colindancia con las urbanizaciones Ciudad Interamericana y Valle de Cerro Gordo, será necesario el mantenimiento a perpetuidad de la obra y demostrar la no afectación a terceros. Esta responsabilidad de la ACT debe estar incluida en la DIA-F.

- Resulta pertinente resaltar que, toda información que se presente ante la consideración del DRNA en las diferentes instancias del proyecto, incluida su descripción y huella de impacto, deberán corresponder en todos sus detalles. La descripción de los trabajos propuestos para el tramo correspondiente a la canalización del Río Minillas presentada en una tabla de la comunicación del 2 de septiembre de 2022, no concuerda con la presentada en la DIA-F y el H-H. En la comunicación se indica que la obra consistiría en dos segmentos tipo *box culverts* de dos celdas de 2.13 m x 2.13 m 137.40 metros lineales y 256 metros lineales, dos segmentos en canalización en tierra de 189.81 y 97.74 metros lineales. Mientras que en el H-H y la DIA-F se describe la obra como una atarjea de 2 celdas de 2.74 m y 2.13 m y 255 m de largo, una atarjea de 2 celdas 2.44 x 2.13 m y 150 m de largo entre las dos atarjeas un canal trapezoidal en tierra con un ancho en la base de 12 m, taludes 2H:1V y 99 m de largo. La comunicación presentada es posterior al H-H preparado para el proyecto, por lo que se deberán aclarar las diferencias en la descripción presentada. Asimismo, el H-H que se evalúe en el DRNA debe considerar desde un principio el análisis de los cuerpos de agua a impactar debido a que es de los resultados del estudio que surgen los parámetros para el diseño de las obras y no a la inversa. Esto responde al hecho de que las dimensiones de estas obras dependen del caudal determinado en el análisis hidrológico, la rugosidad, las condiciones del flujo, los tipos de control del flujo: *inlet* o *outlet* control, entre otros. Con relación a las canalizaciones, en tierra y con gaviones, para su diseño también se tienen que considerar las velocidades, los esfuerzos cortantes permisibles, entre otros parámetros que se analizan en el H-H. Se aclara que el endoso del DRNA al H-H no es necesario para obtener el cumplimiento ambiental del proyecto. Dicho proceso es uno independiente de la evaluación de los impactos y medidas de mitigación propuestas en el proyecto. De hecho, el H-H está más vinculado al trámite de la solicitud conjunta de permiso.

- La consideración de parámetros también aplica para la selección del diámetro de las tuberías propuestas en los drenajes pluviales, independientemente de sus dimensiones. Lo anterior cobra relevancia ya que el proyecto ubicará en zonas residenciales. Estas obras se deberán diseñar luego de realizar los cómputos correspondientes, de los cuales surgirán los diámetros para evitar que estos componentes del proyecto provoquen inundaciones locales y la afectación a terceros por falta de capacidad hidráulica.

- Es importante destacar, que el DRNA no favorece la canalización de cuerpos de agua, la única excepción es para los proyectos de control de inundaciones. Lo anterior en cumplimiento con las disposiciones de la Ley Núm. 49 de 4 de enero de 2003, según enmendada por la Ley Núm. 55 de 22 de enero de 2004. El proyecto propuesto extendería la canalización del Río Hondo y canalizaría un tramo del Río Minillas en su nacimiento. Aunque se reconoce que el Río Hondo ha sido impactado previamente por canalizaciones y que el tramo del Río Minillas igualmente fue previamente impactado en la construcción de las urbanizaciones colindantes, estas áreas se han regenerado y cuentan con valor ecológico e hidrológico. Para el DRNA es de suma importancia la conservación de los cuerpos de agua, los cuales fungen como conectores hidrológicos naturales que garantizan una mejor calidad de agua y minimizan problemas de sedimentación, erosión e inundaciones. Rellenar y canalizar una sección de un Río resulta en la destrucción de los canales naturales, la degradación del hábitat, la fragmentación del hábitat, aceleración del transporte del agua y los contaminantes tóxicos, al igual que reduce los servicios del ecosistema, tales como retención de nutrientes y retención de sedimentos. A largo plazo, esto puede causar gran desestabilización en

el sistema. La canalización puede alterar las dimensiones originales y la forma del cauce, su pendiente y características naturales, convirtiendo un sistema heterogéneo en uno homogéneo. La consecuencia desde el punto de vista del ecosistema es que la diversidad del hábitat se reduce y las cualidades y funciones de las especies que ocupan el sistema se afectan.

