connection with such relocation ("relocation costs") and in no event shall such relocation costs be charged to Owner.

6.22.4 PUBLIC UTILITIES

With respect to electric power, water, sewer, storm drains, and other publicly owned utilities, the Contractor shall be solely responsible for all costs of the design, construction, installation and relocation of such utilities.

6.22.5 LOCATION OF RELOCATED UTILITIES

The Contractor shall cause to be provided to Owner, any affected utility companies, all governmental agencies having jurisdiction, and any affected landowners or other lawful occupants, a survey, plot plan, legal description or other documentation providing a sufficient description to enable the recipient to accurately and precisely identify the "as-built" location of temporarily and permanently relocated utilities on the Site or other adjacent parcels of land. Such documentation of the "as-built" location of relocated utilities shall be provided whether the utilities have been relocated permanently or temporarily.

6.22.6 INSPECTION RIGHTS

Owner or its agents may inspect any utility relocation work in progress on or adjacent to the Site, regardless of whether the Contractor or the affected utility company is performing the work.

6.23 RESPONSIBILITY FOR THOSE PERFORMING THE WORK

6.23.1 In case of a temporary suspension of the Work, from any cause whatsoever, the Contractor shall be responsible for the Work and shall take such reasonable precautions as may be necessary to prevent damage to the Work, provide suitable drainage and erect necessary temporary structures, signs or other facilities, at its expense.

6.23.2 The Contractor shall be responsible to Owner for the acts and omissions of all its employees, agents, Subcontractors, and Sub-Subcontractors (and their respective agents and employees) and all other persons performing any of the Work or supplying any materials or equipment for the Work under a contract with the Contractor. The Contractor shall rebuild, repair, restore and make good any damages to any portion of the Work before its final completion and acceptance, and shall bear the expense thereof.

6.24 RECORD DOCUMENTATION

The Contractor shall keep complete and accurate field records of all changes and deviations from the Drawings and Specifications indicating the actual placement and condition of all elements of the Work as actually constructed or installed. All such deviations and changes shall be made on a regular and current basis and shall be neatly and accurately indicated on the Drawings affected, or in the Specifications, with appropriate supplemental notes. The Contractor shall keep at the Site field office a copy of the as-built Contract Documents which shall always be available for use and inspection by the Contracting Officer and Owner's Representative. At the conclusion of the Work, the Contractor shall prepare as-built "Record Drawings" on a set of Drawings and shall deliver the final as-built Record Drawings and other Record Documentation to Owner's Representative for approval before, and as a condition precedent to, Final Payment.

6.25 DESIGN SERVICES AND RESPONSIBILITIES

6.25.1 GENERAL

When applicable law requires that services be performed by licensed professionals, the Contractor shall provide those services through the performance of qualified persons or entities duly licensed to practice their professions. OWNER understands and agrees that the services performed by the Contractor's Architect and the Contractor's other design professionals and consultants are undertaken and performed in the sole interest of and for the exclusive benefit of the Contractor.

The agreements between the Contractor and Architect or other design professionals identified in the Agreement, and in any subsequent Modifications, shall be in writing. These agreements, including services and financial arrangements with respect to this Project, shall be promptly and fully disclosed to OWNER upon OWNER's written request.

The Contractor shall be responsible to OWNER for acts and omissions of the Contractor's employees, Architect, Contractors, Subcontractors and their agents and employees, and other persons or entities, including the Architect and other design professionals, performing any portion of the Contractor's obligations under the Contract Documents.

The Contractor shall carefully study and compare the Contract Documents, materials and other information provided by OWNER pursuant to Article.3.5, shall take field measurements of any existing conditions related to the Work, shall observe any conditions at the site affecting the Work, and report promptly to OWNER or OWNER's Representative any errors, inconsistencies or omissions discovered.

The Contractor shall provide to OWNER for OWNER's written approval design documents sufficient to establish the size, quality and character of the Project; its architectural, structural, mechanical and electrical systems; and the materials and such other elements of the Project to the extent required by the Construction Documents. Deviations, if any, from the Construction Documents shall be disclosed in writing.

Upon OWNER's written approval of the design documents submitted by the Contractor, the Contractor shall provide construction documents for review and written approval by OWNER. The construction documents shall set forth in detail the requirements for construction of the Project. The construction documents shall include drawings and specifications that establish the quality levels of materials and systems required. Deviations, if any, from the Construction Documents shall be disclosed in writing. Construction documents may include drawings, specifications, and other documents and electronic data setting forth in detail the requirements for construction of the Work, and shall:

1. be consistent with the approved design documents;
2. provide information for the use of those in the building trades; and
3. include documents customarily required for regulatory agency approvals

The Contractor shall meet with OWNER or OWNER's Representative periodically to review progress of the design and construction documents.

Upon OWNER's written approval of construction documents, the Contractor, with the assistance of OWNER, shall prepare and file documents required to obtain necessary approvals of governmental authorities having jurisdiction over the Project.

6.25.2 RESPONSIBILITY OF THE CONTRACTOR FOR THE DESIGN

The Contractor shall be responsible for the professional quality, technical accuracy, and the coordination of all designs, drawings, specifications, and other non-construction services furnished by the Contractor, its Architect and any other Contractor's Design Professionals under this contract. The Contractor shall, without additional compensation, correct or revise any errors or deficiency in its designs, drawings, specifications, and other non-construction services and perform any necessary rework or modifications, including any damage to real or personal property, resulting from the design error or omission. Detailed design objectives and instructions shall be obtained from the Design Criteria Document (Design Scope of Work) provided as part of the Contract Documents.

The standard of care for all design services performed under this agreement shall be the care and skill ordinarily used by members of the architectural or engineering professions practicing under similar conditions at the same time and locality. Notwithstanding the above, if the contract specifies that portions of the Work be performed in accordance with a performance standard, the design services shall be performed so as to achieve such standards.

Neither the Government's review, approval or acceptance of, nor payment for, the services required under this Contract shall be construed to operate as a waiver of any rights under this Contract or of any cause of action arising out of the performance of this contract. The Contractor shall be and remain liable to the Government in accordance with applicable law for all damages to the Government caused by the Design/Builder/ Conservation Contractor's negligent performance of any of these services furnished under this contract.

The rights and remedies of the Government provided for under this contract are in addition to any other rights and remedies provided by law.

If the Contractor is comprised of more than one legal entity, each entity shall be jointly and severally liable hereunder.

6.25.3 CONSTRUCTOR'S ROLE DURING DESIGN

The Contractor's construction management key personnel shall be actively involved during the design process to effectively integrate the design and construction requirements of this contract. In addition to the typical required construction activities, the constructor's involvement includes, but is not limited to actions such as: integrating the design schedule into the Master Schedule to maximize the effectiveness of fast-tracking design and construction (within the limits allowed in the contract), ensuring constructability and economy of the design, integrating the shop drawing and installation drawing process into the design, executing the material and equipment acquisition programs to meet critical schedules, effectively interfacing the construction QC program with the design QC program, and maintaining and providing the design team with accurate, up-to-date redline and as-built documentation. The Contractor shall require and manage the active involvement of key trade subcontractors in the above activities.

The following paragraphs shall be read as follows:

7.1.3. The Owner may from time to time change the person or entity designated as Owner's Representative or may assume and/or change the functions of the Owner's Representative and the Designated Inspector by notifying the Contractor in writing.

7.2.1.1.1. Based on on-Site observations, the Architect/Engineer will endeavor to safeguard the Owner against defects and deficiencies in the Work.

7.2.1.1.2. Deleted.

7.2.1.1.3. The Architect/Engineer will clarify plans and specifications and will provide recommendations to the Owner as requested.

7.2.1.1.4. The Owner's Representative and Designated Inspector will not be responsible for the acts or omissions of the Contractor, or any Subcontractor and vice versa, or any of their agents or employees, or any other persons performing any of the Work.

7.2.2.1. Deleted.

7.2.2.2.2. Inspectors employed by the Owner and/or the Owner's Representative are authorized to inspect all work done and materials furnished, including the preparation, fabrication or manufacture of the materials to be used.

7.2.2.4.1. Deleted.

7.2.5.1. However, neither the Owner's Representative's authority to act under this Article, nor any decision made by him in good faith either to exercise or not to exercise such authority, shall give rise to any duty or responsibility of the Owner or Owner's Representative to the Contractor, any Subcontractor, any of their agents or employees, or any other person performing any of the Work, nor will the Contractor be released from any of his obligations under the Contract.

9.1.2. The time limit for the execution of this Contract has been figured out based on the approved Contractor's proposal.

9.1.4.1. Time under the Contract for the Design-Build portion of the Work will stop running on the date of Substantial Completion.

The following paragraphs will be added as follows:

9.2.3 TIME IMPACT ANALYSIS FOR CHANGE MODIFICATIONS, DELAYS, AND CONTRACTOR REQUESTS

9.2.3.1 When change modifications are indicated and delays are experienced, by Owner's request or the Contractor desires to revise the Project Schedule, the Contractor shall submit to the OWNER's Representative a written Time Impact Analysis illustrating the influence of each modification, delay, or Contractor request on the contract time. The preparation of Time Impact Analysis is considered part of the construction process and will be performed at no additional cost to OWNER. Each Time Impact Analysis shall include a Fragmentary Network (Network analysis) demonstrating how the Contractor proposes to incorporate the modification, delay or Contractor request into the Project Schedule. The Time Impact Analysis shall demonstrate the time impact based on the date the modification is given to the Contractor or the date the delay occurred; the status of construction at that point in time; and the event time computation of all affected activities. The event times used in the Time Impact Analysis shall be those included in the latest Project Schedule Update or as adjusted by mutual agreement.

9.2.3.2 Activity delays shall not automatically mean that an extension of the Contract time will be warranted or due the Contractor. It is possible that modification or delay will not affect existing critical activities or cause non-critical activities to become critical. A modification or delay may result in only absorbing a part of the available total float that may exist within an activity chain of the Network, thereby not causing any effect on the Contract time.

9.2.3.3 Float is not for the exclusive use or benefit of either OWNER or the Contractor. Extension of the Contract time will be considered in the review/evaluation process only to the extent the equitable time adjustments to the activity or activities affected by the modification or delay, exceeds the total float of an activity; and forces the activity onto the critical path; and extends the contract time set forth in Contract Conditions.

9.2.3.4 Four (4) copies of each Time Impact Analysis shall be submitted as follows:

9.2.3.4.1 Along with the proposal for any requested change.

9.2.3.4.2 Within seven (7) calendar days after receipt of a written modification under Contract Conditions.

9.2.3.4.3 Within seven (7) calendar days after the furnishing of a written notice by OWNER's Representative as set forth under Contract Conditions.

9.2.3.4.4 Within seven (7) calendar days from the beginning of a delay from unforeseeable causes as set forth in Contract Conditions.

9.2.3.5 In cases where the Contractor does not submit a Time Impact Analysis within the time stated above it is mutually agreed that the modification, delay or the Contractor request does not require an extension of the contract time.

9.2.3.6 Approval or rejection of each Time Impact Analysis by OWNER's Representative shall be made after receipt of each Time Impact Analysis, unless subsequent meetings and negotiations are necessary. Upon approval, a copy of the Time Impact Analysis signed by OWNER shall be returned to the Contractor and incorporated into the Project Schedule at the next monthly Schedule Update.

9.2.3.7 Time Impact Analysis related to an extension of the Contract time and/or change modification work shall be incorporated into and attached to the applicable Change Order.

9.3.4 TYPES OF DELAY EVENTS

9.3.4.1 "Delay Event" means any of the following acts, omissions, events or conditions which delays completion of the Work or prevents performance of the Contractor's obligations under the Contract and which could not be prevented by the Contractor even though the Contractor were to take all appropriate care to avoid or diminish the adverse consequences of the Delay Event:

1. Fire or explosion;
2. Act of war, civil disorder, riot or similar occurrence;
3. Order, legislation, judgment, or other official action, of any governmental body, agency or official (other than OWNER) having jurisdiction over the Project;
4. Any act or omission of OWNER or OWNER's Representative, such as a temporary stoppage or suspension of Work, not resulting from the act or omission of the Contractor, any Subcontractor or Sub-Subcontractor or any other person or entity for whom the Contractor is responsible;
5. Excess Weather Delay Days for which the Contractor is entitled to an extension of the Contract Time pursuant to Subsection 9.3.4.2; or
6. Strikes or work shutdowns caused by labor disputes and lockouts (other than lockouts caused by the Contractor, Subcontractors or Sub-Subcontractors), subject to the provisions of Subsection 9.3.4.3.

The financial difficulties of the Contractor (or any Subcontractor, Sub-Subcontractor, supplier or other party for whom the Contractor is responsible) or the consequences thereof, shall not constitute a Delay Event.

9.3.4.2 WEATHER DELAY DAYS

In order to assist in managing issues relating to the Contractor's entitlement to adjustments of the Contract Time resulting from unusually severe weather conditions (including, without limitation, hurricanes), the Contractor shall include in its Progress Schedule, for each calendar month during the Contract Time, the same number of Weather Delay Days as are set forth, for each calendar month, in **Table 9.1**, below ("Scheduled Weather Delay Days").

Table 9.1

January	February	March	April	May	June
1	0	0	1	2	1

July	August	September	October	November	December
1	2	2	2	2	2

As is more particularly described below, the Contractor shall be entitled to seek an extension of the Contract Time on account of the occurrence of Weather Delay Days only if the number of Weather Delay Days experienced by the Contractor exceeds the number of Scheduled Weather Delay Days. The specific requirements and procedures for administering, calculating and determining Weather Delay Days and the Contractor's entitlement to an extension of the Contract Time on account thereof are as follows:

1. *Notice from the Contractor.* If the Contractor believes that a Weather Delay Day has occurred, the Contractor shall provide to OWNER's Representative with a written notice no later than five (5) Work Days following the occurrence of each claimed Weather Delay Day. The notice shall (a) describe the weather event, (b) set forth the number of Weather Delay Days claimed, and (c) include sufficient documentation to establish that, on each claimed Weather Delay Day, the weather or conditions

resulting therefrom prevented the Contractor from engaging at least seventy-five percent (75%) of the labor force and equipment that was scheduled (under the current Progress Schedule and Work Plan Schedule) for engagement on Critical Path Activities for at least fifty percent (50%) of that Work Day. The Contractor shall also furnish such other supporting documentation as OWNER's Representative or the Contracting Officer may request, including an Updated Progress Schedule or schedule impact (fragnet) analysis worksheet. The submission of such written notice within the specified time period shall be a condition precedent to any extension of the Contract Time.

2. *Monthly Determination.* Based upon information provided to OWNER's Representative under Clause .1, the Contracting Officer shall make a monthly determination as to the number of Weather Delay Days during the preceding calendar month and shall furnish to the Contractor a written monthly statement stating the number of Weather Delay Days that the Contracting Officer shall have initially determined to have occurred during that calendar month.

3. *Resolution of Disagreements.* If the Contractor disagrees with the Contracting Officer's initial determination of Weather Delay Days set forth in such a monthly statement, the Contractor may pursue, in negotiations with OWNER, a resolution of the issue during the thirty (30) Day period following the furnishing to the Contractor of the Contracting Officer's monthly statement. If no agreement is reached on the issue by the expiration of such thirty (30) Day period, the Contracting Officer's initial determination of Weather Delay Days as set forth in his monthly statement shall, automatically and without further action by the Contracting Officer or the Contractor (effective on the Day after expiration of such thirty (30) Day period), become a Claim Determination, and shall be final and binding upon OWNER and the Contractor unless, not later than thirty (30) Days after the effective date of such Claim Determination, the Contractor files with OWNER's Representative a written notice disputing the Claim Determination and informing OWNER of the Contractor's intention to seek judicial resolution of the issue.

4. *Extensions of the Contract Time on Account of Weather Delay Days for the First Year.* With respect to the period from the date of issuance of the Notice to Proceed through the end of the twelfth full calendar month thereafter, the Contracting Officer shall determine the total number of Weather Delay Days that have occurred during that period as of the anniversary of the date of issuance of the Notice to Proceed (or if the Notice to Proceed was issued on a date other than the first Day of any calendar month, on the anniversary of the first Day of the calendar month next following the date of issuance of the Notice to Proceed). The Contracting Officer's annual determination shall be based upon those monthly determinations made by the Contracting Officer pursuant to Clause .2, above, which have become final and binding upon OWNER and the Contractor and any negotiated resolutions of monthly determinations achieved under Clause .3, above (collectively, "included calendar months"). If the number of Weather Delay Days determined to have occurred by the Contracting Officer during the included calendar months during such period exceeds the Scheduled Weather Delay Days for the included calendar months, then the Contractor shall be granted an extension of the Contract Time equal in duration to the difference between (a) the actual Weather Delay Days experienced during the included calendar months and (b) the Scheduled Weather Delay Days during the included calendar months, with the result multiplied by 1.46 and rounded to the nearest integer. A Change Order reflecting such time extension will be furnished to the Contractor within a reasonable period after such annual determination. Such Change Order shall provide for a retroactive adjustment of the Progress Schedule, allowing the Contractor to consider Weather Delay Days (for which the Contractor is entitled to an extension of the Contract Time) on the Days when such Weather Delay Days, in fact, occurred. If the number of Weather Delay Days determined to have occurred by the Contracting Officer during the included calendar months during such period is less than the Scheduled Delay Days

for the included calendar months, OWNER shall be entitled to deposit into the Delay Bank that number of Days equal to the difference between (y) the actual Weather Delay Days experienced during the included calendar months and (z) the Scheduled Weather Delay Days during the included calendar months, with the result multiplied by 1.46 and rounded to the nearest integer. Any months as to which the Contractor shall have filed with OWNER's Representative a written notice disputing a Claim Determination shall be excluded from the Contracting Officer's annual determination, and, when the determination of Weather Delay Days for such months is resolved, an appropriate adjustment of the Contract Time or of the Delay Bank shall be made.

5. *Annual Determination in Later Years.* For each subsequent annual period, the Contracting Officer shall make an annual determination identical to that set forth in Clause .4, except that if the number of Weather Delay Days determined to have occurred exceeds the corresponding Scheduled Weather Delay Days, the Contractor shall be granted an extension of the Contract Time equal in duration to the difference between (a) the actual Weather Delay Days experienced and (b) the sum of the Scheduled Weather Delay Days plus the number of Days in the Delay Bank, with the result multiplied by 1.46 and rounded to the nearest integer.

6. *Partial periods.* With respect to any partial years or partial calendar months pro rata calculations shall be made in making the foregoing determinations.

9.3.4.3 STRIKES

No strike or work shutdown caused by a labor dispute shall be a Delay Event if:

1. It is found by a court of competent jurisdiction or by the National Labor Relations Board that such strike or work shutdown was principally caused by the Contractor's breach of its collective bargaining agreement, or by the Contractor's refusal to negotiate or bargain in good faith; or

2. Such strike or work shutdown was fomented or perpetrated by the Contractor for the purpose of interfering with, delaying or influencing a decision about the Contractor's performance under the Contract.

9.3.5 NOTICE AND PROCEDURES AS TO DELAY EVENTS

9.3.5.1 Initial Notice. The Contractor shall provide Owner's Representative with an initial written notice of any occurrence, event or condition which the Contractor claims (or intends to claim) constitutes a Delay Event, except that any such claim that a Weather Delay Day shall have occurred shall be governed by the provisions of Subsection 9.3.4.2, and not this Subsection 9.3.5.1. Such initial written notice shall be submitted and delivered to OWNER's Representative within five (5) Working Days of the commencement of such occurrence, event or condition, and shall:

1. State in detail the circumstances which form the basis of the Claim, and the current and probable future effects on the Contractor's performance; and

2. State the date of commencement of the delay and the duration or expected duration of the delay with respect to each affected portion of the Work.

The submission of such initial written notice within the time provided above shall be a condition precedent to any extension of the Contract Time. Neither OWNER's Representative nor any other agent, consultant

or employee of OWNER shall have authority to modify or waive, expressly or by implication, such condition precedent or the corresponding condition precedents set forth in Subsection 9.3.4.2 and 9.3.5.2, and any action or statement by OWNER's Representative or such other person to such effect shall not be binding upon OWNER.

9.3.5.2 Second Notice. Following submission of the initial written notice, not later than fifteen (15) Work Days of the commencement of any occurrence, event or condition which the Contractor claims (or intends to claim) constitutes a Delay Event, the Contractor shall submit to OWNER's Representative written notice of such occurrence, event or condition. This written notice shall (i) state that an extension of the Contract Time is claimed; (ii) state in detail the circumstances which form the basis of the delay; (iii) identify Work activities alleged to have been delayed; (iv) state the calendar dates on which the Work activities were delayed and are anticipated to be further delayed; (v) state the number of calendar Days by which the Contractor is requesting the Contract Time to be extended; (vi) fully complete and state the CPM analysis justifying the request, including a schedule impact (fragnet) analysis worksheet prepared in a time-scale to graphically illustrate the effect of the alleged delay on affected activities; and (vii) state the time, the date of commencement and duration or expected duration of the delay and its effect on the various portions of the Work, and such notice shall be accompanied by a Contractor Certification. OWNER shall have no obligation to act upon any such notice if the same is not accompanied by a Contractor Certification. The

Contractor shall provide such supporting documentation as OWNER may require, including, where appropriate, an Updated Progress Schedule indicating all of the activities affected by the circumstances which form the basis for the Claim. The submission of such written notice within the time period provided above shall be a condition precedent to any extension of the Contract Time. Because the possible necessity for an extension of the Contract Time might materially alter the scheduling, plans and other actions of OWNER and Other Contractors and because, with sufficient opportunity, OWNER might (if it knew of the Contractor's claim) attempt to mitigate the effect of a delay for which an extension of the Contract Time was to be claimed, and only oral notice might cause disputes as to the existence or substance of such Claim, and because delayed notice seriously hinder or prevent OWNER's investigation of the pertinent facts, the giving of written notice within the time periods stated above in Subsections 9.3.4.2, 9.3.5.1 and 9.3.5.2 shall be of the essence of the Contractor's obligations, and failure of the Contractor to comply with these requirements shall be a conclusive waiver of a claim for extension of the Contract Time. It shall in all cases be presumed that no extension or further extension of the Contract Time is due unless the Contractor shall affirmatively demonstrate the Contractor's entitlement to an extension of the Contract Time under all applicable terms and conditions of the Contract Documents. To this end, the Contractor shall maintain clear and precise records supporting any claim for an extension of the Contract Time, and in the absence of such records, the foregoing presumption shall be conclusive.

9.3.5.3 Procedures for Review and Resolution. Claims for an extension of the Contract Time by reason of a Delay Event shall be reviewed and resolved subject to, and in accordance with, Clauses .3 through .6 of Subsection 11.9.2 and Subsection 11.9.3, except that Claims based upon Weather Delay Days shall be reviewed and resolved pursuant to Subsection 9.3.4.2.

9.3.6 LIMITATIONS ON DELAY COMPUTATION

Whenever the Contractor claims an extension of the Contract Time as a result of an Excusable Delay, only the unavoidable delay caused to completion of the Work as a whole shall be considered in measuring or evaluating the extent of the delay. If, for example, extra work can be (or could have been) performed along with the regular Work called for by the Contract Documents so as to reduce or eliminate a delay in the progress of the Work or some portion thereof, without causing necessary delay to such regular work, no

claim for extension of the Contract Time shall be granted. An extension of the Contract Time shall be granted only for delays affecting Critical Path Activities. In any event, even though a cause of delay meets all of the above conditions, any extension shall be granted only to the extent that the effect of such cause cannot be (or could not have been) avoided or mitigated by the exercise of all reasonable precautions, efforts and measures (including planning, scheduling and rescheduling, re-sequencing Work activities, and reallocating and redeploying work forces), whether before or after the occurrence of the cause of delay. If a concurrent delay occurs (*i.e.*, either a single delay resulting from two or more causes where at least one delay is the responsibility of the Contractor, or multiple delays, where at least one delay is the responsibility of the Contractor), no extension of the Contract Time shall be granted to the Contractor during the period of any such delay for which the Contractor is responsible.

No extension of the Contract Time shall be allowed unless the number of Days of extension of the Contract Time to which the Contractor would otherwise be entitled is reduced, on a Day-for-Day basis, by the number of Days, if any, then in the Delay Bank. Days in the Delay Bank so applied to reduce the duration of an extension of the Contract Time shall, upon such application, be withdrawn from the Delay Bank.

9.3.7 SOLE REMEDY

Subject only to Subsection 9.3.8, the Contractor assumes the risk of all delays of any kind or duration, whether or not within the contemplation of either OWNER or the Contractor and whether foreseeable or unforeseeable. The Contractor shall have no right to rescind, cancel or terminate the Contract except as expressly provided herein, and the Contractor shall have no cause of action under any theory of quasi-contract or *quantum meruit*, by reason of any such delay. The Contractor agrees that extensions of the Contract Time shall be the Contractor's sole and exclusive remedy against OWNER, except to the extent otherwise provided in Subsection 9.3.8, below.

9.3.8 ADJUSTMENT OF THE CONTRACT PRICE AS A RESULT OF CERTAIN DELAYS

If and to the extent that the Contractor establishes that all the following have occurred:

1. The Contractor is entitled to an extension of the Contract Time pursuant to this Section 9.3,

2. The Contractor suffered Compensable Losses (as defined below) as a result of the delay, and

3. The Contractor could not have avoided or mitigated such Compensable Losses despite having taken all reasonable precautions, efforts and measures to avoid or reduce the amount thereof, including, without limitation, mitigating delays by re-sequencing Work activities, and reallocating and redeploying work forces of the Contractor, Subcontractors and Sub-Subcontractors to the maximum extent practicable, then OWNER shall adjust the Contract Price by an amount equal to the Contractor's Compensable Losses directly attributable to the Delay Event giving rise to the extension of the Contract Time. A Change Order affecting the adjustment to the Contract Price will be furnished to the Contractor within a reasonable period after such determination.

   "Compensable Losses" include only the reasonable verified amounts of necessary direct costs of idle time of equipment, necessary direct costs for idle time of workers and professional and technical personnel, and necessary direct costs of moving of equipment and extended field office overhead expenses. No mark-up of Compensable Losses will be allowed for home office overhead or profit. For purposes of the Contract, "extended field office overhead" expenses shall mean those indirect costs incurred at the Site (sometimes also referred to as general conditions costs or jobsite overhead costs) (i) which cannot reasonably be allocated to any specific work item within the Work, and (ii)

which increase or decrease as a function of the duration of the Contract Time. Examples of extended field office overhead items include project manager, superintendent, temporary utilities and temporary facilities, clerical staff, office equipment and supplies and project trucks and automobiles.

The following paragraph shall be read as follows:

9.4.1. In no event shall Owner or Owner's Representative be liable to Contractor, any Subcontractor, any Supplier, or any other person or organization, or to any surety for or employee or agent of any of them, for damages arising out of or resulting from:

The following paragraph will be added as follows:

9.4.3 RECOVERY MEASURES

If OWNER determines that the performance of the Work has not progressed to, or reached, the level of completion required by the current Progress Schedule, OWNER shall have the right to direct the Contractor to take all the necessary measures and steps to recover any lost time and return the Work to the level of progress or completion required by the current Progress Schedule ("Recovery Measures"). In such event, the Contractor shall, within five (5) Working Days of receiving OWNER's direction to take Recovery Measures, notify OWNER's Representative in writing of the steps and measures which the Contractor proposes to take to remedy the situation, and furnish OWNER's Representative with an Updated Progress Schedule reflecting such Recovery Measures, and implement such steps promptly and without further delay. Performance of such Recovery Measures may include steps such as working six days per week, lengthening the Working Day, double shifts, and increasing work forces and construction equipment employed on the Work. Such Recovery Measures shall continue until the progress of the Work is returned to the stage of completion required by the current Progress Schedule. OWNER's right to require Recovery Measures is solely for the purpose of ensuring the Contractor's compliance with the Progress Schedule. If the Contractor disputes OWNER's direction to the Contractor to take Recovery Measures, the Contractor shall, nonetheless, promptly and diligently perform the Recovery Measures and shall have no right whatsoever to fail or refuse to take such Recovery Measures. If the delays giving rise to a direction from OWNER to the Contractor to take Recovery Measures are not Excusable Delays, the Contractor shall not be entitled to an extension of the Contract Time or an adjustment of the Contract Price in connection with taking Recovery Measures. The Contractor acknowledges that if any delay giving rise to a direction from OWNER to implement Recovery Measures is, in fact, an Excusable Delay, the Contractor shall be entitled to be compensated therefore under Art. 9 and11. The Contractor's only recourse, if the Contractor disputes OWNER's order to take Recovery Measures, shall be to submit a Contractor Change Request subject to, and in accordance with, the provisions of Section 11.9. The Contractor acknowledges the critical importance of achieving completion of the Work within the Contract Time and maintaining the progress of the Work consistently with the Progress Schedule.

9.6 EARLY COMPLETION INCENTIVE

Articles 9.6 and 9.6.1 are hereby eliminated from the Uniform General Conditions for Public Works Contracts. OWNER shall not pay the Contractor an incentive of any kind for completion of contract work before the expiration of the contract time, or at any other circumstances, therefore.

The following paragraph will be read as follows:

10.2.1.3.1. If required by Owner's Representative, Contractor shall obtain competitive bids from subcontractors acceptable to Owner and Contractor and shall deliver such bids to Owner, who will then

determine which bids, if any, will be acceptable.

10.2.1.5.3. Rentals of all construction equipment and machinery, and the parts thereof whether rented from Contractor or others in accordance with rental agreements approved by Owner's Representative and the costs of transportation, loading, unloading, assembly, dismantling, and removal thereof.

10.2.4. Documentation: Whenever the Cost of the Work for any purpose is to be determined pursuant to Articles 10.2.1 and 10.2.2, Contractor will establish and maintain records thereof in accordance with generally accepted accounting practices and submit in a form acceptable to Owner's Representative, an itemized cost breakdown together with supporting documentation and data.

The following paragraphs will be added as follows:

11.6 Change Notice

OWNER may, at any time, initiate a Change Order by causing a Change Notice to be issued to the Contractor. A Change Notice shall be the standard method employed to notify the Contractor of OWNER's intent to implement a Change Order. A Change Notice will indicate one of the following:

1. That the proposed Change Order involves no adjustment of the Contract Price or the Contract Time;

2. That the proposed Change Order involves only items for which there are changes in quantities of items for which unit prices are specified in the Contract Documents;

3. That the proposed Change Order involves an adjustment of the Contract Price or the Contract Time, and the Change Notice proposes the basis for adjusting the schedule or the compensation, or both; or

4. That the proposed Change Order may involve an adjustment in the Contract Price or the Contract Time and will require that the Contractor submit a Contractor Change Proposal in accordance with Section 11.8.

Following the issuance of a Change Notice under the provisions of Clauses .1, .2 or .3 of this Subsection 11.6, if the Contractor agrees with the Change Notice, the Contractor shall sign a copy of the Change Notice, indicating "agreed" next to its signature, and return it to OWNER's Representative within five (5) Working Days after receipt. A Change Order will then be issued pursuant to Section 11.1, and the Contractor shall proceed with the Work indicated in the Change Order. If the Contractor disagrees with the Change Notice, the Contractor shall sign the Change Notice, indicating "protested" next to its signature, return it to OWNER's Representative within five (5) Working Days, and follow the protest procedure set forth in Section 11.5.

Following receipt of a Change Notice under the provisions Clause .4 of this Subsection 11.6, the Contractor shall sign the Change Notice, acknowledge its receipt, and return it to OWNER's Representative within fifteen (15) Working Days, together with a Contractor Change Proposal prepared in accordance with Section 11.8.

The Contractor shall not perform any Work which is the subject of a Change Notice unless and until a Change Order is executed implementing the Change Notice, or a Change Directive is issued pursuant to Section 11.7. The Contracting Officer may withdraw a Change Notice without incurring any liability to the Contractor at any time prior to the execution of a Change Order implementing such Change Notice, or the

issuance of a Change Directive implementing such Change Notice.

11.8 CONTRACTOR CHANGE PROPOSAL

Following issuance of a Change Notice for which the Contractor has been requested to submit a Contractor Change Proposal, the Contractor shall submit to OWNER's Representative a Contractor Change Proposal to submit the proposed changes within fifteen (15) Work Days after the receipt of such Change Notice; provided, however, that if the nature and extent of the proposed Change Notice requires a longer period of time for the Contractor to prepare a Contractor Change Proposal, the submission period may be extended by OWNER's Representative. The Contractor Change Proposal shall be accompanied by a Contractor Certification. The Contractor Change Proposal shall contain a detailed cost/time breakdown of any proposed adjustment to the Contract Price and, if applicable, the Contract Time attributable to such Change Notice, as follows:

1. The cost breakdown shall include separate estimates of all costs of the proposed added (or deleted) Work for labor, materials, equipment rental, overhead and profit and Work to be performed by Subcontractors, in such detail as OWNER's Representative may require to permit a thorough analysis of such cost breakdown. To the extent that cost items, overhead amounts or profit identified in such cost breakdown are addressed in, or limited by, the provisions of Section 11.11, the cost estimates for such items, overhead amounts or profit shall not exceed the limitations on compensation specified or referred to in Section 11.11. The Contractor shall review all quotations from Subcontractors and Sub-Subcontractors to assure that pricing is fair and reasonable before forwarding such proposed pricing to OWNER. The Contractor shall submit to OWNER a Contractor Certification at the time of submitting its Contractor Change Request, and OWNER shall have no obligation to act upon a Contractor Change Proposal if not accompanied by a Contractor Certification.

2. Any proposed adjustment of the Contract Time shall be made in accordance with Art. 9 and shall include a schedule impact analysis (fragnet) worksheet prepared in a time-scale to graphically illustrate the effect of the proposed change in the Work. The Contractor Change Proposal shall include an Updated Progress Schedule indicating any proposed adjustment of the Contract Time.

OWNER's Representative will consider the Contractor Change Proposal, and the Contractor will cooperate, as necessary, to reach an agreement at the earliest practicable date on the terms of compensation or schedule adjustment for the Change Notice or Change Directive. If an agreement is reached, a Change Order will be issued pursuant to this Art. 11. If a negotiated settlement of the Change Notice or the Change Directive is not reached within thirty (30) Days after the date of receipt by OWNER's Representative of the Contractor Change Proposal, the Contracting Officer will notify the Contractor, in writing, to perform the Work

included in the Change Notice or Change Directive on a Force Account basis, and the Contract Price shall be adjusted in accordance with Section 11.11, below.

11.9 CHANGES REQUESTED BY THE CONTRACTOR

11.9.1 CONTRACTOR CHANGE REQUESTS

The Contractor may initiate a request for a Change in the Work by submission to OWNER's Representative of a Contractor Change Request. Except for Change Orders or Change Directives initiated pursuant to Sections 11.1, 11.2, 11.3 or Section 11.7, the Contractor shall not be entitled to any adjustment of the Contract Price or the Contract Time as a result of any statement, direction, action or failure to act by OWNER's Representative, the Contracting Officer or OWNER, the occurrence of any event or incident, or any other cause, including a change in Applicable Laws after the date of submission of the final Contractor Proposal, unless, subject to the terms of Subsection 7.6.3 of the Agreement, the Contractor shall have first submitted to Owner's Representative a Contractor Change Request, as hereinafter specified, and shall have complied with the other applicable requirements of the Contract. If the Contractor believes that it is entitled to adjust the Contract Price or the Contract Time, or otherwise modify the terms of the Contract Documents, the Contractor must submit to OWNER's Representative a Contractor Change Request, in accordance with the time periods and procedures set forth in Subsection 11.9.2, containing, at a minimum, the information required to be included in a Contractor Change Proposal, as described in Section 11.8.

11.9.2 NOTICES, PROCEDURES AND TIME PERIODS

1. *Initial Notice*. For any proposed change to the Work initiated by the Contractor, the Contractor shall provide an initial written notice of the Contractor's intent to file a Contractor Change Request. Such initial written notice shall be provided to OWNER's Representative not later than five (5) Working Days following the occurrence of the event on which the Contractor Change Request is based and shall contain as much information concerning the event and its effect on the Contract Price or the Contract Time as is reasonably available to the Contractor within such time period.

2. *Second Notice*. The Contractor shall provide OWNER's Representative with a Contractor Change Request, denominated as such, not later than fifteen (15) Working Days following the occurrence of the action, event or cause upon which its Contractor Change Request is based, unless the Contracting Officer agrees in writing to an extension. The Contractor Change Request shall set forth the reasons for which the Contractor believes an adjustment in the Contract Price or the Contract Time is warranted, and the applicable Contract Document references supporting such Claim, the nature of the additional costs or schedule extension involved, the efforts taken and to be taken to prevent or minimize such costs or extensions, and, insofar as possible, the amount of the proposed increase in the Contract Price or extension of the Contract Time.

3. *Contractor Certification*. The Contractor shall submit to OWNER's Representative a Contractor Certification at the time of submitting its Contractor Change Request and neither OWNER's Representative nor the Contracting Officer shall have any obligation to act upon a Contractor Change Request if not accompanied by a Contractor Certification.

4. *Further Information*. All Contractor Change Requests presented by the Contractor shall provide sufficient detail for OWNER's Representative to understand the basis for, and amount of, the adjustment in the Contract Price or the Contract Time requested in the Contractor Change Request. The Contractor shall furnish, within ten (10) Working Days after OWNER's Representative's request in writing, such further information and details including, but not limited to, books of account, records

and other documents of the Contractor and of its Subcontractors, as may be required by OWNER's Representative to determine the facts or issues of contention involved in the Contractor Change Request. The Contractor's failure to deliver such information will be sufficient cause for rejecting any Contractor Change Request, unless such time is extended in writing by OWNER.

5. *Conferences*. The Contractor, if requested by OWNER's Representative, shall meet and confer with OWNER's Representative, the Contracting Officer or any other representative of OWNER involved in evaluating the Contractor Change Request to discuss the issues involved.

6. *Continuation of Work*. The filing of a Contractor Change Request shall not postpone or alter in any respect the Contractor's duty to complete the Work diligently and without delay.

11.9.3 REVIEW OF CONTRACTOR CHANGE REQUEST

The Contracting Officer shall act on a Contractor Change Request within thirty (30) Working Days after all information and data requested by OWNER's Representative in connection with such Contractor Change Request has been received by OWNER's Representative. If the Contracting Officer fails or refuses to act on a Contractor Change Request within such time, the Contractor Change Request shall be deemed to have been rejected by the Contracting Officer and shall constitute, on the last Day of the period within which the Contracting Officer was required to act upon the Contractor Change Request, the Contracting Officer's Claim Determination with respect to the Contractor Change Request. If the period within which the Contracting Officer was required to act is extended by written agreement of OWNER and the Contractor, the last Day of the period within which the Contracting Officer is required to act shall be the last Day of the period specified in such extension agreement. If the Contractor Change Request is granted, a Change Order will be issued in accordance with Section 11.1. If the Contractor Change Request is rejected, or deemed to have been rejected, in whole or in part, the deemed rejection or written rejection by the Contracting Officer shall constitute a Claim Determination, as provided in Subsection 11.5.

11.9.4 ADJUSTMENTS IN THE CONTRACT PRICE

Any adjustment in the Contract Price as a result of a Contractor Change Request, except for adjustments in the Contract Price resulting from costs incurred as a result of delay, (which adjustments shall be determined in accordance with the provisions of Section 9.3.8), shall be determined in one or more of the following ways:

1. By mutual acceptance of a lump sum; or

2. By cost to be determined in a manner agreed upon by OWNER and the Contractor.

If the methods set forth above cannot be agreed upon, any adjustment of the Contract Price as a result of a Contractor Change Request shall be treated as Force Account Work, and the amount by which the Contract Price shall be adjusted shall be on a Force Account basis in accordance with Section 11.11. The Contractor agrees to be bound by the markups at the rates specified in Subsection 11.11.8 regardless of the method of adjustment selected.

11.9.5 ADJUSTMENT OF THE CONTRACT TIME

Any adjustment of the Contract Time as a result of a Contractor Change Request shall be determined in accordance with, and shall be subject to, the provisions of Subsections 9.3.6 through 9.3.8.

11.9.6 STRICT COMPLIANCE, WAIVER OR BAR

Failure of the Contractor to comply strictly with the notice requirements, procedures and time periods set forth in this Section 11.9 shall constitute a waiver by the Contractor of any right to an adjustment of the Contract Price or the Contract Time with respect to any Contractor Change Request.

11.10 TWO-PART CHANGE ORDERS

In those instances when negotiations between OWNER and the Contractor have not resolved the pricing of all items of a Change Order, but nonetheless the pricing of significant portions of the Change Order have been agreed upon by such parties, at the option of OWNER, a two-part Change Order may be issued to expedite payment to the Contractor for Work completed. Part one of the Change Order shall be issued for those items of the Change Order as to which agreement has been reached on price, which shall include the following:

1. A detailed description of the items of the agreed-upon Change Order;

2. A specific description of the items as to which no agreement has been reached; and

3. A statement on compensation which shall read as follows: "This Change Order includes compensation in full to the Contractor and all of its Subcontractors for all direct and indirect costs, overhead, and profit attributable to the Work described herein, except for the specific unresolved elements or items listed above."

When the unresolved elements of the Change Order have been agreed upon by OWNER and Contractor, then part two of the Change Order shall be issued by OWNER.

11.11 FORCE ACCOUNT WORK

When Work to be performed under a Change Order is to be paid for on a Force Account basis, the labor, materials and equipment used in the performance of Force Account Work shall be subject to verification by OWNER's Representative, based upon its determination that the compensation sought by the Contractor is in compliance with the requirements of this Section 11.11. Compensation for Force Account Work will include only those items as specified below in this Section 11.11.

11.11.1 Cost of Labor

11.11.1.1 *Labor Rates*. The cost of labor used in performing the Force Account Work shall not exceed prevailing standard rates paid in the San Juan area in the case of Force Account Work involving construction, installation or other activities at the Site and, for all other Force Account Work, shall not exceed prevailing standard rates paid in the area where the Force Account Work is performed, and shall include only the following:

11.11.1.2 *Actual Wages of Workers.* Wages of workers involved in performance of construction, installation or other activities at the Site, or with the Contracting Officer's written approval, at off-Site locations. The charges for construction labor shall include all classifications up to foremen and shall include foremen only when foremen are engaged in the actual and direct performance of the Work at the Site. Labor charges for workers shall not include charges for assistant superintendents, superintendents, office personnel, timekeepers, and maintenance mechanics, all of which are included in the authorized mark-ups set forth in Subsection 11.11.8.

11.11.1.3 *Supervisory Personnel*. To the extent involved directly with the Force Account Work, wages or salaries of supervisory personnel, when stationed at the Contractor's field office at the Site. Personnel engaged at factories, shops or on the road, in inspecting, testing or expediting the production or transportation of materials and equipment for use in the Work, shall be considered as stationed at the field office, but only for that portion of their time when so engaged at factories, shops or on the road.

11.11.1.4 *Benefits*. Costs paid or incurred for employee benefits (not including bonuses) such as taxes, insurance, pension contributions and other benefits required by law or collective bargaining agreements, and for personnel not covered by collective bargaining agreements, customary employee benefits (not including bonuses) such as sick leave, medical and health benefits, holidays, vacations and pensions, which are payable on account of wages and salaries included in Force Account Work under Subsections 11.11.1.2 and 11.11.1.3.

11.11.2 TRAVEL AND SUBSISTENCE

Deleted.

11.11.3 MATERIALS AND EQUIPMENT

The cost of materials and equipment used for the accomplishment of the Work will be the delivered cost to the Contractor from the supplier, except to the extent the following are applicable:

1. If a cash or trade discount by the actual supplier is offered or available to the Contractor, it shall be credited to OWNER notwithstanding the fact that such discount may not have been taken.

2. If materials or equipment are procured by any method which is not direct purchase from, and a direct billing by, the actual supplier to the Contractor, the cost of such materials or equipment shall be deemed to be the price paid to the actual supplier as determined by OWNER's Representative. No mark-up, except for actual costs incurred in the handling of such materials or equipment, will be permitted.

3. If the materials or equipment are obtained from a supply or source owned wholly or in part by the Contractor, payment therefore will not exceed the price paid by the Contractor for similar materials furnished from an independent source or the current wholesale price for such materials delivered to the Site, whichever price is lower.

4. If the cost of such materials or equipment is, in the opinion of OWNER's Representative excessive, then the cost of such materials or equipment shall be deemed to be the lowest current wholesale price at which such materials or equipment are available in the quantities concerned, delivered to the Site, less any discounts as provided in Clause .1 above.

5. If the Contractor does not furnish satisfactory evidence of the cost of such materials or equipment from the actual supplier thereof, the cost shall then be determined in accordance with Clause .4 above.

The Contractor shall have no claims for costs and mark-ups on materials or equipment furnished by OWNER, if any.

11.11.4 RENTAL EQUIPMENT

The Contractor will be paid for the use of equipment in an amount equal to the lesser of (i) actual costs, or (ii) eighty-five percent (85%) of the rental rates listed for such equipment in the most recent and applicable publication at that time of the Rental Rate Bluebook published by Machinery Information Division of K-III Directory Corporation of San Jose, California, as adjusted for the rate adjustment factor applicable to Puerto Rico, regardless of Ownership and any rental or other agreement for the use of such equipment entered into by the Contractor. If it is necessary to use equipment not listed in the Rental Rate Bluebook, a suitable discounted rental rate for such equipment will be established by OWNER based upon similar available rate information. The Contractor shall furnish all cost data required for OWNER to establish such rental rate. If at any time, the Rental Rate Blue Book is no longer published, OWNER and the Contractor will mutually agree on the applicable rental rate to be utilized under this Subsection 11.11.4.

Operators of rented equipment will be paid for as provided under Subsection 11.11.1.2. All equipment shall be in good working condition and suitable for the purpose for which the equipment is to be used. Unless otherwise specified, manufacturer's ratings and manufacturer-approved modifications shall be used to classify equipment for the determination of applicable rental rates. Equipment which has no direct power unit shall be powered by a unit of at least the minimum rating recommended by the manufacturer. Individual pieces of equipment or tools having a new value of Three Hundred Dollars ($300.00) or less, whether or not consumed by use, shall be small tools included in Contract Price and no additional payment will be made, therefore.

11.11.5 EQUIPMENT FOR THE WORK

The rental time to be paid for equipment otherwise in use on the Work shall include only the time the equipment is in operation on the Force Account Work being performed and the time required to move the equipment to the location of the Force Account Work and return it to the original location, or to another location requiring no more time than that required to return it to its original location. Moving time will not be paid for, however, if the equipment is used on other work at the site of the Force Account Work. Loading and transporting costs will be allowed, in lieu of moving time, when the equipment is moved by means other than its own power, except that no payment will be made if the equipment is used at the site of the Force Account Work on Work other than such Force Account Work.

11.11.6 EQUIPMENT NOT ON THE WORK

For the use of equipment moved to the Site and used exclusively for Force Account Work, the Contractor will be paid the rental rates agreed to in Subsection 11.11.4 and for the cost of transporting the equipment from the equipment lessor's usual storage facilities to the location of the Work and back to its original location, all in accordance with the following provisions:

1. The original location of the equipment to be hauled to the location of the Work shall be agreed to by OWNER in advance.

2. Payment of the costs of loading and unloading such equipment shall be made in accordance with Subsection 11.11.1.

3. The cost of transporting equipment shall not exceed the applicable rates customarily applied in the San Juan area.

4. The rental period shall begin at the time the equipment is unloaded at the Site, shall include each working Day that the equipment is at the Site and any other Days on which the Force Account Work

is performed, and shall terminate when the Work it was hired to perform is completed or at the end of the Day on which OWNER's Representative directs the Contractor to discontinue the use of such equipment. The maximum rental time to be paid per Day will not exceed eight hours unless the equipment is in operation for a longer time. The minimum rental time to be paid for the entire rental period shall not be less than eight hours. If the entire rental period to be paid for exceeds eight hours, the rental time which will be paid per Day will be in accordance with the following:

Hours Equipment is in Operation	*Hours to be Paid*
0.5 and over, up to and including 2	2
over 2 and up to and including 4	4
over 4 and up to and including 6	6
over 6 and up to and including 8	8

5. Rented equipment shall not be billed to OWNER at rates exceeding those described below:

Actual Usage	*Payment Rate Category*
8 hours or less	Hourly Rate
One to Six Days	Daily Rate
One Week but less than one Month	Weekly Rate
One Month or more	Monthly Rate

6. For equipment not reasonably available in Puerto Rico, the rental period shall begin at the time the equipment leaves the rental storage facility and shall terminate at the time the equipment is returned to the rental storage facility. For such specialty equipment, the Contractor shall provide a certificate that the most effective rate (weekly, monthly, yearly) has been obtained.

7. Should the Contractor request the return of the equipment to a location other than its original location, OWNER will pay the cost of transportation in accordance with the above provisions, provided that such payment shall not exceed the cost of moving the equipment to the Work from the original location.

8. Payment for transporting and loading and unloading equipment, as above provided, will not be made if the equipment is used on any Work in addition to Force Account Work paid for on a Force Account basis.

11.11.7 SUBCONTRACTORS

The cost for Work under a Subcontract will be the actual cost to the Contractor for Work performed by a Subcontractor. The Contractor shall include in each Subcontract provisions corresponding to the provisions of this Section 11.11 with respect to Force Account Work performed by Subcontractors and Sub-Subcontractors and each Subcontractor or Sub-Subcontractor shall compute its compensation for Force Account Work as set forth in Subsections 11.11.1 through 11.11.6 and its overhead and profit shall be payable in accordance with Clause .1 of Subsection 11.11.8.2.

11.11.8 Mark-ups

The mark-ups contained in this Subsection 11.11.8 shall apply to all Change Orders.

11.11.8.1 Contractor Force Account Work Mark-up. For adjustments in the Contract Price based upon Force Account Work performed by the Contractor, the Contractor shall be compensated in full for all indirect costs, overhead and profit associated with such Force Account Work, in an amount equal to the following percentages of the direct costs of such Force Account Work:

Labor	Fifteen percent (15%).
Materials and Equipment	Ten percent (10%).
Equipment Rental	Ten percent (10%).
Other	Ten percent (10%).

The Contractor's mark-ups for overhead and profit set forth above and in Subsection 11.11.8.2 below, shall include compensation in full to the Contractor for:

1. Profit.

2. Payroll costs and other compensation of personnel employed by the Contractor whether at the Site or in the Contractor's principal office or a branch office for management and administration or in support of the performance, management and administration of the Work, including, but not limited to, the Contractor's officers, executives, principals, general managers, construction managers, office personnel, estimators and schedulers, detailers, claims consultants, attorneys, auditors, accountants, purchasing and contracting agents, expeditors, engineers, architects, timekeepers and clerks.

3. Expenses of the Contractor's principal and branch offices other than the Contractor's office at the Site.

4. Any part of the Contractor's capital expenses, including interest on the Contractor's capital employed for the Work involved and charges for delinquent payments.

5. Costs of small tools used but not consumed which remain the property of the Contractor.

6. Costs associated with the preparation of Change Orders (whether or not ultimately authorized), cost estimates, or the preparation or filing of claims.

7. Anticipated lost profits or lost revenues and lost income or earnings.

8. Costs are attributable to home office overhead.

9. Fees and costs of consultants or attorneys, whether or not in the direct employ of the Contractor, employed for services specifically related to the resolution of a claim, dispute, or other matter relating to the acceptability of the Work.

10. Other administrative expenses or contingent costs of any kind.

In no event shall any of the foregoing expenses be included as costs of Force Account Work pursuant to Subsections 11.11.1 through 11.11.7, above.

11.11.8.2 *Subcontractor Force Account Work Mark-up*. For adjustments in the Contract Price based upon Force Account Work performed by a Subcontractor or Sub-Subcontractor, the following amounts shall be added to the total of the payments for such Force Account Work:

1. An amount representing compensation to the Subcontractor or Sub-Subcontractor in full for all overhead and profit associated with such Force Account Work, not exceeding ten percent (10%) of the Subcontractor's or Sub-Subcontractor's costs, exclusive of overhead and profit, attributable to the Force Account Work; and

2. An amount representing compensation to the Contractor in full for all overhead and profit associated with Force Account Work performed by such Subcontractor or Sub- Subcontractor, not exceeding five percent (5%) of the payments for such Force Account Work.

The Subcontractor's or Sub-Subcontractors mark-ups for overhead and profit set forth above shall include compensation in full to the Subcontractor for all the items and costs set forth in Clauses .1 through .10 of Subsection 11.11.8.1.

11.11.8.3 *Limit on Mark-ups*. The aggregate amount of all mark-ups for overhead and profit, for the Contractor and all Subcontractors and Sub-Subcontractors, regardless of the number of tiers of Subcontractors or Sub-Subcontractors involved or the amount of the Force Account Work, shall not exceed twenty-five percent (25%).

11.11.8.4 *Combined Changes*. When both additions and credits are involved in any single Change Order, the allowances for overhead and profit shall be computed based upon the net increase, if any.

11.11.8.5 *Insurance and Bond Mark-up*. To the amounts computed above shall be added the increased bonding and insurance costs, if any, directly attributable to the Force Account Work, representing compensation in full for the additional costs of such bonds and insurance.

11.11.8.6 Exclusion from Compensation for Force Account Work. In no event shall the Contractor be compensated for costs due to the fault or negligence of the Contractor, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, including, but not limited to, deposits lost, costs to correct defective Work, disposal of materials or equipment wrongly supplied, and making good any damage to property, or for overtime or premium pay, unless approved in advance by OWNER in writing.

11.11.9 RECORDS AND ACCOUNTS

Whenever the Contractor is to be compensated for Work performed on a Force Account basis, the Contractor shall maintain separate records and accounts of all costs incurred with respect to such Work, specifically identifying all such Work as Force Account Work by a distinct job order number. The Contractor shall segregate all such records and accounts to provide a clear distinction between Force Account Work and all other Work. No compensation shall be due or payable to the Contractor on account of Work performed on a Force Account basis unless such separate records and accounts are maintained to clearly establish the Contractor's entitlement to payment. At the end of each Work Day, the Contractor shall prepare a daily report sheet identifying all Work performed on a Force Account basis on that Day and shall furnish such daily report sheet to OWNER's Representative, in duplicate. The daily report sheet shall identify:

1. The nature of the Work performed and job order number.

2. The name, classification, date, daily hours worked, hourly rate of pay, benefits for each laborer, foreman or other worker.

3. Designation, date, daily hours, rental rate for each item of machinery and equipment employed on such Work.

4. Quantities of materials used, prices and extensions, substantiated by suppliers' invoices.

5. Transportation charges, substantiated by invoices.

6. Insurance, bond and tax costs.

Equipment and material charges shall be substantiated by copies of supplier's invoices. Such invoices shall be submitted with the daily report sheets, or, if not yet available, shall be submitted with subsequent daily report sheets. All such daily report sheets substantiating Force Account Work shall be signed by the Contractor's Project Manager and shall be certified to be correct and complete.

OWNER's Representative will review the daily report sheets furnished by the Contractor, make any necessary adjustment. When these daily reports are agreed upon and signed by OWNER's Representative and the Contractor, they shall become the basis of payment for the Force Account Work performed but shall not preclude adjustment based on a subsequent audit.

The Contractor's original cost records pertaining to Work paid for on a Force Account basis shall be made available for inspection or audit by representatives of OWNER.

11.12 MINOR CHANGES IN THE WORK

OWNER's Representative will have authority to order minor changes in the Work not involving an adjustment in the Contract Price or the Contract Time and not inconsistent with the intent of the Contract Documents. Such changes shall be affected by written order and shall be binding on OWNER and Contractor. The Contractor shall carry out such written orders promptly.

11.13 PROCEDURAL REQUIREMENTS FOR CLAIMS

11.13.1 CONTINUING CONTRACT PERFORMANCE

Pending final resolution of a Claim (including negotiation or litigation), the Contractor shall proceed continuously and diligently with performance of the Work, in accordance with the Contract Documents.

11.13.1.1 The exclusive jurisdiction and venue for any legal action or proceeding arising out of, or relating to the Contract or the Work shall be the Court of First Instance of the Commonwealth of Puerto Rico, San Juan District.

The following paragraphs will be read as follows:

12.1.1. Prompt notice of all defective Work of which Owner and Owner's Representative has actual knowledge will be given to Contractor. If no notice is promptly given to Contractor of previously known defective Work, it shall be deemed acceptable to Owner.

12.2.1. Owner, Owner's Representative, other representatives and personnel of Owner, independent testing laboratories, and governmental agencies with jurisdictional interests will have access to the Site and the Work at reasonable times for their observation, inspecting, and testing. Said access should be previously coordinated with Contractor.

12.3.3.1. Whenever Contractor is responsible for arranging and obtaining and will pay all costs in connection with any inspections, tests, or approvals required for Owner's Representative's and for Designated Inspector acceptance of materials, mix designs, or equipment submitted for approval prior to Contractor's purchase thereof for incorporation in the Work.

12.3.3.1.1 Unless otherwise indicated in the Contract Documents, such inspections, tests, or approvals shall be performed by organizations acceptable to Owner, Owner's Representative and Designated Inspector, whose acceptance shall not be unreasonably denied.

12.7.1. If both parties agree, instead of requiring correction or removal and replacement of deficient Work, and Owner (prior to Owner's Representative recommendation of final payment) prefers to accept it, Owner may do so.

12.8.1. If Contractor fails within a reasonable time after written notice from Owner's Representative to start correction of deficient Work or to diligently prosecute correction or to remove and replace rejected Work in accordance with Article 12.6.1, or if Contractor fails to perform the Work in accordance with the Contract Documents, or if Contractor fails to substantially comply with any other provision of the Contract Documents, Owner may, after seven (7) days written notice to Contractor, correct and remedy any such deficiency.

13.2.3.2. The Owner's Representative will, within seven (7) days of the Contractor's date of submittal or five (5) days from the date of resubmission, if the corrections are acceptable, submit the approved Application for Payment to the Owner with all required documentation and approvals from the Owner's Representative.

13.2.5.2. Failure of the Contractor to comply with any requirements of the Contract Documents. A 10% Application for Payment reduction shall be applied in the monthly breakdown for payment for failure to comply with OSHA regulations and allowing public and general contractor or subcontractors employees to be exposed to unsafe conditions that could result is serious injuries or death.

The following paragraphs will be added as follows:

13.11 DECISIONS TO WITHHOLD CERTIFICATION AND PAYMENT

If OWNER's Representative is unable to recommend payment in the amount of the Application for Payment, OWNER's Representative will notify the Contractor. If the Contractor and OWNER's Representative cannot agree on a revised amount, OWNER's Representative will recommend to the

Contracting Officer that a Certificate for Payment be issued for the amount determined to be properly due. OWNER's Representative and the Contracting Officer may also decide not to certify payment or, because of subsequently discovered evidence or subsequent observations, may nullify the whole or a part of a Certificate for Payment previously issued. OWNER (in addition to and without limitation of any other rights and remedies of OWNER under the Contract Documents) may withhold payment of any amounts claimed to be due by the Contractor and certified for payment, in each case to such extent as may be necessary in order to provide for retention covering the fair value of any Claims, costs, losses or damages OWNER may have against the Contractor, which amounts may include, but shall not be limited to, the fair value of any Claims, costs, losses or damages arising from:

1. Defective Conditions not remedied;
2. third party claims filed or reasonable evidence indicating probable filing of such claims;
3. failure of the Contractor to make payments properly to Subcontractors or otherwise for labor, materials or equipment;
4. reasonable evidence that the Work cannot be completed for the unpaid balance of the Contract Price;
5. damage to OWNER or an Other Contractor;
6. reasonable evidence that the Work will not be completed within the Contract Time, or that interim completion dates will not be met, or that the unpaid balance of the Contract Price would not be adequate to cover actual or liquidated damages for the anticipated delay;
7. failure to carry out the Work in accordance with the Contract Documents or other default by the Contractor under, or failure of the Contractor to comply with any provisions of, the Contract Documents;
8. failure of the Contractor to undertake Recovery Measures;
9. claims for damages for delay; or
10. any lien or attachment not discharged as required by the Contract Documents.

When the above reasons for withholding certification are removed, certification will be made for amounts previously withheld at the time of the next Application for Payment.

13.12 PAYMENT NOT ACCEPTANCE

No Certificate for Payment, nor any Progress Payment made, nor any partial or full use or occupancy of the Work by OWNER, shall constitute an acceptance of any Work not in accordance with the Contract Documents. All Progress Payments will be subject to correction following the discovery of an error, misreported progress, misrepresentation, or unallowable cost in any previous application, with the correction amount applied to reduce the requested amount of one or more subsequent Applications for Payment until full recovery of the correction amount. The making of any Progress Payment shall not in any respect be construed as an acceptance by OWNER of the amount of Work completed, or the release of the Contractor from any of its responsibilities under the Contract.

The following paragraphs will be read as follows:

14.11.1.1. The Contractor for itself, agents, employees, successors and assigns agrees to save harmless the Owner, its Officers, Agents, Employees and Owner's Representative from and against any and all claims, demands and/or suits, except as stated below, whether judicial or extra judicial for any cost whatever arising out or related to the execution of the Contract, and it's insurers shall defend the Owner, its Officers, agents, Employees and Owner's Representative from such claims, demands and/or suits and shall bear all the expenses for such defense contemplated within the coverage limits provided by the Contractor's general liability policy, except where such claims, demands and/or suits are due solely to the negligence of the Owner, its Officers, Agents, employees and Owner's Representative. In case that the amount to be paid exceeds the policy amount, then the Contractor shall be responsible for the exceeding amount.

15.1.1. At any time and without cause, Owner may, with a minimum of seven (7) calendar days written notice, suspend the Work or any portion thereof for a period of not more than ninety (90) consecutive days by notice in writing to Contractor. Said notice will fix the date on which Work will be resumed. Contractor shall resume the Work on the date so fixed. Contractor shall be allowed an adjustment in the Contract Price or an extension of the Contract Time, or both, directly attributable to any such suspension if Contractor makes a timely Claim therefore as provided in Article 11.5. Said adjustment shall be computed based on the following factors:

15.3.1. Upon seven (7) days written notice to Contractor, Owner may, without cause and without prejudice to any other right or remedy of Owner, elect to terminate the Contract for convenience.

The following paragraphs will be added as follows:

17.11 Rights and Remedies

17.11.1 Duties and obligations imposed by the Contract Documents and rights and remedies available hereunder shall be in addition to and not a limitation of duties, obligations, rights and remedies otherwise imposed or available by law or in equity.

17.11.2 OWNER's rights and the Contractor's obligations under this Agreement and provisions of the Contract Documents that contemplate continuing rights and obligations, respectively, shall survive expiration of the Contract Time and expiration or termination of the Contract.

17.11.3 No action or failure to act by OWNER, the Contracting Officer, OWNER's Representative or the Contractor shall constitute a waiver of a right or duty afforded them under the Contract, nor shall such action or failure to act constitute approval of or acquiescence in a breach hereunder, except as may be specifically agreed in writing.

17.12 MAINTENANCE DURING CONSTRUCTION

17.12.1 The Contractor shall maintain the Work during construction and until the Work is completed in full. This maintenance shall constitute continuous and effective work prosecuted Day by Day, with adequate equipment and forces to the end that all Work covered by the Contract is always kept in satisfactory and acceptable conditions.

17.12.2 All cost of maintenance during construction and before the Work is accepted by OWNER shall be

included in the Contract Price and the Contractor will not be paid an additional amount for such work.

17.12.3 If the Contractor fails at any time to comply with the provisions of Section 17.12, OWNER's Representative may notify the Contractor of such non-compliance. If the Contractor fails to remedy unsatisfactory maintenance within twenty-four (24) hours after receipt of such notice, OWNER may immediately proceed to maintain the Work, and the entire cost of this maintenance will be deducted from monies due or to become due to the Contractor under the Contract.

17.13 DISSEMINATION OF INFORMATION

Certain of OWNER's confidential or proprietary information may come into the Contractor's possession in performing the Contract. The Contractor shall hold such information and all other information that it develops or obtains from or about OWNER or the Project in confidence, shall not use such information other than for performance of its obligations under the Contract, and shall require its employees, agents, Subcontractors and Sub-Subcontractors to be bound to OWNER by the same obligation of confidentiality. OWNER reserves the right to release all information to the public and to the media relating to the Project and the Contract. The Contractor agrees to refer (and to cause its employees, agents, Subcontractors and Sub-Subcontractors to refer) all inquiries about the Project and the Contract to OWNER.

17.14 RECORDS AND AUDIT

17.14.1 The Contractor shall maintain detailed books and records consistent with all applicable requirements of the Contract Documents, sound administration practices of the design and construction of facilities similar to the Project, generally accepted accounting principles consistently applied, and all Applicable Laws, including such records as may be necessary to properly verify costs or substantiate claims for payment under the Contract. The Contractor's books and records shall include all documentation reasonably necessary or desirable for OWNER, or others having audit rights, to verify costs, pricing data, amounts of compensation and schedule adjustments. The Contractor shall keep and maintain all such books and records until six (6) years after the date of achievement of Final Completion (or such longer period as may be required by Applicable Laws), and thereafter until all pending Claims or disputes with OWNER are finally resolved.

17.14.2 OWNER, or its duly authorized representatives, shall have the right to examine and audit the Contractor's books and records, including cost or pricing data, receipts, invoices or other documents, in order to evaluate the accuracy, completeness and currency of cost or pricing data used or included by the Contractor in any Contractor Change Proposal or Contractor Change Request, or in connection with any adjustment to the Contract Price pursuant to Section 11.9.4 or 9.3.8.

In addition, to the extent required by Applicable Laws, OWNER, Puerto Rico and the Comptroller of Puerto Rico, or their duly authorized representatives, shall have the right to inspect the Work and to examine and audit the Contractor's books and records. The books and records subject to such examination and audit shall include all books, correspondence, records, cost or pricing data, receipts, invoices, or other documents necessary to evaluate the accuracy, completeness and currency of cost or pricing data used by the Contractor.

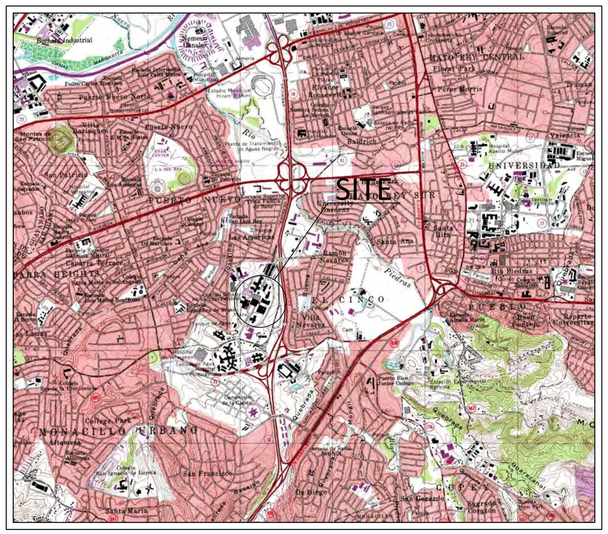
The Contractor's books and records required to be made available for examination and audit pursuant to this Subsection 17.14.2 shall be made available at the Contractor's office at the Site during normal business hours, upon five (5) Working Days' prior notice to the Contractor.

If any audit of the Contractor's books and records discloses an overcharge to OWNER, OWNER may elect to either invoice the Contractor for the Repayment Amount (as hereinafter defined) or to deduct the Repayment Amount from any subsequent payment due to the Contractor, in OWNER's full discretion. If OWNER elects to invoice the Contractor for any Repayment Amount due pursuant to the provisions of this Subsection 17.14.2, the Contractor shall pay the Repayment Amount to OWNER within fifteen (15) Days after receipt of the billing statement.

The "Repayment Amount" shall be an amount equal to the overcharge, together with interest on such amount at the Repayment Rate computed from, and including the date of, issuance of payment to the Contractor of the overcharged amount, but not including the date of repayment to, or deduction by, OWNER, as the case may be.

17.14.3 The Contractor shall insert provisions corresponding to Subsections 17.14.1 and 17.14.2 in each Subcontract, to grant OWNER and its representative's rights to examine and audit the books and records of each respective Subcontractor.

17.15 RIGHTS TO RECORD DOCUMENTATION



Notwithstanding any other provisions of this Article 17, title to all Record Documentation, and title to all computer data bases developed specifically for, or in connection with the Project, shall vest with OWNER, automatically without further action by either OWNER or the Contractor, upon the earlier of the date of achievement of Final Completion or the date of expiration or termination of the Contract.

17.19 PREFERENTIAL PURCHASE POLICY

In the performance of the Work, the Contractor shall use, whenever available, equipment and materials manufactured, assembled, bottled or packaged in Puerto Rico or distributed by agents established and existing in Puerto Rico, pursuant to the Preferential Policy Act for Purchases by the Government of Puerto Rico, 3 L.P.R.A. §914a *et seq.*

EXISTING CONDITIONS, SURVEY, DIMENSIONAL VERIFICATION AND RELIANCE NOTES

1. THESE ADVANCED ARCHITECTURAL DESIGN DOCUMENTS FOR THE PUERTO RICO TRAUMA HOSPITAL HAVE BEEN PREPARED AS PART OF THE BRIDGING DOCUMENTS TO BE USED BY THE ADMINISTRACIÓN DE SERVICIOS MÉDICOS DE PUERTO RICO (ASEM) IN THE REQUEST FOR PROPOSAL (RFP) PROCUREMENT PROCESS FOR THE SELECTION OF A DESIGN-BUILD ENTITY.
2. THESE DRAWINGS ARE INTENDED PRIMARILY TO ESTABLISH AND COMMUNICATE THE OWNER'S PROGRAMMATIC REQUIREMENTS, FUNCTIONAL OBJECTIVES, ARCHITECTURAL DESIGN INTENT, SPATIAL ORGANIZATION, PRINCIPAL BUILDING CHARACTERISTICS, PERFORMANCE EXPECTATIONS, AND GENERAL BASIS OF DESIGN FOR THE PROPOSED PROJECT.
3. THESE ADVANCED ARCHITECTURAL DESIGN DOCUMENTS ARE BRIDGING DOCUMENTS AND ARE NOT FINAL CONSTRUCTION DOCUMENTS. THEY SHALL NOT BE USED DIRECTLY FOR PERMITTING, FABRICATION, PROCUREMENT, INSTALLATION, OR CONSTRUCTION.
4. FOLLOWING AWARD OF THE DESIGN-BUILD CONTRACT, ASEM MAY PROVIDE THE SELECTED DESIGN-BUILD ENTITY AND ITS ARCHITECT OF RECORD WITH ELECTRONIC COPIES OF THESE DRAWINGS, INCLUDING DWG FILES, FOR USE AS REFERENCE INFORMATION AND AS A BASE OR STARTING POINT FOR THE DEVELOPMENT OF THE FINAL ARCHITECTURAL AND ENGINEERING CONSTRUCTION DOCUMENTS.
5. THE FURNISHING OR USE OF DWG OR OTHER EDITABLE ELECTRONIC FILES SHALL NOT CONSTITUTE A REPRESENTATION, CERTIFICATION, OR WARRANTY THAT THE INFORMATION CONTAINED THEREIN IS COMPLETE, FIELD-VERIFIED, SURVEY-ACCURATE, FULLY COORDINATED, OR SUITABLE FOR DIRECT USE IN CONSTRUCTION.
6. THE DESIGN-BUILD ENTITY, THROUGH ITS DULY LICENSED ARCHITECT OF RECORD, ENGINEERS OF RECORD, PROFESSIONAL LAND SURVEYOR, AND OTHER APPROPRIATE DESIGN PROFESSIONALS, SHALL INDEPENDENTLY VERIFY, VALIDATE, COMPLETE, COORDINATE, AND ADAPT ALL INFORMATION REQUIRED FOR THE FINAL DESIGN AND CONSTRUCTION DOCUMENTS.
7. EXISTING SITE AND FIELD CONDITIONS SHOWN ON THESE DRAWINGS ARE BASED UPON INFORMATION REASONABLY AVAILABLE DURING PREPARATION OF THE BRIDGING DOCUMENTS, INCLUDING AVAILABLE RECORD DOCUMENTS, REFERENCE INFORMATION, OBSERVATIONS, AND INFORMATION PROVIDED BY ASEM OR OTHER SOURCES. SUCH INFORMATION IS PROVIDED FOR GENERAL REFERENCE AND DESIGN CONTEXT ONLY AND SHALL NOT BE INTERPRETED AS A CERTIFIED REPRESENTATION OF ACTUAL FIELD CONDITIONS.
8. PRIOR TO COMPLETING THE FINAL DESIGN, THE DESIGN-BUILD ENTITY SHALL CONDUCT ALL FIELD INVESTIGATIONS, MEASUREMENTS, SURVEYS, EXPLORATORY WORK, AND OTHER VERIFICATIONS NECESSARY TO ACCURATELY ESTABLISH THE EXISTING CONDITIONS AFFECTING THE PROJECT.
9. THE DESIGN-BUILD ENTITY SHALL RETAIN A DULY LICENSED PROFESSIONAL LAND SURVEYOR TO PREPARE A CURRENT, ACCURATE, AND GEOREFERENCED EXISTING-CONDITIONS AND BOUNDARY SURVEY OF THE FULL PROJECT LOT AND, TO THE EXTENT REQUIRED FOR DESIGN AND CONSTRUCTION COORDINATION, THE IMMEDIATELY ADJACENT AREAS AFFECTING THE WORK.
10. THE PROFESSIONAL SURVEY SHALL ESTABLISH, AS APPLICABLE, PROPERTY BOUNDARIES, HORIZONTAL AND VERTICAL CONTROL, BENCHMARKS, GRADES, ELEVATIONS, TOPOGRAPHY, BUILDINGS, STRUCTURES, ROADWAYS, CURBS, SIDEWALKS, PAVEMENTS, WALLS, FENCES, ACCESS POINTS, DRAINAGE FEATURES, VISIBLE UTILITIES, UTILITY STRUCTURES, EASEMENTS, AND OTHER PHYSICAL FEATURES REQUIRED FOR THE PROPER DEVELOPMENT OF THE FINAL CONSTRUCTION DOCUMENTS.
11. THE FINAL DESIGN AND CONSTRUCTION DOCUMENTS SHALL BE DEVELOPED USING THE DESIGN-BUILD ENTITY'S VERIFIED FIELD INFORMATION, PROFESSIONAL SURVEYS, AND COORDINATED INVESTIGATIONS AND SHALL NOT RELY SOLELY UPON EXISTING-CONDITION INFORMATION REPRESENTED IN THESE BRIDGING DOCUMENTS.
12. THE LOCATIONS, CONFIGURATIONS, DIMENSIONS, ELEVATIONS, OPENINGS, PROJECTIONS, FOUNDATIONS, CLEARANCES, AND OTHER CHARACTERISTICS OF EXISTING ADJACENT BUILDINGS AND STRUCTURES SHOWN ON THESE DRAWINGS SHALL BE CONSIDERED APPROXIMATE UNLESS EXPRESSLY IDENTIFIED AS HAVING BEEN ESTABLISHED BY A CURRENT CERTIFIED PROFESSIONAL SURVEY.
13. THE DESIGN-BUILD ENTITY SHALL FIELD-VERIFY AND DOCUMENT ALL ADJACENT BUILDING AND SITE CONDITIONS THAT MAY AFFECT THE FINAL DESIGN, DEMOLITION, EXCAVATION, STRUCTURAL WORK, TEMPORARY PROTECTION, ACCESS, CIRCULATION, FIRE SEPARATION, WATERPROOFING, DRAINAGE, UTILITY SERVICES, CONSTRUCTION OPERATIONS, OR THE CONTINUED OPERATION OF ADJACENT ASEM AND PUERTO RICO MEDICAL CENTER FACILITIES.
14. EXISTING UNDERGROUND, ABOVE-GROUND, OVERHEAD, CONCEALED, OR OTHERWISE NON-VISIBLE UTILITIES SHOWN ON THESE DRAWINGS ARE BASED UPON AVAILABLE INFORMATION AND THEIR LOCATIONS, ROUTING, SIZES, DEPTHS, ELEVATIONS, CAPACITIES, AND CONNECTION POINTS SHALL BE CONSIDERED APPROXIMATE UNLESS SPECIFICALLY VERIFIED AND DOCUMENTED OTHERWISE.
15. DE LA TORRE–ESTÉVEZ ARCHITECTS DOES NOT REPRESENT OR WARRANT THAT ALL EXISTING UTILITIES, INCLUDING CONCEALED, ABANDONED, UNDOCUMENTED, PRIVATE, INSTITUTIONAL, OR SUBSURFACE UTILITIES AND SERVICES, ARE SHOWN ON THESE DRAWINGS.
16. THE DESIGN-BUILD ENTITY SHALL VERIFY EXISTING UTILITIES THROUGH APPROPRIATE RECORD RESEARCH, COORDINATION WITH ASEM AND APPLICABLE UTILITY ENTITIES, PROFESSIONAL SURVEYING, UTILITY LOCATING, SUBSURFACE INVESTIGATION, TEST PITS, EXPLORATORY WORK, OR OTHER APPROPRIATE MEANS PRIOR TO UNDERTAKING WORK THAT MAY AFFECT SUCH UTILITIES.
17. ALL EXISTING UTILITIES AND SERVICES REQUIRED TO REMAIN IN OPERATION SHALL BE IDENTIFIED, VERIFIED, PROTECTED, AND MAINTAINED. ANY REQUIRED INTERRUPTION, RELOCATION, TEMPORARY SERVICE, MODIFICATION, OR RECONNECTION SHALL BE COORDINATED IN ADVANCE WITH ASEM AND THE APPLICABLE UTILITY OR FACILITY AUTHORITY.
18. DIMENSIONS INDICATED ON THESE ADVANCED ARCHITECTURAL DESIGN DOCUMENTS ARE INTENDED TO ESTABLISH THE GENERAL CONFIGURATION, PLANNING RELATIONSHIPS, APPROXIMATE SIZES, DESIGN INTENT, AND PRINCIPAL CHARACTERISTICS OF THE PROPOSED PROJECT AT THE LEVEL OF DESIGN DEVELOPMENT REPRESENTED BY THE BRIDGING DOCUMENTS.
19. THE DESIGN-BUILD ENTITY AND ITS ARCHITECT AND ENGINEERS OF RECORD SHALL VERIFY, RECONCILE, COORDINATE, AND ESTABLISH ALL DIMENSIONS, ELEVATIONS, CLEARANCES, DATUMS, AND CONTROL POINTS REQUIRED FOR THE FINAL CONSTRUCTION DOCUMENTS AND FOR THE PROPER EXECUTION OF THE WORK.
20. ALL DIMENSIONS RELATED TO EXISTING CONDITIONS SHALL BE FIELD-VERIFIED. DIMENSIONS SHALL NOT BE ASSUMED TO BE ACCURATE SOLELY BECAUSE THEY APPEAR IN THE BRIDGING DOCUMENTS OR IN THE ASSOCIATED ELECTRONIC DWG FILES.
21. DO NOT SCALE DRAWINGS. WRITTEN DIMENSIONS, VERIFIED FIELD MEASUREMENTS, PROFESSIONAL SURVEY INFORMATION, AND DIMENSIONAL INFORMATION ESTABLISHED IN THE FINAL CONSTRUCTION DOCUMENTS SHALL GOVERN.
22. GRAPHIC SCALE, LINEWORK, SYMBOLS, DIAGRAMS, DETAILS, BACKGROUNDS, CAD GEOMETRY, AND OTHER GRAPHIC REPRESENTATIONS IN THESE BRIDGING DOCUMENTS ARE INTENDED TO COMMUNICATE DESIGN INTENT AT THE STAGE OF DEVELOPMENT REPRESENTED AND SHALL NOT BE USED AS A SUBSTITUTE FOR VERIFIED DIMENSIONAL INFORMATION.
23. DIMENSIONS, DISTANCES, ELEVATIONS, OR COORDINATES OBTAINED BY SCALING PRINTED DRAWINGS, PDF FILES, DIGITAL IMAGES, CAD FILES, OR OTHER ELECTRONIC INFORMATION SHALL NOT BE USED AS THE SOLE BASIS FOR CONSTRUCTION, FABRICATION, PROCUREMENT, OR INSTALLATION.
24. WHERE A REQUIRED DIMENSION, ELEVATION, CLEARANCE, OR OTHER CONSTRUCTION CONTROL INFORMATION IS NOT SPECIFICALLY INDICATED IN THESE BRIDGING DOCUMENTS, THE DESIGN-BUILD ENTITY SHALL DETERMINE, VERIFY, COORDINATE, AND DOCUMENT SUCH INFORMATION AS PART OF THE DEVELOPMENT OF THE FINAL CONSTRUCTION DOCUMENTS.
25. ELECTRONIC DWG FILES MAY INCLUDE REFERENCE INFORMATION, THIRD-PARTY BACKGROUNDS, PRELIMINARY GEOMETRY, EXTERNAL REFERENCES, NON-PLOTTING INFORMATION, OR OTHER DATA DEVELOPED AT DIFFERENT LEVELS OF ACCURACY AND COMPLETENESS. THE DESIGN-BUILD ENTITY AND ITS ARCHITECT OF RECORD SHALL REVIEW AND VALIDATE ALL SUCH INFORMATION BEFORE INCORPORATING IT INTO THE FINAL DESIGN.
26. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR ALL MODIFICATIONS, ADDITIONS, DELETIONS, TRANSLATIONS, CONVERSIONS, RECONFIGURATIONS, OR OTHER ALTERATIONS MADE TO THE ELECTRONIC FILES AFTER THEIR TRANSMITTAL AND FOR THE PROFESSIONAL AND TECHNICAL CONSEQUENCES OF SUCH MODIFICATIONS.
27. ANY DISCREPANCY BETWEEN THESE BRIDGING DOCUMENTS AND VERIFIED FIELD CONDITIONS, PROFESSIONAL SURVEYS, UTILITY INVESTIGATIONS, APPLICABLE CODES, OWNER-PROVIDED INFORMATION, OR OTHER PROJECT REQUIREMENTS SHALL BE IDENTIFIED, INVESTIGATED, AND RESOLVED BY THE DESIGN-BUILD ENTITY DURING DEVELOPMENT OF THE FINAL CONSTRUCTION DOCUMENTS.
28. WHERE VERIFIED FIELD CONDITIONS REQUIRE A MATERIAL MODIFICATION TO THE PROGRAMMATIC REQUIREMENTS, FUNCTIONAL RELATIONSHIPS, ARCHITECTURAL CHARACTER, OR OTHER OWNER-APPROVED DESIGN INTENT ESTABLISHED BY THE BRIDGING DOCUMENTS, THE CONDITION SHALL BE BROUGHT TO ASEM'S ATTENTION AND RESOLVED IN ACCORDANCE WITH THE DESIGN-BUILD AGREEMENT AND APPLICABLE OWNER REVIEW AND APPROVAL PROCEDURES.
29. USE OF THESE DRAWINGS OR ELECTRONIC FILES AS A BASIS FOR CONTINUED DESIGN DEVELOPMENT SHALL NOT RELIEVE THE DESIGN-BUILD ENTITY, ITS ARCHITECT OF RECORD, ENGINEERS OF RECORD, PROFESSIONAL LAND SURVEYOR, CONTRACTORS, SUBCONTRACTORS, OR OTHER RESPONSIBLE PARTIES OF THEIR INDEPENDENT PROFESSIONAL, CONTRACTUAL, AND CONSTRUCTION OBLIGATIONS TO VERIFY EXISTING CONDITIONS AND TO DEVELOP COMPLETE, ACCURATE, COORDINATED, CODE-COMPLIANT, AND CONSTRUCTIBLE FINAL DOCUMENTS.
30. THE SELECTED DESIGN-BUILD ENTITY, THROUGH ITS DULY LICENSED ARCHITECT OF RECORD AND ENGINEERS OF RECORD, SHALL BE RESPONSIBLE FOR THE DEVELOPMENT, COMPLETION, COORDINATION, TECHNICAL ACCURACY, CODE COMPLIANCE, SIGNING AND SEALING, PERMITTING, AND PROFESSIONAL RESPONSIBILITY FOR THE FINAL CONSTRUCTION DOCUMENTS.
31. TO THE FULLEST EXTENT PERMITTED BY THE APPLICABLE DESIGN-BUILD AGREEMENT AND GOVERNING LAW, DE LA TORRE–ESTÉVEZ ARCHITECTS SHALL NOT BE RESPONSIBLE FOR ERRORS, OMISSIONS, CONFLICTS, OR CONSEQUENCES ARISING FROM RELIANCE UPON UNVERIFIED EXISTING-CONDITION INFORMATION; DIMENSIONS OBTAINED BY SCALING; INACCURATE OR INCOMPLETE THIRD-PARTY INFORMATION; UNDOCUMENTED OR CONCEALED UTILITIES; MODIFICATIONS TO ELECTRONIC FILES BY OTHERS; OR FAILURE BY THE DESIGN-BUILD ENTITY TO INDEPENDENTLY SURVEY, INVESTIGATE, VERIFY, COORDINATE, AND DOCUMENT ACTUAL FIELD CONDITIONS.
32. NOTHING IN THESE NOTES SHALL BE INTERPRETED AS AUTHORIZATION TO DISREGARD OR MATERIALLY ALTER THE OWNER-APPROVED ARCHITECTURAL DESIGN INTENT ESTABLISHED BY THE BRIDGING DOCUMENTS. FIELD VERIFICATION AND FINAL DOCUMENT DEVELOPMENT SHALL BE PERFORMED WHILE PRESERVING THE PROJECT'S ESTABLISHED PROGRAMMATIC, FUNCTIONAL, AND ARCHITECTURAL REQUIREMENTS, EXCEPT WHERE MODIFICATIONS ARE REVIEWED AND ACCEPTED BY ASEM IN ACCORDANCE WITH THE DESIGN-BUILD AGREEMENT.

BRIDGING DOCUMENTS INTRODUCTION

THIS FINAL REPORT FORMS PART OF THE BRIDGING DOCUMENTS PREPARED FOR THE NEW PUERTO RICO TRAUMA HOSPITAL AT THE PUERTO RICO MEDICAL CENTER. THE PURPOSE OF THE BRIDGING DOCUMENTS IS TO ESTABLISH THE PROJECT'S SUGGESTED DESIGN INTENT, TECHNICAL DIRECTION, PERFORMANCE REQUIREMENTS, AND BASELINE CRITERIA FOR USE IN THE PROCUREMENT OF A DESIGN-BUILD ENTITY THROUGH A REQUEST FOR PROPOSALS PROCESS.

THE BRIDGING DOCUMENTS WILL BE USED BY THE OWNER DURING THE REQUEST FOR PROPOSALS PROCUREMENT PROCESS TO SELECT THE DESIGN-BUILD ENTITY RESPONSIBLE FOR COMPLETING THE DESIGN DEVELOPMENT, PREPARING THE FINAL CONSTRUCTION DOCUMENTS, AND CONSTRUCTING THE NEW PUERTO RICO TRAUMA HOSPITAL. THEY ARE INTENDED TO PROVIDE A COORDINATED FRAMEWORK THAT COMMUNICATES THE OWNER'S EXPECTATIONS FOR THE PROJECT WHILE ALLOWING THE DESIGN-BUILD ENTITY TO COMPLETE THE FINAL DESIGN, ENGINEERING COORDINATION, PERMITTING, CONSTRUCTION DOCUMENTS, AND CONSTRUCTION EXECUTION IN ACCORDANCE WITH APPLICABLE CODES, REGULATIONS, HEALTHCARE STANDARDS, AND PROJECT REQUIREMENTS.

THE BRIDGING DOCUMENTS INCLUDE THE FINAL REPORT, THE ADVANCED ARCHITECTURAL DESIGN DEVELOPMENT DOCUMENTS, THE PRELIMINARY TECHNICAL SPECIFICATIONS, SUGGESTED PROBABLE CONSTRUCTION COST, AND SUGGESTED PROJECT ITINERARY. TOGETHER, THESE DOCUMENTS DEFINE THE INTENDED SCOPE, PROGRAMMATIC ORGANIZATION, ARCHITECTURAL AND ENGINEERING OBJECTIVES, RESILIENCE AND OPERATIONAL PERFORMANCE GOALS, SUGGESTED PROBABLE CONSTRUCTION COST, AND SUGGESTED PROJECT ITINERARY. THEY ARE NOT INTENDED TO SERVE AS FINAL CONSTRUCTION DOCUMENTS, BUT RATHER AS THE BASIS FOR THE DESIGN-BUILD PROPOSAL, VALIDATION, DEVELOPMENT, AND FINAL IMPLEMENTATION OF THE PROJECT.

THE FINAL REPORT INCLUDES THE EXISTING AND PROPOSED PROJECT LOT PLACEMENT, ARCHITECTURAL, STRUCTURAL, MECHANICAL, AND ELECTRICAL DESIGN NARRATIVES. THESE COMPONENTS SUMMARIZE THE PRINCIPAL DESIGN ASSUMPTIONS AND REQUIREMENTS THAT SHALL GUIDE THE DESIGN-BUILD ENTITY IN ADVANCING THE PROJECT WHILE PRESERVING THE ESSENTIAL DESIGN INTENT, FUNCTIONAL RELATIONSHIPS, OPERATIONAL OBJECTIVES, AND PERFORMANCE EXPECTATIONS ESTABLISHED FOR THE NEW PUERTO RICO TRAUMA HOSPITAL.

DURING THE PROCUREMENT PROCESS, THE OWNER MAY REQUEST CLARIFICATIONS, REVISIONS, CHANGES, OR DEVIATIONS TO THE FINAL REPORT AND RELATED BRIDGING DOCUMENTS AS MAY BE REQUIRED TO ADDRESS PROCUREMENT OBJECTIVES, PROJECT REQUIREMENTS, FUNDING CONSIDERATIONS, REGULATORY COMMENTS, OR OTHER OWNER-DIRECTED DETERMINATIONS PRIOR TO FINAL SELECTION AND IMPLEMENTATION.

PROPRIETARY RIGHTS, LIMITED AUTHORIZATION, AND RESTRICTIONS ON USE OF BRIDGING DOCUMENTS

THESE DRAWINGS, SPECIFICATIONS, NARRATIVES, CRITERIA, REPORTS, CALCULATIONS, SCHEDULES, DETAILS, AND OTHER MATERIALS COMPRISING THE BRIDGING DOCUMENTS HAVE BEEN PREPARED EXCLUSIVELY TO ESTABLISH THE OWNER'S PROGRAMMATIC REQUIREMENTS, FUNCTIONAL AND OPERATIONAL OBJECTIVES, DESIGN INTENT, PERFORMANCE REQUIREMENTS, MINIMUM QUALITY STANDARDS, AND TECHNICAL BASIS OF DESIGN FOR THE REQUEST FOR PROPOSALS AND DESIGN-BUILD PROCUREMENT PROCESS FOR THE PUERTO RICO TRAUMA HOSPITAL PROJECT.

EXCEPT AS OTHERWISE EXPRESSLY PROVIDED IN THE APPLICABLE PROFESSIONAL SERVICES AGREEMENT, THESE BRIDGING DOCUMENTS CONSTITUTE INSTRUMENTS OF PROFESSIONAL SERVICE PREPARED BY DE LA TORRE–ESTÉVEZ ARCHITECTS AND SHALL REMAIN SUBJECT TO ALL APPLICABLE PROPRIETARY, COPYRIGHT, INTELLECTUAL-PROPERTY, AND PROFESSIONAL-USE PROTECTIONS. NO OWNERSHIP INTEREST, COPYRIGHT, OR UNRESTRICTED RIGHT OF USE IS TRANSFERRED BY THE ISSUANCE, DISTRIBUTION, REPRODUCTION, OR AUTHORIZED USE OF THESE DOCUMENTS.

SUBJECT TO THE PRIOR WRITTEN CONSENT OF DE LA TORRE–ESTÉVEZ ARCHITECTS AND THE TERMS AND CONDITIONS ESTABLISHED BY THE OWNER, THE MEDICAL SERVICES ADMINISTRATION OF PUERTO RICO ("ASEM"), A LIMITED, NONEXCLUSIVE, AND NONTRANSFERABLE AUTHORIZATION IS GRANTED SOLELY TO ASEM AND TO THOSE DESIGN-BUILD ENTITIES FORMALLY AUTHORIZED BY ASEM TO PARTICIPATE IN THE PROCUREMENT PROCESS. SUCH AUTHORIZATION IS LIMITED EXCLUSIVELY TO REVIEWING, EVALUATING, INTERPRETING, AND USING THE BRIDGING DOCUMENTS FOR THE PREPARATION AND SUBMISSION OF PROPOSALS AND, FOLLOWING AWARD, AS REFERENCE DESIGN GUIDANCE FOR THE DEVELOPMENT OF THE PROJECT'S FINAL DESIGN AND CONSTRUCTION DOCUMENTS.

THESE BRIDGING DOCUMENTS ARE NOT FINAL DESIGN DOCUMENTS, PERMIT DOCUMENTS, BID DOCUMENTS FOR CONVENTIONAL CONSTRUCTION PROCUREMENT, FABRICATION DOCUMENTS, SHOP DRAWINGS, OR CONSTRUCTION DOCUMENTS. THEY SHALL NOT BE USED, IN WHOLE OR IN PART, FOR PERMITTING, FABRICATION, ORDERING OR PROCUREMENT OF CONSTRUCTION MATERIALS OR SYSTEMS, INSTALLATION, CONSTRUCTION, OR ANY OTHER PURPOSE UNRELATED TO THE AUTHORIZED DESIGN-BUILD PROCUREMENT PROCESS. DIRECT USE OF THESE DOCUMENTS FOR CONSTRUCTION IS EXPRESSLY PROHIBITED.

THE SELECTED DESIGN-BUILD ENTITY, ACTING THROUGH ITS DULY LICENSED ARCHITECT OF RECORD, ENGINEER(S) OF RECORD, SPECIALTY CONSULTANTS, DELEGATED-DESIGN PROFESSIONALS, CONTRACTORS, SUBCONTRACTORS, MANUFACTURERS, AND SUPPLIERS, AS APPLICABLE, SHALL BE SOLELY RESPONSIBLE FOR DEVELOPING, COMPLETING, COORDINATING, REVIEWING, AND CERTIFYING ALL FINAL ARCHITECTURAL, ENGINEERING, PERMITTING, PROCUREMENT, FABRICATION, AND CONSTRUCTION DOCUMENTS REQUIRED FOR THE PROPER EXECUTION AND COMPLETION OF THE PROJECT.

THE DESIGN-BUILD ENTITY SHALL INDEPENDENTLY INVESTIGATE AND VERIFY ALL EXISTING CONDITIONS, FIELD DIMENSIONS, ELEVATIONS, QUANTITIES, UTILITY LOCATIONS, SITE CONSTRAINTS, DESIGN ASSUMPTIONS, TECHNICAL CRITERIA, CODE REQUIREMENTS, AND OTHER INFORMATION AFFECTING THE WORK. INFORMATION CONTAINED IN THE BRIDGING DOCUMENTS SHALL NOT RELIEVE THE DESIGN-BUILD ENTITY OR ITS DESIGN PROFESSIONALS FROM THEIR INDEPENDENT PROFESSIONAL JUDGMENT, DUE DILIGENCE, COORDINATION OBLIGATIONS, OR RESPONSIBILITY FOR THE ACCURACY, COMPLETENESS, CONSTRUCTABILITY, CODE COMPLIANCE, PERMITTING, SAFETY, AND PERFORMANCE OF THE FINAL DESIGN AND COMPLETED WORK.

NO REPRESENTATION OR WARRANTY IS MADE THAT THE BRIDGING DOCUMENTS ARE COMPLETE OR SUITABLE FOR DIRECT CONSTRUCTION USE. ANY UNAUTHORIZED USE, REPRODUCTION, MODIFICATION, ADAPTATION, DISTRIBUTION, DISCLOSURE, OR RELIANCE UPON THESE DOCUMENTS SHALL BE AT THE SOLE RISK OF THE PERSON OR ENTITY UNDERTAKING SUCH USE AND WITHOUT LIABILITY TO DE LA TORRE–ESTÉVEZ ARCHITECTS OR ITS CONSULTANTS. NO THIRD-PARTY RIGHTS, LICENSES, OR BENEFITS ARE CREATED BY THE PREPARATION, ISSUANCE, OR AUTHORIZED DISTRIBUTION OF THESE DOCUMENTS.

ADVANCED ARCHITECTURAL DESIGN DEVELOPMENT - DESIGN BASIS, LIMITATIONS, AND DESIGN-BUILD RESPONSIBILITY

1. THESE DRAWINGS REPRESENT THE ADVANCED ARCHITECTURAL DESIGN DEVELOPMENT STAGE OF THE PUERTO RICO TRAUMA HOSPITAL AND FORM PART OF THE BRIDGING DOCUMENTS PREPARED FOR ASEM'S DESIGN-BUILD REQUEST FOR PROPOSALS. THEY COMMUNICATE THE OWNER-APPROVED PROGRAMMATIC REQUIREMENTS, FUNCTIONAL AND OPERATIONAL OBJECTIVES, DESIGN INTENT, BASIS-OF-DESIGN CONCEPTS, AND MINIMUM PERFORMANCE EXPECTATIONS DEVELOPED TO THE LEVEL SHOWN. THESE DRAWINGS ARE NOT FINAL PERMIT OR CONSTRUCTION DOCUMENTS AND SHALL NOT BE USED FOR CONSTRUCTION.
2. THE ADVANCED ARCHITECTURAL DESIGN DEVELOPMENT AND RELATED ARCHITECTURAL, STRUCTURAL, ELECTRICAL, AND MECHANICAL NARRATIVES WERE DEVELOPED UNDER THE DIRECTION OF DE LA TORRE-ESTEVEZ ARCHITECTS, AS BRIDGING ARCHITECT, BASED ON THE FIRM'S PROFESSIONAL ARCHITECTURAL JUDGMENT, HEALTHCARE PLANNING AND DESIGN EXPERIENCE, AND APPLICABLE ENGINEERING INPUT. THEY ALSO REFLECT THE PROGRAMMING, PLANNING, CLINICAL, OPERATIONAL, FUNCTIONAL, AND SERVICE REQU

NAMED PRODUCTS, MANUFACTURERS, EQUIPMENT, SYSTEMS, AND BASIS-OF-QUALITY REQUIREMENTS

1. UNLESS EXPRESSLY IDENTIFIED OTHERWISE IN THE REQUEST FOR PROPOSALS (RFP), BRIDGING DOCUMENTS, ASEM REQUIREMENTS, OR FINAL DESIGN-BUILD AGREEMENT, ANY TRADE NAME, PROPRIETARY PRODUCT, MATERIAL, EQUIPMENT, SYSTEM, MANUFACTURER, SUPPLIER, MODEL NUMBER, CATALOG REFERENCE, ASSEMBLY, DETAIL, OR SIMILAR REFERENCE SHOWN OR IDENTIFIED IN THESE ADVANCED ARCHITECTURAL DESIGN DEVELOPMENT (AADD) DOCUMENTS SHALL BE CONSIDERED A BASIS OF DESIGN AND MINIMUM BASIS-OF-QUALITY REQUIREMENT ONLY.
2. SUCH REFERENCES ARE INTENDED TO ESTABLISH THE MINIMUM ACCEPTABLE LEVEL OF QUALITY, PERFORMANCE, FUNCTIONALITY, DURABILITY, RELIABILITY, APPEARANCE, SERVICEABILITY, COMPATIBILITY, MAINTAINABILITY, AND STANDARD OF WORKMANSHIP REQUIRED FOR THE PROJECT AND SHALL NOT, BY THEMSELVES, BE INTERPRETED AS REQUIRING THE SPECIFICALLY NAMED PRODUCT, MANUFACTURER, SUPPLIER, MODEL, OR SYSTEM.
3. THE DESIGN-BUILD ENTITY MAY PROPOSE EQUAL, COMPARABLE, SIMILAR, OR SUPERIOR PRODUCTS, MATERIALS, EQUIPMENT, SYSTEMS, MANUFACTURERS, ASSEMBLIES, OR INSTALLATION METHODS, PROVIDED THAT THE PROPOSED SELECTIONS FULLY SATISFY OR EXCEED THE ESTABLISHED BASIS-OF-QUALITY AND PROJECT REQUIREMENTS.
4. ALL PROPOSED SELECTIONS SHALL COMPLY WITH THE PROJECT DESIGN INTENT, REQUIRED PERFORMANCE CRITERIA, FUNCTIONAL AND OPERATIONAL REQUIREMENTS, APPLICABLE CODES AND REGULATIONS, HEALTHCARE-FACILITY REQUIREMENTS, OWNER'S PROJECT REQUIREMENTS, RFP BRIDGING DOCUMENTS, AND FINAL DESIGN-BUILD AGREEMENT.
5. THE DESIGN-BUILD ENTITY, THROUGH ITS ARCHITECT AND ENGINEERS OF RECORD, SHALL BE SOLELY RESPONSIBLE FOR THE TECHNICAL EVALUATION, FINAL SELECTION, SPECIFICATION, COORDINATION, DOCUMENTATION, INTEGRATION, AND PERFORMANCE OF ALL PRODUCTS, MATERIALS, EQUIPMENT, SYSTEMS, AND MANUFACTURERS INCORPORATED INTO THE FINAL PROJECT.
6. FINAL PRODUCT, EQUIPMENT, MATERIAL, MANUFACTURER, SYSTEM, AND BASIS-OF-QUALITY SELECTIONS SHALL BE DEVELOPED IN ACTIVE CONSULTATION AND COORDINATION WITH ASEM AND SHALL REFLECT ASEM'S CONFIRMED PROGRAMMATIC, CLINICAL, OPERATIONAL, MAINTENANCE, FACILITY-STANDARD, STANDARDIZATION, COMPATIBILITY, RELIABILITY, RESILIENCY, AND LONG-TERM SERVICE REQUIREMENTS.
7. PRODUCTS AND SYSTEMS HAVING A MATERIAL EFFECT ON OWNER OPERATIONS, MAINTENANCE PRACTICES, FACILITY STANDARDS, SYSTEM COMPATIBILITY, ARCHITECTURAL CHARACTER, ENERGY USE, RESILIENCY, LIFECYCLE COST, OR LONG-TERM SERVICE REQUIREMENTS SHALL BE PRESENTED TO ASEM FOR REVIEW, CONSULTATION, AND AGREEMENT PRIOR TO INCORPORATION INTO THE FINAL DESIGN AND TECHNICAL SPECIFICATIONS.
8. ALL FINAL PRODUCT AND SYSTEM SELECTIONS SHALL BE APPROPRIATE FOR USE WITHIN A CRITICAL HEALTHCARE FACILITY AND SHALL PROVIDE THE REQUIRED LEVELS OF PERFORMANCE, DURABILITY, SAFETY, ACCESSIBILITY, INFECTION-CONTROL COMPATIBILITY, MAINTAINABILITY, ENERGY EFFICIENCY, RESILIENCE, AND LONG-TERM OPERATIONAL RELIABILITY.
9. PROPOSED EQUAL OR COMPARABLE PRODUCTS SHALL MEET OR EXCEED THE SALIENT CHARACTERISTICS OF THE REFERENCED BASIS-OF-DESIGN ITEM, INCLUDING, AS APPLICABLE, MATERIAL COMPOSITION, DIMENSIONS, CAPACITY, CONFIGURATION, PERFORMANCE, FIRE AND LIFE-SAFETY CHARACTERISTICS, ENVIRONMENTAL RESISTANCE, CODE COMPLIANCE, TESTING, CERTIFICATIONS, LISTINGS, WARRANTIES, SERVICE LIFE, MAINTAINABILITY, AND ARCHITECTURAL APPEARANCE.
10. WHERE APPLICABLE, EQUIVALENCY SHALL ALSO ADDRESS RESISTANCE TO CORROSION, MOISTURE, WIND, IMPACT, VIBRATION, SEISMIC FORCES, AND OTHER PROJECT-SPECIFIC ENVIRONMENTAL OR SERVICE CONDITIONS.
11. PRODUCTS AND MATERIALS USED IN CLINICAL OR HEALTHCARE ENVIRONMENTS SHALL BE COMPATIBLE WITH APPLICABLE INFECTION-PREVENTION PROTOCOLS, CLEANING PROCEDURES, DISINFECTANTS, MAINTENANCE METHODS, AND OTHER OWNER OPERATIONAL REQUIREMENTS.
12. THE AVAILABILITY OF LOCAL TECHNICAL SUPPORT, QUALIFIED SERVICE PERSONNEL, REPLACEMENT PARTS, CONSUMABLES, WARRANTIES, AND REASONABLE LONG-TERM PRODUCT SUPPORT SHALL BE CONSIDERED IN THE FINAL PRODUCT AND EQUIPMENT SELECTION PROCESS.
13. THE IDENTIFICATION OR DEPICTION OF ANY PRODUCT, MATERIAL, EQUIPMENT, SYSTEM, MANUFACTURER, DETAIL, OR ASSEMBLY IN THE BRIDGING DOCUMENTS SHALL NOT RELIEVE THE DESIGN-BUILD ENTITY OF ITS OBLIGATION TO VERIFY ITS SUITABILITY, AVAILABILITY, DIMENSIONAL COMPATIBILITY, PERFORMANCE, CODE COMPLIANCE, COORDINATION WITH ADJACENT CONSTRUCTION, AND INTERFACE WITH OTHER BUILDING SYSTEMS.
14. WHEN REQUIRED BY ASEM, THE RFP, OR THE FINAL DESIGN-BUILD AGREEMENT, THE DESIGN-BUILD ENTITY SHALL SUBMIT SUFFICIENT TECHNICAL DOCUMENTATION TO SUPPORT THE EVALUATION OF PROPOSED PRODUCTS AND SYSTEMS AND TO DEMONSTRATE COMPLIANCE WITH THE ESTABLISHED BASIS-OF-QUALITY REQUIREMENTS.
15. SUCH DOCUMENTATION MAY INCLUDE, AS APPLICABLE, COMPARATIVE PRODUCT DATA, PERFORMANCE INFORMATION AND CALCULATIONS, CODE-COMPLIANCE INFORMATION, TEST REPORTS, CERTIFICATIONS, SAMPLES, MOCKUPS, SHOP DRAWINGS, COORDINATION DRAWINGS, DELEGATED-DESIGN CALCULATIONS, MANUFACTURER QUALIFICATIONS, INSTALLATION REQUIREMENTS, WARRANTIES, SERVICE INFORMATION, MAINTENANCE REQUIREMENTS, REPLACEMENT-PARTS INFORMATION, AND COMMISSIONING REQUIREMENTS.
16. THE DESIGN-BUILD ENTITY SHALL CLEARLY IDENTIFY ANY PROPOSED DEVIATION OR VARIATION FROM A REFERENCED OR ASEM-CONFIRMED BASIS-OF-QUALITY REQUIREMENT AND SHALL PROVIDE DOCUMENTATION DEMONSTRATING THAT THE PROPOSED ALTERNATIVE DOES NOT REDUCE THE REQUIRED QUALITY, PERFORMANCE, SAFETY, DURABILITY, MAINTAINABILITY, FUNCTIONALITY, USEFUL LIFE, COMPATIBILITY, OR ARCHITECTURAL AND ENGINEERING DESIGN INTENT.
17. ANY MATERIAL DEVIATION AFFECTING AN ASEM STANDARD, AGREED BASIS-OF-QUALITY CRITERION, MAJOR EQUIPMENT OR SYSTEM SELECTION, OPERATIONAL REQUIREMENT, SYSTEM COMPATIBILITY, OR LONG-TERM MAINTENANCE REQUIREMENT SHALL BE SPECIFICALLY BROUGHT TO ASEM'S ATTENTION FOR CONSULTATION AND WRITTEN AGREEMENT IN ACCORDANCE WITH THE RFP AND FINAL DESIGN-BUILD AGREEMENT.
18. ASEM'S REVIEW, CONSULTATION, ACCEPTANCE, AGREEMENT, OR NON-OBJECTION REGARDING ANY PRODUCT, MANUFACTURER, MATERIAL, EQUIPMENT, SYSTEM, OR BASIS-OF-QUALITY REQUIREMENT SHALL REPRESENT CONFIRMATION OF OWNER REQUIREMENTS AND PREFERENCES ONLY AND SHALL NOT CONSTITUTE PROFESSIONAL DESIGN APPROVAL OR TRANSFER DESIGN RESPONSIBILITY FROM THE DESIGN-BUILD ENTITY AND ITS ARCHITECT AND ENGINEERS OF RECORD.
19. ASEM'S PARTICIPATION IN THE PRODUCT AND SYSTEM SELECTION PROCESS SHALL NOT RELIEVE THE DESIGN-BUILD ENTITY, ITS ARCHITECT AND ENGINEERS OF RECORD, DELEGATED-DESIGN PROFESSIONALS, SUBCONTRACTORS, SUPPLIERS, OR MANUFACTURERS FROM RESPONSIBILITY FOR CODE COMPLIANCE, TECHNICAL ADEQUACY, COORDINATION, SUITABILITY, COMPATIBILITY, ERRORS, OMISSIONS, DEFICIENCIES, OR COMPLIANCE WITH THE CONTRACT REQUIREMENTS.
20. PRODUCTS, MATERIALS, EQUIPMENT, SYSTEMS, OR MANUFACTURERS EXPRESSLY IDENTIFIED BY THE RFP, BRIDGING DOCUMENTS, ASEM STANDARDS OR DIRECTIVES, OR FINAL DESIGN-BUILD AGREEMENT AS MANDATORY, OWNER-STANDARD, SOLE-SOURCE, NO-SUBSTITUTION, PRE-APPROVED, OR REQUIRED FOR COMPATIBILITY OR STANDARDIZATION WITH EXISTING ASEM SYSTEMS SHALL BE PROVIDED AS SPECIFIED.
21. WHERE ASEM AND THE DESIGN-BUILD ENTITY ESTABLISH OR REVISE PRODUCT, MANUFACTURER, EQUIPMENT, SYSTEM, OR BASIS-OF-QUALITY REQUIREMENTS DURING THE DESIGN-BUILD DESIGN PROCESS, THE AGREED REQUIREMENTS SHALL BE INCORPORATED INTO THE FINAL CONSTRUCTION DOCUMENTS AND TECHNICAL SPECIFICATIONS IN ACCORDANCE WITH THE FINAL DESIGN-BUILD AGREEMENT.
22. THE FINAL TECHNICAL SPECIFICATIONS PREPARED BY THE DESIGN-BUILD ENTITY SHALL DEFINE ALL APPLICABLE PERFORMANCE REQUIREMENTS, QUALITY STANDARDS, BASIS-OF-QUALITY CRITERIA, ACCEPTABLE MANUFACTURERS, PRODUCTS, EQUIPMENT AND SYSTEMS, SUBMITTAL REQUIREMENTS, TESTING REQUIREMENTS, INSTALLATION CRITERIA, WARRANTIES, COMMISSIONING OBLIGATIONS, SERVICE AND MAINTENANCE REQUIREMENTS, AND REQUIRED CLOSEOUT DOCUMENTATION.
23. NOTHING SHOWN OR IDENTIFIED IN THESE AADD BRIDGING DOCUMENTS SHALL LIMIT OR DIMINISH THE DESIGN-BUILD ENTITY'S OBLIGATION TO DEVELOP COMPLETE, COORDINATED, CODE-COMPLIANT, CONSTRUCTION-READY DRAWINGS AND TECHNICAL SPECIFICATIONS FOR THE ENTIRE PROJECT.
24. IN THE EVENT OF A CONFLICT BETWEEN A PRODUCT OR SYSTEM REFERENCE SHOWN IN THESE AADD DOCUMENTS AND A SPECIFIC MANDATORY REQUIREMENT OF THE RFP, ASEM, OR FINAL DESIGN-BUILD AGREEMENT, THE APPLICABLE MANDATORY CONTRACT REQUIREMENT SHALL GOVERN.
25. UNLESS EXPRESSLY INDICATED OTHERWISE, WHEREVER THE ADVANCED ARCHITECTURAL DESIGN DEVELOPMENT (AADD) DRAWING SET IDENTIFIES A PRODUCT, MATERIAL, COLOR, FINISH, EQUIPMENT ITEM, SYSTEM, ASSEMBLY, DETAIL, INSTALLATION, OR OTHER PROJECT COMPONENT AS "TO BE SELECTED BY ARCHITECT," "TO BE APPROVED BY ARCHITECT," "TO BE REVIEWED BY ARCHITECT," "TO BE CONFIRMED BY ARCHITECT," "TO BE COORDINATED WITH ARCHITECT," "CONSULT ARCHITECT," OR USES ANY OTHER LANGUAGE OF SIMILAR INTENT, SUCH REQUIREMENT SHALL BE INTERPRETED AS ALSO REQUIRING APPROPRIATE CONSULTATION AND COORDINATION WITH ASEM, AND THE OWNER'S CONSENT, CONCURRENCE, AND/OR RECOMMENDATION, AS APPLICABLE, PRIOR TO INCORPORATION OF THE FINAL SELECTION OR DECISION INTO THE PROJECT. ASEM'S PARTICIPATION SHALL REPRESENT CONFIRMATION OF OWNER REQUIREMENTS, PREFERENCES, OPERATIONAL NEEDS, AND PROJECT STANDARDS AND SHALL NOT TRANSFER, DIMINISH, OR RELIEVE THE DESIGN-BUILD ENTITY OR ITS ARCHITECT AND ENGINEERS OF RECORD OF THEIR PROFESSIONAL RESPONSIBILITY FOR THE TECHNICAL ADEQUACY, CODE COMPLIANCE,

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF OBTAINING PROPOSALS, PRICING, AND DESIGN-BUILD DEVELOPMENT FOR THE PROJECT IDENTIFIED HEREIN. THEY ARE NOT INTENDED FOR PERMITTING, BIDDING, FABRICATION, PROCUREMENT, OR CONSTRUCTION, AND SHALL NOT BE RELIED UPON FOR SUCH PURPOSES. THEY ARE PROVIDED SOLELY TO GUIDE AND INFORM THE DESIGN-BUILD ENTITY IN DEVELOPING ITS OWN DESIGN AND CONSTRUCTION DOCUMENTS. THE DESIGN-BUILD ENTITY IS RESPONSIBLE FOR THE SELECTED DESIGN-BUILD ENTITY'S ENGINEERING, PROCUREMENT, AND CONSTRUCTION DOCUMENTS REQUIRED FOR THE PROJECT. THE DESIGN-BUILD ENTITY IS SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COMPLETENESS, ACCURACY, AND COORDINATION OF ITS CONSTRUCTION DOCUMENTS AND FOR OBTAINING ALL REQUIRED APPROVALS AND PERMITS. ANY REUSE, DISCLOSURE, ADAPTATION, RELIANCE, OR REUSE OF THESE DOCUMENTS, IN WHOLE OR IN PART, BY ANY PERSON OR ENTITY OTHER THAN THE DESIGN-BUILD ENTITY FOR WHICH THEY WERE PREPARED, WITHOUT THE EXPRESS WRITTEN CONSENT OF DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS, IS PROHIBITED AND SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO THE ARCHITECT AND ENGINEERS.

