Distribution Restoration Progress Report – As of February 20, 2019

- Current load is 91% of comparable 2017 levels
- 97% of the island's 342 substations and 96% of the 56 transmission centers are energized
- Current estimate of distribution customers who have been energized is approximately 99+%
 - This estimate assumes that weatherheads (which are owned by and are the responsibility of the customer) on residences are fully repaired and that the customer is still using the residence—which is not the case for all properties
- All linkages between substation Communication Remote Units (CRUs) and the central customer billing system have been restored for substations that are operational