Debido a que el proyecto se encuentra todavía en fase de diseño conceptual, el DRNA recomienda que, si existiera la oportunidad de haber cambios en el diseño, se analicen otras alternativas que no incluya la canalización de los Ríos.

Una vez se atienda y corrija lo anterior, el DRNA no tiene objeción con la alineación propuesta del proyecto. Además, se deberá cumplir con lo siguiente:

- Según la descripción del proyecto en la DIA-F, el proyecto comenzaría en el kilómetro 14.9 de la carretera estatal PR-167 en Toa Alta y terminará en la PR-199 (Avenida Las Cumbres) en Bayamón. Sin embargo, según todas las figuras incluidas en la DIA-F y en los documentos presentados, el proyecto comenzaría en Bayamón y terminaría en Toa Alta. Es importante que se atienda y corrija dicha discrepancia en la DIA-F.

- Según la comunicación presentada los elementos considerados fueron desarrollados a nivel conceptual. Por lo tanto, una vez culmine el nivel conceptual y el proyecto se encuentre en una etapa más adelantada de diseño, se deberá presentar un H-H en el DRNA que incluya el análisis de las obras en las quebradas CA-02A, CA-02B, CA-03B y CA-05 y en el Río Minillas y el Río Hondo. Se reconoce que el DRNA tiene ante su consideración un H-H presentado para el proyecto, sin embargo, el mismo no incluye el análisis de las obras propuestas en todos los cuerpos de aguas a impactarse.

- El DRNA emitió una certificación de Categorización de Hábitat el 28 de octubre de 2021 en cumplimiento con la Ley Núm. 241 de 15 de agosto de 1999, según enmendada (Nueva Ley de Vida Silvestre de Puerto Rico) y el Reglamento 6765 (Reglamento para regir la conservación de la Vida Silvestre, las Especies Exóticas y la Caza en el Estado Libre Asociado de Puerto Rico). En la misma se categorizaron 13.5 cuerdas de bosques de galería a impactar como Categoría 4 (Hábitat Natural de Valor Ecológico). De igual forma, el DRNA categorizó el resto de las áreas a impactar como Categoría 5 (Hábitat Natural con Alto Potencial de Convertirse en Hábitat Esencial, Hábitat de Alto Valor Ecológico o Hábitat de Valor Ecológico). En cumplimiento con el Reglamento 6765, la ACT presentó una propuesta para la compensación por las 13.5 cuerdas clasificadas como Categoría 4 mediante la adquisición para cesión al DRNA de un predio de terreno de 35.6 cuerdas ubicado en la Reserva Natural Las Cabachuelas en Morovis. El DRNA aceptó la propuesta en comunicación del 30 de noviembre de 2021. Asimismo, aceptó que este predio se utilice como una mitigación concurrente por el impacto de cortes de árboles.

  A estos efectos, previo a que la ACT realice la subasta y otorgue los contratos de construcción del proyecto, se deberá presentar una copia certificada de la escritura de cesión y traspaso al DRNA del predio y radicar una copia de la minuta de asiento de la presentación de la escritura en el Registro de la Propiedad. A los fines de conocer el procedimiento a seguir para cumplir con las disposiciones del Reglamento Núm. 8816 de 19 de septiembre de 2016 (Reglamento para la Adquisición de Bienes Inmuebles y Derechos Reales del Departamento de Recursos Naturales y Ambientales), puede comunicarse con la División de Bienes Inmuebles al (787) 999-2200 Ext. 2505 o 2500.