I. PROJECT DESIGN INTENT

A. PURPOSE OF THE BRIDGING DOCUMENTS

1. THESE ADVANCED ARCHITECTURAL DESIGN DEVELOPMENT DOCUMENTS ESTABLISH THE OWNER'S APPROVED ARCHITECTURAL DESIGN INTENT FOR THE PUERTO RICO TRAUMA HOSPITAL PROJECT AND SHALL SERVE AS THE ARCHITECTURAL BASIS OF DESIGN FOR THE DESIGN-BUILD PROCUREMENT PROCESS.
2. THESE DOCUMENTS ESTABLISH THE REQUIRED FUNCTIONAL PROGRAM, DEPARTMENTAL ORGANIZATION, CLINICAL RELATIONSHIPS, CIRCULATION CONCEPTS, OPERATIONAL OBJECTIVES, ARCHITECTURAL CHARACTER, RESILIENCE OBJECTIVES, AND HEALTHCARE PERFORMANCE REQUIREMENTS OF THE PROJECT.
3. THESE DOCUMENTS ARE BRIDGING DOCUMENTS AND ARE NOT CONSTRUCTION DOCUMENTS AND SHALL NOT BE USED FOR PERMITTING OR CONSTRUCTION PURPOSES.

B. DESIGN INTENT REQUIREMENTS

4. THE APPROVED FUNCTIONAL PROGRAM, ROOM FUNCTIONS, DEPARTMENTAL ORGANIZATION, AND CLINICAL ADJACENCIES REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED.
5. THE APPROVED PATIENT, STAFF, VISITOR, SERVICE, MATERIALS, AND WASTE CIRCULATION CONCEPTS SHALL BE MAINTAINED.
6. THE APPROVED OPERATIONAL WORKFLOWS, HEALTHCARE PLANNING CONCEPTS, AND DEPARTMENTAL RELATIONSHIPS SHALL BE MAINTAINED.
7. THE APPROVED BUILDING ORGANIZATION, VERTICAL STACKING STRATEGY, AND CAMPUS INTEGRATION CONCEPTS SHALL BE MAINTAINED.
8. THE APPROVED ARCHITECTURAL CHARACTER, BUILDING IMAGE, MASSING, SCALE, PROPORTIONS, AND DESIGN QUALITY SHALL BE MAINTAINED.
9. THE APPROVED PATIENT-CARE OBJECTIVES, RESILIENCE STRATEGIES, AND OPERATIONAL CONTINUITY OBJECTIVES SHALL BE MAINTAINED.
10. APPROVED BED CAPACITY, TREATMENT CAPACITY, AND SURGE-CAPACITY OBJECTIVES REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED UNLESS OTHERWISE APPROVED BY THE OWNER.
11. PROVISIONS FOR FUTURE ADAPTABILITY AND FUTURE HEALTHCARE OPERATIONAL NEEDS REPRESENTED BY THESE DOCUMENTS SHALL BE PRESERVED.

C. DESIGN-BUILD RESPONSIBILITIES

1. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR DEVELOPMENT OF THE FINAL DESIGN, ENGINEERING, CONSTRUCTION DOCUMENTS, PERMITTING, PROCUREMENT, AND CONSTRUCTION.
2. THE DESIGN-BUILD ENTITY SHALL PROVIDE COMPLETE INTERDISCIPLINARY COORDINATION AMONG ALL ARCHITECTURAL, STRUCTURAL, MECHANICAL, ELECTRICAL, PLUMBING, FIRE PROTECTION, MEDICAL GAS, TELECOMMUNICATIONS, TECHNOLOGY, SECURITY, AND SPECIALTY SYSTEMS.
3. THE DESIGN-BUILD ENTITY SHALL VERIFY ALL DIMENSIONS, FIELD CONDITIONS, UTILITY REQUIREMENTS, EXISTING CONDITIONS, AND TECHNICAL CRITERIA REQUIRED FOR COMPLETION OF THE FINAL DESIGN.
4. VERIFICATION OF ALL CODE COMPLIANCE, REGULATORY COMPLIANCE, ENGINEERING PERFORMANCE, SYSTEM INTEGRATION, AND PERMITTING REQUIREMENTS SHALL BE THE SOLE RESPONSIBILITY OF THE DESIGN-BUILD ENTITY.
5. NOTHING CONTAINED WITHIN THESE BRIDGING DOCUMENTS SHALL RELIEVE THE DESIGN-BUILD ENTITY OF RESPONSIBILITY FOR COMPLETE AND CODE-COMPLIANT FINAL DESIGN AND CONSTRUCTION.

D. PERMITTED MODIFICATIONS

1. THE DESIGN-BUILD ENTITY MAY PROPOSE MODIFICATIONS THAT IMPROVE CONSTRUCTABILITY, MAINTAINABILITY, SUSTAINABILITY, ENGINEERING EFFICIENCY, LIFE-CYCLE PERFORMANCE, OR OPERATIONAL EFFECTIVENESS.
2. PROPOSED MODIFICATIONS SHALL NOT DIMINISH APPROVED ARCHITECTURAL DESIGN INTENT, CLINICAL FUNCTIONALITY, OPERATIONAL OBJECTIVES, LIFE-SAFETY REQUIREMENTS, OR HEALTHCARE PERFORMANCE REQUIREMENTS.
3. PROPOSED MODIFICATIONS SHALL NOT ADVERSELY AFFECT DEPARTMENTAL RELATIONSHIPS, CIRCULATION SYSTEMS, PATIENT-CARE OBJECTIVES, RESILIENCE STRATEGIES, OR SURGE-CAPACITY OBJECTIVES.
4. MODIFICATIONS AFFECTING APPROVED DESIGN INTENT SHALL BE SUBMITTED TO THE OWNER FOR REVIEW AND ACCEPTANCE PRIOR TO INCORPORATION INTO THE FINAL DESIGN.

E. PROJECT COMPLIANCE REQUIREMENTS

1. THE FINAL DESIGN SHALL COMPLY WITH ALL APPLICABLE FEDERAL, COMMONWEALTH OF PUERTO RICO, LOCAL, HEALTHCARE, ENVIRONMENTAL, ACCESSIBILITY, AND LIFE-SAFETY REQUIREMENTS.
2. APPLICABLE CODES AND STANDARDS SHALL INCLUDE, BUT SHALL NOT BE LIMITED TO, THE PUERTO RICO BUILDING CODE, INTERNATIONAL BUILDING CODE (IBC), INTERNATIONAL EXISTING BUILDING CODE (IEBC), INTERNATIONAL PLUMBING CODE (IPC), INTERNATIONAL MECHANICAL CODE (IMC), INTERNATIONAL ENERGY CONSERVATION CODE (IECC), NFPA CODES AND STANDARDS, NFPA 101, NFPA 99, AMERICANS WITH DISABILITIES ACT (ADA), 2010 ADA STANDARDS FOR ACCESSIBLE DESIGN, FGI GUIDELINES FOR DESIGN AND CONSTRUCTION OF HOSPITALS, PUERTO RICO DEPARTMENT OF HEALTH REQUIREMENTS, CMS REQUIREMENTS, FEMA REQUIREMENTS, HUD/CDBG REQUIREMENTS WHERE APPLICABLE, AND ALL APPLICABLE AUTHORITY HAVING JURISDICTION REQUIREMENTS.

F. HEALTHCARE FACILITY PERFORMANCE REQUIREMENTS

1. THE FACILITY SHALL SUPPORT THE OPERATIONAL REQUIREMENTS OF A LEVEL I TRAUMA CENTER.
2. THE FINAL DESIGN SHALL SUPPORT PATIENT SAFETY, STAFF SAFETY, VISITOR SAFETY, AND EMERGENCY RESPONSE OPERATIONS.
3. ARCHITECTURAL SYSTEMS, MATERIALS, AND ASSEMBLIES SHALL SUPPORT HEALTHCARE INFECTION-PREVENTION OBJECTIVES AND LONG-TERM HEALTHCARE OPERATIONS.
4. ARCHITECTURAL SYSTEMS AND MATERIALS SHALL PROVIDE DURABILITY, MAINTAINABILITY, CLEANABILITY, AND LIFE-CYCLE PERFORMANCE APPROPRIATE FOR HEALTHCARE OCCUPANCY.
5. THE FACILITY SHALL SUPPORT DISASTER RESPONSE OPERATIONS, MASS-CASUALTY INCIDENTS, EMERGENCY MANAGEMENT FUNCTIONS, AND APPROVED SURGE-CAPACITY OBJECTIVES.
6. THE FACILITY SHALL SUPPORT CONTINUOUS OPERATION DURING HURRICANES, SEVERE WEATHER EVENTS, UTILITY INTERRUPTIONS, AND OTHER EMERGENCY CONDITIONS.
7. ALTERNATIVE SYSTEMS, MATERIALS, ASSEMBLIES, OR LAYOUTS PROPOSED BY THE DESIGN-BUILD ENTITY SHALL PROVIDE EQUAL OR SUPERIOR PERFORMANCE TO THE REQUIREMENTS ESTABLISHED BY THESE BRIDGING DOCUMENTS.

G. DRAWING INTERPRETATION REQUIREMENTS

1. THESE DRAWINGS ESTABLISH DESIGN INTENT AND PERFORMANCE REQUIREMENTS AND SHALL NOT BE INTERPRETED AS COMPLETE CONSTRUCTION DOCUMENTS.
2. DRAWINGS, SCHEDULES, DIAGRAMS, NARRATIVES, ROOM DATA SHEETS, AND SUPPORTING DOCUMENTS SHALL BE INTERPRETED COLLECTIVELY.
3. DESIGN INTENT NOTES CONTAINED WITHIN INDIVIDUAL DRAWING SHEETS ESTABLISH ADDITIONAL PROJECT-SPECIFIC REQUIREMENTS APPLICABLE TO THOSE DRAWINGS.
4. WHERE DISCREPANCIES OCCUR, THE INTERPRETATION THAT BEST PRESERVES THE APPROVED DESIGN INTENT SHALL GOVERN UNTIL CLARIFIED BY THE OWNER.
5. DIMENSIONS, LAYOUTS, RELATIONSHIPS, AND PLANNING CONCEPTS REPRESENTED BY THESE DOCUMENTS ESTABLISH MINIMUM DESIGN REQUIREMENTS UNLESS SPECIFICALLY NOTED OTHERWISE.
6. THE ORDER OF PRECEDENCE FOR INTERPRETATION OF DESIGN INTENT SHALL BE:
    a. DESIGN INTENT NARRATIVE
    b. ADVANCED ARCHITECTURAL DESIGN DEVELOPMENT DRAWINGS
    c. ROOM DATA SHEETS
    d. SPACE PROGRAM REQUIREMENTS
    e. ARCHITECTURAL SCHEDULES
    f. DIAGRAMMATIC INFORMATION

H. DESIGN INTENT PRESERVATION REQUIREMENTS

1. SITE PLANS, FLOOR PLANS, ELEVATIONS, SECTIONS, REFLECTED CEILING PLANS, SCHEDULES, AND SUPPORTING ARCHITECTURAL DOCUMENTS ESTABLISH MINIMUM APPROVED DESIGN INTENT REQUIREMENTS.
2. DESIGN INTENT AND PERFORMANCE REQUIREMENT NOTES LOCATED THROUGHOUT THIS DRAWING SET SHALL BE CONSIDERED SUPPLEMENTARY TO THESE GENERAL REQUIREMENTS.
3. THE DESIGN-BUILD ENTITY SHALL PRESERVE THE APPROVED FUNCTIONAL, OPERATIONAL, ARCHITECTURAL, CLINICAL, RESILIENCE, AND HEALTHCARE PERFORMANCE OBJECTIVES REPRESENTED BY THESE BRIDGING DOCUMENTS.
4. THE DESIGN-BUILD ENTITY SHALL MAINTAIN THE ARCHITECTURAL IMAGE, INSTITUTIONAL PRESENCE, FAÇADE COMPOSITION, BUILDING PROPORTIONS, AND OVERALL ARCHITECTURAL CHARACTER REPRESENTED BY THESE BRIDGING DOCUMENTS.

II. GENERAL DESIGN COMPLIANCE

A. GENERAL REQUIREMENTS

1. THE DESIGN-BUILD ENTITY SHALL COMPLY WITH ALL REQUIREMENTS CONTAINED WITHIN THE CONTRACT DOCUMENTS, BRIDGING DOCUMENTS, APPLICABLE CODES, REGULATIONS, STANDARDS, AND AUTHORITY HAVING JURISDICTION REQUIREMENTS.
2. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR DEVELOPMENT OF THE FINAL DESIGN, ENGINEERING, CONSTRUCTION DOCUMENTS, PERMITTING, PROCUREMENT, CONSTRUCTION, AND PROJECT CLOSEOUT.
3. THE DESIGN-BUILD ENTITY SHALL COMPLY WITH ALL APPLICABLE FEDERAL, COMMONWEALTH OF PUERTO RICO, LOCAL, HEALTHCARE, ENVIRONMENTAL, ACCESSIBILITY, AND LIFE-SAFETY REQUIREMENTS.
4. THE DESIGN-BUILD ENTITY SHALL COORDINATE ALL PROJECT ACTIVITIES WITH THE OWNER AND DESIGNATED OWNER REPRESENTATIVES.
5. THE DESIGN-BUILD ENTITY SHALL VERIFY ALL EXISTING CONDITIONS, DIMENSIONS, UTILITY REQUIREMENTS, AND SITE CONDITIONS NECESSARY FOR DEVELOPMENT OF THE FINAL DESIGN AND EXECUTION OF THE WORK.

B. PERFORMANCE OF THE WORK

1. THE DESIGN-BUILD ENTITY SHALL PROVIDE A COMPLETE, FUNCTIONAL, AND CODE-COMPLIANT FACILITY SUITABLE FOR THE INTENDED OCCUPANCY AND OPERATIONAL REQUIREMENTS OF A LEVEL I TRAUMA HOSPITAL.
2. ALL SYSTEMS, ASSEMBLIES, EQUIPMENT, AND COMPONENTS SHALL PERFORM IN ACCORDANCE WITH THE REQUIREMENTS ESTABLISHED BY THE CONTRACT DOCUMENTS.
3. THE COMPLETED FACILITY SHALL SATISFY THE OPERATIONAL, FUNCTIONAL, RESILIENCE, MAINTAINABILITY, AND HEALTHCARE PERFORMANCE OBJECTIVES ESTABLISHED BY THE BRIDGING DOCUMENTS.
4. THE DESIGN-BUILD ENTITY SHALL PROVIDE ALL RESOURCES, COORDINATION, AND MANAGEMENT NECESSARY TO ACHIEVE PROJECT REQUIREMENTS.
5. NON-CONFORMING WORK, SYSTEMS, OR INSTALLATIONS SHALL BE CORRECTED TO ACHIEVE COMPLIANCE WITH PROJECT REQUIREMENTS.

C. CONSTRUCTION MEANS AND METHODS

1. THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR ALL TEMPORARY FACILITIES, TEMPORARY SYSTEMS, TEMPORARY STRUCTURES, AND CONSTRUCTION SUPPORT SYSTEMS REQUIRED FOR EXECUTION OF THE WORK.
2. CONSTRUCTION ACTIVITIES SHALL NOT ADVERSELY AFFECT PUBLIC SAFETY, HEALTHCARE OPERATIONS, ADJACENT FACILITIES, OR CRITICAL INFRASTRUCTURE.
3. EXISTING FACILITIES, UTILITIES, INFRASTRUCTURE, AND ADJACENT PROPERTY AFFECTED BY THE WORK SHALL BE PROTECTED THROUGHOUT THE PROJECT.
4. SITE DRAINAGE, EROSION CONTROL, WATER MANAGEMENT, AND ENVIRONMENTAL PROTECTION REQUIREMENTS SHALL BE MAINTAINED THROUGHOUT THE PROJECT.
5. MEASURES SHALL BE IMPLEMENTED TO MINIMIZE DUST, NOISE, VIBRATION, CONTAMINATION, AND OTHER IMPACTS AFFECTING HEALTHCARE OPERATIONS AND PATIENT SAFETY.

D. SAFETY AND PROTECTION

1. THE DESIGN-BUILD ENTITY SHALL MAINTAIN COMPLIANCE WITH ALL APPLICABLE SAFETY REGULATIONS AND REQUIREMENTS THROUGHOUT THE PROJECT.
2. THE DESIGN-BUILD ENTITY SHALL PROVIDE ALL MEASURES NECESSARY TO PROTECT PERSONNEL, PATIENTS, VISITORS, STAFF, FACILITIES, AND PROPERTY AFFECTED BY THE WORK.
3. EMERGENCY ACCESS ROUTES, FIRE LANES, EMERGENCY RESPONSE FUNCTIONS, AND LIFE-SAFETY SYSTEMS SHALL REMAIN OPERATIONAL THROUGHOUT THE PROJECT.
4. CONSTRUCTION ACTIVITIES SHALL NOT ADVERSELY AFFECT EXISTING HEALTHCARE OPERATIONS OR EMERGENCY SERVICES.
5. THE DESIGN-BUILD ENTITY SHALL COMPLY WITH ALL APPLICABLE INFECTION CONTROL RISK ASSESSMENT (ICRA) REQUIREMENTS AND HEALTHCARE ENVIRONMENTAL CONTROL REQUIREMENTS.

E. COORDINATION WITH OWNER (ASEM)

1. THE DESIGN-BUILD ENTITY SHALL COORDINATE PROJECT ACTIVITIES WITH ASEM TO MAINTAIN CONTINUITY OF HEALTHCARE OPERATIONS.
2. THE DESIGN-BUILD ENTITY SHALL COMPLY WITH APPLICABLE CAMPUS ACCESS, SECURITY, OPERATIONAL, AND FACILITY REQUIREMENTS ESTABLISHED BY ASEM.
3. ACTIVITIES AFFECTING UTILITIES, ACCESS, CRITICAL INFRASTRUCTURE, EMERGENCY OPERATIONS, OR HEALTHCARE SERVICES SHALL BE COORDINATED WITH ASEM.
4. THE DESIGN-BUILD ENTITY SHALL SUPPORT OWNER REVIEW, COORDINATION, AND PROJECT OVERSIGHT ACTIVITIES AS REQUIRED BY THE CONTRACT DOCUMENTS.
5. PLANNED INTERRUPTIONS AFFECTING HEALTHCARE OPERATIONS, UTILITIES, ACCESS, OR CRITICAL SERVICES SHALL BE COORDINATED WITH ASEM.

F. SCHEDULE AND PROGRESS

1. THE DESIGN-BUILD ENTITY SHALL COMPLETE THE PROJECT WITHIN THE CONTRACT TIME AND IN ACCORDANCE WITH PROJECT PHASING REQUIREMENTS.
2. THE DESIGN-BUILD ENTITY SHALL MAINTAIN PROGRESS NECESSARY TO ACHIEVE PROJECT MILESTONES AND COMPLETION REQUIREMENTS.
3. ADEQUATE RESOURCES SHALL BE PROVIDED TO SUPPORT TIMELY COMPLETION OF THE PROJECT.
4. DELAYS, IMPACTS, OR CONDITIONS AFFECTING PROJECT COMPLETION SHALL BE DOCUMENTED AND COMMUNICATED IN ACCORDANCE WITH CONTRACT REQUIREMENTS.

G. SUBMITTALS AND DOCUMENTATION

1. THE DESIGN-BUILD ENTITY SHALL PROVIDE ALL SUBMITTALS, TECHNICAL DOCUMENTATION, PRODUCT INFORMATION, CERTIFICATIONS, AND SUPPORTING INFORMATION REQUIRED BY THE CONTRACT DOCUMENTS.
2. THE DESIGN-BUILD ENTITY SHALL MAINTAIN CURRENT PROJECT DOCUMENTATION AND RECORD INFORMATION THROUGHOUT THE PROJECT.
3. ALL SUBMITTED INFORMATION SHALL BE COORDINATED AND VERIFIED BY THE DESIGN-BUILD ENTITY PRIOR TO SUBMISSION.
4. DOCUMENTATION NECESSARY TO DEMONSTRATE COMPLIANCE WITH PROJECT REQUIREMENTS SHALL BE MAINTAINED THROUGHOUT THE PROJECT.

H. PERMITS, CODES, AND REGULATIONS

1. THE DESIGN-BUILD ENTITY SHALL OBTAIN ALL PERMITS, APPROVALS, INSPECTIONS, CERTIFICATIONS, AND AUTHORIZATIONS REQUIRED FOR CONSTRUCTION AND OCCUPANCY OF THE FACILITY.
2. THE FINAL DESIGN AND COMPLETED FACILITY SHALL COMPLY WITH ALL APPLICABLE CODES, REGULATIONS, STANDARDS, AND AUTHORITY HAVING JURISDICTION REQUIREMENTS.
3. THE DESIGN-BUILD ENTITY SHALL COORDINATE WITH ALL GOVERNMENTAL AGENCIES, REGULATORY AUTHORITIES, AND UTILITY PROVIDERS HAVING JURISDICTION OVER THE PROJECT.

I. FIELD CONDITIONS AND EXISTING UTILITIES

1. EXISTING UTILITY LOCATIONS, INFRASTRUCTURE SYSTEMS, AND SITE CONDITIONS AFFECTING THE PROJECT SHALL BE VERIFIED BY THE DESIGN-BUILD ENTITY.
2. EXISTING UTILITIES, INFRASTRUCTURE, AND SERVICES REQUIRED TO REMAIN OPERATIONAL SHALL BE PROTECTED THROUGHOUT THE PROJECT.
3. UNFORESEEN CONDITIONS, DISCREPANCIES, CONFLICTS, OR CONDITIONS REQUIRING CLARIFICATION SHALL BE PROMPTLY REPORTED TO THE OWNER.

J. CLEANING AND PROJECT CLOSEOUT

1. THE PROJECT SITE SHALL BE MAINTAINED IN A CONDITION APPROPRIATE FOR ONGOING HEALTHCARE CAMPUS OPERATIONS.
2. THE COMPLETED FACILITY SHALL BE DELIVERED FREE OF CONSTRUCTION DEBRIS AND SUITABLE FOR OCCUPANCY AND OPERATION.
3. ALL REQUIRED CLOSEOUT DOCUMENTATION, CERTIFICATIONS, WARRANTIES, OPERATION MANUALS, MAINTENANCE INFORMATION, AND RECORD DOCUMENTS SHALL BE PROVIDED.
4. PROJECT COMPLETION SHALL BE SUBJECT TO SATISFACTION OF CONTRACT REQUIREMENTS AND OWNER ACCEPTANCE.

K. INTERPRETATION OF DOCUMENTS

1. THE CONTRACT DOCUMENTS SHALL BE CONSIDERED COMPLEMENTARY AND SHALL BE INTERPRETED COLLECTIVELY.
2. WHERE DISCREPANCIES OCCUR, THE MORE STRINGENT REQUIREMENT SHALL GOVERN UNLESS OTHERWISE WRITTEN DIMENSIONS, CAPACITIES, AND PERFORMANCE REQUIREMENTS SHALL GOVERN OVER SCALED INFORMATION.
3. NOTHING CONTAINED WITHIN THE BRIDGING DOCUMENTS SHALL RELIEVE THE DESIGN-BUILD ENTITY OF RESPONSIBILITY FOR COMPLETE CODE COMPLIANCE, ENGINEERING PERFORMANCE, CONSTRUCTABILITY, OR DEVELOPMENT OF THE FINAL DESIGN AND CONSTRUCTION DOCUMENTS.

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

DATE: AUGUST 13, 2026
DRAWN BY:
APPROVED BY:
SCALE: AS SHOWN

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF OBTAINING PROPOSALS FOR THE DESIGN-BUILD PROCUREMENT OF THE PROJECT DESCRIBED HEREIN. THEY ARE NOT CONSTRUCTION DOCUMENTS, DO NOT SPECIFY FINAL DESIGN, DIMENSIONS, FABRICATION, OR ASSEMBLY METHODS, AND SHALL NOT BE USED FOR PERMITTING, BIDDING, FABRICATION, OR CONSTRUCTION. THEY ARE INTENDED TO COMMUNICATE DESIGN INTENT AND PROVIDE GUIDANCE FOR THE DESIGN-BUILD ENTITY. THE SELECTED DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR DEVELOPMENT OF THE FINAL DESIGN, ENGINEERING, CONSTRUCTION DOCUMENTS, AND CONSTRUCTION METHODS. WE SHALL NOT BE RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, OR ACCURACY OF CONSTRUCTION DOCUMENTS PREPARED BY OTHERS. ANY REUSE, MODIFICATION, OR DISTRIBUTION OF THESE DOCUMENTS WITHOUT PRIOR WRITTEN AUTHORIZATION IS PROHIBITED.

THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY LA TORRE-ESTEVEZ ARCHITECTS PLANNERS FOR THE PUERTO RICO TRAUMA HOSPITAL PROJECT. THEY ARE NOT PREPARED OR INTENDED SOLELY FOR USE IN CONNECTION WITH THIS PROJECT AND WE USED ONLY BY PERSONS OR ENTITIES WHO HAVE EXECUTED A WRITTEN AGREEMENT WITH LA TORRE-ESTEVEZ ARCHITECTS PLANNERS. ANY REUSE, DISCLOSURE, MODIFICATION, RELIANCE, OR MISUSE OF THESE DOCUMENTS, IN WHOLE OR IN PART, IS PROHIBITED WITHOUT PRIOR WRITTEN AUTHORIZATION. ANY UNAUTHORIZED USE OF THESE DOCUMENTS SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO OUR FIRM OR ASSOCIATES.

III. GENERAL PERFORMANCE REQUIREMENTS

PROPOSED SITE PLAN

1. THE SITE PLAN ESTABLISHES THE APPROVED SITE ORGANIZATION, CAMPUS INTEGRATION STRATEGY, EMERGENCY ACCESS CONCEPTS, AND OPERATIONAL RELATIONSHIPS FOR THE HOSPITAL.
2. THE APPROVED RELATIONSHIP BETWEEN THE HOSPITAL, ASEM CENTRAL SERVICES, ADJACENT MEDICAL CENTER FACILITIES, AND CAMPUS CIRCULATION SYSTEMS SHALL BE MAINTAINED.
3. AMBULANCE ACCESS, EMERGENCY VEHICLE ACCESS, SERVICE ACCESS, PATIENT DROP-OFF FUNCTIONS, PEDESTRIAN CIRCULATION, AND OPERATIONAL CONNECTIVITY SHALL BE MAINTAINED.
4. EMERGENCY RESPONSE ROUTES, FIRE DEPARTMENT ACCESS, AND DISASTER-RESPONSE OPERATIONS SHALL REMAIN FULLY FUNCTIONAL.
5. UTILITY CORRIDORS, CRITICAL INFRASTRUCTURE CONNECTIONS, AND SERVICE ACCESS REQUIREMENTS REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED.
6. ROADWAY GEOMETRY, GRADING, UTILITY ROUTING, LANDSCAPE SYSTEMS, AND SITE INFRASTRUCTURE MAY BE REFINED PROVIDED THAT OPERATIONAL FUNCTIONALITY IS NOT ADVERSELY AFFECTED.
7. FINAL SITE DESIGN SHALL SUPPORT ACCESSIBILITY, RESILIENCY, MAINTAINABILITY, FUTURE ADAPTABILITY, AND LONG-TERM HEALTHCARE OPERATIONS.

PROPOSED FLOOR PLANS

1. FLOOR PLANS ESTABLISH THE APPROVED FUNCTIONAL PROGRAM, DEPARTMENTAL ORGANIZATION, OPERATIONAL RELATIONSHIPS, CLINICAL ADJACENCIES, AND CIRCULATION CONCEPTS FOR THE HOSPITAL.
2. THE APPROVED RELATIONSHIPS BETWEEN EMERGENCY SERVICES, SURGICAL SERVICES, CRITICAL CARE, INPATIENT UNITS, DIAGNOSTIC SERVICES, REHABILITATION SERVICES, ADMINISTRATIVE FUNCTIONS, AND SUPPORT SERVICES SHALL BE MAINTAINED.
3. PATIENT, STAFF, VISITOR, SERVICE, MATERIALS, AND WASTE CIRCULATION CONCEPTS REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED.
4. CLINICAL WORKFLOWS, PATIENT-CARE OBJECTIVES, AND DEPARTMENTAL OPERATIONAL RELATIONSHIPS SHALL BE MAINTAINED.
5. APPROVED BED CAPACITY, TREATMENT CAPACITY, AND SURGE-CAPACITY OBJECTIVES REPRESENTED BY THESE DOCUMENTS SHALL BE PRESERVED.
6. THE FINAL DESIGN SHALL PRESERVE PATIENT SAFETY OBJECTIVES, STAFF OPERATIONAL EFFICIENCY, AND HEALTHCARE FUNCTIONALITY.
7. ROOM CONFIGURATIONS MAY BE REFINED PROVIDED THAT DEPARTMENTAL FUNCTIONALITY AND APPROVED DESIGN INTENT ARE MAINTAINED.
8. FUTURE ADAPTABILITY AND FLEXIBILITY FOR EVOLVING HEALTHCARE OPERATIONAL REQUIREMENTS SHALL BE PRESERVED.
9. FINAL PLANNING SOLUTIONS SHALL SUPPORT EFFICIENT EMERGENCY RESPONSE AND DISASTER OPERATIONS.
10. MODIFICATIONS SHALL NOT ADVERSELY AFFECT APPROVED DEPARTMENTAL ADJACENCIES OR OPERATIONAL WORKFLOWS.

ELEVATIONS

1. ELEVATIONS ESTABLISH THE APPROVED ARCHITECTURAL CHARACTER, INSTITUTIONAL IMAGE, BUILDING PROPORTIONS, MASSING COMPOSITION, AND EXTERIOR APPEARANCE OF THE HOSPITAL.
2. THE OVERALL ARCHITECTURAL EXPRESSION, FAÇADE COMPOSITION, SCALE, AND VISUAL IDENTITY REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED.
3. EXTERIOR MATERIALS MAY BE REFINED PROVIDED THAT DURABILITY, MAINTAINABILITY, AND HEALTHCARE OCCUPANCY REQUIREMENTS ARE MAINTAINED.
4. HURRICANE-RESISTANCE OBJECTIVES AND ENVIRONMENTAL PERFORMANCE REQUIREMENTS SHALL BE MAINTAINED.
5. PROPOSED MODIFICATIONS SHALL PRESERVE THE APPROVED ARCHITECTURAL CHARACTER AND INSTITUTIONAL PRESENCE OF THE FACILITY.
6. BUILDING ENVELOPE SYSTEMS SHALL PROVIDE LONG-TERM DURABILITY AND MAINTAINABILITY APPROPRIATE FOR CRITICAL HEALTHCARE INFRASTRUCTURE.
7. FINAL ENVELOPE SYSTEMS SHALL SATISFY ALL APPLICABLE PERFORMANCE REQUIREMENTS WHILE MAINTAINING APPROVED DESIGN INTENT.

BUILDING SECTIONS

1. BUILDING SECTIONS ESTABLISH THE APPROVED VERTICAL ORGANIZATION, FLOOR-TO-FLOOR RELATIONSHIPS, DEPARTMENTAL STACKING CONCEPTS, CEILING VOLUME RELATIONSHIPS, AND OVERALL BUILDING PROPORTIONS.
2. THE APPROVED VERTICAL PLANNING STRATEGY AND CIRCULATION SYSTEMS SHALL BE MAINTAINED.
3. THE APPROVED RELATIONSHIP BETWEEN CLINICAL DEPARTMENTS, SUPPORT SERVICES, VERTICAL TRANSPORTATION SYSTEMS, AND HELIPORT CONNECTIVITY SHALL BE MAINTAINED.
4. FLOOR-TO-FLOOR HEIGHTS REPRESENTED BY THESE DOCUMENTS ESTABLISH MINIMUM PLANNING CRITERIA FOR BUILDING SYSTEMS INTEGRATION.
5. STRUCTURAL, MECHANICAL, AND BUILDING SYSTEMS MAY BE REFINED PROVIDED THAT APPROVED SPATIAL RELATIONSHIPS AND OPERATIONAL FUNCTIONALITY ARE PRESERVED.
6. FUTURE BUILDING ADAPTABILITY AND SYSTEMS DISTRIBUTION REQUIREMENTS SHALL BE CONSIDERED IN THE FINAL DESIGN.
7. FINAL DESIGN SOLUTIONS SHALL MAINTAIN THE APPROVED ORGANIZATIONAL FRAMEWORK REPRESENTED BY THESE DOCUMENTS.
8. MODIFICATIONS SHALL NOT ADVERSELY AFFECT HEALTHCARE OPERATIONS, PATIENT-CARE FUNCTIONS, OR DEPARTMENTAL RELATIONSHIPS.

REFLECTED CEILING PLANS

1. REFLECTED CEILING PLANS ESTABLISH THE INTENDED CEILING HIERARCHY, ARCHITECTURAL CHARACTER, LIGHTING INTEGRATION CONCEPTS, AND HEALTHCARE ENVIRONMENT OBJECTIVES.
2. ARCHITECTURAL, STRUCTURAL, MECHANICAL, ELECTRICAL, MEDICAL GAS, FIRE PROTECTION, AND TECHNOLOGY SYSTEMS SHALL BE COORDINATED TO PRESERVE INTENDED CEILING CONCEPTS.
3. CEILING SYSTEMS SHALL SUPPORT INFECTION PREVENTION, MAINTENANCE ACCESSIBILITY, DURABILITY, AND HEALTHCARE OPERATIONS.
4. MEDICAL EQUIPMENT, PATIENT-CARE SYSTEMS, AND OVERHEAD SERVICE REQUIREMENTS SHALL BE COORDINATED WITH CEILING SYSTEMS.
5. FINAL CEILING CONFIGURATIONS MAY BE REFINED PROVIDED THAT ARCHITECTURAL CHARACTER AND OPERATIONAL OBJECTIVES ARE MAINTAINED.
6. CEILING SYSTEMS SHALL BE APPROPRIATE FOR THE OCCUPANCY AND FUNCTIONAL REQUIREMENTS OF EACH DEPARTMENT.
7. ACCESS REQUIREMENTS FOR MAINTENANCE AND FUTURE MODIFICATIONS SHALL BE PRESERVED.

TOILET ROOMS AND PLUMBING FIXTURE REQUIREMENTS

1. TOILET ROOM LAYOUTS ESTABLISH THE INTENDED ACCESSIBILITY OBJECTIVES, PATIENT-SUPPORT FUNCTIONS, STAFF-SUPPORT FUNCTIONS, INFECTION-CONTROL CONSIDERATIONS, AND OPERATIONAL REQUIREMENTS OF THE HOSPITAL.
2. COMPLETE COMPLIANCE WITH ALL APPLICABLE ACCESSIBILITY, PLUMBING, HEALTHCARE, AND LIFE-SAFETY REQUIREMENTS SHALL BE PROVIDED.
3. REQUIRED PLUMBING FIXTURE QUANTITIES AND FIXTURE TYPES SHALL BE PROVIDED IN ACCORDANCE WITH APPLICABLE CODES AND HEALTHCARE REGULATIONS.
4. TOILET ROOM CONFIGURATIONS SHALL SUPPORT PATIENT DIGNITY, PRIVACY, SAFETY, ACCESSIBILITY, MAINTAINABILITY, AND INFECTION-PREVENTION OBJECTIVES.
5. TOILET ROOMS SERVING PATIENT-CARE AREAS SHALL SUPPORT SAFE PATIENT USE AND STAFF ASSISTANCE WHERE REQUIRED.
6. FINISHES, FIXTURES, AND ACCESSORIES SHALL SUPPORT MOISTURE RESISTANCE, DURABILITY, CLEANABILITY, AND INFECTION-CONTROL PRACTICES.
7. FINAL FIXTURE SELECTION AND PLUMBING SYSTEM DESIGN SHALL BE THE RESPONSIBILITY OF THE DESIGN-BUILD ENTITY.
8. APPROVED OPERATIONAL INTENT REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED.

SCHEDULE OF FINISHES

1. THE FINISH SCHEDULE ESTABLISHES THE INTENDED QUALITY LEVEL, DURABILITY STANDARDS, HEALTHCARE PERFORMANCE CRITERIA, INFECTION-PREVENTION OBJECTIVES, AND ARCHITECTURAL CHARACTER OF THE FACILITY.
2. MATERIALS AND FINISHES SELECTED BY THE DESIGN-BUILD ENTITY SHALL PROVIDE EQUAL OR SUPERIOR PERFORMANCE RELATIVE TO THE REQUIREMENTS ESTABLISHED BY THESE DOCUMENTS.
3. INTERIOR FINISH SYSTEMS SHALL SUPPORT CLEANABILITY, INFECTION PREVENTION, DURABILITY, MAINTAINABILITY, AND LONG-TERM HEALTHCARE OPERATIONS.
4. FLOOR FINISHES SHALL BE APPROPRIATE FOR THE FUNCTIONAL REQUIREMENTS OF EACH DEPARTMENT AND SHALL SUPPORT PATIENT SAFETY, SLIP RESISTANCE, EQUIPMENT MOBILITY, AND MAINTENANCE OBJECTIVES.
5. WALL FINISHES SHALL PROVIDE DURABILITY, IMPACT RESISTANCE, MOISTURE RESISTANCE, AND COMPATIBILITY WITH HEALTHCARE CLEANING AND DISINFECTION PROCEDURES.
6. FINISH SYSTEMS WITHIN TRAUMA, SURGICAL, CRITICAL CARE, DIAGNOSTIC, REHABILITATION, AND PATIENT-CARE AREAS SHALL SUPPORT HEALTHCARE INFECTION-CONTROL OBJECTIVES AND DEPARTMENTAL OPERATIONAL REQUIREMENTS.
7. ACOUSTICAL PERFORMANCE, PATIENT COMFORT, STAFF FUNCTIONALITY, AND HEALING ENVIRONMENT OBJECTIVES REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED.
8. SUSTAINABLE MATERIAL SELECTIONS MAY BE INCORPORATED PROVIDED THAT HEALTHCARE PERFORMANCE REQUIREMENTS ARE MAINTAINED.
9. FINAL FINISH SELECTIONS SHALL MAINTAIN THE ARCHITECTURAL CHARACTER AND QUALITY STANDARDS REPRESENTED BY THESE DOCUMENTS.
10. MODIFICATIONS SHALL NOT ADVERSELY AFFECT HEALTHCARE OPERATIONS, INFECTION-PREVENTION OBJECTIVES, OR LONG-TERM FACILITY MAINTAINABILITY.

DOOR SCHEDULE

1. THE DOOR SCHEDULE ESTABLISHES THE INTENDED OPERATIONAL REQUIREMENTS, OPENING SIZES, PATIENT MOVEMENT REQUIREMENTS, EQUIPMENT MOVEMENT REQUIREMENTS, PRIVACY REQUIREMENTS, SECURITY REQUIREMENTS, AND LIFE-SAFETY OBJECTIVES OF THE FACILITY.
2. DOOR OPENINGS SHALL ACCOMMODATE PATIENT TRANSPORT, BARIATRIC TRANSPORT WHERE REQUIRED, EMERGENCY RESPONSE OPERATIONS, AND EQUIPMENT MOVEMENT REQUIREMENTS.
3. DOOR LOCATIONS AND OPENING SIZES REPRESENTED BY THESE DOCUMENTS ESTABLISH MINIMUM OPERATIONAL REQUIREMENTS AND SHALL NOT BE REDUCED WITHOUT OWNER APPROVAL.
4. DOOR ASSEMBLIES SHALL SUPPORT SMOKE COMPARTMENTATION, FIRE-RESISTANCE REQUIREMENTS, AND LIFE-SAFETY OBJECTIVES APPLICABLE TO HEALTHCARE OCCUPANCIES.
5. SECURITY ZONING, CONTROLLED ACCESS REQUIREMENTS, AND OPERATIONAL SEPARATION BETWEEN PUBLIC, PATIENT, STAFF, AND SERVICE AREAS SHALL BE MAINTAINED.
6. DOOR SYSTEMS SHALL SUPPORT ACCESSIBILITY, PATIENT SAFETY, STAFF SAFETY, AND HEALTHCARE OPERATIONAL EFFICIENCY.
7. FINAL DOOR ASSEMBLIES SHALL BE APPROPRIATE FOR HEALTHCARE OCCUPANCY AND DEPARTMENTAL OPERATIONAL REQUIREMENTS.
8. REQUIRED FIRE-RATED, SMOKE-RATED, AND SECURITY-RELATED OPENINGS SHALL COMPLY WITH ALL APPLICABLE CODES AND REGULATIONS.
9. FINAL DOOR SYSTEM DESIGN SHALL BE COORDINATED WITH HARDWARE, ACCESS CONTROL, LIFE-SAFETY, AND SECURITY SYSTEMS.
10. APPROVED OPERATIONAL INTENT REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED.

WINDOW SCHEDULE

1. THE WINDOW SCHEDULE ESTABLISHES THE INTENDED DAYLIGHTING OBJECTIVES, EXTERIOR APPEARANCE, PATIENT COMFORT GOALS, OPERATIONAL REQUIREMENTS, AND ENVIRONMENTAL PERFORMANCE EXPECTATIONS OF THE FACILITY.
2. APPROVED FENESTRATION PATTERNS, GLAZING PROPORTIONS, AND EXTERIOR ARCHITECTURAL CHARACTER REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED.
3. WINDOW SYSTEMS SHALL SUPPORT PATIENT WELL-BEING, DAYLIGHT ACCESS, STAFF FUNCTIONALITY, AND HEALING ENVIRONMENT OBJECTIVES.
4. GLAZING AND WINDOW SYSTEMS SHALL PROVIDE HURRICANE RESISTANCE, IMPACT RESISTANCE, STRUCTURAL PERFORMANCE, AND ENVIRONMENTAL PROTECTION APPROPRIATE FOR CRITICAL HEALTHCARE INFRASTRUCTURE.
5. WINDOW SYSTEMS SHALL PROVIDE ENERGY EFFICIENCY, THERMAL PERFORMANCE, AIR INFILTRATION RESISTANCE, WATER INFILTRATION RESISTANCE, AND OCCUPANT COMFORT.
6. WINDOW SYSTEMS SHALL COMPLY WITH ALL APPLICABLE STRUCTURAL, ENERGY, ACCESSIBILITY, LIFE-SAFETY, AND HEALTHCARE FACILITY REQUIREMENTS.
7. PATIENT ROOM WINDOWS AND OCCUPIED-AREA GLAZING SHALL SUPPORT PATIENT COMFORT, SAFETY, AND OPERATIONAL REQUIREMENTS.
8. SAFETY GLAZING, FALL-PROTECTION REQUIREMENTS, OPERABLE WINDOW RESTRICTIONS, AND EMERGENCY ACCESS REQUIREMENTS SHALL BE PROVIDED WHERE APPLICABLE.
9. FINAL GLAZING ASSEMBLIES SHALL PROVIDE EQUAL OR SUPERIOR PERFORMANCE RELATIVE TO THE REQUIREMENTS ESTABLISHED BY THESE DOCUMENTS.
10. APPROVED ARCHITECTURAL APPEARANCE AND HEALTHCARE PERFORMANCE OBJECTIVES SHALL BE MAINTAINED.

HARDWARE SCHEDULE

1. THE HARDWARE SCHEDULE ESTABLISHES THE INTENDED OPERATIONAL, SECURITY, ACCESSIBILITY, PATIENT-SAFETY, AND LIFE-SAFETY REQUIREMENTS OF DOOR OPENINGS.
2. HARDWARE SYSTEMS SHALL SUPPORT CONTROLLED ACCESS, EMERGENCY RESPONSE FUNCTIONS, PATIENT SAFETY, STAFF SAFETY, ACCESSIBILITY, AND SECURITY OPERATIONS.
3. HARDWARE SYSTEMS SHALL BE COMPATIBLE WITH HEALTHCARE OPERATIONAL REQUIREMENTS AND DEPARTMENTAL FUNCTIONAL NEEDS.
4. ACCESS CONTROL SYSTEMS, ELECTRONIC SECURITY SYSTEMS, AND DOOR HARDWARE SYSTEMS SHALL BE FULLY COORDINATED.
5. HARDWARE SYSTEMS SERVING CRITICAL CARE, SURGICAL, EMERGENCY, DIAGNOSTIC, AND RESTRICTED-ACCESS AREAS SHALL SUPPORT APPROVED SECURITY OBJECTIVES.
6. HARDWARE SYSTEMS SHALL SUPPORT FIRE-PROTECTION, SMOKE-CONTROL, AND EMERGENCY EGRESS REQUIREMENTS.
7. ACCESSIBILITY REQUIREMENTS AND BARRIER-FREE ACCESS OBJECTIVES SHALL BE MAINTAINED.
8. FINAL HARDWARE SELECTIONS SHALL BE DURABLE, MAINTAINABLE, AND APPROPRIATE FOR HEALTHCARE OCCUPANCY.
9. HARDWARE SYSTEMS SHALL SUPPORT EMERGENCY OPERATIONS, DISASTER-RESPONSE FUNCTIONS, AND FACILITY SECURITY REQUIREMENTS.
10. APPROVED OPERATIONAL INTENT REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED.

CABINETRY AND MILLWORK

1. CABINETRY AND MILLWORK LAYOUTS ESTABLISH THE INTENDED OPERATIONAL FUNCTIONALITY, STORAGE REQUIREMENTS, HEALTHCARE WORKFLOW SUPPORT, AND ARCHITECTURAL CHARACTER OF INTERIOR SPACES.
2. STORAGE CAPACITIES, WORK SURFACES, AND FUNCTIONAL RELATIONSHIPS REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED.
3. CABINETRY SYSTEMS SHALL SUPPORT HEALTHCARE WORKFLOWS, STAFF EFFICIENCY, PATIENT-CARE OPERATIONS, AND DEPARTMENTAL OPERATIONAL REQUIREMENTS.
4. MATERIALS SHALL BE DURABLE, MOISTURE RESISTANT, CLEANABLE, MAINTAINABLE, AND APPROPRIATE FOR HEALTHCARE OCCUPANCY.
5. CABINETRY SYSTEMS SHALL SUPPORT HEALTHCARE INFECTION-PREVENTION OBJECTIVES AND COMPATIBILITY WITH CLEANING AND DISINFECTION PROCEDURES.
6. MILLWORK SYSTEMS LOCATED WITHIN PATIENT-CARE AND CLINICAL ENVIRONMENTS SHALL BE DESIGNED FOR LONG-TERM DURABILITY AND OPERATIONAL RELIABILITY.
7. FINAL MATERIALS, FABRICATION METHODS, AND CONSTRUCTION DETAILS MAY VARY PROVIDED THAT PERFORMANCE OBJECTIVES ARE MAINTAINED.
8. ARCHITECTURAL CHARACTER AND QUALITY STANDARDS REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED.
9. CABINETRY SYSTEMS SHALL BE COORDINATED WITH MEDICAL EQUIPMENT, UTILITIES, TECHNOLOGY SYSTEMS, AND OPERATIONAL REQUIREMENTS.
10. APPROVED OPERATIONAL INTENT REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED.

FURNITURE, FIXTURES AND EQUIPMENT (FF&E)

1. FF&E LAYOUTS ESTABLISH THE INTENDED OPERATIONAL FUNCTIONALITY, PLANNING ASSUMPTIONS, DEPARTMENTAL CAPACITIES, PATIENT-CARE OBJECTIVES, AND SPACE UTILIZATION CONCEPTS REPRESENTED BY THESE DOCUMENTS.
2. THE FF&E INDICATED WITHIN THESE DOCUMENTS ESTABLISHES PLANNING CRITERIA AND MINIMUM OPERATIONAL REQUIREMENTS FOR THE FINAL DESIGN.
3. FINAL FF&E SELECTIONS SHALL MAINTAIN DEPARTMENTAL FUNCTIONALITY, PATIENT-CARE OBJECTIVES, EQUIPMENT CLEARANCES, OPERATIONAL WORKFLOWS, AND HEALTHCARE PERFORMANCE REQUIREMENTS.
4. MEDICAL EQUIPMENT, FURNITURE SYSTEMS, AND SUPPORT EQUIPMENT SHALL BE COORDINATED WITH ARCHITECTURAL, STRUCTURAL, MECHANICAL, ELECTRICAL, PLUMBING, MEDICAL GAS, TECHNOLOGY, AND SECURITY SYSTEMS.
5. EQUIPMENT ACCESS, INSTALLATION REQUIREMENTS, MAINTENANCE ACCESS, AND FUTURE REPLACEMENT REQUIREMENTS SHALL BE ACCOMMODATED.
6. FF&E SYSTEMS SHALL SUPPORT PATIENT SAFETY, STAFF EFFICIENCY, INFECTION PREVENTION, AND HEALTHCARE OPERATIONAL OBJECTIVES.
7. PROPOSED SUBSTITUTIONS SHALL PROVIDE EQUAL OR SUPERIOR OPERATIONAL PERFORMANCE AND SHALL NOT ADVERSELY AFFECT APPROVED DEPARTMENTAL LAYOUTS.
8. FUTURE FLEXIBILITY AND ADAPTABILITY FOR EVOLVING HEALTHCARE OPERATIONAL REQUIREMENTS SHALL BE PRESERVED.
9. FF&E SELECTIONS SHALL SUPPORT LONG-TERM MAINTAINABILITY, DURABILITY, AND LIFE-CYCLE PERFORMANCE OBJECTIVES.
10. APPROVED OPERATIONAL INTENT, PLANNING ASSUMPTIONS, AND HEALTHCARE PERFORMANCE OBJECTIVES REPRESENTED BY THESE DOCUMENTS SHALL BE MAINTAINED.

GENERAL NOTES / EXISTING CONDITION SITE PLAN:

1- THIS EXISTING CONDITIONS SITE PLAN HAS BEEN PREPARED AS A PRELIMINARY, GENERAL, NON-SURVEYED, AND NON-CERTIFIED REFERENCE DOCUMENT FOR USE AS PART OF THE DESIGN-BUILD REQUEST FOR PROPOSAL ("RFP") BRIDGING DOCUMENTS ONLY.
2- THE INFORMATION SHOWN ON THIS DRAWING IS BASED ON AVAILABLE RECORD INFORMATION, FIELD OBSERVATIONS, CAMPUS REFERENCE INFORMATION, AND PRELIMINARY ARCHITECTURAL PLANNING COORDINATION. IT SHALL NOT BE CONSTRUED AS A CERTIFIED SURVEY, FINAL EXISTING CONDITIONS DOCUMENT, LEGAL PROPERTY SURVEY, UTILITY SURVEY, OR CONSTRUCTION CONTROL DOCUMENT.
3- THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR ENGAGING A DULY LICENSED AND CERTIFIED PROFESSIONAL LAND SURVEYOR AUTHORIZED TO PRACTICE IN PUERTO RICO TO PERFORM A COMPLETE FIELD SURVEY OF THE TOTALITY OF THE PROPOSED PROJECT LOT AND ALL AREAS NECESSARY FOR THE DESIGN, PERMITTING, COORDINATION, AND CONSTRUCTION OF THE PROJECT.
4- THE DESIGN-BUILD ENTITY SHALL VERIFY, DOCUMENT, AND CERTIFY ALL EXISTING CONDITIONS PRIOR TO FINAL DESIGN, PERMITTING, CONSTRUCTION DOCUMENT PREPARATION, PROCUREMENT, SITE DEMOLITION, EXCAVATION, UTILITY WORK, OR CONSTRUCTION ACTIVITY.
5- THE REQUIRED SURVEY AND EXISTING CONDITIONS VERIFICATION SHALL INCLUDE, BUT SHALL NOT BE LIMITED TO, THE FOLLOWING:
   A. PROJECT LOT LIMITS, PERIMETER BOUNDARIES, CONTROL POINTS, BENCHMARKS, EASEMENTS, RIGHTS-OF-WAY, ACCESS LIMITS, AND ANY PHYSICAL OR LEGAL SITE CONSTRAINTS AFFECTING THE WORK.
   B. EXISTING TOPOGRAPHY, GRADES, SLOPES, ELEVATIONS, DRAINAGE PATTERNS, LOW POINTS, HIGH POINTS, RETAINING CONDITIONS, CURBS, GUTTERS, AND FINISHED FLOOR OR PAVEMENT ELEVATIONS OF ADJACENT AREAS.
   C. EXISTING STORM DRAINAGE STRUCTURES AND SYSTEMS, INCLUDING CATCH BASINS, MANHOLES, INLETS, GRATES, PIPES, CLEANOUTS, UNDERGROUND DRAINAGE LINES, OUTFALLS, AND RELATED APPURTENANCES.
   D. EXISTING SANITARY, POTABLE WATER, FIRE PROTECTION, MEDICAL GAS, IRRIGATION, OR OTHER WET UTILITY SYSTEMS, INCLUDING MANHOLES, VALVE BOXES, CLEANOUTS, UTILITY STRUCTURES, LINES, AND POINTS OF CONNECTION.
   E. EXISTING ELECTRICAL, TELECOMMUNICATIONS, DATA, SECURITY, FIBER OPTIC, SITE LIGHTING, EMERGENCY POWER, SWITCHGEAR, TRANSFORMERS, PULL BOXES, DUCT BANKS, HANDHOLES, MANHOLES, CONDUITS, AND RELATED UTILITY INFRASTRUCTURE.
   F. EXISTING ROADWAYS, SERVICE DRIVES, ACCESS LANES, CURBS, SIDEWALKS, RAMPS, PLAZAS, PAVEMENTS, PARKING AREAS, LOADING AREAS, AMBULANCE ROUTES, PEDESTRIAN ROUTES, AND CAMPUS CIRCULATION ELEMENTS.
   G. EXISTING STRUCTURES, BUILDING FOOTPRINTS, CANOPIES, WALLS, RETAINING WALLS, SITE STAIRS, RAMPS, UTILITY ENCLOSURES, MECHANICAL OR ELECTRICAL YARDS, FENCES, GUARDRAILS, BOLLARDS, SIGNAGE, AND OTHER SITE IMPROVEMENTS WITHIN OR ADJACENT TO THE PROJECT AREA.
   H. EXISTING ADJACENT BUILDINGS, STRUCTURES, CAMPUS FACILITIES, ENTRANCES, EXITS, LOADING AREAS, EMERGENCY ACCESS POINTS, SERVICE AREAS, AND OTHER IMPROVEMENTS THAT WILL REMAIN IN OPERATION DURING OR AFTER CONSTRUCTION.
   I. EXISTING LANDSCAPE AREAS, PLANTING AREAS, TREES, PLANTERS, IRRIGATION ELEMENTS, SITE FURNISHINGS, AND OTHER EXTERIOR CAMPUS FEATURES AFFECTING THE PROJECT WORK.
6- THE DESIGN-BUILD ENTITY SHALL NOT RELY EXCLUSIVELY ON THE PRELIMINARY INFORMATION SHOWN ON THIS DRAWING FOR FINAL DESIGN, QUANTITY TAKE-OFFS, COST ESTIMATING, CONSTRUCTION MEANS AND METHODS, SITE DEMOLITION, UTILITY RELOCATION, EXCAVATION, STRUCTURAL DESIGN, OR PERMITTING PURPOSES.
7- ALL DIMENSIONS, LOCATIONS, ELEVATIONS, UTILITY ROUTING, STRUCTURE LOCATIONS, PAVEMENT LIMITS, GRADES, AND SITE FEATURES SHOWN ON THIS DRAWING SHALL BE FIELD VERIFIED BY THE DESIGN-BUILD ENTITY. ANY DISCREPANCIES SHALL BE RESOLVED BY THE DESIGN-BUILD ENTITY THROUGH FIELD SURVEY, EXISTING CONDITIONS INVESTIGATION, UTILITY LOCATION SERVICES, RECORD DOCUMENT REVIEW, AND COORDINATION WITH ASEM AND APPLICABLE CAMPUS AUTHORITIES.
8- THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR IDENTIFYING, LOCATING, VERIFYING, PROTECTING, MAINTAINING, RELOCATING, TEMPORARILY SUPPORTING, OR REMOVING EXISTING UTILITIES AND SITE IMPROVEMENTS AS REQUIRED FOR THE COMPLETE DESIGN AND CONSTRUCTION OF THE PROJECT.
9- THE DESIGN-BUILD ENTITY SHALL COORDINATE WITH ASEM, CAMPUS FACILITIES PERSONNEL, UTILITY PROVIDERS, REGULATORY AGENCIES, AND OTHER AUTHORITIES HAVING JURISDICTION TO CONFIRM EXISTING UTILITY INFORMATION, POINTS OF CONNECTION, SERVICE CONTINUITY REQUIREMENTS, SHUTDOWN PROCEDURES, AND PROTECTION OF EXISTING OPERATIONAL FACILITIES.
10- THE DESIGN-BUILD ENTITY SHALL VERIFY THE LOCATION AND CONDITION OF ALL ADJACENT STRUCTURES AND CAMPUS FACILITIES THAT ARE TO REMAIN, AND SHALL DESIGN AND EXECUTE THE WORK IN A MANNER THAT PROTECTS SUCH FACILITIES FROM DAMAGE, DISRUPTION, SETTLEMENT, VIBRATION, WATER INFILTRATION, UTILITY INTERRUPTION, OR OTHER ADVERSE IMPACTS.
11- EXISTING CONDITIONS NOT SHOWN, INCOMPLETELY SHOWN, OR DIFFERING FROM THE INFORMATION INDICATED ON THIS PRELIMINARY DRAWING SHALL NOT RELIEVE THE DESIGN-BUILD ENTITY FROM ITS RESPONSIBILITY TO PROVIDE A COMPLETE DESIGN, COMPLETE CONSTRUCTION DOCUMENTS, REQUIRED PERMITS, AND FULLY COORDINATED CONSTRUCTION WORK.
12- PRIOR TO COMMENCEMENT OF CONSTRUCTION ACTIVITIES, THE DESIGN-BUILD ENTITY SHALL SUBMIT, AS REQUIRED BY THE RFP AND CONTRACT DOCUMENTS, UPDATED EXISTING CONDITIONS DOCUMENTATION, CERTIFIED SURVEY INFORMATION, UTILITY VERIFICATION RECORDS, AND ANY ADDITIONAL SITE INVESTIGATION INFORMATION NECESSARY TO SUPPORT THE FINAL DESIGN AND CONSTRUCTION OF THE PROJECT.
13- THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR INCORPORATING THE RESULTS OF THE CERTIFIED SURVEY AND EXISTING CONDITIONS VERIFICATION INTO THE FINAL DESIGN DOCUMENTS, CONSTRUCTION DOCUMENTS, PERMIT APPLICATIONS, COORDINATION DRAWINGS, SITE LOGISTICS PLANS, DEMOLITION PLANS, UTILITY RELOCATION PLANS, AND CONSTRUCTION PHASING PLANS.
14- THE DESIGN-BUILD ENTITY SHALL NOTIFY ASEM IN WRITING OF ANY MATERIAL DISCREPANCY, CONFLICT, UNKNOWN CONDITION, UTILITY CONFLICT, ACCESS LIMITATION, OR SITE CONSTRAINT IDENTIFIED DURING SURVEY, INVESTIGATION, DESIGN, OR CONSTRUCTION THAT MAY AFFECT THE PROJECT SCOPE, SCHEDULE, COST, SAFETY, PERMITTING, OR CONTINUITY OF CAMPUS OPERATIONS.
15- THE INCLUSION OF THIS PRELIMINARY EXISTING CONDITIONS SITE PLAN IN THE RFP BRIDGING DOCUMENTS DOES NOT TRANSFER TO THE OWNER OR BRIDGING ARCHITECT THE DESIGN-BUILD ENTITY'S RESPONSIBILITY TO VERIFY EXISTING CONDITIONS, PREPARE FINAL DESIGN DOCUMENTS, OBTAIN REQUIRED SURVEYS, COORDINATE UTILITIES, PROTECT EXISTING FACILITIES, AND COMPLETE THE PROJECT IN ACCORDANCE WITH THE CONTRACT DOCUMENTS.
16- THIS DRAWING IS PROVIDED TO COMMUNICATE GENERAL PROJECT SITE CONTEXT AND PRELIMINARY EXISTING CONDITIONS ONLY. THE DESIGN-BUILD ENTITY SHALL ASSUME FULL RESPONSIBILITY FOR CONFIRMING THE ACCURACY, COMPLETENESS, AND APPLICABILITY OF ALL EXISTING CONDITIONS INFORMATION REQUIRED FOR THE SUCCESSFUL DESIGN, PERMITTING, AND CONSTRUCTION OF THE PUERTO RICO TRAUMA HOSPITAL PROJECT.

THEY ARE NOT CONSTRUCTION DOCUMENTS, SHALL NOT BE USED FOR PERMITTING, BIDDING, FABRICATION, OR INSTALLATION, AND ARE NOT SUFFICIENT IN DETAIL OR COMPLETENESS TO GUIDE CONSTRUCTION. THE DESIGN-BUILD ENTITY SELECTED TO DEVELOP AND IMPLEMENT THE PROJECT SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, ACCURACY, AND CODE COMPLIANCE OF ALL CONSTRUCTION DOCUMENTS, SHOP DRAWINGS, ENGINEERING, PROCUREMENT, AND CONSTRUCTION MEANS AND METHODS REQUIRED FOR THE PROJECT. THE DESIGN-BUILD ENTITY SHALL INDEPENDENTLY VERIFY ALL CONDITIONS AND DIMENSIONS AND SHALL NOT RELY ON THESE DOCUMENTS AS A BASIS FOR CONSTRUCTION. THE DESIGN-BUILD ENTITY IS SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, ACCURACY, AND CODE COMPLIANCE OF ALL CONSTRUCTION DOCUMENTS, SHOP DRAWINGS, ENGINEERING, PROCUREMENT, AND CONSTRUCTION MEANS AND METHODS REQUIRED FOR THE PROJECT. THESE DOCUMENTS ARE NOT SUFFICIENT IN DETAIL OR COMPLETENESS TO GUIDE CONSTRUCTION. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR ENGAGING A DULY LICENSED AND CERTIFIED PROFESSIONAL LAND SURVEYOR AUTHORIZED TO PRACTICE IN PUERTO RICO TO PERFORM A COMPLETE FIELD SURVEY OF THE TOTALITY OF THE PROPOSED PROJECT LOT AND ALL AREAS NECESSARY FOR THE DESIGN, PERMITTING, COORDINATION, AND CONSTRUCTION OF THE PROJECT. THE DESIGN-BUILD ENTITY SHALL VERIFY, DOCUMENT, AND CERTIFY ALL EXISTING CONDITIONS PRIOR TO FINAL DESIGN, PERMITTING, CONSTRUCTION DOCUMENT PREPARATION, PROCUREMENT, SITE DEMOLITION, EXCAVATION, UTILITY WORK, OR CONSTRUCTION ACTIVITY. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE ACCURACY, COMPLETENESS, AND CODE COMPLIANCE OF ALL CONSTRUCTION DOCUMENTS, SHOP DRAWINGS, ENGINEERING, PROCUREMENT, AND CONSTRUCTION MEANS AND METHODS REQUIRED FOR THE PROJECT. THESE DOCUMENTS ARE NOT SUFFICIENT IN DETAIL OR COMPLETENESS TO GUIDE CONSTRUCTION. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR ENGAGING A DULY LICENSED AND CERTIFIED PROFESSIONAL LAND SURVEYOR AUTHORIZED TO PRACTICE IN PUERTO RICO TO PERFORM A COMPLETE FIELD SURVEY OF THE TOTALITY OF THE PROPOSED PROJECT LOT AND ALL AREAS NECESSARY FOR THE DESIGN, PERMITTING, COORDINATION, AND CONSTRUCTION OF THE PROJECT. THE DESIGN-BUILD ENTITY SHALL VERIFY, DOCUMENT, AND CERTIFY ALL EXISTING CONDITIONS PRIOR TO FINAL DESIGN, PERMITTING, CONSTRUCTION DOCUMENT PREPARATION, PROCUREMENT, SITE DEMOLITION, EXCAVATION, UTILITY WORK, OR CONSTRUCTION ACTIVITY. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE ACCURACY, COMPLETENESS, AND CODE COMPLIANCE OF ALL CONSTRUCTION DOCUMENTS, SHOP DRAWINGS, ENGINEERING, PROCUREMENT, AND CONSTRUCTION MEANS AND METHODS REQUIRED FOR THE PROJECT. THESE DOCUMENTS ARE NOT SUFFICIENT IN DETAIL OR COMPLETENESS TO GUIDE CONSTRUCTION. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR ENGAGING A DULY LICENSED AND CERTIFIED PROFESSIONAL LAND SURVEYOR AUTHORIZED TO PRACTICE IN PUERTO RICO TO PERFORM A COMPLETE FIELD SURVEY OF THE TOTALITY OF THE PROPOSED PROJECT LOT AND ALL AREAS NECESSARY FOR THE DESIGN, PERMITTING, COORDINATION, AND CONSTRUCTION OF THE PROJECT. THE DESIGN-BUILD ENTITY SHALL VERIFY, DOCUMENT, AND CERTIFY ALL EXISTING CONDITIONS PRIOR TO FINAL DESIGN, PERMITTING, CONSTRUCTION DOCUMENT PREPARATION, PROCUREMENT, SITE DEMOLITION, EXCAVATION, UTILITY WORK, OR CONSTRUCTION ACTIVITY. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE ACCURACY, COMPLETENESS, AND CODE COMPLIANCE OF ALL CONSTRUCTION DOCUMENTS, SHOP DRAWINGS, ENGINEERING, PROCUREMENT, AND CONSTRUCTION MEANS AND METHODS REQUIRED FOR THE PROJECT. THESE DOCUMENTS ARE NOT SUFFICIENT IN DETAIL OR COMPLETENESS TO GUIDE CONSTRUCTION PURPOSES IS STRICTLY PROHIBITED.

NO.	DATE	DESCRIPTIONS

THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS AND ARE THE PROPERTY OF THE ARCHITECT. THEY ARE NOT TO BE USED IN WHOLE OR IN PART, SOLELY FOR USE IN CONNECTION WITH THIS PROJECT AND MAY BE USED ONLY BY PERSONS OR ENTITIES WHO HAVE ENTERED INTO A WRITTEN AGREEMENT WITH THE ARCHITECT. ANY UNAUTHORIZED USE, DISCLOSURE, MODIFICATION, RELIANCE, OR REUSE OF THESE DOCUMENTS, IN WHOLE OR IN PART, IS PROHIBITED WITHOUT THE PRIOR WRITTEN CONSENT OF THE ARCHITECT. ANY SUCH USE OF THESE DOCUMENTS SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO THE ARCHITECT AND ITS CONSULTANTS.

DRAWING NUMBER

EX-1.0

GENERAL SCOPE DESCRIPTION LAYOUT INDICATIONS & LEGEND NOTES

(APPLICABLE WHERE REQUIRED TO THE FULL SCOPE OF THE WORK SHOWN IN THE DRAWINGS FROM ED-1.1 TO ED-1.3)

GENERAL DEMOLITION NOTES:

(TYPICAL & APPLICABLE WHEN REQUIRED BY THE FULL SCOPE OF THE WORK SHOWN INSIDE THE PROJECT LIMIT)

1. EXISTING PERIMETER WINDOWS SHALL BE PROTECTED DURING THE DEMOLITION WORK.
2. ALL EXISTING WALLS TO REMAIN, INSIDE THE PROJECT LIMIT, SHALL BE REPAIRED AS REQUIRED TO CREATE A SMOOTH FINISH FOR PAINT APPLICATION.
3. ALL EXISTING WALLS, FLOORS AND CEILINGS TO REMAIN, SHALL BE STRIPPED, REPAIRED AND PATCHED AS REQUIRED FOR PROPER APPLICATION OF PAINT FINISH.
4. ALL EXISTING FINISHES NOT SHOWN IN THE DRAWINGS AND NOT SHOWN TO REMAIN IN THE PROPOSED FLOOR PLAN, SHALL BE DEMOLISHED AND DISPOSED OFF.
5. EXISTING FLOOR FINISHES SHALL BE REMOVED AND EXISTING FLOOR SUBSTRATE SHALL BE REPAIRED, SEALED AND LEVELED FOR PROPER INSTALLATION OF FINISHES IN SPACES SPECIFIED TO HAVE THEM AS PART OF THE CONTRACT SCOPE.
6. ALL EXISTING FLOOR SLABS TO REMAIN, INSIDE THE CONTRACT LIMIT, SHALL BE STRIPPED, REPAIRED AND LEVELED READY (USING A SELF-LEVELING PRODUCT) FOR THE INSTALLATION AND/OR APPLICATION OF THE NEW FLOOR FINISH.
7. ALL SLABS THAT HAVE HUMIDITY PERCOLATION SHALL BE TREATED WITH A SURFACE APPLIED VAPOR BARRIER EQUAL OR SIMILAR TO MAXXON M.V.P. VAPOR BARRIER.
8. EXISTING UTILITIES SYSTEMS TO REMAIN SHALL BE PROTECTED DURING CONSTRUCTION AND ADAPTED TO NEW LAY-OUT.
9. ALL EXISTING ELECTROMECHANICAL UTILITIES AND CONDUITS TO REMAIN INSIDE THE PROJECT LIMIT SHALL BE REMOVED AND DISPOSED OFF, UNLESS OTHERWISE NOTED.
10. EXISTING C.M.U WALLS TO REMAIN, SHALL NOT BE DAMAGED DURING THE DEMOLITION WORK.
11. EXISTING REINFORCED CONCRETE WALLS AND STRUCTURAL COLUMNS WILL REMAIN AND SHALL NOT BE DAMAGED DURING THE DEMOLITION WORK.
12. DEMOLITION WORK SHALL BE STOPPED IN WALLS SHOWN TO BE DEMOLISHED IF THEY ARE FOUND TO BE MADE OF REINFORCED CONCRETE. CONSULTATION SHALL BE MADE WITH THE PROJECT INSPECTOR TO GET THE PROPER STRUCTURAL SUPPORT SOLUTION TO ACHIEVE THE REQUIRED WALL DEMOLITION.
13. CONTRACTOR SHALL FIELD VERIFY EXISTING FLOOR LEVELS TO BE MATCHED FLUSH WITH THE PROPOSED FINISHED LEVEL OF THE PROJECT.
14. CONTRACTOR SHALL VERIFY AND CONFIRM THE ELEVATIONS AND RELATIONSHIPS OF LEVEL OF ALL EXISTING FLOORS PRIOR TO THE START OF THE CONSTRUCTION PROCESS
15. CONTRACTOR SHALL VERIFY ALL EXISTING FINISHED LEVELS INSIDE THE PROJECT LIMIT AND WITH ADJACENT CONNECTIONS TO CONFIRM THE SCOPE OF THE PROPOSED FINISHED LEVELS.
16. IN ADDITION TO THE DEMOLITION WORK SPECIFIED HEREIN, THE CONTRACTOR SHALL EXECUTE ALL SITE DEMOLITION OR SELECTIVE DEMOLITION WORK THAT MAY BE REQUIRED FOR THE PROPER EXECUTION OF THE PROJECT CONTRACT WORK WITHIN THE PROJECT LIMITS AND SPECIFIED IN THIS CONTRACT DOCUMENTS.
17. ALL EXISTING UTILITIES LINES, JUNCTION BOXES AND ALL OTHER FACILITIES INSIDE THE CONTRACT LIMIT SHALL BE DEMOLISHED IN ACCORDANCE WITH THE OWNERS' INSTRUCTIONS.
18. A 8'-0" HIGH PLYWOOD TEMPORARY PROTECTION WALL SHALL BE CONSTRUCTED PARALLEL AND ALONG THE PERIMETER OF THE PROJECT LIMIT IN ACCORDANCE WITH THE OWNERS' INSTRUCTIONS.
19. LIMIT OF NEW PAVEMENT WORK. IT SHALL BE GRADED AND/OR LEVELED TO MATCH EXISTING ELEVATIONS.
20. ALL CURBS, GUTTERS AND SIDEWALKS INSIDE THE PROJECT LIMIT SHALL BE DEMOLISHED AND DISPOSED OF.
21. ALL WHEEL STOPS INSIDE THE PROJECT LIMIT SHALL BE DEMOLISHED AND DISPOSED OF.
22. EXISTING FENCES SHALL BE DEMOLISHED AND DISPOSED OF.
23. EXISTING TREES, SHRUBS AND PLANTING SHALL BE REMOVED AND DISPOSED OF.
24. EXISTING STRUCTURE ALONG THE PROPERTY LINE SHALL BE PROTECTED, SUPPORTED AND CONTAINED DURING THE EXCAVATION AND CONSTRUCTION OF THE PROJECT.
25. LIMIT OF NEW PAVEMENT WORK SHALL BE GRADED AND/OR LEVELED TO MATCH EXISTING ELEVATIONS.
26. ALL PAVEMENT AND/OR SUBSTRATE FILL OR SLABS INSIDE THE PROJECT LIMIT SHALL BE DEMOLISHED AND DISPOSED OF.
27. ALL DRAINS, SANITARY OR STORM SEWERS, SHALL BE PROTECTED AND SEALED WITH CONCRETE CLAY PLUGS, LAIN IN MORTAR. CONTRACTORS SHALL NOTIFY THE LOCATION TO THE OWNER SO THAT ALL DRAINS PLUGGED MAY BE PROPERLY REUSED AND LOCATED FOR FUTURE USE.
28. CONTRACTOR SHALL PROTECT THE STORM SEWERS, CONTAIN ANY RUNOFF, AND KEEP ADJACENT STREETS AND PARKING LOTS FREE OF DEBRIS, DIRT, MUD, ETC. INSTALL SILT FENCE AROUND LOTS/PROPERTY THAT IS BEING DEMOLISHED. SWPPP AS REQUIRED PER APPLICABLE LAWS / REGULATIONS. SILT FENCE TO BE REMOVED AFTER HYDRO-SEEDING.
29. ALL EXISTING FLOOR UTILITY BOXES, METERS, JUNCTION BOXES, MANHOLES, VALVES, ETC. SHALL BE PROTECTED DURING THE CONSTRUCTION PROCESS. ALL COVERS, ACCESS PANELS AND LIDS SHALL BE RAISED (EXTENDING NECKS AS REQUIRED) TO BE FLUSH WITH THE NEW SIDEWALK TILE FINISH LEVEL.
30. ALL EXISTING SIGN POSTS, UTILITIES (AEE, COMMUNITATIONS, ETC.) AND HYDRANTS SHALL BE PROTECTED AND GUARDED DURING THE CONSTRUCTION PROCESS TO REMAIN OPERABLE IN EXISTING LOCATION.
31. CONTRACTOR SHALL PROVIDE SUBSTITUTE TEMPORARY PEDESTRIAN AND VEHICULAR ACCESSES AND PEDESTRIAN ROADWAY CROSSINGS (IN ACCORDANCE WITH ASEM'S INSTRUCTION) AS REQUIRED TO SERVE THE AREAS WHERE NEW ACCESSES ARE BEING CONSTRUCTED AS SIDEWALKS INTERRUPTED AS PART OF THE PROJECT.
32. ALL THE WORK AT THE ENDS AND/OR EDGES OF THE PROJECT WORK SCOPE LIMIT SHALL BE CONSTRUCTED AND COORDINATED TO ABUTT FLUSH AND LEVELED WITH THE ADJACENT EXISTING PAVEMENT FINISHED GRADING LEVEL AND EDGES. A ½" EXPANSION JOINT WITH AN EXTERIOR GRADE ELASTIC JOINT FILLER MATERIAL SHALL BE SUPPLIED AND INSTALLED BETWEEN ALL NEW AND EXISTING PAVEMENT CONSTRUCTION, WALLS, AND ADJACENT STRUCTURES.
33. ALL EXISTING UTILITIES INSIDE THE PROPERTY INCLUDING, BUT NOT LIMITED TO, JUNCTION BOXES, OUTLET COVERS, ACCESS LIDS, CATCH BASINS, DRAIN GRILLES, WATER METERS, GAS METERS, FLOW REGISTERS, SIGNS, ETC. SHALL BE REMOVED DURING THE CONSTRUCTION PROCESS.
34. ALL EXISTING FIRE HYDRANTS INSIDE THE PROJECT SCOPE WORK LIMIT SHALL BE PROTECTED AND KEPT OPERABLE DURING THE CONSTRUCTION OF THE PROJECT. THE FIRE HYDRANTS LOCATION SHALL BE MAINTAINED OR ADAPTED IF REQUIRED TO REMAIN INSIDE THE NEW OUTER PLANTING STRIP ADJACENT TO THE NEW CURB AND GUTTER. THE FIRE HYDRANTS SHALL BE REPAIRED, STRIPPED, AND PAINTED TO REMAIN OPERABLE AFTER THE CONSTRUCTION OF THE PROJECT IS COMPLETED.

SUPPLEMENTARY DEMOLITION NOTES

(APPLICABLE WHERE REQUIRED AS PER THE SCOPE OF THE DEMOLITION WORK SHOWN IN THE DRAWINGS AND THEIR NOTES)

1. PRIOR TO COMPLETING THE DEMOLITION, THE CONTRACTOR SHALL REMOVE ALL WOOD, LATH, PLASTER, OR OTHER DELETERIOUS MATERIAL FORM AREA TO BE FILLED, AND NOTIFY THE OWNER, WHO WILL PROVIDE AND INSPECTOR FOR PRELIMINARY INSPECTION OF THE SITE, AND APPROVAL.
2. THE FINAL GRADE OF BACKFILL FOR NEW PAVEMENTS VOIDS SHALL CONFORM TO THE EXISTING SURROUNDING GRADE IN SUCH A MANNER AS TO PRESENT A NEAT WELL-DRAINED APPEARANCE, AND TO PREVENT WATER DRAINING UNNECESSARILY ONTO ADJACENT PROPERTIES.
3. THE CONTRACTOR SHALL CLEAR THE SITE OF THE WORK AND HE SHALL REMOVE AND DISPOSE OF ALL DEAD TREES, BRUSH, RUBBISH, AND ANY OTHER JUNK OR DEBRIS. LIVE TREES, HEDGES, AND SHRUBBERY SHALL NOT BE REMOVED, AND THE CONTRACTOR SHALL BE HELD LIABLE FOR DAMAGE TO OR REMOVAL OF THEM.
4. IT SHALL BE RESPONSIBILITY OF THE CONTRACTOR TO NOTIFY ALL UTILITY SUPPLIERS OF INTENDED DEMOLITION, TO INSURE ALL UTILITIES ARE DISCONNECTED.
5. ALL REFUSE REMOVED FROM THE SITE SHALL BE DISPOSED OF AT AN E.P.A APPROVED LANDFILL. METHOD OF DEMOLITION SHALL COMPLY WITH E.P.A. FUGITIVE DUST REQUIREMENTS INCLUDING ALL ARRANGEMENTS AND COSTS FOR SPRAYING WATER ON DEMOLITION.
6. DEMOLITION AND DISPOSAL OF RUBBISH AND DEBRIS SHALL PROCEED SIMULTANEOUSLY.
7. ONCE THE DEMOLITION IS STARTED, IT SHALL BE CONTINUED UNTIL COMPLETED.
8. A DEMOLITION AND WRECKING PERMIT SHALL BE PROCURED FROM THE APPLICABLE GOVERNMENT AGENCIES BEFORE COMMENCING DEMOLITION. THERE WILL BE NO CHARGE FOR THE PERMIT.
9. THE CONTRACTOR SHALL COMPLY WILL ALL APPLICABLE LAWS, ORDINANCES AND CODES.
10. WHENEVER THE OWNER DETERMINES THAT CONSTRUCTION OR REPAIR WORK MAY ENDANGER THE TRAVELING PUBLIC, THE CONTRACTOR AT THE REQUEST OF THE OWNER, SHALL ERECT ROOFED PASSAGEWAYS EXTENDING OVER PUBLIC THOROUGHFARES AT LEAST SIX (6) FEET, THE ROOF OF WHICH SHALL BE NOT LESS THAT A DOUBLE THICKNESS OF 2-INCH-THICK LUMBER.
11. NO PART OF THE ABUTTING STREETS, INCLUDING THE PUBLIC WALKS AND STREET AREAS, SHALL BE OCCUPIED BY THE CONTRACTOR AND HIS EQUIPMENT. TREES, PUBLIC WALKS AND STREET SHALL BE PRESERVED AND PROPERLY PROTECTED. THE CONTRACTOR'S OPERATIONS SHALL BE CONFINED TO THE PARCELS OF LAND INCLUDED IN THE DEMOLITION.
12. ARRANGEMENTS SHALL BE MADE TO PROHIBIT PARKING OF VEHICLES IN THE NEAR VICINITY OF THE ACTUAL DEMOLITION.
13. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL DAMAGE TO PRIVATE OR PUBLIC PROPERTY AS A RESULT OF HIS FAULT OR NEGLIGENCE IN CONNECTION WITH THE PROSECUTION OF THE WORK AND SHALL BE RESPONSIBLE FOR THE PROPER CARE AND PROTECTION OF ALL WORK PERFORMED UNTIL COMPLETION AND FINAL ACCEPTANCE.
14. IN ORDER TO PREVENT THE BLOWING OF DUST AND DIRT, THE CONTRACTOR WILL BE REQUIRED TO WET DOWN AND KEEP WET THE STRUCTURES BEFORE AND DURING WRECKING OPERATIONS, ALL RUBBISH AND DEBRIS STOCKPILED ON THE SITE, AND ALL RUBBISH OR DEBRIS IS BEING LOADED FOR DISPOSAL.
15. ALL OBSTRUCTIONS SHALL BE ADEQUATELY BARRICADED AND LIGHTED AT NIGHT.
16. DEMOLITION AND SITE CLEARANCE WILL CONSIST UNLESS OTHERWISE NOTED IN THE DRAWINGS, OF THE DEMOLITION AND REMOVAL OF ALL STRUCTURES, WALKS, CONCRETE SLABS, RETAINING WALLS, TREES, AND BUSHES, AND INCLUDING FOUNDATION WALLS, FLOORS AND ANY OTHER SUBSURFACE STRUCTURES TO THE LEVEL OF THE DEMOLITION GRADE; FILLING ALL EXCAVATIONS TO THE EXISTING GROUND ELEVATION; AND THE GRADING AND SMOOTHING OF THE SITE. ALL SHALL BE DONE IN A LUMP SUM BID.
17. WHEN THE WORK OF DEMOLITION IS SUBSTANTIALLY COMPLETE, THE CONTRACTOR SHALL NOTIFY THE OWNER THAT THE WORK WILL BE READY FOR FINAL INSPECTION.
18. THE CONTRACTOR SHALL COMPLY WITH APPLICABLE LAWS AND ORDINANCES GOVERNING THE DISPOSAL OF MATERIALS, DEBRIS, RUBBISH AND TRASH OFF OR ON THE PROJECT AREA; AND SHALL COMMIT NO TRESPASS ON ANY PRIVATE PROPERTY IN THE DISPOSAL OF THE MATERIALS WITHOUT PERMISSION OF THE PROPERTY OWNER INVOLVED.
19. DEMOLISH AND REMOVE BELOW-GRADE CONSTRUCTION AND CONCRETE SLABS-ON-GRADE.
20. ALL DISTURBED AREAS SHALL BE PROPERLY GRADED AFTER DEMOLITION IS COMPLETE. NO PONDING SHALL BE ALLOWED TO OCCUR.
21. CONTRACTOR SHALL PROTECT THE STORM SEWERS, CONTAIN ANY RUNOFF, AND KEEP ADJACENT STREETS AND PARKING LOTS FREE OF DEBRIS, DIRT, MUD, ETC. INSTALL SILT FENCE AROUND LOTS/PROPERTY THAT IS BEING DEMOLISHED. SWPPP AS REQUIRED PER APPLICABLE LAWS / REGULATIONS. SILT FENCE TO BE REMOVED AFTER HYDRO-SEEDING.
22. STRUCTURES TO REMAIN IN PLACE SHALL BE PROTECTED FROM DAMAGE DURING ALL PHASES OF WORK.
23. CONTRACTOR SHALL BE RESPONSIBLE FOR INSTALLING AND MAINTAINING A TEMPORARY FENCE FOR WORK AREA.
24. CONTRACTOR SHALL FIELD VERIFY THE WORK INDICATED PRIOR TO WORK. REPORT DISCREPANCIES OR CONCERNS IMMEDIATELY TO OWNER OR OWNER'S REPRESENTATIVE.
25. THE DEMOLITION WORK SPECIFIED HEREIN SHALL BE PERFORMED IN A SAFE, SATISFACTORY CONDITION, STARTING WITH THE ROOF AND WORKING DOWN, WITH THE SAFETY AND WELFARE OF ALL PEOPLE AND PROPERTY BEING OF THE HIGHEST PRIORITY.
26. THE CONTRACTOR SHALL HAUL OFF ALL DEBRIS AND UNSALVAGEABLE MATERIALS; AND NO DEBRIS OR RUBBLE WHICH MAY POSE A THREAT TO PUBLIC SAFETY WILL BE LEFT ON THE SITE OVERNIGHT. NO SUCH DEBRIS OR MATERIAL WILL BE PLACED ON A SIDEWALK OR PUBLIC RIGHT-OF-WAY SO THAT IT POSES A DANGER TO ANY PERSON.
27. CONTRACTOR IS RESPONSIBLE FOR PERFORMING UTILITY SERVICES, IN COORDINATION WITH THE LOCAL PUBLIC SERVICE COMMISSION (C.S.P), PRIOR TO COMMENCEMENT OF WORK.
28. STORAGE OR SALE OF REMOVED ITEMS ON THE PROJECT SITE WILL NOT BE PERMITTED.
29. THE USE OF EXPLOSIVES WILL NOT BE PERMITTED.
30. CONDUCT DEMOLITION OPERATIONS AND THE REMOVAL OF DEBRIS TO ENSURE MINIMUM INTERFERENCE WITH ROADS, STREETS, WALKS, AND OTHER ADJACENT OCCUPIED OR USED FACILITIES.
31. ENSURE THE SAFE PASSAGE OF PERSONS AROUND THE AREA OF DEMOLITION. CONDUCT OPERATIONS TO PREVENT INJURY TO ADJACENT BUILDINGS, STRUCTURES, OTHER FACILITIES, AND PERSONS.
32. DO NOT INTERRUPT EXISTING UTILITIES SERVING OCCUPIED OR USED FACILITIES, EXCEPT WHEN AUTHORIZED IN WRITING BY AUTHORITIES HAVING JURISDICTION. PROVIDE TEMPORARY SERVICE DURING INTERRUPTIONS TO EXISTING UTILITIES, AS ACCEPTABLE TO THE GOVERNING AUTHORITIES.
33. USE WATER SPRINKLING, TEMPORARY ENCLOSURES, AND OTHER SUITABLE METHODS TO LIMIT THE AMOUNT OF DUST AND DIRT RISING AND SCATTERING IN THE AIR TO THE LOWEST PRACTICABLE LEVEL.
34 COMPLY WITH THE GOVERNING REGULATIONS PERTAINING TO ENVIRONMENTAL PROTECTION.
35. DO NOT USE WATER WHEN IT MAY CREATE HAZARDOUS OR OBJECTIONABLE CONDITIONS SUCH AS FLOODING AND POLLUTION.
36. CLEAN ADJACENT STRUCTURES AND IMPROVEMENTS OF ALL DUST, DIRT AND DEBRIS CAUSED BY DEMOLITION OPERATIONS, AS DIRECTED BY THE OWNER OR OWNER'S REPRESENTATIVE OR GOVERNING AUTHORITIES. RETURN ADJACENT AREAS TO CONDITION EXISTING PRIOR TO THE START OF THE WORK.
37. GRADE THE SURFACE TO MEET ADJACENT CONTOURS AND TO PROVIDE FLOW TO SURFACE DRAINAGE STRUCTURES.
38. AFTER GRADING IS COMPLETE, THE SITE SHALL BE CLEANED OF ALL CONSTRUCTION DEBRIS 2" IN DIAMETER AND LARGER.
39. BURNING OF REMOVED MATERIALS FROM DEMOLISHED STRUCTURES WILL NOT BE PERMITTED ON THE PROJECT SITE.
40. HAZARDOUS MATERIALS: MATERIALS DEFINED BY THE ENVIRONMENTAL PROTECTION AGENCY TO BE HAZARDOUS TO THE ENVIRONMENT OR PERSONS, SHALL BE DISPOSED OF IN ACCORDANCE WITH ALL LOCAL, STATE, AND FEDERAL GOVERNMENT REGULATIONS AND GOVERNING LAWS. THIS SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR. THE CONTRACTOR SHALL FURNISH WRITTEN PROOF OF SUCH DISPOSAL.
41. CONTRACTOR IS RESPONSIBLE FOR VERIFYING QUANTITIES AND DIMENSIONS FOR ALL DEMOLITION AND FINAL CONSTRUCTION REQUIREMENTS SUCH AS BACKFILL/GRADING, HYDRO-SEED/SOD, OR FENCING (W/GATES) AS SHOWN ON SITE PLANS.
42. THE CONTRACTOR MUST OBTAIN FROM THE MUNICIPALITY OF SAN JUAN – PERMITS OFFICE AND ALL OTHER GOVERNMENT ENTITIES, AT HIS OWN EXPENSE, ALL NECESSARY GENERAL, SUPPLEMENTARY, AND SPECIAL PERMITS, INSURANCES, AND PAY ANY AND ALL FEES FOR SAID PERMITS AND ANY OTHER FEES, PUBLIC OR PRIVATE RELATED TO THE DEMOLITION WORK SCOPE.
43. THE CONTRACTOR SHALL LOCATE AND IDENTIFY ALL UTILITIES (INCLUDING BUT NOT LIMITED TO ELECTRICAL, SANITARY, WATER, CHILLED WATER, FIRE PROTECTION, ETC). RUNNING THROUGH THE PROJECT DEMOLITION SITE AND SERVING ADJACENT STRUCTURES AND FACILITIES TO REMAIN. SAID UTILITIES SHALL BE PROTECTED, KEPT IN PLACE, AND REMAIN OPERATIONAL DURING THE DEMOLITION WORK. IF CONFLICTS ARISE BETWEEN THE UTILITIES TO REMAIN OPERATIONAL AND THE DEMOLITION WORK, THE OWNER'S REPRESENTATIVE SHALL BE INFORMED TO PROVIDE, WITH THE HELP OF THE CONTRACTOR, A SOLUTION IN-PLACE WITHOUT AFFECTING THE UTILITIES SERVICE.
44. ALL MATERIAL RESULTING FROM THE DEMOLITION WORK BECOMES THE PROPERTY OF THE CONTRACTOR. DISPOSE OF OR USE ALL MATERIALS, RESULTING FROM THE DEMOLITION WORK, EXCEPT MATERIALS THAT ARE PROPERTY OF UTILITY COMPANIES PROVIDING SERVICE TO THE BUILDING. PROVIDE ALL PERMITS AND DISPOSE OF ALL CONTAMINATED MATERIAL ENCOUNTERED IN CONNECTION WITH THE WORK.
45. COMPLY WITH ALL FEDERAL, STATE, AND LOCAL REGULATIONS WHEN PERFORMING BUILDING DEMOLITION REMOVAL OF UNDERGROUND STORAGE TANKS (UST), AND CONTAMINATED MATERIAL DISPOSAL. ANY FINES RESULTING FROM VIOLATIONS OF ANY REGULATION ARE THE SOLE RESPONSIBILITY OF THE CONTRACTOR AND THE CONTRACTOR AGREES TO INDEMNIFY AND HOLD HARMLESS THE OWNER AGAINST ANY ASSESSMENT OF SUCH FINES.
46. CONFORM TO ALL APPLICABLE SAFETY CODES PERTAINING TO THE WORK, SECURE ALL PERMITS THAT MAY BE REQUIRED AND PAY ALL FEES IN CONNECTION THEREWITH.
47. MAKE ALL NECESSARY ARRANGEMENTS WITH UTILITY COMPANIES FOR THE DISCONNECTING OF ALL SERVICES AND THE REMOVAL OF AND RECOVERY BY THEM OF ALL METERS, TELEPHONES AND ANY OTHER UTILITY FACILITIES OR EQUIPMENT OWNED BY THEM. ARRANGE FOR AND ACTUALLY EFFECT THE DISCONNECTING AND CLOSING OF WATER AND SEWER CONNECTIONS TO BUILDINGS, INCLUDING BUT NOT LIMITED TO ANY WORK THAT SHALL BE DONE IN ADDITION TO THAT NORMALLY DONE BY THE UTILITY COMPANY, IN CONFORMITY WITH ALL APPLICABLE CODES AND REGULATIONS OF THE LOCAL BOARDS OF HEALTH. PAY FOR ALL COSTS INCURRED IN CONNECTION WITH THE ABOVE WORK. ALL REFUNDS OR DEPOSITS THAT MAY BECOME DUE AS A RESULT OF THE DISCONNECTION OF SERVICE AND THE RETURNING OF EQUIPMENT OR FACILITIES TO ANY UTILITY COMPANY BECOME THE PROPERTY OF THE OWNER.
48. DISPOSE OF MATERIALS AND DEBRIS IN ACCORDANCE WITH APPLICABLE LOCAL CODES.

GENERAL SITE DEMOLITION WORK COMPLIANCE NOTES:

(AS REQUIRED AND WHEN BY SCOPE OF WORK SHOWN IN THE CONTRACT PLANS)

1. ALL WORK SHALL INCLUDE COMPLETE DEMOLITION, CLEARING, PROTECTION, AND PREPARATION OF THE APPROX. 5,200 SM SITE FOR CONSTRUCTION OF A NEW TEN-STORY TRAUMA HOSPITAL BUILDING WITH A 3,800 SM FOOTPRINT AND A BASEMENT EXCAVATION RANGING APPROX. FROM 22'-0" TO 28'-0" IN DEPTH.
2. WORK SHALL BE EXECUTED WITHIN AN ACTIVE HEALTHCARE CAMPUS AND SHALL BE PLANNED AND IMPLEMENTED AS A HIGH-RISK CONSTRUCTION OPERATION.
3. CONTRACTOR SHALL COORDINATE CONTINUOUSLY WITH OWNER, HOSPITAL OPERATIONS, AND DESIGN TEAM.
4. MAINTAIN FULL OPERATION OF ADJACENT EMERGENCY, TRAUMA, AND CRITICAL CARE SERVICES AT ALL TIMES.
5. IMPLEMENT INFECTION CONTROL RISK ASSESSMENT (ICRA) MEASURES INCLUDING:
   A. FULLY ENCLOSED WORK ZONES
   B. NEGATIVE AIR PRESSURE (WHERE APPLICABLE)
   C. HEPA FILTRATION SYSTEMS
   D. DAILY CLEANING AND DEBRIS CONTROL
6. IMPLEMENT INTERIM LIFE SAFETY MEASURES (ILSM) AS REQUIRED, INCLUDING:
   A. MAINTAINED EGRESS PATHS
   B. FIRE WATCH (IF REQUIRED)
   C. TEMPORARY LIFE SAFETY SYSTEMS
7. COORDINATE ALL WORK WITH HOSPITAL ADMINISTRATION PRIOR TO ANY HIGH-IMPACT ACTIVITY.
8. PERFORM MASS EXCAVATION TO DEPTHS RANGING APPROX. FROM 22'-0" TO 28'-0"
9. ALL EARTH RETENTION SYSTEMS SHALL BE FULLY ENGINEERED AND SEALED BY A LICENSED PROFESSIONAL ENGINEER.
10. ACCEPTABLE SYSTEMS INCLUDE (AS REQUIRED BY DESIGN):
    A. SECANT OR TANGENT PILE WALLS (PREFERRED IN URBAN HOSPITAL SETTINGS)
    B. SOLDIER PILES AND LAGGING WITH TIEBACKS
    C. SHEET PILES
    D. INTERNALLY BRACED SYSTEMS
11. DESIGN SHALL LIMIT GROUND MOVEMENT AND PROTECT ADJACENT STRUCTURES, UTILITIES, AND PAVEMENTS.
12. PROVIDE A COMPREHENSIVE GEOTECHNICAL INSTRUMENTATION PROGRAM, INCLUDING:
    A. SETTLEMENT POINTS (SURFACE AND STRUCTURAL)
    B. INCLINOMETERS (ALONG RETENTION SYSTEMS)
    C. PIEZOMETERS (GROUNDWATER LEVELS)
    D. VIBRATION MONITORS
    E. CRACK GAUGES ON EXISTING BUILDING
13. ESTABLISH BASELINE READINGS PRIOR TO CONSTRUCTION.
14. MONITORING SHALL BE CONTINUOUS OR DAILY AS REQUIRED DURING CRITICAL PHASES.
15. IMPLEMENT A THREE-TIER ALERT SYSTEM:
    A. ALERT LEVEL 1 (CAUTION):
       · SETTLEMENT≥ 1/4 INCH
       · ACTION: INCREASE MONITORING FREQUENCY, REVIEW METHODS
    B. ALERT LEVEL 2 (WARNING):
       · SETTLEMENT≥ 3/8 INCH
       · ACTION: MODIFY CONSTRUCTION METHODS, NOTIFY ENGINEER AND OWNER
    C. ALERT LEVEL 3 (CRITICAL):
       · SETTLEMENT ≥ 1/2 INCH OR RAPID MOVEMENT
       · ACTION: IMMEDIATE STOP WORK, IMPLEMENT EMERGENCY STABILIZATION
16. ALL THRESHOLDS SHALL BE VERIFIED AND ADJUSTED BY THE GEOTECHNICAL ENGINEER.
17. PROVIDE A FULLY ENGINEERED DEWATERING SYSTEM.
18. CONTROL HYDROSTATIC PRESSURE WITHOUT CAUSING ADJACENT GROUND SETTLEMENT.
19. MONITOR GROUNDWATER LEVELS CONTINUOUSLY.
20. LOCATE AND PROTECT ALL UTILITIES.
21. PROVIDE STRUCTURAL SUPPORT OR BRIDGING FOR UTILITIES WITHIN INFLUENCE ZONE OF EXCAVATION.
22. MAINTAIN CONTINUOUS OPERATION OF CRITICAL HOSPITAL UTILITIES (POWER, MEDICAL GAS, WATER, DATA).
23. DEMOLISH ALL EXISTING SITE ELEMENTS INCLUDING PLAZA AREAS, ROADWAYS, LANDSCAPING, AND STRUCTURES.
24. REMOVE ALL ORGANIC AND UNSUITABLE MATERIALS.
25. PROPERLY HANDLE HAZARDOUS MATERIALS.
26. PROOF-ROLL SUBGRADE AND VERIFY WITH GEOTECHNICAL ENGINEER.
27. REMOVE UNSUITABLE MATERIALS AND REPLACE WITH ENGINEERED FILL.
28. COMPACT TO MINIMUM 95% MODIFIED PROCTOR OR AS SPECIFIED.
29. IMPLEMENT DUST, NOISE, AND VIBRATION CONTROL MEASURES SUITABLE FOR HEALTHCARE ENVIRONMENT.
30. INSTALL EROSION AND SEDIMENT CONTROL SYSTEMS.
31. CONTRACTOR SHALL DEVELOP AND MAINTAIN A PROJECT-SPECIFIC RISK REGISTER, INCLUDING:
    A. ADJACENT STRUCTURE SETTLEMENT
    B. UTILITY FAILURE
    C. GROUNDWATER INTRUSION
    D. VIBRATION IMPACT ON MEDICAL EQUIPMENT
    E. INFECTION CONTROL BREACH
32. EACH RISK SHALL INCLUDE:
    A. PROBABILITY LEVEL
    B. IMPACT LEVEL
    C. MITIGATION MEASURES
    D. RESPONSE PLAN
33. SUBMIT RISK REGISTER PRIOR TO START OF EXCAVATION WORK.
34. COORDINATE WITH STRUCTURAL, CIVIL, MEP, AND HOSPITAL OPERATIONS.
35. PROVIDE DAILY REPORTS DURING CRITICAL EXCAVATION PHASES.
36. ALL WORK SHALL BE SUBJECT TO INSPECTION AND TESTING.
37. REMOVE TEMPORARY SYSTEMS INCLUDING SHORING (AS APPLICABLE), DEWATERING, AND PROTECTION MEASURES.
38. LEAVE SITE READY FOR FOUNDATION CONSTRUCTION.
39. ALL WORK SHALL COMPLY WITH APPLICABLE CODES AND STANDARDS INCLUDING:
    A. PUERTO RICO BUILDING CODE (PRBC) AND ADOPTED INTERNATIONAL BUILDING CODE (IBC)
    B. OSHA CONSTRUCTION SAFETY REGULATIONS (29 CFR 1926)
    C. ACI 301 (SPECIFICATIONS FOR STRUCTURAL CONCRETE)
    D. ACI 318 (BUILDING CODE REQUIREMENTS FOR STRUCTURAL CONCRETE)
    E. ACI 336 (FOUNDATIONS AND EARTH RETAINING STRUCTURES)
    F. ASTM STANDARDS FOR MATERIALS AND TESTING
    G. FHWA / AASHTO GUIDELINES FOR EARTH RETENTION AND EXCAVATION
    H. EPA AND LOCAL ENVIRONMENTAL REGULATIONS
40. WORK SHALL BE EXECUTED WITHIN AN ACTIVE HEALTHCARE CAMPUS AND SHALL END OF GENERAL NOTES

EXISTING BUILDING FLOOR LEVELS:

1. CONTRACTOR SHALL VERIFY AND CONFIRM THE ELEVATIONS AND RELATIONSHIPS OF LEVEL OF ALL EXISTING FLOORS PRIOR TO THE START OF THE CONSTRUCTION PROCESS
2. CONTRACTOR SHALL RETAIN THE SERVICES OF A REGISTERED SURVEYOR TO CONFIRM THE EXISTING ELEVATIONS OF ALL THE EXISTING FLOOR LEVELS.
3. DEVIATION OF EXISTING FLOOR LEVELS FROM THE ONES INDICATED IN THE DRAWINGS SHALL BE INFORMED TO THE ARCHITECT FOR THE PROPER ADJUSTMENT OF THE CONSTRUCTION DRAWINGS LEVELS.

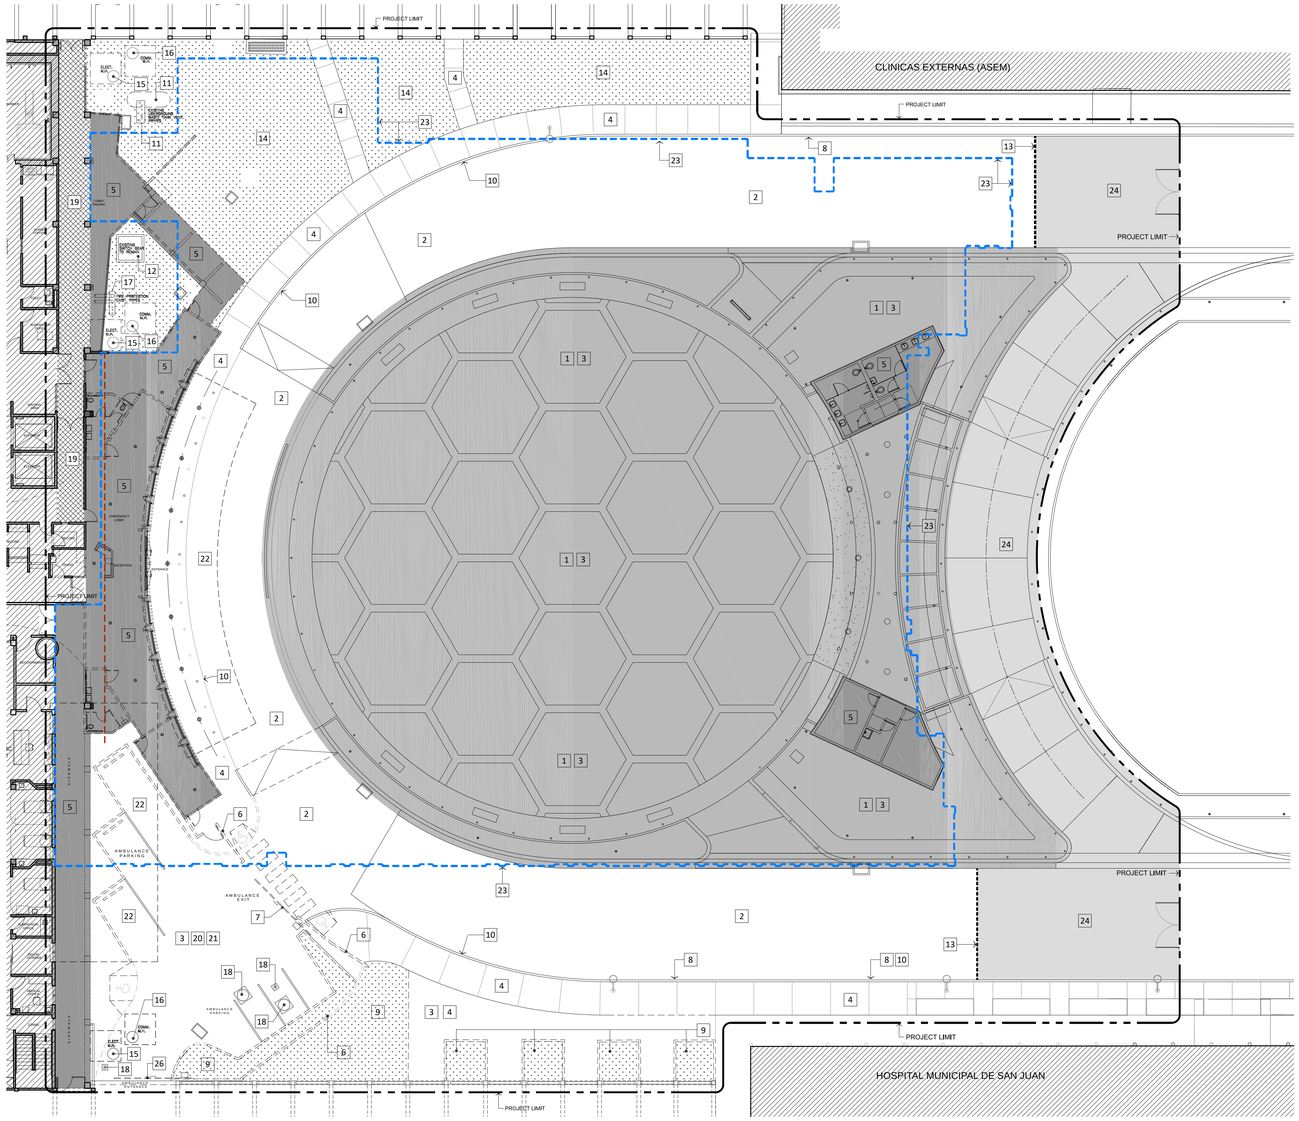
BUILDING ADMINISTRATION COMPLIANCE

1- ALL WORK TO BE EXECUTED UNDER THIS CONTRACT SHALL BE DONE ONLY DURING THE HOURS APPROVED BY THE BUILDING ADMINISTRATOR.

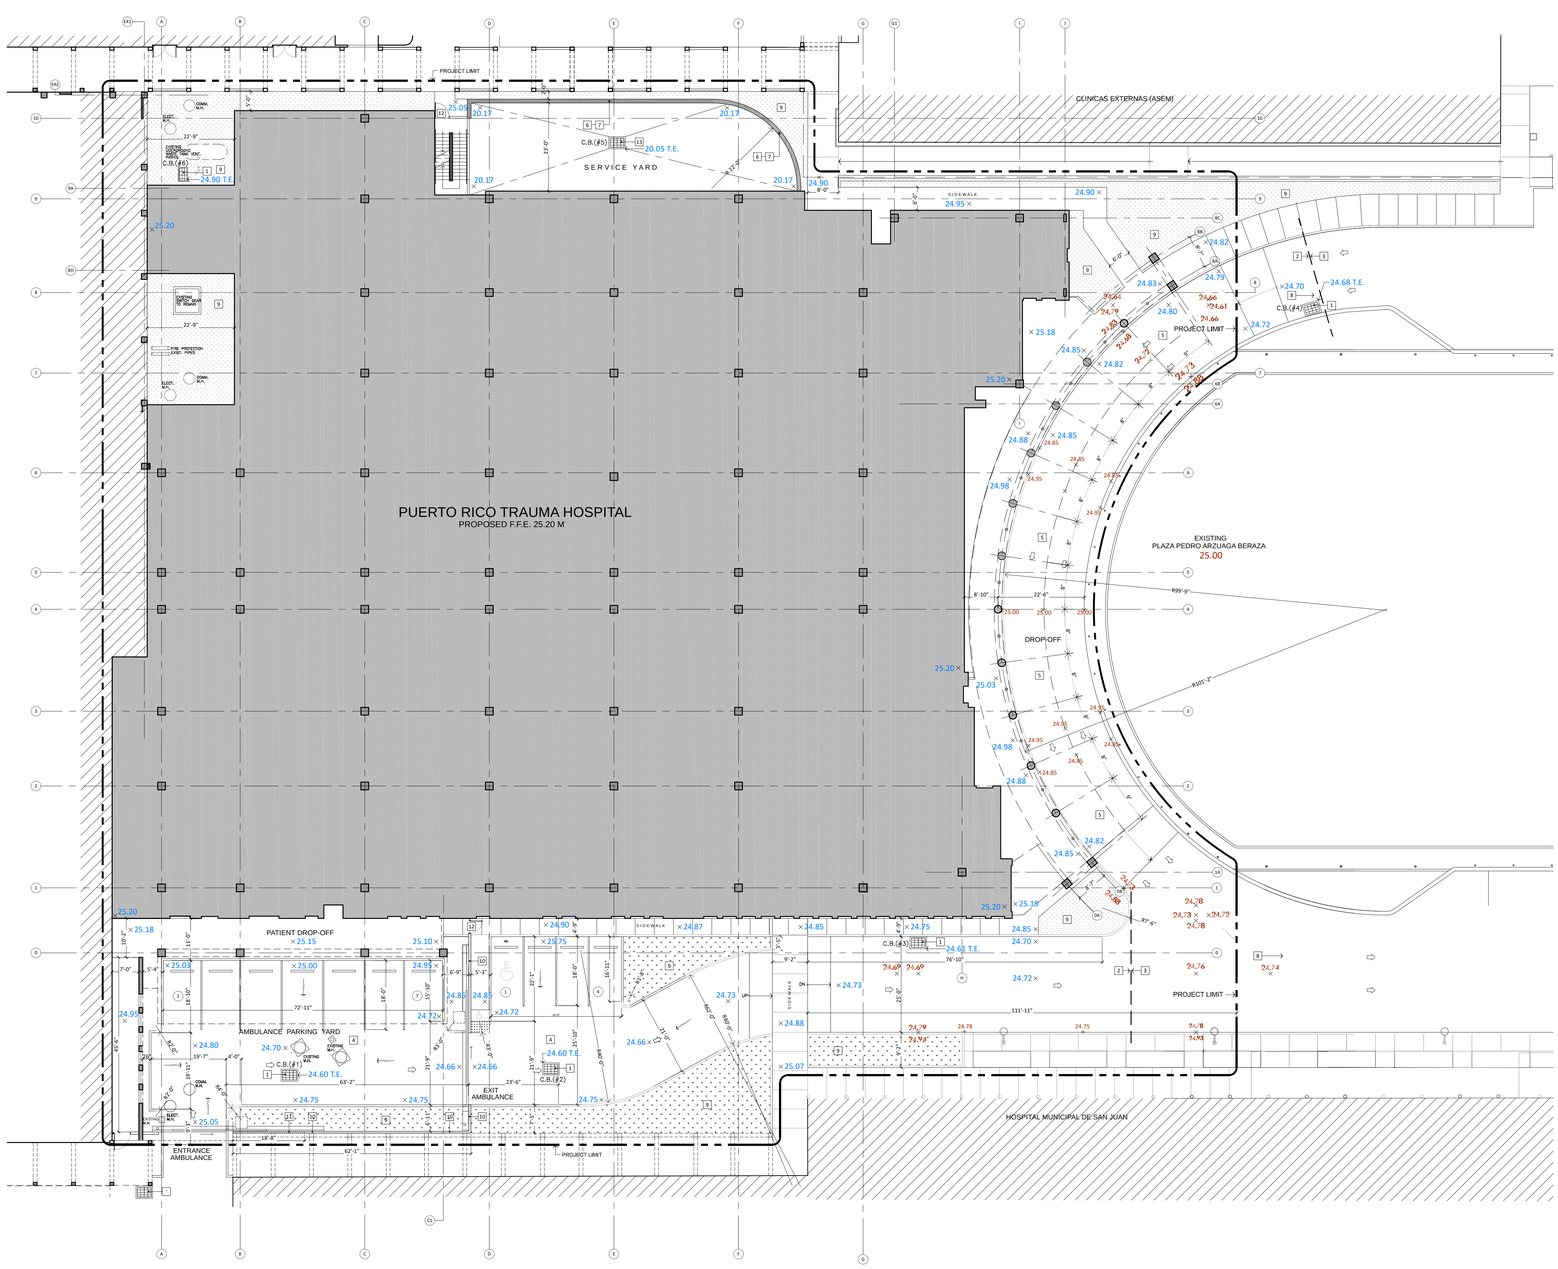
2- ALL WORK EXECUTED UNDER THIS CONTRACT SHALL BE IN ACCORDANCE AND IN COMPLIANCE WITH THE BUILDING ADMINISTRATION REGULATIONS RELATED TO CONSTRUCTION.

WORK BY OWNER

1- ALL CABLING, HARDWARE AND SOFTWARE RELATED TO THE VOICE COMMUNICATION SYSTEM, INFORMATION TECHNOLOGY SYSTEM, CLOSED CIRCUIT TV SYSTEM AND ELECTRONIC ACCESS CONTROL SYSTEM WILL BE SUPPLIED AND INSTALLED BY EACH OF THE SYSTEMS OWNER'S SUBCONTRACTORS.



NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
NOT FOR CONSTRUCTION.



DATE: JULY 2026
DRAWN BY:
APROVED BY:
SCALE: AS SHOWN

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF DESCRIBING THE ARCHITECTURAL AND ENGINEERING DESIGN OF THE PROJECT OBJECTIVES, DESIGN INTENT, PERFORMANCE CRITERIA, AND TECHNICAL REQUIREMENTS FOR THE DESIGN-BUILD ENTITY RESPONSIBLE FOR THE PROJECT. THEY ARE NOT INTENDED TO BE USED FOR PERMITTING, BIDDING, FABRICATION, OR CONSTRUCTION PURPOSES. THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR DEVELOPING THE CONSTRUCTION DOCUMENTS REQUIRED FOR THE PROJECT, IN ACCORDANCE WITH THE PERFORMANCE REQUIREMENTS AND DESIGN GUIDANCE CONTAINED IN THESE DOCUMENTS. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, AND ACCURACY OF THE CONSTRUCTION DOCUMENTS, AND FOR OBTAINING ALL PERMITS AND APPROVALS REQUIRED FOR CONSTRUCTION. THE USE OF THESE DOCUMENTS FOR CONSTRUCTION PURPOSES IS STRICTLY PROHIBITED.

SUGGESTEDGRADING & LAYOUT PLAN

SCALE: 1/16"= 1'-0"

GENERAL NOTES / PROPOSED SITE GRADING AND GEOMETRIC LAY-OUT PLAN:

1- THIS PROPOSED SITE GRADING AND GEOMETRIC LAYOUT PLAN HAS BEEN PREPARED AS A PRELIMINARY, CONCEPTUAL, AND SUGGESTED SITE PLANNING DOCUMENT FOR USE AS PART OF THE DESIGN-BUILD REQUEST FOR PROPOSAL ("RFP") BRIDGING DOCUMENTS ONLY.
2- THIS DRAWING IS INTENDED TO COMMUNICATE THE OWNER'S GENERAL SITE PLANNING INTENT, INCLUDING PRELIMINARY BUILDING ACCESS, VEHICULAR CIRCULATION, ROADWAY ALIGNMENTS, DROP-OFF AND PICK-UP AREAS, CANOPIES, AMBULANCE ACCESS AND PARKING AREAS, PATIENT DROP-OFF AREAS, PEDESTRIAN ROUTES, PAVEMENT AREAS, PLANTING AREAS, AND GENERAL SITE ORGANIZATION.
3- THIS DRAWING SHALL NOT BE CONSTRUED AS A FINAL GRADING PLAN, FINAL GEOMETRIC LAYOUT PLAN, FINAL SITE CIVIL ENGINEERING DESIGN, CERTIFIED SURVEY, CONSTRUCTION STAKING PLAN, PERMIT-READY CIVIL DOCUMENT, OR CONSTRUCTION DOCUMENT.
4- THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR DEVELOPING THE FINAL, COORDINATED, COMPREHENSIVE, CODE-COMPLIANT, PERMIT-READY, AND BUILDABLE SITE GRADING AND GEOMETRIC LAYOUT PLANS REQUIRED FOR THE COMPLETE DESIGN AND CONSTRUCTION OF THE PROJECT.
5- THE DESIGN-BUILD ENTITY SHALL ENGAGE A DULY LICENSED PROFESSIONAL LAND SURVEYOR AUTHORIZED TO PRACTICE IN PUERTO RICO TO ESTABLISH, VERIFY, AND CERTIFY ALL SURVEY CONTROL, BENCHMARKS, HORIZONTAL AND VERTICAL DATUMS, PROJECT COORDINATES, GEOGRAPHIC REFERENCE POINTS, PROPERTY OR LOT LIMITS, AND CONSTRUCTION CONTROL INFORMATION REQUIRED FOR FINAL DESIGN AND CONSTRUCTION.
6- THE FINAL SITE GRADING AND GEOMETRIC LAYOUT PLANS PREPARED BY THE DESIGN-BUILD ENTITY SHALL BE PROPERLY GEOREFERENCED, SURVEY-BASED, DIMENSIONALLY COORDINATED, AND SUITABLE FOR FIELD LAYOUT, CONSTRUCTION STAKING, PERMITTING, QUALITY CONTROL, AND FINAL PROJECT RECORD DOCUMENTATION.
7- THE DESIGN-BUILD ENTITY SHALL VERIFY AND COORDINATE THE FINAL SITE LAYOUT WITH THE CERTIFIED EXISTING CONDITIONS SURVEY, FINAL BUILDING LOCATION, STRUCTURAL GRID, FINISHED FLOOR ELEVATIONS, SITE TOPOGRAPHY, EXISTING AND PROPOSED UTILITIES, DRAINAGE SYSTEMS, ADJACENT CAMPUS FACILITIES, ACCESS REQUIREMENTS, AND CONSTRUCTION PHASING.
8- THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR THE FINAL DESIGN AND COORDINATION OF ALL SITE GRADES, SPOT ELEVATIONS, SLOPES, HIGH POINTS, LOW POINTS, DRAINAGE PATTERNS, CURB ELEVATIONS, PAVEMENT ELEVATIONS, SIDEWALK ELEVATIONS, RAMP ELEVATIONS, BUILDING ENTRY ELEVATIONS, CANOPY AREAS, ROADWAY PROFILES, AND TRANSITIONS TO EXISTING CONDITIONS.
9- THE DESIGN-BUILD ENTITY SHALL CONFIRM THAT THE FINAL GRADING DESIGN PROVIDES POSITIVE DRAINAGE AWAY FROM BUILDING ENTRANCES, EXTERIOR WALLS, CANOPIES, PEDESTRIAN ROUTES, AMBULANCE AREAS, ROADWAYS, PARKING AREAS, PLAZAS, PLANTING AREAS, AND OTHER SITE IMPROVEMENTS, WITHOUT ADVERSELY AFFECTING EXISTING ADJACENT CAMPUS FACILITIES THAT ARE TO REMAIN.
10- THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR THE FINAL GEOMETRIC DESIGN OF ALL PROPOSED ROADWAYS, ACCESS DRIVES, SERVICE DRIVES, EMERGENCY VEHICLE ROUTES, AMBULANCE CIRCULATION, DROP-OFF AND PICK-UP LANES, CURB RADII, TURNING MOVEMENTS, DRIVEWAY WIDTHS, PAVEMENT MARKINGS, SIDEWALKS, RAMPS, CROSSWALKS, ACCESSIBLE ROUTES, LOADING AREAS, AND OTHER SITE CIRCULATION ELEMENTS.
11- THE DESIGN-BUILD ENTITY SHALL VERIFY THAT ALL FINAL ROADWAY, AMBULANCE, SERVICE, AND EMERGENCY ACCESS GEOMETRIES ARE COORDINATED WITH THE REQUIRED VEHICLE TURNING RADII, CLEARANCES, OVERHEAD CANOPY HEIGHTS, FIRE DEPARTMENT ACCESS REQUIREMENTS, EMERGENCY OPERATIONAL REQUIREMENTS, AND CAMPUS TRAFFIC CIRCULATION CONDITIONS.
12- THE DESIGN-BUILD ENTITY SHALL COORDINATE THE FINAL SITE PLAN WITH ALL APPLICABLE ACCESSIBILITY REQUIREMENTS, INCLUDING ACCESSIBLE ROUTES, SLOPES, CROSS-SLOPES, CURB RAMPS, LANDINGS, DOOR APPROACHES, DROP-OFF AREAS, PARKING AREAS, AND ACCESSIBLE CONNECTIONS BETWEEN THE PROJECT, EXISTING CAMPUS FACILITIES, AND PUBLIC OR CAMPUS PEDESTRIAN ROUTES.
13- THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR THE FINAL DESIGN AND COORDINATION OF ALL SITE DRAINAGE IMPROVEMENTS, INCLUDING INLETS, CATCH BASINS, MANHOLES, TRENCH DRAINS, PIPES, SWALES, UNDERGROUND DRAINAGE SYSTEMS, STORMWATER MANAGEMENT ELEMENTS, AND CONNECTIONS TO EXISTING OR PROPOSED CAMPUS DRAINAGE INFRASTRUCTURE.
14- THE DESIGN-BUILD ENTITY SHALL COORDINATE THE FINAL SITE GRADING AND GEOMETRIC LAYOUT WITH ALL SITE UTILITIES, INCLUDING BUT NOT LIMITED TO STORM DRAINAGE, SANITARY, POTABLE WATER, FIRE PROTECTION, ELECTRICAL, TELECOMMUNICATIONS, DATA, SECURITY, SITE LIGHTING, EMERGENCY POWER, MEDICAL GAS, AND OTHER REQUIRED INFRASTRUCTURE.
15- THE DESIGN-BUILD ENTITY SHALL COORDINATE THE FINAL LAYOUT OF PLANTING AREAS, LANDSCAPE ZONES, HARDSCAPE AREAS, SITE FURNISHINGS, CURBS, WALKWAYS, RAMPS, WALLS, GUARDRAILS, BOLLARDS, SIGNAGE, LIGHTING, AND OTHER EXTERIOR IMPROVEMENTS WITH THE FINAL CIVIL, ARCHITECTURAL, LANDSCAPE, STRUCTURAL, MEP, FIRE PROTECTION, AND SECURITY DESIGN.
16- THE DESIGN-BUILD ENTITY SHALL VERIFY ALL FINAL DIMENSIONS, ELEVATIONS, ALIGNMENTS, RADII, COORDINATES, OFFSETS, SETBACKS, CLEARANCES, AND CONTROL POINTS NECESSARY TO CONSTRUCT THE WORK ACCURATELY AND WITHOUT CONFLICT WITH EXISTING CONDITIONS, ADJACENT FACILITIES, UTILITIES, OR OTHER PROJECT COMPONENTS.
17- THE DESIGN-BUILD ENTITY SHALL NOT RELY EXCLUSIVELY ON THE PRELIMINARY GRADING, DIMENSIONS, ELEVATIONS, ROADWAY CONFIGURATIONS, OR SITE FEATURES SHOWN ON THIS DRAWING FOR FINAL DESIGN, PERMITTING, COST ESTIMATING, PROCUREMENT, CONSTRUCTION STAKING, OR FIELD CONSTRUCTION.
18- ANY DISCREPANCIES BETWEEN THIS PRELIMINARY SITE PLAN, THE CERTIFIED SURVEY, EXISTING FIELD CONDITIONS, UTILITY INFORMATION, CAMPUS OPERATIONAL REQUIREMENTS, REGULATORY REQUIREMENTS, OR FINAL DESIGN REQUIREMENTS SHALL BE IDENTIFIED, COORDINATED, AND RESOLVED BY THE DESIGN-BUILD ENTITY PRIOR TO CONSTRUCTION.
19- THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR OBTAINING ALL FINAL CIVIL ENGINEERING DESIGN SERVICES, SURVEYING SERVICES, GEOTECHNICAL COORDINATION, UTILITY COORDINATION, PERMITTING COORDINATION, SITE LOGISTICS COORDINATION, AND CONSTRUCTION STAKING SERVICES REQUIRED TO COMPLETE THE SITE WORK.
20- PRIOR TO CONSTRUCTION, THE DESIGN-BUILD ENTITY SHALL PREPARE AND SUBMIT FINAL SITE GRADING PLANS, GEOMETRIC LAYOUT PLANS, DRAINAGE PLANS, UTILITY PLANS, PAVEMENT PLANS, ACCESSIBILITY PLANS, SITE DETAILS, CONSTRUCTION CONTROL INFORMATION, AND OTHER RELATED DOCUMENTS REQUIRED BY THE RFP, CONTRACT DOCUMENTS, PERMITTING AUTHORITIES, AND AUTHORITIES HAVING JURISDICTION.
21- THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR COORDINATING THE FINAL SITE DESIGN WITH ASEM, CAMPUS FACILITIES PERSONNEL, UTILITY PROVIDERS, REGULATORY AGENCIES, EMERGENCY RESPONSE REQUIREMENTS, AND OTHER AUTHORITIES HAVING JURISDICTION.
22- THE DESIGN-BUILD ENTITY SHALL PROTECT EXISTING CAMPUS OPERATIONS, ADJACENT FACILITIES, PEDESTRIAN ACCESS, VEHICULAR ACCESS, AMBULANCE ACCESS, EMERGENCY ACCESS, UTILITIES, AND LIFE-SAFETY FUNCTIONS DURING ALL PHASES OF FINAL DESIGN AND CONSTRUCTION.
23- EXISTING OR PROPOSED CONDITIONS NOT SHOWN, INCOMPLETELY SHOWN, OR SHOWN DIFFERENTLY ON THIS PRELIMINARY DRAWING SHALL NOT RELIEVE THE DESIGN-BUILD ENTITY FROM ITS RESPONSIBILITY TO PREPARE A COMPLETE, COORDINATED, SURVEY-BASED, GEOREFERENCED, PERMIT-READY, AND BUILDABLE FINAL SITE DESIGN.
24- THE INCLUSION OF THIS PRELIMINARY PROPOSED SITE GRADING AND GEOMETRIC LAYOUT PLAN IN THE RFP BRIDGING DOCUMENTS DOES NOT TRANSFER TO THE OWNER OR BRIDGING ARCHITECT THE DESIGN-BUILD ENTITY'S RESPONSIBILITY FOR FINAL CIVIL DESIGN, FINAL SITE ENGINEERING, SURVEY CONTROL, GEOMETRIC LAYOUT, GRADING, DRAINAGE, UTILITY COORDINATION, ACCESSIBILITY COMPLIANCE, CONSTRUCTION STAKING, OR PROPER CONSTRUCTION OF THE SITE WORK.
25- THE DESIGN-BUILD ENTITY SHALL ASSUME FULL RESPONSIBILITY FOR TRANSFORMING THE PRELIMINARY SITE PLANNING INTENT SHOWN ON THIS DRAWING INTO A FINAL, COORDINATED, CODE-COMPLIANT, SURVEY-BASED, GEOREFERENCED, CONSTRUCTIBLE, AND FULLY DOCUMENTED SITE DESIGN FOR THE PUERTO RICO TRAUMA HOSPITAL PROJECT.

LEGEND:

- FOOTPRINT OF PROPOSED BUILDING
- NEW RETAINING WALL
- NEW 7'-0" HIGH REINFORCED CONCRETE AND BLOCK FENCE

00.00 PROPOSED GRADING POINT ELEVATION LEVELS
00.00 EXISTING GRADING LEVELS
T.E. TOP ELEVATION

C.B. (#) NEW SUGGESTED CATCH BASINS TO BE USED TO BE CONNECTED TO EXISTING STORM SEWER SYSTEM AS REQUIRED. CATCH BASIN DEPTH TO INVERT ELEVATION SHALL BE ADAPTED FOR PROPER DRAIN SLOPE INTO EXISTING SYSTEM.

1. NEW CATCH BASINS TO BE CONNECTED AS REQUIRED TO EXISTING STORM SEWER DRAIN SYSTEM.
2. LIMIT OF EXISTING GRADING ELEVATIONS TO REMAIN.
3. LIMIT OF EXISTING PAVEMENT ELEVATIONS TO REMAIN.
4. NEW PAVED PARKING AREA TO BE BUILT FOLLOWING THE EXISTING GRADING LEVELS.
5. EXISTING ROADWAY AND WALWAY AREAS INSIDE THE PROJECT SCOPE LIMITS TO REMAIN AND SERVE THE PROPOSED PROJECT USE LAYOUT. THE AREA SHALL BE PROTECTED AND PRESERVED DURING THE CONSTRUCTION PROCESS, AND SHALL BE REPAIRED AND AND REFINISHED AS REQUIRED TO SERVE THE COMPLETED PROJECT IN ITS OPERATIONAL USE.
6. NEW RETAINING WALL.
7. TOP OF CONCRETE FENCE WALL ELEVATION OVER RETAINING WALL SHALL BE AT LEAST 27.64 M.
8. EXISTING STORM SEWER CATCH BASINS OUTSIDE FOOTPRINT SHALL REMAIN. THEY SHALL BE USED AS POINT OF CONNECTION FOR THE PROJECT STORM SEWER DRAIN PIPING AS REQUIRED.
9. NEW PLANTED AREA TO BE GRADED AT A LEVEL OF 0.10 MTS. BELOW THE SURROUNDING EDGES LEVEL OF WALKWAYS & CURBS.
10. NEW REINFORCED CONCRETE AND BLOCK FENCE IT SHALL BE AN EXTENSION OF THE PORTION OF THE EXISTING CONCRETE FENCE.
11. PORTION OF THE EXISTING REINFORCED CONCRETE AND BLOCK FENCE TO REMAIN.
12. METAL SWING PEDESTRIAN GATE.
13. NEW CATCH BASINS CONNECTED AS REQUIRED TO EXISTING STORM SEWER DRAIN SYSTEM. IT SHALL BE INSTALLED & SUPPLIED WITH AN INTEGRATED STORM SEWER LIFT STATION ASSEMBLY AS REQUIRED.

NOTES:

1. PRIOR TO THE COMMENCEMENT OF THE CONSTRUCTION WORK, THE CONTRACTOR SHALL SURVEY AND MARK IN THE FIELD THE PROPERTY BOUNDARIES AND THE BUILDING LAYOUT FOOTPRINT PERIMETER AND COLUMNS AXES USING A LICENSED SURVEYOR
2. PRIOR TO THE COMMENCEMENT OF THE CONSTRUCTION WORK, THE CONTRACTOR SHALL MARK IN THE FIELD THE LAYOUT OF ALL OF THE BUILDING FOOTPRINTS, ROADWAYS, WALKWAYS AND FENCES USING A LICENSED SURVEYOR.
3. ANY DISCREPANCIES ARISING BETWEEN THE PROPOSED LAYOUT OF THE BUILDING FOOTPRINT, ROADWAYS, WALKWAYS AND ACCESSORY STRUCTURES SHALL BE INFORMED TO THE OWNER FOR THE PROPER LAYOUT REVISION AND ADJUSTMENT WHEN REQUIRED.
4. PRIOR TO THE COMMENCEMENT OF THE CONSTRUCTION WORK, THE CONTRACTOR SHALL SURVEY AND CONFIRM IN THE FIELD THE EXISTING STORM SEWER SYSTEM LAYOUT, DISTRIBUTION AND INFORMATION RELATED:
   - A - CATCH BASINS TOP ELEVATION
   - B - CATCH BASINS INVERT ELEVATION
   - C - CATCH BASINS DIMENSIONS
   - D - POINT OF CONNECTIONS TO EXISTING ADJACENT CENTRO MEDICO STORM SEWER SYSTEM.

   THE INFORMATION SHALL BE USE AS REFERENCE TO CONNECT THE NEW LAYOUT OF PROPOSED CATCH BASINS, SHOWN HEREIN THE DRAWINGS, TO EXISTING SYSTEM USING STORM SEWER LIFT PUMPING ASSEMBLIES AS REQUIRED.

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

DATE: JULY 2026
DRAWN BY:
APPROVED BY:
SCALE: AS SHOWN

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF DESIGN-BUILD BRIDGING DOCUMENTS AND ARE NOT INTENDED FOR CONSTRUCTION OBJECTIVES. DESIGN INTENT, PERFORMANCE CRITERIA, AND TECHNICAL ASSUMPTIONS ARE SUBJECT TO REFINEMENT, MODIFICATION, AND COORDINATION BY THE DESIGN-BUILD ENTITY. THESE DOCUMENTS ARE NOT TO BE USED FOR PERMITTING, BIDDING, FABRICATION, OR CONSTRUCTION PURPOSES. THE DESIGN-BUILD ENTITY SHALL PREPARE ALL FINAL CONSTRUCTION DOCUMENTS REQUIRED FOR THE GUIDANCE OF THE WORK AND SHALL ENTITY THE SELECTED DESIGN-BUILD ENTITY THE SOLE RESPONSIBILITY FOR THE DESIGN, ADEQUACY, AND COMPLETENESS OF ALL SUCH DOCUMENTS. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, AND ACCURACY OF ALL FINAL CONSTRUCTION DOCUMENTS, SHOP DRAWINGS, AND FIELD DOCUMENTATION. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR ANY CONSTRUCTION, INSTALLATION, OR FABRICATION PERFORMED BASED ON THESE DOCUMENTS, AND SHALL NOTIFY THE OWNER AND ARCHITECT OF ANY DISCREPANCIES, ERRORS, OR OMISSIONS BEFORE USE OF THESE DOCUMENTS FOR CONSTRUCTION PURPOSES IS STRICTLY PROHIBITED.

NO.	DATE	DESCRIPTIONS

THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS FOR THE PUERTO RICO TRAUMA HOSPITAL PROJECT. THEY ARE INTENDED FOR USE SOLELY FOR USE IN CONNECTION WITH THIS PROJECT AND MAY BE USED ONLY BY PERSONS OR ENTITIES AUTHORIZED BY THE ARCHITECT. UNAUTHORIZED REPRODUCTION, DISTRIBUTION, MODIFICATION, DISCLOSURE, RELIANCE, OR REUSE OF THESE DOCUMENTS, IN WHOLE OR IN PART, IS PROHIBITED WITHOUT THE ARCHITECT'S PRIOR WRITTEN CONSENT. ANY UNAUTHORIZED USE OF THESE DOCUMENTS SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO THE ARCHITECT.

GENERAL PROJECT SCOPE SUPLEMENTARY NOTES & INSTRUCTIONS

(APPLICABLE WHERE REQUIRED TO THE FULL SCOPE OF THE WORK SHOWN IN THE DRAWINGS AND THEIR NOTES)

1. THE CONTRACTOR SHALL RETAIN THE SERVICES A PUERTO RICO LICENSED AND CERTIFIED PROFESSIONAL SURVEYOR TO CONFIRM, IN THE PROJECT SITE, THE GEOMETRY OF THE PROJECT DESIGN INTENT LAYOUT, INCLUDING BUT NOT LIMITED TO, PROPOSED STRUCTURES, EXPANSIONS, ENTRANCES, VEHICULAR ACCESSES, SIDEWALKS AND WALKWAYS. THE PROPOSED DESIGN LAYOUT SHALL BE FIELD ADJUSTED AND/OR ADAPTED AS REQUIRED TO IRREGULARITIES RELATED TO THE SITE SPECIFIC CONDITIONS FOLLOWING THE DESIGN INTENT OF THE DRAWINGS. A REVISED SITE PLAN SHALL BE SUBMITTED TO THE ARCHITECT FOR ACCEPTANCE PRIOR TO STARTING THE WORK.
2. UNLESS OTHERWISE NOTED IN THE DRAWINGS, THE CONSTRUCTION OF ALL NEW PEDESTRIAN SIDEWALKS PARALELL TO ROADWAY SHALL BE EXECUTED FOLLOWING THE SAME LAYOUT, GEOMETRY, AND FORM OF THE LINE OF THE EXISTING ROADWAY WIDTH EDGE CURBS ALIGNMENT.
3. UNLESS OTHERWISE NOTED IN THE DRAWINGS, THE FINISHED LEVEL ELEVATION OF ALL NEW SIDEWALKS SHALL BE CONSTRUCTED 6" INCHES (15.25 C.M) ABOVE THE PROPOSED GRADING FINISHED LEVEL OF THE ADJACENT PUBLIC ROADWAY SURFACE EDGE.
4. UNLESS OTHERWISE NOTED IN THE DRAWINGS, THE ALIGNMENT, LAYOUT, AND WIDTH OF ALL THE COMPONENTS OF THE NEW SIDEWALKS SHALL BE BUILT EXTENDING PARALLEL FROM THE LINE OF THE NEW PUBLIC ROADWAY EDGE ALIGNMENT.
5. THE CONSTRUCTION OF SIDEWALKS SHALL BE EXECUTED AS PER THE DESIGN SCOPE INTENT SHOW IN THE DRAWINGS (SEE SHEETS AS-1.2 TO A-1.6). THE CONSTRUCTION WORK SHALL BE GUIDED BY FOLLOWING, MAINTAINING, AND ADHERING TO THE ALIGNMENTS, CURVATURES, TRANSITIONS, SLOPES, CROSS SLOPES, GRADES, RADIUS, DIAMETERS, AND INTERSECTION OF THE GEOMETRIC LAYOUT CONDITIONS OF THE NEW PUBLIC ROADWAYS.
6. ALL THE WORK AT THE ENDS AND/OR EDGES OF THE PROJECT WORK SCOPE LIMIT SHALL BE CONSTRUCTED AND COORDINATED TO ABUTT FLUSH AND LEVELED WITH THE ADJACENT EXISTING WALKWAYS AND ROADWAYS PAVEMENT FINISHED GRADING LEVEL AND EDGES. A ½" EXPANSION JOINT WITH AN EXTERIOR GRADE ELASTIC JOINT FILLER MATERIAL SHALL BE SUPPLIED AND INSTALLED BETWEEN ALL NEW AND EXISTING PAVEMENT CONSTRUCTION, WALLS, AND ADJACENT STRUCTURES.
7. NEW CARPET PLANTING SHALL BE PROVIDED ON ALL GROUNDS SURFACES INSIDE THE PROJECT LIMIT. PROVIDE TOPSOIL AND SHALL BE PLANTED WITH GRAMA ZOYZIA MANILA (ZOYSIA MATRELLA 'MANILA') IN FULL AREA CARPET PLANTING. PLANTING SHALL INCLUDE A BED CONSISTING OF A 6" DEEP TOPSOIL LAYER, 2" DEEP MULCH LAYER AND THE REQUIRED FERTILIZER MIX FOR THE PLANT TYPE. IN ADDITION, IT SHALL APPLY TO ALL NON-BUILT AND/OR NON-PAVED LOT SURFACE AREAS.
8. THE GEOMETRY AND COMPONENTS OF THE LAYOUTS AND DETAILS INCLUDED IN DRAWINGS MAY HAVE TO BE PARTIALLY FIELD ADJUSTED AND/OR ADAPTED TO MINOR IRREGULARITIES RELATED TO THE SITE-SPECIFIC CONDITIONS AT EACH LOCATION. SAID ADJUSTMENTS OR ADAPTATION SHALL BE ALLOWED IN THE CONTRACTOR PROPOSAL AND SHALL BE COORDINATED IN THE FIELD DURING THE CONSTRUCTION OF THE PROJECT.
9. ALL EXISTING UTILITY POLES, SERVICE POLES, SURVEILANCE POSTS, INFORMATION SIGNPOSTS, TRAFFIC SIGNPOSTS AND OTHER ELEMENTS SHALL BE PROTECTED AND KEPT OPERABLE DURING THE CONSTRUCTION OF THE PROJECT. THEY SHALL BE MAINTAINED OR ADAPTED WHEN REQUIRED TO REMAIN ADJACENT TO THE NEW CURB AND GUTTER. WHEN REQUIRED THEY SHALL BE REPAIRED, STRIPPED, AND PAINTED TO REMAIN OPERABLE AFTER THE CONSTRUCTION OF THE PROJECT IS COMPLETED.
10. ALL CABLING, HARDWARE AND SOFTWARE RELATED TO THE VOICE COMMUNICATION SYSTEM, INFORMATION TECHNOLOGY SYSTEM, CLOSED CIRCUIT TV SYSTEM AND ELECTRONIC ACCESS CONTROL SYSTEM WILL BE SUPPLIED AND INSTALLED BY EACH OF THE SYSTEMS OWNER'S SUBCONTRACTORS.
11. UNLESS OTHERWISE NOTED IN THE DRAWINGS, THE CONSTRUCTION OF ALL NEW PEDESTRIAN WALKWAYS INSIDE THE PROJECT SCOPE WORK LIMIT SHALL BE EXECUTED FOLLOWING THE SAME LAYOUT, GEOMETRY, AND FORM OF THE LINE OF THE EXISTING ROADWAY WIDTH EDGE CURBS ALIGNMENT.
12. UNLESS OTHERWISE NOTED IN THE DRAWINGS, THE FINISHED LEVEL ELEVATION OF ALL NEW PEDESTRIAN WALKWAYS AND SIDEWALKS SHALL BE CONSTRUCTED 6" INCHES (15.25 C.M) ABOVE THE EXISTING GRADING FINISHED LEVEL OF THE ADJACENT ROADWAY SURFACE EDGE ALONG THE PROJECT SCOPE WORK LIMIT AREAS.
13. UNLESS OTHERWISE NOTED IN THE DRAWINGS, THE ALIGNMENT, LAYOUT, AND WIDTH OF ALL THE COMPONENTS OF THE NEW WALKWAYS SHALL BE BUILT EXTENDING PARALLEL FROM THE LINE OF THE EXISTING ROADWAY EDGE ALIGNMENT.
14. A SECURITY FENCE SHALL BE PROVIDED DURING CONSTRUCTION, ALONG ALL THE SEGMENTS OF THE PERIMETER EDGES OF THE PROJECT LIMIT AREAS BEING CONSTRUCTED. THE SECURITY FENCE A 6'-0" HIGH CHAIN LINK FENCE WITH AN OPAQUE SILT FABRIC COVER.
15. ALL THE WORK AT THE ENDS AND/OR EDGES OF THE PROJECT WORK SCOPE LIMIT SHALL BE CONSTRUCTED AND COORDINATED TO ABUTT FLUSH AND LEVELED WITH THE ADJACENT EXISTING PAVEMENT FINISHED GRADING LEVEL AND EDGES. A ½" EXPANSION JOINT WITH AN EXTERIOR GRADE ELASTIC JOINT FILLER MATERIAL SHALL BE SUPPLIED AND INSTALLED BETWEEN ALL NEW AND EXISTING PAVEMENT CONSTRUCTION, WALLS, AND ADJACENT STRUCTURES.
16. ALL EXISTING UTILITIES INSIDE THE PROJECT WORK SCOPE LIMIT INCLUDING, BUT NOT LIMITED TO, JUNCTION BOXES, OUTLET COVERS, ACCESS LIDS, CATCH BASINS, DRAIN GRILLES WATER METERS, GAS METERS, FLOW REGISTERS, ETC. SHALL BE PROTECTED DURING THE CONSTRUCTION PROCESS AND REPAIRED, ADAPTED AND REINSTALLED, IN THE SAME LOCATION, WITH ALL REQUIRED COMPONENTS AND/OR PARTS TO REMAIN OPERABLE AND LEVELED FLUSH WITH THE NEW PAVEMENT FINISHES AND LEVELS.
17. ALL EXISTING FIRE HYDRANTS INSIDE THE PROJECT SCOPE WORK LIMIT SHALL BE PROTECTED AND KEPT OPERABLE DURING THE CONSTRUCTION OF THE PROJECT. THE FIRE HYDRANTS LOCATION SHALL BE MAINTAINED OR ADAPTED IF REQUIRED TO REMAIN INSIDE THE NEW OUTER PLANTING STRIP ADJACENT TO THE NEW CURB AND GUTTER. THE FIRE HYDRANTS SHALL BE REPAIRED, STRIPPED, AND PAINTED TO REMAIN OPERABLE AFTER THE CONSTRUCTION OF THE PROJECT IS COMPLETED.
18. THE GEOMETRY AND COMPONENTS OF THE LAYOUTS AND DETAILS INCLUDED IN DRAWINGS A-1.1 TO A-1.15A (17 TOTAL DRAWINGS) MAY HAVE TO BE PARTIALLY FIELD ADJUSTED AND/OR ADAPTED TO MINOR IRREGULARITIES RELATED TO THE SITE-SPECIFICCONDITIONS OF EACH LOCATION. SAID ADJUSTMENTS OR ADAPTATION SHALL BE ALLOWED IN THE CONTRACTOR PROPOSAL AND SHALL BE COORDINATED IN THE FIELD DURING THE CONSTRUCTION OF THE PROJECT.
19. EDGE OF EXISTING PAVED AREA TO REMAIN AND TO BE SAW CUT FOR THE FLUSH ABUTTING JOINT WITH NEW PAVEMENT.
20. NEW PAVEMENT ELEVATIONS ON THE EDGE OF EXISTING PAVEMENT TO REMAIN SHALL BE LEVELLED FLUSH TO CREATE A SMOOTH CONTINUATION OF THE ROAD SURFACE.

GENERAL NOTES – SITE CIVIL CONSTRUCTION WORK

(AS REQUIRED AND WHEN BY SCOPE OF WORK SHOWN IN THE CONTRACT PLANS)

1. ALL WORK SHALL INCLUDE COMPLETE SITE CIVIL CONSTRUCTION FOR AREAS OUTSIDE THE APPROX. 3,800 SM BUILDING FOOTPRINT WITHIN THE TOTAL 5,200 SM SITE.
2. WORK INCLUDES CONSTRUCTION OF CONCRETE SIDEWALKS, ACCESS ROADWAYS, CURBS, GUTTERS, DRAINAGE, AND LANDSCAPED PLANTING AREAS.
3. CONTRACTOR SHALL VERIFY SITE CONDITIONS AND COORDINATE WITH PREVIOUSLY COMPLETED EXCAVATION AND FOUNDATION WORK.
4. COMPLY WITH ALL APPLICABLE CODES INCLUDING OSHA, AASHTO (WHERE APPLICABLE), LOCAL MUNICIPAL REQUIREMENTS, AND AUTHORITIES HAVING JURISDICTION.
5. ALL WORK SHALL FOLLOW CSI DIVISIONS 31 (EARTHWORK), 32 (EXTERIOR IMPROVEMENTS), AND RELATED SECTIONS.
6. COORDINATE WORK WITH EXISTING HOSPITAL OPERATIONS. MAINTAIN SAFE ACCESS FOR EMERGENCY, SERVICE, AND PEDESTRIAN CIRCULATION AT ALL TIMES.
7. PREPARE SUBGRADE FOR ALL PAVEMENTS AND WALKWAYS. PROOF-ROLL AND COMPACT TO MINIMUM 95% MODIFIED PROCTOR.
8. REMOVE UNSUITABLE MATERIALS AND REPLACE WITH ENGINEERED FILL AS REQUIRED.
9. CONSTRUCT CONCRETE SIDEWALKS WITH MINIMUM 4" THICKNESS (UNLESS OTHERWISE SPECIFIED), WITH CONTROL JOINTS AT 5'-0" MAX SPACING. PROVIDE ADA-COMPLIANT SLOPES, CROSS-SLOPES, AND ACCESSIBLE ROUTES. PROVIDE TACTILE WARNING SURFACES AT CURB RAMPS.
10. CONSTRUCT CONCRETE ACCESS ROADWAYS DESIGNED FOR HOSPITAL SERVICE AND EMERGENCY VEHICLE LOADS.
11. PROVIDE THICKNESS AND REINFORCEMENT PER STRUCTURAL/CIVIL DESIGN.
12. ENSURE PROPER DRAINAGE SLOPES TO PREVENT WATER PONDING.
13. INSTALL CONCRETE CURBS AND GUTTERS ALONG ROADWAYS.
14. PROVIDE EXPANSION AND CONTROL JOINTS AS REQUIRED.
15. ENSURE CONTINUOUS DRAINAGE FLOW TO STORMWATER SYSTEM.
16. INSTALL STORM DRAINAGE SYSTEMS INCLUDING CATCH BASINS, AREA DRAINS, AND PIPING.
17. CONNECT TO EXISTING OR NEW STORM SYSTEM AS INDICATED.
18. PROVIDE POSITIVE DRAINAGE AWAY FROM BUILDING.
19. PROVIDE PLANTING AREAS PARALLEL TO SIDEWALKS.
20. INSTALL TOPSOIL, PLANTING SOIL MIX, AND REQUIRED FERTILIZATION.
21. SELECT PLANT MATERIAL SUITABLE FOR URBAN HEALTHCARE ENVIRONMENT AND LOW MAINTENANCE.
22. PROVIDE IRRIGATION SYSTEMS WHERE REQUIRED.
23. IMPLEMENT EROSION AND SEDIMENT CONTROL MEASURES DURING SITE WORK.
24. PREVENT SEDIMENT DISCHARGE INTO STORM SYSTEMS.
25. CONTROL DUST, NOISE, AND CONSTRUCTION TRAFFIC TO MINIMIZE IMPACT ON HOSPITAL OPERATIONS.
26. COORDINATE ALL SITE ELEMENTS WITH UTILITIES INCLUDING LIGHTING, ELECTRICAL, WATER, AND COMMUNICATION SYSTEMS.
27. ALL WORK SHALL BE SUBJECT TO INSPECTION. PROVIDE TESTING REPORTS FOR CONCRETE, COMPACTION, AND MATERIALS.
28. REMOVE ALL DEBRIS AND TEMPORARY FACILITIES. LEAVE SITE CLEAN AND READY FOR FINAL USE.
29. ALL WORK SHALL COMPLY WITH APPLICABLE CODES AND STANDARDS INCLUDING:
    - A. PUERTO RICO BUILDING CODE (PRBC) AND ADOPTED IBC
    - B. ACI 301 (SPECIFICATIONS FOR STRUCTURAL CONCRETE)
    - C. ACI 318 (BUILDING CODE REQUIREMENTS FOR STRUCTURAL CONCRETE)
    - D. ACI 330 (CONCRETE PARKING LOTS AND PAVEMENTS)
    - E. ASTM STANDARDS FOR MATERIALS AND TESTING
    - F. AASHTO GUIDELINES FOR ROADWAY DESIGN (WHERE APPLICABLE)
    - G. ADA (AMERICANS WITH DISABILITIES ACT) ACCESSIBILITY GUIDELINES
    - H. LOCAL MUNICIPAL AND UTILITY REQUIREMENTS

GENERAL NOTES / PROPOSED ARCHITECTURAL SITE PLAN:

1- THIS PROPOSED ARCHITECTURAL SITE PLAN HAS BEEN PREPARED AS A PRELIMINARY, CONCEPTUAL, AND SUGGESTED ARCHITECTURAL SITE PLANNING DOCUMENT FOR USE AS PART OF THE DESIGN-BUILD REQUEST FOR PROPOSAL ("RFP") BRIDGING DOCUMENTS ONLY.
2- THIS DRAWING IS INTENDED TO COMMUNICATE THE OWNER'S AND BRIDGING ARCHITECT'S GENERAL ARCHITECTURAL SITE DESIGN INTENT, INCLUDING PRELIMINARY EXTERIOR PAVEMENT AREAS, WALKWAYS, PLAZAS, PEDESTRIAN CONNECTIONS, ACCESS POINTS, CANOPIES, ARCHITECTURAL SITE ELEMENTS, HARDSCAPE AREAS, PLANTING AREA INTERFACES, EXTERIOR FINISH ZONES, AND OTHER ARCHITECTURAL FEATURES RELATED TO THE ADVANCED ARCHITECTURAL DESIGN DEVELOPMENT DOCUMENTS.
3- THIS DRAWING SHALL NOT BE CONSTRUED AS A FINAL ARCHITECTURAL SITE PLAN, FINAL HARDSCAPE PLAN, FINAL LANDSCAPE PLAN, FINAL CIVIL PLAN, FINAL GRADING PLAN, FINAL CONSTRUCTION STAKING PLAN, PERMIT-READY DOCUMENT, OR CONSTRUCTION DOCUMENT.
4- THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR DEVELOPING THE FINAL, COORDINATED, COMPREHENSIVE, CODE-COMPLIANT, PERMIT-READY, AND BUILDABLE ARCHITECTURAL SITE PLANS REQUIRED FOR THE COMPLETE DESIGN AND CONSTRUCTION OF THE PROJECT.
5- THE DESIGN-BUILD ENTITY SHALL COORDINATE THE FINAL ARCHITECTURAL SITE PLAN WITH THE CERTIFIED EXISTING CONDITIONS SURVEY, FINAL EXISTING CONDITIONS SITE PLAN, FINAL GRADING AND GEOMETRIC LAYOUT PLANS, FINAL CIVIL ENGINEERING DOCUMENTS, FINAL BUILDING DESIGN, FINAL LANDSCAPE DESIGN, FINAL STRUCTURAL DESIGN, FINAL MEP/FP DESIGN, FINAL SITE UTILITY DESIGN, AND ALL OTHER PROJECT DISCIPLINES.
6- THE DESIGN-BUILD ENTITY SHALL NOT RELY EXCLUSIVELY ON THE PRELIMINARY ARCHITECTURAL SITE FEATURES, DIMENSIONS, MATERIAL INDICATIONS, PAVEMENT CONFIGURATIONS, WALKWAY LOCATIONS, SITE ELEMENTS, OR EXTERIOR FINISH AREAS SHOWN ON THIS DRAWING FOR FINAL DESIGN, PERMITTING, PROCUREMENT, COST ESTIMATING, CONSTRUCTION STAKING, OR FIELD CONSTRUCTION.
7- ALL ARCHITECTURAL SITE PLAN ELEMENTS SHOWN ON THIS DRAWING SHALL BE FIELD VERIFIED, SURVEY-BASED, DIMENSIONALLY COORDINATED, AND ADJUSTED AS REQUIRED BY THE DESIGN-BUILD ENTITY TO CONFORM TO FINAL EXISTING CONDITIONS, FINAL GRADES, FINAL DRAINAGE REQUIREMENTS, FINAL UTILITY ROUTING, FINAL ACCESSIBILITY REQUIREMENTS, AND FINAL CONSTRUCTION DOCUMENTS.
8- THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR THE FINAL DESIGN AND COORDINATION OF ALL EXTERIOR ARCHITECTURAL SITE FEATURES, INCLUDING BUT NOT LIMITED TO PAVEMENT FINISHES, WALKWAY SURFACES, PLAZAS, EXTERIOR FLOOR PATTERNS, CURBS, RAMPS, STEPS, LANDINGS, GUARDRAILS, HANDRAILS, BOLLARDS, SITE WALLS, PLANTERS, CANOPIES, BENCHES, SITE FURNISHINGS, SIGNAGE, EXTERIOR LIGHTING INTERFACES, ARCHITECTURAL SCREENING, AND OTHER SITE IMPROVEMENTS.
9- THE DESIGN-BUILD ENTITY SHALL COORDINATE ALL FINAL PAVEMENT, WALKWAY, PLAZA, AND HARDSCAPE MATERIALS WITH THE FINAL GRADING PLAN, DRAINAGE PLAN, STRUCTURAL REQUIREMENTS, SUBGRADE CONDITIONS, VEHICULAR LOADS, PEDESTRIAN LOADS, ACCESSIBILITY REQUIREMENTS, SLIP RESISTANCE REQUIREMENTS, MAINTENANCE REQUIREMENTS, AND LONG-TERM DURABILITY REQUIREMENTS.
10- THE DESIGN-BUILD ENTITY SHALL VERIFY THAT ALL FINAL ARCHITECTURAL SITE SURFACES PROVIDE PROPER SLOPES, CROSS-SLOPES, LANDINGS, TRANSITIONS, ELEVATIONS, DRAINAGE, SURFACE TEXTURE, AND ACCESSIBLE ROUTES IN COMPLIANCE WITH APPLICABLE CODES, STANDARDS, AND AUTHORITIES HAVING JURISDICTION.
11- THE DESIGN-BUILD ENTITY SHALL COORDINATE THE FINAL ARCHITECTURAL SITE PLAN WITH ALL PROPOSED AND EXISTING VEHICULAR AND PEDESTRIAN CIRCULATION ELEMENTS, INCLUDING ROADWAYS, SERVICE DRIVES, AMBULANCE ACCESS ROUTES, EMERGENCY ACCESS ROUTES, DROP-OFF AND PICK-UP AREAS, PATIENT DROP-OFF CANOPIES, PUBLIC ENTRANCES, STAFF ENTRANCES, SERVICE ENTRANCES, SIDEWALKS, CROSSWALKS, RAMPS, AND CAMPUS CONNECTIONS.
12- THE DESIGN-BUILD ENTITY SHALL ENSURE THAT ALL FINAL ARCHITECTURAL SITE ELEMENTS ARE COORDINATED WITH THE FINAL LOCATION OF BUILDING ENTRANCES, FINISHED FLOOR ELEVATIONS, CANOPIES, VESTIBULES, EXTERIOR WALLS, STOREFRONTS, DOORS, LOADING AREAS, EMERGENCY DEPARTMENT ACCESS POINTS, AMBULANCE AREAS, AND OTHER OPERATIONAL COMPONENTS OF THE HOSPITAL.
13- THE DESIGN-BUILD ENTITY SHALL COORDINATE FINAL HARDSCAPE AND ARCHITECTURAL SITE FEATURES WITH ALL SITE UTILITIES, INCLUDING BUT NOT LIMITED TO STORM DRAINAGE, SANITARY, POTABLE WATER, FIRE PROTECTION, ELECTRICAL, TELECOMMUNICATIONS, DATA, SECURITY, SITE LIGHTING, EMERGENCY POWER, MEDICAL GAS, IRRIGATION, AND OTHER REQUIRED INFRASTRUCTURE.
14- THE DESIGN-BUILD ENTITY SHALL VERIFY THAT FINAL SITE ARCHITECTURAL FEATURES DO NOT CONFLICT WITH EXISTING OR PROPOSED MANHOLES, CATCH BASINS, CLEANOUTS, VALVE BOXES, HANDHOLES, PULL BOXES, DUCT BANKS, UTILITY STRUCTURES, EQUIPMENT PADS, SWITCHGEAR, TRANSFORMERS, DRAINAGE STRUCTURES, OR OTHER SITE UTILITY COMPONENTS.
15- THE DESIGN-BUILD ENTITY SHALL COORDINATE THE FINAL ARCHITECTURAL SITE PLAN WITH THE FINAL LANDSCAPE DESIGN, INCLUDING PLANTING AREAS, TREE LOCATIONS, ROOT ZONES, PLANTERS, IRRIGATION REQUIREMENTS, SOIL DEPTHS, DRAINAGE REQUIREMENTS, LANDSCAPE EDGING, SITE FURNISHINGS, SHADE ELEMENTS, AND MAINTENANCE ACCESS.
16- THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR DEVELOPING FINAL CONSTRUCTION DETAILS FOR ALL ARCHITECTURAL SITE ELEMENTS, INCLUDING PAVEMENT SECTIONS, JOINTING, EDGE CONDITIONS, CURB INTERFACES, WALL INTERFACES, RAMP DETAILS, STAIR DETAILS, CANOPY INTERFACES, PLANTER DETAILS, DRAINAGE INTERFACES, EXPANSION JOINTS, CONTROL JOINTS, MATERIAL TRANSITIONS, AND CONNECTIONS TO EXISTING CONDITIONS.
17- THE DESIGN-BUILD ENTITY SHALL COORDINATE FINAL MATERIAL SELECTIONS, FINISHES, COLORS, TEXTURES, PATTERNS, MODULES, JOINT LAYOUTS, AND EXTERIOR ARCHITECTURAL CHARACTER WITH THE ADVANCED ARCHITECTURAL DESIGN DEVELOPMENT INTENT, FINAL BUILDING DESIGN, OWNER REQUIREMENTS, MAINTENANCE CRITERIA, INFECTION CONTROL CONSIDERATIONS, DURABILITY REQUIREMENTS, AND THE FUNCTIONAL NEEDS OF A HOSPITAL CAMPUS ENVIRONMENT.
18- THE DESIGN-BUILD ENTITY SHALL VERIFY THAT ALL FINAL EXTERIOR SURFACE MATERIALS AND ARCHITECTURAL SITE COMPONENTS ARE SUITABLE FOR THE PROJECT'S INTENDED USE, CLIMATE EXPOSURE, HEAVY PEDESTRIAN TRAFFIC, AMBULANCE AND SERVICE OPERATIONS, HOSPITAL MAINTENANCE REQUIREMENTS, EMERGENCY OPERATIONS, AND APPLICABLE CODE REQUIREMENTS.
19- THE DESIGN-BUILD ENTITY SHALL COORDINATE THE FINAL ARCHITECTURAL SITE PLAN WITH ALL REQUIRED LIFE-SAFETY, FIRE ACCESS, EMERGENCY RESPONSE, WAYFINDING, SECURITY, ACCESS CONTROL, SITE LIGHTING, SIGNAGE, AND OPERATIONAL REQUIREMENTS OF THE PUERTO RICO TRAUMA HOSPITAL AND THE EXISTING CENTRO MÉDICO CAMPUS.
20- THE DESIGN-BUILD ENTITY SHALL VERIFY ALL FINAL DIMENSIONS, ELEVATIONS, ALIGNMENTS, RADII, CONTROL POINTS, OFFSETS, COORDINATES, JOINT LAYOUTS, MATERIAL LIMITS, EDGE CONDITIONS, AND TRANSITIONS NECESSARY TO CONSTRUCT THE ARCHITECTURAL SITE WORK ACCURATELY AND WITHOUT CONFLICT WITH EXISTING CONDITIONS, PROPOSED GRADING, PROPOSED UTILITIES, ADJACENT FACILITIES, OR OTHER PROJECT COMPONENTS.
21- ANY DISCREPANCIES BETWEEN THIS PRELIMINARY ARCHITECTURAL SITE PLAN, THE PRELIMINARY EXISTING CONDITIONS SITE PLAN, THE PRELIMINARY GRADING AND GEOMETRIC LAYOUT PLAN, THE CERTIFIED SURVEY, FINAL CIVIL ENGINEERING DOCUMENTS, FIELD CONDITIONS, UTILITY INFORMATION, CAMPUS OPERATIONAL REQUIREMENTS, OR REGULATORY REQUIREMENTS SHALL BE IDENTIFIED, COORDINATED, AND RESOLVED BY THE DESIGN-BUILD ENTITY PRIOR TO CONSTRUCTION.
22- THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR PREPARING FINAL ARCHITECTURAL SITE PLANS, HARDSCAPE PLANS, FINISH PLANS, MATERIAL PLANS, SITE DETAIL DRAWINGS, ACCESSIBILITY DETAILS, SITE FURNISHING PLANS, EXTERIOR SIGNAGE COORDINATION, CANOPY INTERFACE DETAILS, AND ALL OTHER ARCHITECTURAL SITE DOCUMENTS REQUIRED FOR PERMITTING, PROCUREMENT, FABRICATION, INSTALLATION, AND CONSTRUCTION.
23- THE DESIGN-BUILD ENTITY SHALL ENSURE THAT THE FINAL ARCHITECTURAL SITE DOCUMENTS ARE FULLY COORDINATED WITH THE FINAL CIVIL GRADING PLANS, DRAINAGE PLANS, UTILITY PLANS, STRUCTURAL DETAILS, LANDSCAPE PLANS, LIGHTING PLANS, SECURITY PLANS, MEP/FP PLANS, AND CONSTRUCTION PHASING PLANS.
24- THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR COORDINATING THE FINAL ARCHITECTURAL SITE DESIGN WITH ASEM, CAMPUS FACILITIES PERSONNEL, USER GROUPS AS DIRECTED BY ASEM, UTILITY PROVIDERS, REGULATORY AGENCIES, EMERGENCY RESPONSE REQUIREMENTS, AND OTHER AUTHORITIES HAVING JURISDICTION.
25- THE DESIGN-BUILD ENTITY SHALL PROTECT EXISTING CAMPUS OPERATIONS, ADJACENT FACILITIES, PEDESTRIAN ACCESS, VEHICULAR ACCESS, AMBULANCE ACCESS, EMERGENCY ACCESS, UTILITIES, LIFE-SAFETY FUNCTIONS, AND HOSPITAL OPERATIONS DURING ALL PHASES OF FINAL DESIGN AND CONSTRUCTION.
26- EXISTING OR PROPOSED CONDITIONS NOT SHOWN, INCOMPLETELY SHOWN, OR SHOWN DIFFERENTLY ON THIS PRELIMINARY DRAWING SHALL NOT RELIEVE THE DESIGN-BUILD ENTITY FROM ITS RESPONSIBILITY TO PREPARE COMPLETE, COORDINATED, SURVEY-BASED, CODE-COMPLIANT, PERMIT-READY, BUILDABLE, AND FULLY DETAILED FINAL ARCHITECTURAL SITE DOCUMENTS.
27- THE INCLUSION OF THIS PRELIMINARY PROPOSED ARCHITECTURAL SITE PLAN IN THE RFP BRIDGING DOCUMENTS DOES NOT TRANSFER TO THE OWNER OR BRIDGING ARCHITECT THE DESIGN-BUILD ENTITY'S RESPONSIBILITY FOR FINAL ARCHITECTURAL SITE DESIGN, FINAL CIVIL COORDINATION, FINAL GRADING COORDINATION, FINAL MATERIAL SELECTIONS, FINAL DETAILING, FINAL ACCESSIBILITY COMPLIANCE, FINAL CONSTRUCTION DOCUMENTS, OR PROPER CONSTRUCTION OF THE SITE WORK.
28- THE DESIGN-BUILD ENTITY SHALL ASSUME FULL RESPONSIBILITY FOR TRANSFORMING THE PRELIMINARY ARCHITECTURAL SITE DESIGN INTENT SHOWN ON THIS DRAWING INTO A FINAL, COORDINATED, COMPREHENSIVE, CODE-COMPLIANT, SURVEY-BASED, CONSTRUCTIBLE, AND FULLY DOCUMENTED ARCHITECTURAL SITE DESIGN FOR THE PUERTO RICO TRAUMA HOSPITAL PROJECT.

BUILDING ADMINISTRATION COMPLIANCE

1- ALL WORK TO BE EXECUTED UNDER THIS CONTRACT SHALL BE DONE ONLY DURING THE HOURS APPROVED BY THE BUILDING ADMINISTRATOR.

2- ALL WORK EXECUTED UNDER THIS CONTRACT SHALL BE IN ACCORDANCE AND IN COMPLIANCE WITH THE BUILDING ADMINISTRATION REGULATIONS RELATED TO CONSTRUCTION.

NOTES:

- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF DESIGN-BUILD BRIDGING AND ARE NOT INTENDED FOR CONSTRUCTION, PERMITTING, BIDDING, FABRICATION, OR IMPLEMENTATION. THEY ARE NOT TO BE USED FOR PERMITTING, BIDDING, FABRICATION, OR IMPLEMENTATION PURPOSES. THEY ARE INTENDED ONLY TO COMMUNICATE THE DESIGN INTENT AND GUIDANCE FOR THE DESIGN-BUILD ENTITY. THE SELECTED DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR DEVELOPING THE FINAL CONSTRUCTION DOCUMENTS REQUIRED FOR THE PROJECT'S PERMITTING, BIDDING, AND CONSTRUCTION. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, ACCURACY, CODE COMPLIANCE, AND CONSTRUCTABILITY OF THE FINAL DESIGN AND CONSTRUCTION DOCUMENTS. THESE DOCUMENTS CONTAINED HEREIN ARE NOT TO BE USED FOR CONSTRUCTION, BIDDING, OR PERMITTING PURPOSES. THE ARCHITECT AND ENGINEERING CONSULTANTS ASSUME NO RESPONSIBILITY FOR ANY CONSTRUCTION PERFORMED FROM THESE DOCUMENTS. ANY USE OF THESE DOCUMENTS FOR CONSTRUCTION PURPOSES IS STRICTLY PROHIBITED AND SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO THE ARCHITECT AND ENGINEERING CONSULTANTS.

THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS FOR THE PUERTO RICO TRAUMA HOSPITAL PROJECT. THEY ARE NOT TO BE USED SOLELY FOR USE IN CONNECTION WITH THIS PROJECT AND MAY BE USED ONLY BY PERSONS OR ENTITIES WHO HAVE BEEN AUTHORIZED IN WRITING BY DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS. THEY SHALL NOT BE DISCLOSED TO ANY OTHER PERSON OR ENTITY WITHOUT THE WRITTEN CONSENT OF DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS. THE REUSE, REPRODUCTION, ADAPTATION, RELEASE, OR DISCLOSURE OF THESE DOCUMENTS, IN WHOLE OR IN PART, BY ANY MEANS OR FOR ANY PURPOSE WITHOUT THE EXPRESS WRITTEN CONSENT OF DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS IS PROHIBITED. ANY UNAUTHORIZED USE OF THESE DOCUMENTS SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS.

PROPOSED ARCHITECTURAL SITE PLAN

SCALE: 1/16"= 1'-0"

LEGEND:

(APPLICABLE WHERE REQUIRED TO THE FULL SCOPE OF THE WORK SHOWN IN THE DRAWINGS AS-1.1 & AS-1.3 TO AS-1.8 AND THEIR NOTES)

- NEW BUILDING PUERTO RICO TRAUMA HOSPITAL FOOTPRINT
- PAVED PEDESTRIAN WALKWAY PAVEMENTS TO BE CONSTRUCTED AS PER APPLICABLE NOTES.
- GROUND SOIL AREAS TO BE PREPARED FOR PLANTING AFTER FINAL FINISHED GRADING IS COMPLETED. A NEW TOPSOIL LAYER SHALL BE ADDED, AT A RATE OF 3 CUBIC YARDS PER 1,000 S.F., AND THOROUGLY LOOSENED. COMPOST, PEAT OR OTHER AGED MANURE SHALL BE ADDED AS REQUIRED FOR PROPER CARPET PLANTING.
- PROPOSED BUILDING EXPANSION REINFORCED CONCRETE ROADWAY SLAB AND/OR RAMP PAVEMENT TO BE CONSTRUCTED AS PER APPLICABLE NOTES.
- EXISTING ROADWAY AND WALWAY AREAS INSIDE THE PROJECT SCOPE LIMITS TO REMAIN AND SERVE THE PROPOSED PROJECT USE LAYOUT. THE AREA SHALL BE PROTECTED AND PRESERVED DURING THE CONSTRUCTION PROCESS, AND SHALL BE REPAIRED AND AND REFINISHED AS REQUIRED TO SERVE THE COMPLETED PROJECT IN ITS OPERATIONAL USE.
- EXISTING STRUCTURE

FINISHED FLOOR ELEVATION (F.F.E.) — EXISTING STRUCTURE GROUND LEVEL = 25.20

C.B. (#) — 24" X 36" CATCH BASIN CONNECTED AS

1. CONCRETE CURB POUR INTEGRATED WITH SIDEWALK.
2. REINFORCED CONCRETE VEHICULAR ROADWAY. REINFORCED CONCRETE SPECIFICATIONS (PSI, REINFORCING STEEL MESH, FINISH, ETC.) SHALL BE EQUAL AND IN COMPLIANCE WITH ROADWAY CONSTRUCTION SPECIFICATIONS REQUIRED INSIDE THE PROJECT WORK SCOPE LIMIT.
3. TYPICAL CONCRETE REINFORCED WALKWAYS AND/OR RAMP (ON COMPACTED GROUND) WITH A LIGHT BROOM BRUSHED CONCRETE FINISH & AND IN COMPLIANCE WITH WALKWAYS CONSTRUCTION SPECIFICATIONS INSIDE THE PROJECT WORK SCOPE LIMIT.
4. TYPICAL NEW CARPET PLANTING AREA EXTENDING FROM EDGE OF SIDEWALK AND/OR PROPERTY LIMITS UP TO PROPOSED PAVED AREAS AND/OR STRUCTURE. PROVIDE TOPSOIL AND SHALL BE PLANTED WITH GRAMA IN FULL AREA CARPET PLANTING. PLANTING SHALL INCLUDE A BED CONSISTING OF A 6" DEEP TOPSOIL LAYER, 2" DEEP MULCH LAYER AND THE REQUIRED FERTILIZER MIX FOR THE PLANT TYPE. IN ADDITION, IT SHALL APPLY TO ALL NON-BUILT AND/OR NON-PAVED LOT SURFACE AREAS.
5. REINFORCED CONCRETE VEHICULAR PAVEMENT RAMP IN COMPLIANCE WITH THE CIVIL ENGINEERING CONSTRUCTION NOTES.
6. METAL PROTECTION BOLLARD
7. EXISTING STORM SEWER CATCH BASINS TO REMAIN. IT SHALL BE INTEGRATED TO TEH EXISTING STORM SEWER SYSTEM.
8. NEW HANDICAPPED RAMP WITH SIGN & PAINTED
9. SUPPLY PRECAST WHEELSTOPS ON ALL NEW PARKING SPACES AS PER DETAILS.
10. EDGE OF ASPHALT PAVEMENT TRANSITION TO CONCRETE FINISH AS PER DETAILS.
11. EXISTING ELEVATIONS ON THE EDGE OF EXISTING PAVEMENT TO REMAIN AND TO MATCH FLUSH WITH NEW ABUTTING PAVEMENT FINISH.
12. EXISTING PAVED AREAS TO REMAIN & TO BE CUT FLUSH AND ABUTTING WITH NEW PAVEMENT FINISHES.
13. NEW 7'-0" HIGH CONCRETE WALL WITH A SMOOTH CEMENT PLASTE FINISH AND PAINTED .WHERE REQUIRED BY THE EXISTING GRADING, THE LOW WALL SHALL BE EXTENDED IN HEIGHT AS REQUIRED TO RETAIN THE TERRAIN ADJACENT TO THE WALKWAY
14. TRUNCATED DOME ADA COMPLIANT TILES (ON REINFORCED CONCRETE SLOPING SIDEWALK) TILES SHALL BE INSTALLED ON ALL THE SURFACES OF PEDESTRIAN SLOPING WALKWAY RAMPS (FULL WIDTH AND LENGTH OF RAMPS).
15. CROSSWALK BARS PAVEMENT MARKINGS. CONSTRUCTED OF HEAVY-DUTY INTERSECTION GRADE MATERIAL OF WHITE PREFORMED THERMOPLASTIC PAVEMENT MARKINGS CROSSWALK BARS SHALL BE 1'-6" BY WIDE BY 6'- 0" LONG (SPACED AT 2'-0" ON-CENTER) AND PLACED ALIGNED WITH THE CENTER LINE OF CROSSING RAMP LANDING.
16. COMMERCIAL SLIDE GATE AND OPERATOR WITH HIGH-TRAFFIC OPERATOR. IT SHALL INCLUDE ACCESS CONTROL TECHNOLOGY. IT SHALL BE SUPPLIED AND INSTALLED AS REQUIRED, PROVIDING ALL COMPONENTS, OPERATIONAL ELEMENTS, ELECTRICAL SERVICE AND PERFORMANCE REQUIREMENT
17. SLIDING GATE SUPPORT COLUMN AT EACH END OF THE GATE OPENING WIDTH. IT SHALL BE 4" X 4" X GAUGE 16 WITH TOP METAL CAP AND INSTALLED IN A CONCRETE FOOTING.
18. SLIDING GATE CONCRETE RUNNING BASE WITH EMBEDDED METAL WHEEL RUNNING GUIDE.
19. TYPICAL PARKING LINE MARKING TO BE PAINTED WHITE WITH A FULL EVEN COAT OF HIGH-QUALITY THERMOPLASTIC ROADWAY TRAFFIC PAINT.
20. EXISTING ROADWAY TO BE PARTIALLY DEMOLISHED ALONG THE LENGTH OF THE PROJECT SIDEWALK AS REQUIRED FOR THE CONSTRUCTION OF THE NEW SIDEWALK. IT SHALL BE REPAIRED AND/OR RECONSTRUCTED FLUSH WITH THE NEW CURB & GUTTER CONSTRUCTION.
21. DISTANCE ALONG THE PROPERTY AND PROJECT LIMIT TO BE PROVIDED WITH AN 8'-0" HIGH CONSTRUCTION CYCLONE CHAIN LINK FENCE COVERED WITH AN OPAQUE SILT FABRIC COVER.
22. EXISTING ROLLING GATE AND HIGHWAY TO REMAIN OPERABLE AND TO BE PROTECTED DURING CONSTRUCTION PARKING AREA.
23. NEW CATCH BASINS TO BE CONNECTED TO EXISTING STORM SEWER SYSTEM. CATCH BASINS DEPTH TO INVERT ELEVATION SHALL BE ADAPTED FOR PROPER DRAIN SLOPE INTO EXISTING SYSTEM. STORM SEWER SYSTEM SHALL HAVE LIFT PUMPING ASSEMBLIES AS REQUIRED.
24. NEW HANDICAPPED SPACE, RAMP AND LANDING.
25. NEW RETAINING WALL AS REQUIRED AND APPLICABLE.

FINISH NOTES:

1. SEE TECHNICAL SPECIFICATION FOR ADDTIONAL COMPLIANCE INSTRUCTIONS.

DRAWING NUMBER

AS-1.2

BUILDING ADMINISTRATION COMPLIANCE:

1- ALL WORK TO BE EXECUTED UNDER THIS CONTRACT SHALL BE DONE ONLY DURING THE WORKING HOURS APPROVED BY THE BUILDING ADMINISTRATOR.

2- ALL WORK EXECUTED UNDER THIS CONTRACT SHALL BE IN ACCORDANCE AND IN COMPLIANCE WITH THE BUILDING ADMINISTRATION REGULATIONS RELATED TO CONSTRUCTION.

WORK BY OWNER:

1- ALL CABLING, HARDWARE AND SOFTWARE RELATED TO THE VOICE COMMUNICATION SYSTEM, INFORMATION TECHNOLOGY SYSTEM, CLOSED CIRCUIT TV SYSTEM AND ELECTRONIC ACCESS CONTROL SYSTEM WILL BE SUPPLIED AND INSTALLED BY EACH OF THE SYSTEMS OWNER'S SUBCONTRACTORS.

FINISH NOTES:

1. ALL COLORS, TEXTURES AND TYPES OF ALL SPECIFIED FINISHES SHALL BE SELECTED BY THE ARCHITECT FROM THE SPECIFIED BRAND NAMES.
2. EXISTING FLOOR FINISHES SHALL BE REMOVED AND EXISTING FLOOR SUBSTRATE SHALL BE REPAIRED AND LEVELED FOR PROPER INSTALLATION OF NEW FINISH.
3. ALL EXISTING WALLS TO REMAIN SHALL BE STRIPPED, REPAIRED AND PATCHED SMOOTH FOR NEW FINISH APPLICATION.
4. ALL EXTERIOR SURFACES SHALL BE FINISHED WITH A SMOOTH CEMENT FINISH PAINTED. (UNLESS OTHERWISE NOTED)
5. APPLY MAXXON M.V.P. SURFACE APPLIED VAPOR BARRIER OVER EXISTING CONCRETE SUBFLOOR WHERE REQUIRED TO CONTROL HUMIDITY AND IN ALL SPECIFIED AREAS.
6. PROVIDE WATER PROOFING AND VAPOR BARRIER SYSTEM ON ALL SLABS ON GRADE.
7. CONTRACTOR SHALL SUPPLY SAMPLES OF ALL FINISHES FOR APPROVAL BY THE ARCHITECT.
8. ALL EXISTING WALLS TO REMAIN INSIDE THE PROJECT LIMIT SHALL BE STRIPPED, REPAIRED AND PATCHED SMOOTH AND FINISHED WITH NEW GYPSUM BOARD FURRING ASSEMBLY. SEE GYPSUM BOARD LAYOUT DRAWINGS.
9. EXISTING ELECTRICAL & / OR COMMUNICATION PANEL TO BE RELOCATED, UNLESS OTHERWISE NOTED.
10. CONTRACTOR SHALL FIELD VERIFY EXISTING FLOOR LEVELS TO BE MATCHED FLUSH WITH THE PROPOSED FINISHED LEVEL OF THE PROJECT.

SUPPLEMENTARY FINISH NOTES:

1. ALL EXISTING AND NEW WALLS IN THE PERIMETER OF THE PROJECT SHALL BE EXTENDED UP TO STRUCTURAL SLAB WITH A 1 HR. FIRE RATED SEPARATION.
2. ALL EXTERIOR EXISTING COLUMNS SHALL HAVE AN E.I.F.S. FURRING AS INDICATED IN DRAWING. SEE E.I.F.S. DETAILS.
3. NEW SIDEWALK TO BE CONSTRUCTED ALIGNED WITH EXISTING SIDEWALK AND ADAPTED TO THE NEW GEOMETRICAL LAYOUT INDICATED LIMIT IN THE DRAWINGS.TROWELED CEMENT FINISH.
4. FOR BUILDING CONSTRUCTION DIMENSIONING PURPOSES GROUND FLOOR FFE XX.XX mts. SHALL EQUAL 0'-0".
5. PROVIDE WATER PROOFING PROTECTION TO ALL EXTERIOR BASEMENT WALLS, CISTERN WALLS AND RETAINING WALLS AGAINST GROUND. VOLCLAY PANELS INSTALLED AS PER MANUFACTURER'S SPECS.
6. DRAIN BOX CULVER BELOW NEW FLOOR SLAB TO PROVIDE RAIN DRAIN ACCESS TO EXISTING ROOF DRAINS AND LEADERS
7. SEE STRUCTURAL DRAWINGS FOR DETAILED SPECIFICATIONS OF NEW STEEL STRUCTURAL SYSTEM ASSEMBLY.

FIRE RESISTANT NOTE:

1-ALL EXPOSED STEEL BEAMS SHALL HAVE A SPRAYED FIRE RESISTANT MATERIAL TO OBTAIN A RATING OF NO LESS THAN ONE HOUR AS PER THE LATEST LEGALLY ADOPTED EDITION APPLICABLE TO THE PROJECT OF THE PUERTO RICO BUILDING CODE.

2-ALL EXPOSED STEEL COLUMNS SHALL HAVE A FIRE RESISTANT ENCASEMENT WITH A RATING OF NO LESS THAN THAN ONE HOUR UP TO 6" ABOVE SUSPENDED CEILING AND A ONE HOUR SPRAYED MATERIAL UP TO STRUCTURAL SLAB AS PER HE LATEST LEGALLY ADOPTED EDITION APPLICABLE TO THE PROJECT OF THE PUERTO RICO BUILDING CODE.

NOTE

FINAL DIMENSIONS OF STRUCTURAL CONCRETE WALLS AND ELEMENTS SHALL BE AS SPECIFIED IN STRUCTURAL DRAWINGS.

IMAGING DEPARTMENT EQUIPMENT COMPLIANCE NOTES:

1. IN ADDITION TO ALL THE CONSTRUCTION DOCUMENTS, THE CONTRACTOR MUST COORDINATE AND PERFORM THE WORK RELATED TO THE INSTALLATION OF THE EQUIPMENT IN THE IMAGING DEPARTMENT IN COMPLIANCE WITH THE MANUFACTURERS SITE-SPECIFIC REQUIREMENT GUIDANCE.
2. CONTRACTOR SHALL OBTAIN FROM THE OWNER THE SPECIFICATIONS AND INSTALLATION REQUIREMENTS FOR THE EQUIPMENT TO BE INSTALLED IN THE FOLLOWING ROOMS:
   A. CT SCAN (ROOM 1039)
   B. X-RAY (ROOM 1044)
3. CONTRACTOR SHALL SUPPLY ALL THE REQUIRED MATERIAL AND WORK TO EXECUTE ALL THE EQUIPMENT MANUFACTURERS SPECIFICATION AND INSTALLATION RECOMMENDATIONS TO ENSURE THE PROPER ROUGH-IN FACILITIES FOR EQUIPMENT INSTALLATION AND OPERATIONS.
4. ALL WALLS, DOORS AND GLASS PANELS, IN THE ABOVE MENTIONED ROOMS, SHOWN TO BE CONSTRUCTED WITH THE SHIELDING REQUIREMENTS BY THE MANUFACTURER OF THE EQUIPMENT SHALL BE VALIDATED BY THE OWNER'S CERTIFIED RADIOLOGY PHYSIC.
5. ELECTRICAL REQUIREMENT OF THE EQUIPMENTS IN THE IMAGING DEPARTMENT LISTED HERE IN SHALL BE CONFIRMED AND COORDINATED WITH THE OWNER AND MANUFACTURER AS REQUIRED FOR THE PROPER SUPPLY OF THE ELECTRICAL SERVICE REQUIREMENT INCLUDING VOLTAGE, AMPERAGE, AND TOTAL ELECTRICAL LOAD.
6. EXISTING FLOOR LEVEL IN ROOMS 1039 (CT SCAN &, 1044 (X-RAY) SHALL BE LEVELED & PLUM AS REQUIRED FOR THE PROPER INSTALLATION AND OPERATION OF THE EQUIPMENTS.

TYPICAL E.I.F.S. FAÇADE CONSTRUCTION COMPLIANCE:

EXTERIOR INSULATION AND FINISH SYSTEM (E.I.F.S.) SHALL BE EQUAL TO STO THERM NEXT (HI-DG1-SYSTEM) HURRICANE IMPACT SYSTEM.

1. PROTECT EXPOSED E.I.F.S. AT PARAPET FROM WEATHER DAMAGE DURING CONSTRUCTION UNTIL PERMANENTLY PROTECTED WITH COPING.
2. EXTEND DIMENSION OF COPING OVERLAP FOR MULTI-STORY CONSTRUCTION / COASTAL REGIONS TO PREVENT WIND DRIVEN RAIN FROM ENTERING BEHIND SYSTEM.
3. ALL E.I.F.S. ASSEMBLY MATERIALS & INSTALLATION SHALL COMPLY WITH APPLICABLE REQUIREMENTS OF THE LATEST VERSION OF THE PUERTO RICO BUILDING CODE INCLUDING WIND RESISTANCE AND THE IMPACT OF AIR BORNE MISSILES.
4. ALL E.I.F.S. INSTALLATION SHALL BE PLUMB & LEVELED.
5. ALL INSTALLATION OF E.I.F.S. OVER EXISTING SURFACES SHALL BE EXECUTED FOLLOWING E.I.F.S. MANUFACTURER'S RECOMMENDATIONS, MEANS & METHODS.
6. EXTERIOR E.I.F.S. SHALL HAVE AN INTEGRATED PAINT FINISH.
7. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS FOR ARCHITECTS APPROVAL.
8. ALL E.I.F.S. SHALL BE ANCHORED TO STEEL STUDS @ MAXIMUM RECOMMENDED SPACING BY MANUFACTURER'S SPECIFICATIONS FOR HURRICANE IMPACT RESISTANT SYSTEM.
9. ALL E.I.F.S. SHALL BE INSTALLED WITH GALVANIZED METAL STUDS.

GENERAL ROOF NOTES:

1-ROOF SLOPES 1/4" PER/FOOT

2-ARROWS INDICATES SLOPES

3-SLOPES SHALL BE GIVEN WITH LIGHTWEIGHT CONRETE FILL. ——►

4-THE BUILT-UP WEATHERPROOFING ROOFING SYSTEM SHALL BE EQUAL OR SIMILAR IN PERFORMANCE AND COMPLIANCE TO THE FOLLOWING ASSEMBLY:

A. OWENS CORNING FOAMLAR XPS TAPERED ROOFING INSULATION. WITH A SLOPE OF 1/4" PER FOOT AND MINIMUN THICKNESS AT LOW DRAIN POINTS OF 2".

B. DANOSA ESTERDAN R-36-4 BITUMEN BASE MEMBRANE.

C. DANOSA ESTERDAN RM-PLUS BITUMEN TOP MEMBRANE.

5-ALL ROOF DRAINS SHALL BE 3"Ø.

6-UNLESS OTHERWISE NOTED IN DRAWINGS ALL RAIN LEADERS SHALL BE 3"Ø.

7-CAP & REGLET FLASHINGS SHALL BE PROVIDED WHERE REQUIRED TO ENSURE PROPER WEATHER-PROOFING OF ALL ROOFS WITHIN THE PROJECT. LIMIT.

8-ROOFS SUBSTRATE SHALL BE PREPARED AS REQUIRED BY BY MANUFACTURER FOR PROPER APPLICATION OF THE WATER PROOFING SYSTEM.

ALUMINUM FLASHING NOTES

1 - SILICONE BUILDING SEALANT AT ALL EXP. & CONST. JOINTS SHALL BE DOW CORNING 790 OR APPRVED EQUAL.

2 - SILICONE SEALANT INSTALLATION SHALL STRICTLY FOLLOWS MANUFACTURER RECOMENDATIONS.

3 - EXPANSION JOINT COVER SHALL BE STYLE "CF" - EXTERIOR COVER TYPE "N" & FLANGE METAL OF ALUM. 0.032 AS MANUFACTURER BY MANVILLE ROOFING SYSTEMS DIV. FOR BELLOWS WIDTH SELECTION & JOINT COVER INSTALLATION STRICTLY FOLLOWS MANUFACT. INSTRUCTION.

4 - ALL SLOPES SHALL BE MONOLITHIC WITH STRUCTURAL SLAB & 1/4" / FT. SLOPES.

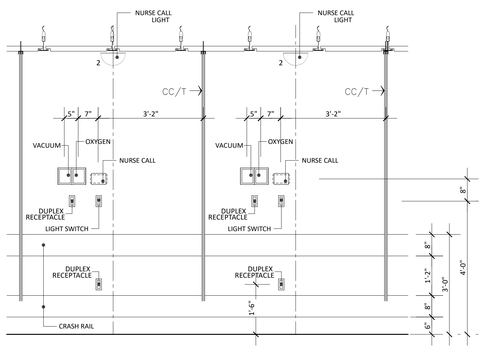
5 - GENERAL CONTRACTOR SHALL GUARANTEE THE WATER SEAL OF ALL ROOF SURFACES.

6 - GENERAL CONTRACTOR SHALL TAKE ALL NECESSARY MEASURES AT JOB SITE TO GUARANTY THE PROPER CONNECTION AN FREE DISCHARGE BY GRAVITY OF ALL RAIN LEADERS FROM ROOF.

SUPPLEMENTARY NOTES:

1- SEE STRUCTURAL DRAWINGS FOR DETAILED SPECIFICATIONS OF NEW STEEL STRUCTURAL SYSTEM ASSEMBLY.

2. LOCATION OF NEW STEEL STRUCTURAL COLUMNS SHALL BE AS SPECIFIED IN STRUCTURAL DRAWINGS AND SHALL BE ANCHORED ALIGNED WITH THE EXISTING STRUCTURAL CONCRETE COLUMNS AS SHOWN IN THE DRAWINGS.



3. DIMENSIONS, SPACING AND LOCATIONS OF EXISTING CONCRETE COLUMNS, TO SUPPORT NEW STEEL STRUCTURAL SYSTEM, SHALL BE FIELD VERIFIED AND CONFIRMED PRIOR TO ERECTION OF THE NEW PROPOSED STEEL STRUCTURAL EXPANSION.

LEGEND:

- EXISTING STRUCTURE
- NEW CONCRETE BLOCK WALL 6" OR 8" EXTENDED UP TO STRUCTURAL SLAB
- REINFORCED CONCRETE WALL OR COLUMN
- NEW GYPSUM BOARD WALL
- EXISTING WALL OPENING TO BE FILLED WITH GYPSUM BOARD WALL (TO MATCH WIDTH OF EXISTING WALL)
- 5/8" GYPSUM BOARD WALL WITH 1/8" LEAD SHIELDED PANEL UP TO HUNG CEILING.
- 3" GYPSUM BOARD FURRING OVER EXISTING AND / OR NEW CONCRETE BLOCK WALL. SEE TYPICAL FURRING DETAILS IN GYPSUM BOARD TYPICAL DETAILS SHEET.

GENERAL NOTES – SOUND AND VIBRATION ATTENUATION
DESIGN-BUILD RFP / BRIDGING DOCUMENTS

A. GENERAL REQUIREMENTS

1. THE DESIGN-BUILD ENTITY SHALL PROVIDE SOUND ATTENUATION AND VIBRATION CONTROL FOR ALL SPACES, EQUIPMENT ROOMS, SHAFTS, WALL ASSEMBLIES, FLOOR/CEILING ASSEMBLIES, ROOF ASSEMBLIES, DOORS, LOUVERS, DUCTS, PIPING, CONDUIT, PENETRATIONS, AND EQUIPMENT SUPPORTS REQUIRED TO MAINTAIN THE ACOUSTIC PERFORMANCE OF THE NEW PUERTO RICO TRAUMA HOSPITAL.
2. ACOUSTICAL DESIGN SHALL ADDRESS AIRBORNE NOISE, STRUCTURE-BORNE NOISE, IMPACT NOISE, EQUIPMENT NOISE, LOW-FREQUENCY NOISE, VIBRATION TRANSMISSION, REVERBERATION CONTROL, AND FLANKING SOUND TRANSMISSION.
3. SOUND AND VIBRATION CONTROL SHALL BE COORDINATED WITH THE ARCHITECTURAL, STRUCTURAL, MECHANICAL, ELECTRICAL, PLUMBING, FIRE PROTECTION, EQUIPMENT, LIFE-SAFETY, INFECTION-CONTROL, AND MAINTENANCE REQUIREMENTS OF THE PROJECT.
4. THE DESIGN-BUILD ENTITY SHALL COMPLY WITH THE LATEST ADOPTED EDITIONS OF APPLICABLE HEALTHCARE ACOUSTIC REQUIREMENTS, INCLUDING FGI ACOUSTIC CRITERIA, ASHRAE NOISE AND VIBRATION CRITERIA, ANSI/ASA ROOM NOISE EVALUATION CRITERIA, ASTM SOUND TRANSMISSION STANDARDS, APPLICABLE ENVIRONMENTAL NOISE REQUIREMENTS, AND REQUIREMENTS OF THE AUTHORITIES HAVING JURISDICTION.
5. WHERE CODES, STANDARDS, OWNER REQUIREMENTS, EQUIPMENT MANUFACTURER REQUIREMENTS, OR ACOUSTIC CONSULTANT RECOMMENDATIONS DIFFER, THE MORE STRINGENT REQUIREMENT SHALL GOVERN.
6. FINAL ACOUSTICAL CRITERIA SHALL BE CONFIRMED BY THE DESIGN-BUILD ENTITY BASED ON FINAL EQUIPMENT SELECTION, FINAL ROOM ADJACENCIES, FINAL WALL AND FLOOR ASSEMBLIES, FINAL DUCT ROUTING, FINAL PENETRATIONS, AND FINAL ROOFTOP EQUIPMENT LOCATIONS.

B. MINIMUM PROJECT ACOUSTICAL PERFORMANCE CRITERIA

THE FOLLOWING TABLE ESTABLISHES MINIMUM PROJECT DESIGN CRITERIA. FINAL CRITERIA SHALL BE VERIFIED AND ADJUSTED AS REQUIRED BY THE LATEST ADOPTED FGI REQUIREMENTS, PROJECT-SPECIFIC ACOUSTIC ANALYSIS, EQUIPMENT SOUND DATA, AND AHJ REVIEW.

Space / Condition	Maximum Background Noise from Building Systems	Minimum Sound Isolation Target	Notes
Patient rooms	NC/RC/RNC 35-40 maximum; 40-45 dBA maximum	STC/STCc 45 between patient rooms	Use stricter target near rooftop equipment or other major noise sources.
ICU / critical care patient areas	NC/RC/RNC 30-35 target; 35-40 dBA target	STC/STCc 45 minimum; STC/STCc 50 where adjacent to public, service, or mechanical areas	Provide enhanced protection for rest, recovery, alarms, and clinical communication.
Patient room floor-to-floor separation	As required to meet patient room criteria	STC/STCc 50 target	Coordinate slabs, ceiling plenums, shafts, and penetrations.
Exam rooms / consultation rooms / treatment rooms	NC/RC/RNC 40 maximum; 45 dBA maximum	STC/STCc 45 minimum; STC/STCc 50 where confidentiality is required	Provide speech privacy and acoustic separation.
Offices / administrative spaces	NC/RC/RNC 35-40 target; 40-45 dBA target	STC/STCc 45 minimum; STC/STCc 50 for confidential offices	Coordinate doors, glazing, ceilings, and partitions.
Conference rooms / meeting rooms	NC/RC/RNC 35 maximum; 40 dBA maximum	STC/STCc 50 target	Provide speech privacy and low background noise.
Corridors / public areas	NC/RC/RNC 45 maximum; 50 dBA maximum	As required by adjacent spaces	Control reverberation and speech transfer.
Medication safety zones / medication rooms	NC/RC/RNC 40 maximum; 45 dBA maximum	STC/STCc 45 minimum	Provide acoustic conditions that support concentration and reduce distraction.
Toilet rooms adjacent to occupied or public spaces	As required by adjacent space	STC/STCc 45 minimum	Control plumbing noise and room-to-room sound transfer.
Mechanical rooms / electrical rooms / equipment rooms adjacent to occupied spaces	Adjacent occupied spaces shall meet their required NC/RC/RNC criteria	STC 55 minimum; STC 60 or greater where adjacent to patient care or noise-sensitive areas	Criteria applies to receiving spaces, not to the equipment room itself.
Generator rooms, chiller rooms, substations, transformer rooms, switchgear rooms	Adjacent occupied spaces shall meet required criteria	STC 60 target minimum, with enhanced low-frequency control	Provide acoustic treatment, silencers, sound-rated openings, and vibration isolation as required.
Rooftop equipment near patient room windows	Interior patient room criteria shall be maintained	Exterior wall, glazing, roof, and screen assemblies shall be coordinated for required OITC/STC performance	Prevent direct equipment noise at patient room windows and façades.

C. BASEMENT EQUIPMENT ROOM SOUND ATTENUATION

1. THE DESIGN-BUILD ENTITY SHALL PROVIDE ENHANCED SOUND ATTENUATION AT ALL BASEMENT ROOMS CONTAINING MAJOR ELECTRO-MECHANICAL SYSTEMS, INCLUDING CHILLER ROOMS, GENERATOR ROOMS, SUBSTATIONS, TRANSFORMER ROOMS, SWITCHGEAR ROOMS, ELECTRICAL ROOMS, MECHANICAL ROOMS, PUMP ROOMS, FAN ROOMS, COMPRESSOR ROOMS, FUEL SYSTEM ROOMS, AND OTHER EQUIPMENT ROOMS PRODUCING SIGNIFICANT NOISE OR VIBRATION.
2. CONCRETE WALLS, CONCRETE BLOCK WALLS, STRUCTURAL SLABS, DOORS, LOUVERS, DUCTS, SHAFTS, SLEEVES, AND PENETRATIONS ENCLOSING EQUIPMENT ROOMS SHALL FUNCTION AS COMPLETE ACOUSTIC SEPARATION ASSEMBLIES.
3. CONCRETE WALLS ENCLOSING NOISY EQUIPMENT ROOMS SHALL PROVIDE SUFFICIENT MASS, CONTINUITY, SEALING, AND ISOLATION TO MEET THE REQUIRED STC, NC, RC, RNC, AND DBA CRITERIA FOR ADJACENT SPACES.
4. CONCRETE MASONRY UNIT WALLS ENCLOSING NOISY EQUIPMENT ROOMS SHALL BE FULL-HEIGHT TO THE UNDERSIDE OF THE STRUCTURE ABOVE AND SHALL BE DESIGNED TO ACHIEVE THE REQUIRED ACOUSTIC PERFORMANCE THROUGH APPROPRIATE BLOCK WEIGHT, GROUTING, SEALING, CONTINUITY, AND PENETRATION CONTROL.
5. LIGHTWEIGHT, UNSEALED, PARTIAL-HEIGHT, OR ACOUSTICALLY DISCONTINUOUS MASONRY CONSTRUCTION SHALL NOT BE USED WHERE EQUIPMENT ROOM SOUND ATTENUATION IS REQUIRED.
6. ALL JOINTS, SLAB INTERSECTIONS, WALL-TO-STRUCTURE INTERFACES, SLEEVES, CONDUIT PENETRATIONS, PIPING PENETRATIONS, DUCT PENETRATIONS, AND OTHER OPENINGS SHALL BE ACOUSTICALLY SEALED.
7. DOORS, FRAMES, LOUVERS, DAMPERS, TRANSFER OPENINGS, ACCESS PANELS, AND DUCTWORK SERVING NOISY EQUIPMENT ROOMS SHALL NOT REDUCE THE REQUIRED ACOUSTICAL PERFORMANCE OF THE ENCLOSURE.
8. GENERATOR ROOMS, CHILLER ROOMS, SUBSTATIONS, TRANSFORMER ROOMS, AND SWITCHGEAR ROOMS SHALL RECEIVE SPECIFIC ACOUSTIC ANALYSIS DUE TO POTENTIAL HIGH SOUND LEVELS, TONAL NOISE, LOW-FREQUENCY NOISE, AND STRUCTURE-BORNE VIBRATION.
9. GENERATOR EXHAUST SYSTEMS, AIR INTAKE OPENINGS, DISCHARGE OPENINGS, LOUVERS, AND VENTILATION PATHS SHALL INCLUDE SILENCERS, ACOUSTIC LOUVERS, ACOUSTIC PLENUMS, OR OTHER ATTENUATION MEASURES AS REQUIRED.
10. EQUIPMENT ROOM ATTENUATION SHALL PROTECT PATIENT CARE AREAS, STAFF AREAS, PUBLIC AREAS, ADMINISTRATIVE AREAS, AND ALL OCCUPIED SPACES LOCATED ABOVE, BESIDE, OR CONNECTED TO THE EQUIPMENT ROOMS BY SHAFTS, SLABS, CORRIDORS, OR SERVICE SPACES.

D. ROOFTOP AND SECOND LEVEL EQUIPMENT SOUND ATTENUATION

1. MECHANICAL AND ELECTRICAL EQUIPMENT LOCATED ON THE ROOF OF THE SECOND LEVEL, OR ANY ROOF AREA ADJACENT TO PATIENT ROOMS, PATIENT ROOM WINDOWS, CLINICAL SPACES, OFFICES, OR OTHER OCCUPIED AREAS, SHALL BE ACOUSTICALLY CONTROLLED.
2. ROOFTOP EQUIPMENT SHALL BE SELECTED, LOCATED, SCREENED, ENCLOSED, SILENCED, AND ISOLATED AS REQUIRED TO MAINTAIN THE REQUIRED INTERIOR NOISE CRITERIA AT ADJACENT PATIENT ROOMS AND OTHER NOISE-SENSITIVE SPACES.
3. EQUIPMENT SHALL NOT DISCHARGE NOISE DIRECTLY TOWARD PATIENT ROOM WINDOWS UNLESS ACOUSTIC ANALYSIS DEMONSTRATES THAT THE REQUIRED INTERIOR NOISE CRITERIA WILL BE MAINTAINED.
4. ACOUSTIC SCREENS, SOUND BARRIERS, EQUIPMENT ENCLOSURES, ACOUSTIC LOUVERS, DUCT SILENCERS, LINED DUCTWORK, VIBRATION-ISOLATED CURBS, FLEXIBLE CONNECTIONS, AND OTHER ATTENUATION MEASURES SHALL BE PROVIDED WHERE REQUIRED.
5. EXTERIOR WALL AND WINDOW ASSEMBLIES ADJACENT TO ROOFTOP EQUIPMENT SHALL BE COORDINATED FOR REQUIRED STC AND OITC PERFORMANCE.
6. ROOFTOP EQUIPMENT SHALL NOT TRANSMIT OBJECTIONABLE VIBRATION, HUM, RUMBLE, TONAL NOISE, OR STRUCTURE-BORNE SOUND INTO PATIENT ROOMS OR OTHER OCCUPIED SPACES.

E. INTERIOR SOUND ATTENUATION

1. INTERIOR SOUND ATTENUATION SHALL BE PROVIDED WHERE REQUIRED FOR PATIENT PRIVACY, STAFF CONFIDENTIALITY, SPEECH PRIVACY, CLINICAL PERFORMANCE, ACOUSTIC COMFORT, AND HEALTHCARE BEST PRACTICES.
2. SOUND ATTENUATING PARTITIONS SHALL BE PROVIDED BETWEEN PATIENT ROOMS, EXAM ROOMS, CONSULTATION ROOMS, TREATMENT ROOMS, OFFICES, CONFERENCE ROOMS, MEDICATION ROOMS, STAFF WORK AREAS, CLEAN AND SOILED WORKROOMS, TOILET ROOMS, PUBLIC CORRIDORS, FAMILY WAITING AREAS, AND OTHER SPACES REQUIRING PRIVACY OR NOISE CONTROL.
3. INTERIOR PARTITIONS REQUIRING SOUND ATTENUATION SHALL EXTEND TO THE UNDERSIDE OF THE STRUCTURE ABOVE UNLESS AN ACOUSTICALLY EQUIVALENT ASSEMBLY IS PROVIDED AND DOCUMENTED.
4. CEILING PLENUMS, RECESSED DEVICES, BACK-TO-BACK OUTLETS, TRANSFER GRILLES, RETURN AIR PATHS, DUCTS, PIPING, CONDUIT, AND PENETRATIONS SHALL BE COORDINATED TO AVOID FLANKING SOUND TRANSMISSION.
5. DOORS SERVING ACOUSTICALLY SENSITIVE ROOMS SHALL BE COORDINATED WITH THE REQUIRED WALL RATING AND SHALL INCLUDE SOUND-RATED CONSTRUCTION, SEALS, GASKETING, OR AUTOMATIC DOOR BOTTOMS WHERE REQUIRED.
6. PATIENT ROOMS, EXAM ROOMS, CONSULTATION ROOMS, OFFICES, AND CONFERENCE ROOMS SHALL PROVIDE SPEECH PRIVACY APPROPRIATE TO HEALTHCARE USE AND PROTECTION OF CONFIDENTIAL PATIENT INFORMATION.
7. PUBLIC CORRIDORS, WAITING AREAS, NURSE STATIONS, STAFF AREAS, AND FAMILY AREAS SHALL INCLUDE ACOUSTICAL ABSORPTION AS REQUIRED TO REDUCE REVERBERATION AND SUPPORT A CALM HEALTHCARE ENVIRONMENT.

F. TYPICAL GENERIC SOUND ATTENUATION MATERIALS AND MEASURES

THE DESIGN-BUILD ENTITY SHALL SELECT FINAL MATERIALS AND ASSEMBLIES BASED ON TESTED ACOUSTIC PERFORMANCE, INFECTION-CONTROL REQUIREMENTS, DURABILITY, MAINTAINABILITY, FIRE-RESISTANCE RATINGS, MOISTURE RESISTANCE, AND COMPATIBILITY WITH THE FINAL DESIGN.

Condition	Typical Generic Materials / Measures
Concrete equipment room walls	Cast-in-place concrete, precast concrete, sealed joints, sealed penetrations, acoustical sealant, resilient isolation where required.
Concrete block equipment room walls	Heavy-weight CMU, fully grouted CMU where required, full-height masonry, sealed joints, sealed top-of-wall condition, sealed penetrations.
Interior sound-rated partitions	Multiple layers of gypsum board, sound attenuation insulation, staggered studs, double studs, resilient channels, acoustic sealant, full-height construction.
Patient room / exam room partitions	Sound attenuation batt insulation, sealed gypsum assemblies, sealed electrical boxes, acoustically treated penetrations, full-height partitions.
Equipment room doors	Sound-rated hollow metal doors, sound-rated frames, perimeter gasketing, door bottoms, threshold seals, acoustic vestibules where required.
Louvers and air openings	Acoustic louvers, duct silencers, lined plenums, intake silencers, discharge silencers, sound traps, acoustic baffles.
Ductwork	Duct silencers, lined ductwork where permitted, flexible duct connectors, low-noise duct design, acoustic boots, sealed duct penetrations.
Piping and conduit penetrations	Sleeves, resilient packing, acoustical sealant, firestopping compatible with acoustic performance, flexible connections.
Ceilings and reverberation control	Acoustic ceiling panels, high-NRC ceiling systems, acoustic wall panels, washable acoustic finishes suitable for healthcare use.
Rooftop equipment	Acoustic screens, acoustic barriers, equipment enclosures, vibration-isolated curbs, spring isolators, neoprene isolators, flexible connectors.
Generators and chillers	Acoustic enclosures, intake silencers, exhaust silencers, vibration isolation, inertia bases, housekeeping pads, flexible connections.
Pumps and rotating equipment	Spring isolators, neoprene pads, inertia bases, flexible pipe connectors, resilient pipe supports.
Transformers and substations	Vibration isolation pads, resilient mounts, acoustic room enclosure, sealed penetrations, low-frequency hum control.

G. VIBRATION ATTENUATION

1. THE DESIGN-BUILD ENTITY SHALL PROVIDE VIBRATION ATTENUATION FOR ALL MECHANICAL, ELECTRICAL, PLUMBING, FIRE PROTECTION, AND SPECIALTY EQUIPMENT CAPABLE OF TRANSMITTING VIBRATION TO THE STRUCTURE OR OCCUPIED SPACES.
2. EQUIPMENT REQUIRING VIBRATION CONTROL SHALL INCLUDE CHILLERS, COOLING TOWERS, AIR HANDLING UNITS, EXHAUST FANS, PUMPS, GENERATORS, TRANSFORMERS, COMPRESSORS, ROOFTOP UNITS, PACKAGED EQUIPMENT, FUEL SYSTEM EQUIPMENT, AND OTHER ROTATING, RECIPROCATING, OR VIBRATION-PRODUCING EQUIPMENT.
3. BASEMENT EQUIPMENT SHALL BE ISOLATED FROM THE BUILDING STRUCTURE TO PREVENT VIBRATION TRANSMISSION TO PATIENT CARE AREAS, STAFF AREAS, PUBLIC AREAS, OFFICES, AND OTHER OCCUPIED SPACES.
4. ROOFTOP EQUIPMENT LOCATED ABOVE, BESIDE, OR NEAR PATIENT ROOMS AND PATIENT ROOM WINDOWS SHALL BE VIBRATION-ISOLATED TO PREVENT STRUCTURE-BORNE NOISE AND PERCEPTIBLE VIBRATION.
5. VIBRATION CONTROL SHALL BE COORDINATED WITH SEISMIC ANCHORAGE, STRUCTURAL SUPPORTS, EQUIPMENT CURBS, HOUSEKEEPING PADS, INERTIA BASES, PIPE SUPPORTS, DUCT SUPPORTS, CONDUIT SUPPORTS, FLEXIBLE CONNECTIONS, AND MANUFACTURER REQUIREMENTS.
6. RIGID CONNECTIONS THAT BYPASS VIBRATION ISOLATION SHALL NOT BE PERMITTED WHERE THEY COMPROMISE THE REQUIRED VIBRATION CONTROL PERFORMANCE.
7. PIPES, DUCTS, CONDUITS, SUPPORTS, HANGERS, AND EQUIPMENT CONNECTIONS ASSOCIATED WITH VIBRATION-PRODUCING EQUIPMENT SHALL BE ISOLATED AS REQUIRED TO PREVENT FLANKING VIBRATION PATHS.
8. STRUCTURE-BORNE SOUND FROM VIBRATION-PRODUCING EQUIPMENT SHALL NOT EXCEED THE REQUIRED ROOM NOISE CRITERIA OF THE AFFECTED RECEIVING SPACES.
9. VIBRATION CONTROL SYSTEMS SHALL BE COMPATIBLE WITH THE PROJECT'S SEISMIC DESIGN REQUIREMENTS AND SHALL NOT REDUCE LIFE-SAFETY PERFORMANCE, ANCHORAGE, EQUIPMENT ACCESS, MAINTAINABILITY, OR OPERATIONAL RELIABILITY.

H. MINIMUM VIBRATION PERFORMANCE CRITERIA

THE FOLLOWING VIBRATION CRITERIA SHALL BE VERIFIED BY THE DESIGN-BUILD ENTITY AND ADJUSTED WHERE MORE STRINGENT REQUIREMENTS ARE REQUIRED BY FGI, ASHRAE, EQUIPMENT MANUFACTURERS, SENSITIVE MEDICAL EQUIPMENT, OR THE AHJ.

Area / Condition	Maximum Vibration Design Criteria
Patient rooms and patient care areas	6,000 micro-inches/second peak velocity maximum, or more stringent criteria where required
Operating rooms and treatment rooms	4,000 micro-inches/second peak velocity maximum, or more stringent criteria where required
Administrative areas	8,000 micro-inches/second peak velocity maximum, or more stringent criteria where required
Public circulation areas	8,000 micro-inches/second peak velocity maximum, or more stringent criteria where required
Sensitive medical equipment areas	Manufacturer's written vibration criteria shall govern
Rooftop equipment adjacent to patient rooms	No perceptible vibration in patient rooms; structure-borne sound shall not exceed room noise criteria

I. VERIFICATION AND COORDINATION

1. THE DESIGN-BUILD ENTITY SHALL PROVIDE ACOUSTICAL CALCULATIONS, EQUIPMENT SOUND DATA, EQUIPMENT VIBRATION DATA, WALL ASSEMBLY DATA, DOOR AND LOUVER ACOUSTIC DATA, VIBRATION ISOLATION SCHEDULES, AND OTHER DOCUMENTATION REQUIRED TO DEMONSTRATE COMPLIANCE.
2. FINAL EQUIPMENT SELECTIONS SHALL INCLUDE MANUFACTURER SOUND POWER DATA, SOUND PRESSURE DATA, OCTAVE-BAND DATA, VIBRATION DATA, AND RECOMMENDED VIBRATION ISOLATION REQUIREMENTS.
3. FIELD CONDITIONS, SUBSTITUTIONS, EQUIPMENT CHANGES, WALL ASSEMBLY CHANGES, ROOF EQUIPMENT CHANGES, AND ROUTING CHANGES SHALL NOT REDUCE THE REQUIRED SOUND OR VIBRATION ATTENUATION PERFORMANCE.
4. INSTALLED ACOUSTIC AND VIBRATION CONTROL MEASURES SHALL BE VERIFIED DURING CONSTRUCTION AND COMMISSIONING AS REQUIRED TO CONFIRM COMPLIANCE WITH THE FINAL DESIGN CRITERIA.
5. ANY CONDITION THAT MAY COMPROMISE PATIENT ROOM ACOUSTIC COMFORT, SPEECH PRIVACY, EQUIPMENT NOISE CONTROL, OR VIBRATION ISOLATION SHALL BE CORRECTED BY THE DESIGN-BUILD ENTITY PRIOR TO PROJECT ACCEPTANCE.

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

GENERAL NOTES – SMOKE COMPARTMENTALIZATION AND FIRE-RATED SEPARATION
DESIGN-BUILD RFP / BRIDGING DOCUMENTS

A. GENERAL REQUIREMENTS

1. THE DESIGN-BUILD ENTITY SHALL PROVIDE SMOKE COMPARTMENTALIZATION, SMOKE BARRIERS, SMOKE PARTITIONS, FIRE BARRIERS, FIRE PARTITIONS, HORIZONTAL ASSEMBLIES, SHAFT ENCLOSURES, AND FIRE WALLS AS REQUIRED BY THE LATEST ADOPTED APPLICABLE CODES, HEALTHCARE REGULATIONS, LIFE-SAFETY REQUIREMENTS, AND AUTHORITIES HAVING JURISDICTION.
2. SMOKE AND FIRE-RATED SEPARATIONS SHALL SUPPORT THE HOSPITAL'S DEFEND-IN-PLACE LIFE-SAFETY STRATEGY, PATIENT RELOCATION, SMOKE CONTAINMENT, FIRE CONTAINMENT, EGRESS PROTECTION, AND CONTINUITY OF CRITICAL HEALTHCARE OPERATIONS.
3. THE FINAL DESIGN SHALL COMPLY WITH THE APPLICABLE REQUIREMENTS OF THE PUERTO RICO BUILDING CODE, INTERNATIONAL BUILDING CODE AS ADOPTED, NFPA 101 LIFE SAFETY CODE AS ADOPTED, NFPA 99 HEALTH CARE FACILITIES CODE AS ADOPTED, FGI GUIDELINES AS APPLICABLE, FIRE MARSHAL REQUIREMENTS, AND ALL APPLICABLE AUTHORITIES HAVING JURISDICTION.
4. WHERE THE DRAWINGS, SPECIFICATIONS, CODE ANALYSIS, LIFE-SAFETY PLANS, OR AHJ REQUIREMENTS DIFFER, THE MOST STRINGENT FIRE-RESISTANCE, SMOKE-RESISTANCE, AND LIFE-SAFETY REQUIREMENT SHALL GOVERN.
5. FIRE-RATED AND SMOKE-RATED ASSEMBLIES SHALL BE CONTINUOUS, COMPLETE, COORDINATED, AND CONSTRUCTIBLE AS INTEGRATED LIFE-SAFETY SYSTEMS, NOT AS ISOLATED WALL TYPES.
6. ALL RATED WALLS, SMOKE BARRIERS, FIRE BARRIERS, FIRE WALLS, SHAFT ENCLOSURES, HORIZONTAL ASSEMBLIES, PROTECTED OPENINGS, JOINTS, PENETRATIONS, DAMPERS, DOORS, GLAZING, ACCESS PANELS, AND FIRESTOPPING SYSTEMS SHALL BE COORDINATED ACROSS ARCHITECTURAL, STRUCTURAL, MECHANICAL, ELECTRICAL, PLUMBING, FIRE PROTECTION, MEDICAL GAS, TECHNOLOGY, AND EQUIPMENT DRAWINGS.
7. LIFE-SAFETY PLANS SHALL IDENTIFY THE REQUIRED LOCATIONS OF SMOKE COMPARTMENTS, SMOKE BARRIERS, FIRE BARRIERS, FIRE WALLS, EXIT ENCLOSURES, SHAFTS, HORIZONTAL EXITS, FIRE-RATED CORRIDORS, AND OTHER RATED ASSEMBLIES REQUIRED FOR CODE COMPLIANCE.
8. FLOOR PLANS AND WALL TYPE PLANS SHALL BE COORDINATED WITH THE LIFE-SAFETY PLANS SO THAT EACH REQUIRED RATED ASSEMBLY IS PROPERLY IDENTIFIED, RATED, DETAILED, SEALED, PROTECTED, AND MAINTAINED.