- Implementar todo tipo de medidas disponibles (Plan CES, el "Storm Water Pollution Prevention Plan-SWPPP", filtros, pacas de heno, etc.) para el control de sedimentación y escorrentías que puedan afectar los cuerpos de agua cercanos al predio. Se deberán implantar las mejores prácticas posibles (BMPs, por sus siglas en inglés) a ser ejecutadas durante cada etapa del proyecto. Las BMPs son las técnicas (zonas de amortiguamiento, cortinas de retención de sedimento, estanques de detención, surcos, etc.),

programación de actividades, prácticas prohibidas, y procedimientos de mantenimiento para prevenir o reducir las descargas de contaminantes a los cuerpos de agua cercanos que pudieran afectarse durante la construcción. Asimismo, se deberán tomar medidas para evitar que residuos de sustancias orgánicas e inorgánicas tales como: aceite: combustibles y otras sustancias químicas, puedan ser arrastradas por la escorrentía y ganen acceso a los cuerpos de agua o se infiltren en el terreno.

- Secciones de las áreas propuestas para impacto han sido identificadas como Zona A de acuerdo con la Hoja C0710H de los Mapas de Niveles de Inundación Base Recomendados preparados por la Agencia Federal para el Manejo de Emergencias y adoptados por la Junta de Planificación según la Resolución Núm. ABFE-02 del 11 de julio de 2018. A tales efectos, se deberá cumplir con las disposiciones del Reglamento de Planificación Núm. 13 (Reglamento sobre Áreas Especiales de Peligro a Inundación).

- Deberán integrar al DRNA y al Gobierno de Puerto Rico como Asegurados Adicionales en la póliza de Seguro de Responsabilidad Pública y Daños a la Propiedad de la Autoridad de Carreteras y Transportación y de la compañía constructora, endoso que deberá presentarse, previo al comienzo de los trabajos de construcción. Se le apercibe que, además del endoso, dicha póliza deberá contener una declaración de Acuerdo de Exención de Responsabilidad ("Hold Harmless Agreement"), por medio de la cual se releva al DRNA de cualquier reclamación, demanda o acción judicial o extrajudicial, o combinación de las anteriores, que resultare de la realización de la acción propuesta.

- La construcción de los componentes del proyecto que incida sobre cualquier cuerpo de agua deberá llevarse a cabo en seco, bajo condiciones de flujo mínimo del cuerpo de agua, a fin de facilitar la construcción y disminuir los impactos de la turbidez y sedimentación aguas abajo. Se deberá mantener desaguada el área de construcción durante el mínimo tiempo posible. También se deberá asegurar que los flujos inmediatamente aguas abajo del área de construcción sean iguales a los flujos inmediatamente aguas arriba de la misma área.

- Todos los materiales excedentes y escombros de construcción resultantes deberán haberse removido completamente del lugar, una vez completadas las obras. Se deberá disponer de estos materiales y escombros en un sistema de relleno sanitario certificado u otra facilidad aprobada para la disposición final de desperdicios sólidos.

- Bajo ningún concepto los trabajos a llevarse a cabo podrán reducir la sección hidráulica de los cuerpos de agua.

- El diseño del proyecto considerará los desplazamientos naturales del cauce de los cuerpos de agua.

- Los elementos que se instalen para el control del flujo tienen que limitarse a las dimensiones mínimas necesarias para encausar las escorrentías mínimas normales.

- Durante la fase de construcción se utilizarán procedimientos para mantener el flujo de estiaje de los cuerpos de agua y prevenir daños a terceros en caso de lluvias extraordinarias. Una vez terminada la obra, la sección del cauce de los cuerpos de agua en el punto de los cruces, no podrá ser menor al existente previo al proyecto.

- Se deberá evitar que el material producto de la construcción propuesta o escombros permanezcan en los cuerpos de agua (y de estos materiales y escombros haber caído a la columna de agua, se les deberá remover inmediatamente).

En la eventualidad de que se impacten los taludes de los cuerpos de agua, deberá cumplir con lo siguiente:

- Deberán compactar el material de relleno en los taludes y bancos. Además, deberán restituir la capa de top soil y vegetación. Se deberá minimizar el impacto a la vegetación ribereña asociada a los cuerpos de agua.