B. MINIMUM FIRE AND SMOKE SEPARATION CRITERIA

Assembly / Condition	Typical Minimum Rating / Requirement	Primary Purpose	Notes
Smoke barrier	1-hour fire-resistance rating minimum, unless a more stringent requirement applies	Divides the hospital floor into smoke compartments	Shall resist the passage of smoke and extend continuously as required by code.
Smoke compartment	Maximum area and travel distances shall comply with adopted code	Supports defend-in-place patient relocation	Group I-2 smoke compartments shall be sized and arranged in accordance with adopted code and AHJ requirements.
Smoke partition	Rating as required by adopted code and life-safety analysis	Limits smoke transfer at corridors or other required locations	Shall resist smoke passage and be sealed at joints and penetrations.
Fire barrier	1-hour, 2-hour, 3-hour, or greater as required by code	Separates hazardous areas, shafts, exits, occupancies, incidental uses, and fire areas	Rating shall be based on final code analysis and life-safety plans.
Fire partition	Rating as required by code	Separates corridors, dwelling/sleeping units where applicable, tenant separations, or other required areas	Use only where permitted by code for the specific condition.
Shaft enclosure	Rating as required by code, typically 1-hour or 2-hour depending on height and condition	Protects vertical openings and concealed shafts	Coordinate with ducts, piping, conduit, medical gas, and access panels.
Horizontal assembly	Rating as required by code	Provides fire-resistance separation between floors or uses	Coordinate slab penetrations, floor openings, and firestopping.
Fire wall	Rating as required by IBC Table 706.4 and adopted code; Group I occupancies typically require 3-hour fire walls unless a permitted exception applies	Creates separate buildings or fire areas as defined by code	Shall be used only where required or specifically shown by the final code analysis.
Fire door assembly	Rating and smoke protection as required by wall type and code	Protects openings in rated or smoke-resistive assemblies	Door, frame, hardware, glazing, gasketing, closer, and threshold shall be coordinated as a complete assembly.
Fire/smoke damper	Rating and listing as required by code	Protects duct and air-transfer penetrations	Coordinate with mechanical systems and access requirements.
Firestopping system	Rating equal to the assembly penetrated, unless otherwise permitted by code	Maintains rating at penetrations and joints	Shall be listed, tested, compatible, and coordinated with each assembly.

C. SMOKE COMPARTMENTALIZATION

1. THE DESIGN-BUILD ENTITY SHALL PROVIDE SMOKE COMPARTMENTS IN PATIENT CARE AREAS AND OTHER REQUIRED HOSPITAL AREAS IN ACCORDANCE WITH THE ADOPTED CODE, NFPA 101, IBC, FGI REQUIREMENTS, AND AHJ REVIEW.
2. SMOKE COMPARTMENTS SHALL BE ARRANGED TO SUPPORT HORIZONTAL PATIENT RELOCATION, STAFF RESPONSE, FIRE DEPARTMENT OPERATIONS, AND DEFEND-IN-PLACE LIFE-SAFETY PROCEDURES.
3. EACH SMOKE COMPARTMENT SHALL PROVIDE THE REQUIRED AREA, TRAVEL DISTANCE, EGRESS CAPACITY, REFUGE CAPACITY, EXIT ACCESS, AND SEPARATION FROM ADJACENT SMOKE COMPARTMENTS.
4. SMOKE COMPARTMENT BOUNDARIES SHALL ALIGN WITH SMOKE BARRIERS, RATED CORRIDORS, HORIZONTAL EXITS, FIRE BARRIERS, SHAFTS, DOORS, DAMPERS, AND OTHER LIFE-SAFETY COMPONENTS REQUIRED TO MAINTAIN THE SMOKE COMPARTMENT.
5. SMOKE COMPARTMENT BOUNDARIES SHALL BE CONTINUOUS FROM EXTERIOR WALL TO EXTERIOR WALL, SMOKE BARRIER TO SMOKE BARRIER, OR OTHER APPROVED RATED CONSTRUCTION AS REQUIRED TO PROVIDE A COMPLETE SMOKE SEPARATION.
6. SMOKE COMPARTMENT LAYOUTS SHALL BE COORDINATED WITH PATIENT BED COUNTS, CLINICAL OPERATIONS, NURSING UNIT ORGANIZATION, STAFF VISIBILITY, DOOR SWINGS, EGRESS ROUTES, EQUIPMENT MOVEMENT, BED MOVEMENT, AND EMERGENCY RESPONSE.
7. SMOKE COMPARTMENT BOUNDARIES SHALL NOT BE INTERRUPTED BY UNPROTECTED OPENINGS, UNSEALED PENETRATIONS, UNPROTECTED TRANSFER GRILLES, UNPROTECTED DUCTWORK, OR DISCONTINUOUS CEILING OR WALL CONDITIONS.
8. SMOKE COMPARTMENTATION SHALL BE MAINTAINED DURING FINAL DESIGN DEVELOPMENT, CONSTRUCTION, COMMISSIONING, AND OCCUPANCY.

D. SMOKE BARRIERS AND SMOKE PARTITIONS

1. SMOKE BARRIERS SHALL BE PROVIDED WHERE REQUIRED TO FORM SMOKE COMPARTMENTS, SEPARATE PATIENT CARE AREAS, PROTECT HORIZONTAL EXITS, AND COMPLY WITH HEALTHCARE LIFE-SAFETY REQUIREMENTS.
2. SMOKE BARRIERS SHALL BE MINIMUM 1-HOUR FIRE-RESISTANCE-RATED CONSTRUCTION, UNLESS A HIGHER RATING IS REQUIRED BY THE ADOPTED CODE, LIFE-SAFETY ANALYSIS, OR AHJ.
3. SMOKE BARRIERS SHALL RESIST THE PASSAGE OF SMOKE AND SHALL BE CONTINUOUS THROUGH CONCEALED SPACES, ABOVE CEILINGS, BELOW RAISED FLOORS, AND AT WALL-TO-SLAB, WALL-TO-DECK, AND WALL-TO-WALL INTERSECTIONS.
4. SMOKE PARTITIONS SHALL BE PROVIDED WHERE REQUIRED BY CODE TO RESIST THE TRANSFER OF SMOKE BETWEEN SPACES, CORRIDORS, AND OTHER AREAS IDENTIFIED BY THE LIFE-SAFETY PLANS.
5. JOINTS, INTERSECTIONS, PERIMETER CONDITIONS, HEAD-OF-WALL CONDITIONS, BOTTOM-OF-WALL CONDITIONS, AND PENETRATIONS IN SMOKE BARRIERS AND SMOKE PARTITIONS SHALL BE SEALED WITH MATERIALS AND SYSTEMS APPROPRIATE FOR THE REQUIRED SMOKE-RESISTIVE PERFORMANCE.
6. DOORS IN SMOKE BARRIERS AND SMOKE PARTITIONS SHALL COMPLY WITH THE REQUIRED FIRE RATING, SMOKE RATING, SELF-CLOSING OR AUTOMATIC-CLOSING OPERATION, POSITIVE LATCHING, GASKETING, UNDERCUT LIMITATIONS, AND HARDWARE REQUIREMENTS ESTABLISHED BY CODE.
7. GLAZING LOCATED IN SMOKE BARRIERS, SMOKE PARTITIONS, FIRE-RATED WALLS, OR FIRE-RATED DOORS SHALL BE FIRE-RATED, SMOKE-RATED, SAFETY-RATED, AND LISTED FOR THE REQUIRED APPLICATION.
8. DUCTS AND AIR-TRANSFER OPENINGS PENETRATING SMOKE BARRIERS OR SMOKE PARTITIONS SHALL BE PROTECTED WITH SMOKE DAMPERS, FIRE/SMOKE DAMPERS, OR OTHER APPROVED PROTECTION AS REQUIRED BY CODE.

E. FIRE BARRIERS, FIRE PARTITIONS, AND HORIZONTAL ASSEMBLIES

1. FIRE BARRIERS SHALL BE PROVIDED WHERE REQUIRED TO SEPARATE OCCUPANCIES, FIRE AREAS, HAZARDOUS AREAS, SHAFTS, EXITS, HORIZONTAL EXITS, INCIDENTAL USES, UTILITY SPACES, AND OTHER CODE-REQUIRED SEPARATIONS.
2. FIRE BARRIERS SHALL HAVE THE FIRE-RESISTANCE RATING REQUIRED BY THE ADOPTED CODE AND FINAL LIFE-SAFETY ANALYSIS.
3. FIRE BARRIERS SHALL BE CONTINUOUS FROM THE TOP OF THE FLOOR OR FOUNDATION BELOW TO THE UNDERSIDE OF THE FIRE-RESISTANCE-RATED FLOOR, ROOF, OR FLOOR/CEILING ASSEMBLY ABOVE, UNLESS OTHERWISE PERMITTED BY CODE.
4. FIRE PARTITIONS SHALL BE PROVIDED WHERE PERMITTED AND REQUIRED BY THE ADOPTED CODE FOR CORRIDOR SEPARATIONS, TENANT SEPARATIONS, SLEEPING UNIT SEPARATIONS, OR OTHER APPLICABLE CONDITIONS.
5. HORIZONTAL ASSEMBLIES SHALL PROVIDE THE REQUIRED FIRE-RESISTANCE RATING BETWEEN FLOORS, BETWEEN DIFFERENT USES, ABOVE HAZARDOUS SPACES, BELOW OCCUPIED AREAS, AND AT OTHER LOCATIONS REQUIRED BY CODE.
6. FIRE-RATED FLOOR AND ROOF ASSEMBLIES SHALL BE COORDINATED WITH STRUCTURAL SYSTEMS, SLAB PENETRATIONS, SHAFTS, STAIRS, ELEVATORS, MECHANICAL OPENINGS, PLUMBING PENETRATIONS, ELECTRICAL PENETRATIONS, MEDICAL GAS PENETRATIONS, AND FIRESTOPPING SYSTEMS.
7. ANY PENETRATION THROUGH A FIRE BARRIER, FIRE PARTITION, SHAFT ENCLOSURE, HORIZONTAL ASSEMBLY, OR RATED FLOOR/CEILING ASSEMBLY SHALL BE PROTECTED WITH AN APPROVED LISTED FIRESTOPPING SYSTEM EQUAL TO THE REQUIRED RATING OF THE ASSEMBLY.

F. FIRE WALLS

1. FIRE WALLS SHALL BE PROVIDED ONLY WHERE REQUIRED BY THE FINAL CODE ANALYSIS, LIFE-SAFETY STRATEGY, BUILDING AREA LIMITATIONS, CONSTRUCTION TYPE, OCCUPANCY SEPARATION, OR AHJ DIRECTION.
2. FIRE WALLS SHALL HAVE THE FIRE-RESISTANCE RATING REQUIRED BY IBC TABLE 706.4, THE ADOPTED PUERTO RICO BUILDING CODE, NFPA REQUIREMENTS, AND AHJ REVIEW.
3. FOR GROUP I HEALTHCARE OCCUPANCIES, FIRE WALLS SHALL BE DESIGNED AS MINIMUM 3-HOUR FIRE-RESISTANCE-RATED CONSTRUCTION UNLESS THE ADOPTED CODE PERMITS A DIFFERENT RATING FOR THE SPECIFIC CONSTRUCTION TYPE AND CONDITION.
4. FIRE WALLS SHALL CREATE SEPARATE BUILDINGS OR FIRE AREAS AS DEFINED BY CODE AND SHALL BE COORDINATED WITH STRUCTURAL DESIGN, SEISMIC DESIGN, EXPANSION JOINTS, ROOF CONSTRUCTION, EXTERIOR WALL CONSTRUCTION, PARAPETS, OPENINGS, PENETRATIONS, AND FIRESTOPPING.
5. OPENINGS IN FIRE WALLS SHALL BE LIMITED AND PROTECTED AS REQUIRED BY CODE.
6. PENETRATIONS THROUGH FIRE WALLS SHALL BE MINIMIZED AND SHALL BE PROTECTED WITH LISTED FIRESTOPPING SYSTEMS, FIRE DAMPERS, FIRE/SMOKE DAMPERS, SLEEVES, AND RATED ASSEMBLIES AS REQUIRED BY CODE.
7. FIRE WALL CONTINUITY SHALL BE MAINTAINED THROUGH CONCEALED SPACES, ROOF CONDITIONS, EXTERIOR WALL INTERSECTIONS, STRUCTURAL INTERFACES, AND SERVICE PENETRATIONS.

G. OPENINGS, DOORS, GLAZING, AND HARDWARE

1. OPENINGS IN SMOKE BARRIERS, SMOKE PARTITIONS, FIRE BARRIERS, FIRE PARTITIONS, FIRE WALLS, SHAFT ENCLOSURES, AND HORIZONTAL ASSEMBLIES SHALL BE LIMITED TO THOSE REQUIRED FOR FUNCTION, EGRESS, BUILDING SYSTEMS, AND CODE-COMPLIANT OPERATION.
2. FIRE-RATED AND SMOKE-RATED DOORS SHALL BE LISTED, LABELED, SELF-CLOSING OR AUTOMATIC-CLOSING WHERE REQUIRED, POSITIVE-LATCHING WHERE REQUIRED, AND COORDINATED WITH THE REQUIRED WALL RATING.
3. RATED DOOR ASSEMBLIES SHALL INCLUDE THE DOOR, FRAME, GLAZING, VISION PANELS, LOUVERS WHERE PERMITTED, HARDWARE, GASKETING, CLOSERS, THRESHOLDS, HOLD-OPEN DEVICES, ACCESS CONTROL, AND SMOKE SEALS REQUIRED FOR THE APPLICABLE CONDITION.
4. DOOR UNDERCUTS, PERIMETER GAPS, HARDWARE PENETRATIONS, ELECTRIC STRIKES, CARD READERS, MAGNETIC HOLD-OPENS, POWER TRANSFERS, AND ACCESS-CONTROL DEVICES SHALL NOT COMPROMISE THE REQUIRED FIRE OR SMOKE PERFORMANCE.
5. RATED GLAZING SHALL BE LISTED AND LABELED FOR THE REQUIRED FIRE-PROTECTION, FIRE-RESISTANCE, SMOKE-CONTROL, SAFETY-GLAZING, AND IMPACT REQUIREMENTS APPLICABLE TO THE LOCATION.
6. FIRE-RATED ACCESS PANELS, FIRE-RATED DAMPERS, FIRE/SMOKE DAMPERS, AND RATED INSPECTION DOORS SHALL BE PROVIDED WHERE REQUIRED TO MAINTAIN THE RATING AND ALLOW REQUIRED MAINTENANCE ACCESS.

H. PENETRATIONS, JOINTS, AND FIRESTOPPING

1. ALL PENETRATIONS IN RATED WALLS, SMOKE BARRIERS, SMOKE PARTITIONS, FIRE BARRIERS, FIRE WALLS, SHAFT ENCLOSURES, AND HORIZONTAL ASSEMBLIES SHALL BE PROTECTED WITH LISTED FIRESTOPPING SYSTEMS APPROPRIATE FOR THE PENETRATING ITEM AND ASSEMBLY.
2. FIRESTOPPING SYSTEMS SHALL BE SELECTED TO MATCH THE WALL, FLOOR, ROOF, SHAFT, JOINT, OR BARRIER CONDITION BEING PENETRATED.
3. FIRESTOPPING SHALL MAINTAIN THE REQUIRED FIRE-RESISTANCE RATING, SMOKE-RESISTANCE PERFORMANCE, MOVEMENT CAPABILITY, AND COMPATIBILITY WITH ADJACENT MATERIALS.
4. HEAD-OF-WALL JOINTS, BOTTOM-OF-WALL JOINTS, PERIMETER JOINTS, EXPANSION JOINTS, SEISMIC JOINTS, CURTAIN WALL EDGES, SLAB EDGES, AND RATED ASSEMBLY INTERSECTIONS SHALL BE PROTECTED WITH APPROVED JOINT SYSTEMS.
5. MECHANICAL, ELECTRICAL, PLUMBING, FIRE PROTECTION, MEDICAL GAS, COMMUNICATIONS, NURSE CALL, SECURITY, AND TECHNOLOGY PENETRATIONS SHALL BE COORDINATED BEFORE CONSTRUCTION TO AVOID UNPROTECTED OR EXCESSIVE PENETRATIONS THROUGH RATED ASSEMBLIES.
6. MULTIPLE SMALL PENETRATIONS, BACK-TO-BACK ELECTRICAL BOXES, RECESSED CABINETS, ACCESS PANELS, PLUMBING CARRIERS, MEDICAL GAS OUTLETS, AND OTHER CONCEALED ELEMENTS SHALL NOT COMPROMISE THE REQUIRED RATING OR SMOKE-RESISTIVE PERFORMANCE.
7. FIRESTOPPING AND SMOKE SEALING SHALL REMAIN ACCESSIBLE FOR INSPECTION WHERE REQUIRED AND SHALL BE DOCUMENTED FOR FUTURE MAINTENANCE.

I. BASEMENT, EQUIPMENT ROOMS, AND SERVICE AREAS

1. BASEMENT ELECTRO-MECHANICAL ROOMS, GENERATOR ROOMS, CHILLER ROOMS, SUBSTATIONS, TRANSFORMER ROOMS, SWITCHGEAR ROOMS, FUEL SYSTEM ROOMS, PUMP ROOMS, MECHANICAL ROOMS, ELECTRICAL ROOMS, AND OTHER SERVICE AREAS SHALL BE SEPARATED FROM OCCUPIED SPACES AND EGRESS PATHS BY THE FIRE-RESISTANCE-RATED CONSTRUCTION REQUIRED BY CODE.
2. HAZARDOUS, INCIDENTAL, UTILITY, FUEL, ELECTRICAL, GENERATOR, AND MECHANICAL SPACES SHALL RECEIVE THE FIRE-RATED SEPARATION, OPENING PROTECTION, SMOKE SEPARATION, FIRE SUPPRESSION, VENTILATION PROTECTION, AND DETECTION REQUIREMENTS ESTABLISHED BY THE FINAL CODE ANALYSIS.
3. SHAFTS, VERTICAL RISERS, DUCT CHASES, PIPE CHASES, CABLE PATHWAYS, AND SERVICE OPENINGS EXTENDING FROM THE BASEMENT TO UPPER FLOORS SHALL BE ENCLOSED, SEALED, AND PROTECTED AS REQUIRED TO PREVENT VERTICAL FIRE AND SMOKE MIGRATION.
4. RATED SEPARATIONS AT BASEMENT EQUIPMENT ROOMS SHALL BE COORDINATED WITH ACOUSTICAL REQUIREMENTS, VIBRATION ISOLATION, EQUIPMENT ACCESS, MAINTENANCE CLEARANCES, DOOR SIZES, VENTILATION OPENINGS, LOUVERS, DUCTS, DAMPERS, AND FIRE SUPPRESSION SYSTEMS.

J. COORDINATION AND VERIFICATION

1. THE DESIGN-BUILD ENTITY SHALL PROVIDE FINAL LIFE-SAFETY PLANS, CODE ANALYSIS, RATED WALL PLANS, SMOKE COMPARTMENT PLANS, EGRESS PLANS, FIRESTOPPING DETAILS, DOOR RATING SCHEDULES, DAMPER SCHEDULES, AND RATED ASSEMBLY DOCUMENTATION FOR REVIEW.
2. THE FINAL CONSTRUCTION DOCUMENTS SHALL CLEARLY IDENTIFY EACH FIRE-RATED, SMOKE-RATED, AND SMOKE-RESISTIVE ASSEMBLY, INCLUDING REQUIRED RATING, EXTENT, CONTINUITY, OPENING PROTECTION, AND PENETRATION PROTECTION.
3. RATED WALL TAGS, LIFE-SAFETY PLANS, DOOR SCHEDULES, PARTITION TYPES, CEILING PLANS, MECHANICAL PLANS, ELECTRICAL PLANS, PLUMBING PLANS, FIRE PROTECTION PLANS, AND STRUCTURAL PLANS SHALL BE FULLY COORDINATED.
4. SUBSTITUTIONS, ROUTING CHANGES, EQUIPMENT CHANGES, SHAFT CHANGES, WALL TYPE CHANGES, CEILING CHANGES, DOOR CHANGES, OR FIELD MODIFICATIONS SHALL NOT REDUCE THE REQUIRED FIRE-RESISTANCE, SMOKE-RESISTANCE, OR LIFE-SAFETY PERFORMANCE.
5. THE DESIGN-BUILD ENTITY SHALL INSPECT, VERIFY, AND DOCUMENT FIRESTOPPING, RATED ASSEMBLIES, SMOKE BARRIERS, SMOKE COMPARTMENTS, RATED DOORS, DAMPERS, AND PROTECTED PENETRATIONS PRIOR TO CONCEALMENT AND BEFORE PROJECT ACCEPTANCE.
6. ANY UNPROTECTED PENETRATION, DISCONTINUOUS RATED ASSEMBLY, MISSING SMOKE SEAL, MISSING FIRESTOPPING, IMPROPERLY RATED DOOR, UNPROTECTED OPENING, OR NON-COMPLIANT SMOKE COMPARTMENT CONDITION SHALL BE CORRECTED PRIOR TO OCCUPANCY.

CEILING MOUNTED OPERATING ROOMS EQUIPMENT NOTES

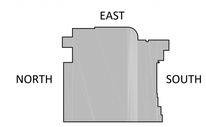
(TYPICAL OPERATING CEILING EQUIPMENT MOUNTING ASSEMBLY REQUIREMENTS DETAILS)

APPLICABLE FOR ALL CEILING-MOUNTED SURGICAL LIGHTING FIXTURES & EQUIPMENT COLUMNS. STRUCTURAL SUPPORT AND MOUNTING ASSEMBLY SHALL BE FOR A RATED LOAD OF UP TO 450 LBS. INSTALLATION SHALL BE IN ACCORDANCE WITH THE FOLLOWING REQUIREMENTS:

1. APPLICABLE TO ALL CEILING MOUNTED EQUIPMENT LOCATIONS SHOWN IN THE DRAWINGS HEREIN WITH NUMBERS, (1) (16) (17) (18) (19)
2. PROVIDE A MINIMUM ¾" THICK A36 STEEL MOUNTING PLATE (MINIMUM DIMENSIONS: 14" X 14") MECHANICALLY ANCHORED TO STRUCTURAL SLAB OR BEAM WITH FOUR (4) MINIMUM ¾" DIAMETER HILTI KWIK BOLT TZ2 (OR APPROVED EQUAL) WITH MINIMUM 5" EMBEDMENT. TORQUE PER MANUFACTURER'S RECOMMENDATIONS.
3. SUSPEND FIXTURE SUPPORT USING FOUR (4) Ø1" ASTM A193 B7 FULLY THREADED RODS WITH HEAVY HEX NUTS AND LOCK WASHERS AT TOP AND BOTTOM. DOUBLE-NUT ALL CONNECTIONS AND TORQUE TO 90–100 FT-LBS.
4. INSTALL TWO (2) LATERAL BRACES MINIMUM, AT 45° ANGLE FROM SUSPENSION TO STRUCTURE, USING 2" X 2" X ¼" ANGLE IRON OR UNISTRUT WITH SEISMIC-RATED GUSSET PLATES. BRACES TO BE ATTACHED TO INDEPENDENT STRUCTURAL MEMBERS TO PREVENT.
5. ATTACH SURGICAL LIGHT MANUFACTURER'S INTERFACE PLATE TO ROD ASSEMBLY. LEVEL FIXTURE MOUNTING PLATE TO WITHIN ⅛". ENSURE BOLT PATTERNS ALIGN EXACTLY WITH FIXTURE BASE.
6. PROVIDE ESCUTCHEON OR SEALED RING AT CEILING PENETRATION FOR INFECTION CONTROL AND FIRE RATING. DO NOT ALLOW ANY FIXTURE LOAD TO BE TRANSFERRED TO CEILING GRID.
7. ELECTRICAL CONDUIT AND JUNCTION BOX SHALL BE MOUNTED ABOVE CEILING, ACCESSIBLE, AND SHALL ALLOW FOR FINAL FIXTURE ADJUSTMENT. COORDINATE ALL POWER AND CONTROL REQUIREMENTS WITH ELECTRICAL DRAWINGS AND FIXTURE MANUFACTURER.
8. CONTRACTOR SHALL SUBMIT INSTALLATION DRAWINGS AND OBTAIN APPROVAL FROM STRUCTURAL ENGINEER PRIOR TO FABRICATION OR INSTALLATION. FIELD-VERIFY CONDITIONS AND PROVIDE AS-BUILT DRAWINGS. PROVIDE INSTALLATION CERTIFICATION BY LICENSED STRUCTURAL ENGINEER STATING THE SYSTEM IS INSTALLED TO SAFELY SUPPORT A 450 LB SURGICAL LIGHT FIXTURE WITH MINIMUM 2.0 SAFETY FACTOR.
9. STRUCTURE ABOVE SHALL BE VERIFIED TO SUPPORT A MINIMUM LOAD OF 2,250 LBS (5X SAFETY FACTOR). COORDINATE WITH STRUCTURAL ENGINEER AND PROVIDE SUPPLEMENTAL FRAMING AS REQUIRED.

SUPLEMENTARY EQUIPMENT NOTES:

(APPLICABLE TO ALL MEDICAL EQUIPMENT SUPPLIED BY THE OWNER)



1. PRIOR TO THE INSTALLATION OF ALL THE EQUIPMENT (SOC, SIN & SCC) SPECIFIED HEREIN, THE CONTRACTOR SHALL REQUEST FROM THE OWNER THE FINAL CONFIRMATION LIST OF THE EQUIPMENT WITH ALL THE ELECTRICAL & PLUMBING REQUIREMENTS.
2. ALL FURNITURE AND EQUIPMENT IDENTIFIED TO BE SUPPLIED BY THE OWNER AND INSTALLED BY THE CONTRACTOR (SOC) SHALL BE INSTALLED ACCORDINGLY BY THE CONTRACTOR IN COMPLIANCE WITH ALL THE UTILITIES (DRAIN, ELECTRICAL, WATER, EXHAUST, ETC.) INSTALLATION SPECIFICATION REQUIREMENTS OF THE MANUFACTURER.
3. ALL EQUIPMENT DEFINED AS SOC (SUPPLIED BY OWNER & INSTALLED BY CONTRACTOR) SHALL BE INSTALLED IN ACCORDANCE WITH ALL MANUFACTURER'S SPECIFICATIONS, REQUIREMENTS AND INSTALLATION PARAMETERS RELATED, BUT NOT LIMITED TO:
   1. BIOMEDICAL SUPPORT
   2. CALIBRATION
   3. INSTALLATION REQUIREMENTS
   4. START-UP
   5. UTILITIES HOOK-UPS
   6. TECHNICAL SUPPORT & GUIDANCE
   7. ASSEMBLY
   8. VALIDATION
4. CONTRACTOR SHALL EXECUTE THE WORK IN COORDINATION & BY SUB-CONTRACTING ALL REQUIRED OWNERS MEDICAL EQUIPMENT SPECIALISTS, SUPPLIERS & VENDOR'S.
5. WHERE APPLICABLE, WATER SUPPLY AND DRAIN REQUIREMENTS SHALL BE PROVIDED FOR ALL NEW AND EXISTING EQUIPMENTS, AND FOR FUTURE EQUIPMENT SHOWN HEREIN AS REQUIRED FOR PROPER EQUIPMENT OPERATION.
6. CONTRACTOR SHALL VERIFY THE DIMENSIONS OF ALL NEW AND EXISTING EQUIPMENTS PRIOR TO THE CONSTRUCTION OF INSTALLATION OPENINGS & UTILITIES SUPPLIES.
7. WHERE APPLICABLE, CONTRACTOR SHALL PROVIDE ALL WATER AND DRAIN UTILITIES REQUIREMTNS FOR NEW AND EXISTING REPROCESSING SINK BAYS.
8. WHERE APPLICABLE, ALL EQUIPMENT SPECIFIED IN THE LEGEND HEREIN THAT REQUIRE WATER AND DRAIN UTILITIES ,SHALL BE INSTALLED AS INSTRUCTED IN THE PLUMBING DRAWINGS AND/OR AS REQUIRED, WITH ALL THE FIXTURES AND FITTINGS, TO THE PROPOSED WATER AND DRAIN UTILITY LINES. INSTALLATION SHALL BE EXECUTED AND CERTIFIED, FOR PROPER OPERATION, BY A LICENCED MASTER PLUMBER.

OPERATING ROOMS EQUIPMENT NOTES:

1. CONTRACTOR SHALL SUPPLY & INSTALL ALL SURGICAL LAMPS & UTILITY SERVICE BOOMS STRUCTURAL SUPPORT INSIDE THE PLENUM AS REQUIRED BY THE EQUIPMENT MANUFACTURER'S INSTALLATION GUIDELINES. THE STRUCTURAL SUPPORT SHALL BE IN ACCORDANCE WITH BUILDING CODE REQUIREMENTS (INCLUDING SEISMIC REQUIREMENTS) & CERTIFIED BY A CONTRACTOR RETAINED STRUCTURAL ENGINEER.
2. LED SURGICAL LAMP WILL BE SUPPLIED BY OWNER & INSTALLED BY CONTRACTOR.
3. ALL STRUCTURAL SUPPORT FOR SURGICAL LED LAMPS & UTILITY SERVICE EQUIPMENT BOOM SHALL HAVE THE REQUIRED APPLIED LOAD CAPACITY SPECIFIED BY THE MANUFACTURER.

WORK BY OWNER:

1. ALL CABLING, HARDWARE AND SOFTWARE RELATED TO THE VOICE COMMUNICATION SYSTEM, INFORMATION TECHNOLOGY SYSTEM, CLOSED CIRCUIT TV SYSTEM AND ELECTRONIC ACCESS CONTROL SYSTEM WILL BE SUPPLIED AND INSTALLED BY EACH OF THE SYSTEMS OWNER'S SUBCONTRACTORS.

PROJECT REFERENCE ORIENTATION KEY PLAN

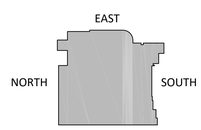
GENERAL NOTES – INTERSTITIAL ISOLATION LEVEL AND SEISMIC RESILIENCE

1. THE INTERSTITIAL ISOLATION LEVEL IS INTENDED TO ACCOMMODATE THE SEISMIC BASE ISOLATION SYSTEM AND PROVIDE THE REQUIRED SEPARATION BETWEEN THE SUPERSTRUCTURE AND THE SUBSTRUCTURE.
2. THE DESIGN-BUILD ENTITY SHALL PRESERVE THE FUNCTIONAL INTENT OF THE INTERSTITIAL ISOLATION LEVEL AS A DEDICATED SEISMIC-RESILIENCE ZONE AND SHALL NOT INTRODUCE ELEMENTS THAT RESTRICT, BRIDGE, OR COMPROMISE THE REQUIRED MOVEMENT OF THE ISOLATED STRUCTURE.
3. THE DESIGN-BUILD ENTITY SHALL COORDINATE THE FINAL ARCHITECTURAL, STRUCTURAL, MECHANICAL, ELECTRICAL, PLUMBING, FIRE PROTECTION, MEDICAL GAS, COMMUNICATIONS, AND LIFE-SAFETY DESIGN AT THE INTERSTITIAL ISOLATION LEVEL TO MAINTAIN THE REQUIRED SEISMIC SEPARATION AND MOVEMENT CAPACITY.
4. BASE ISOLATORS SHALL BE INCORPORATED AS PART OF THE BUILDING'S SEISMIC-RESILIENCE STRATEGY TO REDUCE THE TRANSFER OF EARTHQUAKE FORCES FROM THE GROUND TO THE OCCUPIED HOSPITAL STRUCTURE.
5. THE BASE ISOLATION SYSTEM SHALL BE DESIGNED TO IMPROVE POST-EARTHQUAKE OPERATIONAL CONTINUITY, PROTECT CRITICAL HOSPITAL FUNCTIONS, AND REDUCE DAMAGE TO STRUCTURAL, ARCHITECTURAL, AND BUILDING SERVICE SYSTEMS.
6. THE DESIGN-BUILD ENTITY SHALL MAINTAIN ALL REQUIRED SEISMIC CLEARANCES, MOVEMENT JOINTS, ACCESS ZONES, INSPECTION AREAS, AND MAINTENANCE PROVISIONS ASSOCIATED WITH THE BASE ISOLATION SYSTEM.
7. ARCHITECTURAL PARTITIONS, SHAFTS, STAIRS, ELEVATORS, RAMPS, UTILITY PENETRATIONS, PIPING, DUCTWORK, CONDUITS, EQUIPMENT SUPPORTS, AND OTHER BUILDING COMPONENTS CROSSING THE ISOLATION PLANE SHALL BE DESIGNED TO ACCOMMODATE THE ANTICIPATED SEISMIC DISPLACEMENT WITHOUT LOSS OF REQUIRED PERFORMANCE.
8. THE DESIGN-BUILD ENTITY SHALL PROVIDE FLEXIBLE, ARTICULATED, OR OTHERWISE COMPATIBLE CONNECTIONS WHERE BUILDING SYSTEMS CROSS THE SEISMIC ISOLATION PLANE, AS REQUIRED TO MAINTAIN SERVICE CONTINUITY DURING AND AFTER A SEISMIC EVENT.
9. NO RIGID ARCHITECTURAL, STRUCTURAL, OR UTILITY CONNECTION SHALL BE PROVIDED ACROSS THE ISOLATION PLANE UNLESS SPECIFICALLY ENGINEERED TO ACCOMMODATE THE REQUIRED SEISMIC MOVEMENT WITHOUT COMPROMISING THE BASE ISOLATION SYSTEM.
10. ACCESS TO THE INTERSTITIAL ISOLATION LEVEL SHALL BE MAINTAINED FOR INSPECTION, TESTING, MAINTENANCE, REPAIR, AND REPLACEMENT OF BASE ISOLATORS AND RELATED SEISMIC COMPONENTS.
11. THE INTERSTITIAL ISOLATION LEVEL SHALL BE COORDINATED TO AVOID CONFLICTS BETWEEN BASE ISOLATORS, STRUCTURAL ELEMENTS, UTILITIES, DRAINAGE, FIRE PROTECTION, LIGHTING, ACCESS ROUTES, AND MAINTENANCE CLEARANCES.
12. THE DESIGN-BUILD ENTITY SHALL PROTECT THE ISOLATION LEVEL FROM WATER INTRUSION, UNCONTROLLED DRAINAGE, DEBRIS ACCUMULATION, CORROSION, UNAUTHORIZED STORAGE, AND OTHER CONDITIONS THAT COULD AFFECT THE PERFORMANCE, INSPECTION, OR MAINTENANCE OF THE BASE ISOLATION SYSTEM.
13. THE DESIGN-BUILD ENTITY SHALL PROVIDE ADEQUATE LIGHTING, ACCESS CONTROL, SAFETY PROVISIONS, AND MAINTAINABLE PATHWAYS WITHIN THE INTERSTITIAL ISOLATION LEVEL AS REQUIRED FOR AUTHORIZED INSPECTION AND MAINTENANCE PERSONNEL.
14. THE FINAL DESIGN SHALL MAINTAIN THE ARCHITECTURAL AND OPERATIONAL INTENT SHOWN IN THESE BRIDGING DOCUMENTS WHILE ALLOWING THE STRUCTURAL ENGINEER OF RECORD TO FINALIZE THE BASE ISOLATION SYSTEM IN ACCORDANCE WITH THE REQUIRED SEISMIC PERFORMANCE CRITERIA.
15. THE DESIGN-BUILD ENTITY SHALL COORDINATE THE BASE ISOLATION SYSTEM WITH THE APPROVED STRUCTURAL NARRATIVE, APPLICABLE SEISMIC DESIGN CRITERIA, GOVERNING CODES, HEALTHCARE OPERATIONAL REQUIREMENTS, AND AUTHORITIES HAVING JURISDICTION.
16. THE INTERSTITIAL ISOLATION LEVEL SHALL NOT BE USED FOR UNRELATED STORAGE, OCCUPANCY, OR FUNCTIONS THAT INTERFERE WITH SEISMIC MOVEMENT, INSPECTION ACCESS, MAINTENANCE ACCESS, LIFE SAFETY, OR THE LONG-TERM PERFORMANCE OF THE BASE ISOLATION SYSTEM.
17. ALL FINAL DIMENSIONS, CLEARANCES, ACCESS REQUIREMENTS, MOVEMENT ALLOWANCES, AND COMPONENT LAYOUTS AT THE INTERSTITIAL ISOLATION LEVEL SHALL BE VERIFIED AND COORDINATED BY THE DESIGN-BUILD ENTITY DURING FINAL DESIGN.
18. THE DESIGN-BUILD ENTITY SHALL DEMONSTRATE, THROUGH FINAL DESIGN DOCUMENTATION, THAT THE INTERSTITIAL ISOLATION LEVEL AND BASE ISOLATION SYSTEM SUPPORT THE HOSPITAL'S REQUIRED SEISMIC RESILIENCE, LIFE-SAFETY PERFORMANCE, AND OPERATIONAL CONTINUITY OBJECTIVES.

SPACE PROGRAM:

SEISMIC PROTECTION SYSTEM

- DEDICATED SEISMIC ISOLATION LEVEL LOCATED BETWEEN THE FIRST AND SECOND FLOORS.
- PROVIDES EARTHQUAKE PROTECTION AND OPERATIONAL RESILIENCE FOR THE HOSPITAL STRUCTURE.



LEGEND:

SURFACES (FLOOR AND/OR ROOF) TO BE RAISED, AS REQUIRED AND NOTED IN THE DRAWINGS, USING RIGID LOAD-BEARING EXPANDED POLYSTYRENE (EPS) FOAM FILL TOPPED WITH A 4" THICK LIGHTWEIGHT TOPPING REINFORCED WITH WIRE MESH (BLACK LOW CARBON STEEL) TO INSTALL THE SPECIFIED FLOOR FINISH.

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF OBTAINING PROPOSALS FOR DESIGN-BUILD SERVICES FOR THE PROJECT DESCRIBED HEREIN. THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY DE LA TORRE-ESTEVEZ ARCHITECTS (DLTE), INTENT, PERFORMANCE CRITERIA, AND DESIGN CONCEPTS. THESE DOCUMENTS ARE NOT SUITABLE FOR BIDDING, FABRICATION, OR PERMITTING PURPOSES AND SHALL NOT BE USED FOR PERMITTING, BIDDING, FABRICATION, OR PROCUREMENT. THEY ARE INTENDED SOLELY TO COMMUNICATE THE DESIGN INTENT AND GUIDANCE FOR THE DESIGN-BUILD ENTITY. THE SELECTED DESIGN-BUILD ENTITY IS RESPONSIBLE FOR DEVELOPING ALL CONSTRUCTION DOCUMENTS, ENGINEERING, PROCUREMENT, AND CONSTRUCTION REQUIRED FOR THE PROJECT. THE DESIGN-BUILD ENTITY IS SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, ACCURACY, AND COMPLIANCE OF ALL DESIGN AND CONSTRUCTION DOCUMENTS WITH APPLICABLE CODES, REGULATIONS, AND PROJECT REQUIREMENTS. DLTE MAKES NO WARRANTIES, EXPRESS OR IMPLIED, REGARDING THE SUFFICIENCY OF THESE DOCUMENTS FOR BIDDING OR CONSTRUCTION PURPOSES. ANY RELIANCE ON THESE DOCUMENTS FOR BIDDING, PERMITTING, OR CONSTRUCTION IS AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO DLTE.

THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY DE LA TORRE-ESTEVEZ ARCHITECTS (DLTE), INTENDED ONLY FOR THE SPECIFIC PROJECT AND PURPOSE DESCRIBED HEREIN. THEY ARE NOT SUITABLE FOR BIDDING, PERMITTING, FABRICATION, OR CONSTRUCTION. THEY ARE INTENDED SOLELY TO COMMUNICATE THE DESIGN INTENT AND GUIDANCE FOR THE DESIGN-BUILD ENTITY. THE SELECTED DESIGN-BUILD ENTITY IS RESPONSIBLE FOR DEVELOPING ALL CONSTRUCTION DOCUMENTS, ENGINEERING, PROCUREMENT, AND CONSTRUCTION REQUIRED FOR THE PROJECT. THE DESIGN-BUILD ENTITY IS SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, ACCURACY, AND COMPLIANCE OF ALL DESIGN AND CONSTRUCTION DOCUMENTS WITH APPLICABLE CODES, REGULATIONS, AND PROJECT REQUIREMENTS. DLTE MAKES NO WARRANTIES, EXPRESS OR IMPLIED, REGARDING THE SUFFICIENCY OF THESE DOCUMENTS FOR BIDDING OR CONSTRUCTION PURPOSES. ANY RELIANCE ON THESE DOCUMENTS FOR BIDDING, PERMITTING, OR CONSTRUCTION IS AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO DLTE. ANY REPRODUCTION, MODIFICATION, DISTRIBUTION, OR PUBLIC DISCLOSURE OF THESE DOCUMENTS WITHOUT THE EXPRESS WRITTEN CONSENT OF DLTE IS STRICTLY PROHIBITED.

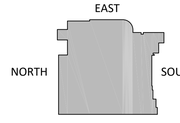
PROPOSED FLOOR PLAN - ROOF (HELIPORT) LEVEL



SCALE: 3/32"= 1'-0"

GENERAL HELIPAD NOTES

1. HELIPAD DESIGN INTENT: THE HELIPAD SHALL PROVIDE A SAFE, FAA-COMPLIANT, HOSPITAL-GRADE LANDING FACILITY FOR EMERGENCY MEDICAL TRANSPORT, TRAUMA RESPONSE, DISASTER RESPONSE, AND APPROVED GOVERNMENT OR PRESIDENTIAL HELICOPTER OPERATIONS.
2. TLOF SIZE: THE TOUCHDOWN AND LIFTOFF AREA SHOWN IN THESE BRIDGING DOCUMENTS SHALL BE 69'-0" X 69'-0" MINIMUM AND SHALL BE DESIGNED TO SUPPORT HELICOPTER OPERATIONS UP TO THE SIKORSKY S-92 (INCLUDING THE MILITARY VH-92A PATRIOT VERSION) PRESIDENTIAL HELICOPTER.
3. REQUIRED PRESIDENTIAL HELICOPTER CAPACITY: THE HELIPAD SHALL BE DESIGNED, COORDINATED, AND STRUCTURALLY SUPPORTED TO ACCOMMODATE HELICOPTER OPERATIONS UP TO THE SIKORSKY S-92 (INCLUDING THE MILITARY VH-92A PATRIOT VERSION) PRESIDENTIAL HELICOPTER, INCLUDING ITS DIMENSIONAL, STRUCTURAL, OPERATIONAL, SAFETY, AND AVIATION REQUIREMENTS.
4. DESIGN HELICOPTER REFERENCE: THE SIKORSKY S-92 (INCLUDING THE MILITARY VH-92A PATRIOT VERSION) PRESIDENTIAL HELICOPTER SHALL BE USED AS THE UPPER-CAPACITY DESIGN REFERENCE AIRCRAFT UNLESS A MORE RESTRICTIVE AIRCRAFT, OPERATING REQUIREMENT, FAA REQUIREMENT, OR AUTHORITY HAVING JURISDICTION REQUIREMENT IS ESTABLISHED.
5. FAA COMPLIANCE: THE HELIPAD SHALL COMPLY WITH ALL CURRENT FAA REQUIREMENTS APPLICABLE TO HOSPITAL HELIPORTS, INCLUDING HELIPORT PLANNING, AIRSPACE PROTECTION, APPROACH AND DEPARTURE PATHS, OBSTRUCTION EVALUATION, TLOF, FATO, SAFETY AREA, MARKINGS, LIGHTING, AND FAA NOTIFICATION OR APPROVAL PROCESSES.
6. HOSPITAL HELIPORT CLASSIFICATION:THE HELIPAD SHALL BE DESIGNED, DOCUMENTED, AND COORDINATED AS A HOSPITAL HELIPORT UNLESS OTHERWISE DIRECTED BY THE OWNER AND ACCEPTED BY THE FAA AND AUTHORITIES HAVING JURISDICTION.
7. DESIGN HELICOPTER VERIFICATION: THE DESIGN-BUILD ENTITY SHALL VERIFY THE FINAL DESIGN HELICOPTER REQUIREMENTS, INCLUDING CONTROLLING DIMENSION "D," OVERALL LENGTH, ROTOR DIAMETER, MAXIMUM GROSS WEIGHT, LANDING GEAR CONFIGURATION, WHEEL OR SKID CONTACT AREAS, DYNAMIC LANDING LOADS, DOWNWASH, APPROACH/DEPARTURE REQUIREMENTS, AND OPERATIONAL LIMITATIONS.
8. TLOF DIMENSIONAL BASIS: THE 69'-0" X 69'-0" MINIMUM TLOF, SHALL ACCOMMODATE THE SIKORSKY S-92 (INCLUDING THE MILITARY VH-92A PATRIOT VERSION) PRESIDENTIAL HELICOPTER BASED ON FAA HOSPITAL HELIPORT CRITERIA, SUBJECT TO FINAL VERIFICATION OF THE CONTROLLING DIMENSION "D," LOAD-BEARING FATO CONFIGURATION, AND AIRCRAFT-OPERATOR REQUIREMENTS.
9. ELEVATED HELIPAD / NON-LOAD-BEARING FATO: WHERE THE HELIPAD IS ELEVATED OR SUPPORTED BY THE HOSPITAL STRUCTURE AND THE FATO BEYOND THE TLOF IS NOT LOAD-BEARING OR IS OPEN TO SPACE BELOW, THE TLOF SHALL BE INCREASED TO 69'-0" X 69'-0" MINIMUM, WHICH CORRESPONDS TO NOT LESS THAN THE CONTROLLING DIMENSION "D" OF THE DESIGN HELICOPTER, AS REQUIRED BY FAA CRITERIA. FOR S-92 HELICOPTER OPERATIONS, INCLUDING VH-92A PATRIOT PRESIDENTIAL HELICOPTER CAPABILITY, THE TLOF SHALL BE SIZED, STRUCTURALLY DESIGNED, AND COORDINATED AS REQUIRED TO ACHIEVE FULL FAA-COMPLIANT OPERATIONAL CAPABILITY.
10. STRUCTURAL CAPACITY: THE HELIPAD STRUCTURE, TLOF, LOAD-BEARING FATO WHERE APPLICABLE, SUPPORTING FRAMING, ACCESS AREAS, AND MAINTENANCE ROUTES SHALL SUPPORT THE SIKORSKY VH-92A PATRIOT PRESIDENTIAL HELICOPTER, INCLUDING MAXIMUM GROSS WEIGHT, LANDING GEAR LOADS, DYNAMIC LANDING EFFECTS, CONCENTRATED LOADS, VIBRATION, AND ROTOR DOWNWASH EFFECTS.
11. NO REDUCTION OF CAPACITY: THE FINAL HELIPAD DESIGN SHALL NOT REDUCE THE STATED SIKORSKY S-92 (INCLUDING THE MILITARY VH-92A PATRIOT VERSION) DESIGN CAPACITY WITHOUT WRITTEN OWNER APPROVAL AND FAA/AHJ COORDINATION.
12. FATO AND SAFETY AREA: PROVIDE THE FINAL APPROACH AND TAKEOFF AREA, SAFETY AREA, AND ALL REQUIRED CLEARANCES IN ACCORDANCE WITH FAA REQUIREMENTS BASED ON THE SIKORSKY S-92 (INCLUDING THE MILITARY VH-92A PATRIOT VERSION) OR THE FINAL APPROVED DESIGN HELICOPTER, WHICHEVER IS MORE RESTRICTIVE.
13. APPROACH AND DEPARTURE PATHS: PROVIDE AND PROTECT CLEAR APPROACH AND DEPARTURE PATHS FREE OF OBSTRUCTIONS, HAZARDS, INCOMPATIBLE LIGHTING, TURBULENCE CONDITIONS, CRANES, ANTENNAS, ROOFTOP EQUIPMENT, PARAPETS, SIGNAGE, UTILITIES, AND TEMPORARY CONSTRUCTION ELEMENTS.
14. AIRSPACE AND OBSTRUCTION CONTROL: SURVEY, IDENTIFY, DOCUMENT, AND MITIGATE ALL EXISTING AND PROPOSED OBSTRUCTIONS AFFECTING THE HELIPAD AIRSPACE, APPROACH/DEPARTURE SURFACES, TRANSITIONAL SURFACES, SAFETY AREA, AND HELIPORT PROTECTION AREAS.
15. EXISTING HELIPAD COORDINATION: THE EXISTING ASEM CENTRAL SERVICES BUILDING HELIPAD SHALL BE EVALUATED AND COORDINATED WITH THE PROPOSED NEW HELIPAD, INCLUDING ITS CURRENT OPERATION, FAA STATUS, APPROACH/DEPARTURE PATHS, LIGHTING, MARKINGS, ACCESS ROUTE, FIRE PROTECTION, UTILITIES, OPERATIONAL LIMITATIONS, AND CONTINUED USE DURING CONSTRUCTION.
16. CONTINUITY OF HELICOPTER OPERATIONS: EXISTING HELICOPTER EMERGENCY OPERATIONS SHALL REMAIN AVAILABLE DURING CONSTRUCTION UNLESS AN ALTERNATE TEMPORARY LANDING ARRANGEMENT OR TRANSITION PLAN IS APPROVED BY THE OWNER, HOSPITAL OPERATIONS, FAA, AIRCRAFT OPERATORS, AND AUTHORITIES HAVING JURISDICTION.
17. CONTINUOUS HELIPAD AVAILABILITY: THE EXISTING HELIPAD SHALL REMAIN FULLY OPERATIONAL AND AVAILABLE FOR USE AT ALL TIMES AND SHALL NOT BE DECOMMISSIONED, BLOCKED, ALTERED, OR OPERATIONALLY REDUCED. BOTH THE EXISTING HELIPAD AND THE NEW HELIPAD SHALL BE MAINTAINED AS AVAILABLE FOR USE, UNLESS OTHERWISE DIRECTED IN WRITING BY THE OWNER AND APPROVED BY THE FAA AND APPLICABLE AUTHORITIES HAVING JURISDICTION.
18. EMERGENCY ACCESS TO TRAUMA SERVICES: PROVIDE DIRECT, SECURE, PROTECTED, AND OPERATIONALLY EFFICIENT ACCESS BETWEEN THE HELIPAD AND TRAUMA/EMERGENCY RECEIVING AREAS, INCLUDING STRETCHER MOVEMENT, MEDICAL TEAM ACCESS, ELEVATOR ACCESS, AND EMERGENCY RESPONSE ACCESS.
19. CONTROLLED ACCESS: SEPARATE HELIPAD OPERATIONS FROM PUBLIC CIRCULATION. PROVIDE CONTROLLED ACCESS, SECURITY MEASURES, GATES, ALARMS, SIGNAGE, AND BARRIERS WITHOUT CREATING OBSTRUCTIONS OR HAZARDS TO HELICOPTER OPERATIONS.
20. PRESIDENTIAL HELICOPTER OPERATIONS: COORDINATE SPECIAL ACCESS, SECURITY, STAGING, COMMUNICATIONS, EMERGENCY RESPONSE, AND OPERATIONAL REQUIREMENTS ASSOCIATED WITH SIKORSKY S-92 (INCLUDING THE MILITARY VH-92A PATRIOT VERSION) USE WITH THE OWNER AND RESPONSIBLE AGENCIES.
21. HELIPAD MARKINGS: PROVIDE FAA-COMPLIANT HOSPITAL HELIPORT MARKINGS, INCLUDING THE HOSPITAL HELIPORT IDENTIFICATION SYMBOL, TLOF PERIMETER MARKINGS, TOUCHDOWN/POSITIONING MARKINGS, SIZE AND WEIGHT LIMITATION MARKINGS, AND PREFERRED APPROACH/DEPARTURE INDICATORS WHERE REQUIRED.
22. SIZE AND WEIGHT MARKINGS: MARK THE HELIPAD WITH THE FINAL APPROVED MAXIMUM HELICOPTER WEIGHT AND CONTROLLING DIMENSION "D" IN ACCORDANCE WITH FAA REQUIREMENTS. THE MARKINGS SHALL REFLECT THE ACTUAL APPROVED OPERATING CAPACITY OF THE HELIPAD, INCLUDING SIKORSKY S-92 (INCLUDING THE MILITARY VH-92A PATRIOT VERSION) CAPACITY.
23. LIGHTING: PROVIDE FAA-COMPLIANT HELIPAD LIGHTING FOR NIGHT AND EMERGENCY OPERATIONS, INCLUDING TLOF PERIMETER LIGHTS, OBSTRUCTION LIGHTING, LANDING DIRECTION LIGHTING WHERE REQUIRED, AND AN ILLUMINATED WIND CONE.
24. EMERGENCY POWER: CONNECT HELIPAD LIGHTING, WIND CONE LIGHTING, OBSTRUCTION LIGHTING, COMMUNICATIONS, ACCESS CONTROLS, AND REQUIRED LIFE-SAFETY SYSTEMS TO THE APPROPRIATE EMERGENCY/ESSENTIAL POWER SYSTEM.
25. WIND CONE: PROVIDE AN ILLUMINATED WIND CONE VISIBLE TO PILOTS DURING APPROACH, LANDING, TAKEOFF, AND GROUND OPERATIONS. LOCATE THE WIND CONE OUTSIDE THE SAFETY AREA AND OUTSIDE OBSTRUCTION SURFACES.
26. FIRE PROTECTION: PROVIDE COMPLETE HELIPAD FIRE PROTECTION, STANDPIPE, HOSE CONNECTION, EXTINGUISHERS, FIRE DEPARTMENT ACCESS, EMERGENCY RESPONSE PROVISIONS, DRAINAGE, SPILL CONTROL, AND RELATED LIFE-SAFETY SYSTEMS IN ACCORDANCE WITH APPLICABLE FIRE CODES, FAA CRITERIA, AND AUTHORITIES HAVING JURISDICTION.
27. DRAINAGE AND SPILL CONTROL: PROVIDE POSITIVE DRAINAGE, SPILL CONTAINMENT, OIL/FUEL SEPARATION WHERE REQUIRED, CORROSION-RESISTANT DRAINAGE MATERIALS, AND EMERGENCY CONTAINMENT MEASURES WITHOUT CREATING SLIPPERY SURFACES, PONDING, DEBRIS, OR HAZARDOUS DISCHARGE CONDITIONS.
28. SURFACE PERFORMANCE: PROVIDE A DURABLE, NON-SLIP, NON-SHEDDING, WEATHER-RESISTANT, FUEL-RESISTANT, AND CORROSION-RESISTANT HELIPAD SURFACE SUITABLE FOR SIKORSKY S-92 (INCLUDING THE MILITARY VH-92A PATRIOT VERSION) OPERATIONS, EMERGENCY RESPONSE, HOSPITAL MAINTENANCE, AND PUERTO RICO'S HURRICANE AND TROPICAL ENVIRONMENTAL CONDITIONS.
29. ROTOR WASH PROTECTION: SECURE OR ELIMINATE ALL LOOSE OBJECTS, ROOFTOP EQUIPMENT, SIGNAGE, PANELS, GRILLES, COVERS, FURNISHINGS, AND OTHER ELEMENTS THAT MAY BECOME AIRBORNE DUE TO ROTOR WASH.
30. ROOFTOP EQUIPMENT COORDINATION: COORDINATE ALL MECHANICAL, ELECTRICAL, PLUMBING, COMMUNICATIONS, LIGHTNING PROTECTION, ANTENNAS, EXHAUSTS, INTAKES, VENTS, SCREENS, LOUVERS, SOLAR EQUIPMENT, AND EQUIPMENT SUPPORTS WITH HELIPAD AIRSPACE, CLEARANCES, DOWNWASH, TURBULENCE, NOISE, AND VIBRATION REQUIREMENTS.
31. NOISE AND VIBRATION: COORDINATE HELIPAD OPERATIONS WITH HOSPITAL ACOUSTIC, VIBRATION, STRUCTURAL, AND PATIENT-CARE REQUIREMENTS TO REDUCE ADVERSE IMPACT ON CRITICAL CARE, SURGICAL, IMAGING, INPATIENT, EMERGENCY, AND OTHER SENSITIVE HOSPITAL FUNCTIONS.
32. COMMUNICATIONS: PROVIDE REQUIRED COMMUNICATION INFRASTRUCTURE FOR HELICOPTER OPERATIONS, HOSPITAL EMERGENCY COORDINATION, SECURITY, FIRE DEPARTMENT RESPONSE, DISASTER RESPONSE, AND SIKORSKY S-92 (INCLUDING THE MILITARY VH-92A PATRIOT VERSION) PRESIDENTIAL HELICOPTER OPERATIONS WHERE REQUIRED.
33. CONSTRUCTION CRANE COORDINATION: ALL CONSTRUCTION CRANES, HOISTS, SCAFFOLDING, TEMPORARY EQUIPMENT, ANTENNAS, STAGING, AND TEMPORARY OBSTRUCTIONS AFFECTING THE EXISTING OR PROPOSED HELIPAD AIRSPACE SHALL BE COORDINATED WITH THE FAA AND AUTHORITIES HAVING JURISDICTION BEFORE INSTALLATION OR USE.
34. COMMISSIONING AND ACCEPTANCE: THE HELIPAD SHALL BE INSPECTED, TESTED, COMMISSIONED, DOCUMENTED, AND ACCEPTED BEFORE OPERATIONAL USE, INCLUDING MARKINGS, LIGHTING, FIRE PROTECTION, DRAINAGE, ACCESS CONTROL, EMERGENCY POWER, COMMUNICATIONS, SIGNAGE, STRUCTURAL CERTIFICATION, FAA COORDINATION, AND AHJ APPROVALS.
35. DESIGN-BUILD RESPONSIBILITY: THE DESIGN-BUILD ENTITY SHALL PROVIDE A COMPLETE, COORDINATED, FAA-COMPLIANT, CODE-COMPLIANT, HOSPITAL-OPERATIONAL HELIPAD DESIGN THAT PRESERVES THE DESIGN INTENT SHOWN IN THE BRIDGING DOCUMENTS AND SATISFIES ALL FINAL AVIATION, STRUCTURAL, EMERGENCY, FIRE/LIFE SAFETY, HEALTHCARE, OPERATIONAL, PRESIDENTIAL HELICOPTER, AND REGULATORY REQUIREMENTS.

SPACE PROGRAM:

TRAUMA HELIPORT AND SUPPORT AREAS
- DEDICATED HELIPORT ELEVATOR CORE
- ACCESS RAMP TO HELIPORT LANDING PAD
- SERVICE PATIENT HOLDING TERRACE
- HELIPORT LANDING PAD

NO. | DATE | DESCRIPTIONS

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF OBTAINING BRIDGING DOCUMENTS FOR THE DESIGN-BUILD PROCUREMENT OF THE PUERTO RICO TRAUMA HOSPITAL PROJECT. THEY ARE NOT INTENDED TO BE USED FOR PERMITTING, BIDDING, FABRICATION, PARAGRAPHSHOP DRAWING REVIEW, OR CONSTRUCTION. THE DESIGN-BUILD ENTITY SHALL PREPARE ITS OWN DESIGN, CONSTRUCTION DOCUMENTS, AND SHOP DRAWINGS AS REQUIRED FOR CONSTRUCTION, AND SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, ACCURACY, CODE COMPLIANCE, AND CONSTRUCTABILITY OF ITS DESIGN-BUILD ENTITY'S DESIGN AND CONSTRUCTION DOCUMENTS. THE DESIGN-BUILD ENTITY SHALL ALSO BE SOLELY RESPONSIBLE FOR ALL CONSTRUCTION MEANS, METHODS, TECHNIQUES, SEQUENCES, PROCEDURES, AND SAFETY PRECAUTIONS AND PROGRAMS IN CONNECTION WITH THE PROJECT. THE DESIGN-BUILD ENTITY SHALL VERIFY ALL DIMENSIONS, CONDITIONS, AND EXISTING CONSTRUCTION IN THE FIELD AND SHALL NOTIFY DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS OF ANY DISCREPANCIES BEFORE PROCEEDING WITH THE WORK. ANY USE OF THESE DOCUMENTS FOR CONSTRUCTION PURPOSES IS STRICTLY PROHIBITED.

THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS FOR THE PUERTO RICO TRAUMA HOSPITAL PROJECT. THEY ARE PROVIDED SOLELY FOR USE IN CONNECTION WITH THIS PROJECT AND MAY BE USED ONLY BY PERSONS OR ENTITIES AUTHORIZED BY THE OWNER. ALL COMMON LAW, STATUTORY, AND OTHER RESERVED RIGHTS, INCLUDING COPYRIGHT, ARE RESERVED. UNAUTHORIZED USE, REPRODUCTION, DISCLOSURE, MODIFICATION, RELIANCE, OR REUSE OF THESE DOCUMENTS, IN WHOLE OR IN PART, IS PROHIBITED WITHOUT THE PRIOR WRITTEN CONSENT OF DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS. ANY UNAUTHORIZED USE OF THESE DOCUMENTS SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS.

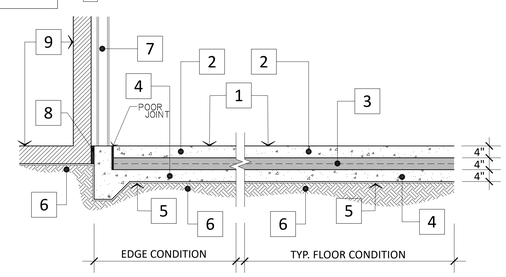
HOLDING COOLER & HOLDING FREEZER EQUIPMENT NOTES

(APPICABLE FOR COOLER ITEM Y & FOR FREEZER ITEM Z)

1. CONTRACTOR SUPPLIED & INSTALLED HOLDING COOLER (AS SHOWN IN ROOM 0-036) FULLY ASSEMBLED & OPERATIONAL.
   - A. WALK-IN COOLER WITH A FLOOR, 8'-6" HIGH, INDOOR MODEL.
   - B. 4" THICK PANEL (WALLS, CEILINGS & FLOOR), METAL CLAD WITH POLYURETHANE INSULATION.
   - C. INSULATION R-VALUE 25 (WALLS, CEILINGS & FLOOR) WITH +25°F OPERATION TEMPERATURE.
   - D. MANUAL STAINLESS STEEL SWINGING DOOR WITH R-VALUE 25.
   - E. USDA ACCEPTED WITH 15 YEAR PANEL WARRANTY AND 18 MONTHS PARTS AND LABOR WARRANTY.
2. CONTRACTOR SUPPLIED & INSTALLED HOLDING FREEZER (AS SHOWN IN ROOM 0-035) FULLY ASSEMBLED & OPERATIONAL.
   - A. WALK-ON COOLER WITH FLOOR, 8'-6" HIGH, INDOOR MODEL.
   - B. 4" THICK PANEL (WALLS, CEILINGS & FLOOR), METAL CLAD WITH POLYURETHANE INSULATION.
   - C. INSULATION R-VALUE 25 (WALLS, CEILINGS & FLOOR) WITH -10°F OPERATION TEMPERATURE.
   - D. MANUAL STAINLESS STEEL SWINGING DOOR WITH R-VALUE 25.
   - E. USDA ACCEPTED WITH 15 YEAR PANEL WARRANTY AND 18 MONTHS PARTS AND LABOR WARRANTY.
3. CONTRACTOR SHALL SUPPLY AND INSTALL SPECIFIED HOLDING COOLER AND HOLDING FREEZER DELIVERING THEM FULLY OPERATIONAL AFTER VALIDATING AND START-UP PROCEDURES.
4. CONTRACTOR SHALL EXECUTE ALL CIVIL, ELECTRICAL AND MECHANICAL UTILITIES RELATED WORK REQUIRED FOR THE INSTALLATION AND PROPER OPERATION OF THE FREEZER AND COOLER AS REQUIRED BY THE MANUFACTURER.
5. ELECTRICAL & COOLING CAPACITY REQUIREMENTS AS FOLLOWS:
   - Y HOLDING COOLER - 80 S.F. / 640 C.F. , 10,000 BTU, 25°F OPERATION. 5 H.P. COMPRESSOR & EVAPORATOR UNIT @ 480 V/3 FANS @ 120V OPERATION
   - Z HOLDING FREEZER - 80 S.F. / 640 C.F. , 10,000 BTU, -10°F OPERATION. 5 H.P. COMPRESSOR & EVAPORATOR UNIT @ 480 V/3 FANS @ 120V OPERATION



GENERAL EQUIPMENT NOTES:

1. PRIOR TO THE INSTALLATION OF ALL THE EQUIPMENT (SIN, SOC & SCC) SPECIFIED HEREIN, THE CONTRACTOR SHALL REQUEST FROM THE OWNER THE FINAL CONFIRMATION LIST OF THE EQUIPMENT WITH ALL THE UTILITIES REQUIREMENTS (ELECTRICAL, PLUMBING, GAS, ETC.).
2. ELECTRICAL OF ALL KITCHEN EQUIPMENT (VOLTAGE, AMPS, & WATTS) SHALL BE CONFIRMED WITH THE OWNER / OPERATOR PRIOR TO QUOTING THE WORK AND STARTING CONSTRUCTION. DISCREPANCIES FROM THE INFORMATION HEREIN SHALL BE INFORMED TO THE ARCHITECT TO AMEND THE DRAWINGS.
3. ALL FURNITURE AND EQUIPMENT IDENTIFIED TO BE SUPPLIED BY THE OWNER AND INSTALLED BY THE CONTRACTOR (SOC) AND/OR TO BE SUPPLIED & INSTALLED BY CONTRACTOR (SCC) SHALL BE INSTALLED ACCORDINGLY BY THE CONTRACTOR IN COMPLIANCE WITH ALL THE UTILITIES (DRAIN, ELECTRICAL, WATER, EXHAUST, GAS, ETC.) INSTALLATION SPECIFICATION REQUIREMENTS OF THE MANUFACTURER.
4. ALL EQUIPMENT IDENTIFIED TO BE SUPPLIED BY THE OWNER AND INSTALLED BY THE CONTRACTOR (SOC) AND/OR TO BE SUPPLIED & INSTALLED BY CONTRACTOR (SCC) SHALL BE INSTALLED IN ACCORDANCE WITH ALL MANUFACTURER'S SPECIFICATIONS, REQUIREMENTS AND INSTALLATION PARAMETERS RELATED, BUT NOT LIMITED TO:
   - a. TECHNICAL SUPPORT & GUIDANCE
   - b. CALIBRATION
   - c. INSTALLATION REQUIREMENTS
   - d START-UP
   - e. UTILITIES HOOK-UPS
   - f. VALIDATION
   - g. ASSEMBLY
5. CONTRACTOR SHALL EXECUTE THE WORK IN COORDINATION & BY SUB-CONTRACTING ALL REQUIRED OWNER'S FOOD PREPARATION EQUIPMENT SPECIALISTS, SUPPLIERS & VENDORS.
6. CONTRACTOR SHALL SUPPLY & INSTALL ALL REQUIRED PIPING BRANCHING AND GAS SUPPLY FLOW FOR EACH EQUIPMENT SHOWN IN THE EQUIPMENT LEGEND ABOVE AS REQUIRED FOR THE INSTALLATION AND PROPER OPERATION OF THE GAS OPERATING EQUIPMENTS AS REQUIRED BY THE MANUFACTURER. SEE MECHANICAL DRAWINGS FOR MAIN GAS SUPPLY SYSTEM AND CONTAINER.
7. CONTRACTOR SHALL VERIFY THE DIMENSIONS OF ALL EQUIPMENTS PRIOR TO THE CONSTRUCTION OF INSTALLATION OPENINGS & UTILITIES SUPPLIES
8. ALL EQUIPMENT SPECIFIED IN THE LEGEND HEREIN THAT REQUIRE WATER AND DRAIN UTILITIES , SHALL BE INSTALLED AS INSTRUCTED IN THE PLUMBING DRAWINGS AND/OR AS REQUIRED, WITH ALL THE FIXTURES AND FITTINGS, TO THE PROPOSED WATER AND DRAIN UTILITY LINES. INSTALLATION SHALL BE EXECUTED AND CERTIFIED, FOR PROPER OPERATION, BY A LICENCED MASTER PLUMBER.

COOLER/FREZZER TYPICAL COMPOSITE SLAB DETAIL LEGEND NOTES:

(FOR COOLER/FREZZER TYPICAL COMPOSITE SLAB)

1	CEMENT TOPPING WITH A LIGHT ABBRASIVE MACHINE POLISHED TROWEL FINISHED WITH EPOXY PAINT FLOOR GRADE PRO-INDUSRIAL PRE- CATALIZED
2	4" THICK 4,000 PSI FLOATING CONCRETE SLAB WITH HIGH-QUALITY CONCRETE REINFORCEMENT FIBERGLASS MESH.
3	TWO LAYERS OF 2" THICK RIGID CLOSED-CELL POLYURETHANE FOAM INSULATION BOARD
4	4" THICK 4,000 PSI STRUCTURAL SLAB WITH GALVANIZED STEEL REINFORCEMENT MESH EQUAL TO WWF 6X6 W1.4 X W1.4
5	POLYETHYLENE TYPE 6 MILLS CONTINUOUS VAPOR BARRIER
6	EXISTING SUBGRADE TO BE FILLED/LEVELED AND COMPACTED TO 90% RELATIVE DENSITY

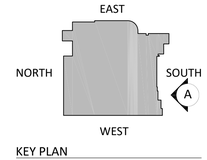
LEGEND:

1 SMOOTH CEMENT PLASTER FINISH, PAINTED

- PROVIDE SMOOTH CEMENT PLASTER EXTERIOR FINISH WITH PAINTED SURFACE. FINISH SHALL PRESENT A UNIFORM, MONOLITHIC APPEARANCE WITH CONSISTENT TEXTURE AND COLOR. SURFACE SHALL BE SUITABLE FOR EXTERIOR EXPOSURE AND COORDINATED WITH ADJACENT MATERIALS, OPENINGS, CORNERS, AND TRANSITIONS SHOWN ON THE ELEVATIONS.

2 EXTERIOR INSULATION AND FINISH SYSTEM (E.I.F.S.)

- PROVIDE EXTERIOR INSULATION AND FINISH SYSTEM WITH SMOOTH EXTERIOR FINISH. FINISH SHALL PROVIDE A CONTINUOUS, UNIFORM EXTERIOR WALL SURFACE WITH CONSISTENT TEXTURE, COLOR, AND APPEARANCE. E.I.F.S. AREAS SHALL BE COORDINATED WITH ADJACENT FAÇADE MATERIALS, WALL OPENINGS, EDGES, AND TRANSITIONS SHOWN ON THE ELEVATIONS.



3 COMBINATION OF E.I.F.S. OVER CONCRETE OR STRUCTURAL ELEMENTS

- PROVIDE E.I.F.S. FINISH CONTINUITY OVER DESIGNATED CONCRETE OR STRUCTURAL ELEMENTS WHERE INDICATED ON THE ELEVATIONS. FINISHED SURFACE SHALL ALIGN VISUALLY WITH ADJACENT E.I.F.S. AREAS TO CREATE A CONTINUOUS EXTERIOR APPEARANCE, WITH CONSISTENT TEXTURE, COLOR, AND FINISH QUALITY. CONCRETE OR STRUCTURAL ELEMENTS RECEIVING THIS FINISH SHALL NOT REMAIN VISUALLY EXPOSED UNLESS SPECIFICALLY INDICATED OTHERWISE.

NOTES:

1. REFER ALSO TO SHEET A-7.0, SCHEDULE OF FINISHES & NOTES, FOR GENERAL FINISH NOTES, FINISH SCHEDULES, MATERIAL DESCRIPTIONS, AND ADDITIONAL REQUIREMENTS APPLICABLE TO THE EXTERIOR ELEVATIONS. ALL EXTERIOR FINISHES INDICATED ON THE ELEVATIONS SHALL BE COORDINATED WITH THE INFORMATION PROVIDED ON SHEET A-7.0.

2. FINISH NOTES AND INDICATIONS ON THE ELEVATIONS ARE INTENDED TO CONVEY THE REQUIRED EXTERIOR APPEARANCE, EXTENT, AND PERFORMANCE INTENT. DESIGN-BUILD ENTITY SHALL PROVIDE COMPLETE EXTERIOR FINISH ASSEMBLIES NECESSARY TO ACHIEVE THE INDICATED FINISHED CONDITION, IN ACCORDANCE WITH PROJECT PERFORMANCE REQUIREMENTS AND APPROVED FINISH SELECTIONS.

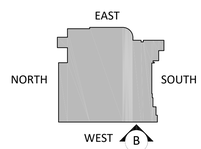
1 SMOOTH CEMENT PLASTER FINISH, PAINTED

- PROVIDE SMOOTH CEMENT PLASTER EXTERIOR FINISH WITH PAINTED SURFACE. FINISH SHALL PRESENT A UNIFORM, MONOLITHIC APPEARANCE WITH CONSISTENT TEXTURE AND COLOR. SURFACE SHALL BE SUITABLE FOR EXTERIOR EXPOSURE AND COORDINATED WITH ADJACENT MATERIALS, OPENINGS, CORNERS, AND TRANSITIONS SHOWN ON THE ELEVATIONS.



2 EXTERIOR INSULATION AND FINISH SYSTEM (E.I.F.S.)

- PROVIDE EXTERIOR INSULATION AND FINISH SYSTEM WITH SMOOTH EXTERIOR FINISH. FINISH SHALL PROVIDE A CONTINUOUS, UNIFORM EXTERIOR WALL SURFACE WITH CONSISTENT TEXTURE, COLOR, AND APPEARANCE. E.I.F.S. AREAS SHALL BE COORDINATED WITH ADJACENT FAÇADE MATERIALS, WALL OPENINGS, EDGES, AND TRANSITIONS SHOWN ON THE ELEVATIONS.

3 COMBINATION OF E.I.F.S. OVER CONCRETE OR STRUCTURAL ELEMENTS

- PROVIDE E.I.F.S. FINISH CONTINUITY OVER DESIGNATED CONCRETE OR STRUCTURAL ELEMENTS WHERE INDICATED ON THE ELEVATIONS. FINISHED SURFACE SHALL ALIGN VISUALLY WITH ADJACENT E.I.F.S. AREAS TO CREATE A CONTINUOUS EXTERIOR APPEARANCE, WITH CONSISTENT TEXTURE, COLOR, AND FINISH QUALITY. CONCRETE OR STRUCTURAL ELEMENTS RECEIVING THIS FINISH SHALL NOT REMAIN VISUALLY EXPOSED UNLESS SPECIFICALLY INDICATED OTHERWISE.

NOTES:

1. REFER ALSO TO SHEET A-7.0, SCHEDULE OF FINISHES & NOTES, FOR GENERAL FINISH NOTES, FINISH SCHEDULES, MATERIAL DESCRIPTIONS, AND ADDITIONAL REQUIREMENTS APPLICABLE TO THE EXTERIOR ELEVATIONS. ALL EXTERIOR FINISHES INDICATED ON THE ELEVATIONS SHALL BE COORDINATED WITH THE INFORMATION PROVIDED ON SHEET A-7.0.
2. FINISH NOTES AND INDICATIONS ON THE ELEVATIONS ARE INTENDED TO CONVEY THE REQUIRED EXTERIOR APPEARANCE, EXTENT, AND PERFORMANCE INTENT. DESIGN-BUILD ENTITY SHALL PROVIDE COMPLETE EXTERIOR FINISH ASSEMBLIES NECESSARY TO ACHIEVE THE INDICATED FINISHED CONDITION, IN ACCORDANCE WITH PROJECT PERFORMANCE REQUIREMENTS AND APPROVED FINISH SELECTIONS.

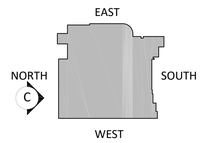
LEGEND:

1 SMOOTH CEMENT PLASTER FINISH, PAINTED
- PROVIDE SMOOTH CEMENT PLASTER EXTERIOR FINISH WITH PAINTED SURFACE. FINISH SHALL PRESENT A UNIFORM, MONOLITHIC APPEARANCE WITH CONSISTENT TEXTURE AND COLOR. SURFACE SHALL BE SUITABLE FOR EXTERIOR EXPOSURE AND COORDINATED WITH ADJACENT MATERIALS, OPENINGS, CORNERS, AND TRANSITIONS SHOWN ON THE ELEVATIONS.

2 EXTERIOR INSULATION AND FINISH SYSTEM (E.I.F.S.)


- PROVIDE EXTERIOR INSULATION AND FINISH SYSTEM WITH SMOOTH EXTERIOR FINISH. FINISH SHALL PROVIDE A CONTINUOUS, UNIFORM EXTERIOR WALL SURFACE WITH CONSISTENT TEXTURE, COLOR, AND APPEARANCE. E.I.F.S. AREAS SHALL BE COORDINATED WITH ADJACENT FAÇADE MATERIALS, WALL OPENINGS, EDGES, AND TRANSITIONS SHOWN ON THE ELEVATIONS.

3 COMBINATION OF E.I.F.S. OVER CONCRETE OR STRUCTURAL ELEMENTS
- PROVIDE E.I.F.S. FINISH CONTINUITY OVER DESIGNATED CONCRETE OR STRUCTURAL ELEMENTS WHERE INDICATED ON THE ELEVATIONS. FINISHED SURFACE SHALL ALIGN VISUALLY WITH ADJACENT E.I.F.S. AREAS TO CREATE A CONTINUOUS EXTERIOR APPEARANCE, WITH CONSISTENT TEXTURE, COLOR, AND FINISH QUALITY. CONCRETE OR STRUCTURAL ELEMENTS RECEIVING THIS FINISH SHALL NOT REMAIN VISUALLY EXPOSED UNLESS SPECIFICALLY INDICATED OTHERWISE.

NOTES:

1. REFER ALSO TO SHEET A-7.0, SCHEDULE OF FINISHES & NOTES, FOR GENERAL FINISH NOTES, FINISH SCHEDULES, MATERIAL DESCRIPTIONS, AND ADDITIONAL REQUIREMENTS APPLICABLE TO THE EXTERIOR ELEVATIONS. ALL EXTERIOR FINISHES INDICATED ON THE ELEVATIONS SHALL BE COORDINATED WITH THE INFORMATION PROVIDED ON SHEET A-7.0.

2. FINISH NOTES AND INDICATIONS ON THE ELEVATIONS ARE INTENDED TO CONVEY THE REQUIRED EXTERIOR APPEARANCE, EXTENT, AND PERFORMANCE INTENT. DESIGN-BUILD ENTITY SHALL PROVIDE COMPLETE EXTERIOR FINISH ASSEMBLIES NECESSARY TO ACHIEVE THE INDICATED FINISHED CONDITION, IN ACCORDANCE WITH PROJECT PERFORMANCE REQUIREMENTS AND APPROVED FINISH SELECTIONS.

BATHROOM ACCESSORIES & PLUMBING FIXTURES GENERAL NOTES:

1. ALL BATHROOM ACCESSORIES SHALL HAVE A SATIN FINISH UNLESS OTHERWISE NOTED.
2. ALL BATHROOM ACCESSORIES SHALL BE COMPLIANT WITH A.D.A. STANDARDS FOR ACCESSIBLE DESIGN.
3. FOR THE BATHROOM ACCESSORIES HEIGHT ABOVE FLOOR SHALL BE AS PER MANUFACTURER'S RECOMMENDED MOUNTING HEIGHT FOR A.D.A. STANDARDS FOR ACCESSIBLE DESIGN.
4. ALL BATHROOM ACCESSORIES SHALL BE HOSPITAL GRADE.
5. CONTRACTOR SHALL BRING PROMPTLY TO THE ATTENTION OF THE OWNER ANY DISCREPANCIES BETWEEN THE ACCESSORIES & PLUMBING FIXTURES BEFORE INSTALLATION.
6. ALL PLUMBING EQUIPMENT SPECIFIED IN THE LEGEND HEREIN SHALL BE INSTALLED AS INSTRUCTED IN THE PLUMBING DRAWINGS AND/OR AS REQUIRED, WITH ALL THE FIXTURES AND FITTINGS, TO THE PROPOSED WATER AND DRAIN UTILITY LINES. INSTALLATION SHALL BE EXECUTED AND CERTIFIED, FOR PROPER OPERATION, BY A LICENCED MASTER PLUMBER.
7. ALL BATHROOM ACCESSORIES AND/OR PLUMBING EQUIPMENT SPECIFIED IN THE LEGENDS HEREIN, THAT REQUIRE ELECTRICAL SERVICE, SHALL BE INSTALLED AS INSTRUCTED IN THE ELECTRICAL DRAWINGS AND/OR AS SERVICE, SHALL BE INSTALLED AS INSTRUCTED IN THE ELECTRICAL DRAWINGS AND/OR AS REQUIRED TO THE NEAREST PROPOSED ELECTRICAL CIRCUIT FOR PROPER OPERATION.

GB-1	GYPSUM BOARD	5/8" GYPSUM BOARD PLASTERED & PAINTED CEILING SYSTEM	
GB-2	GYPSUM BOARD	5/8" MOISTURE RESISTANT GYPSUM BOARD WITH WATER BASED EPOXY CLEAN ROOM PAINT FINISH	
GB-3	GYPSUM BOARD	5/8" GYPSUM BOARD WITH WATER BASED EPOXY CLEAN ROOM PAINT FINISH	
GB-4	GYPSUM BOARD	5/8" MOISTURE RESISTANT GYPSUM BOARD PLASTERED & PAINTED EG-SHEL FINISH.	
GAC	COMBINATION	SPECIFIED ACOUSTIC TILE AND GYPSUM BOARD CEILING SYSTEM COMBINATION	
CPP	CEMENT PLASTER PAINTED	SMOOTH CEMENT PLASTER PAINTED	
DU	DUROCK	EXTERIOR CEMENT BOARD SYSTEM	
SWF	SYNTHETIC WOOD FINISH		

SUPPLEMENTARY FINISH NOTES:

1. EPOXY PAINT PRE-CATALYZED WATER BASED EPOXY. EG-SHELL FINISH. COLOR TO BE SELECTED BY ARCHITECT.
2. ALL WALLS SPECIFIED MURAL WALL COVERING FINISH SHALL BE INSTALLED ON MOISTURE RESISTANT GYPSUM BOARD.
3. ALL FLOORS SPECIFIED WITH RESILIENT URETHANE FLOORING SYSTEM SHALL BE LEVELED WITH THE APPLICATION OF A SELF-LEVELING TOPPING BEFORE INSTALLATION OF FLOOR FINISH.

GENERAL FINISH NOTES:

A - CERAMIC TILES:
1. ALL CERAMIC TILES SHALL BE FHA APPROVED. (FIRST QUALITY)
2. ALL CERAMIC TILES SHALL BE RECTIFIED WITH VERY PRECISE TOLERANCE. (FIRST QUALITY - COMMERCIAL GRADE)
3. ALL CERAMIC TILES QUALITY , TEXTURE, AND COLOR TO BE SELECTED & APPROVED BY OWNER.
4. CERAMIC & GLAZED TILES COLOR , PATTERN & SIZES TO BE SELECTED BY THE ARCHITECT.
5. SUBMIT SAMPLES OF ALL CERAMIC TILES FOR ARCHITECT'S APPROVAL.

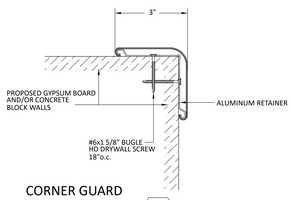
B - WOOD:
1. ALL WOOD DOORS & FRAMES SHALL BE FINISHED WITH SEALER & 2 COATS OF ENAMEL PAINT, SHALL BE SHOP PAINTED.

C - METAL:
1. ALL METALS, INCLUDING BUT NOT LIMIT TO DOORS, FRAMES, HANDRAILS, GUARDRAILS, ETC., SHALL BE PRIMED & SHOP PAINTED.
2. SUBMIT RAILINGS SHOP DRAWINGS.

D - OPENINGS:
1. ALL FINAL MASONRY OPENINGS DIMENSIONS FOR WINDOWS & DOORS SHALL BE CHECKED & VERIFIED AT JOB SITE PRIOR TO CONSTRUCTION ORDER FOR WINDOWS & DOORS.
2. SUBMIT SAMPLE OF MARBLE SADDLE FOR ARCHITECT'S APPROVAL.

E - INTERIOR PAINT:
1. INTERIOR PAINT SHALL BE TWO COATS.
2. ALL PAINT COLOR TO BE SELECTED BY ARCHITECT.

F - WALLS:
1. ALL EXISTING WALLS TO REMAIN SHALL BE STRIPPED, REPAIRED AND PATCHED TO CREATE A SMOOTH FINISH FOR PAINT APPLICATION.
2. GYPSUM BOARD WALL FURRING SHALL BE ADDED ON ALL EXISTING WALLS TO REMAIN INSIDE THE PROJECT LIMIT.
3. ALL WALL TILE FINISHES SHALL BE EXTENDED UP TO FINISHED CEILING LEVEL AS INDICATED IN DRAWINGS.
4. ALL NEW INTERIOR AND EXTERIOR CONSTRUCTED SURFACES SHALL HAVE A SMOOTH PLASTER & PAINT FINISH.

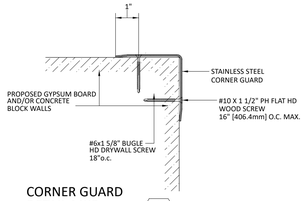


G - FLOORS:
1. EXISTING FLOOR FINISHES SHALL BE REMOVED. EXISTING FLOOR SUBSTRATE SHALL BE REPAIRED, SEALED AND LEVELED FOR PROPER INSTALLATION OF NEW FINISHES.
2. WHERE REQUIRED FOR PROPER LEVELING OF SPECIFIED FLOOR FINISHES, LEVEL-RIGHT SELF-LEVELING CEMENTITIOUS FLOOR UNDERLAYMENT SHALL BE USED.
3. WHERE REQUIRED FOR PROPER CEMENTITIOUS BONDING, ACRYLIC LATEX BONDING AGENT AND ADMIXTURE SHALL BE USED.
4. APPLY VAPOR BARRIER OVER EXISTING CONCRETE SUBFLOOR WHERE REQUIRED TO CONTROL HUMIDITY AND IN ALL SPECIFIED AREAS.
5. ALL NEW SLABS ON GRADE OR OVER EXISTING FLOOR SLABS SHALL BE TREATED WITH A VAPOR BARRIER SYSTEM TO CONTROL HUMIDITY.

H - EXTERIOR PAINT:
1. ONE COAT OF PRIMER (WHITE). TWO COATS DURA-CRAFT EXTERIOR 100% ACRYLIC FLAT B2 SERIES (WITH M-1 MILDEW ADDITIVE).

I - PARKING BUILDING:
1. ALL PARKING SPACES STRIPES, ROADWAY CIRCULATION STRIPES, CROSSING AND/OR WALKWAYS STRIPES AND HANDICAPPED SIMBOLS, LAYOUTS SHOWN IN THE PLANS, SHALL BE PAINTED WHITE WITH A FULL EVEN COAT OF HEAVYDUTY ROADWAY TRAFFIC PAINT.
2. ALL PARKING SPACES SHALL HAVE A PRECAST WHEEL STOP AS PER DETAILS 20/AS-1.3 AND 21/AS-1.3.
3. THE FINISHED FLOOR ELEVATION LEVEL OF THE PARKING FLOOR DECKS SHALL MATCH FLUSH ABUTTING TO THE SAME LEVEL OF THE EXISTING AND/OR PROPOSED ADJACENT AND CONNECTING BUILDING AS LAID OUT IN THE PLANTS.

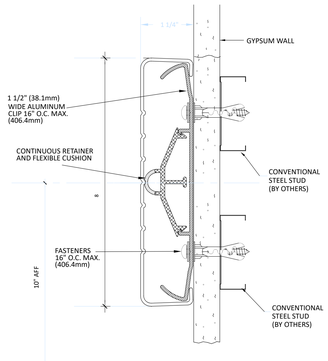
J - GENERAL:
1. COLORS, TEXTURES AND TYPE OF ALL SPECIFIED FINISHES SHALL BE SELECTED BY THE ARCHITECT FROM THE SPECIFIED BRAND NAMES.
2. "OR EQUAL" SUBSTITUTIONS SHALL BE ALLOWED FOR ALL SPECIFIED BRAND NAMES. SUBSTITUTIONS OF COMPARABLE PRODUCTS ARE ALLOWED WHEN QUALITY & PERFORMANCE ARE NOT COMPROMISED. SUBSTITUTION REQUESTS MUST BE SUBMITTED PRIOR TO THE BID & WILL BE EVALUATED AND IF ACCEPTED, WILL BE INCLUDED IN THE FORM OF AN ADDENDUM. "OR EQUAL" REFERS TO ANY MATERIAL OR EQUIPMENT THAT WILL FULLY PERFORM THE DUTIES SPECIFIED, IS EQUIVALENT IN PERFORMANCE & QUALITY & CARRIES PROOF OF SUCH EQUIVALENCY. ALL PRODUCTS TO BE SUBSTITUTED MUST BE APPROVED BY ARCHITECT PRIOR TO SUBSTITUTION.
3. CONTRACTOR MUST VERIFY CONGRUENCE BETWEEN PRODUCT NUMBER AND PRODUCT NAME PRIOR TO PURCHASING/INSTALLING MATERIAL. ANY DISCREPANCIES SHALL BE PRESENTED TO ARCHITECT FOR CLARIFICATION.
4. THE INTERIOR SURFACE OF ALL WALLS OF SPACES FACING EARTHFILL ALONG PERIMETER OF PROJECT LIMIT SHALL HAVE A SPRAYED-ON WATER PROOFING TREATMENT CEMENT BASE BARRIER COATING EQUAL TO CHEM-MASTER,CHEM-SEAL.
5. THE EXTERIOR FACE OF ALL WALLS FACING EARTHFILL SHALL BE TREATED WITH A VAPOR BARRIER SYSTEM AND WATERPROOFING PANEL FORMWORK LEAVE-IN ASSEMBLY.
6. FULL SPACE ENCLOSURE (WALLS AND CEILINGS) SHALL BE TREATED AS REQUIRED WITH NOISE ABATEMENT SYSTEM TO ENSURE THAT ADJACENT SPACES (HORIZONTALLY AND VERTICALLY) DO NOT GET MORE THAN 85 DECIBELS (dB) OF SOUND TRANSMISSION. USING A NOISE ABATEMENT SYSTEM EQUAL OR SIMILAR TO KINETICS NOISE CONTROL INC.



NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
NOT FOR CONSTRUCTION.

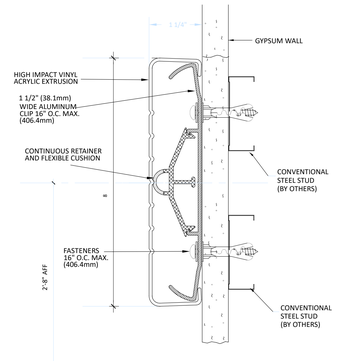
CORNER GUARD DETAIL MKD. 1 A-7.0

NOT TO SCALE



NOTES:
1. APPLIES ON ALL EXTERIOR CORNERS OF SPACES INDICATED IN FINISH SCHEDULE SHEETS A-7.0 TO A-7.10.
2. CORNER GUARD SHALL BE 4'-6" HIGH ABOVE FINISHED FLOOR.

CORNER GUARD DETAIL MKD. 2 A-7.0



NOT TO SCALE

NOTES:
1. APPLIES ON ALL EXTERIOR CORNERS OF SPACES INDICATED IN FINISH SCHEDULE SHEETS A-7.0 TO A-7.10.
2. CORNER GUARD SHALL BE 4'-6" HIGH ABOVE FINISHED FLOOR.

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF DESIGN-BUILD BRIDGING DOCUMENTS AND ARE NOT INTENDED FOR CONSTRUCTION OBJECTIVES. DESIGN INTENT, PERFORMANCE CRITERIA, AND MECHANICAL ASSESSMENTS ARE INCLUDED IN THESE DOCUMENTS. THESE DOCUMENTS ARE NOT TO BE USED FOR PERMITTING, BIDDING, FABRICATION, OR INSTALLATION PURPOSES. THESE DOCUMENTS ARE INTENDED TO PROVIDE GUIDANCE FOR THE DESIGN-BUILD ENTITY. THE SELECTED DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR THE DEVELOPMENT OF CONSTRUCTION DOCUMENTS, ENGINEERING, PROCUREMENT, AND CONSTRUCTION. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, ENGINEERING, PROCUREMENT, AND CONSTRUCTION DOCUMENTS REQUIRED FOR THE PROJECT. THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR ALL CONSTRUCTION MEANS, METHODS, TECHNIQUES, SEQUENCES, AND PROCEDURES. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, AND IMPLEMENTATION OF ALL SAFETY PRECAUTIONS AND PROGRAMS IN CONNECTION WITH THE WORK. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, AND ACCURACY OF ALL INFORMATION CONTAINED IN THESE DOCUMENTS. THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR ENSURING THAT ANY AND ALL SUBCONTRACTORS, VENDORS, AND OTHER PARTIES INVOLVED IN THE DESIGN-BUILD PROCESS ARE AWARE OF THE LIMITATIONS AND INTENDED USE OF THESE DOCUMENTS. ANY UNAUTHORIZED USE OF THESE DOCUMENTS SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS.

THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS. THESE DOCUMENTS ARE THE PROPERTY OF DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS AND ARE NOT TO BE USED IN WHOLE OR IN PART, SOLELY FOR USE IN CONNECTION WITH THIS PROJECT AND WE USED ONLY BY PERSONS OR ENTITIES WHO HAVE EXECUTED A WRITTEN AGREEMENT WITH DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS. ANY UNAUTHORIZED USE, DISCLOSURE, MODIFICATION, RELIANCE, OR REUSE OF THESE DOCUMENTS, IN WHOLE OR IN PART, IS STRICTLY PROHIBITED AND MAY RESULT IN LEGAL ACTION. BY ACCESSING OR USING ANY OF THESE DOCUMENTS, THE USER AGREES TO INDEMNIFY AND HOLD HARMLESS DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS FROM ANY AND ALL CLAIMS, DAMAGES, LOSSES, AND EXPENSES ARISING OUT OF OR RELATED TO THE UNAUTHORIZED USE OF THESE DOCUMENTS. NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF OBTAINING PROPOSALS FOR DESIGN-BUILD SERVICES. THEY ARE NOT CONSTRUCTION DOCUMENTS AND ARE NOT INTENDED TO BE USED FOR PERMITTING, BIDDING, FABRICATION, OR INSTALLATION. THEY DO NOT CONTAIN SUFFICIENT INFORMATION AND ARE NOT INTENDED TO PROVIDE GUIDANCE FOR THE DESIGN-BUILD ENTITY. THE SELECTED DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, AND ACCURACY OF ALL CONSTRUCTION DOCUMENTS REQUIRED FOR THE PROJECT. THE DESIGN-BUILD ENTITY SHALL ALSO BE SOLELY RESPONSIBLE FOR THE ENGINEERING, PROCUREMENT, AND CONSTRUCTION DOCUMENTS REQUIRED FOR THE PROJECT. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR ALL CONSTRUCTION MEANS, METHODS, TECHNIQUES, SEQUENCES, AND PROCEDURES, AND FOR ALL SAFETY PRECAUTIONS AND PROGRAMS IN CONNECTION WITH THE PROJECT. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, AND ACCURACY OF ALL TECHNICAL INFORMATION CONTAINED IN SHOP DRAWINGS, AND SHALL NOT RELY ON THE ACCURACY OF ANY INFORMATION CONTAINED IN THESE DOCUMENTS. THE USE OF THESE DOCUMENTS FOR CONSTRUCTION PURPOSES IS STRICTLY PROHIBITED.

THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS AND ARE THE PROPERTY OF THE ARCHITECT. THEY ARE NOT TO BE USED IN WHOLE OR IN PART, SOLELY FOR USE IN CONNECTION WITH THIS PROJECT AND MAY BE USED ONLY BY PERSONS OR ENTITIES WHO HAVE EXECUTED A WRITTEN AGREEMENT WITH THE ARCHITECT. ANY UNAUTHORIZED USE, DISCLOSURE, MODIFICATION, RELIANCE, OR REUSE OF THESE DOCUMENTS, IN WHOLE OR IN PART, IS PROHIBITED WITHOUT THE PRIOR WRITTEN CONSENT OF THE ARCHITECT. BY RECEIVING OR USING THESE DOCUMENTS, THE USER AGREES TO INDEMNIFY AND HOLD HARMLESS THE ARCHITECT FROM ANY CLAIMS, LOSSES, OR LIABILITIES ARISING FROM THE USER'S USE OF THE DOCUMENTS. ANY USE OF THESE DOCUMENTS SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO THE ARCHITECT.

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS. NOT FOR CONSTRUCTION.

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF OBTAINING PROPOSALS FOR DESIGN-BUILD SERVICES AND CONSTRUCTION OBJECTIVES. DESIGN INTENT, PERFORMANCE CRITERIA, AND TECHNICAL ASSESSMENTS ARE INCLUDED FOR THE DESIGN-BUILD ENTITY'S REFERENCE. THESE DOCUMENTS ARE NOT INTENDED TO BE USED FOR PERMITTING, BIDDING, FABRICATION, FABRICATION, OR CONSTRUCTION. THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR DEVELOPING GUIDANCE FOR THE DESIGN-BUILD ENTITY THE SELECTED DESIGN-BUILD ENTITY. THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, ENGINEERING, PROCUREMENT, AND CONSTRUCTION DOCUMENTS REQUIRED FOR THE PROJECT. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, CORRECTNESS, AND COMPLETENESS OF ALL CONSTRUCTION DOCUMENTS, AND SHALL ENSURE THAT THEY COMPLY WITH ALL APPLICABLE CODES, REGULATIONS, AND TECHNICAL REQUIREMENTS. DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS SHALL NOT BE RESPONSIBLE FOR THE DEVELOPMENT, CORRECTNESS, OR COMPLETENESS OF THE DESIGN-BUILD ENTITY'S CONSTRUCTION DOCUMENTS, NOR FOR ANY ERRORS, OMISSIONS, OR NON-COMPLIANCE WITH CODES OR REGULATIONS CONTAINED THEREIN. ANY REVIEW BY DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS OF THE DESIGN-BUILD ENTITY'S DOCUMENTS SHALL BE LIMITED TO GENERAL CONFORMANCE WITH THE INTENT OF THESE DOCUMENTS AND SHALL NOT RELIEVE THE DESIGN-BUILD ENTITY OF ITS RESPONSIBILITIES. THE DESIGN-BUILD ENTITY SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS.

THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS FOR USE SOLELY WITH RESPECT TO THIS PROJECT. THEY ARE NOT INTENDED TO BE SUITABLE FOR REUSE BY THE OWNER OR OTHERS ON EXTENSIONS OF THE PROJECT OR ON ANY OTHER PROJECT. THEY ARE TO BE USED ONLY BY PERSONS OR ENTITIES WHO HAVE ENTERED INTO AN AGREEMENT WITH DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS. ANY UNAUTHORIZED USE, REPRODUCTION, DISCLOSURE, MODIFICATION, RELIANCE, OR REUSE OF THESE DOCUMENTS, IN WHOLE OR IN PART, IS PROHIBITED WITHOUT THE PRIOR WRITTEN CONSENT OF DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS. THE OWNER'S USE OF THESE DOCUMENTS SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS.

SHEET TITLE:
SCHEDULE OF FINISHES - EIGHT, NINE & TENTH LEVEL

DE LA TORRE - ESTEVEZ
ARCHITECTS PLANNERS
URB. CARIBE 1590 AVE.PONCE DE LEON, STE 105 SAN JUAN PR 00909

DRAWING NUMBER

A-7.10

DOOR SCHEDULE NOTES:

1. ALL METAL DOORS AND METAL FRAMES SHALL BE PRIMED & SHOP PAINTED.
2. ALL METALS SHALL BE GALVANIZED WITH PRIMER & 2 COATS OF SHERWIN WILLIAMS
3. ALL ALUMINUM FRAMES AND DOORS SHALL HAVE A NATURAL CLEAR ANODIZED FINISH.
4. ALL ALUMINUM FRAMES AND DOORS SHALL BE FLUSH GLASS MOUNT.
5. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS FOR WINDOWS AND DOORS AND SHALL VERIFY FIELD DIMENSIONS AND ALERT THE ARCHITECT OF DISCREPANCIES BETWEEN EXISTING & PROPOSED CONDITION.
6. SEE ALL GENERAL FINISH NOTES & SUPPLEMENTARY FINISH NOTES ON FINISH SCHEDULE SHEET.
7. CONTRACTOR SHALL VERIFY FINAL CONSTRUCTED DOOR OPENING DIMENSIONS & SHALL ADJUST AS REQUIRED, BEFORE FABRICATION PROCEEDS, FOR THE INSTALLATION OF THE DOORS SPECIFIED HEREIN.
8. CONTRACTOR SHALL BRING PROMPTLY TO THE ATTENTION OF THE ARCHITECT, ANY DISCREPANCIES IN THE DOOR SCHEDULE BEFORE FABRICATION PROCEEDS AND INSTALLATION OF HARDWARE.

*THE FOLLOWING IS APPLICABLE TO DOORS NOTED UNDER THE "UTILITIES SERVICES TO BE PROVIDED" COLUMN:

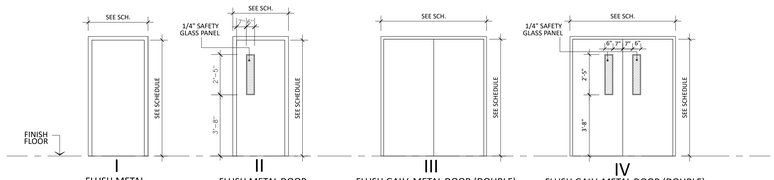
1. DOORS NOTED UNDER THE "UTILITIES SERVICES TO BE PROVIDED" COLUMN IN THE DOOR SCHEDULE SHALL BE SUPPLIED & INSTALLED WITH KEY CARD READER CAPABILITY AND DOOR EXIT BUTTON, CONSISTING OF TWO 4" X 4" X 1 5/8" JUNCTION BOX (@ 4'-6" A.F.F.) WITH TWO 3/4"Ø CONDUIT UP TO 6" ABOVE SUSPENDED CEILING. IN ADDITION, THEY SHALL BE INSTALLED WITH TOP MOUNTED MAGNETIC LOCK CAPABILITY CONSISTING OF ONE 4" X 4" X 1 5/8" JUCTION BOX INSTALLED OVER THE DOOR FRAME (INSIDE THE GYPSUM BOARD PARTITION) WITH A 3/4"Ø CONDUIT UP TO 6" ABOVE SUSPENDED CEILING. UP TO 6" ABOVE SUSPENDED CEILING. PROVIDE ALL REQUIRED ELECTRICAL POWER SERVICE USING THE NEAREST ELECTRICAL CIRCUIT BRANCH.
2. ALL DOORS UNDER THE ELECTRIC STRIKE COLUMN SHALL BE OPERABLE FROM THE NEAREST RECEPTION, CONTROL STATION OR CASHIER AREAS UNLESS OTHERWISE NOTED IN THE SCHEDULE. PROVIDE ALL REQUIRED ELECTRICAL POWER SERVICE USING THE NEAREST ELECTRICAL CIRCUIT BRANCH.
3. ALL DOORS SHOWN TO HAVE KEY CARD READER ACCESS CONTROL CAPABILITY SHALL BE INSTALLED WITH ALL THE ROUGH-IN REQUIRED (CONDUITS, BOXES, JUNCTION BOXES, ETC.) FOR THE INSTALLATION OF THE DOOR MAGNETIC CONTACT, ELECTRIC STRIKE, CARD/KEYPAD READER AND EXIT PUSH BUTTON. A 120V DOUBLE ELECTRICAL RECEPTACLE SHALL PROVIDED IN THE PLENUM OVER THE DOOR FRAME HEADER.
4. ALL DOORS SHOWN TO HAVE KEY CARD READER ACCESS CONTROL CAPABILITY SHALL BE INSTALLED WITH ALL THE WIRING, HARDWARE AND SOFTWARE CAPABILITY REQUIRED FOR THE PROPER OPERATION OF THE ACCESS CONTROL SYSTEM. THE CONTRACTOR SHALL INCLUDE AS PART OF THE CONTRACT WORK SCOPE THE CONTRACTING OF THE OWNER. ACCESS CONTROL SYSTEM SUPPLIER, VENDOR & INSTALLER TO PROVIDE THE COMPLETED & OPERABLE ACCESS CONTROL SYSTEM.
5. THE FOLLOWINGS DOORS WILL SERVE AS EXITS WITH EMERGENCY EXIT HARDWARE THAT SHALL HAVE AUDIBLE ALARM ANNUNCIATION WITHOUT KEY CARD READER. PROVIDE ALL REQUIRED ELECTRICAL POWER SERVICE USING THE NEAREST ELECTRICAL CIRCUIT BRANCH:

ALUMINUM AND GLASS CODE COMPLIANCE NOTES:

1. ALL ALUMINUM & GLASS WINDOWS, SLIDING DOORS, OUTSIDE DOORS, FIXED GLASS PANELS AND WINDOW WALLS, MATERIAL AND INSTALLATION SHALL COMPLY WITH APPLICABLE REQUIREMENTS OF THE LATEST APPLICABLE PUERTO RICO BUILDING CODE INCLUDING RESISTANCE TO WITHSTAND THE IMPACT OF WINDBORNE MISSILES.
2. GENERAL CONTRACTOR SHALL SUBMIT TO THE OWNER, SHOP DRAWINGS AND STRUCTURAL COMPUTATIONS SIGNED AND SEALED BY LICENSED ENGINEER IN PUERTO RICO, SUPPORTING THE ABOVE INDICATED REQUIREMENTS.
3. ALL GLASS, EXCEPT OTHERWISE NOTED, SHALL BE 3/16" SAFETY LAMINATED GLASS. ALL GLASS UP TO 2'-6" A.F.F. SHALL BE 3/16" TEMPERED GLASS.

DOOR ACCESS CONTROL NOTES:

4. PROVIDE THE FOLLOWING UTILITY FACILITIES:
   a - 4" X 4" X 1-1/2" BOX WITH ONE GANG RAISED COVER FOR FUTURE DOOR CLOSER, INSTALL ABOVE DOOR FRAME. COORDINATE EXACT LOCATION W/ ARCHITECT
   b - 4" X 4" X 2-1/8" BOX WITH ONE GANG RAISED COVER FOR FUTURE DOOR ACCESS CONTROL INSTALL @ 48" AFF.



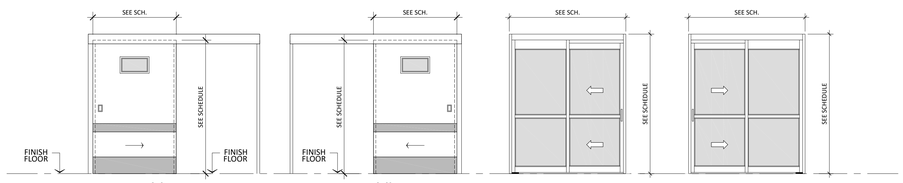
BUILDING ADMINISTRATION COMPLIANCE:

1- ALL WORK TO BE EXECUTED UNDER THIS CONTRACT SHALL BE DONE ONLY DURING THE WORKING HOURS APPROVED BY THE BUILDING ADMINISTRATOR.
2- ALL WORK EXECUTED UNDER THIS CONTRACT SHALL BE IN ACCORDANCE AND IN COMPLIANCE WITH THE BUILDING ADMINISTRATION REGULATIONS RELATED TO CONSTRUCTION.

WORK BY OWNER:

1- ALL CABLING, HARDWARE AND SOFTWARE RELATED TO THE VOICE COMMUNICATION SYSTEM, INFORMATION TECHNOLOGY SYSTEM, CLOSED CIRCUIT TV SYSTEM AND ELECTRONIC ACCESS CONTROL SYSTEM WILL BE SUPPLIED AND INSTALLED BY EACH OF THE SYSTEMS OWNER'S SUBCONTRACTORS.

DOOR TYPES

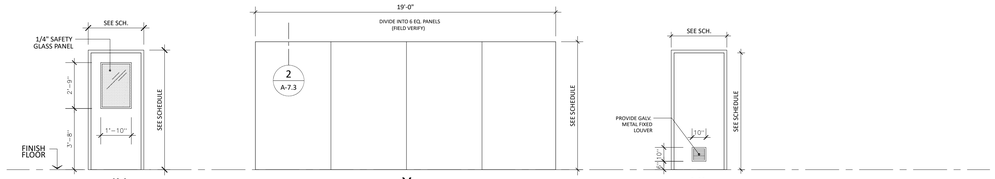


I — FLUSH METAL DOOR & FRAME PAINTED (HOLLOW CORE)

II — FLUSH METAL DOOR & FRAME PAINTED WITH 1/4" SAFETY GLASS PANEL (HOLLOW CORE)

III — FLUSH GALV. METAL DOOR (DOUBLE) & METAL FRAME PAINTED

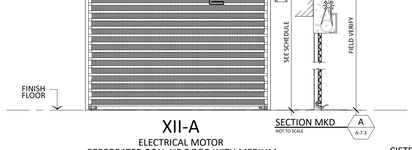
IV — FLUSH GALV. METAL DOOR (DOUBLE) & METAL FRAME PAINTED (OPPOSITE ACTING - PIVOTING TYPE)) 1/4" WIRED GLASS VISION PANEL EACH.



V — NABCO NAX HERMETIC DOOR GT9000 MODEL STAINLESS STEEL/GLASS OPERATING FACE SIDE VIEW

VI — NABCO NAX HERMETIC DOOR GT9000 MODEL STAINLESS STEEL/GLASS OPERATING FACE SIDE VIEW

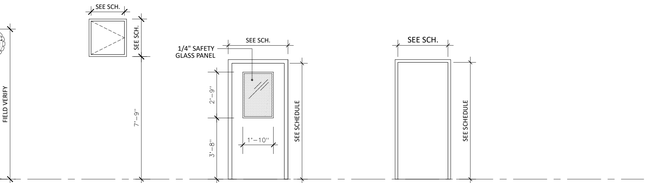
VII — NABCO GT2100 SINGLE SLIDE - BREAKOUT SWING FULL OPEN TRACKLESS (OPERATION AS PER DOOR SCHEDULE)



VIII — NABCO GT2100 SINGLE SLIDE - BREAKOUT SWING FULL OPEN TRACKLESS (OPERATION AS PER DOOR SCHEDULE)

IX — FLUSH METAL DOOR W/METAL FRAME PAINTED W/1/4" TEMP. GLASS

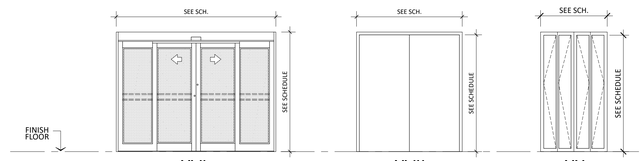
X — KWIK-WALL MODEL-2020 MULTI-DIRECTIONAL WITH INDIVIDUAL PANELS (42 STC TO 51 STC) / ACOUSTIC SEAL DOOR MULTI-DIRECTIONAL WITH INDIVIDUAL PANELS



XI — FLUSH METAL DOOR & FRAME PAINTED WITH METAL FIXED LOUVER (HOLLOW CORE)

XII-A — ELECTRICAL MOTOR PERFORATED ROLL-UP DOOR WITH MEDIUM DUTY JACKSHAFT MOTOR 26 GAUGE GALV. STEEL WITH BAKED ON EPOXY PRIMER & POLYESTER TOP COAT

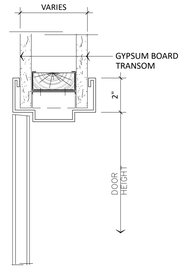
XII-B — ELECTRICAL MOTOR SOLID ROLL-UP DOOR WITH MEDIUM DUTY JACKSHAFT MOTOR 26 GAUGE GALV. STEEL WITH BAKED ON EPOXY PRIMER & POLYESTER TOP COAT



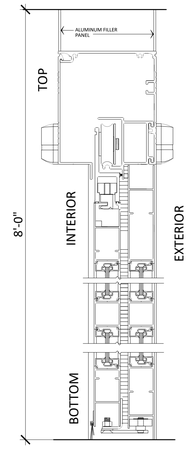
XII-C — ELECTRICAL MOTOR CHAIN LINK ROLL-UP DOOR WITH MEDIUM DUTY JACKSHAFT MOTOR 26 GAUGE GALV. STEEL WITH BAKED ON EPOXY PRIMER & POLYESTER TOP COAT

XIII — CISTERN ACCESS HATCH DOOR

XIV — FLUSH METAL DOOR & FRAME PAINTED (HOLLOW CORE) (OPPOSITE ACTING - PIVOTING TYPE)

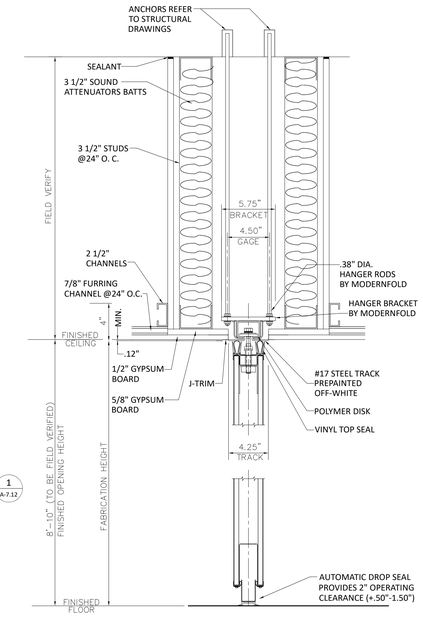


XV — FLUSH METAL DOOR & FRAME PAINTED LEAD SHIELDED DOOR & FRAME



XVI — DOUBLE SLIDING DOOR GLASS & ALUMINUM SEE SPECS.

XVII — FLUSH GALV. METAL DOOR (DOUBLE) & METAL FRAME PAINTED (OPPOSITE ACTING - PIVOTING TYPE))



XX — DOUBLE FOLDING DOOR W/METAL FRAME PAINTED W/1/4" SAFETY

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSES OF DESIGN-BUILD BRIDGING DOCUMENTS AND ARE NOT INTENDED FOR CONSTRUCTION OBJECTIVES. DESIGN INTENT, PERFORMANCE CRITERIA, AND TECHNICAL ASSESSMENTS ARE PRESENTED IN THESE DOCUMENTS. THESE DOCUMENTS ARE NOT TO BE USED FOR PERMITTING, BIDDING, FABRICATION, FABRICATION, OR CONSTRUCTION PURPOSES. THESE DOCUMENTS ARE PROVIDED AS A GUIDANCE FOR THE DESIGN-BUILD ENTITY THE SELECTED DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, ENGINEERING, PROCUREMENT, AND CONSTRUCTION DOCUMENTS REQUIRED FOR THE CONSTRUCTION OF THE PROJECT. THE DESIGN-BUILD ENTITY SHALL BE SOLELY

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF DESIGN-BUILD BRIDGING DOCUMENTS AND ARE NOT INTENDED FOR CONSTRUCTION OBJECTIVES. DESIGN INTENT, PERFORMANCE CRITERIA, AND TECHNICAL ASSUMPTIONS ARE INCLUDED TO GUIDE THE DESIGN-BUILD ENTITY IN DEVELOPING THE PROJECT. THESE DOCUMENTS ARE NOT TO BE USED FOR PERMITTING, BIDDING, FABRICATION, OR CONSTRUCTION PURPOSES. THE DESIGN-BUILD ENTITY IS RESPONSIBLE FOR PREPARING ALL DOCUMENTS REQUIRED FOR PERMITTING, FABRICATION, AND CONSTRUCTION. THE DESIGN-BUILD ENTITY SHALL USE THESE DOCUMENTS AS GUIDANCE FOR THE DESIGN-BUILD ENTITY'S OWN SELECTED DESIGN-BUILD ENTITY. THE DESIGN-BUILD ENTITY IS SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, ACCURACY, AND CODE COMPLIANCE OF ALL CONSTRUCTION DOCUMENTS. DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS SHALL NOT BE RESPONSIBLE FOR ANY CONSTRUCTION DOCUMENTS PREPARED BY THE DESIGN-BUILD ENTITY, INCLUDING ENGINEERING, PROCUREMENT, AND CONSTRUCTION DOCUMENTS REQUIRED FOR THE PROJECT'S IMPLEMENTATION. THE DESIGN-BUILD ENTITY IS RESPONSIBLE FOR ENSURING THAT ALL DESIGN-BUILD DOCUMENTS COMPLY WITH APPLICABLE CODES, REGULATIONS, AND PROJECT REQUIREMENTS. DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS IS NOT RESPONSIBLE FOR ANY ERRORS, OMISSIONS, OR NON-COMPLIANCE IN THE DESIGN-BUILD ENTITY'S DOCUMENTS

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

DATE: JULY 2026

DRAWN BY:

APPROVED BY:

SCALE: AS SHOWN

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF OBTAINING PROPOSALS FOR DESIGN-BUILD SERVICES. THE DESIGN OBJECTIVES, DESIGN INTENT, PERFORMANCE CRITERIA, AND TECHNICAL ASSUMPTIONS REFLECTED HEREIN ARE PRELIMINARY IN NATURE AND SHALL NOT BE RELIED UPON FOR PERMITTING, BIDDING, FABRICATION, OR CONSTRUCTION PURPOSES. THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR PREPARING ALL DESIGN AND CONSTRUCTION DOCUMENTS REQUIRED FOR THE PROJECT, INCLUDING THOSE NECESSARY FOR PERMITTING, BIDDING, AND CONSTRUCTION, IN ACCORDANCE WITH APPLICABLE CODES, REGULATIONS, AND INDUSTRY STANDARDS. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, AND ACCURACY OF ALL DESIGN AND CONSTRUCTION DOCUMENTS, AND FOR OBTAINING ALL REQUIRED APPROVALS AND PERMITS. ANY INFORMATION CONTAINED HEREIN IS INTENDED TO GUIDE THE DESIGN-BUILD ENTITY IN THE SELECTED DESIGN-BUILD ENTITY'S PREPARATION OF ITS PROPOSAL AND SHALL NOT BE CONSTRUED AS FINAL, BINDING, OR SUFFICIENT FOR CONSTRUCTION PURPOSES.

THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS, AND ARE THE PROPERTY OF THE ARCHITECT. THESE DOCUMENTS ARE NOT TO BE USED SOLELY FOR USE IN CONNECTION WITH THIS PROJECT AND MAY BE USED ONLY BY PERSONS OR ENTITIES WHO HAVE EXECUTED A WRITTEN AGREEMENT WITH THE ARCHITECT. ANY UNAUTHORIZED USE, DISCLOSURE, MODIFICATION, RELIANCE, OR REUSE OF THESE DOCUMENTS, IN WHOLE OR IN PART, IS PROHIBITED WITHOUT THE PRIOR WRITTEN CONSENT OF THE ARCHITECT. ANY AUTHORIZED USE OF THESE DOCUMENTS SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO THE ARCHITECT AND ITS CONSULTANTS.

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

DATE: JULY 2026
DRAWN BY:
APPROVED BY:
SCALE: AS SHOWN

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF DESIGN-BUILD BRIDGING DOCUMENTS AND ARE NOT INTENDED FOR CONSTRUCTION PURPOSES. THEY DO NOT CONTAIN SUFFICIENT INFORMATION PERTAINING TO THE SPECIFICATIONS, DESIGN INTENT, PERFORMANCE CRITERIA, AND TECHNICAL ASPECTS OF THE PROJECT TO BE USED FOR BIDDING, FABRICATION, OR CONSTRUCTION. THESE DOCUMENTS ARE INCOMPLETE AND SHALL NOT BE USED FOR PERMITTING, BIDDING, FABRICATION, OR CONSTRUCTION. THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR PROVIDING ALL NECESSARY DESIGN, ENGINEERING, AND CONSTRUCTION DOCUMENTS REQUIRED FOR THE PROJECT'S COMPLETION IN ACCORDANCE WITH APPLICABLE CODES AND REGULATIONS. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, AND ACCURACY OF ALL CONSTRUCTION DOCUMENTS, AS WELL AS FOR OBTAINING ALL NECESSARY PERMITS AND APPROVALS. THE OWNER AND ARCHITECT OF RECORD ASSUME NO RESPONSIBILITY FOR THE USE OF THESE DOCUMENTS FOR CONSTRUCTION PURPOSES AND STRONGLY DISCOURAGE SUCH USE. ANY UNAUTHORIZED USE OF THESE DOCUMENTS FOR CONSTRUCTION SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO THE ARCHITECT OF RECORD.

NO.	DATE	DESCRIPTIONS

THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY DE LA TORRE-ESTEVEZ ARCHITECTS AND ARE PROTECTED BY COPYRIGHT LAWS. THEY ARE NOT TO BE USED BY ANY PERSON OR ENTITY FOR ANY PURPOSE UNLESS SPECIFICALLY AUTHORIZED IN WRITING BY DE LA TORRE-ESTEVEZ ARCHITECTS. THESE DOCUMENTS ARE TO BE USED SOLELY FOR USE IN CONNECTION WITH THIS PROJECT AND MAY BE USED ONLY BY PERSONS OR ENTITIES WHO HAVE ENTERED INTO A WRITTEN AGREEMENT WITH DE LA TORRE-ESTEVEZ ARCHITECTS. ANY UNAUTHORIZED USE, DISCLOSURE, MODIFICATION, RELIANCE, OR REUSE OF THESE DOCUMENTS, IN WHOLE OR IN PART, IS STRICTLY PROHIBITED AND MAY RESULT IN LEGAL ACTION. ALL RIGHTS TO THESE DOCUMENTS REMAIN THE PROPERTY OF DE LA TORRE-ESTEVEZ ARCHITECTS.

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

DATE: JULY 2026
DRAWN BY:
APPROVED BY:
SCALE: AS SHOWN

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF DESIGN-BUILD BRIDGING DOCUMENTS AND ARE NOT INTENDED FOR CONSTRUCTION, BIDDING, PERMITTING, OBTAINING OF OFFICIAL APPROVALS, OR ANY OTHER REGULATORY PURPOSE. THEY DO NOT REPRESENT A COMPLETE SET OF CONSTRUCTION DOCUMENTS AND SHALL NOT BE USED FOR PERMITTING, BIDDING, FABRICATION, OR INSTALLATION. THE DESIGN-BUILD ENTITY SHALL PREPARE ITS OWN CONSTRUCTION DOCUMENTS IN ACCORDANCE WITH THE CONTRACT DOCUMENTS AND SHALL USE THESE DOCUMENTS ONLY AS GENERAL GUIDANCE FOR THE DESIGN-BUILD ENTITY'S SELECTED DESIGN-BUILD ENTITY. DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS SHALL NOT BE RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, ENGINEERING, PROCUREMENT, AND CONSTRUCTION DOCUMENTS REQUIRED FOR THE PROJECT. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT OF ITS OWN CONSTRUCTION DOCUMENTS, AND DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS SHALL NOT BE RESPONSIBLE FOR ANY ERRORS, OMISSIONS, OR DISCREPANCIES IN SUCH DOCUMENTS. ANY USE OF THESE DOCUMENTS FOR CONSTRUCTION, PERMITTING, OR BIDDING PURPOSES IS STRICTLY PROHIBITED AND AT THE USER'S SOLE RISK.

THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS FOR USE SOLELY WITH RESPECT TO THIS PROJECT. ALL RIGHTS RESERVED. THESE DOCUMENTS ARE NOT TO BE USED BY ANY PERSON OR ENTITY FOR ANY PURPOSE UNRELATED TO THIS PROJECT WITHOUT THE PRIOR WRITTEN CONSENT OF DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS. SUBMISSION OR DISTRIBUTION OF THESE DOCUMENTS TO MEET OFFICIAL REGULATORY REQUIREMENTS OR FOR OTHER PURPOSES IN CONNECTION WITH THIS PROJECT DOES NOT CONSTITUTE PUBLICATION AND IS NOT INTENDED TO PERMIT OR AUTHORIZE ANY USE BY OTHERS. NO PART OF THESE DOCUMENTS MAY BE COPIED, REPRODUCED, PUBLISHED, OR USED IN ANY WAY WITHOUT THE PRIOR WRITTEN PERMISSION OF DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS. ANY UNAUTHORIZED USE, DISCLOSURE, MODIFICATION, RELIANCE, OR REUSE OF THESE DOCUMENTS, IN WHOLE OR IN PART, IS STRICTLY PROHIBITED AND MAY RESULT IN LEGAL ACTION. ANY PERSON OR ENTITY THAT USES OR RELIES UPON ANY OF THESE DOCUMENTS SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO DE LA TORRE - ESTEVEZ ARCHITECTS PLANNERS.

DOOR ACCESS CONTROL NOTES:

1. THE DOORS INDICATED UNDER THE COLUMNS HEADINGS "KEY CARD READER" AND "MAGNETIC LOCK" IN DOOR SCHEDULE TABLES (SHEETS A-7.13 TO A-7.22) SHALL BE INSTALLED WITH KEY CARD READER CAPABILITY AND DOOR EXIT BUTTON, CONSISTING OF TWO 4" X 4" X 1 5/8" JUNCTION BOX (@ 4'-6" A.F.F.) WITH TWO 3/4"Ø CONDUIT UP TO 6" ABOVE SUSPENDED CEILING. IN ADDITION, THEY SHALL BE INSTALLED WITH TOP MOUNTED MAGNETIC LOCK CAPABILITY CONSISTING OF ONE 4" X 4" X 1 5/8" JUCTION BOX INSTALLED OVER THE DOOR FRAME (INSIDE THE GYPSUM BOARD PARTITION) WITH A 3/4"Ø CONDUIT UP TO 6" ABOVE SUSPENDED CEILING. PROVIDE ALL REQUIRED ELECTRICAL POWER SERVICE USING THE NEAREST ELECTRICAL CIRCUIT BRANCH:

2. THE DOORS INDICATED UNDER THE COLUMN HEADINGS "ELECTRIC STRIKE" IN DOOR SCHEDULE TABLES (SHEETS A-7.13 TO A-7.22) SHALL BE OPERABLE FROM THE NEAREST RECEPTION, NURSE STATION, CONTROL OR CASHIER AREAS AS APPLICABLE. PROVIDE ALL REQUIRED ELECTRICAL POWER SERVICE AND CONNECTION USING THE NEAREST ELECTRICAL CIRCUIT BRANCH:

3. THE DOORS WITH HARDWARE SET D4, SET 9 AND SET 10 WILL SERVE AS EXITS WITH EMERGENCY EXIT HARDWARE THAT SHALL HAVE AN AUDIBLE ALARM ANNUNCIATION ONLY BYPASSED FOR USE WITH KEY CARD READER. PROVIDE ALL REQUIRED ELECTRICAL POWER SERVICE USING THE NEAREST ELECTRICAL CIRCUIT BRANCH:

4. ALL DOORS WITH THE CAPACITIES AND CHARACTERISTICS IN NOTES 1, 2, & 3 ABOVE, SHALL BE PROVIDED WITH THE FOLLOWING UTILITY FACILITIES:

   a - 4" X 4" X 1-1/2" BOX WITH ONE GANG RAISED COVER FOR FUTURE DOOR CLOSER, INSTALL ABOVE DOOR FRAME. COORDINATE EXACT LOCATION W/ ARCHITECT

   b - 4" X 4" X 2-1/8" BOX WITH ONE GANG RAISED COVER FOR FUTURE DOOR ACCESS CONTROL INSTALL @ 48" AFF.

HARDWARE SCHEDULE NOTES:

1. BALANCE OF HARDWARE BY ALUMINUM DOOR MANUFACTURER AND BY AUTOMATIC DOOR MANUFACTURER.
2. SEE DOOR SCHEDULE FOR DOORS INSTALLED WITH MAGNETIC LOCK, ELECTRIC STRIKE CAPABILITY & KEY CARD READER.
3. DOORS INSTALLED WITH KEY CARD READER, MAGNETIC LOCK & ELECTRIC STRIKE CAPABILITY SHALL BE INTERFACED WITH THE LIFESAFETY & ALARM SYSTEM AS REQUIRED FOR PROPER COMPLIANCE WITH EMERGENCY EXIT ACCESSES.
4. ONLY APPROVED FIRE EXIT HARDWARE SHALL BE USED ON FIRE PROTECTION-RATED DOOR ASSEMBLIES. NEW PANIC HARDWARE AND NEW FIRE EXIT HARDWARE SHALL COMPLY WITH ANSI/UL 305, STANDARD FOR SAFETY PANIC HARDWARE, AND ANSI/BHMA A156.3, EXIT DEVICES.
5. ALL EMERGENCY & PANIC EXIT HARDWARE GROUPS SHALL INCLUDE AN INTEGRATED TRIM WITH LOCK, LATCH & LEVER OPERATION CAPABILITY.
6. VERIFY SWING OPERATION OF SINGLE AND DOUBLE DOORS AS SHOWN IN THE FLOOR PLANS

GENERAL NOTES (DOOR FINISH HARDWARE SCHEDULE)

HEALTHCARE / HOSPITAL FACILITY

1. ALL DOOR HARDWARE SHALL COMPLY WITH THE LATEST ADOPTED EDITIONS OF THE INTERNATIONAL BUILDING CODE (IBC), NFPA 101 LIFE SAFETY CODE, NFPA 80 FIRE DOORS, NFPA 105 SMOKE DOOR ASSEMBLIES, AND ICC A117.1 ACCESSIBILITY REQUIREMENTS, AS WELL AS ALL APPLICABLE STATE AND LOCAL CODES. HARDWARE ON FIRE-RATED AND SMOKE-RATED OPENINGS SHALL BE LISTED AND LABELED FOR THE INTENDED USE.

2. UNLESS OTHERWISE NOTED, ALL HARDWARE SHALL MEET ANSI/BHMA GRADE 1 STANDARDS. HARDWARE SHALL CONFORM TO THE PERFORMANCE REQUIREMENTS DEFINED BY ANSI/BHMA A156 SERIES STANDARDS.

3. ALL DOOR HARDWARE SHALL BE PROVIDED THROUGH A SINGLE QUALIFIED HARDWARE SUPPLIER EXPERIENCED IN HEALTHCARE AND INSTITUTIONAL PROJECTS. SUPPLIER SHALL PROVIDE A COMPLETE HARDWARE SCHEDULE, TEMPLATES, AND INSTALLATION INSTRUCTIONS FOR ALL OPENINGS.

4. HARDWARE SETS SHOWN IN THE SCHEDULE REPRESENT THE MINIMUM HARDWARE REQUIRED FOR EACH OPENING.CONTRACTOR SHALL PROVIDE ALL ADDITIONAL FASTENERS, BRACKETS, ACCESSORIES, MOUNTING PLATES, AND MISCELLANEOUS ITEMS REQUIRED FOR A COMPLETE INSTALLATION.

5. DOORS AND FRAMES SHALL BE FACTORY PREPARED FOR ALL HARDWARE ITEMS USING MANUFACTURER TEMPLATES. FIELD MODIFICATION OF DOORS, FRAMES, OR HARDWARE IS NOT PERMITTED WITHOUT APPROVAL FROM THE ARCHITECT.

6. ELECTRIFIED LOCKS, STRIKES, POWER TRANSFERS, DELAYED EGRESS DEVICES, CARD READERS, DOOR POSITION SWITCHES, AND MONITORING DEVICES SHALL BE COORDINATED WITH THE ELECTRICAL, SECURITY, AND ACCESS CONTROL SYSTEMS. CONTRACTOR SHALL COORDINATE WITH THE ELECTRICAL DRAWINGS FOR:

   • POWER REQUIREMENTS
   • LOW VOLTAGE WIRING
   • CONDUIT ROUTING
   • JUNCTION BOX LOCATIONS
   • ACCESS CONTROL HEAD-END EQUIPMENT

7. WHERE DOORS ARE PART OF THE BUILDING SECURITY OR ACCESS CONTROL SYSTEM:

   • HARDWARE SHALL BE COMPATIBLE WITH THE OWNER'S ACCESS CONTROL PLATFORM
   • ALL ELECTRIFIED HARDWARE SHALL BE MONITORED WHERE REQUIRED
   • FAIL-SAFE OR FAIL-SECURE OPERATION SHALL BE PROVIDED AS INDICATED ON THE ELECTRICAL/SECURITY DRAWINGS
   • HARDWARE SHALL ALLOW FREE EGRESS AT ALL TIMES IN ACCORDANCE WITH LIFE SAFETY CODES

8. HARDWARE INSTALLED ON FIRE-RATED OR SMOKE-RATED OPENINGS SHALL BE LISTED FOR USE ON LABELED ASSEMBLIES. REQUIREMENTS INCLUDE:

   • POSITIVE LATCHING ON FIRE DOORS
   • SELF-CLOSING DEVICES WHERE REQUIRED
   • NO FIELD MODIFICATIONS TO RATED ASSEMBLIES
   • HARDWARE MOUNTING THAT DOES NOT COMPROMISE THE RATING

9. DOORS SERVING AS SMOKE BARRIER OPENINGS SHALL COMPLY WITH SMOKE DOOR REQUIREMENTS INCLUDING:

   • SELF-CLOSING OR AUTOMATIC-CLOSING DEVICES
   • POSITIVE LATCHING WHERE REQUIRED
   • GASKETING WHERE SPECIFIED
   • COORDINATION WITH SMOKE DETECTION AND FIRE ALARM SYSTEMS

10. HARDWARE USED IN PATIENT CARE AREAS SHALL BE SELECTED FOR EASE OF CLEANING AND INFECTION CONTROL. WHERE REQUIRED:

    • ANTIMICROBIAL HARDWARE FINISHES MAY BE USED
    • HARDWARE SURFACES SHALL MINIMIZE CREVICES AND DIRT TRAPS
    • LEVER HANDLES SHALL BE SMOOTH AND EASY TO DISINFECT

11. DOOR CLOSERS SHALL BE ADJUSTABLE, HEAVY-DUTY INSTITUTIONAL GRADE, WITH ADJUSTABLE CLOSING AND LATCHING SPEEDS. CLOSERS SHALL BE COORDINATED WITH:

    • DOOR WIDTH AND WEIGHT
    • ACCESSIBILITY OPENING FORCE REQUIREMENTS
    • SMOKE AND FIRE DOOR REQUIREMENTS

12. ALL HARDWARE SHALL COMPLY WITH ADA AND ICC A117.1 ACCESSIBILITY REQUIREMENTS. LEVER HARDWARE SHALL:

    • OPERATE WITHOUT TIGHT GRASPING OR TWISTING
    • BE MOUNTED BETWEEN 34 AND 48 INCHES ABOVE FINISHED FLOOR

13. ALL LOCK CYLINDERS SHALL BE PROVIDED UNDER A MASTER KEY SYSTEM AS DIRECTED BY THE OWNER. HARDWARE SUPPLIER SHALL SUBMIT:

    • PRELIMINARY KEYING SCHEDULE
    • CYLINDER SCHEDULE
    • KEY HIERARCHY

    FOR OWNER APPROVAL PRIOR TO FABRICATION.

14. HARDWARE FINISHES SHALL CONFORM TO ANSI/BHMA FINISH STANDARDS. FINISH SHALL BE CONSISTENT THROUGHOUT THE PROJECT UNLESS OTHERWISE NOTED IN THE SCHEDULE.

15. PRIOR TO FABRICATION AND INSTALLATION, CONTRACTOR SHALL SUBMIT A COMPLETE DOOR HARDWARE SUBMITTAL PACKAGE INCLUDING:

    • HARDWARE SCHEDULE
    • PRODUCT DATA SHEETS
    • CUT SHEETS
    • TEMPLATES
    • ELECTRIFIED HARDWARE WIRING DIAGRAMS
    • KEYING SCHEDULE

    SUBMITTALS SHALL BE REVIEWED BY THE ARCHITECT PRIOR TO ORDERING.

16. HARDWARE SHALL BE INSTALLED IN ACCORDANCE WITH MANUFACTURER INSTRUCTIONS AND TEMPLATES. INSTALLATION SHALL BE PERFORMED BY EXPERIENCED INSTALLERS FAMILIAR WITH INSTITUTIONAL DOOR HARDWARE.

17. ALL ELECTRIFIED HARDWARE, ACCESS CONTROL DEVICES, DELAYED EGRESS LOCKS, AND AUTOMATIC OPERATORS SHALL BE TESTED AND COMMISSIONED PRIOR TO OWNER ACCEPTANCE. CONTRACTOR SHALL COORDINATE TESTING WITH:

    • SECURITY SYSTEMS CONTRACTOR
    • FIRE ALARM CONTRACTOR
    • OWNER'S FACILITIES STAFF

18. PROVIDE MANUFACTURER'S STANDARD WARRANTIES FOR ALL HARDWARE COMPONENTS. WARRANTY PERIOD SHALL BEGIN UPON SUBSTANTIAL COMPLETION.

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

DATE: JULY 2026
DRAWN BY:
APPROVED BY:
SCALE: AS SHOWN

THESE DOCUMENTS HAVE BEEN PREPARED SOLELY FOR THE PURPOSE OF DESIGN-BUILD BRIDGING AND ARE NOT INTENDED FOR CONSTRUCTION, PERMITTING, OR IMPLEMENTATION. THEY DO NOT CONSTITUTE FINAL CONSTRUCTION DOCUMENTS AND SHALL NOT BE USED FOR PERMITTING, BIDDING, FABRICATION, PROCUREMENT, OR CONSTRUCTION. THEY ARE PROVIDED SOLELY TO COMMUNICATE DESIGN GUIDANCE FOR THE DESIGN-BUILD ENTITY THE SELECTED DESIGN-BUILD ENTITY, IN COLLABORATION WITH ITS CONSULTANTS AND CONTRACTORS, SHALL BE SOLELY RESPONSIBLE FOR THE DEVELOPMENT, COORDINATION, COMPLETENESS, ACCURACY, AND CODE COMPLIANCE OF ALL CONSTRUCTION DOCUMENTS, SHOP DRAWINGS, AND TECHNICAL INFORMATION CONTAINED HEREIN, AND SHALL NOT RELY ON THESE DOCUMENTS AS A BASIS FOR CONSTRUCTION. ANY REUSE OF THESE DOCUMENTS FOR CONSTRUCTION PURPOSES IS STRICTLY PROHIBITED

THESE DOCUMENTS ARE INSTRUMENTS OF SERVICE PREPARED BY DE LA TORRE-ESTEVEZ ARCHITECTS PLANNERS. THEY ARE PROPRIETARY AND CONFIDENTIAL AND ARE PROVIDED TO THE CLIENT SOLELY FOR USE IN CONNECTION WITH THIS PROJECT AND MAY BE USED ONLY BY PERSONS OR ENTITIES AUTHORIZED BY THE ARCHITECT. UNAUTHORIZED REPRODUCTION, DISTRIBUTION, MODIFICATION, DISCLOSURE, MODIFICATION, RELIANCE, OR REUSE OF THESE DOCUMENTS, IN WHOLE OR IN PART, IS PROHIBITED WITHOUT THE ARCHITECT'S PRIOR WRITTEN CONSENT. ANY UNAUTHORIZED USE OF THESE DOCUMENTS SHALL BE AT THE USER'S SOLE RISK AND WITHOUT LIABILITY TO THE ARCHITECT.

PROJECT:
PUERTO RICO TRAUMA HOSPITAL
PUERTO RICO MEDICAL CENTER
SAN JUAN, PUERTO RICO

SHEET TITLE:
HARDWARE SCHEDULE

DE LA TORRE - ESTEVEZ
ARCHITECTS PLANNERS
URB. SANTA CRUZ 1590 AVE. PONCE DE LEON, STE 102 SAN JUAN PR 00925

DRAWING NUMBER

A-7.22

IN ADDITION TO THE REQUIREMENTS IN THIS SECTION, HARDWARE SPECIFIED IN HARDWARE SCHEDULE SHALL COMPLY WITH THE N.F.P.A. 101 & THE A.D.A. STANDARDS FOR ACCESSIBLE DESIGN.

KEYING

ALL CYLINDERS SHALL BE KEYED INTO GRAND MASTER KEY SYSTEM. PROVIDE REMOVABLE CORE CYLINDERS
THAT ARE REMOVABLE ONLY WITH A SPECIAL KEY OR TOOL WITHOUT DISASSEMBLY OF KNOB OR LOCKSET
CYLINDERS SHALL BE 7 PIN TYPE. KEYING INFORMATION SHALL BE FURNISHED AT A LATER DATE BY THE
RESIDENT ENGINEER.

CONTINUOUS HINGES

A. ANSI/BHMA A156.26

//GRADE 1-150// //GRADE 1-300// //GRADE 1-600//.

(1) LISTED UNDER CATEGORY N IN BHMA'S "CERTIFIED PRODUCT DIRECTORY."

B. GENERAL

MINIMUM 0.120-INCH- (3.0-MM-) THICK, HINGE LEAVES WITH MINIMUM OVERALL WIDTH OF 4 INCHES
(102 MM); FABRICATED TO FULL HEIGHT OF DOOR AND FRAME AND TO TEMPLATE SCREW LOCATIONS; WITH COMPONENTS FINISHED AFTER MILLING AND DRILLING ARE COMPLETE:

(1) FIRE PINS

STEEL PINS TO HOLD LABELED FIRE DOORS IN PLACE IF REQUIRED BY TESTED LISTING.

C. CONTINUOUS, BARREL-TYPE HINGES

HINGE WITH KNUCKLES FORMED AROUND A PIN THAT EXTENDS ENTIRE LENGTH OF HINGE.

(1) BASE METAL FOR EXTERIOR HINGES

STAINLESS STEEL.

(2) BASE METAL FOR INTERIOR HINGES

//STAINLESS STEEL// //STEEL// //ALUMINUM//.

(3) BASE METAL FOR HINGES FOR FIRE-RATED ASSEMBLIES

//STAINLESS STEEL// //STEEL//.

(4) MANUFACTURERS

HAGER COMPANIES.
MARKAR ARCHITECTURAL PRODUCTS, INC.; A SUBSIDIARY OF ADAMS RITE MANUFACTURING CO.
MCKINNEY PRODUCTS COMPANY; AN ASSA ABLOY GROUP COMPANY.
STANLEY COMMERCIAL HARDWARE; DIVISION. OF THE STANLEY WORKS
ZERO INTERNATIONAL

CONTINUOUS, GEAR-TYPE HINGES

EXTRUDED-ALUMINUM, PINLESS, GEARED HINGE LEAVES; JOINED BY A CONTINUOUS EXTRUDED-ALUMINUM CHANNEL CAP; WITH CONCEALED, SELF-LUBRICATING THRUST BEARINGS.

(1) MANUFACTURERS

BOMMER INDUSTRIES, INC.
HAGER COMPANIES.
MCKINNEY PRODUCTS COMPANY; AN ASSA ABLOY GROUP COMPANY.
PEMKO MANUFACTURING CO.
SELECT PRODUCTS LIMITED.STANLEY COMMERCIAL HARDWARE, DIVISION OF THE STANLEY WORKS
ZERO INTERNATIONAL.

DOOR CLOSING DEVICES

CLOSING DEVICES SHALL BE PRODUCTS OF ONE MANUFACTURER FOR EACH TYPE REQUIRED.
THE CLOSER SHALL HAVE 50 PERCENT ADJUSTABLE CLOSING FORCE OVER MINIMUM VALUE FOR THAT CLOSER AND HAVE ADJUSTABLE HYDRAULIC BACK CHECK EFFECTIVE BETWEEN 60 DEGREES AND 85 DEGREES OF DOOR OPENING.
WHERE SPECIFIED, CLOSER SHALL HAVE HOLD-OPEN FEATURE.
SIZE REQUIREMENTS: SIZE CLOSERS IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS OR
PROVIDE MULTI-SIZE CLOSERS, SIZES 1 THROUGH 6.
FURNISH HEAVY DUTY ARM STOPS AT EXTERIOR DOORS OR AS INDICATED IN THE HARDWARE SETS.
MANUFACTURERS:
STANLEY COMMERCIAL HARDWARE; INDIANAPOLIS, IN
LCN; LCN CLOSERS, PRINCETON, IL
SARGENT; NEW HAVEN, CN

DOOR STOPS

A. CONFORM TO ANSI A156.16.
B. PROVIDE DOOR STOPS WHEREVER AN OPENED DOOR OR ANY ITEM OF HARDWARE THEREON WOULD STRIKE A WALL, COLUMN, EQUIPMENT OR OTHER PARTS OF BUILDING CONSTRUCTION. FOR CONCRETE, MASONRY OR QUARRY TILE CONSTRUCTION, USE LEAD EXPANSION SHIELDS FOR MOUNTING DOOR STOPS.
C. WHERE CYLINDRICAL LOCKS WITH TURN PIECES OR PUSHBUTTONS OCCUR, EQUIP WALL BUMPERS
(RUBBER PADS HAVING CONCAVE FACE) TO RECEIVE TURN PIECE OR BUTTON.
D. SUBSTITUTE FLOOR STOPS AS APPROPRIATE, WHEN WALL BUMPERS WOULD NOT PROVIDE AN EFFECTIVE DOOR STOP.
E. WHERE DRYWALL PARTITIONS OCCUR, USE FLOOR STOPS.
F. PROVIDE STOP TYPE L02011 OR L02181, AS APPLICABLE FOR EXTERIOR DOORS.
G. OMIT STOPS WHERE FLOOR MOUNTED DOOR HOLDERS ARE REQUIRED AND WHERE AUTOMATIC OPERATED DOORS OCCUR.
H. PROVIDE APPROPRIATE ROLLER BUMPER FOR EACH SET OF DOORS (EXCEPT WHERE CLOSET DOORS OCCUR) WHERE TWO DOORS WOULD INTERFERE WITH EACH OTHER IN SWINGING.
I. PROVIDE APPROPRIATE DOOR MOUNTED STOP ON DOORS IN INDIVIDUAL TOILETS WHERE FLOOR OR WALL MOUNTED STOPS CANNOT BE USED.
J. PROVIDE OVERHEAD SURFACE APPLIED STOP TYPE C02541, ANSI A156.8 ON PATIENT TOILET DOORS
IN BEDROOMS WHERE TOILET DOOR COULD COME IN CONTACT WITH THE BEDROOM DOOR.
K. PROVIDE DOOR STOPS ON DOORS WHERE COMBINATION CLOSER MAGNETIC HOLDERS ARE SPECIFIED.

LOCKS AND LATCHES

A. CONFORM TO ANSI A156.2. LOCKS AND LATCHES FOR DOORS 45 MM (1-3/4 INCH) THICK OR OVER
SHALL HAVE BEVELED FRONTS. LOCK CYLINDERS SHALL HAVE NOT LESS THAN SEVEN PINS. PATENTED
CYLINDERS FOR ALL LOCKSETS SHALL BE REMOVABLE CORE TYPE. CYLINDERS SHALL BE FURNISHED WITH
CONSTRUCTION REMOVABLE CORES AND CONSTRUCTION MASTER KEYS. CYLINDER SHALL BE REMOVABLE BY SPECIAL KEY OR TOOL. CONSTRUCT ALL CORES SO THAT THEY WILL BE INTERCHANGEABLE INTO THE CORE HOUSINGS OF ALL MORTISE LOCKS, RIM LOCKS, CYLINDRICAL LOCKS, AND ANY OTHER TYPE LOCKS INCLUDED IN THE GREAT GRAND MASTER KEY SYSTEM. DISASSEMBLY OF LEVER OR LOCKSET SHALL NOT BE REQUIRED TO REMOVE CORE FROM LOCKSET. ALL LOCKSETS OR LATCHES ON DOUBLE DOORS WITH FIRE LABEL SHALL HAVE LATCH BOLT WITH 19 MM (3/4 INCH) THROW. PROVIDE TEMPORARY KEYING DEVICE OR CONSTRUCTION CORE TO ALLOW OPENING AND CLOSING DURING CONSTRUCTION AND PRIOR TO THE INSTALLATION OF FINAL CORES.
B. IN ADDITION TO ABOVE REQUIREMENTS, LOCKS AND LATCHES SHALL COMPLY WITH FOLLOWING
REQUIREMENTS:
1. CYLINDRICAL LOCK AND LATCH SETS: LEVERS SHALL MEET ADA (AMERICANS WITH DISABILITIES ACT)
REQUIREMENTS. CYLINDRICAL LOCKSETS TO BE CERTIFIED TO ANSI/BHMA A156.2 OPERATIONAL GRADE 1,
SECURITY GRADE 1 SERIES 4000. WHERE TWO TURN PIECES ARE SPECIFIED FOR LOCK F76, TURN PIECE ON
INSIDE KNOB SHALL LOCK AND UNLOCK INSIDE KNOB, AND TURN PIECE ON OUTSIDE KNOB SHALL UNLOCK
OUTSIDE KNOB WHEN INSIDE KNOB IS IN THE LOCKED POSITION. (THIS FUNCTION IS INTENDED TO ALLOW
EMERGENCY ENTRY INTO THESE ROOMS WITHOUT AN EMERGENCY KEY OR ANY SPECIAL TOOL.)
2. MORTISE LOCK AND LATCH SETS: CERTIFIED TO ANSI/BHMA A156.13. MORTISE LOCKSETS SHALL BE
SERIES 1000, OPERATIONAL GRADE 1 SECURITY GRADE 2. LEVERS TO BE STAINLESS STEEL BASE MATERIAL.
LOCKS AND LATCHSETS SHALL BE FURNISHED WITH 4 7/8" STRIKES CONFORMING TO ANSI A115.1 AND
FURNISHED WITH WROUGHT STRIKE BOXES. FURNISH ARMORED FRONTS FOR ALL MORTISE LOCKS.
3. AUXILIARY LOCKS SHALL BE AS SPECIFIED UNDER HARDWARE SETS AND CONFORM TO ANSI A156.5.
MANUFACTURERS:
BEST ACCESS SYSTEMS; A DIVISION OF THE STANLEY WORKS
SCHLAGE; AN INGERSOLL RAND COMPANY
SARGENT; AN ASSA ABLOY GROUP COMPANY

RFID ELECTRONIC LOCKS

A. ANSI/BHMA A156.13, GRADE 1
B. CONSTRUCTION: HEAVY DUTY CYLINDRICAL ELECTRONIC LOCKSET WITH CLUTCH MECHANISM AND BUILT-IN CONTACTLESS RFID READER CONFORMING TO ANSI/BHMA A156.13, GRADE 1. LEVER HANDLES AND
OPERATING COMPONENTS IN COMPLIANCE WITH THE UFAS AND THE ADA ACCESSIBILITY GUIDELINES.
C. SPECIAL FEATURES: CONCEALED KEY OVERRIDE, KEYED-ALIKE, MASTER KEYED, RECORDABLE, BEST
SMALL IC ADAPTER.

D. MANUFACTURERS:
1. SAFLOK
2. STANLEY/ BEST ACCESS SYSTEMS

ELECTROMAGNETIC LOCKS

A. ANSI/BHMA A156.23

ELECTRICALLY POWERED, OF STRENGTH AND CONFIGURATION INDICATED; WITH ELECTROMAGNET ATTACHED TO FRAME AND ARMATURE PLATE ATTACHED TO DOOR. LISTED UNDER CATEGORY E IN BHMA'S "CERTIFIED PRODUCT DIRECTORY."

(1) TYPE

FULL EXTERIOR OR FULL INTERIOR, AS REQUIRED BY APPLICATION INDICATED.

(2) STRENGTH RANKING

//1500 LBF (6672 N)// //1000 LBF (4448 N)// //500 LBF (2224 N)//.

(3) INDUCTIVE KICKBACK PEAK

(4) RESIDUAL MAGNETISM

NOT MORE THAN //4 LBF (18 N)// //0 LBF (0 N)// TO SEPARATE DOOR FROM MAGNET.

B. DELAYED-EGRESS LOCKS

BHMA A156.24.// LISTED UNDER CATEGORY G IN BHMA'S "CERTIFIED PRODUCT DIRECTORY". //

(1) MEANS OF EGRESS DOORS

LOCK RELEASES WITHIN 15 SECONDS AFTER APPLYING A FORCE NOT MORE THAN 15 LBF (67 N) FOR NOT
MORE THAN 3 SECONDS, AS REQUIRED BY NFPA 101.

(2) SECURITY GRADE

ACTIVATED FROM SECURE SIDE OF DOOR BY INITIATING DEVICE.

(3) MOVEMENT GRADE

ACTIVATED BY DOOR MOVEMENT AS INITIATING DEVICE.

C. MANUFACTURERS

DOOR CONTROLS INTERNATIONAL.
DOORGUARD SYSTEMS, INC.
DORTRONICS SYSTEMS, INC.
DYNALOCK CORP.
LOCKNETICS; AN INGERSOLL-RAND COMPANY.
RUTHERFORD CONTROLS INT'L. CORP.
SARGENT MANUFACTURING COMPANY; AN ASSA ABLOY GROUP COMPANY.
SECURITRON MAGNALOCK CORPORATION; AN ASSA ABLOY GROUP COMPANY.
SECURITY DOOR CONTROLS.

CARD READERS

PROVIDE AND INSTALL CARD READERS WHERE INDICATED. CARD READERS TO BE REQUIRED AT ALL EXTERIOR DOORS AND AT DEPARTMENTAL SUITE ENTRY DOORS. INTEGRATE CARD READERS WITH OTHER SPECIFIED SYSTEMS AND SYSTEMS THAT ARE IN PLACE.

ELECTRIC STRIKES

A. ANSI/ BHMA A156.31 GRADE 1.
B. GENERAL: USE FAIL-SECURE ELECTRIC STRIKES WITH FIRE-RATED DEVICES.
C. MANUFACTURERS:
1. ADAMS RITE MANUFACTURING CO.
2. FOLGER ADAM SECURITY INC.; AN ASSA ABLOY GROUP COMPANY.
3. HES, INC.; AN ASSA ABLOY GROUP COMPANY.
4. LOCKNETICS; AN INGERSOLL-RAND COMPANY.
5. VON DUPRIN; AN INGERSOLL RAND COMPANY

ARMOR PLATES, COMBINATION KICK-MOP PLATES AND DOOR EDGING

A. CONFORM TO ANSI STANDARD A156.6.
B. PROVIDE PROTECTIVE PLATES AND DOOR EDGING AS SPECIFIED BELOW:
1. KICK-MOP PLATES AND ARMOR PLATES PLASTIC OR METAL, TYPE J100 SERIES, COLOR AS REQUIRED.
2. PROVIDE KICK-MOP PLATES FOR BOTH SIDES OF EACH DOOR, EXCEPT WHERE NOTED AS NOT REQUIRED.
KICK-MOP PLATES SHALL BE 125 MM (5 INCHES) HIGH. ON PUSH SIDE OF DOORS WHERE JAMB STOP
EXTENDS TO FLOOR, MAKE COMBINATION KICK-MOP PLATES 38 MM (1-1/2 INCHES) LESS THAN WIDTH OF DOOR, EXCEPT PAIRS OF METAL DOORS WHICH SHALL HAVE PLATES 25 MM (1 INCH) LESS THAN WIDTH OF
EACH DOOR. EXTEND ALL OTHER COMBINATION KICK-MOP PLATES TO WITHIN 6 MM (1/4 INCH) OF EACH
EDGE OF DOORS. KICK MOP PLATES SHALL BUTT ASTRAGALS. FOR JAMB STOP REQUIREMENTS, SEE
SPECIFICATION SECTIONS PERTAINING TO DOOR FRAMES.
3. KICK-MOP PLATES ARE NOT REQUIRED ON FOLLOWING DOOR SIDES:
A) ARMOR PLATE SIDE OF DOORS;
B) EXTERIOR SIDE OF EXTERIOR DOORS;
C) CLOSET SIDE OF CLOSET DOORS;
D) STORAGE SIDE OF DOORS TO OR FROM STORAGE SPACES; AND
E) BOTH SIDES OF ALUMINUM ENTRANCE DOORS.
4. ARMOR PLATES FOR DOORS ARE LISTED UNDER "HARDWARE SETS". ARMOR PLATES SHALL BE 875 MM
(35 INCHES) HIGH AND 38 MM (1-1/2 INCHES) LESS THAN WIDTH OF DOORS, EXCEPT ON PAIRS OF METAL
DOORS. PLATES ON PAIRS OF METAL DOORS SHALL BE 25 MM (1 INCH) LESS THAN WIDTH OF EACH DOOR.
WHERE TOP OF INTERMEDIATE RAIL OF DOOR IS LESS THAN 875 MM (35 INCHES) FROM DOOR BOTTOM,
EXTEND ARMOR PLATES TO WITHIN 13 MM (1/2 INCH) OF TOP RAIL. ON DOORS EQUIPPED WITH PANIC
DEVICES EXTEND ARMOR PLATES TO WITHIN 13 MM (1/2 INCH) OF PANIC BOLT CROSS BAR.
5. WHERE LOUVER OR GRILLE OCCURS IN LOWER PORTION OF DOORS, SUBSTITUTE STRETCHER PLATE AND KICKMOP PLATE IN PLACE OF ARMOR PLATE. SIZE OF STRETCHER PLATE AND KICK-MOP PLATE SHALL BE 125 MM (5 INCHES) HIGH.

EXIT DEVICES

A. CERTIFIED TO ANSI STANDARD A156.3. EXIT DEVICES SHALL BE GRADE 1; TYPE AND FUNCTION ARE
SPECIFIED IN HARDWARE SETS. PROVIDE FLUSH WITH FINISHED FLOOR STRIKES FOR VERTICAL ROD EXIT DEVICES IN INTERIOR OF BUILDING. TRIM SHALL HAVE LEVER HANDLES SIMILAR TO LOCKSETS, UNLESS OTHERWISE SPECIFIED.
B. EXIT DEVICES FOR FIRE DOORS SHALL COMPLY WITH UNDERWRITERS LABORATORIES, INC., REQUIREMENTS FOR FIRE EXIT HARDWARE. SUBMIT PROOF OF COMPLIANCE.

WEATHERSTRIPS (FOR EXTERIOR DOORS)

CONFORM TO ANSI A156.22. AIR LEAKAGE SHALL NOT TO EXCEED 0.50 CFM PER FOOT OF CRACK LENGTH
(0.000774M3/S/M).

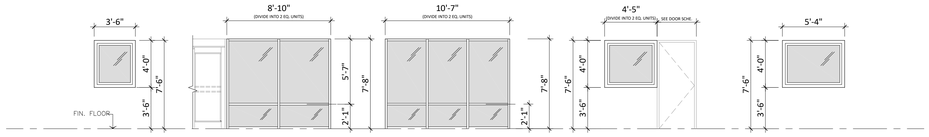
MISCELLANEOUS HARDHWAARE

A. CYLINDERS FOR VARIOUS PARTITIONS AND DOORS: KEY CYLINDERS SAME AS ENTRANCE DOORS OF AREA
IN WHICH PARTITIONS AND DOOR OCCUR. PROVIDE CYLINDERS TO OPERATE LOCKING DEVICES WHERE
SPECIFIED FOR FOLLOWING PARTITIONS AND DOORS:
1. FOLDING DOORS AND PARTITIONS.
2. SLIDE-UP DOORS.
3. DAY GATE ON VAULT DOOR.
B. MUTES: CONFORM TO ANSI A156.16. PROVIDE DOOR MUTES OR DOOR SILENCERS TYPE L03011, OF
WHITE OR LIGHT GRAY COLOR, ON EACH STEEL DOOR FRAME, EXCEPT LEAD-LINED FRAMES AND FRAMES FOR SOUND-RESISTANT, LIGHTPROOF AND ELECTROMAGNETICALLY SHIELDED DOORS. FURNISH 3 MUTES FOR SINGLE DOORS AND 2 MUTES FOR EACH PAIR OF DOORS, EXCEPT DOUBLE-ACTING DOORS. PROVIDE 4 MUTES OR SILENCERS FOR FRAMES FOR EACH DUTCH TYPE DOOR. PROVIDE 2 MUTES FOR EACH EDGE OF SLIDING DOOR WHICH WOULD CONTACT DOOR FRAME.

PADLOCKS FOR VARIOUS DOORS, GATES AND HATCHES

A. ASTM E883, SIZE 50 MM (2 INCH) WIDE CHAIN; FURNISH EXTENDED SHACKLES AS REQUIRED BY JOB
CONDITIONS. PROVIDE PADLOCKS, WITH KEY CYLINDERS, FOR EACH DOOR IN FOLLOWING AREAS AS NOTED.
B. KEY PADLOCKS AS FOLLOWS:
1. CHAIN LINK FENCE GATES FOR ELECTRICAL SUBSTATION AND OTHER FENCED BUILDINGS OR AREAS: ENGINEER'S SET, EXCEPT AS OTHERWISE SPECIFIED.
2. CHAIN LINK FENCE GATES FOR OXYGEN STORAGE: MAINTENANCE SUPPLY SET.
3. ROOF ACCESS AND SCUTTLES: ENGINEER'S SET.

SOUNDPROOFING GASKETING



1. ADJUSTABLE DOORSTOPS AT HEAD AND JAMBS AND AN AUTOMATIC DOOR BOTTOM PER SET, TWO AUTO DOOR BOTTOMS AT PAIRS. BOTH EXTRUDED ALUMINUM, CLEAR ANODIZED, SURFACE APPLIED WITH SPONGE SILICON SEALS BETWEEN PLUNGER AND HOUSING. FURNISH DOOR BOTTOMS WITH PLUNGER AND ADJUSTABLE OPERATING ROD AND SPONGE SILICON RUBBER GASKET AND STAINLESS STEEL ACTUATING SPRING. DOORSTOPS MITERED AT CORNERS. FURNISH TYPE AND FUNCTION DESIGNATION AS SPECIFIED IN THE HARDWARE SETS.

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
NOT FOR CONSTRUCTION.

LOUVERS TYPES

ALL FIXED LOUVERS SHALL BE INVERTED "V" GALV. METAL PRIMER & PAINTED AND PROVIDED WITH REMOVABLE INSECT SCREEN.

1 INVERTED 'V' GALVANIZED METAL FIXED LOUVERS PAINTED

2 INVERTED 'V' GALVANIZED METAL FIXED LOUVERS PAINTED

3 GENERATOR OPERABLE GRAVITY LOUVERS
(AS REQUIRED FOR THE SIZE, CAPACITY AND EXHAUST REQUIREMENTS OF THE 3 GENERATORS SPECIFIED FOR THE PROJECT)
(SEE RELATED ELECTRICAL DWGS.)

4 INVERTED 'V' GALVANIZED METAL FIXED LOUVERS PAINTED

5 INVERTED 'V' GALVANIZED METAL FIXED LOUVERS PAINTED

6 INVERTED 'V' GALVANIZED METAL FIXED LOUVERS PAINTED

7 INVERTED 'V' GALVANIZED METAL FIXED LOUVERS PAINTED

ALUMINUM TO STEEL WINDOW INSTALLATION NOTES

ALUMINUM FRAME TO STRUCTURAL STEEL SUPPORT COMPLIANCE CONSTRUCTION NOTES)

GENERAL REQUIREMENTS

1. ALL ALUMINUM-FRAMED WINDOWS SHALL BE INSTALLED IN STRICT ACCORDANCE WITH THE APPROVED SHOP DRAWINGS, MANUFACTURER'S WRITTEN INSTRUCTIONS, AND APPLICABLE CODES.
2. INSTALLATION SHALL COMPLY WITH ASTM E2112 FOR EXTERIOR WINDOW INSTALLATION AND PERIMETER SEALING.
3. PROVIDE COMPLETE SYSTEM INCLUDING FRAMES, ANCHORS, ISOLATION MATERIALS, FLASHINGS, SEALANTS, AND ACCESSORIES REQUIRED FOR A FULLY WEATHER-TIGHT AND STRUCTURALLY SOUND INSTALLATION.
4. COORDINATE WITH STRUCTURAL AND CIVIL DRAWINGS FOR EXACT LOCATION AND DIMENSIONS OF STEEL SUPPORT MEMBERS.

MATERIAL COMPATIBILITY AND SEPARATION

1. DIRECT CONTACT BETWEEN ALUMINUM AND STRUCTURAL STEEL MEMBERS IS STRICTLY PROHIBITED.
2. PROVIDE CONTINUOUS NON-CONDUCTIVE ISOLATION BETWEEN ALUMINUM FRAMES AND STEEL SUPPORTS USING ONE OF THE FOLLOWING:
   a. EPDM OR NEOPRENE STRIPS, MINIMUM 1/8" THICK
   b. HIGH-DENSITY PVC OR NYLON ISOLATION SHIMS
   c. MANUFACTURER-APPROVED THERMAL ISOLATION PADS
3. ISOLATION MATERIAL SHALL BE CONTINUOUS ALONG HEAD, JAMB, AND SILL CONDITIONS.
4. ALL ISOLATION MATERIALS SHALL BE UV-RESISTANT, NON-ABSORBENT, AND COMPATIBLE WITH ADJACENT SEALANTS AND FINISHES.

CORROSION PROTECTION

1. ALL STRUCTURAL STEEL IN CONTACT WITH WINDOW SYSTEM SHALL BE:
   a. HOT-DIP GALVANIZED, OR
   b. COATED WITH ZINC-RICH PRIMER AND FIELD-APPLIED EPOXY COATING
2. APPLY BITUMINOUS OR DIELECTRIC BARRIER COATING AT ALL INTERFACES WITH ISOLATION MATERIALS WHEN REQUIRED.
3. FASTENERS SHALL BE STAINLESS STEEL (TYPE 304 MINIMUM; TYPE 316 IN COASTAL OR HIGH-CORROSION ENVIRONMENTS).
4. DISSIMILAR METAL CONTACT BETWEEN FASTENERS, FRAMES, AND STRUCTURAL MEMBERS SHALL BE ISOLATED WITH NON-METALLIC WASHERS OR SLEEVES.

CLEANING AND PROTECTION

1. REMOVE PROTECTIVE FILMS AND CLEAN ALL EXPOSED SURFACES AFTER INSTALLATION.
2. PROTECT INSTALLED WINDOW SYSTEM FROM DAMAGE BY SUBSEQUENT TRADES.
3. REPAIR OR REPLACE DAMAGED COMPONENTS PRIOR TO PROJECT CLOSEOUT.

ANCHORAGE AND FASTENING

1. ANCHOR ALUMINUM WINDOW FRAMES TO STRUCTURAL STEEL USING MANUFACTURER-APPROVED CLIPS, BRACKETS, OR DIRECT FASTENERS.
2. PROVIDE SLOTTED HOLES OR ADJUSTABLE ANCHORS TO ALLOW FOR DIFFERENTIAL MOVEMENT BETWEEN STEEL AND ALUMINUM.
3. MAINTAIN A MINIMUM INSTALLATION CLEARANCE OF 1/4" TO 3/8" BETWEEN FRAME AND STRUCTURE.
4. MAXIMUM FASTENER SPACING SHALL NOT EXCEED 24" ON CENTER UNLESS OTHERWISE APPROVED BY ENGINEER OR MANUFACTURER.
5. DO NOT WELD ALUMINUM COMPONENTS TO STEEL STRUCTURE.

THERMAL ISOLATION

1. PROVIDE CONTINUOUS THERMAL BREAK BETWEEN EXTERIOR STEEL STRUCTURE AND ALUMINUM FRAME WHERE WINDOW IS PART OF THE BUILDING ENVELOPE.
2. THERMAL BREAK MATERIAL SHALL BE POLYAMIDE, HDPE, OR MANUFACTURER-APPROVED EQUIVALENT.
3. DETAIL INSTALLATION TO MINIMIZE THERMAL BRIDGING AND PREVENT INTERIOR CONDENSATION.

AIR AND WATER TIGHTNESS

1. PROVIDE CONTINUOUS PERIMETER SEALANT JOINT BETWEEN WINDOW FRAME AND ADJACENT CONSTRUCTION.
2. SEALANT SHALL COMPLY WITH ASTM C920 , TYPE S OR M, GRADE NS, CLASS 25 MINIMUM.
3. INSTALL CLOSED-CELL BACKER ROD TO CONTROL SEALANT DEPTH AND PROFILE.
4. PROVIDE MINIMUM 3/8" WIDE SEALANT JOINT UNLESS OTHERWISE NOTED.
5. INSTALL SELF-ADHERED FLASHING MEMBRANE OR METAL FLASHING AT SILLS AND HEADS AS REQUIRED TO DIRECT WATER TO EXTERIOR.
6. ENSURE ALL FRAME WEEP HOLES REMAIN OPEN AND FUNCTIONAL AFTER INSTALLATION.

TOLERANCES AND ADJUSTMENT

1. VERIFY OPENING DIMENSIONS PRIOR TO FABRICATION AND INSTALLATION.
2. ADJUST ANCHORS AND SHIMS TO ACHIEVE PROPER ALIGNMENT WITHOUT INDUCING STRESS IN FRAME OR GLASS.
3. DO NOT FORCE COMPONENTS INTO POSITION.

GLAZING AND FRAME INSTALLATION

1. INSTALL GLASS AND GASKETS IN ACCORDANCE WITH ASTM E1300 AND MANUFACTURER REQUIREMENTS.
2. PROVIDE SETTING BLOCKS, EDGE BLOCKS, AND GLAZING GASKETS AS REQUIRED FOR PROPER LOAD TRANSFER AND GLASS SUPPORT.
3. ENSURE FRAME IS PLUMB, LEVEL, AND SQUARE WITHIN TOLERANCES OF ±1/16" IN 10'-0".

QUALITY CONTROL AND INSPECTION

1. INSPECT ALL ISOLATION MATERIALS PRIOR TO INSTALLATION TO ENSURE CONTINUITY AND PROPER PLACEMENT.
2. VERIFY THAT NO DIRECT CONTACT EXISTS BETWEEN ALUMINUM AND STEEL AFTER INSTALLATION.
3. PERFORM FIELD WATER TESTING IF REQUIRED BY PROJECT SPECIFICATIONS OR OWNER.

SUPLEMENTARY COMPLIANCE NOTES

1. ALL ALUMINUM-FRAMED WINDOWS SHALL BE INSTALLED IN ACCORDANCE WITH APPROVED SHOP DRAWINGS AND ASTM E2112.
2. DIRECT CONTACT BETWEEN ALUMINUM AND STRUCTURAL STEEL IS PROHIBITED. PROVIDE CONTINUOUS EPDM OR NEOPRENE ISOLATION (MIN. 1/8").
3. STRUCTURAL STEEL SHALL BE GALVANIZED OR COATED WITH ZINC-RICH PRIMER AND EPOXY FINISH.
4. USE STAINLESS STEEL FASTENERS (TYPE 304/316) WITH NON-METALLIC ISOLATION WASHERS.
5. PROVIDE SLOTTED ANCHORS TO ALLOW DIFFERENTIAL MOVEMENT.
6. MAINTAIN 1/4"-3/8" PERIMETER INSTALLATION GAP.
7. PROVIDE CONTINUOUS THERMAL BREAK (HDPE OR POLYAMIDE).
8. INSTALL BACKER ROD AND ASTM C920 SEALANT (MIN. 3/8" JOINT).
9. PROVIDE FLASHING AT HEAD AND SILL.
10. ENSURE FRAME IS PLUMB, LEVEL, AND SQUARE.
11. VERIFY NO DIRECT METAL CONTACT AFTER INSTALLATION.
12. CLEAN AND PROTECT SYSTEM AFTER INSTALLATION.

ALUMINUM AND GLASS CODE COMPLIANCE

1- ALL EXTERIOR ALUMINUM & GLASS WINDOW CONFIGURATIONWITH A U-VALUE = 1.2 W/M²·K AND A SOLAR HEAT GAIN COEFFICIENT (SHGC) = 0.33 COMPOSED OF THE FOLLOWING ASSEMBLY CONFIGURATION:
   A. OUTER-LITE (ARCTIC BLUE) - 6MM (1/4")
   B. INNER-LITE (CLEAR OR LOW-E) : 6MM (1/4")
   C. INTERMEDIATE CAVITY : 16MM (5/8") AIR OR ARGON

2- ALL WINDOWS ALUMINUM MEMBERS SHALL HAVE A SILVER/NATURAL CLEAR ANODIZED FINISH

3- ALL EXTERIOR ALUMINUM & GLASS WINDOWS, SLIDING DOORS, FIXED GLASS PANELS AND WINDOW WALLS, MATERIALS AND INSTALLATION SHALL COMPLY WITH APPLICABLE WIND RESISTANCE REQUIREMENTS OF THE LATEST PUERTO RICO BUILDING CODE INCLUDING RESISTANCE TO WITHSTAND THE IMPACT OF AIRBORNE MISSILES.

4- GENERAL CONTRACTOR SHALL SUBMIT TO THE OWNER, SHOP DRAWINGS AND STRUCTURAL COMPUTATIONS SIGNED AND SEALED BY LICENSED ENGINEER IN PUERTO RICO, SUPPORTING COMPLIANCE WITH THE ABOVE INDICATED REQUIREMENTS.

5- ALL FINAL MASONRY OPENINGS DIMENSIONS FOR WINDOWS & DOORS SHALL BE VERIFIED AT JOB SITE PRIOR TO FABRICATION.

6- ALL DIMENSIONS SHALL BE FIELD VERIFIED BY CONTRACTOR PRIOR TO MANUFACTURING OF WINDOWS & DOORS.

7. MAXIMUM PROJECTED WINDOW CLEAR OPENING SHALL BE 6".

INSULATING GLASS UNITS (IGUS) COMPLIANCE NOTES

A. PROVIDE FACTORY-FABRICATED, HERMETICALLY SEALED INSULATING GLASS UNITS (IGUS) COMPLYING WITH ASTM E2190 AND CONSISTING OF TINTED AND COATED GLAZING CONFIGURED TO ACHIEVE THE SPECIFIED THERMAL AND SOLAR PERFORMANCE.

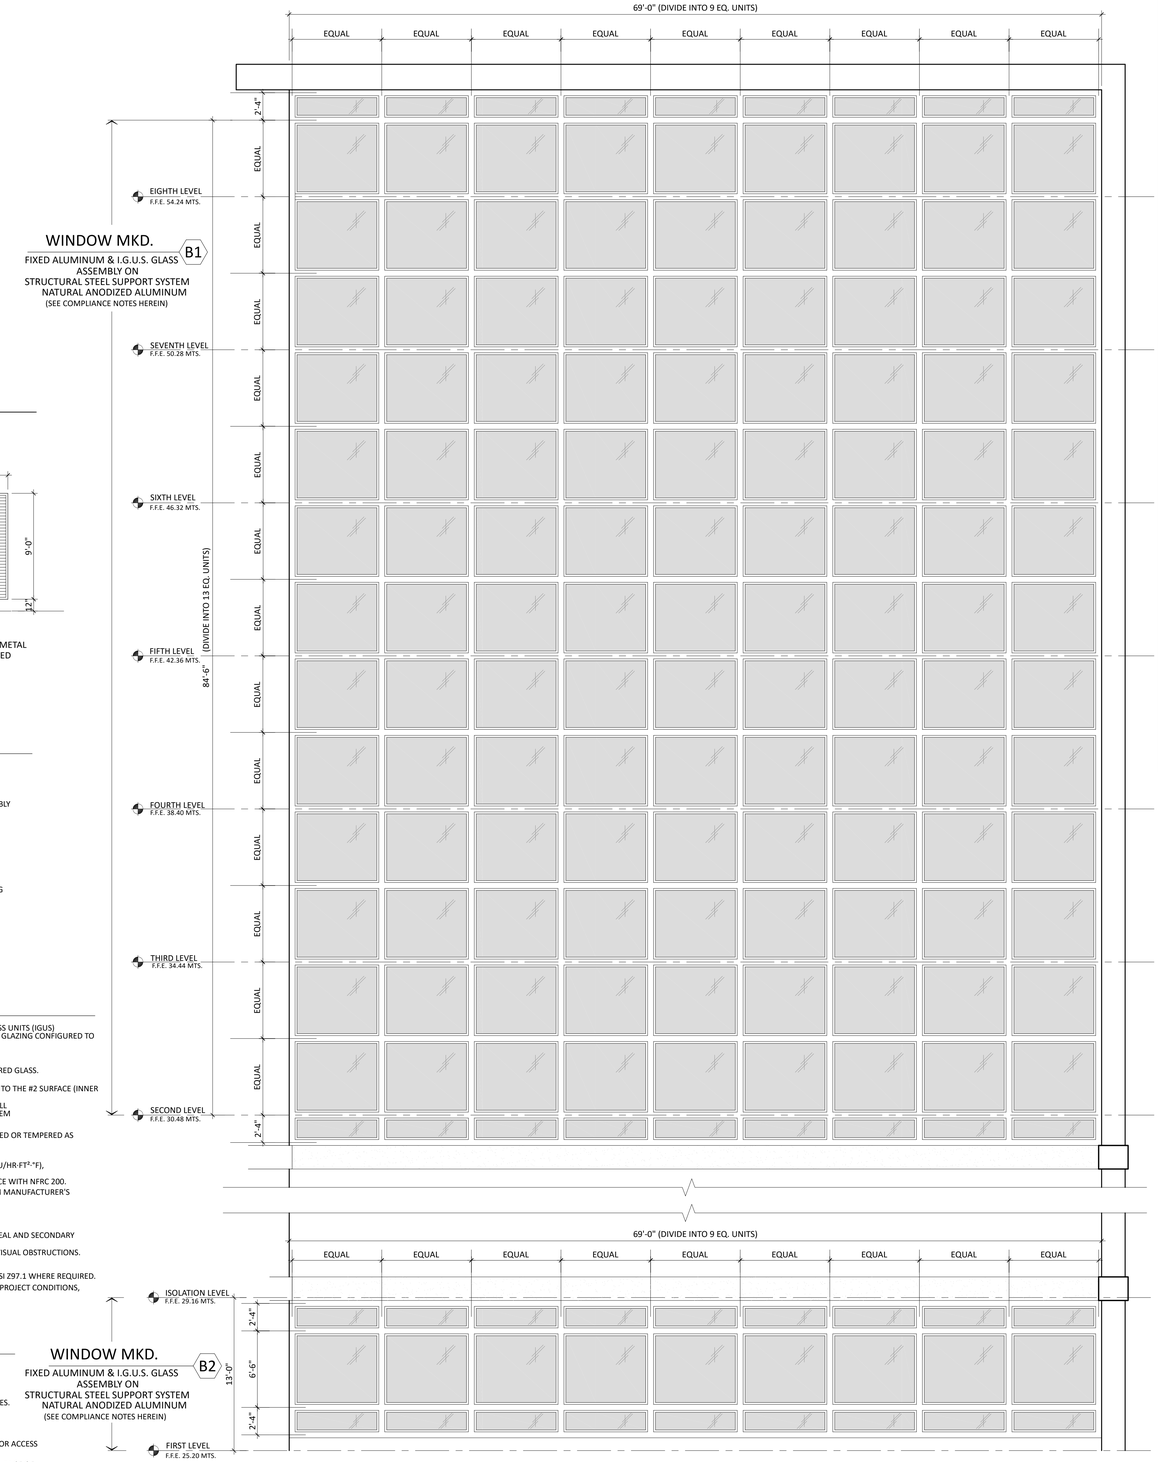
GLASS CONFIGURATION:

1. OUTER LITE: 6 MM (1/4") THICK HEAT-STRENGTHENED OR FULLY TEMPERED GLASS.
2. COATING: SOLAR CONTROL LOW-EMISSIVITY (LOW-E) COATING APPLIED TO THE #2 SURFACE (INNER FACE OF THE OUTER LITE).
3. CAVITY: NOMINAL 16 MM (5/8") SEALED AIR SPACE WITH ARGON GAS FILL (MINIMUM 90% CONCENTRATION). PROVIDE WARM-EDGE SPACER SYSTEM WITH DESICCANT COMPLYING WITH ASTM E2190.
4. INNER LITE: 6 MM (1/4") THICK CLEAR FLOAT GLASS, HEAT-STRENGTHENED OR TEMPERED AS REQUIRED BY CODE.

REQUIREMENTS:

1. THERMAL TRANSMITTANCE (U-VALUE): MAXIMUM 1.2 W/M²·K (0.21 BTU/HR·FT²·°F), CENTER-OF-GLASS, IN ACCORDANCE WITH NFRC 100.
2. SOLAR HEAT GAIN COEFFICIENT (SHGC): MAXIMUM 0.33, IN ACCORDANCE WITH NFRC 200.
3. VISIBLE LIGHT TRANSMITTANCE (VLT): AS SELECTED BY ARCHITECT FROM MANUFACTURER'S STANDARD DATA.

FABRICATION REQUIREMENTS:



1. NOMINAL IGU THICKNESS: APPROXIMATELY 28 MM (1-1/8").
2. PROVIDE DUAL-SEAL EDGE SYSTEM WITH PRIMARY POLYISOBUTYLENE SEAL AND SECONDARY STRUCTURAL SILICONE OR POLYSULFIDE SEAL.
3. FABRICATE UNITS TRUE, FLAT, AND FREE OF DEFECTS, DISTORTION, OR VISUAL OBSTRUCTIONS.

SAFETY AND CODE COMPLIANCE:

1. PROVIDE SAFETY GLAZING COMPLYING WITH CPSC 16 CFR 1201 AND ANSI Z97.1 WHERE REQUIRED.
2. PROVIDE TEMPERED OR LAMINATED GLASS AS REQUIRED BY CODE AND PROJECT CONDITIONS, INCLUDING IMPACT-RESISTANT GLAZING WHERE APPLICABLE.

EXTERIOR GALVANIZED METAL "INVERTED V" LOUVERS COMPLIANCE AND INSTALLATION NOTES

GENERAL REQUIREMENTS

1. PROVIDE EXTERIOR FIXED, STATIONARY, INVERTED "V" (CHEVRON-TYPE) METAL LOUVERS FOR VENTILATION OF ELECTROMECHANICAL ROOMS AS INDICATED ON DRAWINGS.
2. LOUVER SYSTEM SHALL BE DESIGNED TO PROVIDE CONTINUOUS NATURAL VENTILATION WHILE PREVENTING RAIN PENETRATION AND DEBRIS INTRUSION.
3. INSTALLATION SHALL COMPLY WITH MANUFACTURER'S WRITTEN INSTRUCTIONS AND APPLICABLE STANDARDS INCLUDING AMCA 500-L (AIR PERFORMANCE, WATER PENETRATION, AND WIND-DRIVEN RAIN).
4. COORDINATE LOUVER LOCATIONS, SIZES, AND FREE AREA REQUIREMENTS WITH MECHANICAL AND ELECTRICAL ENGINEERING DRAWINGS.

MATERIALS AND FABRICATION

1. LOUVERS SHALL BE FABRICATED FROM:
   a. GALVANIZED STEEL (G90 MINIMUM), OR
   b. GALVANIZED STEEL WITH FACTORY-APPLIED HIGH-PERFORMANCE COATING
2. BLADE CONFIGURATION SHALL BE INVERTED "V" PROFILE TO PROMOTE WATER SHEDDING AND MAXIMIZE AIRFLOW.
3. FRAME DEPTH, BLADE SPACING, AND ANGLES SHALL BE ENGINEERED TO MEET SPECIFIED FREE AREA AND PRESSURE DROP REQUIREMENTS.
4. PROVIDE REINFORCED FRAMES AND INTERMEDIATE MULLIONS WHERE REQUIRED FOR WIND LOAD RESISTANCE PER PROJECT STRUCTURAL CRITERIA.

CORROSION PROTECTION AND FINISHES

1. ALL STEEL COMPONENTS SHALL BE HOT-DIP GALVANIZED OR FACTORY-COATED AFTER FABRICATION.
2. PROVIDE FACTORY-APPLIED FINISH COATING SYSTEM (MINIMUM):
   a. PRIMER + POLYESTER OR PVDF (FLUOROPOLYMER) FINISH (AAMA 2604/2605 EQUIVALENT)
3. ALL FIELD CUTS, DRILLED HOLES, AND DAMAGED AREAS SHALL BE TOUCHED-UP WITH ZINC-RICH COATING.
4. FASTENERS AND ACCESSORIES SHALL BE STAINLESS STEEL (TYPE 304 MIN.; TYPE 316 FOR COASTAL EXPOSURE).

AIRFLOW AND PERFORMANCE

1. LOUVERS SHALL BE SIZED TO PROVIDE REQUIRED FREE AREA FOR VENTILATION ELECTROMECHANICAL EQUIPMENT.
2. MAXIMUM ALLOWABLE PRESSURE DROP SHALL BE COORDINATED WITH MECHANICAL ENGINEER.
3. LOUVERS SHALL BE TESTED OR RATED IN ACCORDANCE WITH AMCA 500-L.
4. MINIMIZE TURBULENCE AND AIRFLOW OBSTRUCTION CAUSED BY SCREENS OR SUPPORT MEMBERS.

WATER PENETRATION CONTROL

1. LOUVER DESIGN SHALL LIMIT WATER PENETRATION UNDER WIND-DRIVEN RAIN CONDITIONS.
2. PROVIDE INTEGRAL DRAINAGE CHANNELS OR SILL FLASHING TO DIRECT WATER TO EXTERIOR.
3. INSTALL CONTINUOUS FLASHING AT HEAD AND SILL OF OPENINGS.
4. SEAL ALL PERIMETER JOINTS WITH SEALANT COMPLYING WITH ASTM C920.

THERMAL AND ENVIRONMENTAL CONSIDERATIONS

1. PROVIDE THERMAL BREAKS WHERE LOUVERS ARE INSTALLED IN CONDITIONED ENVELOPE WALLS.
2. DETAIL INSTALLATION TO PREVENT CONDENSATION DRIP INTO INTERIOR SPACES OR EQUIPMENT.
3. COORDINATE WITH BUILDING ENVELOPE CONSULTANT FOR CONTINUITY OF AIR AND WATER BARRIERS.

TOLERANCES AND INSTALLATION

1. INSTALL LOUVERS PLUMB, LEVEL, AND SQUARE WITHIN ±1/8" IN 10'-0".
2. VERIFY OPENING DIMENSIONS PRIOR TO FABRICATION.
3. DO NOT DISTORT FRAME DURING INSTALLATION.
4. ENSURE PROPER ALIGNMENT OF BLADES FOR UNIFORM APPEARANCE.

INSECT SCREEN ASSEMBLY

1. PROVIDE INTERIOR-MOUNTED INSECT SCREEN SYSTEM AT ALL LOUVERS.
2. SCREEN MATERIAL SHALL BE:
   a. STAINLESS STEEL MESH, OR
   b. ALUMINUM MESH WITH CORROSION-RESISTANT COATING
3. SCREEN FRAME SHALL BE REMOVABLE AND SECURELY FASTENED FOR MAINTENANCE ACCESS.
4. SCREEN MESH SIZE SHALL PREVENT INSECT ENTRY WHILE MAINTAINING ADEQUATE AIRFLOW (TYP. 1/16"-1/8").
5. PROVIDE ADEQUATE OFFSET BETWEEN LOUVER AND SCREEN TO PREVENT AIRFLOW RESTRICTION.

ATTACHMENT AND SUPPORT

1. ANCHOR LOUVER FRAMES TO STRUCTURAL OPENINGS (CONCRETE OR STEEL) MANUFACTURER-APPROVED ANCHORS.
2. PROVIDE ISOLATION BETWEEN DISSIMILAR MATERIALS (STEEL FRAME TO CONCRETE OR STRUCTURAL STEEL) USING NON-CONDUCTIVE SHIMS OR GASKETS.
3. FASTENER SPACING SHALL BE AS REQUIRED TO RESIST DESIGN WIND LOADS (NOT TO EXCEED 24" O.C. UNLESS ENGINEERED OTHERWISE).
4. PROVIDE CONTINUOUS PERIMETER SUPPORT AND SHIMMING TO ENSURE FRAME IS PLUMB, LEVEL, AND TRUE.

QUALITY CONTROL AND TESTING

1. INSPECT ALL COMPONENTS PRIOR TO INSTALLATION FOR DAMAGE OR DEFECTS.
2. VERIFY SCREEN INSTALLATION DOES NOT OBSTRUCT REQUIRED AIRFLOW.
3. PERFORM FIELD INSPECTION FOR WATER TIGHTNESS AND INSTALLATION QUALITY AS REQUIRED.

CLEANING AND PROTECTION

1. CLEAN ALL EXPOSED SURFACES AFTER INSTALLATION.
2. REMOVE DEBRIS FROM LOUVER BLADES AND SCREENS.
3. PROTECT INSTALLED LOUVERS FROM DAMAGE BY OTHER TRADES.

MAINTENANCE ACCESS

1. PROVIDE REMOVABLE OR HINGED PANELS WHERE REQUIRED FOR ACCESS TO SCREENS AND CLEANING.
2. ENSURE SAFE ACCESS FOR PERIODIC INSPECTION AND MAINTENANCE OF ELECTROMECHANICAL VENTILATION OPENINGS.

NOTES:
- DESIGN-BUILD BRIDGING DOCUMENTS.
  NOT FOR CONSTRUCTION.

GENERAL NOTES – PRELIMINARY BUILT-IN CABINETRY AND CASEWORK PLANS
DESIGN-BUILD RFP / BRIDGING DOCUMENTS

GENERAL NOTES

1. THESE BUILT-IN CABINETRY AND CASEWORK PLAN DRAWINGS HAVE BEEN PREPARED AS PRELIMINARY, CONCEPTUAL, AND RECOMMENDED ARCHITECTURAL DESIGN DEVELOPMENT DOCUMENTS FOR USE AS PART OF THE DESIGN-BUILD REQUEST FOR PROPOSAL (“RFP”) BRIDGING DOCUMENTS ONLY.
2. THESE DRAWINGS ARE INTENDED TO COMMUNICATE THE OWNER’S AND BRIDGING ARCHITECT’S GENERAL DESIGN INTENT REGARDING THE PRELIMINARY LOCATION, GENERAL CONFIGURATION, AND FUNCTIONAL DISTRIBUTION OF BUILT-IN CABINETRY, COUNTERTOPS, WORK SURFACES, NURSE STATIONS, CLINICAL WORKSTATIONS, PATIENT ROOM CASEWORK, PATIENT OBSERVATION AND TREATMENT AREA CASEWORK, PRE-OP AND POST-OP SERVICE CASEWORK, PATIENT STABILIZATION AREA CASEWORK, AND OTHER FIXED ARCHITECTURAL MILLWORK OR CASEWORK ELEMENTS.
3. THESE DRAWINGS SHALL NOT BE CONSTRUED AS FINAL CASEWORK CONSTRUCTION DOCUMENTS, FINAL MILLWORK SHOP DRAWINGS, FINAL EQUIPMENT COORDINATION DRAWINGS, FINAL INTERIOR ELEVATIONS, FINAL SECTIONS, FINAL DETAILS, FINAL MATERIAL SELECTIONS, FINAL FINISH SCHEDULES, OR FINAL FABRICATION DOCUMENTS.
4. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR DEVELOPING THE FINAL, COORDINATED, COMPREHENSIVE, CODE-COMPLIANT, PERMIT-READY, FABRICATION-READY, AND BUILDABLE DESIGN OF ALL BUILT-IN CABINETRY, COUNTERTOPS, WORK SURFACES, NURSE STATIONS, CLINICAL CASEWORK, AND RELATED ARCHITECTURAL INTERIOR ELEMENTS REQUIRED FOR THE COMPLETE PROJECT.
5. THE DESIGN-BUILD ENTITY SHALL COORDINATE THE FINAL CASEWORK DESIGN WITH THE FINAL ARCHITECTURAL FLOOR PLANS, ROOM DATA, ROOM FINISH SCHEDULES, EQUIPMENT PLANS, MEDICAL EQUIPMENT REQUIREMENTS, STRUCTURAL CONDITIONS, MEP/FP SYSTEMS, PLUMBING FIXTURES, MEDICAL GAS OUTLETS, ELECTRICAL DEVICES, DATA OUTLETS, NURSE CALL DEVICES, LIGHTING, FIRE PROTECTION, SECURITY, ACCESS CONTROL, TECHNOLOGY, AND ALL OTHER PROJECT DISCIPLINES.
6. THE DESIGN-BUILD ENTITY SHALL CONSULT WITH THE OWNER, ASEM, USER GROUPS, CLINICAL REPRESENTATIVES, FACILITY OPERATIONS PERSONNEL, INFECTION CONTROL REPRESENTATIVES, AND OTHER PARTIES IDENTIFIED BY THE OWNER TO CONFIRM THAT THE FINAL BUILT-IN CABINETRY AND CASEWORK DESIGN PROPERLY SERVES THE FUNCTIONAL, OPERATIONAL, CLINICAL, MAINTENANCE, SAFETY, AND DURABILITY NEEDS OF EACH SPACE.
7. THE DESIGN-BUILD ENTITY SHALL VERIFY THE REQUIRED FUNCTION OF EACH CASEWORK LOCATION AND SHALL ADAPT THE FINAL DESIGN TO THE SPECIFIC USE OF THE ROOM OR AREA IN WHICH IT IS LOCATED, INCLUDING BUT NOT LIMITED TO PATIENT CARE, CLINICAL SUPPORT, STAFF WORK, MEDICATION PREPARATION, CLEAN SUPPLY, SOILED HOLDING, EQUIPMENT STORAGE, DOCUMENTATION, RECEPTION, OBSERVATION, TREATMENT, STABILIZATION, PRE-OPERATIVE CARE, POST-OPERATIVE CARE, AND GENERAL HOSPITAL OPERATIONS.
8. THE DESIGN-BUILD ENTITY SHALL NOT RELY EXCLUSIVELY ON THE PRELIMINARY CASEWORK LOCATIONS, DIMENSIONS, CONFIGURATIONS, SYMBOLS, OR GRAPHIC REPRESENTATIONS SHOWN ON THESE DRAWINGS FOR FINAL DESIGN, PROCUREMENT, FABRICATION, INSTALLATION, OR CONSTRUCTION.
9. ALL BUILT-IN CABINETRY, COUNTERTOPS, WORK SURFACES, SINK LOCATIONS, KNEE SPACES, STORAGE ELEMENTS, OPEN SHELVING, WALL CABINETS, BASE CABINETS, TALL CABINETS, NURSE STATION COMPONENTS, AND SPECIALTY CASEWORK ELEMENTS SHOWN ON THESE DRAWINGS SHALL BE FIELD VERIFIED, DIMENSIONALLY COORDINATED, AND ADJUSTED BY THE DESIGN-BUILD ENTITY AS REQUIRED TO MEET FINAL ROOM LAYOUTS, FINAL EQUIPMENT REQUIREMENTS, FINAL BUILDING CONDITIONS, AND FINAL USER REQUIREMENTS.
10. THE DESIGN-BUILD ENTITY SHALL DEVELOP FINAL INTERIOR ELEVATIONS, SECTIONS, ENLARGED PLANS, CONSTRUCTION DETAILS, CASEWORK DETAILS, COUNTERTOP DETAILS, SUPPORT DETAILS, ANCHORAGE DETAILS, EDGE DETAILS, JOINT DETAILS, BACKSPLASH DETAILS, SINK DETAILS, ACCESS PANEL DETAILS, AND ALL OTHER DETAILING NECESSARY TO PROPERLY FABRICATE AND CONSTRUCT THE WORK.
11. THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR SELECTING, SPECIFYING, AND COORDINATING ALL FINAL CASEWORK MATERIALS, SUBSTRATES, HARDWARE, FINISHES, COUNTERTOP MATERIALS, SOLID SURFACES, LAMINATES, CABINET LINERS, BASES, SPLASHES, SEALANTS, EDGE PROFILES, FASTENERS, SUPPORTS, AND ACCESSORIES IN ACCORDANCE WITH THE PROJECT REQUIREMENTS, OWNER STANDARDS, HOSPITAL USE, INFECTION CONTROL REQUIREMENTS, DURABILITY REQUIREMENTS, AND APPLICABLE CODES.
12. ALL FINAL CASEWORK MATERIALS AND FINISHES SHALL BE APPROPRIATE FOR THE INTENDED HEALTHCARE ENVIRONMENT AND SHALL BE SELECTED TO SUPPORT CLEANABILITY, DURABILITY, MOISTURE RESISTANCE, IMPACT RESISTANCE, CHEMICAL RESISTANCE, STAIN RESISTANCE, INFECTION CONTROL, MAINTENANCE, AND LONG-TERM PERFORMANCE.
13. THE DESIGN-BUILD ENTITY SHALL COORDINATE ALL CASEWORK WITH REQUIRED PLUMBING FIXTURES, SINKS, FAUCETS, DRAINS, TRAPS, WATER SUPPLIES, BACKFLOW PREVENTION, EMERGENCY FIXTURES, HANDWASHING REQUIREMENTS, MEDICAL GAS OUTLETS, WASTE RECEPTACLES, SHARPS CONTAINERS, SOAP DISPENSERS, PAPER TOWEL DISPENSERS, GLOVE BOX HOLDERS, AND OTHER CLINICAL OR SUPPORT ACCESSORIES.
14. THE DESIGN-BUILD ENTITY SHALL COORDINATE ALL CASEWORK WITH ELECTRICAL, DATA, COMMUNICATIONS, NURSE CALL, LOW-VOLTAGE, SECURITY, MONITORING, EQUIPMENT POWER, UNDER-COUNTER POWER, COUNTERTOP DEVICES, WALL-MOUNTED DEVICES, AND ANY REQUIRED TECHNOLOGY INFRASTRUCTURE.
15. THE DESIGN-BUILD ENTITY SHALL VERIFY THAT FINAL NURSE STATIONS, STAFF WORK AREAS, RECEPTION COUNTERS, CLINICAL WORKSTATIONS, AND PATIENT CARE CASEWORK ARE COORDINATED WITH SIGHTLINES, STAFF WORKFLOW, PATIENT OBSERVATION, EQUIPMENT ACCESS, DOCUMENTATION NEEDS, PRIVACY REQUIREMENTS, SECURITY REQUIREMENTS, ACCESSIBILITY REQUIREMENTS, AND OPERATIONAL EFFICIENCY.
16. THE DESIGN-BUILD ENTITY SHALL COORDINATE FINAL CASEWORK IN PATIENT ROOMS, TREATMENT ROOMS, OBSERVATION AREAS, STABILIZATION AREAS, PRE-OP AREAS, POST-OP AREAS, AND OTHER PATIENT CARE AREAS WITH BEDS, STRETCHERS, RECLINERS, EXAM TABLES, MEDICAL EQUIPMENT, HEADWALLS, BOOMS, MONITORS, CLEARANCES, STAFF ACCESS, PATIENT ACCESS, AND REQUIRED CLINICAL WORKFLOW.
17. THE DESIGN-BUILD ENTITY SHALL VERIFY THAT FINAL CASEWORK LAYOUTS DO NOT OBSTRUCT REQUIRED CLEARANCES, EGRESS PATHS, DOOR SWINGS, ACCESSIBLE ROUTES, WHEELCHAIR MANEUVERING SPACES, STRETCHER MOVEMENT, EQUIPMENT MOVEMENT, MEDICAL GAS ACCESS, FIRE PROTECTION DEVICES, LIFE-SAFETY DEVICES, ACCESS PANELS, OR MAINTENANCE ACCESS.
18. THE DESIGN-BUILD ENTITY SHALL COORDINATE FINAL COUNTER HEIGHTS, WORK SURFACE HEIGHTS, KNEE AND TOE CLEARANCES, REACH RANGES, ACCESSIBLE SINKS, ACCESSIBLE WORKSTATIONS, AND OTHER RELATED DIMENSIONS WITH APPLICABLE ACCESSIBILITY REQUIREMENTS AND THE FUNCTIONAL REQUIREMENTS OF EACH SPACE.
19. THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR COORDINATING ALL BUILT-IN CABINETRY AND CASEWORK WITH WALL CONSTRUCTION, PARTITIONS, BLOCKING, BACKING, STRUCTURAL SUPPORTS, EQUIPMENT SUPPORTS, FIRE-RATED ASSEMBLIES, ACOUSTICAL REQUIREMENTS, FLOOR FINISHES, WALL FINISHES, CEILING SYSTEMS, AND FINAL ROOM FINISHES.
20. THE DESIGN-BUILD ENTITY SHALL PROVIDE ADEQUATE BLOCKING, BACKING, ANCHORAGE, SUPPORT, REINFORCEMENT, AND STRUCTURAL COORDINATION FOR ALL WALL-MOUNTED CABINETS, COUNTERTOPS, SHELVES, EQUIPMENT, ACCESSORIES, NURSE STATION COMPONENTS, AND SPECIALTY CASEWORK ITEMS.
21. THE DESIGN-BUILD ENTITY SHALL COORDINATE FINAL CASEWORK WITH REQUIRED CLEANING PROTOCOLS, INFECTION CONTROL RISK ASSESSMENT REQUIREMENTS, CLINICAL SAFETY REQUIREMENTS, JOINT SEALING REQUIREMENTS, AND THE ELIMINATION OR CONTROL OF GAPS, CREVICES, SHARP EDGES, DUST-COLLECTING SURFACES, AND UNSEALED MOISTURE-SENSITIVE CONDITIONS.
22. THE DESIGN-BUILD ENTITY SHALL DEVELOP FINAL CASEWORK DETAILS THAT PROPERLY ADDRESS MATERIAL TRANSITIONS, COUNTERTOP SPLASHES, WALL INTERFACES, FLOOR INTERFACES, BASE CONDITIONS, END PANELS, FILLER PANELS, EXPOSED EDGES, SCRIBE CONDITIONS, SEALANT JOINTS, ACCESS PANELS, REMOVABLE PANELS, AND COORDINATION WITH ADJACENT CONSTRUCTION.
23. THE DESIGN-BUILD ENTITY SHALL COORDINATE ALL FINAL CASEWORK WITH OWNER-FURNISHED EQUIPMENT, CONTRACTOR-FURNISHED EQUIPMENT, MEDICAL EQUIPMENT, LABORATORY EQUIPMENT, IT EQUIPMENT, OFFICE EQUIPMENT, STORAGE SYSTEMS, MOBILE CARTS, REFRIGERATORS, WARMERS, PRINTERS, MONITORS, AND OTHER DEVICES OR EQUIPMENT REQUIRED FOR EACH SPACE.
24. THE DESIGN-BUILD ENTITY SHALL VERIFY FINAL CASEWORK QUANTITIES, SIZES, CONFIGURATIONS, STORAGE CAPACITIES, DOOR AND DRAWER ARRANGEMENTS, SHELVING REQUIREMENTS, LOCKING REQUIREMENTS, HARDWARE REQUIREMENTS, AND SPECIALTY ACCESSORY REQUIREMENTS WITH THE OWNER AND USER GROUPS PRIOR TO FINAL PROCUREMENT AND FABRICATION.
25. THE DESIGN-BUILD ENTITY SHALL PREPARE AND COORDINATE FINAL CASEWORK SCHEDULES, MATERIAL SCHEDULES, FINISH SCHEDULES, HARDWARE SCHEDULES, COUNTERTOP SCHEDULES, SINK SCHEDULES, ACCESSORY SCHEDULES, AND RELATED DOCUMENTATION REQUIRED FOR FINAL DESIGN, PERMITTING, PROCUREMENT, FABRICATION, INSTALLATION, AND QUALITY CONTROL.
26. THE DESIGN-BUILD ENTITY SHALL REQUIRE FABRICATOR SHOP DRAWINGS, PRODUCT DATA, MATERIAL SAMPLES, FINISH SAMPLES, MOCKUPS, AND OTHER SUBMITTALS AS NECESSARY TO CONFIRM COMPLIANCE WITH THE FINAL DESIGN INTENT, OWNER REQUIREMENTS, QUALITY STANDARDS, AND HEALTHCARE PERFORMANCE REQUIREMENTS.
27. THE DESIGN-BUILD ENTITY SHALL COORDINATE THE FINAL CASEWORK DESIGN WITH CONSTRUCTION PHASING, DELIVERY ACCESS, INSTALLATION SEQUENCING, PROTECTION OF FINISHED WORK, QUALITY CONTROL INSPECTIONS, PUNCH LIST REQUIREMENTS, AND FINAL OWNER ACCEPTANCE.
28. ANY DISCREPANCIES BETWEEN THESE PRELIMINARY BUILT-IN CABINETRY AND CASEWORK PLAN DRAWINGS, THE FINAL ARCHITECTURAL FLOOR PLANS, FINAL EQUIPMENT PLANS, FINAL ENGINEERING DOCUMENTS, OWNER REQUIREMENTS, USER GROUP REQUIREMENTS, FIELD CONDITIONS, APPLICABLE CODES, OR REGULATORY REQUIREMENTS SHALL BE IDENTIFIED, COORDINATED, AND RESOLVED BY THE DESIGN-BUILD ENTITY PRIOR TO FABRICATION OR INSTALLATION.
29. EXISTING OR PROPOSED CONDITIONS NOT SHOWN, INCOMPLETELY SHOWN, OR SHOWN DIFFERENTLY ON THESE PRELIMINARY DRAWINGS SHALL NOT RELIEVE THE DESIGN-BUILD ENTITY FROM ITS RESPONSIBILITY TO PREPARE COMPLETE, COORDINATED, CODE-COMPLIANT, BUILDABLE, AND FULLY DETAILED FINAL CASEWORK DOCUMENTS.
30. THE INCLUSION OF THESE PRELIMINARY BUILT-IN CABINETRY AND CASEWORK PLAN DRAWINGS IN THE RFP BRIDGING DOCUMENTS DOES NOT TRANSFER TO THE OWNER OR BRIDGING ARCHITECT THE DESIGN-BUILD ENTITY’S RESPONSIBILITY FOR FINAL CASEWORK DESIGN, FINAL DETAILING, FINAL MATERIAL SELECTIONS, FINAL USER COORDINATION, FINAL ENGINEERING COORDINATION, FINAL FABRICATION COORDINATION, OR PROPER CONSTRUCTION AND INSTALLATION OF THE WORK.
31. THE DESIGN-BUILD ENTITY SHALL ASSUME FULL RESPONSIBILITY FOR TRANSFORMING THE PRELIMINARY BUILT-IN CABINETRY AND CASEWORK DESIGN INTENT SHOWN ON THESE DRAWINGS INTO A FINAL, COORDINATED, COMPREHENSIVE, CODE-COMPLIANT, FUNCTIONALLY APPROPRIATE, FABRICATION-READY, AND BUILDABLE CASEWORK DESIGN FOR THE PUERTO RICO TRAUMA HOSPITAL PROJECT.

GENERAL NOTES – PRELIMINARY FURNITURE, FIXTURES, AND EQUIPMENT (FF&E) PLANS
DESIGN-BUILD RFP / BRIDGING DOCUMENTS

GENERAL NOTES

1. THESE FURNITURE, FIXTURES, AND EQUIPMENT (“FF&E”) PLAN DRAWINGS HAVE BEEN PREPARED AS PRELIMINARY, CONCEPTUAL, AND RECOMMENDED ARCHITECTURAL DESIGN DEVELOPMENT DOCUMENTS FOR USE AS PART OF THE DESIGN-BUILD REQUEST FOR PROPOSAL (“RFP”) BRIDGING DOCUMENTS ONLY.
2. THESE DRAWINGS ARE INTENDED TO COMMUNICATE THE OWNER’S AND BRIDGING ARCHITECT’S GENERAL DESIGN INTENT REGARDING THE PRELIMINARY LOCATION, GENERAL ARRANGEMENT, FUNCTIONAL DISTRIBUTION, AND SPACE PLANNING COORDINATION OF RECOMMENDED FURNITURE, FIXTURES, MEDICAL EQUIPMENT, CLINICAL EQUIPMENT, ADMINISTRATIVE EQUIPMENT, SUPPORT EQUIPMENT, LOOSE FURNISHINGS, AND RELATED ITEMS REQUIRED FOR THE PROPOSED HOSPITAL OPERATIONS.
3. THESE DRAWINGS SHALL NOT BE CONSTRUED AS FINAL FF&E PROCUREMENT DOCUMENTS, FINAL MEDICAL EQUIPMENT PLANS, FINAL EQUIPMENT COORDINATION DRAWINGS, FINAL OWNER-FURNISHED EQUIPMENT DOCUMENTS, FINAL CONTRACTOR-FURNISHED EQUIPMENT DOCUMENTS, FINAL SHOP DRAWINGS, FINAL INSTALLATION DOCUMENTS, OR FINAL CONSTRUCTION DOCUMENTS.
4. THE DESIGN-BUILD ENTITY SHALL BE SOLELY RESPONSIBLE FOR DEVELOPING THE FINAL, COORDINATED, COMPREHENSIVE, CODE-COMPLIANT, PERMIT-READY, PROCUREMENT-READY, INSTALLATION-READY, AND BUILDABLE FF&E DESIGN AND COORDINATION DOCUMENTS REQUIRED FOR THE COMPLETE PROJECT.
5. THE DESIGN-BUILD ENTITY SHALL COORDINATE THE FINAL FF&E DESIGN WITH THE FINAL ARCHITECTURAL FLOOR PLANS, ROOM DATA, ROOM FINISH SCHEDULES, BUILT-IN CABINETRY AND CASEWORK PLANS, MEDICAL EQUIPMENT REQUIREMENTS, STRUCTURAL CONDITIONS, MEP/FP SYSTEMS, PLUMBING FIXTURES, MEDICAL GAS OUTLETS, ELECTRICAL DEVICES, DATA OUTLETS, NURSE CALL DEVICES, LIGHTING, FIRE PROTECTION, SECURITY, ACCESS CONTROL, INFORMATION TECHNOLOGY, TELECOMMUNICATIONS, WAYFINDING, AND ALL OTHER PROJECT DISCIPLINES.
6. THE DESIGN-BUILD ENTITY SHALL CONSULT WITH THE OWNER, ASEM, USER GROUPS, CLINICAL REPRESENTATIVES, FACILITY OPERATIONS PERSONNEL, BIOMEDICAL EQUIPMENT REPRESENTATIVES, INFORMATION TECHNOLOGY REPRESENTATIVES, INFECTION CONTROL REPRESENTATIVES, AND OTHER PARTIES IDENTIFIED BY THE OWNER TO CONFIRM THAT THE FINAL FF&E SELECTION, LAYOUT, AND COORDINATION PROPERLY SERVE THE FUNCTIONAL, OPERATIONAL, CLINICAL, MAINTENANCE, SAFETY, TECHNOLOGY, AND DURABILITY NEEDS OF EACH SPACE.
7. THE DESIGN-BUILD ENTITY SHALL VERIFY THE REQUIRED FUNCTION OF EACH FF&E ITEM AND SHALL ADAPT THE FINAL DESIGN TO THE SPECIFIC USE OF THE ROOM OR AREA IN WHICH THE ITEM IS LOCATED, INCLUDING BUT NOT LIMITED TO PATIENT CARE, TRAUMA CARE, OBSERVATION, TREATMENT, STABILIZATION, PRE-OPERATIVE CARE, POST-OPERATIVE CARE, CLINICAL SUPPORT, STAFF WORK, ADMINISTRATION, PUBLIC WAITING, FAMILY CONSULTATION, CLEAN SUPPLY, SOILED HOLDING, EQUIPMENT STORAGE, MEDICATION SUPPORT, DIAGNOSTIC SUPPORT, AND GENERAL HOSPITAL OPERATIONS.
8. THE DESIGN-BUILD ENTITY SHALL NOT RELY EXCLUSIVELY ON THE PRELIMINARY FF&E LOCATIONS, SYMBOLS, TAGS, DIMENSIONS, CONFIGURATIONS, OR GRAPHIC REPRESENTATIONS SHOWN ON THESE DRAWINGS FOR FINAL DESIGN, PROCUREMENT, INSTALLATION, OR CONSTRUCTION.
9. ALL FF&E ITEMS SHOWN ON THESE DRAWINGS SHALL BE FIELD VERIFIED, DIMENSIONALLY COORDINATED, AND ADJUSTED BY THE DESIGN-BUILD ENTITY AS REQUIRED TO MEET FINAL ROOM LAYOUTS, FINAL EQUIPMENT REQUIREMENTS, FINAL USER REQUIREMENTS, FINAL BUILDING CONDITIONS, FINAL UTILITY LOCATIONS, AND FINAL CONSTRUCTION DOCUMENTS.
10. THE DESIGN-BUILD ENTITY SHALL DEVELOP FINAL FF&E PLANS, EQUIPMENT PLANS, FURNITURE PLANS, FIXTURE PLANS, ENLARGED ROOM PLANS, EQUIPMENT COORDINATION DETAILS, INSTALLATION DETAILS, BLOCKING AND ANCHORAGE DETAILS, UTILITY CONNECTION DETAILS, CLEARANCE DIAGRAMS, AND OTHER DOCUMENTS.
11. THE DESIGN-BUILD ENTITY SHALL BE RESPONSIBLE FOR COORDINATING FINAL FF&E LOCATIONS WITH REQUIRED CLEARANCES, EGRESS PATHS, DOOR SWINGS, ACCESSIBLE ROUTES, WHEELCHAIR MANEUVERING SPACES, STRETCHER MOVEMENT, BED MOVEMENT, EQUIPMENT MOVEMENT, STAFF WORK AREAS, PATIENT ACCESS, SERVICE ACCESS, MAINTENANCE ACCESS, AND EMERGENCY RESPONSE REQUIREMENTS.
12. THE DESIGN-BUILD ENTITY SHALL VERIFY THAT FINAL FF&E LAYOUTS DO NOT OBSTRUCT REQUIRED EXITS, EXIT ACCESS, CORRIDOR WIDTHS, LIFE-SAFETY DEVICES, FIRE PROTECTION DEVICES, FIRE EXTINGUISHERS, MEDICAL GAS OUTLETS, ELECTRICAL PANELS, ACCESS PANELS, VALVES, CONTROLS, DOOR CLEARANCES, WINDOWS, VISION PANELS, OR OTHER REQUIRED OPERATIONAL OR MAINTENANCE FEATURES.
13. THE DESIGN-BUILD ENTITY SHALL COORDINATE FINAL FF&E ITEMS WITH ALL REQUIRED UTILITY SERVICES, INCLUDING BUT NOT LIMITED TO NORMAL POWER, EMERGENCY POWER, CRITICAL BRANCH POWER, EQUIPMENT BRANCH POWER, DATA, TELECOMMUNICATIONS, WIRELESS NETWORK REQUIREMENTS, NURSE CALL, LOW-VOLTAGE SYSTEMS, SECURITY, ACCESS CONTROL, MEDICAL GAS, VACUUM, COMPRESSED AIR, PLUMBING, DRAINAGE, VENTILATION, EXHAUST, AND OTHER BUILDING SYSTEM CONNECTIONS.
14. THE DESIGN-BUILD ENTITY SHALL COORDINATE ALL FINAL MEDICAL EQUIPMENT, CLINICAL EQUIPMENT, MONITORS, BEDS, STRETCHERS, EXAM TABLES, RECLINERS, CARTS, WARMERS, REFRIGERATORS, MEDICATION EQUIPMENT, DIAGNOSTIC EQUIPMENT, AND OTHER SPECIALTY EQUIPMENT WITH THE FINAL ARCHITECTURAL, STRUCTURAL, MECHANICAL, ELECTRICAL, PLUMBING, MEDICAL GAS, FIRE PROTECTION, TECHNOLOGY, AND SECURITY DESIGN.
15. THE DESIGN-BUILD ENTITY SHALL VERIFY THAT ALL FINAL PATIENT CARE FF&E ITEMS ARE COORDINATED WITH PATIENT SAFETY, STAFF WORKFLOW, CLINICAL PROCEDURES, PATIENT OBSERVATION, PRIVACY REQUIREMENTS, EQUIPMENT ACCESS, INFECTION CONTROL REQUIREMENTS, CLEANING PROTOCOLS, AND THE FUNCTIONAL NEEDS OF A LEVEL I TRAUMA HOSPITAL ENVIRONMENT.
16. THE DESIGN-BUILD ENTITY SHALL COORDINATE FINAL FF&E LAYOUTS IN PATIENT ROOMS, TREATMENT ROOMS, OBSERVATION AREAS, STABILIZATION AREAS, PRE-OP AREAS, POST-OP AREAS, TRAUMA CARE AREAS, NURSE STATIONS, SUPPORT AREAS, AND PUBLIC AREAS WITH BEDS, STRETCHERS, RECLINERS, CHAIRS, WORKSTATIONS, MOBILE CARTS, CLINICAL EQUIPMENT, HEADWALLS, BOOMS, MONITORS, CLEARANCES, STAFF ACCESS, AND PATIENT ACCESS.
17. THE DESIGN-BUILD ENTITY SHALL VERIFY THAT ALL FINAL FF&E ITEMS ARE SUITABLE FOR THE INTENDED HEALTHCARE ENVIRONMENT AND SHALL SELECT OR COORDINATE ITEMS TO SUPPORT CLEANABILITY, DURABILITY, IMPACT RESISTANCE, CHEMICAL RESISTANCE, MOISTURE RESISTANCE, STAIN RESISTANCE, INFECTION CONTROL, MAINTENANCE, SAFETY, ERGONOMICS, AND LONG-TERM PERFORMANCE.
18. THE DESIGN-BUILD ENTITY SHALL COORDINATE FINAL FURNITURE AND FIXTURE SELECTIONS WITH THE OWNER’S STANDARDS, USER GROUP REQUIREMENTS, INTERIOR DESIGN INTENT, FINISH PALETTE, ROOM FUNCTION, MAINTENANCE CRITERIA, REPLACEMENT REQUIREMENTS, WARRANTY REQUIREMENTS, AND THE OPERATIONAL NEEDS OF A HOSPITAL CAMPUS ENVIRONMENT.
19. THE DESIGN-BUILD ENTITY SHALL VERIFY FINAL QUANTITIES, TYPES, SIZES, CAPACITIES, CONFIGURATIONS, PERFORMANCE REQUIREMENTS, ACCESSORY REQUIREMENTS, UTILITY REQUIREMENTS, MOUNTING REQUIREMENTS, AND INSTALLATION REQUIREMENTS OF ALL FF&E ITEMS WITH THE OWNER AND USER GROUPS PRIOR TO FINAL PROCUREMENT.
20. THE DESIGN-BUILD ENTITY SHALL PREPARE AND COORDINATE FINAL FF&E SCHEDULES, MEDICAL EQUIPMENT SCHEDULES, FURNITURE SCHEDULES, FIXTURE SCHEDULES, ACCESSORY SCHEDULES, UTILITY REQUIREMENT MATRICES, RESPONSIBILITY MATRICES, PROCUREMENT MATRICES, INSTALLATION MATRICES, AND RELATED DOCUMENTATION REQUIRED FOR FINAL DESIGN, PERMITTING, PROCUREMENT, INSTALLATION, COMMISSIONING, AND OWNER ACCEPTANCE.
21. THE DESIGN-BUILD ENTITY SHALL CLEARLY IDENTIFY AND COORDINATE RESPONSIBILITY FOR EACH FF&E ITEM, INCLUDING WHETHER THE ITEM IS OWNER-FURNISHED OWNER-INSTALLED, OWNER-FURNISHED CONTRACTOR-INSTALLED, CONTRACTOR-FURNISHED CONTRACTOR-INSTALLED, CONTRACTOR-FURNISHED OWNER-INSTALLED, OR OTHERWISE ASSIGNED BY THE FINAL CONTRACT DOCUMENTS.
22. THE DESIGN-BUILD ENTITY SHALL COORDINATE FINAL FF&E REQUIREMENTS WITH PROCUREMENT LEAD TIMES, DELIVERY ACCESS, STORAGE REQUIREMENTS, INSTALLATION SEQUENCING, PROTECTION OF FINISHED WORK, TEMPORARY CONDITIONS, PHASING, START-UP, TESTING, COMMISSIONING, TRAINING, AND FINAL TURNOVER REQUIREMENTS.
23. THE DESIGN-BUILD ENTITY SHALL PROVIDE ADEQUATE BLOCKING, BACKING, ANCHORAGE, SUPPORT, SEISMIC OR WIND-RELATED RESTRAINTS WHERE APPLICABLE, STRUCTURAL COORDINATION, AND INSTALLATION COORDINATION FOR ALL WALL-MOUNTED, CEILING-MOUNTED, FLOOR-MOUNTED, COUNTER-MOUNTED, AND EQUIPMENT-MOUNTED FF&E ITEMS.
24. THE DESIGN-BUILD ENTITY SHALL COORDINATE FINAL FF&E ITEMS WITH WALL CONSTRUCTION, PARTITIONS, FLOOR FINISHES, WALL FINISHES, CEILING SYSTEMS, CASEWORK, MILLWORK, DOORS, HARDWARE, WINDOWS, SIGNAGE, LIGHTING, DIFFUSERS, SPRINKLERS, SMOKE DETECTORS, SPEAKERS, CAMERAS, ACCESS CONTROL DEVICES, AND ALL OTHER ADJACENT BUILDING COMPONENTS.
25. THE DESIGN-BUILD ENTITY SHALL VERIFY THAT ALL FINAL FF&E ITEMS COMPLY WITH APPLICABLE ACCESSIBILITY REQUIREMENTS, INCLUDING CLEAR FLOOR SPACES, REACH RANGES, KNEE AND TOE CLEARANCES, OPERABLE PARTS, ACCESSIBLE WORKSTATIONS, ACCESSIBLE PATIENT AREAS, PUBLIC USE AREAS, STAFF SUPPORT AREAS, AND REQUIRED ACCESSIBLE ROUTES.
26. THE DESIGN-BUILD ENTITY SHALL COORDINATE FINAL FF&E REQUIREMENTS WITH APPLICABLE HEALTHCARE CODES, LIFE-SAFETY REQUIREMENTS, INFECTION CONTROL REQUIREMENTS, FIRE-SAFETY REQUIREMENTS, ELECTRICAL SAFETY REQUIREMENTS, MEDICAL EQUIPMENT SAFETY REQUIREMENTS, AND AUTHORITIES HAVING JURISDICTION.
27. THE DESIGN-BUILD ENTITY SHALL REQUIRE MANUFACTURER PRODUCT DATA, TECHNICAL DATA, DIMENSIONAL DATA, UTILITY REQUIREMENTS, INSTALLATION INSTRUCTIONS, FINISH SAMPLES, MOCKUPS, SHOP DRAWINGS, CERTIFICATIONS, WARRANTIES, MAINTENANCE REQUIREMENTS, AND OTHER SUBMITTALS AS NECESSARY TO CONFIRM COMPLIANCE WITH THE FINAL DESIGN INTENT, OWNER REQUIREMENTS, QUALITY STANDARDS, AND HEALTHCARE PERFORMANCE REQUIREMENTS.
28. THE DESIGN-BUILD ENTITY SHALL COORDINATE FINAL FF&E ITEMS WITH INFORMATION TECHNOLOGY, BIOMEDICAL ENGINEERING, FACILITY MAINTENANCE, CLINICAL OPERATIONS, SECURITY, HOUSEKEEPING, ENVIRONMENTAL SERVICES, SUPPLY CHAIN, AND OTHER OWNER-DETERMINED STAKEHOLDERS PRIOR TO FINAL PROCUREMENT AND INSTALLATION.
29. ANY DISCREPANCIES BETWEEN THESE PRELIMINARY FF&E PLAN DRAWINGS, THE FINAL ARCHITECTURAL FLOOR PLANS, FINAL CASEWORK PLANS, FINAL EQUIPMENT PLANS, FINAL ENGINEERING DOCUMENTS, OWNER REQUIREMENTS, USER GROUP REQUIREMENTS, FIELD CONDITIONS, APPLICABLE CODES, OR REGULATORY REQUIREMENTS SHALL BE IDENTIFIED, COORDINATED, AND RESOLVED BY THE DESIGN-BUILD ENTITY PRIOR TO PROCUREMENT, FABRICATION, INSTALLATION, OR CONSTRUCTION.
30. EXISTING OR PROPOSED CONDITIONS NOT SHOWN, INCOMPLETELY SHOWN, OR SHOWN DIFFERENTLY ON THESE PRELIMINARY DRAWINGS SHALL NOT RELIEVE THE DESIGN-BUILD ENTITY FROM ITS RESPONSIBILITY TO PREPARE COMPLETE, COORDINATED, CODE-COMPLIANT, FUNCTIONALLY APPROPRIATE, PROCUREMENT-READY, INSTALLATION-READY, AND BUILDABLE FINAL FF&E DOCUMENTS.
31. THE INCLUSION OF THESE PRELIMINARY FF&E PLAN DRAWINGS IN THE RFP BRIDGING DOCUMENTS DOES NOT TRANSFER TO THE OWNER OR BRIDGING ARCHITECT THE DESIGN-BUILD ENTITY’S RESPONSIBILITY FOR FINAL FF&E DESIGN, FINAL EQUIPMENT COORDINATION, FINAL USER COORDINATION, FINAL UTILITY COORDINATION, FINAL PROCUREMENT COORDINATION, FINAL INSTALLATION COORDINATION, FINAL CODE COMPLIANCE, OR PROPER INSTALLATION AND OPERATIONAL READINESS OF THE WORK.
32. THE DESIGN-BUILD ENTITY SHALL ASSUME FULL RESPONSIBILITY FOR TRANSFORMING THE PRELIMINARY FF&E DESIGN INTENT SHOWN ON THESE DRAWINGS INTO A FINAL, COORDINATED, COMPREHENSIVE, CODE-COMPLIANT, FUNCTIONALLY APPROPRIATE, OWNER-VALIDATED, PROCUREMENT-READY, INSTALLATION-READY, AND FULLY DOCUMENTED FF&E DESIGN FOR THE PUERTO RICO TRAUMA HOSPITAL PROJECT.