Además, se deberá cumplir con lo siguiente:

- Deberá cumplir con las disposiciones de la Regla 3.4.1 ("Permiso Único Incidental Operacional"), la Sección 5.1.9.3 ("Manejo de Aguas Pluviales") y la Sección 5.1.9.4 ("Obras Pluviales) del Reglamento Conjunto 2020, Reglamento Conjunto para la Evaluación y Expedición de Permisos Relacionados al Desarrollo, Uso de Terrenos y Operación de Negocios (Reglamento Núm. 9233 del 2 de diciembre de 2020, con vigencia del 2 de enero de 2021, adoptado por la Junta de Planificación mediante la Resolución JP-RP-39, del 1 de diciembre de 2020).

- Las obras propuestas requerirían de un permiso del Cuerpo de Ingenieros por los impactos temporales y permanentes en aguas y terrenos jurisdiccionales. Las obras que presenten deben coincidir con las presentadas en el H-H.

- Una vez completados los trabajos, entre las alternativas a considerar para evitar la erosión y deslizamientos en taludes asociados a cuerpos de agua, la ACT puede incluir la siembra de hileras del pasto vetiver (*Chrysopogon zizanioides*) repetidamente perpendiculares a las pendientes, en taludes, de tal forma que atrape los sedimentos que se transportan pendiente abajo. La siembra de vetiver (Sistema Vetiver) tiene la particularidad de proteger la superficie de las pendientes, así como su estabilidad, incrementando la resistencia a la ruptura. Las siguientes referencias contienen información y recomendaciones para su uso e implementación en proyectos de estabilización de taludes ribereños: -Oahu Resource Conservation and Development Council. 2012. Vetiver Grass Installation Guide. Prepared in cooperation with USDA Natural Resource Conservation Service (NRCS), Pacific Islands Area. Oahu, HI: Oahu Resource Conservation and Development Council. (Véase especialmente las páginas 12–14 de esta referencia.) -Paul Truong, Tran Tan Van, Elise Pinners. 2008. Vetiver System Applications. Technical Reference Manual. Second edition. San Antonio, TX: The Vetiver Network International. (Véase especialmente las páginas 32–36 de esta referencia.)

- Deberá cumplir con las disposiciones del Reglamento para el Control de Contaminación Atmosférica, el Reglamento para el Control de la Contaminación por Ruido, el Reglamento de Estándares de Calidad de Agua, el Reglamento para el Control y la Prevención de la Contaminación Lumínica y el Reglamento para el Manejo de Desperdicios Sólido No Peligrosos, así como obtener los permisos correspondientes relacionados a dichos reglamentos.

- El Banco de Datos Biológicos y de Conservación de Puerto Rico del DRNA no refleja la presencia en el área de especies de particular rareza o de distribución geográfica limitada, o de aquéllas designadas como vulnerables o en peligro de extinción. Sin embargo, según la página "Information for Planning and Consultation" (IPaC) del Servicio Federal de Pesca y Vida Silvestre (USFWS), el área que cubre este proyecto está situada dentro del alcance de la distribución geográfica de la boa de Puerto Rico (*Chilabothrus inornatus*) especie en peligro de extinción a nivel federal y estatal. Por lo que, de encontrarse individuos de dicha especie dentro de la propiedad los mismos deberán ser removidos y reubicados por los biólogos del DRNA o los miembros del Cuerpo de Vigilantes de Recursos Naturales y Ambientales o por biólogos de vida silvestre bajo contrato con la parte proponente por servicios profesionales que cuenten con un permiso federal del *Fish and Wildlife Service*, y que el DRNA haya designado explícitamente como sus agentes para ese propósito. El proceso para la autorización del biólogo se rige por el Reglamento 6766 de 11 de febrero de 2004 (Reglamento para Regir la

25 de octubre de 2022

Conservación y Manejo de las Especies Vulnerables y en Peligro de Extinción en del Estado Libre Asociado de Puerto Rico). Este proceso se lleva a cabo en el DRNA y no en la Oficina de Gerencia de Permisos o a través de ésta. La reubicación de los individuos encontrados deberá producirse no más tarde de las 24 horas (o el próximo día laborable) a partir del momento en el que se informa el hallazgo y, hasta donde sea práctico y viable, los mismos serán reubicados en terrenos cercanos a la propiedad.