Attachment B: Technical Specifications

PUERTO RICO TRAUMA HOSPITAL

PREPARED FOR

Administración de Servicios Médicos de Puerto Rico (A.S.E.M.)

Puerto Rico Medical Center | San Juan, Puerto Rico

August 13, 2026

APPENDIX B – PRELIMINARY TECHNICAL SPECIFICATIONS

Bridging Documents for the New Puerto Rico Trauma Hospital

DE LA TORRE – ESTÉVEZ
ARCHITECTS - PLANNERS

NOTICE OF DOCUMENT USE

A. PROPRIETARY RIGHTS, LIMITED AUTHORIZATION, AND RESTRICTIONS ON USE OF BRIDGING DOCUMENTS

These drawings, specifications, narratives, criteria, reports, calculations, schedules, details, and other materials comprising the Bridging Documents have been prepared exclusively to establish the Owner's programmatic requirements, functional and operational objectives, design intent, performance requirements, minimum quality standards, and technical basis of design for the Request for Proposals and Design-Build procurement process for the Puerto Rico Trauma Hospital Project.

Except as otherwise expressly provided in the applicable Professional Services Agreement, these Bridging Documents constitute instruments of professional service prepared by De La Torre–Estévez Architects and shall remain subject to all applicable proprietary, copyright, intellectual-property, and professional-use protections. No ownership interest, copyright, or unrestricted right of use is transferred by the issuance, distribution, reproduction, or authorized use of these documents.

Subject to the prior written consent of De La Torre–Estévez Architects and the terms and conditions established by the Owner, the Medical Services Administration of Puerto Rico ("ASEM"), a limited, nonexclusive, and nontransferable authorization is granted solely to ASEM and to those Design-Build entities formally authorized by ASEM to participate in the procurement process. Such authorization is limited exclusively to reviewing, evaluating, interpreting, and using the Bridging Documents for the preparation and submission of proposals and, following award, as reference design guidance for the development of the Project's final design and construction documents.

These Bridging Documents are not final design documents, permit documents, bid documents for conventional construction procurement, fabrication documents, shop drawings, or construction documents. They shall not be used, in whole or in part, for permitting, fabrication, ordering or procurement of construction materials or systems, installation, construction, or any other purpose unrelated to the authorized Design-Build procurement process. Direct use of these documents for construction is expressly prohibited.

The selected Design-Build entity, acting through its duly licensed Architect of Record, Engineer(s) of Record, specialty consultants, delegated-design professionals, contractors, subcontractors, manufacturers, and suppliers, as applicable, shall be solely responsible for developing, completing, coordinating, reviewing, and certifying all final architectural, engineering, permitting, procurement, fabrication, and construction documents required for the proper execution and completion of the Project.

The Design-Build entity shall independently investigate and verify all existing conditions, field dimensions, elevations, quantities, utility locations, site constraints, design assumptions, technical criteria, code requirements, and other information affecting the Work. Information contained in the Bridging Documents shall not relieve the Design-Build entity or its design

professionals from their independent professional judgment, due diligence, coordination obligations, or responsibility for the accuracy, completeness, constructability, code compliance, permitting, safety, and performance of the final design and completed Work.

No representation or warranty is made that the Bridging Documents are complete or suitable for direct construction use. Any unauthorized use, reproduction, modification, adaptation, distribution, disclosure, or reliance upon these documents shall be at the sole risk of the person or entity undertaking such use and without liability to De La Torre–Estévez Architects or its consultants. No third-party rights, licenses, or benefits are created by the preparation, issuance, or authorized distribution of these documents.

B. DESIGN BASIS, LIMITATIONS, AND DESIGN-BUILD RESPONSIBILITIES

1. PURPOSE AND STATUS. These Preliminary Technical Specifications form part of the Bridging Documents prepared for the Medical Services Administration of Puerto Rico (ASEM) for the Puerto Rico Trauma Hospital Design-Build procurement. Read together with the Advanced Architectural Design Development Drawings, discipline narratives, programmatic information, reports, studies, criteria, and other Bridging Documents, they communicate the Owner's approved programmatic and operational requirements, design intent, basis-of-design concepts, recommended systems and materials, and minimum quality and performance expectations. They are not a complete final Project Manual, permit specification, construction specification, or comprehensive statement of every product, component, accessory, service, connection, control, execution requirement, or item required for a complete and operational Project.
2. PROFESSIONAL AND OWNER-APPROVED BASIS. The Advanced Architectural Design Development and related architectural, structural, electrical, and mechanical criteria reflected herein were developed under the direction of De La Torre-Estevez Architects, as Bridging Architect, based upon the firm's professional architectural judgment and healthcare planning and design experience, together with applicable engineering input. They also reflect the programming, planning, clinical, operational, functional, and service requirements developed, coordinated, and agreed upon with ASEM, culminating in the Schematic Design reviewed and approved by ASEM as the basis for further Project development.
3. STAGE-SPECIFIC CODE AND TECHNICAL DEVELOPMENT. These Preliminary Technical Specifications were prepared with consideration of the codes, standards, regulations, reference standards, and healthcare design guidelines identified as applicable and reasonably required for the scope and level of completion represented by the Advanced Architectural Design Development stage. Any code analysis, preliminary sizing, product or system selection, performance criterion, coordination, or compliance review is limited to the information developed at this stage and does not constitute final code analysis, engineering verification, product selection,

permitting or construction documentation, or certification of complete compliance with all requirements applicable to the final Project.

4. OWNER-DIRECTED REVISIONS. Any Owner-directed revision to the approved program, layouts, scope, systems, materials, performance criteria, or service requirements shall be confirmed in writing by ASEM. The Design-Build Entity shall evaluate, coordinate, and incorporate all resulting design, code, permitting, operational, cost, schedule, procurement, and construction impacts into its final design and construction documents.
5. DESIGN-BUILD ENTITY REVIEW AND FINAL PROJECT MANUAL. Upon proceeding beyond the Bridging Documents stage, the Design-Build Entity, through its duly licensed Architect of Record, Engineers of Record, specification professionals, and other qualified design professionals, shall independently review, verify, validate, coordinate, supplement, revise, and complete these Preliminary Technical Specifications. It shall prepare a complete, coordinated, project-specific final Project Manual; resolve all omissions, conflicts, ambiguities, discrepancies, interfaces, and requirements necessary for the complete Work; and coordinate all specification divisions with the drawings, disciplines, delegated-design components, manufacturers, utilities, authorities having jurisdiction, and existing ASEM facilities and services. Requirements herein establish minimum design, quality, and performance criteria unless the Request for Proposals or Design-Build Agreement expressly states otherwise.
6. FINAL PROFESSIONAL RESPONSIBILITY AND LIMITATION OF BRIDGING ARCHITECT RESPONSIBILITY. The Design-Build Entity shall identify and apply all codes, standards, regulations, healthcare guidelines, authority requirements, amendments, and official interpretations applicable to final design, permitting, construction, occupancy, and operation; perform all required analyses, calculations, testing, coordination, and product evaluations; and prepare, sign, seal, and submit all final drawings, specifications, permit documents, construction documents, and professional deliverables required for a complete, coordinated, code-compliant, permit-ready, construction-ready, operational, and maintainable facility. Use, adoption, modification, or further development of any portion of these Preliminary Technical Specifications shall constitute the Design-Build Entity's independent professional evaluation and acceptance of responsibility for its incorporation into the final Project. Neither ASEM's review or approval nor the Bridging Architect's preparation of these documents shall relieve the Design-Build Entity or its Architect and Engineers of Record of any professional, contractual, code-compliance, coordination, permitting, or construction-document responsibility. Unless separately retained under a subsequent written professional services agreement, De La Torre-Estevez Architects shall not serve as Architect of Record, Engineer of Record, specification professional of record, delegated designer, or design professional responsible for the Design-Build Entity's final design, final Project Manual, permit or construction documents, construction, means and methods, or completed Work.

C. NAMED PRODUCTS, MANUFACTURERS, EQUIPMENT, SYSTEMS, AND BASIS-OF-QUALITY REQUIREMENTS

Unless expressly stated otherwise in the Request for Proposals, the Bridging Documents, or the final Design-Build Agreement, any trade names, proprietary products, equipment, systems, manufacturers, suppliers, model numbers, catalog references, materials, assemblies, installation details, or similar references identified in the architectural, civil, structural, electrical, mechanical, plumbing, fire-protection, communications, medical-equipment, or other sample technical specifications are provided solely to establish a basis of design and a minimum benchmark for the required quality, performance, functionality, durability, reliability, appearance, serviceability, compatibility, and standard of workmanship. Such references shall not be interpreted as requiring the use of the specifically named product, manufacturer, supplier, model, or system, nor as limiting competition to the entities or products identified.

The Design-Build Entity may propose products, materials, equipment, systems, manufacturers, and installation methods that it determines to be equal, comparable, similar, or superior to those referenced, provided that the proposed selections fully comply with the performance criteria, design intent, functional and operational requirements, applicable codes and regulations, healthcare-facility requirements, Owner's Project Requirements, RFP Bridging Documents, and the final Design-Build Agreement. The scope and basis-of-quality criteria for such selections shall be developed and confirmed in consultation with ASEM, and products or systems that materially affect Owner operations, maintenance practices, facility standards, system compatibility, architectural character, lifecycle cost, resiliency, or long-term service requirements shall be subject to ASEM's review and agreement before being incorporated into the final design and technical specifications.

The Design-Build Entity and its Architect and Engineers of Record shall be responsible for evaluating, selecting, specifying, coordinating, and documenting the final products, materials, equipment, systems, and manufacturers to be incorporated into the Project. This selection process shall be carried out in active consultation and coordination with ASEM so that the final scope of products and systems reflects the Owner's confirmed programmatic and operational requirements, facility standards, preferred levels of quality, maintainability criteria, standardization objectives, compatibility with existing ASEM infrastructure and equipment, availability of local service and replacement parts, warranty expectations, lifecycle considerations, and other Project-specific requirements. All final selections shall be appropriate for their intended use within a critical healthcare facility and shall provide the required levels of performance, durability, infection-control compatibility, maintainability, resilience, energy efficiency, safety, accessibility, and long-term operational reliability.

At appropriate design-development and construction-document milestones, the Design-Build Entity shall present to ASEM the proposed product, manufacturer, equipment, and system selections, together with the applicable basis-of-quality and performance criteria, for consultation, coordination, and confirmation of the Owner's scope requirements. This review shall prioritize categories having significant implications for clinical operations, reliability, maintenance, compatibility, energy use, resilience, architectural appearance, or lifecycle cost, including major building-envelope and interior systems; structural and specialty systems;

electrical and emergency-power equipment; HVAC equipment and controls; plumbing and medical-gas systems; fire-protection and life-safety systems; vertical transportation; communications and security systems; and other major facility equipment. The final basis-of-quality and acceptable-manufacturer requirements for such categories shall reflect the conclusions reached through this consultation and the requirements agreed with ASEM in accordance with the RFP and final Design-Build Agreement.

The use of a product, manufacturer, material, equipment item, system, detail, or assembly identified in the Bridging Documents shall not relieve the Design-Build Entity of its obligation to independently verify its suitability, availability, dimensional compatibility, performance, code compliance, coordination with adjacent construction, interface with other building systems, and compliance with the Project's design and operational requirements. The Design-Build Entity shall remain fully responsible for the completeness and adequacy of the final design and for the successful integration and performance of all selected products and systems.

Proposed equal or comparable products shall meet or exceed the salient characteristics and minimum requirements established by the referenced basis-of-design item, including, as applicable:

1. Material composition, dimensions, capacity, and configuration.
2. Structural, mechanical, electrical, thermal, acoustical, environmental, and operational performance.
3. Fire-resistance, flame-spread, smoke-development, and life-safety characteristics.
4. Resistance to corrosion, moisture, wind, impact, vibration, seismic forces, and other applicable environmental or service conditions.
5. Compatibility with healthcare operations, infection-prevention protocols, cleaning agents, disinfectants, and maintenance procedures.
6. Energy-efficiency and sustainability requirements.
7. Required testing, certifications, listings, approvals, and regulatory acceptances.
8. Availability of replacement parts, consumables, technical support, and qualified service personnel.
9. Manufacturer experience, product history, warranties, and anticipated service life.
10. Visual appearance, profiles, colors, textures, finishes, and architectural design intent, where applicable.

As part of the product and system selection process, and whenever required by the RFP, the Design-Build Agreement, or ASEM's review procedures, the Design-Build Entity shall submit sufficient technical documentation to ASEM to support consultation, comparison, and evaluation of the proposed selection and to demonstrate compliance and equivalency with the established basis-of-quality requirements. Such documentation may include comparative product data, performance calculations, code-compliance information, test reports, certifications, samples, mockups, shop drawings, coordination drawings, delegated-design calculations, manufacturer qualifications, installation instructions, warranties, service and

maintenance requirements, replacement-parts information, commissioning requirements, and other information reasonably necessary to evaluate the proposed product or system and its suitability for ASEM's operational requirements.

The Design-Build Entity shall clearly identify any proposed variation from the referenced or ASEM-confirmed basis-of-quality requirements and shall provide a written comparison describing the differences and demonstrating that the proposed selection will not reduce the quality, performance, safety, durability, maintainability, functionality, useful life, architectural and engineering intent, compatibility with existing ASEM systems, or other Owner-established requirements of the Project. Any material variation affecting an Owner-standard, agreed basis-of-quality criterion, major equipment or system selection, operational requirement, or long-term maintenance consideration shall be specifically brought to ASEM's attention for consultation and written agreement in accordance with the procedures established by the RFP and final Design-Build Agreement. The absence of an identified deviation shall be interpreted as confirmation that the proposed product or system complies fully with the applicable requirements.

ASEM's participation in product and system consultation, establishment or confirmation of basis-of-quality criteria, agreement with Owner scope requirements, review, acceptance, or non-objection shall represent confirmation of Owner preferences and Project requirements only. Such participation shall not constitute professional approval of the Design-Build Entity's final design, shall not transfer design responsibility, and shall not relieve the Design-Build Entity, its Architect and Engineers of Record, delegated-design professionals, subcontractors, suppliers, or manufacturers from responsibility for technical evaluation, code compliance, coordination, suitability, errors, omissions, incompatibilities, deficiencies, or failure to satisfy the Contract requirements.

Products or manufacturers expressly identified in the RFP, Bridging Documents, ASEM standards or directives, or final Design-Build Agreement as mandatory, Owner-standard, sole-source, no-substitution, pre-approved, or required for compatibility or standardization with existing ASEM systems shall be provided as specified. Where ASEM elects, through consultation with the Design-Build Entity, to establish or revise such requirements during the Design-Build design process, the resulting agreed scope and basis-of-quality criteria shall be incorporated into the final technical specifications and Contract Documents, subject to the change, approval, and authorization procedures of the final Design-Build Agreement.

The final technical specifications prepared by the Design-Build Entity shall clearly define the applicable performance requirements, quality standards, basis-of-quality criteria, acceptable manufacturers, products, equipment and systems, submittal and testing requirements, installation criteria, warranties, commissioning obligations, service and maintenance requirements, and closeout documentation. They shall incorporate the product- and system-related scope developed through consultation with ASEM and shall reflect Owner standards, agreed selections, approved alternatives, compatibility requirements, and other basis-of-quality decisions established during the Design-Build design process. Nothing contained in the sample specifications or Bridging Documents shall limit the Design-Build Entity's obligation to

develop complete, coordinated, code-compliant, and construction-ready technical specifications for the entirety of the Project.

D. SCOPE, LIMITATIONS, AND DESIGN-BUILD ENTITY RESPONSIBILITY

The technical specifications included in these Bridging Documents comprise selected sections from CSI Divisions 01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 13, 16, 21, 22, 23, 31, 32, and 33. These sections have been selected to correspond with the level of development represented by the Advanced Architectural Design Development Drawings and the associated civil, structural, electrical, mechanical, plumbing, fire protection, and other technical bridging information.

The included specification sections are preliminary, selective, and performance-oriented in nature. They are provided solely to communicate the Owner's programmatic requirements, technical criteria, minimum standards of quality, performance expectations, design intent, and basis of design for the Design-Build procurement process. They do not constitute a complete Project Manual, a complete construction specification package, or the full scope of specifications required for permitting, procurement, fabrication, installation, construction, testing, validation, system startup, commissioning, training, turnover, occupancy, operation, closeout, or final acceptance of the Project.

The Design-Build Entity shall be solely responsible, through its duly licensed Architect and Engineers of Record and other qualified design professionals, for reviewing, verifying, coordinating, revising, supplementing, expanding, and completing each specification section included in the Bridging Documents. The Design-Build Entity shall also prepare and incorporate all additional CSI Master Format divisions and specification sections necessary to provide a complete, coordinated, code-compliant, permit-ready, and construction-ready Project Manual for the full scope of the Project.

The completed specifications shall address all materials, products, equipment, systems, assemblies, workmanship, execution requirements, quality-control procedures, testing, inspections, delegated-design requirements, submittals, warranties, training, validation, pre-functional and functional testing, system startup, testing and balancing, commissioning, integrated systems testing where applicable, operation and maintenance documentation, closeout requirements, facility turnover, and other provisions necessary for the proper design, procurement, construction, activation, operation, and completion of the Project, whether or not such items are specifically identified in the Bridging Documents.

The absence of a particular CSI division, specification section, material, product, system, component, accessory, or execution requirement from the Bridging Documents shall not be interpreted as excluding that item from the Project or relieving the Design-Build Entity of its obligation to provide a complete and fully functional facility consistent with the Owner's requirements, the Design-Build Agreement, the accepted proposal, applicable laws and regulations, governing codes and standards, healthcare-facility requirements, authorities having jurisdiction, manufacturers' requirements, and accepted industry practice.

The Design-Build Entity shall develop the final specifications in consultation and coordination with the Medical Services Administration of Puerto Rico (ASEM) and shall incorporate ASEM's scope requirements, operational criteria, facility standards, approved products and systems, maintainability requirements, commissioning and acceptance criteria, turnover and operational documentation requirements, training requirements, and other Project-specific directives. Such consultation and review by ASEM shall not transfer responsibility for the completeness, accuracy, technical adequacy, multidisciplinary coordination, code compliance, constructability, or proper integration of the final specifications from the Design-Build Entity and its Architect and Engineers of Record.

In particular, the final Project Manual shall include all CSI Master Format divisions and specification sections required to govern the Project phases and activities associated with design and systems validation, construction-phase quality verification, equipment and system startup, pre-functional and functional performance testing, testing and balancing, commissioning and recommissioning activities where applicable, integrated systems testing, Owner training, facility activation and turnover, preparation and delivery of complete operation and maintenance manuals, record documentation, warranties, spare parts and special tools, demonstration of systems, acceptance procedures, and post-startup or deferred/seasonal testing when required. The scope, sequencing, responsibilities, documentation, acceptance criteria, and deliverables for these activities shall be developed and coordinated with ASEM and shall conform to ASEM's final scope requirements, operational needs, facility management requirements, and the applicable Contract Documents. Where any such activity is to be performed by an independent commissioning authority, specialty consultant, manufacturer, testing agency, or other party, the Design-Build Entity shall nevertheless coordinate the related specification requirements and interfaces within the complete Project Manual.

Where the Bridging Documents establish a minimum performance requirement, quality level, basis-of-design criterion, or technical standard, the final specifications shall meet or exceed that requirement unless otherwise expressly authorized in writing by ASEM. Any modification, substitution, deviation, or proposed alternative shall be fully documented by the Design-Build Entity and shall demonstrate equivalent or superior performance, quality, durability, compatibility, maintainability, life-cycle value, and compliance with the Project requirements.

The Design-Build Entity shall coordinate the final Project Manual with the final drawings, calculations, schedules, reports, equipment selections, delegated-design documents, procurement requirements, construction phasing, validation protocols, startup procedures, commissioning plans and requirements, testing and balancing, Owner training, operation and maintenance manuals, record documentation, facility turnover and acceptance requirements, and all other Contract Documents. Conflicts, omissions, inconsistencies, or ambiguities identified within or between the Bridging Documents shall be brought promptly to ASEM's attention for clarification; however, such conditions shall not relieve the Design-Build Entity of its contractual and professional responsibility to develop and deliver a complete, coordinated, and construction-ready set of specifications and Contract Documents covering the full Project lifecycle through successful startup, turnover, and acceptance.

ARCHITECTURAL PRELIMINARY TECHNICAL SPECIFICATIONS

RFP / DESIGN-BUILD USE NOTICE

These architectural preliminary technical specifications are revised for use as RFP/bridging performance criteria for the selection of a Design-Build Entity for the New Puerto Rico Trauma Hospital. They establish minimum architectural requirements, quality criteria, design intent and coordination expectations, and are not issued as final permit or construction specifications by themselves.

The selected Design-Build Entity shall verify existing and proposed conditions, coordinate all disciplines, perform required engineering and code analysis, prepare and submit the final permit and construction documents, and obtain all required approvals through Puerto Rico licensed design professionals of record.

References in these sections to “Contractor” mean the selected Design-Build Entity after award. References to “Architect,” “Engineer,” “A/E,” “Resident Engineer,” or similar review parties mean the applicable Design Professional(s) of Record and/or ASEM/Owner review representative, as applicable under the RFP and final Design-Build Agreement.

Named products, manufacturers and details are minimum quality benchmarks unless the RFP expressly states otherwise. Proposed equals, substitutions, delegated design items, shop drawings, product data and samples shall demonstrate compliance with the RFP Bridging Documents, applicable codes, healthcare requirements and the final Design-Build Agreement.

ARCHITECTURAL TABLE OF CONTENTS - RFP / DESIGN-BUILD BRIDGING CRITERIA

For RFP use, sections identify minimum design-build performance criteria to be advanced, coordinated, signed and sealed by the selected Design-Build Entity's licensed design professionals of record.

SECTION 01045 – CUTTING AND PATCHING

PART I – GENERAL

1.01 RELATED DOCUMENTS

A. RFP Documents, Bridging Drawings, performance criteria and, afterwards, applicable Design-Build Contract provisions, including applicable general requirements, apply to this Section.

1.02 SUMMARY

A. This Section specifies administrative and procedural requirements for cutting and patching.

B. Refer to other Sections for specific requirements and limitations applicable to cutting and patching individual parts of the Work.

1. Requirements of this Section apply to mechanical and electrical installations. Refer to the applicable Mechanical Systems and Electrical Systems Sections for other requirements and limitations applicable to cutting and patching mechanical and electrical installations.

C. Demolition of portions of the building for alterations is included in applicable demolition section.

1.03 RELATED WORK

Demolition

1.04 SUBMITTALS

A. Cutting and Patching Proposal: Where approval of procedures for cutting and patching is required before proceeding, submit to the ASEM/Owner's Representative a proposal describing procedures well in advance of the time cutting and patching will be performed and request approval to proceed. Include the following information, as applicable, in the proposal:

1. Describe the extent of cutting and patching required and how it is to be performed; indicate why it cannot be avoided.

2. Describe anticipated results in terms of changes to existing construction; include changes to structural elements and operating

components as well as changes in the building's appearance and other significant visual elements.

3. List products to be used and firms or entities that will perform Work.

4. Indicate dates when cutting and patching is to be performed.

5. List utilities that will be disturbed or affected, including those that will be relocated and those that will be temporarily out-of-service. Indicate how long service will be disrupted.

6. Where cutting and patching involves addition of reinforcement to structural elements, submit for Design Professional of Record approval, details and engineering calculations to show how reinforcement is integrated with the original structure.

7. Approval by the ASEM/Owner's Representative to proceed with cutting and patching does not waive the ASEM/Owner's Representative's right to later require complete removal and replacement of a part of the Work found to be unsatisfactory.

1.05 QUALITY ASSURANCE

A. Requirements for Structural Work: Do not cut and patch structural elements in a manner that would reduce their load-carrying capacity or load-deflection ratio.

1. Unless noted otherwise on drawings, obtain approval of the cutting and patching proposal before cutting and patching the following structural elements:

a. Foundation construction.

b. Bearing and retaining walls.

c. Structural concrete.

d. Structural steel.

e. Lintels.

f. Structural decking.

g. Stair systems.

h. Miscellaneous structural metals.

i. Exterior curtain wall construction.

j. Equipment supports.

k. Piping, ductwork, vessels and equipment.

l. Structural systems of special construction.

B. Operational and Safety Limitations: Do not cut and patch operating elements or safety-related components in a manner that would result in reducing their capacity to perform as intended, or result in increased maintenance, or decreased operational life or safety.

1. Obtain the ASEM/Owner's Representative's approval of the cutting and patching proposal before cutting and patching the following operating elements or safety related systems:

a. Water, moisture, or vapor barriers.

b. Fire protection systems.

C. Visual Requirements: Do not cut and patch construction exposed to the exterior or in occupied spaces, in a manner that would, in the ASEM/Owner's Representative's opinion, reduce the building's aesthetic qualities, or result in visual evidence of cutting and patching. Remove and replace work cut and patched in a visually unsatisfactory manner.

1. Retain a recognized experienced and specialized firm to cut and patch the following categories of Work:

a. Concrete finishes.

b. Membrane or fluid applied waterproofing.

c. Fluid-applied flooring.

d. Electrical equipment, cabinets.

e. Air-conditioning enclosures, cabinets or covers.

PART II – PRODUCTS

2.01 MATERIALS

A. Use materials that are identical to existing materials. If identical materials are not available or cannot be used where exposed surfaces are involved, use materials that match existing adjacent surfaces to the

fullest extent possible with regard to visual effects. Use materials whose installed performance will equal or surpass that of existing materials.

PART III - EXECUTION

3.01 INSPECTION

A. Before cutting existing surfaces, examine surfaces to be cut and patched conditions under which cutting and patching is to be performed. Take corrective action before proceeding, if unsafe or unsatisfactory conditions are encountered.

1. Before proceeding, meet at the site with parties involved in cutting and patching, including mechanical and electrical trades. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

3.02 PREPARATION

A. Temporary Support: Provide temporary support of work to be cut.

B. Protection: Protect existing construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of the Project that might be exposed during cutting and patching operations.

C. Avoid interference with use of adjoining areas or interruption of free passage to adjoining areas.

D. Take all precautions necessary to avoid cutting existing pipe, conduit or ductwork serving the building, but scheduled to be removed or relocated until provisions have been made to bypass them.

3.03 PERFORMANCE

A. General: Employ skilled workmen to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time and complete without delay.

1. Cut existing construction to provide for installation of other components or performance of other construction activities and the subsequent fitting and patching required to restore surfaces to their original condition.

B. Cutting: Cut existing construction using methods least likely to damage elements to be retained or adjoining construction. Where possible, review

proposed procedures with the original installer; comply with the original installer's recommendations.

1. In general, where cutting is required use hand or small power tools designed for sawing or grinding, not hammering and chopping. Cut holes and slots neatly to size required with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.

2. To avoid marring existing finished surfaces, cut or drill from the exposed or finished side into concealed surfaces.

3. Cut through concrete and masonry using a cutting machine such as a carborundum saw or diamond core drill.

4. Comply with the requirements of applicable sitework and earthwork Sections where cutting and patching requires excavating and backfilling.

5. Bypass utility services such as pipe or conduit, before cutting, where services are shown or required to be removed, relocated or abandoned. Cut off pipe or conduit in walls or partitions to be removed. Cap, valve or plug and seal the remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after by-passing and cutting.

C. Patching: Patch with durable seams that are as invisible as possible. Comply with specified tolerances.

D. Where feasible, inspect and test patched areas to demonstrate the integrity of the installation.

E. Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.

F. Where removal of walls or partitions extends from one finished area into another, patch and repair floor and wall surfaces in the new space to provide an even surface of uniform color and appearance.

3.04 CLEANING

A. Thoroughly clean areas and spaces where cutting and patching is performed or used as access. Remove completely paint, mortar, oils, putty and items of similar nature. Thoroughly clean piping, conduit and similar features before painting or other finishing is applied. Restore damaged pipe covering to its original condition.

END OF SECTION

SECTION 01200 - SUBMITTALS, SHOP DRAWINGS AND SAMPLES

PART I - GENERAL

The RFP and the final Design-Build Agreement shall establish the governing submittal requirements. The following provisions identify minimum architectural submittal, shop drawing, product data, and sample criteria to be carried by the selected Design-Build Entity:

1.01 SHOP DRAWINGS AND SAMPLE

A. Before commencing fabrication of the Design-Build Work, the Design-Build Entity shall submit required Shop Drawings and Product/Design Submittals to its Design Professional(s) of Record and to ASEM/Owner for review or record, as required by the RFP and final Design-Build Agreement, in accordance with the procedure outlined below. All submissions of Shop Drawings, whether by catalog or by transparency, shall be in bold drafting and clear enough for future microfilming.

B. The Design-Build Entity shall review all Shop Drawings for conformance with the final Design-Build construction documents prior to submission to the Design Professional(s) of Record and his stamp shall be affixed to all Drawings submitted with his comments.

C. Submission and review of Shop Drawings shall be by the reproducible transparency or catalog method as follows: For all Shop Drawings the Design-Build Entity shall transmit one reproducible transparency of each sheet for each submission. Each sheet shall have a clear space at least 4 in. wide by 12 in. high at the right-hand side for stamping by the Design-Build Entity and by the Design Professional(s) of Record. The reproducible transparency shall be suitable for reproduction by the diazo process.

1. In addition, the Design-Build Entity shall include with each submission one black-line print or one blue-line print of each of the above-required reproducible transparency.

2. The reproducible transparency will be returned to the Design-Build Entity who shall make and distribute prints to suit all Project needs.

3. For standard manufactured items the Design-Build Entity shall submit five copies of manufacturer's catalog sheets showing the item to be furnished, scale details, sizes, dimensions, performance characteristics, capacities, wiring and control diagrams and all other pertinent information. One copy will be returned to the Design-Build Entity who will mark additional copies of the Catalog Sheets as

necessary to transmit the corrections to his vendor and to all other interested parties. The handling of catalog sheets after review by the Design Professional(s) of Record shall be the same as given below for transparencies.

4. If catalog sheets include items or information not pertinent to this Project, the sheets shall be edited and such non-pertinent data deleted.

5. Simultaneous Submissions: The Design-Build Entity shall coordinate and submit Shop Drawings of contiguous components of the various trades in such a manner that all Shop Drawings pertaining to a given assembly or area shall be submitted simultaneously. Interfaces shall be clearly delineated on the Drawings of each trade, and all Drawings shall be cross-referenced.

D. The review of Shop Drawings by the Design Professional(s) of Record will be general only. Review shall not be interpreted as a checking of detailed dimensions or approval of deviations from Drawings or Specifications or from time schedule unless such a check or review is specifically requested at time of submission. Review shall not relieve the Design-Build Entity from its responsibility for the accuracy of Shop Drawings, including coordination with and clearances for the other trades, nor from the furnishing of all materials as required by the Contract but not indicated on the Shop Drawings.

E. If upon review by the Design Professional(s) of Record, it appears that the checking has been inadequate or careless, even though stamped as checked, the Shop Drawings will be returned to the Design-Build Entity for proper checking, before further processing or review by the Design Professional(s) of Record regardless of any urgency claimed by the Design-Build Entity. Shop Drawings so returned will not be recorded or considered as submitted for review until they are properly checked and stamped by the Design-Build Entity and forwarded to the Design Professional(s) of Record for review.

F. After reviewing the Shop Drawings, the Design Professional(s) of Record will mark their comments and corrections on the Shop Drawings and will also place a stamp thereon to indicate disposition of the review. They will make copies from the stamped Shop Drawings for their own records and will return the Shop Drawings to the Design-Build Entity for making and distributing copies to suit all Project needs.

G. When the Shop Drawing is returned stamped "Rejected" or "To Be Revised and Resubmitted" it shall be corrected and resubmitted.

H. When the Shop Drawing is returned "No Exceptions Taken" the Design-Build Entity may proceed with the work.

I. When the Shop Drawing is returned "Exceptions Taken", the Design-Build Entity may proceed with the Work or the fabrication subject to the changes noted on the Shop Drawing, but the Shop Drawing shall be corrected and resubmitted for final review and for record copies.

J. The Design-Build Entity shall so schedule the submission of Shop Drawings as to allow the Design Professional(s) of Record a period of a minimum ten working days, after receipt of Shop Drawings at the Engineer's office, for the review of each submission.

K. Review of a Shop Drawing does not authorize changes in the requirements of the RFP Bridging Documents and Design-Build Contract Documents as to materials, workmanship, extent of the Work or price unless authorized in a separate Change Order.

L. The submission of Shop Drawings (in either the original submission or re-submission with corrections) is understood to constitute evidence that the Design-Build Entity has checked all information thereon, and that he accepts and is willing to perform the Work as shown, in accordance with best standard practice. No claim for additional cost or time shall be based upon work shown on a Shop Drawing unless such claim is noted on the Design-Build Entity's transmittal letter accompanying the Shop Drawings.

1.02 SHOP DRAWINGS- DESIGN AND SEAL OF A PROFESSIONAL

A. Shop Drawings are also defined as design drawing or drawings including or illustrating design or design systems or features, or both, prepared by the Design-Build Entity or by a Subcontractor, Sub-subcontractor, manufacturer, supplier, distributor, vendor, or agent or agency formally and legally acting for the foregoing, in the preparation of such Shop Drawings illustrating some portion of the Work.

B. In some instances, such Shop Drawings which include design or design features may be required to bear the Seal of a Professional Engineer by a Building Department or other Agency having jurisdiction.

C. Under such conditions the party preparing such Shop Drawings, shall arrange for and obtain the Seal of the Professional Engineer as well as any required computations of the Professional Engineer, attesting to the design or design features, and shall bear the entire cost thereof.

1.03 SAMPLES

A. Samples shall be submitted in duplicate except as otherwise specified.

B. Samples shall be submitted by the Design-Build Entity only and shall be shipped prepaid. Each sample shall have a label indicating:

    Name of Project

    Location of Project

    Name of Design-Build Entity

    Material or Equipment Represented

    Manufacturer's Data Sheets and Drawings, as available

C. Review or acceptance of samples will not preclude the rejection of the completed Work.

D. After material has been submitted, no change in brand or make will be permitted unless satisfactory evidence that the manufacturer cannot make delivery of the material on Schedule is presented to and considered by the Design Professional(s) of Record.

E. The right is reserved to require submission of samples of any material or any material list whether or not particularly mentioned herein.

F. Samples will be disposed of at the discretion of the Design Professional(s) of Record unless the return thereof is requested by the Design-Build Entity. Requests for return of samples shall be in the form of a letter accompanying the submittal and designating the shipping firm responsible for packing and transporting the samples to be returned. The Design Professional(s) of Record assumes no responsibility whatsoever for the return of any sample nor for the condition thereof, and such return shall be at the convenience of the Design Professional(s) of Record. All costs involved in the return of samples shall be borne solely by the Design-Build Entity.

END OF SECTION

SECTION 01631 – PRODUCT SUBSTITUTIONS AND DESIGN-BUILD EQUALS

PART I – GENERAL

1.01 RELATED DOCUMENTS

A. RFP Documents, Bridging Drawings, performance criteria and, after award, applicable Design-Build Contract provisions, including applicable general requirements, apply to this Section.

1.02 SUMMARY

A. This Section specifies administrative and procedural requirements for handling requests for substitutions made after award of the Design-Build contract.

1.03 DEFINITIONS

A. Definitions used in this Article are not intended to change or modify the meaning of other terms used in the RFP Bridging Documents and Design-Build Contract Documents.

B. Substitutions: Requests for changes in products, materials, equipment, and methods of construction required by RFP Bridging Documents and Design-Build Contract Documents proposed by the Design-Build Entity after award of the Design-Build contract are considered requests for "substitutions." The following are not considered substitutions:

1. Revisions to RFP Bridging Documents and Design-Build Contract Documents requested by the ASEM/Owner or Design Professional of Record.

2. Specified options of products and construction methods included in RFP Bridging Documents and Design-Build Contract Documents.

3. The Design-Build Entity's determination of and compliance with governing regulations and orders issued by governing authorities.

1.04 SUBMITTALS

A. Substitution Request Submittal: Requests for substitution will be considered if received within 60 days after commencement of the Work. Requests received more than 60 days after commencement of the Work may be considered or rejected at the discretion of the Design Professional of Record.

1. Submit 3 copies of each request for substitution for consideration. Submit requests in the form and in accordance with procedures

required for Change Order proposals.

2. Identify the product, or the fabrication or installation method to be replaced in each request. Include related Specification Section and Drawing numbers. Provide complete documentation showing compliance with the requirements for substitutions, and the following information, as appropriate: Product Data, including Drawings and descriptions of products, fabrication and installation procedures.

    a. Samples, where applicable or requested.

    b. A detailed comparison of significant qualities of the proposed substitution with those of the Work specified. Significant qualities may include elements such as size, weight, durability, performance and visual effects.

    c. Coordination information, including a detailed list of changes or modifications needed to other parts of the Work and to construction performed by the ASEM/Owner and separate Design-Build Entities, that will become necessary to accommodate the proposed substitution.

    d. A statement indicating the substitution's effect on the Design-Build Entity's.

    e. Construction Schedule compared to the schedule without approval of the substitution. Indicate the effect of the proposed substitution on overall Contract Time.

    f. Cost information, including a proposal of the net change, if any in the Contract Sum.

    g. Certification by the Design-Build Entity that the substitution proposed is equal to or better in every significant respect to that required by the RFP Bridging Documents and Design-Build Contract Documents, and that it will perform adequately in the application indicated. Include the Design-Build Entity's waiver of rights to additional payment or time, that may subsequently become necessary because of the failure of the substitution to perform adequately.

3. Design Professional of Record Review Action: Within one week of receipt of the request for substitution, the Design Professional of Record will request additional information or documentation necessary for evaluation of the

request. Within 2 weeks of receipt of the request, or one week of receipt of the additional information or documentation, whichever is later, the Design Professional of Record will notify the Design-Build Entity of acceptance or rejection of the proposed substitution. If a decision on the use of a proposed substitute cannot be made or obtained within the time allocated, use the product specified by name. Acceptance will be in the form of a Change Order.

PART II - PRODUCTS

2.01 SUBSTITUTIONS

A. Conditions: The Design-Build Entity's substitution request will be received and considered by the Design Professional of Record when one or more of the following conditions are satisfied, as determined by the Design Professional of Record; otherwise, requests will be returned without action except to record noncompliance with these requirements.

1. Extensive revisions to RFP Bridging Documents and Design-Build Contract Documents are not required.

2. Proposed changes are in keeping with the general intent of RFP Bridging Documents and Design-Build Contract Documents.

3. The request is timely, fully documented and properly submitted.

4. The request is directly related to an "or equal" clause or similar language in the RFP Bridging Documents and Design-Build Contract Documents.

5. The specified product or method of construction cannot be provided within the Contract Time. The request will not be considered if the product or method cannot be provided because of failure to pursue the Work promptly or coordinate activities properly.

6. The specified product or method of construction cannot receive necessary approval by a governing authority, and the requested substitution can be approved.

7. A substantial advantage is offered the ASEM/Owner, in terms of cost, time, energy conservation or other considerations of merit, after deducting offsetting responsibilities the ASEM/Owner may be required to bear. Additional responsibilities for the ASEM/Owner may include additional compensation to the Design Professional of Record for redesign and evaluation services, increased cost of other construction by the ASEM/Owner or separate Design-Build Entities, and similar considerations.

8. The specified product or method of construction cannot be provided in a manner that is compatible with other materials, and where the Design-Build Entity certifies that the substitution will overcome the incompatibility.

9. The specified product or method of construction cannot be coordinated with other materials, and where the Design-Build Entity certifies that the proposed substitution can be coordinated.

10. The specified product or method of construction cannot provide a warranty required by the RFP Bridging Documents and Design-Build Contract Documents and where the Design-Build Entity certifies that the proposed substitution provides the required warranty.

B. The Design-Build Entity's submittal and Design Professional of Record's acceptance of Shop Drawings, Product Data or Samples that relate to construction activities not complying with the RFP Bridging Documents and Design-Build Contract Documents does not constitute an acceptable or valid request for substitution, nor does it constitute approval.

PART III - EXECUTION

(Not Applicable)

END OF SECTION

SECTION 01800 – ALTERATIONS

PART I – GENERAL

1.01 All work in this Section shall be performed in accordance with the requirements of the RFP Bridging Documents and Design-Build Contract Documents.

1.02 SCOPE

This Section covers all materials and operations in connection with alterations, removal and demolition work.

1.03 EXAMINATION OF EXISTING BUILDING AND SITE

A. Before submitting a proposal, each Proposer shall visit the Site and examine the building to be altered and adjoining areas and buildings to determine the extent that its Proposal may be affected by existing conditions. He shall thoroughly examine the buildings and Site for accessibility thereto and for obstructions thereon, for availability of storage space and for any other condition which may affect the performance of the Work.

1.04 MAINTENANCE OF EXISTING BUILDINGS

A. The buildings are occupied and are in use. Except for those portions required to be vacated so that necessary indicated work may be performed, the buildings will be so occupied and used during the time the required work is under way.

1.05 GENERAL REQUIREMENTS

A. Alterations shall be as indicated in the Drawings and in accordance with applicable technical portions of these Specifications. The Design-Build Entity shall do all necessary demolition or removal of existing work as required in connection with this Project, including shoring, bracing and removal of unwanted material and debris from the site. This work shall be done in a most careful manner. The Design-Build Entity will be held responsible for any damage which may be caused to any part or part of existing structure. Debris shall be kept damp to keep down dust. Chutes shall be used for removal of demolished materials from upper levels.

B. Portions of the existing structure where existing work is to be demolished or removed and where new work is to be done, connections made, materials handled, or equipment moved and relocated, shall be temporarily protected. Temporary protection shall be such that the interior of existing structure will always be protected from dust and weather inclemency, and interior heat conserved. Suitable temporary dust-tight barrier partitions with hinged doors

shall be provided in the existing structure. Temporary openings in exterior walls shall be protected by temporary weatherproof plywood closures. The Design-Build Entity will be held responsible for any damage to the existing structure or contents because of the insufficiency of such protection. Location of temporary protection will be field coordinated with ASEM/Owner's representative.

C. The Design-Build Entity shall furnish and install adequate guards, barricades and other temporary protection to prevent injury to people.

D. Where alterations occur, or new and old work join, the immediate adjacent surfaces, or so much thereof as is required by the conditions involved, shall be cut, removed, patched, repaired or refinished and left in as good a condition as existed prior to the commencing of the Work. The materials and workmanship employed in the alterations involving new construction, unless otherwise shown or specified, shall conform to that of the original work.

E. Where required by the Drawings or Specifications, certain materials and equipment shall be relocated as shown or specified. Repair and refinish of existing surfaces shall be executed after the materials to be relocated are removed and shall be as hereinafter specified. All material and equipment indicated in the drawings to be relocated shall be removed from its existing location following all required procedures to ensure adequate salvage for reinstallation without damage. Removed materials and equipment shall be repaired and refinished as required to maintain its existing condition when installed in the new location.

   Reinstallation of existing materials and equipment shall be executed according to the best practices of the trade and following the original manufacturer's installation recommendations. Appropriate provisions shall be taken to prepare existing surfaces that will serve to install relocated materials and equipment. Preparation shall include all required patching, repairs and refinishing as needed to ensure proper installation and operation of relocated materials and/or equipment.

F. The Design-Build Entity shall perform the Work in a manner that will cause the least interference with the operation of the building or any part thereof.

G. The Design-Build Entity shall work overtime in the performance of the Work when required by the owner and as may be required at any time to avoid or to minimize interruption of the building services or the operation of any part of the building. Additional payment for the cost of such overtime work will be paid by the ASEM/Owner upon the written authorization for and the certification by the Engineers of the necessity to

work overtime.

H. Any temporary shut-down of the heating system or steam, power, light, water, gas or fire protection service shall be made only at such time as and for the period agreed upon with the ASEM/Owner.

I. The Design-Build Entity shall give notice to the ASEM/Owner sufficiently in advance to permit such moves as may be necessary to permit the new work to be done in any occupied portions of the building.

1.06 SALVABLE MATERIALS

A. Demolition and removal shall be performed with care to prevent unnecessary damage.

B. The ASEM/Owner may select from the existing materials, fixtures and equipment which are required to be removed, such materials, fixtures and equipment as he may deem suitable for re-use.

C. All other existing materials, fixtures and equipment which are to be removed under the Contract shall become the property of the Design-Build Entity subject to other provisions included in this Section.

1.07 TITLE TO MATERIALS

A. The Design-Build Entity shall have no right or title to any of the equipment, materials or other items to be removed from the existing building unless and until said equipment, materials and other items have been removed from the premises. The Design-Build Entity shall not sell or assign or attempt to sell or assign any interest in the said equipment, materials or other items that have been removed, without the consent of the ASEM/Owner.

1.08 SCHEDULING

A. Before commencing any alteration, removal and demolition work, the Design-Build Entity shall prepare and submit for approval by the Engineers and the ASEM/Owner a schedule showing the commencement, the order and completion dates of various parts of this Work.

END OF SECTION

SECTION 02 41 00 – DEMOLITION

PART I – GENERAL

1.01 DESCRIPTION

This section specifies demolition and removal of buildings, portions of buildings, utilities, other structures and debris from trash dumps shown.

1.02 RELATED WORK

A. Demolition and removal of roads, walks, curbs, and on-grade slabs outside buildings to be demolished.

B. Safety Requirements: Develop an ACCIDENT PREVENTION PLAN (APP).

C. Disconnecting utility services prior to demolition: GENERAL REQUIREMENTS.

D. Reserved items that are to remain the property of the ASEM/Owner.

E. Environmental Protection.

F. Construction Waste Management.

G. Infectious Control.

1.03 PROTECTION

A. Perform demolition in such manner as to eliminate hazards to persons and property; to minimize interference with use of adjacent areas, utilities and structures or interruption of use of such utilities; and to provide free passage to and from such adjacent areas of structures. Comply with requirements of the GENERAL CONDITIONS Article, ACCIDENT PREVENTION.

B. Provide safeguards, including warning signs, barricades, temporary fences, warning lights, and other similar items that are required for protection of all personnel during demolition and removal operations. Comply with requirements of Section 01 00 00, GENERAL REQUIREMENTS, Article PROTECTION OF EXISTING VEGETATION, STRUCTURES, EQUIPMENT, UTILITIES AND IMPROVEMENTS.

C. Maintain fences, barricades, lights, and other similar items around exposed excavations until such excavations have been filled.

D. Provide enclosed dust chutes with control gates from each floor to carry debris to truck beds and govern flow of material into truck. Provide overhead bridges of tight board or prefabricated metal construction at dust chutes to protect

persons and property from falling debris.

E. Prevent spreading of flying particles and dust. Sprinkle rubbish and debris with water to keep dust to a minimum. Do not use water if it results in hazardous or objectionable conditions such as, but not limited to; ice, flooding, or pollution. Vacuum and dust the work area daily.

F. In addition to previously listed fire and safety rules to be observed in performance of work, include the following:

1. No wall or part of wall shall be permitted to fall outwardly from structures.

2. Maintain at least one stairway in each structure in usable condition to the highest remaining floor. Keep the stairway free of obstructions and debris until that level of structure has been removed.

3. Wherever a cutting torch or other equipment that might cause a fire is used, provide and maintain fire extinguishers nearby ready for immediate use. Instruct all possible users in use of fire extinguishers.

4. Always keep hydrants clear and accessible. Prohibit debris from accumulating within a radius of 4500 mm (15 feet) of fire hydrants.

G. Before beginning any demolition work, the Design-Build Entity shall survey the site and examine the drawings and specifications to determine the extent of the work. The contractor shall take necessary precautions to avoid damages to existing items to remain in place, to be reused, or to remain the property of the ASEM/Owner; any damaged items shall be repaired or replaced as approved by the ASEM/Owner's Representative. The Design-Build Entity shall coordinate the work of this section with all other work and shall construct and maintain shoring, bracing, and supports as required. The Design-Build Entity shall ensure that structural elements are not overloaded and shall be responsible for increasing structural supports or adding new supports as may be required because of any cutting, removal, or demolition work performed under this contract. Do not overload structural elements. Provide new support and reinforcement for existing construction weakened by demolition or removal works. Repairs, reinforcement, or structural replacement must have ASEM/Owner's Representative’s approval.

H. The work shall comply with the requirements of Section 01 57 19.

I. The work shall comply with the requirements of Section 01 00 00.

1.04 UTILITY SERVICES

A. Demolish and remove outside utility service lines shown to be removed.

B. Remove abandoned outside utility lines that would interfere with installation of new utility lines and new construction.

PART II – PRODUCTS (NOT USED)

PART III – EXECUTION

3.01 DEMOLITION

A. Completely demolish and remove buildings and structures, including all appurtenances related or connected thereto, as noted below:

1. As required for installation of new utility service lines.

2. To full depth within an area defined by hypothetical lines located 1500 mm (5 feet) outside building lines of new structures.

B. Debris, including brick, concrete, stone, metals and similar materials shall become property of Design-Build Entity and shall be disposed of by him daily, off the project contract site to avoid accumulation at the demolition site. Materials that cannot be removed daily shall be stored in areas specified by the ASEM/Owner's Representative. Break up concrete slabs below grade that do not require removal from present location into pieces not exceeding 600 mm (24 inches) square to permit drainage. The contractor shall dispose debris in compliance with applicable federal, Puerto Rico Commonwealth or municipal permits, rules and/or regulations.

C. In removing buildings and structures of more than two stories, demolish the work story by story starting at highest level and progressing down to third floor level. Demolition of first and second stories may proceed simultaneously.

D. Remove and legally dispose of all materials, other than earth to remain as part of project work, from any trash dumps shown. Materials removed shall become property of contractor and shall be disposed of in compliance with applicable federal, Puerto Rico Commonwealth or municipal permits, rules and/or regulations. All materials in the indicated trash dump areas, including the above surrounding grade and extending to a depth of 1500mm (5feet) below surrounding grade, shall be included as part of the lump sum compensation for the work of this section. Materials that are located beneath the surface of the surrounding ground more than 1500 mm (5 feet), or materials that are discovered to be hazardous, shall be handled as unforeseen. The removal of hazardous material shall be referred to Hazardous Materials specifications.

E. Remove existing utilities as indicated or uncovered by work and terminate in a manner conforming to the nationally recognized code covering the specific utility and approved by the ASEM/Owner's Representative. When Utility lines

are encountered that are not indicated on the drawings, the ASEM/Owner's Representative shall be notified prior to further work in that area.

3.02 CLEAN-UP

On completion of work of this section and after removal of all debris, leave site in clean condition satisfactory to ASEM/Owner's Representative. Clean-up shall include off the project contract site disposal of all items and materials not required to remain property of the ASEM/Owner as well as all debris and rubbish resulting from demolition operations.

END OF SECTION

SECTION 02 41 19 – SELECTIVE DEMOLITION

PART I – GENERAL

1.01 RELATED DOCUMENTS

A. RFP Documents, Bridging Drawings, performance criteria and, after award, applicable Design-Build Contract provisions, including applicable general requirements, apply to this Section.

B. Specifications throughout all applicable administrative and technical Sections of the RFP Bridging Documents and Design-Build Contract Documents are directly applicable to this Section, and this Section is directly applicable to them.

1.02 REFERENCE STANDARDS

A. The latest published edition of a reference shall be applicable to this Project unless identified by a specific edition date.

B. All reference amendments adopted prior to the effective date of this Contract shall be applicable to this Project.

C. All materials, installation and workmanship shall comply with all applicable requirements and standards.

1.03 SUBMITTALS

A. Record Documents:

1. Schedule indicating proposed sequence of operations for selective demolition Work to ASEM/Owner's Representative for review prior to start of Work. Include coordination for shutoff, capping, and continuation of utility services as required, together with details for dust and noise control protection.

    a. Provide detailed sequence of demolition and removal Work to ensure uninterrupted progress of ASEM/Owner's on-site operations.

    b. Coordinate with ASEM/Owner's continuing occupation of portions of existing building and with ASEM/Owner's partial occupancy of completed new addition.

2. Photographs of existing conditions of structure surfaces, equipment, and adjacent improvements that might be misconstrued as damage related to removal operations. File with ASEM/Owner's Representative prior to start of Work.

1.04 PROJECT CONDITIONS

A. The ASEM/Owner will occupy portions of the building immediately adjacent to areas of selective demolition. Conduct selective demolition Work in manner that will minimize the need for disruption of ASEM/Owner's normal operations. Provide minimum of 72 hours advance notice to ASEM/Owner of demolition activities that will affect ASEM/Owner's normal operations.

B. The ASEM/Owner assumes no responsibility for actual condition of items or structures to be demolished.

   1. Conditions existing at time of inspection for bidding purposes will be maintained by ASEM/Owner insofar as practicable. However, minor variations within structure may occur by ASEM/Owner's removal and salvage operations prior to start of selective demolition Work.

C. Promptly repair damage caused to adjacent facilities by demolition Work.

D. Conduct selective demolition operations and debris removal to ensure minimum interference with roads, streets, walks, and other adjacent occupied or used facilities.

   1. Do not close, block, or otherwise obstruct streets, walks, or other occupied or used facilities without written permission from authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by governing regulations.

E. Do not use cutting torches for removal until Work area is cleared of flammable materials. At concealed spaces, such as interior of ducts and pipe spaces, verify condition of hidden space before starting flame cutting operations. Maintain portable fire suppression devices during flame cutting operations.

F. Maintain existing utilities indicated to remain in service and protect them against damage during demolition operations.

   1. Do not interrupt utilities serving occupied or used facilities, except when authorized in writing by authorities having jurisdiction. Provide temporary services during interruptions to existing utilities, as acceptable to governing authorities.

   2. Maintain fire protection services during selective demolition operations.

G. Use water sprinkling, temporary enclosures, and other methods to limit dust and dirt migration. Comply with governing regulations pertaining to environmental protection.

1. Do not use water when it may create hazardous or objectionable conditions such as ice, flooding, and pollution.

PART II - PRODUCTS

2.01 GENERAL

A. All materials shall meet or exceed all applicable referenced standards, federal, Puerto Rico Commonwealth and municipal requirements, and conform to codes and ordinances of authorities having jurisdiction.

2.02 MATERIAL OWNERSHIP

A. Except for items or materials indicated to be reused, salvaged, or otherwise indicated to remain the ASEM/Owner's property, demolished materials shall become the Design-Build Entity's property and shall be removed from the Site with further disposition of the Construction's option.

B. Historical items, relics, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, antiques, and other items of interest or value to the ASEM/Owner, which may be encountered during demolition, remain the ASEM/Owner's property. Carefully remove and salvage each item or object in a manner to prevent damage and deliver promptly to the ASEM/Owner.

PART III - EXECUTION

3.01 PREPARATION

A. Provide interior and exterior shoring, bracing, or support to prevent movement, settlement, or collapse of areas to be demolished and adjacent facilities to remain.

1. Cease operations and notify ASEM/Owner's Representative immediately if safety of structure appears to be endangered. Take precautions to support structure until determination is made for continuing operations.

2. Locate, identify, stub off, and disconnect utility services that are not indicated to remain.

a. Provide bypass connections as necessary to maintain continuity of service to occupied areas of building. Provide a minimum of 72 hours advance notice to ASEM/Owner if shutdown of service is necessary during changeover.

3.02 INSTALLATION

A. Installation shall meet or exceed all applicable federal, Puerto Rico Commonwealth and municipal requirements, referenced standards and conform to codes and ordinances of authorities having jurisdiction.

B. All installation shall be in accordance with the manufacturer's published recommendations.

3.03 DEMOLITION

A. Perform selective demolition Work in a systematic manner. Use such methods as required to complete Work indicated on Drawings in accordance with demolition schedule and governing regulations.

1. Demolish concrete and masonry in small sections. Cut concrete and masonry at junctures with construction to remain using power driven masonry saw or hand tools; do not use power driven impact tools.

2. Locate demolition equipment throughout the structure and promptly remove debris to avoid imposing excessive loads on supporting walls, floors, or framing.

3. Provide services for effective air and water pollution controls as required by local authorities having jurisdiction.

4. Demolish foundation walls to a depth of not less than 12 inches below existing ground surface. Demolish and remove below grade wood or metal construction. Break up below the grade concrete slabs.

5. For interior slabs on grade, use removal methods that will not crack or structurally disturb adjacent slabs or partitions. Use power saw where possible.

6. Completely fill below grade areas and voids resulting from demolition Work. Provide fill consisting of approved earth, gravel, or sand, free of trash and debris, stones over 6 inches in diameter, roots, or other organic matter.

B. Remove culvert or sewer pipe for reuse by careful excavation of all material on the top and sides so that the pipe will not be damaged. Removal of sewer appurtenances shall be included for removal with the pipe. Remove pipes which are unsatisfactory for reuse, and dispose of, off the Project Site.

C. Concrete parts of structures below the permanent ground-line shall be neatly squared off with reinforcement cut off close to the concrete.

D. Dismantle steel structures or steel portions of structures in sections determined by the ASEM/Owner's Representative.

1. The sections shall be of such weight and dimensions which permit convenient handling, hauling and storing.

2. Rivet and bolts connecting steel rail members, steel beams or girder spans and steel stringers of truss spans will be removed by cutting the heads with a cold cut then punching or drilling by a method that will not injure the member for reuse.

3. The removal of rivets and bolts from connections will not be required unless specifically indicated.

4. Unless otherwise specified, the Design-Build Entity shall have the option of dismantling these members by flame cutting immediately adjacent to the connection.

5. Flame-cutting will not be permitted when Drawings call for the structural unit to be salvaged in such a manner as to permit re-erection. In such cases, all members shall be carefully dismantled without damage, match marked with paint, and all rivets and bolts removed from the connections.

E. Remove brick and stone structures by sledging the masonry into removal sizes. Portions of such structures below the permanent ground-line, which will not in any manner interfere with the proposed construction, may be left in place, but removal shall be carried at least two feet below the permanent ground-line and neatly squared off.

F. If unanticipated mechanical, electrical, or structural elements that conflict with intended function or design are encountered, investigate and measure both nature and extent of the conflict. Submit report to ASEM/Owner's Representative in written, accurate detail. Pending receipt of directive from ASEM/Owner's Representative, rearrange selective demolition schedule as necessary to continue overall job progress without undue delay.

3.04 EXCAVATION AND BACKFILL

A. Back-fill to the level of the original ground-line, all excavation made in, and all openings below, the natural ground-line caused by the removal of old structures or portions thereof.

B. That portion of the back-fill which will support any portion of the roadbed or paving shall be placed in layers of the same thickness as those required subgrade preparation.

1. Material in each layer shall be wet uniformly, if required, and shall be compacted to the density required in the adjoining embankment. In places inaccessible to blading and rolling equipment, mechanical or hand tampers

shall be used to obtain the required compaction.

C. Place that portion of the back-fill which will not support any portion of the roadbed or paving in such a manner, and compact, to preclude settling.

3.05 DISPOSAL OF DEMOLISHED MATERIALS

A. Remove from building Site debris, rubbish, and other materials resulting from demolition operations. Transport and legally dispose off-site.

1. If hazardous materials are encountered during demolition operations, comply with applicable regulations, laws, and ordinances concerning removal, handling, and protection against exposure or environmental pollution.

2. Burning of removed materials is not permitted on the Project Site.

3.06 CLEANUP AND REPAIR

A. Upon completion of demolition Work, remove tools, equipment, and demolish materials from the Project Site. Remove protections and leave interior areas broom clean.

B. Repair demolition performed more than that required. Return elements of construction and surfaces to remain to condition existing prior to start operations. Repair adjacent construction or surfaces soiled or damaged by selective demolition Work.

END OF SECTION

SECTION 04100 – MORTAR

PART I - GENERAL

1.01 WORK INCLUDED

A. This Section includes mortar and latex modified mortars for masonry work included in other Sections.

1.02 RELATED WORK

A. Related Work in Other Sections:

4220	Concrete Unit Masonry

1.03 REFERENCES

A. Industry standards governing this work are of the latest issue at the date of this specification release, except as otherwise noted:

1. American Society for Testing and Materials [ASTM]:

ASTM C5	Quicklime for Structural Purposes
ASTM C31	Making and Curing Concrete Test Specimens in the Field
ASTM C39	Method of Test for Compressive Strength of Cylindrical Concrete Specimens
ASTM C91	Masonry Cement
ASTM C144	Aggregate for Masonry Mortar
ASTM C150	Portland Cement
ASTM C207	Hydrated Lime for Masonry Purposes
ASTM C270	Mortar for Unit Masonry

1.04 QUALITY ASSURANCE

A. Mock-up: Furnish type of mortar required to execute on site mockups specified for masonry work.

B. Do not change source or brands of masonry mortar materials during construction.

1.05 SUBMITTALS

A. Mortar Mix Designs: Submit mix design reports for each type of mortar proposed a minimum of 21 days prior to the use of each mix. Include the following for each mix:

1. Conformance of mortar to property specifications of ASTM C 270.

2. Include the following:

a. Compressive strength

b. Flow of mortar

c. Sieve analysis for fine aggregate

d. Quantities of all ingredients

e. Type of cement

f. Sources of fine aggregate

g. Type of fine aggregate, whether natural or manufactured

B. Manufacturer's mixing instructions for masonry cement and colored mortar.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver material, except aggregate, in packages or bags, displaying manufacturer's name, product brand name, type or grade, and mixing instructions. Aggregates may be delivered in bulk form with each delivery carrying certification of product delivered.

B. Storage:

1. Cementitious products shall be stored in water-tight sheds with floors elevated off the ground.

2. Aggregates shall be stored so as not to become segregated, mixed with other aggregate size fractions, or contaminated with foreign matter, and shall be covered to keep its moisture content constant.

1.07 SEQUENCING/SCHEDULING

A. Schedule and coordinate the work of this Section with masonry work in other Sections.

PART II- PRODUCTS

2.01 CEMENTITIOUS MATERIALS

A. Portland Cement: ASTM C 150, Type I, natural color.

B. Masonry Cement: ASTM C 91, natural color, except where colored mortar is indicated.

C. Hydrated Lime: ASTM C 207, Type S.

D. Quicklime: ASTM C5.

2.02 OTHER MORTAR PRODUCTS

A. Aggregate: ASTM C144.

B. Additives:

1. Stearate: Ammonium, calcium, or aluminum tri-stearate manufactured for a masonry mortar additive to make joints more dirt and moisture resistant.

2. Waterproofing admixtures will not be permitted.

3. Acrylic polymers and modifiers to increase chemicals resistance and adhesion for latex modified mortars.

C. Water: Potable.

2.03 PROPORTIONS

A. Mortar

1. Mortar shall comply with the property specifications of ASTM C 270 and the following table:

	Average Compressive Strength
Mortar Type	at 28 Days of Field Cylinders
M	2500 psi
S	1800 psi

2. Lime may be either hydrated lime or lime putty. Mix and slake lime putty in accordance with manufacturer's instructions.

3. Mortar for fire-rated masonry shall be of type and proportions used to receive rating classification specified. However, mortar compressive strength shall comply with the table above.

2.04 MIXING

A. Mortar may be either mixed at plant or job site as specified.

B. Proportion mortar ingredients by methods that will ensure accurate measure. Measurement of materials by using shovels will not be permitted.

C. Mix mortar in power-driven, drum-type batch mixer.

D. After all the ingredients have been added, mix for minimum of five minutes and a maximum of seven minutes.

E. Empty drum before recharging for the next batch.

F. Mix proprietary products in accordance with manufacturer's instructions.

PART III - EXECUTION

3.01 MORTAR AND MORTARING

A. Refer *to* Section 04220 for specific mortar and mortar requirements.

3.02 RETEMPERING

A. Use mortar within two hours of initial mixing.

B. Use no mortar after it has begun to set.

C. Retemper mortar as often as necessary to keep it plastic and workable.

END OF SECTION

SECTION 04145 – POURED PORTLAND CEMENT CONCRETE GROUT

PART I – GENERAL

1.01 WORK INCLUDED

A. This Section specifies grout for masonry work included in other Sections.

1.02 RELATED WORK

A. Related Work in Other Sections:

4220	Concrete Unit Masonry

1.03 REFERENCES

A. Industry standards governing *this* **work** are of the latest issue at the date of this specification release, except as otherwise noted:

1. American Society for Testing and Materials [ASTM]:

ASTM C5	Quicklime for Structural Purposes.
ASTMC31	Making and Curing Concrete Test Specimens in the Field.
ASTMC39	Method of Test for Compressive Strength of Cylindrical Concrete Specimens.
ASTMC143	Slump of Portland Cement Concrete.
ASTMC150	Portland Cement
ASTMC207	Hydrated Lime for Masonry Purposes.
ASTM C404	Aggregates for Masonry Grout.
ASTMC476	Mortar and Grout for Reinforced Masonry.

1.04 QUALITY ASSURANCE

A. Testing:

1. Testing agency selected and paid by Design-Build Entity, approved by Design Professional of Record:

    a. Test grout mix design proposed by Design-Build Entity to determine conformance of grout to ASTM C 476 and this Specification.

    b. Submit to Design Professional of Record for review copies of all data and test results to substantiate mix designs.

2. Testing agency paid by ASEM/Owner, except as noted, selected and directed by Design Professional of Record:

    a. During mixing and placing grout, testing agency shall conduct compressive strength tests of mixed materials in the field complying with the following procedures and the applicable curing, storage, and transportation provisions of ASTM C31:

        1) Place masonry units, having the same moisture condition as those being placed, on non-absorptive base to form a void for a square prism with a height twice the side and a minimum size of three inches.

        2) Line the side faces of the prism with permeable paper, such *as* paper towel, or porous separator to allow water passage through liner into masonry units.

        3) Fill prism with a fully representative grout sample in two layers with each layer puddled with a puddle stick approximately one inch by two inches to eliminate air voids.

        4) Level off specimen and maintain in a damp condition.

        5) After 48 hours, remove masonry units and ship prisms to laboratory and store in fog room until testing.

        6) Cap and make compressive strength test with prism in accordance with applicable provisions of ASTM C 39.

        7) Each grout compressive strength test shall consist of five prisms for each150 cubic feet of mix or fraction thereof; however, make not less than one strength test for each day grout is placed.

        8) Perform compression test of two specimens at 7 days and two specimens at 28 days. Reserve one specimen for later testing as directed.

9) Each set of compressive tests shall be accompanied with a description of location in Project where grout was used.

10) Should a 7-day test have a compressive strength less than 55% of the required 28 day strength, lay no more masonry in walls over masonry represented by the defective grout.

11) If the 28-day tests achieve required test results, work may resume; otherwise, ASEM/Owner will have testing agency conduct on site testing to determine which masonry work shall be strengthened or removed and replaced, at ASEM/Owner's option. The testing shall be at Design-Build Entity's expense.

12) Remedial work and testing of remedial work shall be at Design-Build Entity's expense.

3. Responsibilities and duties of Design-Build Entity relative to ASEM/Owner testing:

   a. Notify ASEM/Owner's agency in advance of grouting to allow sufficient time to prepare for required testing.

   b. Assist ASEM/Owner's agency in securing field specimens.

   c. Provide and maintain, for sole use of ASEM/Owner's agency, facilities for safe storage and proper curing of test cylinders and prisms at Project site as required by this Specification.

1.05 SUBMITTALS

A. Grout Mix Designs: Submit mix design reports for each type of grout proposed a minimum of 21 days prior to the use of each mix. Include the following for each mix:

   1. Conformance of grout to *ASTM* C 476 and compressive strength required by this Specification.

   2. Include the following:

      a. Compressive strength.

      b. Slump for grout in accordance with ASTM C 143.

      c. Sieve analysis for fine and coarse aggregate.

      d. Quantities of all ingredients.

e. Type of cement.

f. Sources of fine and coarse aggregate.

g. Type of fine aggregate, whether natural or manufactured.

B. Manufacturer's mixing instructions for grout, if prepackaged.

C. Proposed Method of Measuring Materials in the Field: See Paragraph 2.04 B, this Section.

D. Certification from an acceptable independent laboratory that proposed products comply with Specifications.

E. Laboratory reports in duplicate from testing agency shall be sent to Design-Build Entity and to ASEM/Owner's Representative within two days of completion of 7- and 28-day tests.

1.06 DELIVERY, STORAGE AND HANDLING

A. Deliver materials, except aggregate, in packages or bags, displaying manufacturer's name, product brand name, type or grade and mixing instructions. Aggregates may be delivered in bulk form with each delivery carrying certification of product delivered.

B. Storage:

1. Cementitious products shall be stored in water-tight sheds with floors elevated off the ground.

2. Aggregates shall be stored so as not to become segregated, mixed with other aggregate size fractions, or contaminated with foreign matter, and shall be covered to keep its moisture content constant.

C. Do not change the source or brands of grout materials during construction.

1.07 PROJECT/SITE CONDITIONS

A. Cold Weather Provisions: When masonry work is authorized between freezing and 40° F, heat mixing water not to exceed 120° F to maintain grout temperature when placed in wall between 70° F and 110° F.

1.08 SEQUENCING/SCHEDULING

A. Schedule and coordinate the work of this Section with masonry work in other Sections.

B. Waterproofing and antifreeze admixtures will not be permitted.

C. Waterproofing and antifreeze admixtures will not be permitted.

PART II - PRODUCTS

2.01 CEMENTITIOUS MATERIALS

A. Portland Cement ASTM C 150, Type I, natural color.

B. Hydrated Lime: ASTM C 207, Type S.

C. Quicklime: ASTM C5

2.02 OTHER PRODUCTS

A. Aggregate: ASTM C404.

B. Additives: Waterproofing and antifreeze admixtures will not be permitted.

C. Water: Potable

2.03 PROPORTIONS

A. Grout shall comply with ASTM C 476 and shall have a minimum compressive strength at 28 days of 2500 psi for field prisms. Mix grout with sufficient water to give a fluid pouring consistency without segregation of materials.

2.04 MIXING

A. Grout may be either mixed at the plant or job site as specified.

B. Proportion grout ingredients by methods that will ensure accurate measure. Measurement of materials by using shovels will not be permitted.

C. Mix grout in power-driven drum-type batch mixer.

D. After all the ingredients have been added, mix for a minimum of five minutes and a maximum of seven minutes.

E. Empty drum before recharging for the next batch.

F. Mix proprietary products in accordance with manufacturer's instructions.

PART III - EXECUTION

3.01 GROUTING

A. Refer to Section 04220 for specific grouting requirements.

3.02 RETEMPERING

A. Use grout within two hours of initial mixing.

B. Use no grout after it has begun to set.

END OF SECTION

SECTION 04150 – MASONRY ACCESSORIES

PART I – GENERAL

1.01 WORK INCLUDED

A. This Section includes horizontal joint reinforcement, anchors, ties, and other related masonry accessories.

1.02 RELATED WORK

A. Related Work in Other Sections: 04220 Concrete Unit Masonry

1.03 REFERENCES

A. Industry standards governing this work are of the latest issue at the date of this Specification release, except as otherwise noted:

1. American Society for Testing and Materials [ASTM):

ASTM A36	Structural Steel.
ASTM A82	Cold-Drawn Steel Wire for Concrete Reinforcement.
ASTM A116	Zinc-Coated [Galvanized] Iron or Steel Farm Field and Railroad Right-of-Way Wire Fencing. For Class I and Class III.
ASTM A153	Zinc Coating [Hot-Dip) on Iron and Steel Hardware.
ASTM A496	Deformed Steel Wire for Concrete Reinforcement.
ASTM A525	Steel Sheet, Zinc-Coated [Galvanized] by the Hot-Dip Process.
ASTM A615	Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.

B. Comply with Puerto Rico Building Code, as currently adopted and amended, applicable life-safety requirements, and referenced standards adopted by the authorities having jurisdiction.

1.04 QUALITY ASSURANCE

A. Mock-up: Furnish items specified under this Section for mock-up panels

specified in Section 04220.

1.05 SUBMITTALS

A. Samples:

1. One of each type of anchor and tie.

2. Twelve-inch length of items furnished in linear form except three feet of horizontal joint reinforcement.

B. Manufacturer's standard installation instructions amended to comply with the provisions of this project.

C. Certification from an independent testing laboratory that proposed products comply with or exceed provisions of this Section.

D. Complete data on power driven anchors, giving types of anchors, type of power driver and location where anchors are proposed.

1.06 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in manufacturer's packaging identifying product and specified finish.

B. Store in dry area with spacers to provide ventilation. Stack linear items to prevent warping, complying with manufacturer's instructions.

1.07 SEQUENCING/SCHEDULING

A. Coordinate this work with adjacent construction to which it is anchored.

PART II - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Provide accessories from the following listed manufacturers. Like items shall be from one manufacturer:

1. Dur-O-Wall.

2. **AA Wire** Products Co.

3. Hohmann and Barnard, Inc.

2.02 HORIZONTAL JOINT REINFORCEMENT

A. General: Side rods shall be deformed. All rods shall conform to ASTM A 82 or A 496. Side rods and cross rods shall be connected by welding.

B. All rods shall be galvanized complying with Class III mill galv. (0.80 oz. per sq. ft.).

C. Type, unless otherwise noted on Drawings:

1. Interior Walls and Partitions: Extra duty 3/16" by 3/16" gauge truss.

2.03 ANCHORS AND TIES

A. Corrugated Strap Anchors: Not lighter than 16 gauge unless otherwise noted by not less than 7/8 inch wide by 7 inches long. ASTM A 525.

B. Rigid Steel Anchors: Not less than 1-1/2 inches wide by 1/ 4 inch thick, by length required, with ends turned up two inches minimum. ASTM A36.

C. "Z"-bars: 3/16-inch diameter steel wire, with ends bent at 90 degrees and with at least 8 inches extension. ASTM A 82. Bars without water drips shall be provided. Space bars 16 inches OC vertically and 24 inches OC horizontally, staggered.

D. Column and Beam Anchors: 0.125" thick x 13@ width mill galv., or 3-inch diameter wire wall anchors with 1/ 4-inch diameter anchor rods. ASTM A 82.

E. Wire Mesh Ties: 16-gauge steel wire 1/2- i n c h mesh, 16 inches long and 1-1/2 inches less than width of wall. ASTM A 82.

F. Dovetail Anchors: 16-gauge corrugated steel, one inch wide, 5-1/2 inches long, to match dovetail anchor slots in concrete members. ASTM A 525.

G. Control Joint Anchors: 3@ thick x l" up to 22@ width.

2.04 METAL LATH

A. Expanded metal lath, 3.4 pounds, coated with rust inhibitive paint, and cut to one inch less than wall width.

2.05 REINFORCING STEEL

A. Steel for lintel blocks, bond beams, pilasters and reinforced masonry shall be deformed bars conforming to ASTM A 615, Grade 60, including Supplementary RequirementS-1.

2.06 CONTROL JOINTS

A. Wide flange or regular, PVC, where detailed.

2.07 THROUGH-WALL FLASHING

A. Flashing shall be fabricated specifically for through-wall flashing building construction, and as follows:

1. Copper: Not less than three ounces per square foot.

2. Fabric-covered both sides laminated to copper with high melting point asphalt.

B. Adhesive: As recommended by manufacturer.

2.08 POWER DRIVEN ANCHORS

A. Capable of developing full strength of members anchored and designed for fastening to the anchor material.

2.09 COATING

A. Metal items shall have the following coatings:

1. Wire and Joint Reinforcement Zinc coated, ASTM A 116, Class ID, 0.8 ounce.

2. Anchors and Bars: Zinc coated, ASTM A 153, Class B, 1.50 ounces.

3. Steel Sheet Galvanized, ASTM A 525, Coating Designation G90.

PART III - EXECUTION

3.01 INSTALLATION

A. Install products furnished under this Section as specified under other Sections, at spacings and locations indicated on Drawings, and in compliance with manufacturer's instructions.

END OF SECTION

SECTION 04220 – CONCRETE UNIT MASONRY

PART I – GENERAL

1.01 WORK INCLUDED

A. This Section includes work concerning concrete unit masonry.

1.02 RELATED WORK

A. Related Work in Other Sections:

	Grout
04100	Mortar
04150	Masonry Accessories

1.03 REFERENCES

A. Industry standards governing this work are of the latest issue at the date of this specification release, except as otherwise noted:

1. American Society for Testing and Materials [ASTM]:

ASTM C 90	Hollow Load-Bearing Concrete Masonry Units.
ASTM C 140	Sampling and Testing Concrete Masonry Units.

2. Underwriters Laboratories, Inc. [UL]:

UL618	Standard for Concrete Masonry Units.

3. American Concrete Institute [AC!]:

ACI 531.1	Specification for Concrete Masonry Construction.

B. Comply with the Puerto Rico Building Code, as currently adopted and amended, applicable life-safety requirements, and referenced standards adopted by the authorities having jurisdiction

1.04 QUALITY ASSURANCE

A. Masonry tolerances shall not exceed the following:

1. Plumb:

a. 3/8 inch in 10'-0",

b. 5/8 inch in any 40'-0" or more; except,

c. 1/ 4 inch in any 10'-0" and 1/2 inch in 40'-0" or more at external corners, expansion joints, and jambs at masonry openings.

2. Level:

a. 3/8 inch in any bay or 20'-0" maximum, and

b. 3/ 4 inch in 40'-0" or more.

3. Building Line:

a. .5/8 inch in any bay or 20'-0" maximum, and

b. 3/ 4 inch in 40'-0" or more.

4. Cross-Sectional Dimension of Multiple Wythes:

a. 1/ 4 inches less, and

b. 1/2 inch more.

5. Bed Joint:

a. Thickness: Plus, or minus 1/8 inch.

b. Level: Plus, or minus 1/ 4 inch in ten feet,1/2 inch maximum.

6. Head Joint

a. Thickness: Plus, or minus 1/8 inch

b. Vertical Alignment: Plus, or minus1/ 4 inch in ten feet,1/2 inch maximum.

c. Reinforcing bar tolerances shall not exceed the following:

1) Fabrication:

a) Sheared Length: Plus, or minus one inch.

b) Stirrup and Tie Dimensions: Plus, or minus 1/2 inch.

c) Other Bends: Plus, or minus one inch.

2) Vertical Placement

a) Variation in Spacing from Face of Masonry: Plus, or minus 1/4 inch.

b) Variation in Spacing in Longitudinal Run of Masonry: Plus, or minus two inches.

3) Horizontal Placement

a) Variation in Spacing Perpendicular to Face of Masonry: Plus, or minus 1/ 4 inch.

B. Surface and Edge Defects: Concrete unit masonry exposed in finished work shall be reasonably straight and true with finished faces and edges free from chips, crazes, blisters, and other imperfections detracting from appearance of finished wall when viewed at a distance of 10'-0" at right angles from wall.

1.05 SUBMITTALS

A. Prior to ordering or delivery of materials, submit to the Design Professional of Record for approval two block unit's representative of each block type to be used. Texture, profile, and color shall be consistent with job mock-up and all installed masonry work.

B. Test Reports and Certificates - Concrete Unit Masonry:

1. For Fire Rated Masonry, the producer of the concrete units shall certify that the minimum equivalent thickness of the units supplied meets all the requirements of UL-618, "Standard for Concrete Masonry Units".

1.06 DELIVERY, STORAGE AND HANDLING

A. Product Handling:

1. Deliver concrete unit masonry on pallet adequately secured. Handle during shipment and storage in manner to prevent damage of surfaces and edges.

2. Stack concrete unit masonry and installation material on platforms, off ground, and cover to protect from stains and weather exposure with waterproof cover.

1.07 PROJECT/SITE CONDITIONS

A. Weather Requirements:

1. Hot Weather-Low Humidity Requirements, When Approved by

ASEM/Owner's Representative: Prevent rapid drying. The mortar bedding surfaces may be lightly wet. Keep mortar moist, and do not string out on the wall so far ahead of units being placed that drying will take place prior to placement of units. After units are in place, a very light fog spray should be applied several times during the first 24 hours for proper curing.

B. Protection of Work:

1. During erection, keep the walls dry by covering at end of each day or shutdown period with a waterproof membrane.

2. Similarly protect partially completed walls not being worked on.

3. Covering shall overhang at least 2'-0" on each side of wall and shall be securely anchored.

4. Protect finished exposed work from stains.

5. Mortar droppings that stick to concrete block faces shall be allowed to dry, and then be removed with trowel and by lightly scrubbing surface with bristled brush.

6. Keep concrete block clean as it is laid.

7. Damaged installed materials shall be removed and replaced with new material at no additional expense to the ASEM/Owner.

8. Masonry walls and partitions above normal allowable heights shall be braced or reinforced, temporarily or permanently as required, in accordance with the requirements of the local governing codes.

C. Inspect job for conditions which would prevent execution of this work as specified. Do not proceed until such conditions are corrected.

1.08 SEQUENCING/SCHEDULING

A. Coordination:

1. Before commencing work, lay out vertical and horizontal coursing to achieve bond pattern indicated, and coordinate with other masonry work.

2. Locate on story pole each joint to receive horizontal joint reinforcing and anchors to adjacent construction. Relate joints to floor elevations and other work lines.

3. Do not enclose or cover up mechanical, electrical or other work, until such

work has been installed and accepted.

4. Provide open joints for caulking where indicated. Caulking shall be furnished and installed by others.

PART II - PRODUCTS

2.01 MORTAR

A. Mortar shall comply with Section 04100 and as follows:

1. Interior Masonry: Non-Load Bearing: Type S.

2. Cavity Walls Above Ground: Type S.

3. Mortar for Filling Pressed Metal Frames and built-in items: Grout.

4. Mortar for Parging: Type S.

B. Non-Shrink Grout for Embedment of Steel Bearing Plates and Lintels: Section 03600.

2.02 CONCRETE MASONRY UNITS

A. General:

1. Concrete Masonry Units shall be medium weight conforming to the requirements of ASTM Specification C-90, grade N-1, for hollow load bearing concrete masonry units, or ASTM Specification C-145, grade N-1, for solid load bearing concrete masonry units.

2. Cement shall be Portland cement, ASTM C-150.

3. Density of the CMUs shall be less than 90 lbs/ft.

4. Assembly: The dry weight of various sizes of 2-core CMUs shall not exceed the pounds shown in table below when tested in accordance with ASTM C-140: 6x8x16 - 45 Pounds 8x8x16 - 55 Pounds

5. Miscellaneous Concrete Masonry Units:

a. Lintel Block and Other Special Shapes: ASTM C 90, grade and aggregate to match that of adjacent masonry.

b. Hollow Load Bearing Block: ASTM C 90, Grade N-1.

B. Fire Rated Concrete Block Assemblies:

1. The units shall be produced in accordance with the "Standard for Concrete Masonry Units", Table 4.1 of UL-618. The block manufacturer shall certify, in writing, that the minimum equivalent thickness and CMU mix design are in conformance with U.L. 618.

2. If requested, the Mason Design-Build Entity must have CMUs examined and certified by a certified testing laboratory. The examination shall include width, height, length of block, shell and web thickness, minimum equivalent thickness, compressive strength and type of aggregate. The report shall comply with ASTM C-140 "Methods of Sampling and Testing Concrete Masonry Units" and U.L. - 618.

C. Cure concrete masonry units by either autoclave or low-pressure steam treatment.

D. Standard Block:

1. Provide special shapes required for starters, jambs, comers, lintels, and sash block with exposed faces matching in color and texture and other standard block.

2. Concrete Masonry Units shall be of standard size (8"x16") having two or three vertical cells, and not more than1/8"variation in standard dimension.

E. Special Block:

1. Comply with the above specifications except as modified.

2. Bond beams and lintel blocks shall be as indicated.

3. Provide bullnose corners at external comers of interior block.

2.03 MASONRY ACCESSORIES

A. Comply with Section 04150.

PART III - EXECUTION

3.01 PREPARATION

A. Remove laitance, loose aggregate, and anything that prevents mortar from bonding to foundation.

B. Before starting to lay masonry units, determine that all required dowels from foundation have been installed.

C. Do not proceed with masonry construction, until permitted, when the following

foundation tolerances are not met

1. Horizontal Alignment: Plus, or minus 1/ 4 inch in ten feet variation from plan dimension 1/2-inch maximum variation.

2. Vertical Alignment: Plus, or minus 1/ 4 inch in ten feet variation from level1/2-inch maximum variation.

3.02 JOB LAYOUT

A. Horizontal:

1. Layout coursing horizontally shall fit openings and offsets.

2. Avoid slivers of concrete masonry units less than four inches wide. Cut masonry units shall have at least one web. Cut shell pieces will not be permitted.

B. Vertical:

1. Maintain story pole marked with courses to work with head and sill of openings and to maintain uniform jointing.

2. Indicate bed joints to receive joint reinforcing, ties and anchors.

3. Coordinate story pole with joint coursing of back-up masonry.

C. Faced Concrete Masonry Unit: Interior concrete masonry units scheduled as finish wall.

D. Bond:

1. Concealed Masonry:

a. Bond units in a wythe in running bond.

b. Bond and interlock each course of each wythe at comer.

E. Fire-Rated Wall: Provide concrete masonry units with rated units, laid out as tested by UL for the ratings indicated.

3.03 WORKMANSHIP

A. Lay masonry plumb, true to line, with level and accurately spaced courses.

B. Finished work shall be within specified tolerances and match accepted job mock-up sample panels.

C. Lay corners and reveals plumb. Avoid over plumbing and pounding of comers and jambs to fit stretcher units after they are set in position.

D. Where adjustment must be made after mortar has started to harden, remove and replace mortar with fresh mortar.

E. Keep bed and head joints uniform in width. Joint thickness shall be 3/8 inch.

F. Cutting and punching of finish masonry to accommodate work of other trades shall be done not to damage or mar appearance of adjoining masonry.

G. Cut edges of units exposed in finished wall with an abrasive power saw.

H. Chases, wall cavities, and raked-out joints shall be kept free from mortar and other debris.

I. Use solid blocks where expansion bolted attachments are made to block and where end of block is exposed. Cells of hollow blocks to receive anchor bolts shall be solidly filled with grout. Design-Build Entity shall determine location from notes and details on the Drawings. Unless noted otherwise, set bolts and inserts vertically in the top of walls, pilasters, beams or columns three inches minimum from any face in masonry seven inches or more in thickness and at the centerline in thinner masonry sections.

J. Lintels and bond beams, unless otherwise indicated, shall be built-in place and filled with grout as specified. Reinforce units with not less than two No. 5 bars full length. Lintels shall extend beyond each side of the opening to a minimum of eight inches unless otherwise noted.

   Provide comer bars at bond beam comers and lap splice straight bars standard lap length.

K. Vertical cells of standard masonry units and pilaster units to be filled shall be aligned to maintain a clear, unobstructed, continuous vertical cell Remove mortar protrusions extending into cells or cavities to be grouted as necessary to have minim.um core sizes required. Units containing reinforcement shall be solid filled with grout as specified

3.04 JOINING OF WORK

A. Exposed surfaces of partially or totally set masonry shall be cleaned before laying adjoining fresh masonry. Loose masonry and mortar shall be removed.

B. If it is necessary to stop off a horizontal run of masonry, rack back one half concrete masonry unit length in each course. Toothing will not be permitted.

C. Intersecting walls shall be keyed together by masonry anchors, joint reinforcement or wire mesh, as indicated. Embed bent ends of anchors and corrugated strap anchors into cores of units filled with mortar or grout.

3.05 BUILDING-IN OF OTHER WORK

A. Build in horizontal joint reinforcement specified in Section 04150 in bed joints of all masonry walls spaced 16 inches vertically. Provide prefabricated corner units at comers. Lap longitudinal joints not less than six inches. Reinforcing shall be installed in the three courses above all openings and extend l'-0" beyond each side of opening. Place joint reinforcement so that longitudinal wires are located over face shell mortar beds and are embedded in mortar for their entire length with minimum cover of 5/8 inch when exposed to weather and 1/2 inch at other locations.

B. Build in work of other trades indicated shall be built into masonry, including anchors, wall plugs, expansion joints, and accessories, as erection progresses. Space and align built-in parts as indicated and do not displace other materials from position.

C. Fill in spaces around built-in items with grout or mortar.

D. Fill pressed metal frames in masonry walls with grout as the wall is laid. Maintain door mute holes open.

E. Where indicated, rake back 1/2-inch joint between metal frames and adjacent masonry to receive caulking.

F. Set steel lintels and bearing plates in non-shrink grout. Steel lintels and plates shall be furnished and installed under this Section as specified in Section 05500.

G. Anchor bolts shall be furnished and installed under this Section as specified under Section 05500. Bolts shall project from the face of the masonry the distance called for on the Drawings or a sufficient distance to allow for the proper attachment intended. All threads shall be oiled and protected by waterproof caps.

H. Steel channel frames for openings through masonry walls shall be furnished and installed under th.is Section and as specified in Section 05500. Fill spaces around frames solid with grout as specified.

3.06 MORTARING

A. Bed Joints:

1. Lay the first course of standard blocks and all courses of rated blocks in full bed of mortar.

2. On masonry piers, columns, and pilasters spread full mortar beds on face shells and webs of block already laid.

3. On all other bed joints apply mortar on face shells only of block already laid.

4. On block to be laid apply a beveled buttering to face shells to ensure filled bed joints.

5. On walls to be grouted, spread full mortar beds on face shells and webs where adjacent to cells or cavities to be reinforced or filled with grout.

6. Place solid units with full bed joints.

B. Head Joints:

1. Apply mortar to vertical face shells on both the block already laid and the block to be laid to ensure a filling head joint.

2. Mortar shall have a minimum depth from each block face equal to the masonry unit face shell thickness.

3. Place solid units with full head joints.

C. Place block by rolling it slightly to a vertical position and shoving it against adjacent block achieving its position and alignment with a minimum adjusting.

D. Adjustment shall be made only while mortar is still soft and plastic by tapping lightly to plumb and bringing in alignment.

E. Check each unit as laid with level for plumbness with wall below.

F. Concrete masonry units shall be dry when laid.

3.07 JOINT TREATMENT

A. Flush Joints: Joints in masonry to receive finish work of other trades shall be struck flush.

B. Facing Concrete Masonry Joint Exposed joints in concrete masonry shall be struck flush and when partially set tooled to a concave with a tool (aluminum tool not permitted) to squeeze mortar into joint producing continuous pressure on mortar against edge of block, both sides of joint. Finish joint shall match joints in accepted mock-up sample.

C. Correction of Joints: Cut out defective joints, refill with mortar, and retool to match adjacent work.

D. Joints on. Bond beams shall be caulked with flexible compound as specified on section 07920.

3.08 REINFORCING STEEL

A. Condition:

1. Reinforcing steel shall be clean and free from defects, loose mill or rust scale, or other coatings that will reduce bond.

2. Do not use reinforcing with kinks or unrequired bends.

3. Do not straighten or repair bars in a manner that will damage the bar or adjacent construction.

B. Fabrication:

1. Fabricate bars without damaging the materials.

2. Perform bending on unheated bars.

3. Bars larger than No. 5 shall not be field bent unless approved by Design Professional of Record.

4. Perform bending and fabricate standard hooks in accordance with ACI 531.1.

5. Provide standard lap length for splices of 48 bar diameters.

6. Do not weld or tack-weld reinforcing bars.

C. Installation:

1. Center vertical reinforcing bar in cell unless noted otherwise on Drawings.

2. Rigidly secure vertical bars at top and bottom, and at intervals of 192 bar diameters or ten feet maximum on center, whichever is less.

3.09 GROUTING

A. General:

1. Set reinforcing steel and anchors in required position and secure against displacement before grouting is started.

2. Freshly mix grout and place in cores while fluid and before the initial set has taken place. Puddle or vibrate grout into place.

3. Grout beams over openings in one continuous operation.

4. Grout vertical cores in maximum five feet lifts. Stop grout pours in vertical cores 1-1/2 inches below a mortar joint, except at top of wall.

5. Use metal lath, mortar, or special units to confine grout to the area required. Do not use materials which may inhibit bond or are combustible.

6. Place grout in such a way as to prevent segregation of materials. Pour grout fluid enough to flow into all crevices of grout spaces leaving no voids.

B. Low-Lift Grouting:

1. To utilize low-lift grouting method, vertical cores to be grouted shall have minimum clear distance between sides of the core of two inches and a clear area of eight square inches.

2. Limit low-lift grouting to maximum wall height of five feet per Lift

3. Do not erect masonry to a height of more than five feet before grouting.

3.10 CLEANING

A. Clean block as it is laid as specified.

B. Block work exposed to view shall be left clean and free of dirt, stains, discolorations, or blemishes.

C. Cleaning methods and materials shall be in accordance with the manufacturer’s instructions of the masonry unit cleaned.

D. Protect corrodible parts, such as metal frames, lintels, etc., from corrosive cleaning materials.

E. No muriatic acid shall be used.

END OF SECTION

SECTION 05500 – METAL FABRICATIONS

PART I - GENERAL

1.01 WORK INCLUDED

A. This Section includes all major items of metal fabrications work, consisting of but not limited to, items listed in Article 2.01.

1.02 RELATED WORK

A. Related Work in Other Sections:

09900	Painting

1.03 REFERENCES

A. Industry standards governing this work are of the latest issue at the date of this Specification- release as shown above, except as otherwise noted:

ASTM F 436 Hardened Steel Washers for Use with High Strength Bolts.

5. American Welding Society [AWS]:

   AWS D1 .1 Structural Welding Code - Steel.

6. Federal Specifications {FSJ:

   FS FF-W-84 Washers, Lock [Spring

   FS F-W-92 Washers, Metal, Flat [Plain].

7. Research Council on Structural Connections of the Engineering Foundation [RCSC]:

   RCSC Structural Joints Using ASTM A 325 or A 490 Bolts.

8. Steel Structures Painting Council [SSPC]:

   SSPC Volume 11, Systems and Specifications.

1.04 QUALITY ASSURANCE

A. Testing Requirements:

   1. Prepare mill tests on all specified ASTM materials.

   2. Qualify shop and field welders in accordance with AWS D1.1 and other applicable AWS standards for all types of welds required to complete this portion of work. Conduct examinations by a recognized agency staffed and equipped for such purposes. Each welder shall be qualified prior to starting to weld.

   3. The contractor shall inspect and test shop and field welds of shear connectors and other types of studs in accordance with AWS D1.1.

B. Material Appearance: For work exposed to view, use materials which are smooth and free from surface blemishes, including seam marks, roller marks, rolled trade names and roughness. Remove such blemishes before application of surface finishes.

C. Allowable Tolerances: Fabrication and erection tolerances for steel shall not exceed those in AISC S302 and S323 unless otherwise noted.

D. Workmanship:

1. Metal fabrications work not conforming to specified requirements including type of material, strength and coatings shall be corrected as directed by Design Professional of Record at Design-Build Entity's expense without extension of contract time.

2. The contractor shall be responsible for cost of corrections or delays to other work affected by or resulting from corrections to metal fabrications work.

1.05 SUBMITTALS TO Design Professional of Record FOR APPROVAL

A. Provide welding certificates for each welder with name and title of person who conducted examination, kind of specimens, position of welds, results of tests and date of examination [see paragraph 1.04 A.2]. Submit seven (7) days prior to commencement of the work.

B. Requests for substitutions or modifications to details. Submit seven [7] days minimum prior to submitting Shop Drawings.

C. Brand and chemical composition of shop applied and field touch-up paints. Submit at same time as Shop Drawings.

D. Shop Drawings for Fabrication and Erection of All Metal Fabrication Members: Prepare Shop Drawings comparable to those in AISC MOO8. Include the following: details of shop and field connections; cuts; holes; brackets; surface preparation; shop painting; type and grade of material; accessory items; anchorage data; type, size and extent of all welds, including welding symbols adopted by AWS; and other pertinent information. Paragraph 4.2.1 of AISC S302, Section 4, is hereby modified to delete the sentence: "This approval constitutes the ASEM/Owner's acceptance of all responsibility for the design adequacy of any connections designed by the fabricator as a part of his preparation of these Shop Drawings." See the General Requirements provisions for other requirements. Review by Design Professional of Record of Shop Drawings is only for general conformance with design concept of project and general compliance with information given in RFP Bridging Documents and Design-Build Contract Documents.

E. Vendor Data for All Manufactured Items: Include specifications, load tables, ultimate capacities, dimension data, anchoring details, installation instructions and other pertinent data. Submit at same time as Shop Drawings.

F. Pattern of Embossments on Checkered Plate: Submit at same time as Shop

Drawings.

1.06 PRODUCT DELIVERY, STORAGE AND HANDLING

A. Deliver anchor bolts and embedded items in sufficient time for installation by others in the concrete or masonry work. Deliver metal fabrications in sequence to conform to the construction schedule.

B. Handle metal fabrications in manner to prevent damage to items or finish.

C. Store items above ground. Provide sufficient support to prevent distortion. Place dunnage between items when stacking.

D. Keep items dry and clean.

1.07 PROJECT/SITE CONDITIONS

A. Existing Conditions:

1. For new construction, field verify correctness of foundations, anchor bolts, or other existing work affecting metal fabrications before starting erection. Report discrepancies to Design Professional of Record.

2. For additions or other modifications to existing structures, field verify dimensions and other things affecting new work before starting fabrication.

3. Obtain approval from Design Professional of Record before making any field changes.

PART II - PRODUCTS

2.01 MATERIALS

A. High Strength Bolts: ASTM A 325.

B. Nuts for High Strength Bolts: ASTM A 194 or A 563, as required by ASTM A 325.

C. Washers for High Strength Bolts: ASTM F 436.

D. Plain Bolts: ASTM A 307.

E. Anchor Bolts: ASTM A 36, unless otherwise noted, for material; ASTM A 307 for other properties.

F. Nuts for Plain Bolts and Anchor Bolts: ASTM A 563, Grade A. Furnish heavy hex nuts for anchor bolts.

G. Washers for Plain Bolts and Anchor Bolts: FS FF-W-84 or FS F-W-92. Use washer most suitable for application.

H. Expansion Bolts: Conform to following ultimate loads based on 3500 psi concrete:

Bolt Size	Min. Pullout	Min. Shear
3/8 in.	4,000 lbs.	5,000 lbs.
½in.	5,700 lbs.	8,000 lbs.
5/8in.	7,000 lbs.	11,000 lbs.
3/4in.	11,000 lbs.	16,000 lbs.
7/8 in.	15,000 lbs.	18,000 lbs.

To determine allowable working loads, use safety factors recommended by manufacturers for the specific application. However, the minimum safety factor shall be 4; this is 25% of above ultimate load values for allowable working loads. Spacing of bolts and distance to edges shall be taken into consideration for loads calculations.

I. Miscellaneous Fasteners: Toggle bolts, powder actuated fasteners, lag screws and miscellaneous connecting devices: Submit manufacturer's data stating materials and ultimate capacities.

J. Welding Electrodes: AWS D1 .1 for steel; applicable AWS standards, or AWS recommendations if standards are not available, for other metals.

K. Welded Studs: AWS D1. 1, General and Mechanical Requirements.

L. Miscellaneous Carbon Steel Structural Shapes: Items such as bars, angles, beams, channels, bent plates for masonry lintels, anchor straps, opening frames, brackets, equipment supports and other items not a part of the structural steel; ASTM A 36.

M. Pipe: Items such as columns, posts, wall and floor sleeves and pipe guards. Provide nominal diameter. Where thickness is not noted, use schedule 40, standard weight; ASTM A 53, Type E or S, Grade B, black finish. The following may be substituted if wall thicknesses are same as for schedule pipe noted on Drawings: ASTM A 500, Grade B or C; ASTM A 501; or ASTM A 618.

N. Checkered Plate: ASTM A 36, thickness as noted on Drawings excluding embossments.

O. Steel Grating: One-piece welded construction conforming to ASTM A 569 for carbon steel and ASTM A 276, Type 304, for stainless steel. Size and type as noted on Drawings. Maximum spacing of bearing bars: 1-3/16 inches On Center. Maximum spacing of cross bars: four inches On Center.

P. Steel Handrails and Posts: Schedule 40, 1-1/2 inches nominal diameter pipe conforming to ASTM A 53, Type E or S, Grade 8, black finish. The following may be substituted if wall thicknesses are same as for schedule 40: ASTM A 500, Grade B or C; ASTM A 501; or ASTM A 618.

Q. Custom Handrails and Posts: See Drawings.

R. Safety Nosing: Cast aluminum or cast iron, with cross-hatched, abrasive surface and integrally cast anchors. Nosing shall be at least 3/8 inch thick by three inches wide with nose protruding minimum 1/4-inch underside. Furnish length equal to width of steps less than six inches for all stairs, except nosing for metal pan stairs shall extend the full length of the tread.

S. Structural Steel Tubing, Square or Rectangular: ASTM A 500, Grade B or C, or ASTM A 618.

T. Miscellaneous Stainless-Steel Shapes: ASTM A 276, Type 304.

U. Stainless Steel Plate and Sheet: ASTM A 167, Type 304. Provide No. 4 finish for sheet, unless noted otherwise on Drawings.

V. Steel Safety Chain for Handrails: No. 1 straight link machine chain with snap fasteners and eye bolts for each end. All materials shall be galvanized in accordance with applicable ASTM industry standards.

W. Steel Wire Rope: ASTM A 603, with Class A weight zinc-coated wires throughout. Furnish all fittings and accessories for a complete installation. Galvanize all fittings and accessories in accordance with applicable ASTM industry standards.

X. Galvanizing Repair Paint: See Section 09900.

Y. Shop Paint: See Section 09900.

Z. Security Mesh: Prepared by simultaneously cutting and stretching steel plate in compliance with: Carbon Steel Security Mesh-ASTM F1267 for Type I and Type 11, Class 1, 2 and 3, Grade A; Stainless Steel Security Mesh - ASTM 1267 Type I and 11, Case 3, Grade A.

2.02 FABRICATION

A. General:

1. Fabricate miscellaneous metals in accordance with AISC S302, S323 and S326 for steel and with lines, dimensions, details and notes shown on Drawings and described in this Specification.

2. Preassemble work in shop to the greatest extent possible to minimize field assembly.

3. In general, shop weld and field bolt connections.

4. Use only welders qualified in accordance with AWS D1.1.

5. Make welds in accordance with AWS D1.1.

6. Conform to RCSC industry standard specified for high strength bolted connections.

7. Use materials of size and thickness shown or, if not shown, of required size and thickness to produce adequate strength and durability in finished product for intended use.

8. From bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing the work.

9. Welding shall be continuous along entire area of contact, unless otherwise noted on Drawings.

B. Steel Channel and Bent Plate Opening and Door Frames:

1. Use mitered, welded connections for all exterior frames and interior frames up to 6' x 7'-2" in size. Larger interior frames may be mitered and bolted.

2. Locate connecting angles, bolts and other members on concealed side.

3. Provide jambs with seat angle at bottom on concealed side, with provision for anchoring to the floor.

4. Where steel frames are installed in masonry walls, provide a minimum of three steel strap anchors at each jamb for openings up to eight feet in height. For openings over eight feet, add an additional pair of anchors for each 2'-6" increase in height, Locate strap anchors at masonry coursing heights. Strap anchors shall be bent PL 1/8" x 2" x 12" long minimum.

5. Drill, tap and cutout door frames as required for hardware.

6. Provide stops for swing doors where required by Drawings.

7. Pressed metal frames are included in Section 08111.

8. Provision shall be made to stiffen the top member for all spans over three feet.

C. Lintels: Length shall be 16 inches longer than opening width unless shown otherwise.

D. Checkered Plate:

1. If possible, cut to length in shop so each section extends over two or more spans.

2. Pre-punch for welding to supports.

3. Cut openings and attach sleeves and kickplates were shown on Drawings.

4. When noted removable, cut finger holes in plate less than 50 pounds per section and install recessed lifting rungs in plate more than 50 pounds.

5. Provide countersunk holes and machine bolts for fastening removable plate.

6. Provide non-slip nosing on edge of plate at top of stairs.

E. Grating:

1. If possible, cut to length in shop so each section extends over two or more spans.

2. Shop cut openings greater than 1'-0" in diameter. Attach sleeves and kick plates where shown on Drawings.

3. Band all openings and edges of grating when edges are not over supports. Banding bars shall be flush with top of bearing bars.

4. Weld bands to every third bearing bar.

5. Banding bars shall be same material as grating.

6. Provide non-slip nosing on edge of grating at top of stairs.

F. Railings and Posts:

1. Fabricate handrail by fitting post to top rail and intermediate rails to post.

2. Space posts not more than five feet on center.

3. Miter all joints and corners, groove weld and grind smooth.

4. Close all exposed ends.

5. Butt railing splices and reinforce with tight-fitting interior sleeves not less than six inches long.

6. Railings may be bent at corners in lieu of jointing, provided a cylindrical cross-section is maintained.

7. Railings, posts and all connections shall be capable of resisting a horizontal loading of 50 pounds per linear foot applied at top rail without exceeding allowable stresses increased by one-third.

8. Handrail connected directly to stairs and intermediate stair landings is included in Section 05510.

2.03 SHOP PAINTING

A. General:

1. Shop paint all metal fabrications, except galvanized steel, cast iron, non-ferrous and other noted items before delivery to the job site.

2. Do not ship metal until the paint is thoroughly dry.

3. Items to have topcoat[s] shall have a primer compatible with the topcoat [s]. See Section 09900.

4. Items to have non-bituminous topcoat[s] shall not be given a bituminous first coat.

B. Surface Preparation: Thoroughly clean steel surfaces prior to painting in accordance with Steel Structure Painting Council's surface preparation as noted on Drawings.

C. Shop Painting:

1. Apply primer and topcoats,if any, in accordance with manufacturer's recommendations.

2. Prior to priming, remove residual deposits resulting from cleaning.

3. Apply prime coat as soon as possible after cleaning, and before deterioration of surface occurs. However, do not allow elapsed time between cleaning

and priming to exceed two hours for surfaces cleaned in accordance with SSPC-SP 6 and SP 10 or 24 hours for surfaces cleaned in accordance with SSPC-SP 3.

4. Apply topcoat, if any, only after base coat has thoroughly dried.

5. Use painting methods which will result in full coverage of joints, corners and edges.

D. Aluminum Protection: Aluminum items that are to be embedded in, or are in contact with concrete, masonry, wet or pressure-treated wood, or absorptive materials subject to wetting, shall be painted with an approved primer.

E. Inaccessible Surfaces: Paint inaccessible surfaces before assembling, except as noted in paragraph 2.03.F.

F. Unpainted Items: The following items shall not be painted:

1. Portions of ferrous metal items that will be in contact with fresh concrete.

2. Contact surfaces of bolted parts for friction-type connections, unless approved by Design Professional of Record for special paint or treatment.

3. All areas within one inch of field welds.

2.04 GALVANIZING

A. When required by Drawings, galvanize ferrous metal items after fabrication in accordance with ASTM A 123, A 385, A 386 and/or ASTM A 525, G90, as appropriate. Galvanize after fabrication, unless not recommended by ASTM standards noted above. Thoroughly clean all weld slag, weld splatter, oil, grease, dirt and other foreign matter from surfaces to be galvanized.

B. When required by Drawings, galvanize bolts, nuts and washers in accordance with ASTM A 153. Conform to additional requirements in ASTM A 325 for high-strength bolts.

PART III - EXECUTION

3.01 ERECTION

A. General:

1. Erect steel in accordance with AISC S302 and S323.

2. Perform all cutting, drilling, fitting, bolting and welding required for installation.

3. Set work accurately in position, level, plumb and free of rack.

4. Provide anchors for items to be built into masonry or concrete work.

5. Insulate metals in contact with materials that will cause electrolytic or chemical action, such as aluminum and steel.

6. Do not drill holes in the bottom flanges of structural members without approval from Design Professional of Record.

7. Furnish all items necessary for securing metal work to other construction.

8. Provide temporary shores and bracing during progress of work to support all loads to which the miscellaneous metals may be subjected, including wind, erection and construction loads.

B. Connections:

1. In general, field bolt connections.

2. When field welds are used, grind smooth welded connections that will be exposed.

3. Fit exposed connections accurately to form tight joints.

4. Do not weld galvanized surfaces unless approved by Design Professional of Record.

5. Design connections to provide suitable access for field installation.

6. Conform to RCSC industry standard specified for high strength bolted connections.

7. When an outer face of bolted parts has a slope greater than 1/20 with respect to a plane normal to bolted axis., use a beveled washer to compensate for lack of parallelism.

8. Welding shall be continuous along entire area of contact, unless otherwise noted on the Drawings.

C. Fasteners:

1. Use only high strength bolts to connect structural members supporting shear loads in addition to own weight. Use plain bolts elsewhere.

2. In general, use expansion bolts in concrete and grouted or solid masonry, toggle bolts or plain through-bolts in hollow masonry, through-bolts in brick

work, and lag screws or through-bolts in wood.

3. Follow manufacturer's recommendations for allowable loads for fasteners anchored in various materials.

4. Use powder actuated or pneumatic driven fasteners only where specifically approved by Design Professional of Record.

5. Do not allow countersunk bolt heads to project above the surface of material in which they are installed.

6. Conform to RCSC industry standard specified for high strength bolted connections.

7. Tighten anchor bolts and plain bolts provide adequate strength for connection without overstressing bolts.

D. Pipe Guards:

1. Set in concrete with six inches minimum around sides and bottom unless otherwise noted on Drawings.

2. Fill with concrete and round off at top.

E. Checkered Plate:

1. Attach plate to all supports with either 3/4-inch plug welds or countersunk machine bolts. Use bolted fasteners where removable plate is required.

2. Fasten plate a minimum of two places at each end support and one place at all intermediate supports for every 2 '-0" width of floor plate panels.

F. Grating:

1. Fasten grating to all supports with either 3/16" x 3/4" long welds or bolted saddle clips. Use bolted saddle clips only where removable grating is required.

2. Fasten grating a minimum of two places at each end support and one place at all intermediate supports for every 2'-0" width of grating panels.

G. Handrails:

1. Plumb, level and align posts.

2. Bolt or weld to structural steel.

3. Grout into concrete pockets concrete with epoxy grout or an approved fast-setting hydraulic grout.

4. Smooth grind field splices of rails.

5. Anchor rails to walls with pipe flanges welded to rail and expansion or toggle bolts.

H. Safety Nosing:

1. Install in all formed concrete stairs and concrete filled metal pan stairs.

2. Set flush with top of concrete.

3. Rod or vibrate concrete around and under nosing to ensure full bedding.

I. Trench and Pit Covers and Frames: Construction shall be such that tops of frames and covers will be flush with the floor.

J. Errors:

1. Immediately report to the architect all errors in shop fabrication of deformation resulting from handling and shipping.

2. Obtain approval from Design Professional of Record for method of correction before proceeding with work.

3. Make approved corrections without additional cost to ASEM/Owner.

4. Do not use gas cutting torches for field correcting fabrication errors without prior approval of Design Professional of Record.

3.02 FIELD PAINTING

A. Clean all mud, weld splatter, weld slag, visible rust and other contaminants from metal.

B. Within 24 hours after cleaning, the field paints unpainted and ungalvanized surfaces, including nuts, bolts, welds and damaged surfaces. Follow manufacturer's recommendations. Use the following materials:

1. For painted items, use same primer used for shop painting, except as follows. Use an approved organic zinc primer for field painting and touch-up when primer is inorganic zinc.

2. For galvanized items, use galvanizing repair paint noted.

END OF SECTION

SECTION 05521 – PIPE AND TUBE RAILINGS

PART I – GENERAL

1.01 RELATED DOCUMENTS

A. RFP Documents, Bridging Drawings, performance criteria and, after award, applicable Design-Build Contract provisions, including applicable general requirements, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:

1. Steel pipe and tube handrails and railing systems.

1.03 DEFINITIONS

A. Definitions in ASTM E 985 for railing-related terms apply to this Section.

1.04 PERFORMANCE REQUIREMENTS

A. General: In engineering handrail and railing systems to withstand structural loads indicated, determine allowable design working stresses of materials based on the following:

1. Cold-Formed Structural Steel: AISI "Specification for the Design of Cold-Formed Steel Structural Members."

B. Structural Performance of Handrails and Railing Systems: Engineer, fabricate, and install handrails and railing systems to withstand the following structural loads without exceeding the allowable design working stress of the materials for handrails, railing systems, anchors, and connections. Apply each load to produce the maximum stress in each of the respective components comprising handrails and railing systems.

1. Top Rail of Guardrail Systems: Capable of withstanding the following loads applied as indicated:

a. Concentrated load of 200 lbs. (890. N) applied at any point and in any direction.

b. Uniform load of 50 lbs. per linear foot (730 N/m) applied horizontally and concurrently with uniform load of 100 lbs. per linear foot (1460 N/m) applied vertically downward.

c. Concentrated and uniform loads above need not be assumed to act

concurrently.

2. Handrails Not Serving as Top Rails: Capable of withstanding the following loads applied as indicated:

    a. Concentrated load of 200 lbs. (890 N) applied at any point and in any direction.

    b. Uniform load of 50 lbs. per linear foot (730 N/m) applied in any direction.

    c. Concentrated and uniform loads above need not be assumed to act concurrently.

C. Thermal Movements: Allow for thermal movement resulting from the following maximum change (range) in ambient temperature in engineering, fabricating, and installing handrails and railing systems to prevent buckling, opening of joints, overstressing of components and connections, and other detrimental effects. Base engineering calculation on actual surface temperatures of materials due to both solar heat gain and nighttime sky heat loss.

    1. Temperature change (Range): 120 deg F (67 deg C) ambient 180 deg F (100 deg C) material surfaces.

D. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1.05 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and applicable General Requirements Sections.

B. Product data for mechanically connected handrails and railing systems, each kind of fitting, grout, anchoring cement, and paint products.

C. Shop drawings showing fabrication and installation of handrails and railing systems including plans, elevations, sections, details of components, and attachments to other units of Work.

    1. For installed handrails and railing systems indicated to comply with certain design loadings, include structural analysis data sealed and signed by the qualified professional engineer who was responsible for their preparation.

D. Samples for initial selection in the form of short sections of railing or flat sheet metal samples showing available mechanical finishes.

E. Samples for verification of each type of exposed finish required, prepared on components indicated below that are of the same thickness and metal indicated for final unit of Work. Where finishes involve normal color and texture variations, include sample sets showing the full range of variations expected.

1. 6-inch- (150-mm-) long sections of each distinctly different linear railing member including handrails, top rails, posts, and balusters.

2. Fittings and brackets.

3. Assembled samples of railing system, made from full-size components, including top rail, post, handrail, and infill. Show method of finishing members at intersections. Sample need not be full height.

F. Qualification data for firms and persons specified in the "Quality Assurance" Article to demonstrate their capabilities and experience. Include a list of completed projects with project names, addresses, names of architects and owners, and other information specified.

G. Product test reports from a qualified independent testing agency evidencing compliance of handrails and railing systems with requirements based on comprehensive testing of current products.

1.06 QUALITY ASSURANCE

A. Single-Source Responsibility: Obtain handrail and railing systems of each type and material from a single manufacturer.

B. Engineer Qualifications: Professional engineer legally authorized to practice in the jurisdiction where Project is located and experienced in providing engineering services of the kind indicated for handrails and railing systems like this Project in material, design, and extent, and that have a record of successful in-service performance.

1.07 STORAGE

A. Store handrails and railing systems inside a well-ventilated area, away from uncured concrete and masonry and protected from weather, moisture, soiling, abrasion, extreme temperatures, and humidity.

1.08 PROJECT CONDITIONS

A. Field Measurements: Where handrails and railing systems are indicated to fit to other construction, check actual dimensions of other construction by accurate field measurements before fabrication; show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to

avoid delaying the Work.

1. Where field measurements cannot be made without delaying the Work, guarantee dimensions and proceed with fabricating handrails and railing systems without field measurements. Coordinate other constructions to ensure that actual dimensions correspond to guaranteed dimensions.

1.09 SEQUENCING AND SCHEDULING

A. Sequence and coordinate installation of wall handrails as follows:

1. Mount handrails only on completed walls. Do not support handrails temporarily by any means not satisfying structural performance requirements.

PART II - PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering handrails and railing systems that may be incorporated in the Work include, but are not limited to, the following:

1. Steel Pipe and Tube Railings:

a. Humane Equipment Co.

b. Wagner. R & B Wagner, Inc.

2.02 METALS

A. General: Provide metals free from surface blemishes where exposed to view in the finished unit. Exposed-to-view surfaces exhibiting pitting, seam marks, roller marks, stains, discolorations, or other imperfections on finished units are not acceptable.

B. Steel and Iron: Provide steel and iron in the form indicated, complying with the following requirements:

1. Steel Pipe: ASTM A 53; finish, type, and weight class as follows:

a. Galvanized finish.

b. Type F, or Type S, Grade A, standard weight (schedule 40), unless otherwise indicated, or another weight, type, and grade required by structural loads.

2. Steel Plates, Shapes, and Bars: ASTM A 36 {ASTM A 36M).

3. Gray Iron Castings: ASTM A 48, Class 30.

4. Malleable Iron Castings: ASTM A 47, Grade 32510 {ASTM A 47M, Grade 22010).

C. Brackets, Flanges, and Anchors: Cast or formed metal of the same material and finish as supported rails, unless otherwise indicated.

2.03 WELDING MATERIALS, FASTENERS, AND ANCHORS

A. Welding Electrodes and Filler Metal: Provide type and alloy of filler metal and electrodes as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.

B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of the type, grade, and class required to produce connections that are suitable for anchoring railings to other types of construction •indicated and capable of withstanding design loadings.

1. For steel railings and fittings, use plated fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating.

C. Fasteners for Interconnecting Railing Components: Use fasteners of the same basic metal as the fastened metal, unless otherwise indicated. Do not use metals that are corrosive or incompatible with materials joined.

1. Provide concealed fasteners for interconnecting railing components and their attachment to other work, except where otherwise indicated.

2. Provide Phillips flat-head machine screws for exposed fasteners, unless otherwise indicated.

D. Cast-in-Place and Post installed Anchors: Anchors of type indicated below, fabricated from corrosion-resistant materials, capable of sustaining, without failure, a load equal to 6 times the load imposed when installed in unit masonry and equal to 4 times the load imposed when installed in concrete, as determined by testing per ASTM E 488, conducted by a qualified, independent testing agency.

1. Cast-in-place anchors.

2. Expansion anchors.

2.04 PAINT

A. Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer, selected for good resistance to normal atmospheric corrosion, compatibility with finish paint systems indicated, and capability to provide a sound foundation for field-applied topcoats despite prolonged exposure, complying with performance requirements of FS TT-P-664.

B. Shop Primer for Galvanized Steel: Zinc-dust, zinc-oxide primer formulated for priming zinc-coated steel and compatibility with finish paint systems indicated, complying with SSPC-Paint 5.

C. Galvanizing Repair Paint: High-zinc-dust-content paint for galvanizing welds in galvanized steel, with dry film containing not less than 94 percent zinc dust by weight, complying with DOD-P-21035 or SSPC-Paint 20.

2.05 GROUT AND ANCHORING CEMENT

A. Non-shrink, Nonmetallic Grout: Premixed, factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturers for interior and exterior applications.

B. 8. Erosion-Resistant Anchoring Cement: Factory-packaged, non-shrink, nonstaining, hydraulic controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound. Provide formulation that is resistant to erosion from water exposure without need for protection by a sealer or waterproof coating and is recommended for exterior use by manufacturers.

C. Available Products: Subject to compliance with requirements, products that may be incorporated in the Work include, but are not limited to, the following:

1. Non-shrink, Nonmetallic Grouts:

a. 8-6 Construction Grout; W.R. Bonsal Co.

b. Diamond-Crete Grout; Concrete Service Materials Co.

c. Supreme; Comix Construction Chemicals.

d. Sure-grip High Performance Grout; Dayton Superior Corp.

e. Euco N-S Grout; Euclid Chemical Co.

f. Five Star Grout; Five Star Products.

g. Vibropruf #11; Lambert Corp.

h. Crystex; L & M Construction Chemicals, Inc.

i. Masterflow 928 and 713; Master Builders Technologies, Inc.

j. Sealtight 588 Grout; W.R. Meadows, Inc.

k. Sonogrout 14; Sonneborn Building Products-ChemRex, Inc.

l. Kemset; The Spray-Cure Company.

2. Erosion-Resistant Anchoring Cement:

a. Bonsal Anchor Cement; W.R. Bonsal Co.

b. Super Por-Rok; Minwax Construction Products Division.

c. Thorogrip; Thero Systems Products.

2.06 FABRICATION

A. General: Fabricate handrails and railing systems to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of hollow members, post spacings, and anchorage, but not less than those required to support structural loads.

B. Assemble handrails and railing systems in the shop to the greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

C. Form changes in direction of members as follows:

1. As detailed.

2. By radius bends of radius indicated.

3. By insertion of prefabricated flush elbow fittings.

4. By any method indicated above, applicable to change of direction involved.

D. Form simple and compound curves by bending pipe in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross section of pipe throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of pipe.

E. Welded Connections: Fabricate handrails and railing systems for connection of members by welding. For connections made during fabrication, weld comers and seams continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

2. Obtain fusion without undercut or overlapping.

3. Remove the welding flux immediately.

4. At tee and cross intersections, cope ends of intersecting members to fit contour of pipe or tube to which end is joined, and weld all around.

5. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and welded surface matches contours of adjoining surfaces.

F. Nonwelded Connections: Fabricate handrails and railing systems by connecting members with railing manufacturer's standard concealed mechanical fasteners and fittings, unless otherwise indicated. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.

1. Fabricate splice joints for field connection using epoxy structural adhesive where this represents manufacturer's standard splicing method.

G. Brackets, Flanges, Fittings, and Anchors: Provide manufacturer's standard wall brackets, flanges, miscellaneous fittings, and anchors to interconnect handrail and railing system members to other constructions.

H. For railing posts set in concrete, provide preset sleeves of steel, not less than 6 inches (150 mm) long with inside dimensions not less than 1/2 inch (12 mm) greater than outside dimensions of post, and steel plate forming bottom closure.

I. Shear and punch metals cleanly and accurately. Remove burrs from exposed cut edges.

J. Ease exposed edges to a radius of approximately 1/32 inch (1 mm), unless otherwise indicated. Form bent-metal corners to the smallest radius possible without causing grain separation or otherwise impairing work.

K. Cut, reinforce, drill, and tap components, as indicated, to receive finish hardware, screws, and similar items.

L. Provide weep holes, or another means to evacuate entrapped water, in hollow

sections of railing members that are exposed to exterior or to moisture from condensation or other sources.

M. Fabricate joints that will be exposed to weather in a manner to exclude water.

N. Provide wall returns at ends of wall-mounted handrails, unless otherwise indicated.

2.07 FINISHES, GENERAL

A. Comply with NAAMM "Metal Finishes Manual" for recommendations related to applying and designating finishes.

B. 8. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering prior to shipment.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one half of the range of approved samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved samples and they are assembled or installed to minimize contrast.

D. Provide exposed fasteners with finish matching appearance, including color and texture, of handrails and railing systems.

2.08 STEEL FINISHES

A. Galvanized Finish: Hot dip galvanize items indicated to be galvanized to comply with applicable standard listed below:

1. ASTM A 153 for galvanizing iron and steel hardware.

2. ASTM A 123 for galvanizing iron and steel products made from rolled, pressed, and forged steel shapes, castings, plates, bars, and strips.

B. Fill vent and drain holes that will be exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.

C. For galvanized handrails and railing systems, provide galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.

D. Preparation for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matters and treat with metallic phosphate process.

PART III – EXECUTION

3.01 PREPARATION

A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installing anchorages, such as sleeves, concrete inserts, anchor bolts, and miscellaneous items having integral anchors, that are to be embedded in concrete as masonry construction. Coordinate delivery of such items to Project site.

3.02 INSTALLATION, GENERAL

A. Fit exposed connections accurately together to form tight, hairline joints.

B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing handrails and railing systems. Set handrails and railing systems accurately in location, alignment, and elevation, measured from established lines and levels and free from rack.

1. Do not weld, cut, or abrade surfaces of handrails and railing components that have been coated or finished after fabrication and are intended for field connection by mechanical or other means without further cutting or fitting.

2. Set posts plumb within a tolerance of 1/4 inch in 12 feet (2 mm in 1 mm).

3. Align rails so that variations from level for horizontal members and from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet (2 mm in 1 m).

C. Field Welding: Comply with the following requirements:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

2. Obtain fusion without undercut or overlapping.

3. Remove welding flux immediately.

4. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing, and welded surface matches contours of adjoining surfaces.

D. Adjust handrails and railing systems prior to anchoring to ensure matching alignment at abutting joints. Space posts at interval indicated but not less than that required by design loadings.

E. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing handrails and railing systems and for properly transferring loads to in-place construction.

3.03 RAILING CONNECTIONS

A. Nonwelded Connections: Use mechanical joints for permanently connecting railing components. Locate exposed fasteners in least conspicuous locations. Seal recessed holes of exposed locking screws with plastic filler, cement colored to match finish of handrails and railing systems.

B. Welded Connections: Use fully welded joints for permanently connecting railing components by welding. Cope or butt components to provide 100 percent contact, or use fittings designed for this purpose.

C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending 2 inches (50 mm) beyond joint on either side; fasten internal sleeve securely to one side; locate joint within 6 inches (150 mm) of post.

3.04 ANCHORING POSTS

A. Anchor posts in concrete by forming or core-drilling holes not less than 5 inches (125 mm) deep and 3/4 inch (20 mm) greater than outside diameter of post. Clean holes of all loose material, insert posts, and fill annular space between post and concrete with the following anchoring material, mixed and placed to comply with anchoring material manufacturer's directions.

1. Non-shrink, nonmetallic grout or anchoring cement.

B. Cover anchorage joint with a round steel flange attached to post as follows:

1. Welded to post after placement of anchoring material.

C. C. Leave anchorage joint exposed, wipe off surplus anchoring material, and leave 1/8- inch (3-mm) buildup, sloped away from post.

3.05 ANCHORING RAIL ENDS

A. Anchor rail ends into concrete and masonry with round flanges connected to rail ends and anchored into wall construction with post installed anchors and bolts.

1. Weld flanges to rail ends.

3.06 ATTACHING HANDRAILS TO WALLS

A. Attach handrails to wall with wall brackets and end fittings. Provide bracket with 1- 1/2-inch (38-mm) clearance from inside face of handrail to finished wall surface.

B. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

C. Secure wall brackets and wall return fittings to building construction as follows:

1. Use a type of bracket with flange tapped for concealed anchorage to threaded hanger bolt.

2. For concrete and solid masonry anchorage, use drilled-in expansion shield and concealed hanger bolt.

3.07 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material.

B. For Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and apply galvanizing repair paint to comply with ASTM A 780.

3.08 PROTECTION

A. Protect finishes of handrails and railing systems from damage during construction period with temporary protective coverings approved by railing manufacturers. Remove protective coverings at time of Substantial Completion.

B. Restore finishes damaged during installation and construction period so that no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish the entire unit, or provide new units.

END OF SECTION

SECTION 06100 – ROUGH CARPENTRY

PART I – GENERAL

1.01 RELATED DOCUMENTS

A. RFP Documents, Bridging Drawings, performance criteria and, after award, applicable Design-Build Contract provisions, including applicable general requirements, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:

1. Wood furring, grounds, nailers, and blocking.

B. Related Sections: The following Sections contain requirements that relate to this Section:

1. Requirements for finish carpentry, including nonstructural carpentry items exposed to view and not specified in another Section.

1.03 DEFINITIONS

A. Rough Carpentry: Carpentry work not specified in other Sections and not exposed, unless otherwise specified.

1.04 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and applicable General Requirements Sections.

B. Wood treatment data are as follows, including chemical treatment manufacturer's instructions for handling, storing, installing, and finishing treated materials:

1. For each type of preservative-treated wood product, include certification by treating plant stating type of preservative solution and pressure process used, net amount of preservative retained, and compliance with applicable standards.

2. For waterborne-treated products, include statement that moisture content of treated materials was reduced to levels indicated before shipment to Project site.

C. Warranty of chemical treatment manufacturer for each type of treatment.

1.05 QUALITY ASSURANCE

A. Testing Agency Qualifications: To qualify for approval, an independent testing agency must demonstrate to Design Professional of Record's satisfaction, based on evaluation of agency-submitted criteria conforming to ASTM E 699, that it has the experience and capability to satisfactorily conduct the testing indicated without delaying the Work.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Keep the materials under cover and dry. Protect from weather and contact with damp or wet surfaces. Stack lumber, plywood, and other panels. Provide air circulation within and around stacks and under temporary coverings.

1. For lumber and plywood pressure treated with waterborne chemicals, place spacers between each bundle to provide air circulation.

PART II - PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Wood-Preservative-Treated Materials:

a. Baxter: J. H. Baxter Co.

b. Chemical Specialties, Inc.

c. Continental Wood Preservers, Inc.

d. Hickson Corp.

e. Hoover Treated Wood Products, Inc.

f. Osmose Wood Preserving, Inc.

2.02 LUMBER, GENERAL

A. Lumber Standards: Comply with DOC PS 20, "American Softwood Lumber Standard," and with applicable grading rules of inspection agencies certified by ALSC's Board of Review.

B. Inspection Agencies: Inspection agencies, and the abbreviations used to reference them, include the following:

1. NELMA - Northeastern Lumber Manufacturers Association.

2. NLGA - National Lumber Grades Authority (Canadian).

3. SPIB - Southern Pine Inspection Bureau.

4. WCLIB - West Coast Lumber Inspection Bureau.

5. WWPA - Western Wood Products Association.

C. Grade Stamps: Provide lumber with each piece factory marked with grade stamp of inspection agency evidencing compliance with grading rule requirements and identifying grading agency, grade, species, moisture content at time of surfacing, and mill.

1. For exposed lumber, furnish pieces with grade stamps applied to ends or back of each piece, or omit grade stamps and provide grade-compliance certificates issued by inspection agency.

D. Where nominal sizes are indicated, provide actual sizes required by DOC PS 20 for moisture content specified. Where actual sizes are indicated, they are minimum dressed sizes for dry lumber.

1. Provide dressed lumber, S4S, unless otherwise indicated.

2. Provide dry lumber with 19 percent maximum moisture content at time of dressing for 2- inch nominal (38-mm actual) thickness or less, unless otherwise indicated.

2.03 WOOD-PRESERVATIVE-TREATED MATERIALS

A. General: Where lumber or plywood is indicated as preservative treated or is specified to be treated, comply with applicable requirements of AWPA C2 (lumber) and AWPA C9 (plywood). except that preservative shall be copper chromated arsenicals (CCA). Mark each treated item with the Quality Mark Requirements of an inspection agency approved by ALSC's Board of Review.

B. Pressure-treat aboveground items with waterborne preservatives to a minimum retention of

C. 0.25 lb./cu. ft. (4.0 kg/cu. m). After treatment, kiln-dry lumber and plywood to a maximum moisture content of 19 and 15 percent. respectively. Treat indicated items and the following:

1. Wood sills, sleepers, blocking, furring, stripping, and similar concealed members in contact with masonry or concrete.

D. Complete fabrication of treated items before treatment, where possible. If cut after treatment, apply field treatment complying with AWPA M4 to cut surfaces. Inspect each piece of lumber or plywood after drying and discard damaged or defective pieces.

2.04 MISCELLANEOUS LUMBER

A. General: Provide lumber for support or attachment of other construction, including bucks, nailers, blocking, furring, grounds, stripping, and similar members.

B. 8. Fabricate miscellaneous lumber from dimension lumber of sizes indicated and into shapes shown.

C. Moisture Content: 19 percent maximum for lumber items not specified to receive wood preservative treatment.

D. Grade: For dimension lumber sizes, provide No. 3 or Standard grade lumber per ALSC's NGRs of any species. For board-size lumber, provide No. 3 Common grade per NELMA, NLGA, or WWPA; No. 2 grade per SPl8; or Standard grade per NLGA, WCU8 or WWPA of any species.

2.05 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this Article for material and manufacture.

1. Provide fasteners with a hot-dip zinc coating per ASTM A 153 or of Type 304 stainless steel.

B. Nails, Wire, Brads, and Staples: FS FF-N-105.

C. Power-Driven Fasteners: CASO NER-272.

D. Wood Screws: ASME B18.6.1.

E. Lag Bolts: ASME B18.2.1. (ASME B18.2.3.8M)

F. Bolts: Steel bolts complying with ASTM A 307, Grade A {ASTM F 568, Property Class 4.6); with ASTM A 563 (ASTM A 563M) hex nuts and, where indicated, flat washers.

PART III -EXECUTION

3.01 INSTALLATION, GENERAL

A. Discard units of material with defects that impair the quality of rough carpentry and that are too small to use with minimum number of joints or optimum joint arrangement.

B. Set rough carpentry to required levels and lines, with members plumb, true to line, cut, and fitted.

C. Fit rough carpentry to other construction; scribe and cope as required for accurate fit. Correlate location of furring, nailers, blocking, grounds, and similar supports to allow attachment of other construction.

D. Apply field treatment complying with AWPA M4 to cut surfaces of preservative-treated lumber and plywood.

E. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:

1. CASO NER-272 for power-driven staples, P-nails, and allied fasteners.

2. "Recommended Nailing Schedule" of referenced framing standard and with AFPA's "National Design Specifications for Wood Construction."

3. "Table 23-1-Q-Nailing Schedule" of the Uniform Building Code.

4. "Table 2305.2-Fastening Schedule" of the BOCA National Building Code.

5. "Table 1705.1-Fastening Schedule," of the Standard Building Code.

F. Use common wire nails, unless otherwise indicated. Use finishing nails for finishing work. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finished materials. Make tight connections between members. Install fasteners without splitting wood; predrill as required.

G. Use hot dip galvanized or stainless-steel nails.

H. Countersink nail heads on exposed carpentry work and fill holes with wood filler.

3.02 WOOD GROUNDS, NAILERS AND BLOCKING.

A. Install wood grounds, nailers and blocking where shown and where required for screeding or attaching other work. Form to shapes shown and cut as required for true line and level of attached work. Coordinate locations with other work involved.

B. Attach to substrates to support applied loading. Recess bolts and nuts flush with surfaces, unless otherwise indicated. Build into masonry during installation of masonry work. Where possible, anchor to formwork before concrete placement.

C. Install permanent grounds of dressed, preservative-treated, key-beveled lumber not less than 1-1/2 inches (38 mm) wide and of thickness required to bring face of ground to exact thickness of finish material. Remove temporary grounds when no longer required.

END OF SECTION

SECTION 06200 – FINISH CARPENTRY

PART I – GENERAL

1.01 WORK INCLUDED

A. This Section includes finish carpentry and related items.

1.02 RELATED WORK

A. Related Work in Other Sections:

09900 Painting

1.03 REFERENCES

A. Industry standards governing this work are of the latest issue at the date of this Specification release, except as otherwise noted:

- National Lumber Manufacturers Association.
- The Douglas Fir Plywood Association.
- “Quality Standards” of the Architectural Woodworking Institute [AWI].
- The American Wood Preservers Association.
- National Board of Fire Underwriters.
- American Plywood Association.
- National Woodwork Manufacturing Association.
- Hardwood Plywood Manufacturer's Association.
- National Electrical Manufacturer's Association [NEMA] Standards GP-30, 43 and 50-LD3.

1.04 QUALITY ASSURANCE

A. Grade and Treatment Marking:

1. Marking: Lumber and plywood shall bear grade and treatment mark indicating compliance with this Specification.

2. Grade Marking: Comply with regulations of inspection bureau or agency having jurisdiction.

1.05 SUBMITTALS

A. Samples: Two 2” by 2" pieces of each color and pattern of plastic laminate representative of actual finish, pattern, texture, and color to be used.

B. Shop Drawings:

1. Show plans, elevations, sections, methods of assembly, and. anchorage.

2. Indicate species and thickness of materials, locations of cut outs, hardware blocking and hardware to be furnished.

3. Indicate plumbing items to be built-in or enclosed in work furnished under this Section.

4. Identify areas for jobsite placement

1.06 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Wrap or carton materials to protect from damage during shipment and storage. Mark clearly for job site location.

B. Materials are not to be fabricated until Shop Drawings and samples have been approved.

C. Materials shall not be delivered until it is required for incorporation into the structure. Materials shall be carefully protected against all possible damage upon delivery to the building.

D. Materials shall be stored inside a building, in a dry and ventilated area and remain in manufacturer’s cartons or wrapping.

E. Casework items shall be assembled and hardware applied at mill to the greatest extent practicable.

1.07 PROJECT/SITE CONDITIONS

A. Inspect job for conditions which would prevent execution of this work as specified. Do not proceed until such conditions are corrected.

1.08 SEQUENCING/SCHEDULING

A. Schedule delivery of materials to coordinate with the work of other trades and avoid construction delays.

PART II – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Acceptable Manufacturers for Plastic Laminate:

1. Wilson Art Plastics [Base manufacturer].
2. Formica Corp.
3. Westinghouse Corp., Micarta.

2.02 BASIC MATERIALS

A. Grades and Kinds of Wood: Finish in accordance with the grading rules of the National Lumber Manufacturers Association under whose jurisdiction the species was manufactured with the applicable manufacturer's stamp.

1. Quality: Dressed four sides[S4S], sound and free from warpage.
2. Moisture Content Not to exceed U% for millwork lumber, all lumber kiln dried.
3. Lumber of every kind shall be free from knots, sap stain, twist, and decay. The use of green or partially dried lumber or lumber is wet by rain. Snow, or other causes will not be permitted.
4. Millwork: Sound, close grained, kiln-dried lumber, thoroughly seasoned stock. Exposed wood parts shall be rift sawn white oak. Concealed wood parts shall be Grade "Band better" Douglas Fir.
5. Wood Trim and Base:
    a. Material Standard: AWI100, custom grade.
6. Shelving: Douglas Fir 3/4 inch thick, five-ply plywood, Grade A/B, DFPA, with mortised and glued hardwood nosing, except were noted otherwise. AWI 600, Custom Grade.
7. Shelf Hardware:
    a. Brackets for Fixed Shelves: Equal to Stanley V797BG, gray enamel finish of sizes to fit shelves.
    b. Adjustable Shelf Standards and Supports: Zinc or brass plated, equal to Knape and Vogt Mfg. Co. Nos. 255 and 256.
8. Closet Rods and Flanges: Knape and Vogt No. 770-5, 1-5/16 inches OD tube and No. 734 and 735flanges.

9. Plastic Laminate:

    a. General: High pressure plastic laminate, heat resisting, satin finish unless otherwise noted in Finish Schedule.

    b. Thickness:

        1) Horizontal and General Use Where High Performance Is Required: 0.050 inch thick, plus or minus 0.005 inch, complying with NEMA GP50, NEMA L03.

        2) Vertical Surface Type: 0.030 inch thick, plus or minus 0.004 inch, complying with NEMA GP28, NEMA LD3.

        3) Postforming Type: 0.042 inch thick, plus or minus 0.005 inch, complying with NEMA PF43 and NEMA LD3.

    c. Use chemical resistant type for laboratory uses.

    d. Adhesive: As recommended by manufacturer.

10. Exposed Plywood: A/ A or "B and better" Douglas Fir DFPA, except as otherwise specified. Use interior or exterior grade as conditions require. Plywood required to be painted shall be Creson Paper overlaid. Thickness of plywood as indicated on the Drawings and specified.

11. Wood Handrails:

    a. Material Standard: AWI100, Premium Grade.

    b. Species and Cut Plainsawn white oak.

12. Prefinished Plywood Paneling: Georgia Pacific “barn plank” three-ply rotary cut ponderosa pine, weathered gray.

13. Miscellaneous Woodwork: Where no mention is made to the kind of wood for

14. finish carpentry and millwork, wood shall be Grade "B and better" Douglas Fir.

15. Adhesives: Water resistant type.

16. Fasteners: Finishing nails for woodwork of the smallest size commensurate with the function and use intended. Screws shall be Phillips head, chrome-plated, or stainless steel, size as required for the application.

17. Railing Brackets and Steel Railing Bar: As detailed.

PART III – EXECUTION

3.01 GENERAL

A. Field Measurements: Take and be responsible for final measurements after walls adjacent to shelves and counter tops have been installed.

B. Preliminary work shall consist of inspecting the materials for damage and the structure and surfaces for alignment and completeness, including painting and "positioning" of members which will support the finish carpentry materials. Damaged materials or incomplete items shall not be installed.

1. The structure shall be plumb, level, and alignment. Structural and framing members and surfaces to be covered shall be in place, secure, and painted. Surfaces on, or to which materials and items are to be attached shall be complete, dry, smooth, and within tolerances. Discrepancies in the structure surfaces shall be corrected before work is started.

C. No finish carpentry or millwork shall be done until all wet trades have completed their work and such work is cured and dry, and minimum temperature established for finishing work is maintained.

D. Cutting and fitting in connection with finish carpentry work shall be done, as required for and by work of other trades, and repaired neatly afterwards.

E. Painting of Finish Carpentry: Comply with Section 09900.

F. Custom Grade Millwork: Finished and assembled at the mills, as far as practicable, and delivered to the job site ready to set in place. Shop fabricated in accordance with the reviewed Shop Drawings and this Specification.

G. Members shall be mortised, tenoned, doweled, blocked, and glued together so as to avoid the use of nails as much as possible. Tenons and dowels shall be made to a driving fit Dowels shall be of hardwood. and at least two shall be used in each joint

H. Moldings and trim shall be cleanly cut, sharply defined and miters accurately made.

I. Joints: Make neatly and carefully, on the miter as far as possible, tight and so formed to conceal shrinkage. Plain butt-joints without an approved device for preventing separation at joints will not be accepted.

J. Nails and Screws, Where Necessary: Concealed, blind-nailed wherever possible, but where not possible, the nailing shall be done with finishing nails of the smallest size commensurate with the function and shall be so located and

driven as not to be visible in the finish.

K. Surfaces: Smooth machine finished, straight, and clean, sanded with the grain, with stains, abrasions, cross scratches, raised grain, and other defects removed before priming or painting.

L. Exposed Edges of Plywood: Edge-banded with solid stock wood of same species as adjacent finish surfaces.

M. Wood finish shall be back primed prior to job delivery, unless noted for "natural finish".

3.02 INSTALLATION

A. Finish carpentry and millwork shall be installed in accordance with reviewed Shop Drawings and this Specification.

1. Finish carpentry installation shall be of workmanship common to best practices of the trade.

2. Use only highly skilled finish carpenters for installation of millwork

B. Fixed shelving shall be supported on metal brackets. For shelves of long lengths, support shall include additional brackets spaced on not greater than 4'-0" centers.

C. Adjustable Shelving: Install shelf standards recessed or surface mounted, as detailed. Carefully adjust before fastening to ensure that shelves will be level

D. Closet Rods and Flanges: Install in accordance with manufacturer's instructions at heights indicated on the Drawings.

E. Millwork:

1. Carefully install millwork in place, framed, and secured in the most rigid manner, neatly and accurately fitted, and scribed as necessary. Set finish work absolutely true, level, and plumb.

2. Running Finish, Such as Bases, Moldings and Trim: Commercial lengths, coped at returns and interior angles, mitered at comers and jointed only where solid fastenings can be made.

3. Use concealed fastenings or blind nailing of the size commensurate for the use intended. Make necessary field miters and other connections with tight hairline joints and formed to conceal shrinkage. Sand joints after installation. Set nails for putty stopping.

F. Cabinet Work: This work shall include toilet room vanities, counter top work, base cabinets, wall cabinets, receptionist counters, and similar items as shown on the Drawings.

1. Fabrication:

a. Fabricate cabinet work in accordance with Custom Grade requirements of AWL

b. As far as possible, assemble work in the shop in unit sizes as large as can be delivered into the area of installation.

c. Shop-prepare attachment devices for field connections.

2. Counter Tops:

a. Material and Finish: 3/4 inch Douglas Fir plywood, five ply, Grade A/C, DFPA, Exterior Grade covered with plastic laminate specified in Article 2.02Paragraph A.9. Laminated plastic shall be self-edged.

b. Back Splashes: Four inches high, 3/ 4 inch Exterior Grade Plywood continuous around perimeter of top where adjacent to wall. Splash backs shall be laminated to counter top to form a one-piece unit covered with laminated plastic on exposed faces and edges.

c. Use exterior grade plywood for all counter tops.

3. Base and Wall Cabinets:

a. Quality: AWI Custom Grade.

b. Finish Materials:

1) For Exposed Solid Natural Wood: Quarter sawn white oak.

2) For Exposed Solid Wood Paint Finish: Close grained "B and Better• Douglas Fir.

3) Exposed Plywood for Natural Finish: Quarter sawn white oak with •A" veneer on exposed sides.

4) Exposed Plywood for Paint Finish: Hardwood face veneered.

5) Plywood for Plastic Laminate Finish: Hardwood face veneered.

4. Cabinet Hardware:

a. Hinges:

1) Provide one pair for doors up to 36 inches high and 1-1/2 pairs for doors over 36 inches high.

2) Equal or similar to Stanley.

b. Pulls:

1) Each door and drawer shall have one pull.

2) Equal or similar to Stanley

c. Catch:

1) Each door should have one magnetic catch.

2) Equal to Stanley No. SP41 with 15-pound pull.

d. Drawer Slides: Each drawer shall be equipped with one set of ball bearing nylon roller drawer slides, Knape and Vogt Mfg. Company's No. 1240. The capacity for slides shall be 50 pounds. Use No. 1300, 75-pound capacity when heavy loading is expected.

5. Cabinet Doors: Overlay type. Drawer fronts shall be similar.

6. Installation of Cabinet Work

a. General: Install cabinet work plumb, level, true and straight with no distortions. Shim, if required, shall be concealed. Secure to grounds stripping and blocking with concealed fasteners and blind nailing. Scribe cut for accurate fit to other finished work

b. Cabinet Hardware: Install in accordance with manufacturer's instructions. Rabbet [recess] shelf standards flush into vertical wood supports.

c. Adjustments: Adjust cabinet work and hardware so that drawers and doors operate smoothly with proper clearances and without forcing or binding.

3.03 PROTECTION AND CLEANUP

A. Woodwork shall be left clean, free from warp, twist, open joints, or any other defects.

B. Protection of installed materials shall be the responsibility of the Design-Build

Entity until the Project has been accepted by the ASEM/Owner. Damaged materials shall be removed and replaced with new materials by the Design-Build Entity at no additional expense to the ASEM/Owner.

END OF SECTION

SECTION 7270 – FIRESTOPPING & SMOKE SEALS

PART I – GENERAL

1.01 DEFINITIONS

A. For the purposes of this section the following definitions shall apply;

B. Firestop System: means a specific construction consisting of any device intended to close off an opening or penetration during a fire and/or materials that fill an opening in a wall or floor assembly where penetration is by cables, cable trays, conduits, ducts, pipes and any poke through termination device, such as electrical outlet boxes along with their means of support through the wall or the floor opening. (ref: ASTM E-814)

C. Firestop System Report: means results reported in accordance with the performance in the tests prescribed in the ASTM E-814 methods. Reports shall include the assembly, the materials and penetrating items of the tested Firestop Systems and each condition shall be identified and described. Drawings depicting geometry, exact size (length-width- thickness) and location of firestop systems within the test assembly shall be recorded. (ref: ASTM E-814)

D. Listed System Design: means an informational listing by an Accredited Testing Agency developed by Firestop Systems Reports depicting the correct use and installation of firestop materials. These published listings contain drawings depicting geometry, minimum/maximum dimensions for all the individual components tested including penetration item type and size, annular space, insulating materials used, substrate types and thickness, sealant types and thickness, etc.

E. Fire Compartment: means an enclosed space in a building that is separated from all other parts of the building by enclosing construction providing a Fire Separation having a required fire-resistance rating. Fire Compartments are also referred to as Fire Zones.

F. Fire Resistance Rating: means the time in hours or fraction thereof that a material or assembly of materials will withstand the passage of flame and the transmission of heat when exposed to fire under specified conditions of test and performance criteria.

G. Fire Separation: means a construction assembly that acts as a barrier against the spread of fire.

H. Firewall: means a type of fire separation of noncombustible construction which subdivides a building or separates adjoining buildings to resist the spread of fire, and which has a fire-resistance rating and structural ability to remain intact

under fire conditions for the required fire-rated time.

I. Combustible Construction: means that type of construction that does not meet the requirement for noncombustible construction. Combustible means that a material fails to meet the acceptance criteria of Standard Method of test for determination of non-combustibility in Building Materials

J. Noncombustible Construction: means that type of construction in which a degree of fire safety is attained by the use of noncombustible materials for structural members and other building assemblies. Noncombustible means that a material meets the acceptance criteria of Standard Method of test for determination of non-combustibility in Building Materials.

K. Authority Having Jurisdiction (AHJ): means the governmental body responsible for the enforcement of any part of the Standard codes or the official or agency designated to exercise such a function and/or the Design Professional of Record.

L. Service Penetration: means any hole or void created in the faces or edges of Fire Separations or Firewalls for Mechanical and Electrical through penetrations or poke through termination devices and/or other building services.

M. Firestop Material: means any material used individually or as a component to create an onsite or off-site ASTM E-814 Firestop Systems.

N. Single Component Firestop System: means a Firestop Material that has a Listed Systems Design and is used individually without the use of high temperature insulation or other materials to create firestop systems.

O. Multiple Component Firestop System: means a group of Firestop Materials that are used within a Listed Systems Design to create a Firestop System.

P. Smoke Seal: means an elastomeric sealant material that has been used for a Single Component Firestop System and that has a ASTM E-84 flame spread rating of 25 or less.

Q. Tightly Fitted: means penetrating items that are cast in place in Noncombustible Construction or have "0" annular space in Combustible Construction. In Combustible Construction Fire Separations each assembly of this type must have a Smoke Seal.

R. Third Party Testing Agency: means any accredited Standards Council notified testing agency approved to perform Fire Endurance Testing as outlined in this section of Work which includes any of the following agencies.

    1. Underwriters Laboratories (United States), UL mark.

2. Inchcape Testing Service NA Ltd. (formerly Warnock Hersey), WH mark

1.02 WORK INCLUDED

A. Work of this Section comprises Firestop Materials and Listed Systems Designs intended to act as Firestop Systems and Smoke Seals at openings around penetrations, at un-penetrated openings, at projecting or recessed items, and at openings and joints within and around Fire Separations and Firewalls.

B. Provide seals in all Fire Rated Separations and Firewalls to form tight barriers to retard the passage of flame and smoke.

C. The installed seals shall provide and maintain the fire resistance rating of the adjacent floor, wall or other fire separation assembly to the requirements of ASTM E-814 and acceptable to Authorities Having Jurisdiction and the Engineer.

D. Firestop and smoke seals within mechanical (i.e. inside sleeves, ducts, dampers) and electrical assemblies (i.e. inside electrical bus ducts, conduits) shall be provided as part of the Mechanical Systems and Electrical Systems Work, respectively. Firestop and Smoke Seal around the outside of such mechanical and electrical assemblies where they penetrate Fire Rated Separations and Firewalls shall form part of the Work of this Section.

E. Fluid seals as well as fire and smoke seals are required for all floor penetrations in Laboratories and Operating Rooms in Hospitals, Universities and Schools.

1.03 RELATED WORK

A. Cast In Place Concrete

B. Area Separation Walls

C. Basic Materials and Methods

1.04 QUALITY ASSURANCE

A. Provide the work of this Section using competent installers, experienced in the application of the materials and systems being used, approved and trained by the material or system manufacturer.

B. Firestop Systems shall conform to the fire (F) and temperature (T) ratings of ASTM E-814 and other local requirements of Authorities Having Jurisdiction.

C. Firestop Materials and Smoke Seal materials shall have a flame spread rating of 25 or less.

1.05 REFERENCES AND ACCEPTABLE STANDARDS

A. ASTM E-814 Standard Method of Fire Tests of Firestop Systems.

B. ASTM E-119 Standard Method of Fire Endurance Tests of Building Construction and Materials.

C. ASTM E-84 Standard Method of Testing for Surface Burning Characteristics of Building Materials and Assemblies.

1.06 SUBMITTALS

A. Submit the following:

1. Manufacturer's Listed Systems Designs.
2. Manufacturer's Product Data Sheets.
3. Manufacturer's Materials Safety Data Sheets.
4. Manufacturer's printed instructions for installation on each proposed product.
5. Manufacturer's prefabricated devices providing descriptions sufficient for identification at the Project site.
6. Manufacturer's Third-Party Testing Agency Firestop Systems Report (only if requested).
7. Clearly indicate which firestop sealant products are single component firestops and which are multiple components (ones that require high temperature insulation filler materials to comply with the ASTM E-814 Standard).
8. Samples of each type of firestopping and smoke seal material.
9. Submit Trade Qualifications (TQ) Certificate or related experience of each installer performing work on the site.
10. If an independent firestop contractor is engaged, a copy of that contractor’s Liability Insurance Policy. (This clause is optional in some jurisdictions)

1.07 DELIVERY AND STORAGE

A. Deliver and store materials in their original unopened containers. Protect from damage and environmental conditions as noted under manufacturer's recommendations.

PART II – PRODUCTS

2.01 ACCEPTABLE PRODUCTS AND OR MANUFACTURERS

A. Only Firestop Systems tested to the ASTM E-814 Standard complete with Listed Systems Designs showing their appropriate individual applications are acceptable.

2.02 MATERIALS

A. All Firestop Systems and Listed Systems Designs selected for use shall be listed and tested by a recognized and accredited Third Party Testing Agency in accordance with ASTM E-814, Standard Method of Fire Tests of Firestop Systems.

B. All Smoke Seal materials shall have been tested in accordance with ASTM E-84 Standard Method of Testing for Surface Burning Characteristics of Building Materials and Assemblies and have a flame spread classification of 25 or less.

C. Fire resistance ratings of installed Firestop Systems shall not be less than the fire resistance rating of the surrounding Fire Separation or Firewall.

D. All Listed Systems Designs selected for use shall have a Smoke Seal

E. incorporated within the ASTM E-814 rated Firestop Systems.

F. All Firestop Materials that will come directly in contact with plastic pipe or plastic-coated wire shall have undergone Firestop Material compatibility testing by the Firestop Systems manufacturer and/or the pipe or wire manufacturer.

G. Where moisture seals are required for floor penetration in Operating Rooms, Morgues, and Laboratories in Hospitals, Universities and Schools, the Firestop Materials selected must be compatible with Formalin. (37% formaldehyde / 63% methanol)

H. All Firestop Materials and Smoke Seals shall have elastomeric characteristics to allow for building settling and seismic movement.

I. All Firestop Materials and Smoke Seals shall be free of asbestos.

J. Site Firestop Systems must be installed in accordance with the Listed System Design limitations, unless a technical evaluation is approved by one of the acceptable Third-Party Testing Agencies.

K. All Listed Systems Designs used must provide a Flame (F), Temperature (T) and Hose (H) stream rating.

PART III - EXECUTION

3.01 PREPARATION

A. Examine sizes and conditions of voids to be filled to establish correct thickness and installation of Firestop Materials. If silicones are to be used ensure that substrates and penetrating item surfaces are dry, clean and frost free.

B. Prepare surfaces in contact with Firestop Systems and Smoke Seals to manufacturer's instructions.

C. Mask where necessary to avoid spillage and over coating onto adjoining surfaces; remove stains on adjacent surfaces.

3.02 INSTALLATION

A. ASTM E-814 tested and Listed Systems Designs govern all installations

B. of Firestop Systems and Firestop Materials.

C. In all Firestop Systems that require mineral wool or ceramic fiber backer or filler materials, these materials must be dry and free of other contaminants before, during and after installation of sealant Firestop Materials. Alkaline water contamination of the backer or filler materials may cause corrosion of metallic penetrating items.

D. Apply Firestop Systems and Smoke Seals in strict accordance with manufacturer's instructions and Listed Systems Designs to provide required temperature and flame rated seals, to prevent the passage of fire and smoke, and where specifically designated, the passage of fluids.

E. Provide temporary forming and packing as required.

F. Tool or trowel all exposed surfaces to smooth, neat and tidy finish.

G. Notify Design Professional of Record when completed installations are ready for inspection and prior to concealing or enclosing Firestop Systems and Smoke Seals.

3.03 SERVICE PENETRATION FIRESTOP SYSTEMS

A. Firestop and smoke seal gaps and holes in all Fire Separation and Firewall construction through which, wire, cables, ductwork, piping and all other protrusions pass as a result of Work using an appropriate Listed System Design identifying substrate type, penetrating material type, penetrating item size, minimum and maximum annular space and overall "FTH" ratings.

B. In Combustible Construction (membrane GWB type) where the framing members are wood a Fire and Temperature rise "FT" rating is required equal to that of the rating of the Fire Separation. Include openings which have been formed and sleeved.

C. In Combustible Construction (membrane GWB type) where paper faced insulation or combustible vapor, and air barriers are incorporated within the separation a Fire and Temperature rise "FT" rating is required equal to that of the rating of the Fire Separation.

D. In Combustible Construction (membrane GWB type), firestop and smoke seal all penetrations of the faces as above and firestop and smoke seal all penetrations that enter or exit (transverse) the edges of one Fire Separation into another Fire Separation. (i.e. where the header or sill plate is penetrated in the interior of a wall separation into the hollow ceiling or floor cavity of the adjacent separation).

E. In Combustible Construction (membrane GWB type), fire taping of service penetrations and HVAC duct work is not acceptable unless a tested ASTM E-814 Firestop Systems is submitted.

F. Apply Firestop Systems at unpenetrated openings and sleeves installed for future use through Fire Separations and Firewalls.

G. Install 1/4" to 3/8" bead of firestop caulking at interface of retaining angles around fire dampers, where angles meet fire-rated assembly, and between retaining angles and fire damper, both sides of penetration. At floor locations, the sealant bead at top of assembly is adequate.

H. Where necessary, remove fiberglass insulation and replace mineral wool insulation from insulated pipes and ducts where such services penetrate a Fire Separation or Firewall unless the Listed Systems Design permits such insulation to remain within the Firestop System.

3.04 HORIZONTAL JOINT AND CURTAIN WALL FIRESTOP SYSTEMS

A. For joint configurations through floor slabs, ceilings and roof Fire Separation unless otherwise stipulated; The detail to be used shall state the substrate material that has been tested for i.e.; (concrete to concrete) or (concrete to metal). Where metal curtain wall assemblies are meeting floor slab assemblies, use only Listed Systems Designs that have been tested to ASTM E-814 for concrete to metal curtain wall performance.

B. Single Component Firestop Systems; Install as per the Listed Systems Design with the following additional provisions:

1. All Listed Systems Designs selected for use shall have a smoke seal incorporated within the Firestop System.

2. For joints 1" (25mm) and under in width; Install as per Listed Systems Design.

3. For joints 1 ¼" to 3" (30mm-75mm); Install 6 lb./pcf mineral wool board stock at a depth of 4" (100mm). Cut mineral wool board stock 10% over the width dimension and compress into the opening.

4. For joints 3" (75mm) and over; Use mineral wool as above and insert impaling clips on 16" (400mm) centers. Impaling clips, minimum heavy gauge galvanized steel 25 mm wide x 0.65 mm thick, Z formed, dimensions to suit location and width of void to be filled. Butt succeeding sections of mineral wool backer material tightly up against preceding. Leave no voids.

C. Multiple Component Firestop Systems; Install as per the Listed Systems Design with the following additional provisions:

1. All Firestop Systems selected for use shall have a Smoke Seal incorporated within the Listed System Design.

2. For all joints 1" to 3" (25mm-75mm); Install 6 lb./pcf mineral wool board stock at a depth of 4" (100mm). Cut mineral wool board stock 10% over the width dimension and compress into the opening.

3. For joints 3" (25mm) and over; Use mineral wool as above and insert impaling clips on 16" (400mm) centers. Impaling clips, minimum heavy gauge galvanized steel 25 mm wide x 0.65 mm thick, Z formed, dimensions to suit location and width of void to be filled. Butt succeeding sections of mineral wool backer material tightly up against preceding. Leave no voids.

3.05 VERTICAL JOINT AND WALL FIRESTOP SYSTEMS

A. Firestop and Smoke Seals at top of masonry and gypsum wall board Fire Separations and Firewalls which extend nominally to within 20 mm of underside of deck above. Provide adequate depth of material to fill gap flush with face of wall, except as otherwise specified.

B. Insert at both sides of vertical joints where masonry or concrete Firewalls or Fire Separations intersect with Fire Separations of Combustible Construction (GWB).

C. Insert at both sides of control and sway joints in masonry or concrete

D. Firewalls or Fire Separations.

E. Where wall/slab junction is exposed in finished work, apply a concrete gray in color fire-rated sealant to gap, tooling to a concave joint.

3.06 EXPOSED SERVICE PENETRATIONS IN CEILING OF UNDERGROUND PARKING AREAS

A. Where the bottom of a Firestop System is exposed, seal bottom side of the assembly with a fire rated elastomeric firestop sealant.

3.07 SCHEDULE OF LOCATIONS

A. Service Penetrations:

1. All Mechanical penetrations and poke through termination devices in Fire Separations and Firewalls.

2. Penetrations in Sills and Headers of gypsum wall board Fire Separations. (interior of wall)

3. All Electrical penetrations and poke through termination devices in Fire Separations and Firewalls.

4. All Telecommunication and Cable penetrations and poke through termination devices in Fire Separations and Firewalls.

5. All HVAC penetrations and poke through termination devices in Fire Separations and Firewalls.

6. All Sprinkler Heads protruding from Fire Separations.

B. Joint Firestopping:

1. Concrete Vertical or Horizontal Joints with dissimilar Firewalls or Fire Separations.

2. Top of Masonry Fire Separations and Firewalls to underside of slabs and decks.

3. Masonry Vertical or Horizontal Joints with dissimilar Firewalls or Fire Separations.

4. Gypsum Wall Board Vertical or Horizontal Joints with dissimilar Firewalls or Fire Separations.

5. Slab edge to curtain wall assembly.

6. All Mechanical Damper Joints in Fire Separations and Firewalls. Completely

around all wall and floor dampers, both sides of the wall-on-wall dampers, top side only in floor dampers.

3.08 ABNORMAL CONDITIONS NOT COVERED BY SUBMITTED LISTED SYSTEMS DESIGNS

A. Where any of the following conditions are encountered after Work has commenced notify the Design Professional of Record and/or the site Engineer prior to proceeding.

1. Penetrating item materials not covered by Listed Systems Design(s)

2. Penetrating item sizes exceeding the parameters of Listed Systems Design(s)

3. Annular spaces exceeding the parameters of Listed Systems Design(s)

4. Vertical or horizontal joints exceeding the parameters of Listed Systems Design(s)

3.09 INFORMATION TO BE RETAINED ON SITE AT ALL TIMES

A. First-stop System Trade Qualification Certificate (TQ) or installer Resume of experience.

B. Firestop System Manufacturer's Listed Systems Designs, Product Data Sheets and Materials Safety Data Sheets.

C. Firestop System Manufacturer's printed instructions for installation on each product and prefabricated device.

3.10 CLEAN UP

A. Remove excess materials and debris and clean adjacent surfaces immediately after application to satisfaction of Construction Manager. Remove and/or correct staining and discoloring of adjacent surfaces as directed.

B. Remove temporary dams after the initial set of Firestop Systems where such materials are left exposed in finished areas and flame spread rating of such materials exceed a value of 25.

3.11 TESTING

A. Destructive Testing

1. Cut tests will be performed at random locations throughout the Work to check for Firestop Systems component sealant depths and fill weights of filler/backer materials.

B. Non-Destructive Testing

1. At the Authority Having Jurisdiction or Architects discretion perform a series of 5 fog tests to random locations as designated by Design Professional of Record. Should any penetration, joint or void, under the jurisdiction of this Section, emit visible fog, make repairs and replace deficiencies and re-perform fog test at no addition cost to Design-Build Entity.

2. Fog units (machines) shall have a formulation output range of

3. 6.8 L/h. Formulation particle size 0.5 - 25 microns. Fogging agent shall be non-toxic, non-staining and shall provide a heavy fog at 30 PPM with a permissible airborne level concentration of 50 PPM.

4. Fog at a rate of 4 s / 2.8 m3. Maintain the fog density until the inspection is complete.

END OF SECTION

SECTION 07901 – JOINT SEALANTS

PART I – GENERAL

1.01 RELATED DOCUMENTS

A. RFP Documents, Bridging Drawings, performance criteria and, after award, applicable Design-Build Contract provisions, including applicable general requirements, apply to this Section.

1.02 SUMMARY

A. This Section includes joint sealants for the following locations:

1. Exterior joints in vertical surfaces and nontraffic horizontal surfaces as indicated below:

a. Control and expansion joints in cast-in-place concrete.

b. Control and expansion joints in unit masonry.

c. Perimeter joints between materials listed above and frames of doors and windows.

d. Other joints as indicated.

2. Exterior joints in horizontal traffic surfaces as indicated below:

a. Control, expansion, and isolation joints in cast-in-place concrete slabs.

b. Tile control and expansion joints.

c. Other joints as indicated.

3. Interior joints in vertical surfaces and horizontal non-traffic surfaces as indicated below:

a. Perimeter joints of exterior openings where indicated.

b. Joints between tops of non-load-bearing unit masonry walls and underside of cast- in place concrete slabs and beams.

c. Tile control and expansion joints.

d. Vertical control joints on exposed surfaces of interior unit masonry and concrete walls and partitions.

e. Perimeter joints between interior wall surfaces and frames of interior

doors, windows, and elevator entrances.

f. Perimeter joints of toilet fixtures.

g. Other joints as indicated.

4. Interior joints in horizontal traffic surfaces as indicated below:

a. Control and expansion joints in cast-in-place concrete slabs.

b. Control and expansion joints in stone flooring.

c. Control and expansion joints in tile flooring.

d. Other joints as indicated.

B. Related Sections: The following Sections contain requirements that relate to this Section:

1. Requirements for flashing and sheet metal, including sealing joints associated with roofing applications.

2. Requirements for glass and glazing, including sealants used in glazing.

3. Requirements for acoustical ceiling systems, including sealing edge moldings at ceiling perimeters.

4. Requirements for tile work, including sealing tile joints.

1.03 SYSTEM PERFORMANCE REQUIREMENTS

A. Provide elastomeric joint sealants that have been produced and installed to establish and to maintain watertight and airtight continuous seals without causing staining or deterioration of joint substrates.

1.04 SUBMITTALS

A. General: Submit the following in accordance with Conditions of Contract and applicable General Requirements Sections.

B. Product data from manufacturers for each joint sealant product required.

1. Certification by joint sealant manufacturer that sealants plus the primers and cleaners required for sealant installation comply with local regulations controlling use of volatile organic compounds.

C. Samples for initial selection purposes in form of manufacturer's standard bead

samples, consisting of strips of actual products showing full range of colors available, for each product exposed to view.

D. Samples for verification purposes of each type and color of joint sealant required. Install joint sealant samples in 1/2-lnch (13-mm) wide joints formed between two 6-inch (150-mm) long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

E. Certificates from manufacturers of joint sealants attest that their products comply with specification requirements and are suitable for the use indicated.

F. Qualification data complying with requirements specified in "Quality Assurance" article. Include a list of completed projects with project names, addresses, names of Architects and Owners, plus other information specified.

G. Compatibility and adhesion test reports from elastomeric sealant manufacturers indicating that materials forming joint substrates and joint sealant backings have been tested for compatibility and adhesion with joint sealants. Include sealant manufacturer's interpretation of test results relative to sealant performance and recommendations for primers and substrate preparation needed to obtain adhesion.

H. Product test reports for each type of joint sealants indicated, evidencing compliance with requirements specified.

I. Preconstruction field test reports indicating which products and joint preparation methods demonstrate acceptable adhesion to joint substrates.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced Installer who has completed joint sealant applications similar in material, design, and extent to that indicated for Project that have resulted in construction with a record of successful in-service performance.

B. Testing Laboratory Qualifications: To qualify for acceptance, an independent testing laboratory must demonstrate to Design Professional of Record's satisfaction, based on evaluation of laboratory-submitted criteria conforming to ASTM E 699, that it has the experience and capability to conduct satisfactorily the testing indicated without delaying progress of the Work.

C. Single Source Responsibility for Joint Sealant Materials: Obtain joint sealant materials from a single manufacturer for each different product required.

D. Preconstruction Compatibility and Adhesion Testing: Submit to joint sealant manufacturers samples of materials that will contact or affect joint sealants for

compatibility and adhesion testing as indicated below:

1. Use test methods standard with manufacturers to determine if priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.

    a. Perform tests under normal environmental conditions that will exist during actual installation.

2. Submit not fewer than 9 pieces of each type of material, including joint substrates, shims, joint sealant backings, secondary seals, and miscellaneous materials.

3. Schedule sufficient time for testing and analysis of results to prevent delay in the progress of the Work.

4. Investigate materials failing compatibility or adhesion tests and obtain joint sealant manufacturer's written recommendations for corrective measures, including use of specially formulated primers.

5. Testing will not be required when joint sealant manufacturer is able to submit joint preparation data required above that are acceptable to Design Professional of Record and are based on previous testing of current sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those submitted.

E. Product Testing: Provide comprehensive test data for each type of joint sealant based on tests conducted by a qualified independent testing laboratory on current product formulations within a 24-month period preceding date of Design-Build Entity's submittal of test results to Design Professional of Record.

    1. Test elastomeric sealants for compliance with requirements specified by reference to ASTM C 920. Include test results for hardness, stain resistance, adhesion and cohesion under cyclic movement (per ASTM C 719), low-temperature flexibility, modulus of elasticity at 100 percent strain, effects of heat aging, and effects of accelerated weathering.

    2. Include test results performed on joint sealants after they have cured for 1 year.

F. Preconstruction Field Testing: Prior to installation of joint sealants, field-test their adhesion to joint substrates as follows:

    1. Locate test joints where indicated or, if not indicated, as directed by Design Professional of Record.

2. Conduct field tests for each application indicated below:

    a. Each type of elastomeric sealant and joint substrate indicated.

    b. Each type of non-elastomeric sealant and joint substrate indicated.

3. Notify Design Professional of Record one week in advance of the dates and times when mock-ups will be erected.

4. Arrange for tests to take place with joint sealant manufacturer's technical representative present.

5. Test Method: Test joint sealants by hand pull method described below:

    a. Install joint sealants in 60 inches (1500 mm) joint lengths using same materials and methods for joint preparation and joint sealant installation required for completed Work. Allow sealants to cure fully before testing.

    b. Make knife cuts horizontally from one side of joint to the other followed by 2 vertical cuts approximately 2 inches (50 mm) long at side of joint and meeting horizontal cut at top of 2-inch (SO-mm) cuts. Place a mark 1 inch (25 mm) from top of 2-inch (50-mm) piece.

    c. Use fingers to grasp 2-inch (50-mm) piece of sealant just above 1-inch (25-mm) mark; pull firmly down at a 90-degree angle or more while holding a ruler alongside of sealant. Pull sealant out of joint to the distance recommended by sealant manufacturer for testing adhesive capability, but not less than that equaling specified maximum movement capability in extension; hold this position for 10 seconds.

6. Report whether sealant in joint connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each type of product and joint substrate.

7. Evaluation of Field Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

G. Field-Constructed Mock-Ups: Prior to installation of joint sealants, apply elastomeric sealants as follows to verify selections made under sample submittals and to demonstrate aesthetic effects as well as qualities of materials and execution:

    1. Joints in field-constructed mock-ups of assemblies specified in other Sections that are indicated to receive elastomeric joint sealants specified in

this Section.

H. Pre-Installation Conference: Conduct conference at Project site to comply with the applicable General Requirements provisions governing pre-installation conferences.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Project site in original unopened containers or bundles with labels indicating manufacturer, product name and designation, color. expiration period for use, pot life, curing time, and mixing instructions for multicomponent materials.

B. Store and handle materials in compliance with manufacturer's recommendations to prevent their deterioration or damage due to moisture, high or low temperatures. contaminants, or other causes.

1.07 PROJECT CONDITIONS

A. Environmental Conditions: Do not proceed with the installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside the limits permitted by joint sealant manufacturers.

2. When joint substrates are wet.

B. Joint Width Conditions: Do not proceed with the installation of joint sealants where joint widths are less than allowed by joint sealant manufacturer for application indicated.

C. Joint Substrate Conditions: Do not proceed with installation of joint sealants until contaminants capable of interfering with their adhesion are removed from joint substrates.

1.08 SEQUENCING AND SCHEDULING

A. Sequence installation of joint sealants to occur not fewer than 21 nor more than 30 days after completion of waterproofing, unless otherwise indicated.

PART II – PRODUCTS

2.01 MATERIALS, GENERAL

A. Compatibility: Provide joint sealants, joint fillers, and other related materials that are compatible with one another and with joint substrates under conditions

of service and application, as demonstrated by sealant manufacturers based on testing and field experience.

B. Colors: Provide color of exposed joint sealants to comply with the following:

1. Provide selections made by Design Professional of Record from manufacturer's full range of standard colors for products of type indicated.

2.02 ELASTOMERIC JOINT SEALANTS

A. Elastomeric Sealant Standard: Provide manufacturer's standard chemically curing elastomeric sealants that comply with ASTM C 920 and other requirements indicated on each Elastomeric Joint Sealant Data Sheet at end of this Section, including those requirements referencing ASTM C 920 classifications for Type, Grade, Class, and Uses.

1. Additional Movement Capability: Where additional movement capability is specified in Elastomeric Joint Sealant Data Sheet, provide products with the capability, when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, to withstand the specified percentage change in the joint width existing at time of installation and remain in compliance with other requirements of ASTM C 920 for Uses indicated.

B. Available Products: Subject to compliance with requirements, elastomeric sealants that may be incorporated in the Work include, but are not limited to, the products specified in each Elastomeric Sealant Data Sheet.

2.03 PREFORMED FOAM SEALANTS

A. Preformed Foam Sealants: Manufacturer's standard preformed, pre-compressed, impregnated open-cell foam sealant manufactured from high-density urethane foam impregnated with a nondrying, water repellent agent; factory-produced in pre-compressed sizes and in roll or stick form to fit joint widths indicated and to develop a watertight and airtight seal when compressed to the degree specified by manufacturer; and complying with the following requirements:

1. Properties: Permanently elastic, mildew-resistant, nonmigratory, nonstaining, and compatible with joint substrates and other joint sealants.

2. Impregnating Agent: Manufacturer's standard.

3. Density: Manufacturer's standard.

4. Backing: None.

5. Available Products: Subject to compliance with requirements, pre-formed foam sealants that may be incorporated in the Work include, but are not limited to, the following:

    a. "Emseal," Emseal Corp.

    b. "Emseal Greyflex," Emseal Corp.

    c. "Wil-Seal 150," Wil-Seal Construction Foams Div., lllbruck.

    d. "Wil-Seal 250," Wil-Seal Construction Foams Div., lllbruck.

2.04 JOINT SEALANT BACKING

A. General: Provide sealant backings of material and types that are nonstaining; are compatible with joint substrates, sealants, primers and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

B. Plastic Foam Joint Fillers: Preformed, compressible, resilient, nonstaining, non-waxing, non-extruding strips of flexible plastic foam of material indicated below and of size, shape, and density to control sealant depth and otherwise contribute to producing optimum sealant performance:

    1. Open-cell polyurethane foam.

    2. Closed-cell polyethylene foam, non-absorbent to liquid water and gas, non-outgassing in unruptured state.

    3. Proprietary, reticulated, closed-cell polymeric foam, non-outgassing, with a density of 2.5 pcf (40 kg/cu. m) and tensile strength of 35 psi (240 kPa) per ASTM D 1623, and with water absorption less than 0.02 g/cc per ASTM C 1083.

    4. Any material indicated above.

C. Elastomeric Tubing Joint Fillers: Neoprene, butyl, EPDM, or silicone tubing complying with ASTM D 1056, nonabsorbent to water and gas, capable of remaining resilient at temperatures down to -26 deg F (-32 deg C). Provide products with low compression set and of size and shape to provide a secondary seal, to control sealant depth, and otherwise contribute to optimum sealant performance.

D. Bond-Breaker Tape: Polyethylene tape or other plastic tape as recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint filler materials or joint surfaces at back of joint where such adhesion would

result in sealant failure. Provide self-adhesive tape where applicable.

2.05 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by joint sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint sealant-substrate tests and field tests.

B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealants backing materials, free of oily residues or other substances capable of staining or harming in any way joint substrates and adjacent nonporous surfaces, and formulated to promote optimum adhesion of sealants with joint substrates.

C. Masking Tape: Nonstaining, non-absorbent material compatible with joint sealants and surfaces adjacent to joints.

PART III – EXECUTION

3.01 EXAMINATION

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint sealant performance. Do not proceed with the installation of joint sealants until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with the recommendations of joint sealant manufacturer and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.

2. Clean concrete, masonry, unglazed surfaces of ceramic tile, and similar porous joint substrate surfaces by brushing, grinding, blast cleaning, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining from above cleaning operations by vacuuming or blowing out joints with oil-free compressed air.

3. Remove laitance and form release agents from concrete.

4. Clean metal, glass, porcelain enamel, glazed surfaces of ceramic tile, and other nonporous surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants.

B. Joint Priming: Prime joint substrates where indicated or where recommended by joint sealant manufacturer based on preconstruction joint sealant-substrate tests or prior experience. Apply primer to comply with joint sealant manufacturer's recommendations. Confine primers to areas of joint sealant bond; do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape where required to prevent contact of sealant with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove the tape immediately after tooling without disturbing joint seal.

3.03 INSTALLATION OF JOINT SEALANTS

A. General: Comply with joint sealant manufacturer's printed installation instructions applicable to products and applications indicated, except where more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations of ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. Acoustic Sealant Application Standard: Comply with recommendations of ASTM C 919 for use of joint sealants in acoustical applications as applicable to materials, applications, and conditions indicated.

D. Installation of Sealant Backings: Install sealant backings to comply with the following requirements:

1. Install joint fillers of type indicated to provide support of sealants during application and at position required to produce the cross-sectional shapes and depths of installed seal and relative to joint widths that allow optimum sealant movement capability.

a. Do not leave gaps between ends of joint fillers.

b. Do not stretch, twist, puncture, or tear joint fillers.

c. Remove absorbent joint fillers that have become wet prior to sealant application and replace with dry material.

2. Install bond breaker tape between sealants where backer rods are not used between sealants and joint fillers or back of joints.

E. Installation of Sealants: Install sealants by proven techniques that result in sealants directly contacting and fully wetting joint substrates, completely filling recesses provided for each joint configuration, and providing uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability. Install sealants at the same time sealant backings are installed.

F. Tooling of Nonsag Sealants: Immediately after sealant application and prior to time skinning or curing begins, tool sealants to form smooth, uniform beads of configuration indicated, to eliminate air pockets, and to ensure contact and adhesion of sealant with sides of joint. Remove excess sealants from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturers.

1. Provide concave joint configuration per Figure SA in ASTM C 1193, unless otherwise indicated.

2. Provide flush joint configuration, per Figure SB in ASTM C 1193, where indicated.

a. Use masking tape to protect adjacent surfaces of recessed tooled joints.

3. Provide recessed joint configuration, per Figure SC in ASTM C 1193, of recess depth and at locations indicated.

G. Installation of Preformed Foam Sealants: Install each length of sealant immediately after removing protective wrapping, taking care not to pull or stretch material, and to comply with sealant manufacturer's directions for installation methods, materials, and tools that produce seal continuity at ends, turns, and intersections of joints.

3.04 CLEANING

A. Clean off excess sealants or sealant smears adjacent to joints as work progresses by methods and with cleaning materials approved by manufacturers of joint sealants and of products in which joints occur.

3.05 PROTECTION

A. Protect joint sealants during and after curing periods from contact with contaminating substances or from damage resulting from construction operations or other causes so that they are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or

deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so that installations with repaired areas are indistinguishable from original work.

PRODUCT DATA SHEET 1 - ELASTOMERIC JOINT SEALANT

A. Base Polymer. Neutral-curing silicone.

B. Type: S (single component).

C. Grade: NS (non-sag).

D. Class: 25.

E. Additional Movement Capability: 50 percent movement in extension and SO percent in compression for a total of 100 percent movement.

F. Use[s] Related to Exposure: NT (nontraffic).

G. Uses Related to Joint Substrates: M, G, A and, as applicable to joint substrates indicated,0.

H. Available Products:

795, Dow Corning Corp.

799, Dow Corning Corp.

Silpruf Sealant, General Electric Co. 864 Silicone, Pecora Corp.

895 Silicone, Pecora Corp. 890 Silicone, Pecora Corp. Spectrem 2, tremco

END OF SECTION

SECTION 07920 – SEALANTS AND CAULKINGS

PART I – GENERAL

1.01 WORK INCLUDED

A. This Section includes caulking, sealant, and related items.

1.02 QUALITY ASSURANCE

A. Certify that materials to be used are in accordance with the Design Professional of Record's specifications.

B. Compatibility of Materials: Provide only materials which are proven to be compatible with each other and with adjacent joint material.

1.03 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in original manufacturer packaging with seals and labels intact Handle and store in accordance with manufacturer's instructions.

B. Caulking and sealant materials shall have shelf-life clearly indicated by terminal date on each carton, package, or container.

1.04 PROJECT/SITE CONDITIONS

A. Weather Conditions:

1. Do no install under weather conditions contrary to manufacturer's specifications for installation.

2. Proceed with work only when forecasted weather conditions are favorable for joint cure and development of high early bond strength.

3. Wherever joint width is affected by ambient temperature variations, install materials only when temperatures are in lower third of manufacturer's recommendations.

B. Protection of Adjacent Surfaces:

1. Protect either by applying masking material or manipulating application equipment to confine caulking or sealant material in joint.

2. If masking materials are used, allow no tape to touch cleaned surfaces to receive sealant, and remove tape immediately after finished tooling is accomplished and before surface skin has started to form.

3. Remove misapplied caulking or sealant materials from surfaces immediately, using solvents and methods recommended by manufacturer.

4. Restore surfaces from which caulking or sealant materials have been removed to their original condition and appearance.

C. Inspect job for conditions which would prevent the execution of this work as specified. Do not proceed until such conditions are corrected.

PART II – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Provide caulking and sealant from the following manufacturers: Dow Corning and G.E. for Silicone; W.R. Grace, Pecora Corp. and Sonneborne for polysulfide. Equivalent materials from other manufacturers may be provided, if approved prior to bid by the Design Professional of Record. Materials shall be from one source for each type specified.

2.02 CAULKING AND SEALANT MATERIAL

A. Interior Caulking System: Two component polysulfide sealants, selected from one of the following "Hornflex Thickol LP-32", "Synthacalk GC-5" or "Sonolastic Sealant''.

B. Primer: As recommended by the caulking or sealant manufacturer.

C. Backup Materials, Where Required: "Ethafoam" as manufactured by Dow Chemical Company or approved equivalent material. Size of backup material shall be such that a minimum of 25% compression and a maximum of 50% is obtained in all joints. Braided rods are not acceptable.

D. Bondbreaker: Polyethylene Bondbreaker tape recommended by sealant manufacturer.

E. Solvents and cleaning agents as recommended by the manufacturer for use with the caulking or sealant being applied.

F. Color:

1. Interior Joints at Prefinished Surfaces Not to be Painted.

2. Other Interior Locations: as approved by the Design Professional of Record.

PART III – EXECUTION

3.01 INSTALLATION

A. Caulking and Sealant Materials: Install materials in accordance with the manufacturer's printed directions for the material and substrates involved.

3.02 AREAS OF APPLICATION

A. The required typical applications of sealants and caulking include, but are not necessarily limited to the following general locations:

1. Wall joints, including perimeter of metal doors and vision panels.

2. Flooring joints.

3. Joints at penetrations of walls, decks and floors by piping and other services and equipment.

4. Other interior joints between different building materials where voids are created by construction joints and where indicated on Drawings.

3.03 PREPARATORY WORK

A. Inspection: Examine joint surfaces to receive caulking and sealant materials, and report to the ASEM/Owner's Representative all unacceptable conditions. Commencement of work shall constitute acceptance of joint surface conditions.

B. Cleaning:

1. General: Thoroughly clean joints scheduled to receive caulking and sealant materials. Rake joints to full width and depth. Remove loose particles present or resulting from cleaning operations by blowing out joints with oil free compressed air. All traces of bituminous materials must be removed.

2. Porous Surfaces: Clean surfaces such as concrete by grinding, blast-cleaning, mechanical abrading, acid washing, or combination of these methods to provide a clean, sound base surface for caulking and sealant adhesion. Remove form oils by blasting-cleaning. Ensure that concrete is fully cured and free from laitance, loose aggregate, and surface treatments. If surface treatments are present, test for adhesion before proceeding with sealing work.

3. Nonporous Surfaces: Clean Surfaces such as metal and glass in accordance with system manufacturer's recommendations. Do not use solvents that leave a residue. Apply and remove solvents with clean white cloths. Do not allow solvents to air dry without wiping.

C. Protection: Prior to priming, apply masking tape to adjacent surfaces. Leave

masking tape in place until the tooling operation is complete.

3.04 APPLICATION

A. General: Employ only proven installation techniques which will ensure that sealants will be deposited in uniform, continuous ribbons without gaps or air pockets, with complete "wetting" of the joint bond surfaces equally on opposite sides. Except as otherwise indicated, fill sealant rabbet to a slightly concave surface, slightly below adjoining surfaces. Where horizontal joints are between a horizontal surface and a vertical surface, fill joint to form a slight cove, so that joint will not trap moisture and dirt.

B. Back-up: Install back-up material to proper depth in joints. Use back-up material of suitable size and shape, so that when compressed [25% to 50%], it will fit in joints as required. Carefully roll back-up material into joints to avoid stretching or twisting. Use bond-breaker strip in all joints where sufficient room for back-up material does not exist and where required by manufacturer's recommendations.

C. Primer: Prime surfaces in accordance with manufacturer's recommendations and allow them to dry before applying sealing material.

D. Caulking and Sealant Follow manufacturer's instructions regarding mixing, pot life, and application procedure. Do not apply sealing materials during wet or humid weather. Apply sealing materials in full bead and force into joint.

E. Tooling: Tool joints to compress the compound into the joint. Except as recommended by the sealing material manufacturer, do not use liquid solutions to moisten tools. Remove masking tape immediately after tooling.

3.05 CLEANING

A. Remove excess sealing materials from adjacent surfaces. Clean surfaces using procedures recommended by the sealing material manufacturer.

END OF SECTION

SECTION 08100 – METAL DOORS AND FRAMES

PART I – GENERAL

1.01 SCOPE

A. A The contractor shall provide all materials, labor and equipment necessary to furnish, deliver and install all work for this section as required by the drawings and/or herein specified.

B. All materials used in the fabrication of metal doors and frames shall be free from defects impairing their strength, durability or appearance.

C. The contractor shall provide all materials, labor and equipment necessary to furnish, deliver and install all work for this section as required by the drawings and/or herein specified, but not necessarily limited to the following:

1. Hollow Metal Doors.
2. Formed Sheet Steel Frames for doors and fixed view windows.
3. Formed Sheet Steel Louvers in Hollow Metal.
4. Reinforcing, Supporting and Attachment devices for work of this section.
5. Underwriters Laboratories, Inc., Labeled Doors and Frames.
6. Reinforcing Hardware as required.
7. Prime Painting for all doors and frames.

D. Referenced Standards

1. American National Standards Institute (ANSI):
2. National Builders Hardware Association (NBHA):
3. Builders Hardware Manufacturers Association: BHMA
4. National Fire Protection Association (NFPA):
5. Building Code "Reglamento de Edificaci6n" - P.R.:
6. Código para la Prevención de Incendios del Cuerpo de Bomberos de P.R
7. ASTM A526/A 526M-90 - Standard Specification for Steel, Sheet, Zinc-Coated (Galvanized) by the Hot-Dip Process, Commercial Quality.

8. ASTM A 591 - Standard Specification for Electronically Galvanized Sheet Steel.

9. ASTM A 569/A 569M-9la- Standard Specification for Steel, Carbon (0.15 Maximum Percent), Hot-Rolled Sheet and Strip Commercial Quality.

10. ASTM B 749-85(91)- Standard Specification for Lead and Lead Alloy Street, Strip, and Plate Products.

11. SDI 100-1991 - Recommended Specifications; Standard Steel Doors and Frames; Steel Door Institute.

12. SDI 105-92- Recommended Erection Instructions for Steel Frames; Steel Door Institute.

E. Shop Drawings: Submit six (6) copies of shop drawings of all items herein specified to architect for approval. Obtain approval of drawings prior to proceeding with manufacturing. Drawings shall include sizes, details of construction, anchorage, methods of assembly, hardware details and complete information regarding materials, gauges and finish. Approval indicates general conformance with design but does not relieve contractor of full responsibility for the correctness of the documents furnished or for conformance with the detailed provisions of this specifications.

F. Samples: Submit for approval corner sections of metal frames and hollow metal doors, indicating all construction details, prime coat for frames and doors, submit all required accessories and anchors.

G. Painting: All steel doors are to be thoroughly cleaned and primed to present a smooth surface and given sufficient coats of baked-on rust inhibiting primer as required to receive finish painting. Frames shall be prime painted at the factory with dust, zinc oxide primer.

H. Storage: Doors and frames shall be stored in an upright position under cover at the building site on wood sills or on floors in a manner that will prevent damage.

I. Manufacturer: The Law requires that local manufactured products be specified. Specifications are based on the published standards of Trujillo Alto Metal Corp. Other manufacturers must comply with specific requirements as indicated herein.

J. Labeled Work-Fire Protection: Doors and frames requiring labels as indicated on drawings shall meet the requirements for the ratings noted in accordance with the established procedures of the Underwriter Laboratories, Inc. Doors and frames shall bear the necessary labels separately.

PART II – PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Products of the following manufacturers, provided they comply with the specific requirements of the contract documents, will be considered acceptable:

1. AMWELD Building Products.

2. Basic Industries.

3. Pioneer Industries, Inc.

4. Trujillo Alto Metal Corporation.

B. Special requirements - Doors and frames must be furnished through a local manufacturer or an acceptable local manufacturer representative active in this trade for not less than four (4) years.

Local manufacturers or manufacturer representative of proposed products must submit, together with shop drawings, Certificates of Compliance and Good Standing for a period covering the last four years from the following:

1. Fondo del Seguro del Estado

2. Negociado de Arbitrios del Departamento de Hacienda

3. Negociado de Contribuci6n sobre Ingresos del Departamento de Hacienda.

4. Certificado de conformidad del Informe Anual del Departamento de Estado.

2.02 MATERIALS

A. Steel Sheets, galvanized: ASTM A 526 commercial quality, G60 zinc coating mill phosphatized or electrogalvanized bonderized with 2.5 MY per side zinc coating as per ASTM-A591.

B. Lead Sheet: Rolled sheet lead, complying with FS QQ-L-201, Grade C or ASTM B 749, type L51120 (chemical lead), in sizes and thicknesses indicated.

2.03 FABRICATION

A. General: Shop-fabricate assemblies to the greatest extent possible assuring that installed units will be without warp, twist, bow or other defects in appearance or function.

B. Exposed Panel Faces: Fabricate from cold-rolled electrogalvanized bonderized steel.

C. Exposed Door Faces: Fabricate from cold-rolled electrogalvanized bonderized steel.

D. Frames: Fabricate from cold or hot rolled electro or hot dipped galvanized steel.

E. Top and Bottom Channels, Stiffeners and Reinforcements: Fabricate from cold rolled electrogalvanized steel.

F. Louvers and Glass Moldings: Fabricate Louvers and Moldings from cold-rolled electrogalvanized steel.

G. Seal top and bottom edges with an added 16-gauge electrogalvanized steel channel to form a flush closure.

H. Exposed Screws and bolts: Where required, provide only countersunk, flat Phillips-bead fasteners.

2.04 STEEL DOORS:

A. General: Fabricate doors for scheduled openings in styles and sizes as shown on drawing and in accordance with the best-known industrial practice for custom hollow metal doors. Doors to be no less than 1 3/4" thick. Door shall have flush seamless faces.

B. Doors shall be fabricated from electrogalvanized Steel sheets of gauges herein after specified. Doors shall be of 14 gauges or of gauges shown on contract drawings.

C. Core Material: All interior doors shall be free of blemishes and spot-welding marks with a honeycomb core of not more than 3/4" cell. Provide polystyrene core at all exposed exterior doors.

D. Door Louvers: Where called for on contract drawings, provide non removable 16-gauge electrogalvanized louver blades of the inverted "V" type for interior doors and 14-gauge electrogalvanized storm proof louver blades at exterior doors. Louver blades shall be rigid, leveled, equally spaced to present a neat appearance. Louver shall provide 5/8" clearance between louver blades. Louver blades shall be set into 16-gauge electrogalvanized steel frames. Pre-assembled louver blades with frame are to be inserted within the core of the door and welded to both faces of door. -See details

E. Closure Channels: For added bending resistance provide a non-removable (welded)Top and bottom closure channel of 16 gauge electrogalvanized steel

running the full width of the door to provide a flush cover top and bottom. Closure channel to be welded to both faces of door. Provide water tight sealed cover top at all exposed exterior doors. For doors over 40" wide provide channels of 14-gauge galvanized steel.

F. Meeting Style: Provide a double integral astragal interlocked between active and inactive door and/or as shown on contract drawings. Astragal should provide latch protection from both sides of the door. Astragal shall be flushed to door surface on both sides. See detail

G. Door Panels: Where metal panels are required provide such panels of same gauge and thickness as metal door and fabricated from electrogalvanized steel.

H. Door Glass Mouldings: Glass mouldings shall consist of a four-sided fixed moulding on the exterior side of door and a loose moulding on the interior side. The glass moulding on the exterior side shall be non-removable fabricated from 16-gauge electrogalvanized steel. Exterior fixed moulding shall be welded to the interior of the door prior to assembly of door. Moulding shall be not less than 5/8" deep and factory pre-fitted for a neat appearance. The removable glass moulding shall be 5/8" deep made of 16-gauge electrogalvanized steel. Loose mouldings shall be factory pre-fitted and predrilled and countersunk for 1/4" round flat head machine screw. See details

I. Beveled Edges: In order to maintain the minimum possible clearance at jambs provide doors with beveled edges. The rate of bevel shall be one eight (1/8") of an inch in two (2'') inches. See details.

J. All doors shall be mortised, reinforced, drilled, and tapped for all specified mortise hardware and reinforced only for surface applied hardware. Drilling and tapping for surface applied hardware to be done at time of installation.

K. Soundproof Doors and Frames

Where called for provide Sound Attenuating Doors with a rated STC as indicated on drawings. Doors shall be of 2 3/8" thick fabricated from not less than 16-gauge galvanized steel face sheets. Provide galvanized flush covered non-removable steel channel top. Meeting stiles of pair openings shall be of the double integral astragal type provided with required sound seals. Frame stops to be not less than one inch high provided with a double continuous perimeter sound seal. Automatic drop sill together with horizontal seals at aluminum threshold shall provide a continuous sound seal at bottom of door. Frames for soundproof doors shall be fabricated from 14 gauge galvanized steel and properly anchored and sealed at perimeter wall.

2.05 STEEL FRAMES AND BORROWED LIGHT FRAMES.

A. General: Fabricate steel frames for scheduled openings, in sizes, styles, and profiles as shown.

B. Frames shall be fabricated from 14-gauge electrogalvanized steel. Frames to be notched, mitered and mechanically interlocked to a hairline joint at forty five (45) degrees. Frames shall be factory assembled and fully welded. Where indicated on drawings frames shall be provided with invisible comer joints. See details

C. Frames are to be mortised, reinforced drilled and tapped for all mortise hardware. They shall be factory reinforced only for surface applied hardware.

D. Guards: Weld protective covers to back of hardware openings at locations where grout plasters or other materials might interfere with hardware operations.

E. Corner Clips: Provide corner clip reinforcements at head and jamb joints. Corner clips to be of no less than 16-gauge electrogalvanized steel. Comer clips are to be factory welded to both head and jambs.

F. Steel Spreaders: Provide steel spreaders at bottom of jambs temporarily attached to serve as brace during transportation and handling of frames prior to installation. Remove brace only after frame has been properly set and braced.

G. Vision Panels and Transom Panels frames where adjacent to door frames shall be fabricated integral with and of same gauge and type of steel as the door frame.

H. Conceal all fastenings unless shown otherwise. Use 1/4" round flat head machine screws where exposed at applied stops.

I. Provide additional 12-gauge electrogalvanized steel reinforcement channel at head of frames on openings over 54" wide with a masonry load above. Submit detail for architects’ approval.

2.06 DOOR AND FRAME REINFORCEMENTS

A. Prepare hollow metal units at the manufacturers plant to receive mortised and concealed finish hardware, including cutouts, reinforcing, drilling, and tapping. Comply with the applicable requirements of these specifications, and with the specific requirements of the hardware template drawings of the manufacturer of each finish hardware specified. In addition, all door and frame reinforcements with the exception of hinge reinforcements shall be fabricated from electrogalvanized bonderized steel of U.S. Standard gauges specified herein.

B. Provide 6 gauge plain steel reinforcements at each hinge cut-out. Use of 8-gauge steel reinforcements specially stiffened or formed for added bending

resistance will be acceptable in lieu of the above.

C. Door and frame reinforcements shall be not less than 14-gauge electrogalvanized steel. Use 12 gauge for strikes, flush bolts, exit devices, pull plates, closers and holders. Other reinforcements as recommended by Hardware Manufacturer. Use "HAT" type reinforcement on all "pulls" hardware. "HAT" type reinforcement to be welded on the interior or push side of door.

2.07 FIRE PROTECTION U.L. LABELED

A. Doors and frames requiring labels as indicated on drawings shall meet the requirements for the ratings noted in accordance with the established procedures of the Underwriter Laboratories, Inc.. Doors and frames shall bear the necessary labels separately. The manufacturer must submit a certificate of compliance and good standing with the Underwriters Laboratories, Inc., methods and follow-up procedures.

B. In the case of local manufacturers' representative submitting doors and frames with U.L. labels, evidence of actual purchase of merchandise must be submitted so that the architect may establish that the doors and frames being incorporated to the project, were specifically fabricated for this project and that records of compliance will be available when requested.

C. The contractor must obtain from the manufacturer and provide an itemized list of serial numbers of labels being used on the project with door identification and location, together with label classification, name and address of manufacturer issuing the label, manufacturer order number, and Underwriters Laboratories file number under which label is issued.

2.08 ANCHORS:

Shall be fabricated from 16-gauge electrogalvanized steel. Provide no less than three anchors per jamb or no less than one anchor for every applied hinge. Submit manufacturers anchoring standard method for the various wall conditions shown on drawings. Provide anchors at no more than 30 inches on centers. See detail

2.09 FINISH HARDWARE:

A. A contractor shall obtain all required templates from hardware supplier and furnish same to hollow metal manufacturer to be used in the fabrication as directed. See builders' hardware section 08710 for detailed information.

PART III – EXECUTION

3.01 INSTALLATION

A. Installation of Frames: Install frames at designated (tagged) location in accordance to contract requirements. Installation shall be plumb straight and true, rigidly secured in place and properly braced. Frames shall be anchored securely to concrete floors.

   1. Set frames in their correct locations, plumb, true and adequately braced to prevent displacement during erection of walls and partitions.

   2. Except for frames located at in-place concrete or masonry, place frames prior to the construction of enclosing walls and ceilings. Set frames accurately in position, plumbed, aligned and braced securely until permanent anchors are set.

   3. Install one wall anchor for every hinge provided on frame. Provide no less than three wall anchors per jamb. Submit details of frame anchorage for in-place concrete or masonry walls, for the approval of owner engineers.

B. Installation of Doors: Install the pre-designated (tagged) door at the indicated location shown on contract drawings. Verify compliance with door type required and hardware preparation. Revise and correct all scratches and dents prior to installation.

C. Final installation: Do not finally install hardware until all plastering and painting is completed and the building is totally dry.

D. Silencers: Door silencers shall be installed after installation is completed. Three silencers for single doors and two for head of pair of swing doors. Door manufacturers shall submit silencers for approval.

E. Maximum Clearances at all Openings. In order to maintain clearances to a minimum provide beveled-edged doors at a rate of one eight of an inch in two inches.

   1. At top rail 1/8"

   2. At hinge and lock 1/8"

   3. At floor or saddle 3/8"

F. All doors and frames shall be properly marked and or tagged at factory for proper identification at job site.

END OF SECTION

SECTION 08211 – FLUSH WOOD DOORS

PART I - GENERAL

1.01 RELATED DOCUMENTS

A. RFP Documents, Bridging Drawings, performance criteria and, after award, applicable Design-Build Contract provisions, including applicable general requirements, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:

1. Solid core doors with wood veneer faces.
2. Solid core doors with plastic laminate faces.
3. Hollow core doors with wood veneer faces.
4. Hollow core doors with plastic laminate faces.
5. Louvers for flush wood doors.

B. Related Sections: The following Sections contain requirements that relate to this Section:

1. Requirements for interior architectural woodwork, including wood door frames.

1.03 SUBMITTALS

A. General: Submit each *item* in this Article according to the Conditions of the Contract and applicable General Requirements Sections.

B. Product data for each type of door, including details of core and edge construction, trim for openings and louvers, and factory-finishing specifications.

C. Shop drawings indicating location and size of each door, elevation of each kind of door, details of construction, location and extent of hardware blocking, fire ratings, requirements for veneer matching and factory finishing and other pertinent data.

1. For factory-machined doors, indicate dimensions and locations of cutouts for locksets and other cutouts adjacent to light and louver openings.

D. Samples for initial selection in the form of color charts consisting of actual materials in small sections for the following:

1. Plastic laminate door faces. Show the full range of colors, textures, and patterns available.

E. Samples for verification in the form and size indicated below:

1. Comer sections of doors approximately 12 inches (300 mm) square with door faces and edgings representing the typical range of color and grain for each species of veneer and solid lumber required. Finish sample with the same materials proposed for factory-finished doors.

2. Plastic laminate-clad door sections, 6 inches (1SO mm) square, for each color, texture. and pattern selected.

3. Louvers consisting of blade arid frame, 6 inches (150 mm) long, for each material and finish specified.

4. Frames for light openings, 6 inches (150 mm) long, for each material, type, and finish required.

1.04 QUALITY ASSURANCE

A. Quality Standard: Comply with the following standard:

1. NWWDA Quality Standard: I.S.1-A, "Architectural Wood Flush Doors," of the National Wood Window and Door Association.

B. Fire-Rated Wood Doors: Provide wood doors that comply with NFPA 80; are identical in materials and construction to units tested in door and frame assemblies per ASTM E 152; and are labeled and listed by UL, Warnock Hersey, or another testing and inspection agency acceptable to authorities having jurisdiction.

1. Oversized, Fire-Rated Wood Doors: For door assemblies exceeding sizes of tested assemblies, provide manufacturer's certificate stating that doors conform to all standard construction requirements of tested and labeled fire-door assemblies except for size.

C. Single-Source Responsibility: Obtain doors from one source and by a single manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Protect doors during transit, storage, and handling to prevent damage,

soiling, and deterioration. Comply with requirements of referenced standard and manufacturer's instructions.

1. Comply with WIC Technical Bulletin 420-R for delivery, storage, and handling *of* doors.

B. Identify each door with individual opening numbers as designated on shop drawings, using temporary, removable, or concealed markings.

1.06 PROJECT CONDITIONS.

A. Conditioning: Do not deliver or install doors until the building is enclosed, wet work is complete, and the HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Conditioning: Do not deliver or install doors until conditions for temperature and relative humidity have been stabilized and will be maintained in storage and installation areas during the remainder of the construction period to comply with the following requirements applicable to Project's geographical location:

1. AWI quality standard Section 100-S-11 "Relative Humidity and Moisture Content."

1.07 WARRANTY

A. General Warranty: Door manufacturer's warranty specified in this Article shall not deprive the ASEM/Owner of other rights the ASEM/Owner may have under other provisions of the RFP Bridging Documents and Design-Build Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Design-Build Entity under requirements of the RFP Bridging Documents and Design-Build Contract Documents.

B. Door Manufacturer's Warranty: Submit written agreement on door manufacturer's standard form signed by manufacturer, Installer, and Design-Build Entity, agreeing to repair or replace defective doors that have warped (bow, cup, or twist) more than 1/4 inch (6.35 mm) in a 42-by-84-inch (1067-by-2134-mm) section or that show telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch (0.25 mm in a 75-mm) span, or do not conform to tolerance limitations of referenced quality standards, or that show damage by termites (polilla or comegen).

1. The warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors where defect was not apparent prior to hanging.

2. The warranty shall be in effect during the following period of after date of Substantial Completion.

    a. Solid Core Exterior Doors: Two years.

    b. Solid Core Interior Doors: Two years.

    c. Hollow Core Interior Doors: Two years.

PART II – PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering doors that may be incorporated in the Work include, but are not limited to, the following:

B. Manufacturer. Subject to compliance with requirements, provide doors by one of the following:

1. Solid Core Doors:

    a. Algoma Hardwoods Inc.

    b. Ampco Products, Inc.

    c. Buell Door Co.

    d. Chappell Door Co.

    e. Eagle Plywood & Door Manufacturing, Inc.

    f. Eggers Industries, Architectural Door Division.

    g. Fenestra Corporation.

    h. Graham Manufacturing Corp.

    i. Haley Brothers, Inc.

    j. Ideal Wood Products, Inc.

    k. IPIK Door Co., Inc.

    l. Marlite.

    m. Mohawk Flush Doors, Inc.

n. Poncraft Door Co.

o. Ragland Manufacturing Co., Inc.

p. V-T Industries Inc.

q. Weyerhauser Co.

r. Empresas Lausell.

s. Rosado Carpentry, Inc.

2. Hollow Core Doors:

a. Algoma Hardwoods Inc.

b. Ampco Products, Inc.

c. Eggers Industries, Architectural Door Division.

d. Graham Manufacturing Corp.

e. Haley Brothers, Inc.

f. Marlite.

g. Mohawk Flush Doors, Inc.

h. Weyerhauser Co.

i. Wing Industries, Inc.

j. Empresas Lausell.

k. Rosado Carpentry, Inc.

2.02 EXTERIOR FLUSH WOOD DOORS

A. Solid Core Doors for Transparent Finish: Comply with the following requirements:

1. Faces: White ash, plain sliced.

2. Grade: Custom.

3. Construction: 5 plies.

4. Core: Glued-block core.

5. Bonding: Stiles and rails bonded to core, then entire unit abrasive planed before veneering.

B. Solid Core Doors for Opaque Finish: Comply with the following requirements:

1. Faces: Any closed-grain hardwood of mill option.

2. Grade: Custom.

3. Construction: 5 plies.

4. Core: Glued-block core.

5. Bonding: Stiles and rails bonded to core, then entire unit abrasive planed before veneering.

2.03 INTERIOR FLUSH WOOD DOORS

A. Solid Core Doors for Transparent Finish: Comply with the following requirements:

1. Faces: White birch, plain sliced.

2. Grade: Custom.

3. Construction: 5 plies.

4. Core: Glued-block core.

5. Bonding: Stiles and rails bonded to core, then entire unit abrasive planed before veneering.

B. Solid Core Doors for Opaque Finish: Comply with the following requirements:

1. Faces: Any closed-grain hardwood of mill option.

2. Grade: Custom.

3. Construction: 5 plies.

4. Core: Glued-block core.

5. Bonding: Stiles and rails bonded to core, then entire unit abrasive planed before veneering.

C. Solid Core Doors with Plastic Laminate Faces: Comply with the following requirements:

1. Laminate Faces: High-pressure, decorative laminates complying with NEMA LD 3 and as follows:

    a. Colors. Patterns, and Finishes: As indicated or, if not otherwise indicated, as selected by Design Professional of Record from laminate manufacturer's full range of products.

    b. Faces: GP-50 (0.050-inch (1.270-mm) nominal thickness).

2. Grade: Custom.

3. Construction: 5 plies.

4. Core: Glued-block core.

5. Bonding: Stiles and rails bonded to core, then entire unit abrasive planed before veneering.

D. Fire-Rated Solid Core Doors: Comply with the following requirements:

1. Faces and Grade: Provide faces and grades to match non-fire-rated doors in same area of building, unless otherwise indicated.

2. Construction: Manufacturer's standard core construction as required to provide fire- resistance rating indicated.

3. Blocking: Provide composite blocking designed to maintain fire resistance of door but with improved screw-holding capability of same thickness as core and with minimum dimensions as follows:

    a. 5-inch (125-mm) top rail blocking.

    b. 5-inch (125-mm) bottom rail blocking.

    c. 5-by-18-inch (125-by-450-mm) lock blocks.

    d. 5-inch (125-mm) mid-rail blocking.

4. Edge Construction: Provide manufacturer's standard laminated-edge construction for improved screw-holding capability and split resistance as compared to edges composed of a single layer of treated lumber.

E. Hollow Core Doors for Transparent Finish: Comply with the following requirements:

1. Faces: White birch, rotary cut.

2. Grade: Custom.

3. Core: Standard hollow core.

4. Blocking: Provide wood blocking of the same thickness as core with minimum dimensions as follows:

    a. 5-inch (125-mm) top rail blocking.

    b. 10-inch (250-mm) bottom rail blocking.

    c. 5-by-18-inch (125-by-450-mm) lock blocks.

    d. 2-1/2-inch (63-mm) mid-rail blocking.

F. Hollow Core Doors for Opaque Finish: Comply with the following requirements:

1. Faces: Any closed-grain hardwood of mill option.

2. Grade: Custom.

3. Core: Standard hollow core.

4. Blocking: Provide wood blocking of the same thickness as core with minimum dimensions as follows:

    a. 5-inch (125-mm) top rail blocking.

    b. 10-inch (250-mm) bottom rail blocking.

    c. 5-by-18-inch (125-by-450-mm) lock blocks.

    d. 2-1/2-inch (63-mm) mid-rail blocking.

G. Hollow Core Doors with Plastic Laminate Faces: Comply with the following requirements:

1. Laminate Faces: High-pressure, decorative laminates complying with NEMA LO 3 and as follows:

    a. Colors, Patterns, and Finishes: As indicated or, if not otherwise indicated, as selected by Design Professional of Record from laminate manufacturer's full range of products.

    b. Faces: GP-50 (0.05O-inch (1.270-mm) nominal thickness).

2. Grade: Custom.

3. Construction: 5 plies.

4. Core: Standard hollow core.

5. Blocking: Provide wood blocking of the same thickness as core with minimum dimensions as follows:

   a. 5-inch (125-mm) top rail blocking.

   b. 10-inch (250-mm) bottom rail blocking.

   c. 5-by-18-inch (125-by-450-mm) lock blocks.

   d. 2-1/2-inch (63-mm) mid-rail blocking.

2.04 VENEER MATCHING

A. Within Door Faces: Provide doors with the following veneer matching:

   1. Book matching.

2.05 LOUVERS AND LIGHT FRAMES

A. Wood Louvers: Door manufacturer's standard solid wood louvers, unless otherwise indicated, and of size indicated.

B. Metal Louvers: Size, type, and profile shown and fabricated from the following:

   1. Natural Aluminum: Extruded aluminum with natural-anodized finish complying with AA- C22A31, Class II.

C. Wood-Veneered Beads for Light Openings in Fire Doors: Manufacturer's standard wood- veneered steel beads matching veneer species of door faces and approved for use in doors of fire-rating indicated.

2.06 FABRICATION

A. Fabricate flush wood doors to comply with the following requirements:

   1. In sizes indicated for job-site fitting.

B. Openings: Cut and trim openings through doors to comply with applicable requirements of referenced standards for kind(s) of door(s) required.

   1. Light Openings: Trim openings with moldings of material and profile

indicated.

2. Louvers: Factory install louvers in prepared openings.

C. Exterior Doors: Treat exterior doors at factory with water repellent after manufacturing has been completed.

PART III – EXECUTION

3.01 EXAMINATION

A. Examine installed door frames prior to hanging door.

1. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with plumb jambs and level heads.

2. Reject doors with defects.

B. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Hardware:

1. The finish hardware to be applied to wood doors is to be furnished under Section 08710 but installed under this section.

2. All items shall operate easily, quietly and properly and locks, bolts, etc. shall lock securely.

3. Cut-outs and mortises for hardware shall be treated with an approved preservative solution.

4. Screws, bolts and other fastenings shall match in finish the item with which they are associated; and any exposed to view shall have Phillips heads. Though such fastenings shall generally be furnished with the hardware, any missing ones needed to complete the installation shall be furnished under this section at no additional cost to the ASEM/Owner.

B. Manufacturer's Instructions: Install wood doors to comply with manufacturer's instructions and referenced quality standard and as indicated.

1. Install fire-rated doors in corresponding fire-rated frames according to requirements of NFPA 80.

C. Job-Fit Doors: Align and fit doors in frames with uniform, clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted with fire- rated doors. Machine doors for hardware. Seal cut surfaces after fitting and machining.

1. Fitting Clearances for Non-Fire-Rated Doors: Provide 1/8 inch (3.2 mm) at jambs and heads, 1/16 inch (1.6 mm) per leaf at meeting styles for pairs of doors, and 1/8 inch (3.2 mm) from bottom of door to top of decorative floor finish or covering. Where threshold is shown or scheduled, provide 1/4-inch (6.4-mm) clearance from bottom of door to top of threshold.

2. Fitting Clearances for Fire-Rated Doors: Comply with NFPA 80.

3. Bevel non-fire-rated doors 1/8 inch in 2 inches (3-1/2 degrees) at tock and hinge edges.

4. Bevel fire-rated doors 1/8 inch in 2 inches (3-1/2 degrees) on lock edge; trim stiles and rails only to extent permitted by labeling agency.

D. Field-Finished Doors: Refer to the following for finishing requirements:

1. Requirements for painting.

3.03 ADJUSTING AND PROTECTION

A. Operation: Rehang or replace doors that do not swing or operate freely.

B. Protect doors as recommended by door manufacturer to ensure that wood doors will be without damage or deterioration at the time of Substantial Completion.

END OF SECTION

SECTION 08520 - ALUMINUM WINDOWS

PART I – GENERAL

1.01 RELATED DOCUMENTS

A. RFP Documents, Bridging Drawings, performance criteria and, after award, applicable Design-Build Contract provisions, including applicable general requirements, apply to this Section.

1.02 SUMMARY

A. This Section includes Commercial Grade aluminum windows of the performance class indicated. Window types required include the following:

1. Casement windows.

2. Projected windows.

3. Fixed windows.

1.03 DEFINITIONS

A. Performance class number, included as part of the window designation system, is the actual design pressure in pounds force per square foot (pascals) used to determine structural test pressure and water test pressure.

1. Structural test pressure, wind load test, is equivalent to 150 percent of the design pressure.

2. Water-leakage-resistance test pressure is equivalent to 15 percent of the design pressure with 2.86 lb./sq. ft. (137 Pa) as a minimum for Residential, Commercial, and Heavy-Commercial Grade windows.

1.04 PERFORMANCE REQUIREMENTS

A. General: Provide aluminum windows engineered, fabricated, and installed to withstand normal thermal movement, wind loading, and impact loading without failure, as demonstrated by testing manufacturer's standard window assemblies representing types, grades, classes, and sizes required for Project according to test methods indicated.

B. Test Criteria: Testing shall be performed by a qualified independent testing agency based on the following criteria:

1. Design wind velocity at Project site is 70 mi./h (113 km/h).

2. Heights of window units above grade at window centerline are indicated on or can be determined from the Drawings. Consult the Design Professional of Record, if necessary, to confirm required loading and test pressures.

3. Test Procedures: Test window units according to ASTM E 283 for air infiltration, both ASTM E 331 and ASTM E 547 for water penetration, and ASTM E 330 for structural performance.

C. Performance Requirements: Testing shall demonstrate compliance with requirements indicated in AAMA 101 for air infiltration, water penetration, and structural performance for type, grade, and performance class of window units required. Where required design pressure exceeds the minimum for the specified window grade, comply with requirements of AAMA 101, Section 3, "Optional Performance Classes," for higher than minimum performance class.

1. Air-Infiltration Rate for Operating Units: Not more than 0.37 cfm/ft (2.06 cu. m/h perm) of operable sash joint for an inward test pressure of 6.24 lb./sq. ft. (299 Pa).

2. Air-Infiltration Rate for Fixed Windows: Not more than 0.15 cfm/ft. (2.74 cu. m/h perm) of area for an inward test pressure of 6.24 lb./sq. ft. (299 Pa).

3. Water Penetration: No water penetration as defined in the test method at an inward test pressure of 20 percent of the design pressure.

4. Uniform Load Deflection: No deflection more than 1/175 of any member's span during the imposed load, for a positive (inward) and negative (outward) test pressure of 60 lb./sq. ft. (2873 Pa).

5. Structural Performance: No failure or permanent deflection more than 0.4 percent of any member's span after removing the imposed load, for a positive (inward) and negative (outward) test pressure of 30 lb./sq. ft. (1437 Pa).

6. Forced-Entry Resistance: Comply with Performance Level 10 requirements when tested according to ASTM F 588.

7. Thermal Movements: Provide window units that allow thermal movement resulting from the following maximum change (range) in ambient temperature when engineering, fabricating, and installing aluminum windows to prevent buckling, opening of joints, and overstressing of components, connections, and other detrimental effects. Base engineering calculation on actual surface temperatures of materials due to solar

heat gain and nighttime sky heat loss.

a. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

1.05 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and applicable General Requirements Sections.