- Es de la entera responsabilidad del proponente el obtener y cumplir con cualquier otro permiso o autorización que puedan ser requeridos por otras agencias, autoridades, departamentos, corporaciones públicas o instrumentalidades gubernamentales.

- Se deberá preparar y cumplir con las recomendaciones y especificaciones del Estudio de Suelos que garantice que el proyecto cumpla con los códigos de construcción.

- Se deberá establecer un programa de reforestación utilizando especies nativas que además de ayudar a minimizar la erosión beneficien la vida silvestre. Esta medida es cónsona con la Ley para Fomentar la Siembra de Árboles Cuyas Frutas y/o Semillas Provean Alimento a Especies de Aves Silvestres de Puerto Rico (Ley Núm. 97 de 24 de junio de 1998), la cual establece lo siguiente: "En todo proyecto de reforestación en que se utilicen fondos públicos o privados, o en una combinación de estos, un 15% en las áreas rurales y un 10% en las áreas urbanas del total de árboles a ser sembrados, serán de especies cuyas frutas y/o semillas sirvan de alimento a las aves silvestres que residan temporal o permanentemente en ésta".

- De descubrirse en los predios objeto de desarrollo algún otro cuerpo de agua superficial o subterráneo sea perenne o intermitente, deberá informarlo inmediatamente al DRNA y demás agencias concernidas. No informar hallazgos de este tipo, así como las medidas de mitigación que se implantarán para proteger estos recursos naturales conllevará una revocación automática de la presente comunicación de no-objeción y podrá ser base para acciones legales por parte de DRNA en los foros disponibles.

Este endoso es solamente aplicable a la situación de hechos y los datos según presentados y evaluados en el caso y la Secretaria se reserva el derecho de reevaluar, variar o modificar los mismos en cualquier momento anterior a la emisión del permiso o la acción administrativa correspondiente por parte de la agencia solicitante o proponente cuando surja nueva información oficial específica estableciendo que el derecho aplicable o las condiciones ambientales en el predio han cambiado sustancialmente, o cuando el endoso original se emitió bajo premisas falsas o fraudulentas.

Cordialmente,

Ing. Luis Sierra
Secretario Auxiliar

El Departamento de Recursos Naturales y Ambientales (DRNA) recibió la comunicación suscrita por el Ing. Luis E. Rodríguez Rosa de la Autoridad de Carreteras y Transportación (ACT) el 2 de septiembre de 2022. La misma es en respuesta a la carta que emitió el DRNA el 10 de agosto de 2022, mediante la cual se le requirió información adicional. En dicha misiva el DRNA le requirió incluir los cuerpos de agua que serán impactados por el proyecto y que no fueron analizados en el estudio hidrológico-hidráulico (HH). Además, se le requirió que identificaran como Río Minillas el cuerpo de agua que se denomina tributario en el estudio HH.

Resulta que, durante la revisión a la información presentada por la ACT, el DRNA se encontraba evaluando el proyecto mediante el trámite de cumplimiento ambiental a través de la Oficina de Gerencia de Permisos y emitió un endoso condicionado el 25 de octubre de 2022. En dicha carta el DRNA se reafirmó en que el cuerpo de agua identificado como tributario es el Río Minillas. Además, el Departamento distinguió entre lo que se reconoce como drenajes pluviales y las que constituyen quebradas intermitentes. Estas son: CA-02A, CA-02B, CA-03B Y CA-05A. De hecho, el DRNA determinó que estas quebradas intermitentes deben formar parte del estudio HH del proyecto. Es importante indicar que la ACT manifestó en su carta que los elementos considerados en el estudio HH fueron desarrollados a **nivel conceptual**.

Ante lo expuesto, el DRNA ha determinado dejar en suspenso la evaluación del estudio HH hasta que la ACT cuente con un diseño en una etapa más adelantada. Se resalta que la ACT se deberá asegurar que el estudio HH que presente incluya los cuerpos de agua que el DRNA identificó como quebradas intermitentes

en la carta de endoso condicionado. Es de particular importancia que se demuestre que las obras propuestas en estas quebradas tengan la capacidad adecuada para evitar inundaciones locales y afectación a terceros. Asimismo, las obras propuestas en todos los cuerpos de agua deberán coincidir en todos los documentos y planos del proyecto que presenten ante la consideración del DRNA.

Cordialmente,

Ing. Luis Sierra
Secretario Auxiliar
Secretaría Auxiliar de Permisos,
Endosos y Servicios Especializados

NOTES:

1. All distances in meters.
2. Coordinate System is referred to the State Plane Coordinate System for PR and the USVI, Lambert Projection, NAD83, Epoch 2010, Adjustment 2011.
3. All elevations in meters.
4. Elevations are Orthometric, derived by Geoid Modeling (Geoid18) and by GPS ties to PRVD02 Bench Marks.
5. This set of plans is the result of a compilation of current surveys, older surveys and photogrametric surveys, all tied and processed on the same horizontal and vertical datum.
   Special attention and efforts have been made in identifying earthwork, new constructions, demolitions, etc., and identified areas have been revised and field completed, in order to obtain updated results.
6. Photogrametry was prepared and provided by Caribbean Aerial Survey.

SURVEY SHOWN IS A COMPILATION OF CURRENT SURVEYED DATA, OLDER SURVEYS AND PHOTOGRAMETRIC SURVEYS. AREAS HAVE BEEN REVISED AND FIELD COMPLETION HAS BEEN PERFORMED IN ORDER TO UPDATE TOPOGRAPHIC DATA. ALL COORDINATES HAVE BEEN REFERED TO SPCS FOR PR AND THE USVI, NAD83, LAMBERT PROJECTION. ELEVATIONS HAVE BEEN REFERRED TO PRVD02 DATUM BY THE MEANS OF GPS AND GEOID MODELING, BASED ON GEOID18 AND TIES TO PRVD02 DATUM.

LIC. 14662
PUERTO RICO

NOTE: THIS PLAN SHOWS SURVEY AND PHOTOGRAMETRIC DATA OBTAINED IN DIFFERENT EPOCHS DURING THE YEARS 2000, 2012, 2021 AND 2022. COORDINATE AND ELEVATION SYSTEMS OF THE FIELD WORK HAVE BEEN TIED AND TRANSFORMED TO THE SPCS 5200 AND ORTHOMETRIC HEIGHTS DERIVED BY GEOID18 MODELING.
THIS PLAN WAS PREPARED FOR THE PURPOSE OF THE PREPARATION OF PRELIMINARY DESIGNS, AND SHOULD NOT BE USED FOR FINAL DESIGN. SINCE SOME AREAS MAY HAVE CHANGED, SUFERED CONSTRUCTIONS, IMPROVEMENTS, AND LARGE EARTHWORK.
THE SURVEY OF THE YEAR 2000 AND THE PHOTOGRAMETRY WERE ORIGINALLY PREPARED BY OTHERS.

NOTES:
1. All distances in meters.
2. Coordinate System is referred to the State Plane Coordinate System for PR and the USVI, Lambert Projection, NAD83, Epoch 2010, Adjustment 2011.
3. All elevations in meters.
4. Elevations are Orthometric, derived by Geoid Modeling (Geoid18).
5. This set of plans is the result of a compilation of current surveys, older surveys and photogrametric surveys, all tied and referred to the same horizontal and vertical datum.
   Special attention and efforts have been made in identifying earthwork, new constructions, demolitions, etc., and some identified areas have been revised and field completed, in order to obtain more updated results.
6. Photogrametry was prepared and provided by Caribbean Aerial Survey, except in cases noted as such..

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.