B. Product Data for each type of window required, including the following:

1. Construction details and fabrication methods.

2. Profiles and dimensions of individual components.

3. Data on hardware, accessories, and finishes.

4. Recommendations for maintaining and cleaning exterior surfaces.

C. Shop Drawings showing fabrication and installation of each type of window required including information not fully detailed in manufacturer's standard Product Data and the following:

1. Layout and installation details, including anchors.

2. Elevations at 1/4 inch = 1 foot (1:50) scale and typical window unit elevations at 3/4 inch = 1 foot (1:20) scale.

3. Hardware, including operators.

4. Glazing details.

5. Accessories.

D. Samples for initial color selection on 12-inch- (300-mm-) long sections of window members. Where finishes involve normal color variations, include Sample sets showing the full range of variations expected.

E. Samples for Verification: The Design Professional of Record reserves the right to require additional samples that show fabrication techniques, workmanship, and design of hardware and accessories.

F. Test reports from a qualified independent testing agency indicating that each type, grade, and size of window unit complies with performance requirements indicated. Test results based on use of down-sized test units will not be accepted.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced Installer who has completed installation of aluminum windows similar in material, design, and extent to those required for this Project and with a record of successful in-service performance.

B. Testing Agency Qualifications: To qualify for approval, an independent testing agency must demonstrate to Design Professional of Record's satisfaction, based on evaluation of agency-submitted criteria conforming to ASTM E 699, that it has the experience and capability to satisfactorily conduct the testing indicated without delaying the Work.

C. Single-Source Responsibility: Obtain aluminum windows from one source and by a single manufacturer.

D. Mockups: Prior to installing aluminum windows, construct mockups for each form of construction and finish required to verify selections made under Sample submittals and to demonstrate aesthetic effects as well as qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for final unit of Work.

1. Locate mockups on-site in the location and of the size indicated or, if not indicated, as directed by Design Professional of Record.

2. Notify Design Professional of Record one week in advance of the dates and times when mockups will be constructed.

3. Demonstrate the proposed range of aesthetic effects and workmanship.

4. Obtain Design Professional of Record's approval of mockups before start of final unit of Work.

5. Retain and maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.

a. When directed, demolish and remove mockups from the Project site.

b. Approved mockups in an undisturbed condition at the time of Substantial Completion may become part of the completed Work.

E. Product Options: The Drawings indicate sizes, profiles, dimensional requirements, and aesthetic effects of aluminum windows and are based on the specific window types and models indicated. Other aluminum window manufacturers whose products have equal performance characteristics may be considered provided with deviations in size, profile, and dimensions

are minor and do not alter the aesthetic effect. Refer to the General Requirements provisions governing substitutions.

1.07 PROJECT CONDITIONS

A. Field Measurements: Check window openings by field measurements before fabrication and show recorded measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Where field measurements cannot be made without delaying the Work, guarantee opening dimensions and proceed with fabricating aluminum windows without field measurements. Coordinate wall construction to ensure that actual opening dimensions correspond to guaranteed dimensions.

1.08 WARRANTY

A. General Warranty: The special warranty specified in this Article shall not deprive the ASEM/Owner of other rights the ASEM/Owner may have under other provisions of the RFP Bridging Documents and Design-Build Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Design-Build Entity under the requirements of the RFP Bridging Documents and Design-Build Contract Documents.

B. Special Warranty: Submit a written warranty signed by an aluminum window manufacturer agreeing to repair or replace window components that fail in materials or workmanship within the specified warranty period. Failures include, but are not limited to, the following:

1. Structural failures include excessive deflection, water leakage, air infiltration, or condensation.

2. Faulty operation of sash and hardware.

3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

C. Warranty Period: 3 years after date of Substantial Completion.

D. Warranty Period for Metal Finishes and Glass: 5 years after date of Substantial Completion.

PART II - PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the Work include, but are not limited to, the following:

1. Casement Windows:

    a. Acom Window Systems.

    b. Alenco Commercial Division.

    c. Capitol Products Corp.

    d. Custom Window Company.

    e. DeSCo Windows.

    f. EFCO Corporation.

    g. Graham Architectural Products Corporation.

    h. TRACO.

    i. Wausau Metals Corporation.

    j. Wince Manufacturing Co.

2. Single-Hung Windows:

    a. Acorn Window Systems.

    b. Alenco Commercial Division.

    c. Capitol Products Corp.

    d. Custom Window Company.

    e. EFCO Corporation.

    f. Graham Architectural Products Corporation.

    g. Peerless Products, Inc.

    h. TRACO.

    i. Tropicair manufacturing Corp.

3. Projected Windows:

a. Acorn Window Systems.

b. Alenco Commercial Division.

c. Capitol Products Corp.

d. Custom Window Company.

e. EFCO Corporation.

f. Graham Architectural Products Corporation.

g. TRACO.

h. Wausau Metals Corporation.

i. Winco Manufacturing Co.

j. Kawneer Co., Inc.

4. Fixed Windows:

a. Alenco Commercial Division.

b. Capitol Products Corp.

c. Custom Window Company.

d. DeSCo Windows.

e. EFCO Corporation.

f. Graham Architectural Products Corporation.

g. Peerless Products, Inc.

h. TRACO.

i. Wausau Metals Corporation.

j. Kawneer Co., Inc.

2.02 MATERIALS

A. Aluminum Extrusions: Provide alloy and temper recommended by manufacturer for strength, corrosion resistance, and application of required finish, but not less than 22,000-psi (150-MPa) ultimate tensile strength and not less than 0.062 inch (1.6 mm) thick at any location for main frame and sash

members.

B. Fasteners: Provide aluminum, nonmagnetic stainless steel, epoxy adhesive, or other materials warranted by manufacturers to be noncorrosive and compatible with aluminum window members, trim, hardware, anchors, and other components of window units.

1. Reinforcement: Where fasteners screw anchor into aluminum less than 0.125 inch (3.2 mm) thick, reinforce interior with aluminum or nonmagnetic stainless steel to receive screw threads or provide standard, noncorrosive, pressed-in, splined grommet nuts.

2. Exposed Fasteners: Except where unavoidable for application of hardware, do not use exposed fasteners. For application of hardware, use fasteners that match finish of member or hardware being fastened, as appropriate. All exposed fasteners shall have Phillips flat heads.

C. Anchors, Clips, and Window Accessories: Fabricate anchors, clips, and window accessories of aluminum, nonmagnetic stainless steel, or hot-dip zinc-coated steel or iron complying with requirements of ASTM B 633; provide sufficient strength to withstand design pressure indicated.

D. Compression-Type Glazing Strips and Weatherstripping: Unless otherwise indicated, and at manufacturer's option, provide compressible stripping for glazing and weatherstripping such as molded EPDM or neoprene gaskets complying with ASTM D 2000 Designation 2BC415 to 3BC620, or molded PVC gaskets complying with ASTM D 2287, or molded expanded EPDM or neoprene gaskets complying with ASTM C 509, Grade 4.

E. Sliding-Type Weatherstripping: Provide woven-pile weatherstripping of wool, polypropylene, or nylon pile and resin-impregnated backing fabric. Comply with AAMA 701.2.

1. Provide stripping with integral centerline barrier fin of semirigid plastic sheet of polypropylene.

F. Sealant: For sealants required within fabricated window units, provide type recommended by manufacturer for joint size and movement. Sealant shall remain permanently elastic, non-shrinking, and nonmigrating. Comply with the joint sealant requirements of these Specifications for selection and installation of sealants.

2.03 HARDWARE

A. General: Provide manufacturer's standard hardware fabricated from aluminum, stainless steel, or other corrosion-resistant material compatible

with aluminum and of sufficient strength to perform the function for which it is intended.

B. Four-Bar Friction Hinges: Comply **with MMA** 904.1.

1. Friction Shoes: Provide friction shoes of nylon or other nonabrasive, nonstaining, noncorrosive, durable material.

C. Limit Device: Provide manufacturer's standard, concealed support arms with adjustable, limited, hold-open limit device designed to restrict ventilator opening.

D. Counterbalancing Mechanism: Comply with AAMA 902. 2.

1. Sash-Balance Type: Concealed block-and-tackle type of size and capacity to hold sash stationery at any open position.

E. Pole Operators: Provide one pole operator and a pole hanger for every room in the Project that has operable aluminum windows more than 72 inches (1800 mm) above floor. Fabricate pole of tubular-shaped anodized aluminum with rubber cap at lower end and standard push-pull hook at top to match hardware design. Provide sufficient length for window operation without reaching more than 60 inches (1500 mm) above floor.

2.04 ACCESSORIES

A. General: Provide manufacturer's standard accessories that comply with indicated standards.

B. Weatherstripping: Provide sliding-type weatherstripping where sash rails slide horizontally or vertically along unit frame. Provide compression-type weatherstripping at perimeter of each operating sash where sliding type is inappropriate.

1. Provide weatherstripping locked into extruded grooves in sash.

2.05 CASEMENT WINDOWS

A. Window Grade and Class: Comply with requirements of AAMA Grade and Performance Class C-HC40. Window units shall successfully pass vertical deflection, hardware load, and torsion test performance requirements specified in AAMA 101.

B. Hardware: Provide the following equipment and operating hardware:

1. Operating Device: Gear-type rotary operator located on jamb at sill, or

combination lever handle and cam latch.

2. Hinges: Concealed 4-bar friction hinges with adjustable slide shoe (2 per ventilator).

3. Lock: Lift-type, cam-action lock.

2.06 SINGLE-HUNG WINDOWS

A. Window Grade and Class: Comply with requirements of AAMA Grade and Performance Class DH-HC40. Window units shall successfully pass operating force test performance requirements specified in AAMA 101.

B. Hardware: Provide the following equipment and operating hardware:

1. Sash Balances: Manufacturer's standard type (2 per sash).

2. Tilt Lock: Tamperproof concealed, tilt mechanism to permit sash to tilt inward for cleaning.

3. Lift Handle: Applied sash lifts on bottom rail of lower sash (2 per sash).

2.07 PROJECTED WINDOWS

A. Window Grade and Class: Comply with requirements of AAMA Grade and Performance Class P-HC40. Window units shall successfully pass the following test requirements as specified in AAMA 101:

1. Torsion test on an unglazed ventilator.

2. Horizontal and vertical concentrated load tests on latch rail of each ventilator.

B. Hardware: Provide the following equipment and operating hardware:

1. Hinges: Concealed 4-bar friction hinges with adjustable slide shoe (2 per ventilator).

2. Lock: Cam-action, sweep lock handle with surface-mounted strike.

2.08 FIXED WINDOWS

A. Window Grade and Class: Comply with requirements of AAMA Grade and Performance Class F-HC40.

2.09 FABRICATION

A. General: Fabricate aluminum window units to comply with indicated standards. Include a complete system for assembly of components and anchorage of window units.

1. Provide units that are realizable without dismantling sash or ventilator framing.

2. Prepare window sash or ventilators for glazing.

2.10 FINISHES

A. Comply with NAAMM "Metal Finishes Manual" for recommendations relative to applying and designating finishes.

B. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes.

C. High-Performance Organic Coating Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturer's instructions.

1. Fluoropolymer 2-Coat Coating System: Manufacturer's standard 2-coat, thermocured system composed of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 605.2.

2. Color and Gloss: As selected by Design Professional of Record from manufacturer's full range of choices for color and gloss.

PART III – EXECUTION

3.01 INSPECTION

A. Inspect openings before installation. Verify that rough or masonry opening is correct, and sill plate is level.

1. Masonry surfaces shall be visibly dry and free of excess mortar, sand, and other construction debris.

3.02 INSTALLATION

A. Comply with manufacturer's specifications and recommendations for installing window units, hardware, operators, and other components of the Work.

B. Set window units plumb, level, and true to line, without warp or rack of frames or sash. Provide proper support and anchor securely in place.

1. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials by complying with requirements specified under "Dissimilar Materials" Paragraph in appendix to AAMA 101.

C. Set sill members and other members in a bed of sealant or with joint fillers or gaskets, as shown on Shop Drawings, to provide weathertight construction. Refer to the joint sealant requirements for compounds, fillers, and gaskets to be installed concurrently with window units. Coordinate installation with wall flashings and other components of the Work.

3.03 FIELD QUALITY CONTROL

A. Conduct on-site tests for air and water infiltration with window manufacturer's representative present. The Design Professional of Record will select units to be tested. Tests not meeting specified requirements and units having similar deficiencies shall be corrected at no cost to the ASEM/Owner. Testing shall be performed by a qualified independent testing agency selected by the Design Professional of Record.

1. Air-Infiltration Tests: Conduct tests according to requirements of ASTM E 783. Allowable infiltration shall not exceed 1.5 times the amount indicated.

2. Water-Resistance Tests: Conduct tests according to requirements of ASTM E 1105. No water leakage is permitted.

3.04 ADJUSTING

A. Adjust operating sash and hardware to provide a tight fit at contact points and at weatherstripping for smooth operation and a weathertight closure.

3.05 CLEANING

A. Clean aluminum surfaces promptly after installing windows. Exercise care to avoid damage to protective coatings and finishes. Remove excess glazing and sealant compounds, dirt, and other substances. Lubricate hardware and other moving parts.

B. Clean glass of pre-glazed units promptly after installing windows. Comply with the glazing requirements for cleaning and maintenance.

3.06 PROTECTION

A. Provide final protection and maintain conditions, in a manner acceptable to aluminum window manufacturers, that ensure window units are without damage or deterioration at the time of Substantial Completion.

END OF SECTION

SECTION 08710 – BUILDERS HARDWARE

PART I – GENERAL

1.01 SECTION INCLUDES:

A. Builders hardware for doors.

1.02 RELATED SECTIONS:

A. Hollow metal doors and frames - Section 08110.

1.03 REFERENCES:

A. American National Standards Institute (ANSI):

1. ANSI 156.1-1988 -Butts and hinges.
2. ANSI 156.2-1983 - Bored & preassembled locks.
3. ANSI 156.3-1984 - Exit devices.
4. ANSI 156.4-1986 - Door control (Closer).
5. ANSI 156.5-1984 - Auxiliary locks.
6. ANSI 156.13-1987- Mortise locks & latches.
7. ANSI 156.16-1989-Auxiliary hardware.
8. ANSI 156.18-1987- Materials & finishes.
9. ANSI 117. 1-1986- Providing accessibility and usability for physical handicapped people.

B. National Builders Hardware Association (NBHA):

1. Recommended Locations for Builders Hardware -1975.
2. Basic Builders Hardware - October 1969.

C. Builders Hardware Manufacturers Association:

1. Directory of Certified Locks & Latches -June 1989.
2. Directory of Certified Door Closers - July 1989.

D. National Fire Protection Association (NFPA):

1. NFPA 80 -Fire Doors and Windows.
2. NFPA 101-Life Safety Code 1988

E. Building Code "Reglamento de Edificación de P.R.

1.04 QUALITY ASSURANCE:

A. Hardware shall conform to the following standards:

1. All butts shall comply with ANSI A2112 and A2133.
    a. Butts on outswing exterior doors shall have non-removable pins (NRP).
    b. Provide Ball Bearing Hinges at Self Closing Doors
2. Locksets and latches shall meet the following minimum ANSI standards.
    a. Heavy duty cylindrical locks -ANSI Series 4000, Grade 1.
    b. Mortise Locks-ANSI Series 1000, Grade I test requirements.
    c. Use UL approved locks on labeled fire doors.
3. Door closers shall comply with ANSI Series C02011, Grade 1 with cast iron case and adjustable backcheck. Closers for reverse bevel doors and all doors opening towards a hallway shall comply with ANSI Series CO202l, Grade 1 and be sized according to the manufacturer's recommendation.
4. Exit devices shall be of the modern push-bar type, ANSI Grade 1. All pair openings with a combination mortise and vertical rod device shall be equipped with an open back strike. Pair openings with a combination Rim and vertical rod device and door closers on each doors shall be equipped with a type 21 door coordinator.

1.05 SUBMITTALS

A. The hardware supplier shall submit seven (7) copies of a complete hardware schedule for approval. See the General Requirements provisions of these Specifications.

1. Preface sheet listing category only and manufacturers name of items being furnished, as follows:

Category	Specified	Scheduled
Hinges	Mfg."A"	Mfg. “B”
Locksets	Mfg."C"	Mfg. “D”
Kickplates	Open	Mfg. “X”

2. For hardware locations, see Article 3.3 - Locations.
3. Open description: Single or pair, number, room locations, hand, active leaf, degree of opening, size, material, frame material, and fire rating.
4. Hardware description: Quantity, category, product number, fasteners, and finish.
5. Headings that refer to the specified Hardware Set Numbers.
6. Scheduling sequence shown in Hardware Sets.
7. Product data of each hardware item and shop drawings, where required, for special conditions and specialty hardware.
8. Vertical scheduling format only. Horizontal schedules are not acceptable.
9. Typed copy.
10. Double spacing.
11. Eight and one-half by eleven inch (8 l/2"x 11") sheets.
12. U.S. Standards finish symbols.

B. Samples: Submit sample of each type of builders hardware item proposed for project. If approved, samples may be used in the project.

1.06 DELIVERY, STORAGE AND HANDLING:

A. Package and deliver hardware items separately and mark each to correspond with heading numbers on hardware schedule.

B. Include necessary instructions, templates, drawings and fasteners for proper installation.

1.07 JOB CONDITIONS:

A. Furnish templates to the hollow metal and frame manufacturer as required for installing the hardware to avoid any delay in fabrication.

B. See Article 3.3 - Locations, and coordinate with templates.

C. Sub-contract the furnishing of builders' hardware to a recognized local builders' hardware representative for the lockset being furnished. The local hardware supplier must have been furnishing builders' hardware for a period of not less than 5 years and must have in his employment an experienced hardware consultant who is available at all reasonable times while the work for project hardware consultation to the owner or architect. Hardware supplier must furnish all hardware required to comply pertinent government regulations from American Disability Act, and National Fire Protection Association.

1.08 REGULATORY REQUIREMENTS

Design-Build Entities must provide hardware to conform to:

1. All applicable codes for fire rated doors and frames.

1. All applicable sections of Chapter 5 of N.F.P.A. 101.

2. ANSI Al 17.1 for hardware locations and requirements to meet all handicapped codes of the Americans with Disabilities Act.

3. The quantities shown on schedule are for reference only. Final count is the contractor's responsibility.

PART II - PRODUCTS:

2.01 MANUFACTURERS:

A. General:

1. Products are listed in a brand name only to establish a standard of quality.

2. Equivalent products, as described in section 2.2 of these specifications, are acceptable substitutions.

B. Locks and latches:

1. Corbin Russwin

2. Sargent.

C. Door Closers:

1. Corbin Russwin.
2. Donna
3. LCN
4. Sargent

D. Manufacturers of other items:

1. Butts: Soss, Hager, McKinney or Lawrence
2. Exit Devices: Corbin Russwin, Sargent, Von Duprin
3. Floor Closers & Pivots: Donna or McKinney
4. Overhead Door Holders: Corbin Russwin -Sargent
5. Door Pulls: Rockwood, Trimco, Hager
6. Protective Plates: Rockwood, Trimco, Hager
7. Bolts: Rockwood, Trimco, Hager
8. Stops: Rockwood, Trimco-Hager
9. Electromagnetic Locks and Holders-Von Duprin
10. Padlocks -American- Corbin Russwin

2.02 LABEL REQUIREMENTS:

A. Furnish Underwriters Laboratories, Inc. approved hardware items, meeting requirements of NFPA 80, at doors scheduled to be labeled doors.

2.03 FINISHES:

Unless otherwise specified on the hardware schedule all finishes will be as follows:

A. Butts and Pivots: 630

B. Locksets, Deadlocks, Padlocks and Latches: 626 (Except MS1850-628).

C. Exit Devices: 626.

D. Closers: Sprayed aluminum to match; 626 on Floor Type.

E. Pulls & Plates: 630.

F. Stops/Holders: 626.

G. Thresholds: 628.

H. Flush Bolts: 626.

2.04 KEYING:

A. Key and master key in accordance with owner's requirements and approved keying schedule. Furnish 3 change keys for each lock, and 3 ea. Master keys, and 10 construction keys.

B. Where specified all cylinders shall be of the high security Type with interlocking pins and skew out key bitting.

C. Furnish a complete key control system that provides tags for each individual change key and a key cabinet that will hold 150% of the key capacity of the building.

PART III – EXECUTION

3.01 EXAMINATION

A. Examine door frames and related items for conditions that would prevent proper application of builders' hardware.

B. Do not proceed until defects are corrected, with approval obtained from owner or his designated representative.

3.02 INSTALLATION:

A. Install hardware according to manufacturer's printed instructions and to template dimensions. See Article 1.6.

B. All hardware shall be installed in a neat workmanlike manner by experienced workmen and left in perfect working condition. Any hardware lost or damaged shall be replaced at no additional cost to the owner.

3.03 LOCATIONS:

A. Dimensions are from finish floor to center line of items.

B. This list to be included in Hardware Schedule:

Category	Dimension
Hinges	Door manufacturer standards
Flush bolt Levers	72” and 12”
Knobs	Door manufacturer standards
Exit Device Crossbars	Manufacturer’s Template
Push Plates	52”
Pull Plates	42”
Wall Stops	At Head

3.04 FINAL ADJUSTMENT:

A. Provide the services of a representative to inspect material furnished and its installation and adjustment, to make final hardware adjustment, and to instruct the Tenant's personnel in adjustment, care and maintenance of the hardware.

END OF SECTION

SECTION 08800 – GLAZING

PART I – GENERAL

1.01 RELATED DOCUMENTS

A. RFP Documents, Bridging Drawings, performance criteria and, after award, applicable Design-Build Contract provisions, including applicable general requirements, apply to this Section.

1.02 SUMMARY

A. This Section includes glazing for the following products, including those specified in other Sections where glazing requirements are specified by reference to this Section:

1. Window units.

2. Vision lites.

3. Entrances and other doors.

4. Storefront construction.

1.03 DEFINITIONS

A. Manufacturers are used in this Section to refer to a firm that produces primary glass or fabricated glass as defined in the referenced glazing standard.

B. Deterioration of Laminated Glass: Defects developed from normal use that are attributed to the manufacturing process and not to glass breakage and practices for maintaining and cleaning laminated glass contrary to manufacturer's directions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated glass standard.

1.04 SYSTEM PERFORMANCE REQUIREMENTS

A. General: Provide glazing systems that are produced, fabricated, and installed to withstand normal thermal movement, wind loading, and impact loading (where applicable), without failure including loss or glass breakage attributable to the following: defective manufacture, fabrication, and installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; and other defects in construction.

B. Glass Design: Glass thicknesses indicated on Drawings are for detailing only. Confirm glass thickness by analyzing Project loads and in-service conditions.

Provide glass lites for the various size openings in the thicknesses and strengths (annealed or heat-treated) to meet or exceed the following criteria:

1. Minimum glass thickness, nominally, of lites in exterior walls is 6 mm.

2. Tinted and heat-absorbing glass thicknesses for each tint indicated are the same throughout Project.

3. Minimum glass thicknesses of lites, whether composed of annealed or heat-treated glass, are selected so the worst-case probability of failure does not exceed the following:

    a. 8 lites per 1000 for lites set vertically or not over 15 degrees off vertical and under wind action. Determine minimum thickness of monolithic annealed glass according to ASTM E 1300. For other than monolithic annealed glass, determine thickness per glass manufacturer's standard method of analysis including applying adjustment factors to ASTM E 1300 based on type of glass.

C. Normal thermal movement results from the following maximum change (range) in ambient and surface temperatures acting on glass-framing members and glazing components. Base engineering calculation on materials' actual surface temperatures due to both solar heat gain and nighttime sky heat loss.

1. Temperature Change (Range): 120 F deg (67 C deg), ambient; 180 F deg (100 C deg), material surfaces.

1.05 SUBMITTALS

A. General: Submit the following according to Conditions of Contract and applicable General Requirements Sections.

B. Product data for each glass product and glazing material indicated.

C. Samples for verification purposes of 12-inch (300 mm) square samples of each type of glass indicated except for clear monolithic glass products, and 12-inch (300 mm) long samples of each color required (except black) for each type of sealant or gasket exposed to view. Install sealant or gasket sample between two strips of material representative in color of the adjoining framing system.

D. Product certificates signed by glazing materials manufacturers certifying that their products comply with specified requirements.

1. Separate certifications are not required for glazing materials bearing

manufacturer's permanent labels designating type and thickness of glass, provided labels represent a quality control program of a recognized certification· agency or independent testing agency acceptable to authorities having jurisdiction.

E. Compatibility and adhesion test reports from sealant manufacturers indicate that glazing materials were tested for compatibility and adhesion with glazing sealants. Include sealant manufacturer's interpretation of test results relative to sealant performance and recommendations for primers and.substrate preparation needed for adhesion.

F. Product test reports for each type of glazing sealant and gasket indicated, evidencing compliance with requirements specified.

G. Maintenance data for glass and other glazing materials to include in Operating and Maintenance Manual specified in the General Requirements.

1.06 QUALITY ASSURANCE

A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, except where more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

1. FGMA Publications: "FGMA Glazing Manual."

2. LSGA Publications: "LSGA Design Guide."

3. SIGMA Publications: TM-3000 "Vertical Glazing Guidelines".

B. Safety Glass: Products complying with ANSI 297.1 and testing requirements of 16 CFR Part 1201 for Category II materials.

1. Subject to compliance with requirements, provide safety glass permanently marked with certification Jabel of Safety Glazing Certification Council (SGCC) or other certification agency acceptable to authorities having jurisdiction.

C. Fire-Resistive Glazing Products for Door Assemblies: Products identical to those tested per ASTM E 152, labeled and listed by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

D. Glazier Qualifications: Engage an experienced glazier who has completed glazing similar in material, design, and extent to that indicated for Project with a record of successful in-service performance.

E. Single-Source Responsibility for Glass: Obtain glass from one source for each product indicated below:

1. Primary glass of each (ASTM C 1036) type and class indicated.

2. Heat-treated glass of each (ASTM C 1048) condition indicated.

3. Laminated glass of each (ASTM C 1172) kind indicated.

F. Single-Source Responsibility for Glazing Accessories: Obtain glazing accessories from one source for each product and installation method indicated.

G. Field-Constructed Mockups: Prior to glazing, erect mockups for each glass product indicated below to verify selections made under sample submittals and to demonstrate aesthetic effects and quality of materials and execution. Build mockups to comply with the following requirements, using materials indicated for final unit of **Work:**

1. Glass Products: Erect mockups with the following kinds of glass to match glazing systems required for Project, including typical lite size, framing systems, and glazing methods:

   a. Fully tempered glass.

   b. Laminated glass.

2. Place mockups on site in location and of size indicated or, if not indicated, as directed by Design Professional of Record.

3. Notify Design Professional of Record one week in advance of the dates and times when mockups will be erected.

4. Obtain Design Professional of Record's acceptance of mockups before start of final unit of Work.

5. Demonstrate the proposed range of aesthetic effects and workmanship.

6. Retain and maintain mockups during construction in undisturbed condition as a standard for judging completed unit of Work.

   a. When directed, demolish and remove mockups from the Project site.

   b. Accepted mockups in undisturbed condition at time of Substantial Completion may become part of completed unit of Work.

H. Preconstruction Compatibility and Adhesion Testing: Submit to sealant

manufacturers. samples of each glass, gasket, glazing accessory, and glass-framing member that will contact or affect glazing sealants for compatibility and adhesion testing as indicated below:

1. Use test methods standard with sealant manufacturer to determine if priming and other specific preparation techniques are required for rapid, optimum glazing sealants adhesion to glass and glazing channel substrates.

    a. Perform tests under normal environmental conditions during installation.

2. Submit not fewer than nine pieces of each type and finish of glass-framing members and each type, class, kind, condition, and form of glass (monolithic, laminated units) for adhesion testing, as well as one sample of each glazing accessory (gaskets, setting blocks and spacers) for compatibility testing.

3. Schedule sufficient time to test and analyze results to prevent delay in the Work.

4. Investigate materials failing compatibility or adhesion tests and get sealant manufacturer's written recommendations for corrective measures, including using special primers.

5. Testing is not required when glazing sealant manufacturer can submit required preparation data that is acceptable to Design Professional of Record and is based on previous testing of current sealant products for adhesion to and compatibility with submitted glazing materials.

I. Pre-Installation Conference: Conduct conference at Project site to comply with the General Requirements provisions governing Project Meetings.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Protect glazing materials to comply with manufacturer's directions and as needed to prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

1.08 PROJECT CONDITIONS

A. Environmental Conditions: Do not proceed with glazing when ambient and substrate temperature conditions are outside the limits permitted by the glazing materials manufacturer or when glazing channel substrates are wet from rain, condensation, or other causes.

1.09 WARRANTY

A. General: Warranties specified in this Article shall not deprive the ASEM/Owner of other rights the ASEM/Owner may have under other provisions of the RFP Bridging Documents and Design-Build Contract Documents and will be in addition to and run concurrent with other warranties made by the Design-Build Entity under requirements of the RFP Bridging Documents and Design-Build Contract Documents.

B. Manufacturer's Warranty on Laminated Glass: Submit written warranty signed by insulating glass manufacturer agreeing to furnish replacements for those laminated glass units that deteriorate as defined in the "Definitions" article, f.o.b. point of manufacture, freight allowed Project site, within specified warranty period indicated below. Warranty covers only deterioration due to normal conditions of use and not to handling, installing, and cleaning practices contrary to glass manufacturer's published instructions.

1. Warranty Period: Manufacturer's standard but not less than 5 years after date of Substantial Completion.

PART II – PRODUCTS

2.01 MANUFACTURERS

A. Available Products: subject to compliance with requirements, products mat may be incorporated in the Work include, but are not limited to, the products specified in Product Data Sheets at end of this Section.

B. Products: Subject to compliance with requirements, provide one of the products specified in Product Data Sheets at end of this Section.

2.02 PRIMARY FLOAT GLASS PRODUCTS

A. Float Glass: ASTM C 1036, Type I (transparent glass, flat), Class as indicated below, and Quality q3 (glazing select).

1. Class 1 (clear) unless otherwise indicated.

2. Class 2 (tinted, heat-absorbing, and light-reducing) where indicated.

B. Refer to Primary Clear Float Glass Product Data Sheet for Class 1 uncoated tinted glass for monolithic glazing.

C. Refer to Primary Tinted Float Glass Product Data Sheet for tint color and nominal performance characteristics of Class 2 uncoated tinted glass for monolithic

glazing relative to visible light transmittance, U-values, shading coefficient, and visible reflectance.

2.03 HEAT-TREATED FLOAT GLASS PRODUCTS, GENERAL

A. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed, unless otherwise indicated.

2.04 HEAT-TREATED FLOAT GLASS

A. Uncoated, Clear, Heat-Treated Float Glass: ASTM C 1048, Condition A (uncoated surfaces). Type I (transparent glass, flat), Class 1 (clear), Quality q3 (glazing select), kind as indicated below.

1. Kind FT (fully tempered) where indicated.

B. Uncoated, Tinted, Heat-Treated Float Glass: ASTM C 1048, Condition A (uncoated surfaces), Type I (transparent glass, flat), Class 2 (tinted heat-absorbing and light-reducing), Quality q3 (glazing select), with tint color and performance characteristics for 6 mm thick glass matching those indicated for annealed primary tinted float glass; kind as indicated below:

1. Kind FT (fully tempered) where indicated.

C. Available Manufacturers: Subject to compliance with requirements, manufacturers offering heat-treated glass products that may be incorporated in the Work include, but are not limited to, the following companies.

1. AFG Industries, Inc.
2. Artistic Glass Products Co.
3. Cardinal IG.
4. Saint-Gobain.
5. Falconer Glass Industries.
6. Glasstomp, Inc.
7. Guardian Industries Corp.
8. HGP Industries.
9. PPG Industries, Inc.

10. Spectrum Glass Products, Inc.

11. Tempglass.

12. Viracon. Inc.

2.05 LAMINATED GLASS PRODUCTS

A. Laminated Glass Products: Comply with ASTM C 1172 for kinds of laminated glass indicated and other requirements specified, including those in Laminated Glass Product Data Sheet at the end of this Section. Refer to primary and heat-treated glass requirements relating to properties of glass products comprising laminated glass products.

B. Interlayer: Interlayer material as indicated below, in clear or colors, and of thickness indicated with a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after laminating glass lites and installation.

1. Interlayer Material: Polyvinyl butyral sheets.

2. Available Products: Subject to compliance with requirements, the plastic interlayer products that may be incorporated in the Work include, but are not limited to, the following:

a. Polyvinyl Butyral Interlayer.

1) Saflex, Monsanto Co.

2) Butacite, E. I. du Pont de Nemours & Co., Inc.

C. Laminating Process: Fabricate laminated glass to produce glass free of foreign substances and air or glass pockets as follows:

1. Laminate lites with polyvinyl butyral interlayer in autoclave with heat plus pressure.

2.06 FIRE-RESISTIVE GLAZING PRODUCTS

A. Fire-Resistive, Ceramic Glazing Material: Proprietary product in the form of clear flat sheets of 3/16 inch (5 mm) nominal thickness, weighing 2.5 psf (4.7 kg/sq m), permanently labeled with appropriate marks of testing and inspecting agency, acceptable to authorities having jurisdiction, showing product complies with fire-resistive installation indicated, and as follows:

1. Polished on both surfaces, transparent with visible light transmission of

76.9 percent.

2. Product: Subject to compliance with requirements, provide the following product manufactured by Nippon Electric Glass Co., Ltd. and distributed by Technical Glass Products:

   a. Pyroswiss.

2.07 ELASTOMERIC GLAZING SEALANTS

A. General: Provide products of the type indicated, complying with the following requirements:

1. Compatibility: Select glazing sealants and tapes of proven compatibility with other materials they will contact, including glass products, seals of insulating glass units, and glazing channel substrates, under conditions of Installation and service, as demonstrated by testing and field experience.

2. Suitability: Comply with sealant and glass manufacturer's recommendations for selecting glazing sealants and tapes that are suitable for applications indicated and conditions existing at time of installation.

3. Colors: Provide color of exposed joint sealants to comply with the following:

   a. Provide selections made by Design Professional of Record from manufacturer's full range of standard colors for products of type indicated.

B. Elastomeric Glazing Sealant Standard: Provide manufacturer's standard chemically curing, elastomeric sealants of base polymer indicated that comply with ASTM C 920 requirements indicated on each Elastomeric Glazing Sealant Product Data Sheet at the end of this Section, including those referencing ASTM classifications for Type, Grade, Class and Uses.

C. Glazing Sealant for Fire-Resistant Glazing Products: Identical to product used in test assembly to obtain fire-resistive rating.

2.08 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tape: Preformed, butyl-based elastomeric tape with a solids content of 100 percent, nonstaining and nonmigrating in contact with nonporous surfaces, with or without spacer rod as recommended by tape and glass manufacturers for application indicated,

packaged on rolls with a release paper backing, and complying with AAMA 800 for products indicated below:

1. MMA804.1.
2. MMA 806.1.
3. MMA 807.1.

B. Expanded Cellular Glazing Tape: Closed-cell, polyvinyl chloride foam tape, factory coated with adhesive on both surfaces, packaged on rolls with release liner protecting adhesive, and complying with MMA 800 for product 810.5.

C. Available Products: Subject to compliance with requirements, glazing tape that may be incorporated in the Work include, but is not limited to, the following:

1. Back-Bedding Mastic Glazing Tape Without Spacer Rod:
    a. PTI 303 Glazing Tape (shimless), Protective Treatments, Inc.
    b. S-M 5700 Poly-Glaze Tape Sealant, Schnee-Morehead, Inc.
    c. Tremco 440 Tape, Tremco Inc.
    d. Extru-Seal, Pecora Corp.
    e. PTI 606 Architectural Sealant Tape, Protective Treatments, Inc.
    f. Dyna-Seal, Pecora Corp.
    g. PTI 626 Architectural Sealant Tape, Protective Treatments, Inc.
    h. S-M 5710 H.P Poly-Glaze Tape Sealant, Schnee-Morehead, Inc.
    i. SST-800 Tape, Tremco, Inc.
2. Back-Bedding Mastic Glazing Tape with Spacer Rod:
    a. PTI 303 Glazing Tape (with shim), Protective Treatments. Inc.
    b. Pre-shimmed Tremco 440 Tape, Tremco, Inc.
    c. PTI 606 Architectural Sealant Tape, Protective Treatments, Inc.
3. Expanded Cellular Glazing Tape:

a. Norseal V-980 Closed-Cell Glazing Tape, Norton Company.

2.09 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials involved for glazing application indicated, and with a proven record of compatibility with surfaces contacted in installation.

B. Cleaners, Primers and Sealers: Type recommended by sealant or gasket manufacturer.

C. Setting Blocks: Elastomeric material with a Shore A durometer hardness of 85 plus or minus 5.

D. Spacers: Elastomeric blocks or continuous extrusions with a Shore-A durometer hardness required by glass manufacturer to maintain glass lites in place for installation indicated.

E. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side- walking).

F. Plastic Foam Joint Fillers: Preformed, compressible, resilient, nonstaining, non-extruding, non-outgassing, strips of closed-cell plastic foam of density, size, and shape to control sealant depth and otherwise contribute to produce optimum sealant performance.

G. Perimeter Insulation for Fire-Resistive Glazing: Identical to product used in test assembly to obtain fire-resistive rating.

2.10 FABRICATION OF GLASS AND OTHER GLAZING PRODUCTS

A. Fabricate glass and other glazing products in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with recommendations of product manufacturers and referenced glazing standard as required to comply with system performance requirements.

B. Clean cut or flat grind vertical edges of butt-glazed monolithic lites in a manner that produces square edges with slight kerfs at junctions with indoor and outdoor faces.

PART III – EXECUTION

3.01 EXAMINATION

A. Examine glass framing, with glazier present, for compliance with the following:

1. Manufacturing and installation tolerances, including those for size. squareness, offsets at corners.

2. Presence and functioning of weep system.

3. Minimum required face or edge clearances.

4. Effective sealing between joints of glass-framing members.

B. Do not proceed with glazing until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings that are not firmly bonded to substrates.

3.03 GLAZING, GENERAL

A. Comply with combined recommendations of manufacturers of glass, sealants, gaskets, and other glazing materials, except where more stringent requirements are indicated, including those in referenced glazing publications.

B. Glazing channel dimensions as indicated on Drawings provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances. Adjust as required by Project conditions during installation.

C. Protect glass from edge damage during handling and installation as follows:

1. Use a rolling block in rotating glass units to prevent damage to glass corners. Do not impact glass with metal framing. Use suction cups to shift glass units within openings; do not raise or drift glass with a pry bar. Rotate glass lites with flares or bevels on bottom horizontal edges so edges are located at top *of* opening, unless otherwise indicated by manufacturer's label.

2. Remove damaged glass from Project site and legally dispose of off-site. Damaged glass is glass with edge damage or other imperfections that, when installed, weaken glass and impair performance and appearance

D. Apply primers to joint surfaces where required for adhesion of sealants, as

determined by preconstruction sealant-substrate testing.

E. Install elastomeric setting blocks in sill rabbets, sized and located to comply with referenced glazing standard, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

G. Provide spacers for glass sizes larger than 50 united inches (1250 mm) (length plus height) as follows:

1. Locate spacers inside, outside, and directly opposite each other. Install correct size and spacing to preserve required face clearances, except where gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and comply with system performance requirements.

2. Provide 1/8-inch (3 mm) minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

H. Provide edge blocking to comply with requirements of referenced glazing publications. unless otherwise required by glass manufacturer.

I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.

3.04 TAPE GLAZING

A. Position tapes on fixed stops so that when compressed by glass their exposed edges are flush with or protrude slightly above sightline of stops.

B. Install tapes continuously but not in one continuous length. Do not stretch tapes to make them fit opening.

C. Where framing joints are vertical, cover these joints by applying tapes to heads and sills first and then to jambs. Where framing joints are horizontal, cover these joints by applying tapes to jambs and then to heads and sills.

D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.

E. Do not remove release paper from tape until just before each lite is installed.

F. Apply heel bead of elastomeric sealant.

G. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.05 GASKET GLAZING (DRY)

A. Fabricate compression gaskets in lengths recommended by gasket manufacturers to fit openings exactly, with stretch allowance during installation.

B. Secure compression gaskets in place with joints located at corners to compress gaskets producing a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturers.

C. Install gaskets so they protrude past face of glazing stops.

3.06 SEALANT GLAZING (WET)

A. Install continuous spacers between glass lites and glazing stops to maintain glass face clearances and to prevent sealants from extruding into glass channel weep systems until sealants cure. Secure spacers in place and in a position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealants to glass and channel surfaces.

C. Tool exposed surfaces of sealants to provide a substantial wash away from glass. Install pressurized gaskets to protrude slightly out of channel to eliminate dirt and moisture pockets.

3.07 PROTECTION AND CLEANING

A. Protect· exterior glass from breakage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to the glass surface. Remove nonpermanent labels, and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations including weld splatter. If, despite such protection, contaminating substances do come into contact with glass, remove them

immediately as recommended by glass manufacturers.

C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for build-up of dirt, scurry, alkali deposits, or stains, and remove as recommended by glass manufacturer.

D. Remove and replace glass that is broken, chipped, cracked, abraded, or damaged in any way, including natural causes, accidents and vandalism, during construction period.

E. Wash glass on both faces in each area *of* Project not more than 4 days prior to date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended by glass manufacturers.

PRODUCT DATA SHEET 1 - PRIMARY CLEAR TEMPERED FLOAT GLASS

A. Primary Clear Tempered Glass: Clear fully tempered float glass shall be used wherever so indicated on the Drawings.

B. Class: Class 1 (clear) fully tempered float glass.

C. Nominal Performance Characteristics are as indicated below:

   1. Visible Light Transmittance: 80% to 95%.

   2. Shading Coefficient: 0.90 to 0.95.

   3. Outdoor Visible Reflectance: 5% to 10%.

D. Available Manufacturers:

   1. Ford Glass.

   2. Guardian Industries Corp.

   3. Libbey Owens Ford.

   4. PPG.

PRODUCT DATA SHEET 2 - PRIMARY TINTED TEMPERED FLOAT GLASS

A. Primary Tinted Tempered Glass: Tinted fully tempered float glass shall be used wherever so indicated on the Drawings.

B. Class: Class 2 (tinted heat absorbing and light reducing) fully tempered float glass of tint color indicated below.

    1. Gray.

C. Nominal Performance Characteristics are as indicated below:

    1. Visible Light Transmittance: 40% to 50%.

    2. Shading Coefficient: 0.60 to 0.75.

    3. Outdoor Visible Reflectance: 5% to 7%.

D. Available Products:

    1. Ford Glass Sunglas Grey.

    2. Guardian Industries Corp. Gray.

    3. Libbey Owens Ford Grey Tint.

    4. PPG Solargray.

PRODUCT DATA SHEET 3 - LAMINATED GLASS

A. Clear Laminated Glass: Except as otherwise indicated, all interior glass shall be clear laminated glass.

B. Kind of Laminated Glass per ASTM C 1172: Kind LA (two lites of annealed Type I glass).

1. Clear Inner Lite: Class 1 (clear) float glass, with a thickness of 3.0 mm.

2. Clear Outer Lite: Class 1 (clear) float glass with a minimum thickness of 3.0 mm.

3. Thickness of Plastic Interlayer: 0.030 inch (8 mm).

4. Color of Plastic Interlayer: Clear.

5. Nominal Performance Characteristic of Laminated Units are as indicated below:

a. Visible Light Transmittance: 80% to 90%.

b. Summer Daytime U-Value: .98 to 1.00.

c. Winter Nighttime U-Value: 1.04 to 1.06.

d. Shading Coefficient: 0.90 to 0.95.

C. Available manufacturers:

1. Globe Amerada Glass Co.

2. Guardian Industries Corp.

3. Viracon, Inc.

4. Binswager Mirror Co.

PRODUCT DATA SHEET 4- LAMINATED GLASS

A. Tinted Laminated Glass: Except as otherwise, indicated all exterior glass shall be tinted laminated glass.

B. Kind of Laminated Glass per ASTM C 1172: Kind LA (two lites of annealed Type I glass).

   1. Clear Inner Lite: Class 1 (clear) float glass, with a thickness of 3.0 mm.

   2. Clear Outer Lite: Class 1 (clear) float glass with a minimum thickness of 3.0 mm.

   3. Thickness of Plastic Interlayer. 0.030 inch (8mm).

   4. Color of Plastic Interlayer: Gray.

   5. Nominal Performance Characteristics Of Laminated Units are as indicated below:

      a. Visible Light Transmittance: 40% to 50%

      b. Summer Daytime U-Value: .98 to 1.00

      c. Winter Nighttime U-Value: 1.04 to 1.06

      d. Shading Coefficient: 0.63 to 0.70

C. Available manufacturers:

   1. Globe Amerada Glass Co.

   2. Guardian Industries Corp.

   3. Binswanger Mirror Co.

PRODUCT DATA SHEET 5 - ELASOMETRIC GLAZING SEALANT.

A. Elastometric Glazing Sealant: Elastometric glazing sealant shall be used for all glass installations unless otherwise indicated.

B. Base Polymer: Neutral-curing silicone or urethane.

C. Type: S (single component) or M (multicomponent).

D. Grade: NS (non-sag).

E. Class: 25.

F. Additional Movement capability: Not less than 25 percent movement in extension and not less than 25 percent in compression for a total of not less than 50 percent movement.

G. Available Products:

1. Pecora 864, 895 or 985.

2. Tremco Proglaze II or Dymonic.

END OF SECTION

SECTION 09130 – ACOUSTICAL SUSPENSION CEILINGS

PART I – GENERAL

1.01 WORK INCLUDED

A. This Section includes acoustical ceiling suspension system, exposed grid and concealed grid, for support of acoustical panels included in another Section.

1.02 RELATED WORK

A. Related Work in Other Sections: 09510 Acoustical Ceilings

1.03 REFERENCES

A. Industry standards governing this work are of the latest issue at the date of this Specification release, except as otherwise noted:

1. American Society for Testing and Materials [ASTM]:

ASTM A 366	Steel, Carbon, Cold-Rolled Sheet, Commercial Quality.
ASTM C 635	Metal Suspension Systems for Acoustical Tile and Lay-In Panel Ceilings.
ASTM C 636	Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.

1.04 SYSTEM DESCRIPTION

A. Design Criteria:

1. Deflection: Acoustical suspension system including all components, hanger, and fastening devices shall be capable of supporting ceiling grilles, light fixtures, ceiling speakers, and finish ceiling without deflecting more than 1/360 of span length in inches when tested in accordance with ASTM C 635.

B. Tolerances: Finish ceiling shall be level within a tolerance of 1/8 inch in ten feet in all directions.

C. Qualification of Product:

1. Product shall be acceptable to manufacturer of the finish ceiling it supports. Refer to Section 09510.

2. Where a suspension system becomes a part of a rated assembly, it shall comply with rating provisions specified.

1.05 SUBMITTALS

A. Samples:

1. Linear Items: Two 12-inch lengths of each item.

2. Anchors and Fasteners: One of each type identified for each type of installation.

B. Shop Drawings shall indicate:

1. Hanger supports locations.

2. Framing and placement layout to produce finish ceiling in accordance with Design Professional of Record's reflected ceiling plan.

3. Location of items penetrating ceiling for which framing must be coordinated.

4. Framing and hangers in addition to the normal spacing for recessed items or items penetrating ceiling.

5. Special framing to support suspension system under wide ducts and other obstructions to normal hanger spacing.

6. Details of power-driven anchor system proposed.

C. Certification: Furnish certification from an acceptable independent testing laboratory that Shop Drawings provides system which will comply with the design criteria specified.

D. Manufacturer's standard installation instructions amended to comply with this project.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver in manufacturer's original packages, with seals unbroken, and with manufacturer's name and contents of package noted. Store in enclosed dry and ventilated areas and protect from dirt, grease, other contaminants or damage.

1.07 PROJECT/SITE CONDITIONS

A. Inspect job for conditions which would prevent execution of this work as specified. Do not proceed until unsatisfactory conditions are corrected.

1.08 SEQUENCING/SCHEDULING

A. Hanger support installation shall be coordinated with installation of work receiving them and work hangers' support.

B. Centerlines of areas to receive exposed grid systems shall be established and maintained so all trades can work to comparable established lines.

C. Verify ceiling height with installed plumbing, heating, air conditioning, ducts and electrical items to assure that clearances are provided for ceiling suspension system framing.

D. Coordinate ceiling suspension framing to receive recessed items and openings having finish frames furnished under other Sections.

PART II - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Acceptable Manufacturers Subject to Compliance with this Specification:

1. Roper Eastern Building Systems [referenced manufacturer].

2. National Rolling Mills, Inc.

3. Donn Corporation.

2.02 EXPOSED GRID SUSPENSION SYSTEM

A. Suspension System:

1. "Tablock Double Web" exposed grid system conforming to heavy duty classification of ASTM C 635.

2. "Firesafe Tablock" double web exposed grid system conforming to heavy duty classification of ASTM C 635, two-hour fire rated.

B. Grid Components: Conform to requirements of Heavy [16-pound minimum] Structural Classification ASTM C 635. Main beams shall be

double thickness web bulb section design of steel conforming to ASTM A 366 with web height of 1-1/2 inches and 1 5/1 6-inch bottom flange. Provide cross ties of double thickness bulb section with 15/16-inch bottom flange.

C. Hanger Support Attachment Devices: ASTM C 636.

D. Hanger Material: Galvanized soft annealed mild steel wire, pencil rods or flat steel straps. The strength of hangers shall be at least equivalent to No. 12 gauge steel wire.

E. Grid Types:

1. Type "A": Manufacturer's standard interlocking 24- inch by 24-inch grid, fire rated, "Firesafe Tablock".

2. Type "B": Manufacturer's standard interlocking 24- inch by 48-inch, non-fire rated, "Tablock Double Web".

F. Accessories: Manufacturer's standard for the system used except as otherwise indicated, including hold-down clips, where required, and "W" shaped wall molding providing a rabbetted off-set at junction of wall and ceiling.

G. Finish:

1. Manufacturer's standard high-bake white enamel paint on steel.

2. Manufacturer's standard etched and clear lacquer on natural aluminum.

3. See Finish Schedule for location of steel and aluminum grid systems.

2.03 CONCEALED GRID SUSPENSION SYSTEM

A. Referenced System: 'Tablock 281 ", double web concealed grid suspension system, conforming to heavy-duty classification of ASTM C 635 and rated as a two-hour assembly by Underwriters' Laboratories, Inc.

B. Grid Components: 0.019-inch steel, conforming to ASTM A 366. Main beams and cross ties shall be 1-1/2 inches high by 7/8-inch minimum width with double thickness webs.

C. Hanger Support Attachment Devices: Conforming to ASTM C 636.

D. Hanger Material: Galvanized soft annealed mild steel wire, pencil rods or flat steel straps with strength at least equivalent to No. 12 gauge steel wire.

E. Grid Types:

1. Type "A": Manufacturer's standard 12 inches by 12 inches.

2. Type "B": Manufacturer's standard 24 inches by 24 inches.

F. Accessories: Manufacturer's standard for the system used except as otherwise indicated, including channels, saddles, tee sections, splices, splines, clips, and molding specifically designed as integral parts of the system.

G. Finish:

1. Manufacturer's standard high-baked white enamel paint on galvanized steel.

2. Manufacturer's standard natural aluminum, etched with clear lacquer.

3. See Finish Schedule for location of steel and aluminum grid systems.

2.04 MAINTENANCE MATERIALS

A. At completion of the job, provide packaged components for the systems used equal to 2% of the quantity installed.

PART III – EXECUTION

3.01 INSTALLATION, GENERAL

A. Installation shall be in accordance with ASTM C 636 except as modified by this Specification.

B. Pattern: Ceiling grid pattern shall follow reflected ceiling plan and installed in straight line pattern.

C. Hangers:

1. For 48 Inch Carrying Channel or Main Runner Spacing: Attach to hanger supports not exceeding 48 inches On Center in direction at right angles to structural framing and 48 inches On Center in the other direction.

2. Hangers shall not be attached to ducts, pipes or conduit.

3. Secure hangers to supplementary channels wire-tied to supports where hangers do not occur on standard hanger support spacing or where other work prevents hanger from anchoring to standard support spacing.

4. No hanger shall be more than five degrees out of plumb.

5. In addition to hangers supporting the suspension system, provide hangers at all four corners of HVAC ceiling diffusers, return air grilles, and light fixtures when their area exceeds two square feet.

D. Suspension Systems:

1. Installation of suspension system shall be in accordance with manufacturer's instructions.

2. Install metal edge mold where suspended ceiling abuts vertical surfaces.

3. Fasten edge mold to wall not more than three inches from ends and not more than 16 inches On Center between end holes.

E. Workmanship:

1. Suspension system shall be straight and in alignment and exposed surface flush and level within tolerances specified.

2. Corners: Miter cut inside and outside corners of exposed grid.

3.02 GRID PATTERN

A. 24 Inches by 48 Inches Grid Parallel to Structural Framing:

1. Space main runners 48 inches On Center at right angles to structural framing.

2. Space 48 inches cross runners at right angles to main runners 24 inches on Center.

B. 24 Inches by 48 Inch Grid at Right Angles to Structural Framing:

1. Space main runner 48 inches On Center at right angles to structural framing.

2. Space 48-inch cross runners 48 inches On Center framing

between and at right angles to main runners.

3. Space 48-inch cross runners parallel to and at midpoint between main runners.

C. 24 Inch by 24 Inch Grid:

1. Space main runners 48 inches On Center at right angles to structural framing.

2. Space 48-inch cross runners 24 inches On Center at right angles to main runners.

3. Space 24-inch cross runners parallel to and at midpoint between main runners.

3.03 COORDINATION

A. Coordinate work, including layouts, with other trades. Mounts, clips, and other attachment devices for electrical, mechanical, heating, ventilating and air conditioning components are provided under the Mechanical Systems and Electrical Systems requirements.

3.04 RATED CEILING

A. Install suspension system for rated ceilings complying with requirements of agency establishing ratings specified.

END OF SECTION

SECTION 09220 – PORTLAND CEMENT PLASTER

PART I – GENERAL

1.01 RELATED DOCUMENTS

A. RFP Documents, Bridging Drawings, performance criteria and, after award, applicable Design-Build Contract provisions, including applicable general requirements, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:

1. Metal lath and accessories.

2. Plastic accessories.

3. Portland cement plaster.

1.03 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and applicable General Requirements Sections.

B. Product Data for each product specified.

C. Material Certificates: Submit certificate signed by manufacturer for each kind of plaster aggregate certifying that materials comply with requirements.

1.04 QUALITY ASSURANCE

A. Mockups: Prior to installing plaster work, construct panels for each type of finish and application required to verify selections made under Sample submittals and to demonstrate aesthetic effects as well as qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for final unit of Work.

1. Locate mockups on-site in the location and of the size indicated or, if not indicated, as directed by Design Professional of Record.

2. Erect mockups 48 by 48 inches (1200 by 1200 mm) by full thickness in presence of Design Professional of Record using materials, including lath, support system, and control joints, indicated for final Work.

3. Notify Design Professional of Record 7 days in advance of the dates and times when mockups will be constructed.

4. Demonstrate the proposed range of aesthetic effects and workmanship.

5. Obtain Design Professional of Record's approval of mockups before start of plaster Work.

6. Retain and maintain mockups during construction in an undisturbed condition as a standard for judging the completed Portland Cement plaster Work.

    a. When directed, remove mockups from the Project site.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver cementitious materials to Project site in original packages, containers, or bundles, labeled with manufacturer's name, product brand name, and lot number.

B. Store materials inside, under cover, and dry, protected from weather, direct sunlight, surface contamination, aging, corrosion, and damage from construction traffic and other causes.

1.06 PROJECT CONDITIONS

A. Environmental Requirements, General: Comply with requirements of referenced plaster application standards and recommendations of plaster manufacturer for environmental conditions before, during, and after plaster application.

B. Warm-Weather Requirements: Protect plaster against uneven and excessive evaporation and from strong flows of dry air, both natural and artificial. Apply and cure plaster as required by climatic and job conditions to prevent dry out during cure period. Provide suitable coverings, moist curing, barriers to deflect sunlight and wind, or combinations of these, as required.

C. Ventilation: Provide natural or mechanical means of ventilation to properly dry interior spaces after Portland Cement plaster has cured.

D. Protect contiguous work from soiling and moisture deterioration caused by plastering. Provide temporary covering and other provisions necessary to minimize harmful spattering of plaster on other work.

PART II – PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Expanded-Metal Lath:

a. Alabama Metal Industries Corp. (AMICO).

b. California Expanded Metal Products Co.

c. Dale//lncor Industries, Inc.

d. Dietrich Industries, Inc.

e. National Gypsum Co.

f. Unimast, Inc.

g. United States Gypsum Co.

h. Western Metal Lath Co.

2. Plastic Accessories:

a. Alabama Metal Industries Corp. (AMICO).

b. Plastic Components, Inc.

c. Vinyl Corp.

2.02 METAL SUPPORTS FOR SUSPENDED AND FURRED CEILINGS

A. General: Size metal ceiling supports to comply with ASTM C 1063, unless otherwise indicated.

B. Cast-in-Place and Post-installed Anchors in Concrete: Anchors of type indicated below, fabricated from corrosion-resistant materials, with holes or loops for attaching hanger wires; and with capability to sustain, without failure, a load equal to 5 times that imposed by ceiling construction, as determined by testing according to ASTM E 488 conducted by a qualified independent testing agency.

1. Cast-in-place type designed for attachment to concrete forms.

2. Expansion anchor.

C. Wire for Hangers and Ties: ASTM A 641 (ASTM A 641M), Class 1 zinc coating, soft

temper.

D. Rod Hangers: Mild steel, zinc coated.

E. Channels: Cold-rolled steel, minimum 0.0598-inch- (1.5-mm-) thick base (uncoated) metal and 7/16-inch- (11.1-mm-) wide flanges, and as follows:

1. Carrying Channels: 1-1/2 inches (38 mm) deep, 475 lb/1000 feet (0.7 kg/m).

2. Furring Channels: 3/4 inch (19 mm) deep, 300 lb/1000 feet (0.45 kg/m).

3. Finish: ASTM A 653, G60 (ASTM A 653M, 2180) hot-dip galvanized coating.

2.03 STEEL RUNNERS

A. General: Provide steel runners complying with the following requirements:

1. Protective Coating: ASTM A 653, G40 (ASTM A 653M, Z90) hot-dip galvanized coating.

2.04 LATH

A. Expanded-Metal Lath: Comply with ASTM C 847 for material, type, configuration, and other characteristics indicated below.

1. Material: Fabricate expanded-metal lath from sheet metal conforming to the following:

a. Galvanized Steel: Structural-quality, zinc-coated (galvanized) steel sheet complying with ASTM A 653, G60 (ASTM A 653M, Z180) minimum coating designation, unless otherwise indicated.

2. Rib Lath: Comply with the following requirements:

a. Configuration: Rib depth of 3/8 inch (9.5 mm).

1) Weight: 3.4 lb/sq. yd. (1.8 kg/sq. m).

2.05 ACCESSORIES

A. General: Comply with material provisions of ASTM C 1063 and the requirements indicated below; coordinate depth of accessories with thickness and number of plaster coats required.

1. Plastic Components: ASTM D 4216, high-impact polyvinyl chloride (PVC) for building products.

B. Cornerbeads: Small nose comer beads fabricated from the following, with expanded flanges of large-mesh diamond lath allowing full plaster encasement.

1. PVC Plastic: Minimum 0.035 inch (0.89 mm) thick.

C. Casing Beads: Square-edged style, with expanded flanges of the following material:

1. PVC Plastic: Minimum 0.035 inch (0.89 mm) thick.

D. Control Joints: Prefabricated, of material and type indicated below:

1. PVC Plastic: Minimum 0.035 inch (0.89 mm) thick.

2. Two-Piece Type: Pair of casing beads with back flanges formed to provide slip-joint action, adjustable for joint widths from 1/8 to 5/8 inch (3 to 16 mm).

a. Provide removable protective tape on plaster face of control joints.

E. Lath Attachment Devices: Material and type required by ASTM C 1063 for installations indicated.

2.06 PLASTER MATERIALS

A. Base-Coat Cements: Type as indicated below:

1. Portland cement, ASTM C 1SO, Type I.

B. Job-Mixed Finish-Coat Cement: Material as indicated below:

1. Portland cement, ASTM C 150, Type I.

C. Lime: Special hydrated lime for finishing purposes, ASTM C 206, Type S; or special hydrated lime for masonry purposes, ASTM C 207, Type S.

D. Sand Aggregate: ASTM C 897.

2.07 MISCELLANEOUS MATERIALS

A. Fiber for Base Coat: Alkaline-resistant glass or polypropylene fibers, 1/2 inch (13 mm) long, free of contaminates, manufactured for use in Portland Cement plaster.

B. Water for Mixing and Finishing Plaster. Potable.

C. Bonding Agent: ASTM C 932.

D. Steel drill screws complying with ASTM C 1002 for fastening metal lath to wood or steel members less than 0.033 inch (0.84 mm) thick.

E. Steel drill screws complying with ASTM C 954 for fastening metal lath to steel members 0.033 to 0.112 inch (0.84 to 2.84 mm) thick.

2.08 PLASTER MIXES AND COMPOSITIONS

A. General: Comply with ASTM C 926 for base- and finish-coat mixes as applicable to plaster bases, materials, and other requirements indicated.

B. Base-Coat Mixes and Compositions: Proportion materials for respective base coats in parts by volume per sum of cementitious materials for aggregates to comply with the following requirements for _each method of application and plaster base indicated. Adjust mixed proportions below within limits specified to attain workability.

C. Fiber Content: Add fiber to following mixes after ingredients have mixed at least 2 minutes. Comply with fiber manufacturer's written instructions but do not exceed 1 lb/cu. ft. (16 kg/cu. m) of cementitious materials. Reduce aggregate quantities accordingly to maintain workability.

D. Three-Coat Work over Metal Lath: Base-coat proportions as indicated below:

1. Scratch Coat: 1-part Portland Cement, Oto 3/4 parts lime, 2-1/2 to 4 parts aggregate.

2. Brown Coat: 1-part Portland Cement, 0 to 3/4 parts lime, 3 to 5 parts aggregate.

E. Two-Coat Work over Concrete Unit Masonry: Base-coat proportions as indicated below:

1. Base Coat: 1-part Portland Cement, 3/4 to 1-1/2 parts lime, 3 to 4 parts aggregate.

F. Job-Mixed Finish Coats: Proportion materials for finish coats in parts by volume for cementitious materials and parts by volume per sum of cementitious materials to comply with the following requirements:

1. Proportions using sand aggregates as indicated below:

a. 1-part Portland Cement, 3/4 to 1-1/2 parts lime, 3 parts sand.

2.09 MIXING

A. Mechanically mix cementitious and aggregate materials for plasters to comply with applicable referenced application standards and with recommendations of plaster manufacturer.

PART III – EXECUTION

3.01 INSTALLATION OF LATH AND FURRING, GENERAL

A. Standards: Comply with MUSFA 920, "Guide Specifications for Metal Lathing and Furring," and with requirements of ASTM C 1063.

B. Install supplementary framing, blocking, and bracing at terminations in work and for support of fixtures, equipment services, heavy trim, grab bars, handrails, furnishings, and similar work to comply with details indicated or, if not otherwise indicated, to comply with applicable written instructions of lath and furring manufacturer.

C. Isolation: Where lathing and metal support system abuts building structure horizontally, sufficiently isolate from structural movement to prevent transfer of loading from building structure. Install slip- or cushion-type joints to absorb deflections but maintain lateral support.

1. Frame both sides of control joints independently and do not bridge joints with furring and lathing or accessories.

D. Install additional framing, furring, runners, lath, and beads, as required to form openings and frames for other work as indicated. Coordinate support system for proper support of framed work that is not indicated to be supported independently of metal furring and lathing system.

3.02 INSTALLATION OF CEILING SUSPENSION SYSTEMS

A. Preparation and Coordination: Coordinate installation of ceiling suspension system with installation of overhead structural systems to ensure inserts and other structural anchorage provisions have been installed to receive ceiling hangers in a manner that will develop their full strength and at spacings required to support ceiling.

1. Furnish concrete inserts, and other anchorage devices indicated, to other trades for installations well in advance of time needed for coordination with other work.

B. Hanger Installation: Attach hangers to the structure above ceiling to comply with MUSFA 920, "Guide Specifications for Metal Lathing and Furring," and with referenced standards

C. Install ceiling suspension system components of sizes and spacings indicated, but not in smaller sizes or greater spacings than those required by referenced lathing and furring installation standards.

1. Wire Hangers: Space 0.16-inch- (4-mm-) diameter wire hangers not over 48 inches (1219 mm) o.c., parallel with and not over 36 inches (914 mm) perpendicular to direction of carrying channels, unless otherwise indicated, and within 6 inches (152 mm) of carrying channel ends.

2. Carrying Channels: Space carrying channels not over 36 inches (914 mm) o.c. with 48- inch (1219-mm) o.c. with hanger spacing.

3. Furring Channels to Receive Metal Lath: Space furring channels not over 24 inches (609 mm) o.c. for 3.4-lb/sq. yd. (1.8-kg/sq. m), 3/8-inch (9.5-mm) rib lath.

3.03 PREPARATIONS FOR PLASTERING

A. Clean plaster bases and substrates for direct application of plaster, removing loose material and substances that may impair the Work.

B. Apply bonding agent on concrete and concrete unit masonry surfaces indicated for direct plaster application; comply with manufacturer's written instructions for application.

C. Install temporary grounds and screeds to ensure accurate rodding of plaster to true surfaces; coordinate with scratch-coat work.

D. Refer to the applicable carpentry requirements for installing permanent wood grounds, if any.

3.04 INSTALLATION OF PLASTERING ACCESSORIES

A. General: Comply with referenced lathing and furring installation standards for provision and location of plaster accessories of type indicated. Miter or cope accessories at corners: install with tight joints and in alignment. Attach accessories securely to plaster bases to hold accessories in place and in alignment during plastering. Install accessories of type indicated at following locations:

1. External Corners: Install comer reinforcement at external corners.

2. Terminations of Plaster. Install casing beads, unless otherwise indicated.

3. Control Joints: Install at locations indicated or, if not indicated, at locations complying with the following criteria and approved by Design

Professional of Record:

a. Where an expansion or contraction joint occurs in surface of construction directly

behind plaster membrane.

b. Distance between Control Joints: Not to exceed 18 feet (5.4 m) in either direction or a length-to-width ratio of 2-1/2 to 1.

c. Wall Areas: Not more than 144 sq. ft. (13 sq. m).

d. Horizontal Surfaces: Not more than 100 sq. ft. (9 sq. m) in area.

e. Where plaster panel sizes or dimensions change, extend joints full width or height of plaster membrane.

3.05 PLASTER APPLICATION

A. Plaster Application Standard: Apply plaster materials, composition, and mixes to comply with ASTM C 926.

B. Do not use materials that are caked, lumpy, dirty, or contaminated by foreign materials.

C. Do not use excessive water in mixing and applying plaster materials.

D. Flat Surface Tolerances: Do not deviate more than plus or minus 1/8 inch in 10 feet (3 mm in 3 m) from a true plane in finished plaster surfaces, as measured by a 10-foot (3-m) straightedge placed at any location on surface.

E. Grout hollow-metal frames, bases, and similar work occurring in plastered areas, with base- coat plaster material. Except where full grouting is indicated or required for fire-resistance rating, grout at least 6 inches (152 mm) at each jamb anchor.

F. Sequence plaster application with installation and protection of other work so that neither will be damaged by installation of other.

G. Plaster flush with metal frames and other built-in metal items or accessories that act as a plaster ground, unless otherwise indicated. Where interior plaster is not terminated at metal frame by casing beads, cut base coat free from metal frame before plaster sets and groove finish coat at junctures with metal.

H. Corners: Make internal corners and angles square; finish external corners

flush with comer beads.

I. Number of Coats: Apply plaster of composition indicated, to comply with the following requirements:

1. Three Coats: Over the following plaster base:

a. Metal lath.

2. Two Coats: Over the following plaster bases:

a. Concrete unit masonry.

b. Concrete.

J. Finish Coats: Apply finish coats to comply with the following requirements:

1. Float Finish: Apply finish coat to a minimum thickness of 1/8 inch (3 mm) to completely cover base coat, uniformly floated to a true even plane with fine-textured sand finish matching Design Professional of Record's sample.

K. Moist-cure plaster base and finish coats to comply with ASTM C 926, including written instructions for time between coats and curing in "Annex A2 Design Considerations."

3.06 CUTTING AND PATCHING

A. Cut, patch, replace, repair, and point up plaster as necessary to accommodate other work. Repair cracks and indented surfaces. Point-up finish plaster surfaces around items that are built into or penetrate plaster surfaces. Repair or replace work to eliminate blisters. buckles, check cracking, dry-outs, efflorescence, excessive pinholes, and similar defects. Repair or replace work as necessary to comply with the required visual effects.

3.07 CLEANING AND PROTECTING

A. Remove temporary covering and other provisions made to minimize spattering of plaster on other work. Promptly remove plaster from door frames, windows, and other surfaces not to be plastered. Repair surfaces stained, marred or otherwise damaged during plastering work. When plastering work is completed, remove unused materials, containers, equipment, and plaster debris.

8. Provide final protection and maintain conditions, in a manner

acceptable to manufacturer and Installer, that ensure plaster work is without damage or deterioration at the time of Substantial Completion.

END OF SECTION

SECTION 09260 – GYPSUM WALLBOARD SYSTEMS

PART I – GENERAL

1.01 WORK INCLUDED

A. This Section includes metal framed gypsum drywall work and related accessories.

B. Refer to Mechanical and Electrical Work for items penetrating drywall work.

1.02 RELATED WORK

A. Related Work in Other Sections:

07920	Sealants and Caulkings
	Access Doors
09900	Painting

1.03 REFERENCES

A. Industry standards governing this work are of the latest issue at the date of this Specification release, except as otherwise noted:

1. American National Standards Institute [ANSI]:

ANSI A97.2	Installation of Steel Framing Members to Receive Screw Attached Gypsum Wallboard and Backing Board.

2. American Society for Testing and Materials [ASTM]:

ASTM C 36	Gypsum Wallboards.
ASTM D 3678	High Impact Rigid PVC Plastic Gypsum Sheathing Board.
ASTM C 79	Gypsum Sheathing Board.
ASTM C 442	Gypsum Backing Board.
ASTM C 474	Testing Joint Treatment Materials for Gypsum Wallboard Construction.

ASTM C 475 Joint Treatment Materials for Gypsum Wallboard Construction.

ASTM C 645 Non-Load [Axial] Bearing Steel Studs, Runners [Track] and Rigid Furring Channels for Screw Application of Gypsum Board.

ASTM C 646 Steel Drill Screws for the Application of Gypsum Board to Light-Gauge Steel Studs.

1.04 SYSTEM DESCRIPTION

A. Allowable Tolerances:

1. Straight: 1/8 inch in 8'-0".

2. Plumb or Level: 1/8 inch in 8'-0".

3. Square: 1/8 inch within 8'-0" of corner, except where angles are indicated.

4. Planes at Abutting Board Edges: 1/32 inch.

5. Locate openings in drywall work within 1/2 inch of dimensioned locations on Drawings. Where studs, piping, conduit, or other minor obstructions occur, openings shall be not more than four inches from locations indicated.

B. Furnish framing members, boards, and accessories at the longest practical lengths to minimize job-made joints.

1.05 QUALITY ASSURANCE

A. Qualifications of Manufacturer: One listed in UL Building Materials Directory.

1.06 SUBMITTALS

A. Samples: None

B. Shop Drawings:

1. Detail drywall ceiling and wall support systems.

2. Indicate hanger layout for support of ceiling grillage system.

3. Detail anchorage of support systems to adjacent work.

4. Identify types of fasteners to be used in each condition detailed in sub-paragraphs 1 and 2 above.

5. Include details at openings, corners, partition intersections, and control joints

C. Manufacturer's storage and installation instructions.

D. Certificates from an acceptable independent testing agency certifying compliance with design criteria specified.

1.07 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver products in manufacturer's original unopened packages, containers or bundles with manufacturer's name and brand clearly legible.

B. Store products in dry areas, protect from damage and contamination, and comply with manufacturer's instructions.

1.08 PROJECT SITE CONDITIONS

A. Maintain uniform temperature between 55° F and 70° F for 24 hours before, during, and after installation of the work.

B. Provide ventilation to eliminate sweating and build-up of moisture, and to produce uniform drying-out of applied joint compound where work is in progress or has been completed.

C. Inspect job for conditions which would prevent execution of this work as specified. Do not proceed until unsatisfactory conditions are corrected.

1.09 SEQUENCING/SCHEDULING

A. Coordination:

1. Verify rough opening location and size with supplier of finished opening items furnished under other Sections.

2. Verify blocking and anchoring provisions with the supplier for items mounted on wall.

3. Locate studs to receive plumbing fixture mounting brackets furnished under the Plumbing Sections.

4. Cut runners and other drywall support members to allow concealed conduit and pipe furnished under Mechanical and Electrical Sections. Reinforce, block, or frame around unsatisfactory cutting to maintain integrity of support system.

5. Verify ceiling height with installed plumbing, air conditioning ducts, and electrical items to see that clearances provide for ceiling suspension system framing indicated.

6. Coordinate control and expansion joints in walls and ceilings to verify that they are located as indicated and have no obstructions.

PART II – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Acceptable manufacturers subject to compliance with this Section:

1. United States Gypsum (referenced).

2. Georgia Pacific.

3. Gold Bond Building Products.

2.02 SUPPORT SYSTEMS AND FASTENERS

A. Ceiling Grillage:

1. Hangers:

a. Not less than 8-gauge pre-straightened wire.

b. Threaded rods 3/8" diam. length as required, nuts and washers.

2. Main Runners:

a. 6 inches cold-rolled, 16 gauge, "C" purlins

b. 1-1/2 Inch Cold-Rolled Painted Steel Channels: 0.475 pounds/foot.

c. Drywall Studs: As specified in Article 3.01 Paragraph B.

3. Furring Channels (Cross Furring):

a. Depth: Approximately 7/8 inch.

b. Overall Width: Approximately 2-9/16 inches minimum.

c. Board Contact Surface Width: Not less than 1-1/4 inches.

d. Material: Galvanized steel.

e. Weight: Not less than 0.29 pounds/foot.

B. Wall Framing:

1. Furring channels: Hat shaped, roll-formed from two gauges of corrosion - resistant steel. Same as specified in article 2.02, paragraph 3.

2. Industry Standard: ASTM C 645.

C. Fasteners:

1. General:

a. Manufacturer's standards. Comply with drawings and these specifications as minimum requirements.

b. Hanger attachments shall be designed specifically to attach to structure indicated and capable of supporting 300 pounds each.

c. Screws: Self-drilling, self-tapping type designed to be power driven, ASTM C 646.

d. Hanger and Tie· Wire: Soft annealed wire, minimum gauge as follows: 8 gauge for hangers and 16 gauge for ties.

2. Metal Runners, Furring Channels and Bracing Members to Concrete or Masonry: 3/4- i n c h No. 8 case-hardened nail.

3. Light Gauge Metal to Metal Fastenings: 3/8- i n c h Type S pan-head screw, except where two strands of tie wire or wire clips are indicated by manufacturer in ceiling grillage framing.

4. Gypsum Panels to Metal Framing: Type S bugle head screw, length recommended by manufacturer for thickness and number of layers.

5. Other Fasteners, Including "Z" Clips, Staples, and Adhesive: Standard with manufacturer for type of installation.

2.03 BOARDS

A. Regular Gypsum Board: 1/2 inch and 5/8- inch thickness, four feet wide by lengths as long as practical, complying with ASTM C 36. Tapered edges and faced with paper suitable to receive job finishing.

B. Fire-Rated Board: Same as subparagraph A above and listed in UL's Fire Resistance Index. Board delivered to site shall bear UL classification marking.

2.04 ACCESSORY ITEMS

A. Trim Accessories:

1. Corner Beads: 1-1/4 inch by 1-1/4-inch-high impact rigid PVC with flanges designed to receive joint treatment.

2. Casing Bead Trim:

a. "U" "J" shape or "L" shape high impact rigid PVC trim to protect exposed edges of board, standard with manufacturer to receive joint treatment.

b. Dry-mount casing bead "U" shape high impact rigid PVC to protect edges of board, designed to be mounted dry without joint treatment.

3. Control Joint: High impact rigid PVC with a tape protected 1/4-inch opening and flanges to receive joint treatment.

B. Sealant: Specified in Section 07920.

2.05 JOINT TREATMENT

A. Joint Compound: Ready mixed, all-purpose compound specifically formulated for embedding and finishing joints and depressions in drywall work.

B. Tape: Paper fiber, fabricated specifically for finishing drywall joints, spark-perforated and lightly pre-creased.

C. Water: Potable.

D. Industry Standards: ASTM C 474 and C 475.

PART III – EXECUTION

3.01 CEILING GRILLAGE

A. Hanger Attachment: Set "C" purlins at maximum spacing of 6 feet and secure to overhead construction with threaded rods spaced at not more than 4 feet on centers and not more than six inches from channel ends. In no case shall a hanger support more than 16 square feet of ceiling.

B. Main Runners:

1. Space main runners within six inches of walls and as specified below for the remainder of space. Where ducts or other obstructions interfere with this spacing, use main runner spacing not to exceed 8'-0" on center.

2. 1-1/2 Inch Runner Channels: For 4'-0" main runner spacing.

3. 2-1/2 Inch Drywall Studs: For 4'-0" to 6'-0" main runner spacing.

4. 3-5/8 Inch Drywall Studs: For 6'-0" to 8'-0" main runner spacing.

C. Cross Furring:

1. Spacing: 16 inches on center for furring channels, 7/8 inches by 2-3/4 inches.

2. Where spans are wider than 4’-0” from runners are required, provide cross furring of sufficient strength for span.

D. Control Joints: Space joints as indicated. Do not extend grillage framing across joints. Coordinate joint locations with items penetrating ceiling and with joints in wall.

E. Fastenings: Manufacturer's standard furring channel clip or two strands of tie-wire. Cross furring studs shall be boxed twelve inches long at hangers.

F. No grillage framing shall contact masonry or concrete walls, which extend up past grillage system.

G. Building Expansion Joints: Frame to expansion joints and provide for joint covers or caulked joints as detailed.

H. Reinforce openings in ceiling suspension system which interrupts main carrying or furring channels with lateral channel bracing. Extend bracing 24 inches minimum past each end of opening.

3.02 PARTITION FRAMING

A. General: Install steel framing members in compliance with ASTM .C 754.

B. Layout:

1. Locate and align partitions within tolerances specified.

2. Verify that partition type, furring channels depth, height, control joints, and openings are as indicated.

C. Studs:

1. Gauges:

a. Interior Partitions to Structure Above: 20 gauge.

b. Other: 25 gauge.

2. Spacing: 16 inches on center, except where greater spacing is indicated.

3. Provide additional studs at:

a. Inside and outside corners.

b. Partition intersections.

c. Fixture brackets and hanger plates.

d. Control and expansion joints; one each side of open joint.

e. Horizontal locations to receive board ends.

4. Fastening:

a. Anchor studs to runners shall comply with manufacturer's instructions.

5. Splicing: Avoid splicing wherever possible. In conditions where splices are difficult to avoid, follow the manufacturer’s instructions.

6. Bracing: Brace opposite flanges of studs receiving boards only on one side, complying with manufacturer's instructions.

D. Furring:

1. Install furring channels vertically, spaced 16 inches on center horizontally.

2. Anchor channels to wall twelve inches on center staggered through alternate using flanges.

3. Provide additional channels at:

a. Openings and corners.

b. Four inches off floor, horizontally.

c. Line of finish ceiling, horizontally.

d. Expansion and control joints.

4. Nest furring channels eight inches at splices and anchor with two nails in each lapped flange.

E. Soffits: Frame soffits with drywall studs spaced 16 inches on center and complying with manufacturer's instructions.

F. Building Expansion Joints: Frame to expansion joints and provide for joint covers or caulked joints as detailed.

3.03 BOARD APPLICATION

A. Cutting and Fitting:

1. Cut board by scoring and breaking or by sawing, working from

a. face side.

2. Neatly cut board to fit around openings.

3. Smooth cut edges to obtain neat joint when erected.

4. Scribe board meeting projecting surfaces to fit.

B. Fasteners:

1. Screw-attach boards to supporting system as specified.

2. Slightly depress screw heads below surface of board but do not break face paper.

C. Boards: Bring adjacent boards into contact but do not force into place.

D. Ceilings:

1. Place boards with long edges at right angles to support members.

2. Board ends shall occur only over supporting members and staggered.

3. Attach boards to support framing with screws spaced twelve inches on center in field and at abutting ends.

E. Single Layer Walls: In accordance with ASTM C 840, System VIII.

1. Place boards with long edges parallel to support framing and all abutting ends and edges occurring over framing member surfaces.

2. Board ends shall be staggered.

3. Attach boards to support framing with screws spaced twelve inches on center in field and eight inches on center at abutting edges and top and bottom ends.

4. Stagger joints on opposite sides of partitions.

3.04 ACCESSORIES

A. Layout:

1. Install accessories to drywall work exposed to view plumb and level.

2. Where drywall extends up above ceiling suspension systems furnished under other Sections, extend accessories up four inches above finish ceiling, except where full partition extends to structure above.

3. Cover corners and exposed raw edges of boards with accessories.

B. Installation:

1. Fasteners and fastener spacing shall be in accordance with the manufacturer's instructions.

2. Joints shall be neat, flush, tight, in alignment, and matching approved sample.

3. Corner Beads: Provide at external corners.

4. Casing Beads: Provide at exposed edges of gypsum board.

5. Dry-set Casing Beads: Install at locations where differential movement occurs. These joints shall not receive tapes and joint treatment.

6. Control Joint: Provide control joint trim in opening left in drywall work for control joints. After joint treatment is complete, remove tape protecting open slot in trim.

3.05 RATED WORK

A. Where fire rating is required, comply with design criteria specified. This includes but is not necessarily limited to special requirements in the following:

1. Support system.

2. Board types and application.

3. Sealants.

3.06 FINISHING

A. Preliminary and Preparation Work:

1. Prefill tapered edges or open space between abutting drywall boards with joint compound.

2. Fill joint flush and wipe excess compound from face of board either side of joint.

3. Allow filled joints to dry before proceeding with joint treatment.

B. Joint Treatment:

1. First Coat [Embedding]:

a. Apply thin uniform layer approximately 1/32 inch to 1/16 inch thick of joint compound slightly wider than tape.

b. Immediately embed tape in compound centered over joint.

c. At internal angles fold tape and embed in compound to form true angle.

d. Apply a skim coat immediately to embed tape.

e. Allow the first coat, including the skim coat, to dry before applying second coat.

2. Second Coat [Fill]:

a. Apply joint compound over first coat.

b. Fill the board taper flush with board surface.

c. Do not apply this coat at interior angles unless tapered edges occur at corners.

d. Allow to dry before applying the next coat.

3. Third Coat [Finishing]:

a. Apply joint compound over and extend slightly beyond second coat.

b. Feather edges to smooth uniform finish.

c. *Over tapered edges do not extend finished joints beyond the* tapered plane of board surface.

d. Apply joint compound to interior angles to cover tape and form true angles.

C. Depression Treatment:

1. Apply minimum of three coats of joint compound over fastener and other depressions.

2. Allow each coat to dry before applying succeeding coats.

3. Level filled areas to plane of board surface.

D. Finishing Accessories:

1. Apply minimum of three coats of joint compound designed for joint treatment.

2. Featheredge each coat to plane of board surface.

3. Extend each coat out on the face of board past preceding coat.

4. Allow each coat to dry before applying succeeding coats.

E. Sanding:

1. Sand each coat of joint compound after it has dried to a smooth surface.

2. Avoid roughening gypsum board face paper and inflicting deep scratches in joint compound while sanding.

F. Workmanship: Finished joint treatment shall fill out depressions and irregularities at joints and accessories to be flush with wallboard surface and to match approved sample.

END OF SECTION

SECTION 09310 – CERAMIC TILE

PART I – GENERAL

1.01 RELATED DOCUMENTS

A. RFP Documents, Bridging Drawings, performance criteria and, after award, applicable Design-Build Contract provisions, including applicable general requirements, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:

1. Ceramic mosaic tile.

2. Italian tile.

3. Glazed wall tile.

B. Related Sections include the following:

1. Requirements for cast-in-place concrete, including monolithic slab finishes specified for tile substrates.

2. Requirements for joint sealants, including sealing of expansion, contraction, control, and isolation joints in tile surfaces.

3. Requirements for portland cement plaster, including portland cement scratch coats over metal lath on wall surfaces.

1.03 DEFINITIONS

A. Module Size: Actual tile size (minor facial dimension as measured per ASTM C 499) plus joint width indicated.

B. Facial Dimension: Nominal tile size as defined in ANSI A137.1.

1.04 PERFORMANCE REQUIREMENTS

A. Static Coefficient of Friction: For tile installed on walkway surfaces, provide products with the following values as determined by testing identical products per ASTM C 1028:

1. Level Surfaces: Minimum 0.6.

B. Load-Bearing Performance: For ceramic tile installed on walkway surfaces, provide installations rated for the following load-bearing performance level

based on testing assemblies according to ASTM C 627 that are representative of those indicated for this Project:

1. Moderate: Passes cycles 1 through 10.

1.05 SUBMITTALS

A. Product Data: For each type of tile, mortar, grout, and other products specified.

B. Shop Drawings: For the following:

1. Tile patterns and locations.

2. Widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.

C. Tile Samples for Initial Selection: Manufacturers color charts consisting of actual tiles or sections of tiles showing the full range of colors, textures, and patterns available for each type and composition of tile indicated.

D. Grout Samples for Initial Selection: Manufacturers color charts consisting of actual sections of grout showing the full range of colors available for each type of grout indicated.

E. Samples for Verification: Of each item listed below, prepared on Samples of size and construction indicated. Where products involve normal color and texture variations, include Sample sets showing the full range of variations expected.

1. Each type and composition of tile and for each color and texture required, at least 12 inches (300 mm) square, mounted on braced cementitious backer units, and with grouted joints using product complying with specified requirements and approved for completed work in color or colors selected by Design Professional of Record.

2. Full-size units of each type of trim and accessory for each color required.

F. Master Grade Certificates: For each shipment, type, and composition of tile, signed by tile manufacturer and Installer.

G. Qualification Data: For firms and people specified in the "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names of architects and owners, and other information specified.

H. Tile Test Reports: Indicate and interpret test results for compliance of special-purpose tile with specified requirements.

I. Setting Material Test Reports: Indicate and interpret test results for compliance of tile-setting and -grouting products with specified requirements.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer who has completed tile installations similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.

B. Source Limitations for Tile: Obtain each color, grade, finish, type, composition, and variety of tile from one source with resources to provide products from the same production run for each contiguous area of consistent quality in appearance and physical properties without delaying the Work.

C. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from a single manufacturer and each aggregate from one source or producer.

D. Mockups: Before installing tile, construct mockups for each form of construction and finish required to verify selections made under Sample submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for completed Work.

1. Locate mockups in the location and of the size indicated or, if not indicated, as directed by Design Professional of Record.

2. Notify Design Professional of Record 7 days in advance of the dates and times when mockups will be constructed.

3. Demonstrate the proposed range of aesthetic effects and workmanship.

4. Obtain Design Professional of Record's approval of mockups before proceeding with final unit of Work.

5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.

a. When directed, demolish and remove mockups from the Project site.

b. Approved mockups in an undisturbed condition at the time of Substantial Completion may become part of the completed Work.

E. Preinstallation Conference: Conduct conference at Project site to comply with the General Requirements provisions governing Project Meetings.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with the requirements of ANSI A137.1 for labeling sealed tile packages.

B. Prevent damage or contamination of materials by water, foreign matter, and other causes.

1.08 PROJECT CONDITIONS

A. Environmental Limitations: Do not install tile until construction in spaces is completed and ambient temperature and humidity conditions are being maintained to comply with referenced standards and manufacturer's written instructions.

1.09 EXTRA MATERIALS

A. Deliver extra materials to ASEM/Owner. Furnish extra materials described below that match products installed, are packaged with protective covering for storage, and are identified with labels describing contents.

1. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed, for each type, composition, color, pattern, and size indicated.

PART II – PRODUCTS

2.01 MANUFACTURERS

A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to the following:

1. Ceramic mosaic tile: Unglazed porcelain ceramic mosaics; 1” x 1·, 2" x 1" or 1" x 1·, as shown on the Drawings or directed; color or colors as selected by Design Professional of Record from manufacturer's lowest price group.

a. Available Manufacturers: Subject to compliance with requirements,

manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1) American Marrazzi Tile, Inc.

2) American Olean Tile Company.

3) Buchta! Corporation USA.

4) Cerim-Floor Gres Ceramiche.

5) Crossville Ceramics.

6) Dal-Tile Corporation.

7) Florida Tile Industries, Inc.

8) Graniti Fiandre.

9) lnterceramics, USA.

10) KPT, Inc.

11) Laufen International, Inc.

12) Lonestar Ceramics Company.

13) Mannington Ceramic Tile.

14) Metropolitan Ceramics.

15) Monarch Tile, Inc.

16) Quarry Tile Company.

17) Seneca Tiles, Inc.

18) Summitville Tiles, Inc.

19) United States Ceramic Tile Company.

2. Glazed wall tile:4" x 4" or 4 ¼" x 4 ¼"; matte, high gloss or crystalline finish as selected by Design Professional of Record; color or colors as selected by Design Professional of Record from manufacturer's lowest group.

   a. Available manufacturer's: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, those listed above for ceramic

mosaic tile.

3. Italian tile: Porcelain tile, 6" x 6" or 12 x 12", as shown on the Drawings; equal or similar as approved to Duraker Florida tile (6" x 6") and Duraker Colormassa (12" x 12"), both as manufactured by Ceramica Floor Gres, Fiorano Modenese, Italy; colors and finishes as selected by the Design Professional of Record from manufacturer's full range of colors and finishes.

B. Available manufacturers of Tile-Setting and Grouting Materials *offering* products that may be incorporated into the Work include, but are not limited to, the following:

1. American Olean Tile Company.
2. Atlas Minerals & Corporation, Inc.
3. Boiardi Products Corporation.
4. Bonsal: W.R. Bonsal Company.
5. Bostik.
6. C-Cure Corporation.
7. Custom Building Products.
8. Dal-Tile Corporation.
9. DAP, Inc.
10. Laticrete International, Inc.
11. Mapei Corporation.
12. Southern Grouts & Mortars, Inc.
13. Summitville Tiles, Inc.
14. TEC Incorporated.

2.02 PRODUCTS, GENERAL

A. ANSI Ceramic Tile.Standard: Provide tile that complies with ANSI A137.1, "Specifications for Ceramic Tile," for types, compositions, and other characteristics indicated.

1. Provide tile complying with Standard Grade requirements, unless otherwise indicated, except as otherwise indicated.

2. For facial dimensions of tile, comply with requirements relating to tile sizes specified in Part 1 "Definitions" Article.

B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI standards referenced in "Setting Materials" and "Grouting Materials" articles.

C. Colors, Textures, and Patterns: Where manufacturer's standard products are indicated for tile, grout, and other products requiring selection of colors, surface textures, patterns, and other appearance characteristics, provide specific products or materials complying with the following requirements:

1. Provide Design Professional of Record's selections from manufacturer's full range of colors, textures, and patterns for products of type indicated.

2. Provide tile trim and accessories that match color and finish of adjoining flat tile.

D. Factory Blending: For tile exhibiting color variations within the ranges selected during Sample submittals, blend tile in the factory and package so tile units taken from one package show the same range in colors as those taken from other packages and match approved Samples.

E. Mounting: Where factory-mounted tile is required, provide back- or edge-mounted tile assemblies as standard with manufacturer, unless another mounting method is indicated.

1. Where tile is indicated for installation in swimming pools, on exteriors, or in wet areas, do not use back- or edge-mounted tile assemblies unless tile manufacturers specify in writing that this type of mounting is suitable for these kinds of installations and has a record of successful in-service performance.

2.03 TILE PRODUCTS

A. Unglazed Ceramic Mosaic Tile: Provide factory-mounted flat tile complying with the following requirements:

1. Composition: Porcelain.

2. Module Size: 1 by 1 inch (25.4 by 25.4 mm); 1 by 2 inches (25.4 by 50.8 mm); or 2 by 2 inches (50.8) by mm).

3. Nominal Thickness: 1/4 inch (6.35 mm).

4. Face: Plain with cushion edges.

B. Italian Floor Tile: Provide flat tile complying with the following requirements:

1. Composition: Porcelain.

2. Facial Dimensions: 6 by 6 inches (152 by 152 mm); or 11-13/16 by 11-13/16 inches (300 by 300mm).

3. Thickness: 3/8 inch (9.5 mm).

4. Face: Plain with square or cushion edges.

C. Glazed Wall Tile: Provide flat tile complying with the following requirements:

1. Module Size: 4-1/4 by 4-1/4 inches (108 by 108 mm).

2. Thickness: 5/16 inch (8 mm).

3. Face: Plain with modified square edges or cushion edges.

4. Mounting: Factory backmounted.

D. Trim Units: Provide tile trim units to match characteristics of adjoining flat tile and to comply with the following requirements:

1. Size: As indicated, coordinated with sizes and coursing of adjoining flat tile where applicable.

2. Shapes: As follows, selected from manufacturer's standard shapes:

a. Base for Thin-Set Mortar Installations: Straight.

b. Wainscot Cap for Thin-Set Mortar Installations: Surface bullnose.

c. External Comers for Thin-Set Mortar Installations: Surface bullnose.

d. Internal Comers: Field-butted square comers, except with cap angle pieces designed to member with stretcher shapes.

2.04 SETTING MATERIALS

A. Water-Cleanable, Tile-Setting Epoxy Adhesive: ANSI A118.3.

2.05 GROUTING MATERIALS

A. Latex-Portland Cement Grout: ANSI A118.6 for materials described in Section H-2.4, composed as follows:

1. Mixture of Dry-Grout Mix and Latex Additive: Mixture of factory-prepared, dry-grout mix and latex additive complying with the following requirements:

a. Sanded Dry-Grout Mix: Commercial Portland Cement grout complying with ANSI A118.6 for materials described in Section H-2.1.

b. Latex Additive: Acrylic resin.

2. Provide Design Professional of Record's selections from manufacturer's full range of colors.

2.06 ELASTOMERIC SEALANTS

A. General: Provide manufacturer's standard chemically curing, elastomeric sealants of base polymer and characteristics indicated that comply with applicable joint sealant requirements.

B. Colors: Provide colors of exposed sealants to match colors of grout in tile adjoining sealed joints, unless otherwise indicated.

C. One-Part, Mildew-Resistant Silicone Sealant: ASTM C 920; Type S; Grade NS; Class 25; Uses NT, G, A, and, as applicable to nonporous joint substrates indicated, O; formulated with fungicide, intended for sealing interior ceramic tile joints and other nonporous substrates that are subject to in-service exposures of high humidity and temperature extremes.

D. Available Products: Subject to compliance with requirements, products which may be incorporated into the Work include, but are not limited to, the following:

1. One-Part, Mildew-Resistant Silicone Sealants:

a. Dow Corning 786; Dow Corning Corporation.

b. Sanitary 1700; GE Silicones.

c. Pecora 898 Sanitary Silicone Sealant; Pecora Corp.

d. Rhodorsil 68 White; Rhone-Poulenc, Inc.

e. Tremsil 600 White; Tremco, Inc.

2.07 MISCELLANEOUS MATERIALS

A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland-cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.

B. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

2.08 MIXING MORTARS AND GROUT

A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.

B. Add materials, water, and additives in accurate proportions.

C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART III – EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.

1. Verify that substrates for setting tile are firm; dry; clean; free from oil, waxy films, and curing compounds; and within flatness tolerances required by referenced ANSI A108 series of tile installation standards for installations indicated.

2. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed before installing tile.

3. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust later in consultation with Design Professional of Record.

B. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Remove coatings, including curing compounds, and other substances that

contain soap, wax, oil, or silicone and are incompatible with tile-setting materials by using a terrazzo or concrete grinder, a drum sander, or a polishing machine equipped with a heavy-duty wire brush.

B. Provide concrete substrates for tile floors installed with dry-set or latex-portland cement mortars that comply with flatness tolerances specified in referenced ANSI A108 series of tile installation standards for installations indicated.

1. Use trowelable leveling and patching compounds per tile-setting material manufacturer's written instructions to fill cracks, holes, and depressions.

2. Remove protrusions, bumps, and ridges by sanding or grinding.

C. Blending: For tile exhibiting color variations within the ranges selected during Sample submittals, verify that tile has been blended in the factory and packaged so tile units taken from one package show the same range in colors as those taken from other packages and match approved Samples. If not, factory blended, either return to manufacturer or blend tiles at Project site before installing.

3.03 INSTALLATION, GENERAL

A. ANSI Tile Installation Standards: Comply with parts of ANSI A108 series of tile installation standards in "Specifications for Installation of Ceramic Tile" that apply to types of setting and grouting materials and to methods indicated in ceramic tile installation schedules.

B. TCA Installation Guidelines: TCA's "Handbook for Ceramic Tile Installation." Comply with TCA installation methods indicated in ceramic tile installation schedules.

C. Extend tile work into recesses and under or behind equipment and fixtures to form a complete covering without interruptions, unless otherwise indicated. Terminate work neatly at obstructions, edges, and comers without disrupting pattern or joint alignments.

D. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile close to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

E. Jointing Pattern: Lay tile in grid pattern, unless otherwise indicated. Align joints when adjoining tiles on floor, base, walls, and trim are the same size. Lay out tile work and center tile fields in both directions in each space or on

each wall area. Adjust to minimize tile cutting. Provide uniform joint widths, unless otherwise indicated.

1. For tile mounted in sheets, make joints between tile sheets the same width as joints within tile sheets so joints between sheets are not apparent in finished work.

F. Lay tile wainscots to next full tile beyond dimensions indicated.

G. Expansion Joints: Locate expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.

1. Locate joints in tile surfaces directly above joints in concrete substrates.

2. Prepare joints and apply sealants to comply with joint sealant requirements.

H. Grout tile to comply with the requirements of the following tile installation standards:

1. Comply with ANSI A108.10.

3.04 FLOOR TILE INSTALLATION

A. General: Install tile to comply with TCA installation methods and ANSI A108 series of tile installation standards.

B. Joint Widths: Install tile on floors with the following joint widths:

1. Ceramic Mosaic Tile: 1/16 inch (1.6 mm).

C. Back Buttering: For installations indicated, obtain 100 percent mortar coverage by complying with applicable special requirements for back buttering of tile in referenced ANSI A108 series of tile installation standards:

1. Exterior tile floors.

2. Tile floors in wet areas, including showers, tub enclosures, laundries, and swimming pools.

3. Tile floors are composed of rib-backed tiles.

3.05 WALL TILE INSTALLATION

A. Install types of tiles designated for wall installations to comply with TCA

installation methods and ANSI setting-bed standards.

B. Joint Widths: Install tile on walls with the following joint widths:

1. Wall Tile: 1/16 inch (1.6 mm).

C. Back Buttering: For installations indicated, obtain 100 percent mortar coverage by complying with applicable special requirements for back buttering of tile in referenced ANSI A108 series of tile installation standards:

1. Exterior tile wall installations.

2. Tile wall installations in wet areas, including showers, tub enclosures, laundries, and swimming pools.

3.06 CLEANING AND PROTECTING

A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.

1. Remove latex-Portland Cement grout residue from tile as soon as possible.

2. Unglazed tile may be cleaned with acid solutions only when permitted by tile and grout manufacturer's written instructions, but no sooner than 1O days after installation. Protect metal surfaces, cast iron, and vitreous plumbing fixtures from effects of acid cleaning. Flush surface with clean water before and after cleaning.

B. Finished Tile Work: Leave finished installation clean and free of cracked, chipped, broken, unbonded, and otherwise defective tile work.

C. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure tile is without damage or deterioration at the time of Substantial Completion.

1. When recommended by tile manufacturer, apply a protective coat of neutral protective cleaner to complete tile walls and floors. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear.

2. Prohibit foot and wheel traffic from tiled floors for at least 7 days after grouting is completed.

D. Before final inspection, remove protective coverings and rinse neutral cleaner from tile surfaces.

END OF SECTION

SECTION 09320 - CERAMIC MOSAIC TILE

PART I – GENERAL

1.01 WORK INCLUDED

A. This section includes ceramic tile and marble thresholds.

1.02 RELATED WORK

A. Related work in other Sections:

07920 Sealants and Caulking

1.03 QUALITY ASSURANCE

A. Standards

1. "Handbook for Ceramic Tile Installation" latest edition, and TCA 137.1-76, Recommended Standard Specification for Ceramic Tile as published by the Tile Council of America.

2. Provide materials obtained from only one source for each type of tile and color to minimize variations in appearance and quality.

B. Acceptable Manufacturers

American Olean Tile Company

Dal-Tile

Florida Tile

1.04 DESCRIPTION

A. Color shall be or as selected by the Design Professional of Record from color samples submitted.

B. Tolerances: Finish surfaces shall not vary more than 1/8 inch above or 1/8 inch below the designed plane in any individual space; neither shall these be more than 3/16-inch variation within three feet.

1.05 SUBMITTALS

A. Manufacturer's Data

1. Submit two copies of manufacturer's technical information and

installation instructions for materials required, except bulk materials. Include certifications and other data to show compliance to standards. Transmit a copy of each instruction to the installer.

B. Samples

1. Tile: Submit two samples of each type and color of tile required, not less than 12 inches square on plywood or hardboard backing and grouted as required.

2. Threshold: Two 12-inch lengths of each size and profile indicated.

1.06 EXTRA STOCK

A. Provide 2 percent extra stock for each color and type used.

PART II – PRODUCTS

2.01 CERAMIC WALL TILE

A. Type

1. Tiles shall be standard grade, natural clay, glazed, with all purpose edges.

B. Size, Color, and Finish

1. Size: 4½ x 4½ x 1/4 inch

2. Color: Stock color and pattern selected by ASEM/Owner.

3. Finish: Matte

C. Shapes and Trim

1. Provide all required shapes, bull nose, angles, strips, and cove corners and bases as required.

2.02 MARBLE THRESHOLD

Not Used

2.03 SETTING MATERIALS

A. Portland cement: ASTM C150-78a, Type 1

B. Hydrated lime: ASTM C206-76 or C207-76, type "S".

C. Sand: ASTM C144-76.

D. Water

E. Shrinkage mesh: 2 x 2 inch, 16/16-gauge welded wire mesh.

2.04 MORTAR AND GROUT

A. Latex-Portland Cement mortar

1. Latex modified Portland Cement mortar ANSI A118.4-86 (R76)

2. Dry-set mortar ANSI A118.1-76

B. Commercial Portland Cement floor grout

1. Proprietary compound of Portland Cement and additives, factory blended to decrease shrinkage and increase moisture resistance. Use gray grout on floor.

2. Products:

a. Hydroment ceramic tile group: The Upco Company L & M Acid-R grout: L & M-Surco Company

C. Wall Grout

1. Proprietary compound composed of Portland Cement and additives formulated for the type of tile installed. Color of grout to be determined by ASEM/Owner.

2. Products offered by manufacturers to comply with the requirements for dry-set grout include the following:

Tile-mate grout: The Upco Company

Dry cure: L & M-Surco Company

2.05 BOND COAT

A. Portland cement paste on a plastic bed or dry-set mortar on a cured bed.

2.06 PROTECTIVE MATERIALS

A. Heavy-duty, nonstaining construction paper and compliant masking tape.

B. Cleaners and finishing treatment, American-Olean general purpose cleaner or

Hillyard Chemical Company "Super Shine-All".

PART III – EXECUTION

3.01 INSPECTION

A. Examine the substrate and the conditions under which ceramic tile is to be installed and notify the contractor in writing of unsatisfactory conditions. Proceed with the work when unsatisfactory conditions have been corrected in a manner acceptable to the installer.

3.02 INSTALLATIONS

A. Standards

1. Comply with ANSI standard installation specifications.

2. Comply with the installation methods specified herein, as per the Tile Council of America Inc. Handbook for Ceramic Tile Installation.

B. General

1. Handle, store, mix, and apply proprietary setting and grouting materials in compliance with the manufacturer's instructions.

2. For pre-grouted sheets, field grout perimeters of individual sheets, and other un-grouted joints using same elastomeric material as used in the factory.

3. Extend tile work into recesses and under equipment and fixtures, to form a complete covering without interruptions, except as otherwise shown. Terminate work neatly at obstructions, edges, and corners without disruption of pattern or joint alignment.

4. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind-cut edges of tile abutting trim, finish, or built-in items for straight, aligned joints. Fit tile closely to electrical outlets (if applicable), piping, and fixtures so that plates, collars, or cover overlap tile.

5. The following installation method numbers refer to the Tile Council of America, Inc. "Handbook for Ceramic Tile Installation", 1980 Edition, and shall govern the various installation methods to be used:

a. Walls: Method #B515 (wall detail only)

C. Setting Beds

1. Provide setting bed types as shown on the drawings and as follows:

    a. Use dry-set or latex-Portland Cement mortar setting beds (thin-set) for floors and walls.

D. Joining Pattern

1. Lay tile in grid pattern. Lay out tile work and center tile fields in both directions on each wall area. Adjust to minimize tile cutting. Provide uniform joint widths, unless otherwise shown.

3.03 ADJUST AND CLEAN

A. Cleaning

1. Clean grout and setting materials from face of tile while materials are workable. Leave tile face clean and free of foreign matter.

2. Tiles may be cleaned with acid solutions only when permitted by the tile and grout manufacturer's printed instructions, but not sooner than 14 days after installation. Protect metal surfaces, cast iron, and vitreous plumbing fixtures from effects of acid cleaning. Flush the surface with clean water before and after cleaning.

B. Finish Tile Work

1. Leave finished installation clean and free of cracked, chipped, broken, unbonded, or otherwise defective tile work.

C. Protection

1. When recommended by tile manufacturer, apply a protective coat of neutral protective cleaner to completed tile walls.

2. Before final inspection, remove protective coverings and rinse neutral cleaner from all tile surfaces.

END OF SECTION

SECTION 09510 – ACOUSTICAL CEILINGS

PART I – GENERAL

1.01 WORK INCLUDED

A. This Section includes lay-in ceiling panels for the suspension system included in Section 09130.

1.02 RELATED WORK

A. Related Work in Other Sections:

09130 Acoustical Suspension Systems

1.03 REFERENCES

A. Industry standards governing this work are of the latest issue at the date of this Specification release, except as otherwise noted:

1. American Society for Testing and Materials [ASTM]:

ASTM C 636	Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.
ASTM E 84	Surface Burning Characteristics of Building Materials.

2. Federal Specification [FSJ:

FS SS-S-118	Sound Controlling Blocks and Boards [Acoustical Tiles and Panels, Prefabricated].

3. Underwriters' Laboratories, Inc. [UL]:

a. Requirements for Fire Resistance Classification.

1.04 QUALITY ASSURANCE

A. Installer: Representative of the materials manufacturer or an installer approved by the materials manufacturer and the Design Professional of Record.

1.05 SUBMITTALS

A. Samples: Two of each pattern and size of unit specified.

B. Certification from an acceptable independent testing laboratory substantiating characteristics and classification of panels specified.

C. Manufacturer's installation instructions.

D. Manufacturer's maintenance instructions.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to project site in manufacturer's original packages, with seals unbroken and with manufacturer's name and contents indicated.

B. Store in enclosed areas with the same temperature and humidity conditions as areas in which material is to be installed.

1.07 PROJECT SITE CONDITIONS

A. Environmental Conditions:

1. Temperature and Ventilation: Install this work only when normal temperatures and humidity conditions can be maintained at least to 90% of interior conditions anticipated for finished building.

2. Glazing shall be in place and exterior openings closed.

3. Concrete, masonry, plastering, and ceramic tile work shall be completed and dry.

4. Provide heat and ventilation to maintain above conditions before, during, and after acoustical work is begun.

B. Inspect job for conditions which would prevent execution of this work as specified. Do not proceed until unsuitable conditions are corrected.

1.08 SEQUENCING/SCHEDULING

A. Coordination:

1. With suspension system supporting it.

2. With mechanical, electrical, and other recessed items.

PART II – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Acceptable Manufacturers Subject to Compliance with this Specification:

1. Armstrong World Industries, Inc. [referenced manufacturer].

2. United States Gypsum Company.

3. The Celotex Corporation.

2.02 LAY-IN UNITS

A. Type "A": Non-combustible mineral fiber board panels.

1. Pattern: "Bold face", over-punched.

2. Size: 24 inches by 24 inches by 3/4 inch with rabbetted tegular edges to form a recess with a lay-in exposed grid system.

3. Flame Spread Classification: 25 or less complying with ASTM E 84 and FS SS-S-118A, Class 25. Each panel shall carry label certifying classification.

4. NRC: 0.70 - 0.80.

5. STC: 40-44.

6. Finish: White, with LR-2 of 70-75%.

B. Type "B": "Minaboard", mineral fiber lay-in panels.

1. Pattern: Fissured "Minaboard" 7558.

2. Size: 24 inches by 48 inches by 5/8 inch with square edges for lay-in installation.

3. Flame Spread Classification: 25 or less complying with ASTM E 84 and 25 or less complying with Class **"A",** FS SS-S-1188.

4. NRC: 0.50 - 0.60.

5. STC: 35 - 39.

6. Finish: White, with LR-1 of over 75%.

C. Type "C": "Ceramaguard" moisture resistant acoustical lay-in panel.

1. Pattern: "Ceramaguard" 602.

2. Size: 24 inches by 48 inches by 5/8 inch, with square edges for lay-in installation.

3. Flame Spread Classification: 25 or less complying with ASTM E 84 and 25 or less complying with Class A, FS SS-S-118B.

4. NRC: 0.55 - 0.65

5. STC: 40-44.

6. . Light Reflectance: LR-1, over 75%.

7. Finish: Factory applied white, capable of withstanding 1000 scrub cycles when tested according to AIMA IB Specification No. 7.

2.03 MAINTENANCE MATERIALS

A. At completion of the Project, provide packaged acoustical panels equal to 1% of quantity installed for each pattern and unit size.

2.04 CEILING ACCESS

A. Provide access identification in lay-in ceiling below items requiring accessibility, including dampers, valves, and similar items. A 3/4-inch diameter identification plate of 16-gauge metal, painted to match the ceiling panel and stamped "AP", shall be securely attached to the face of the panel near one corner.

PART III – EXECUTION

3.01 INSTALLATION

A. Install panels to rest on flanges of grid system with border units supported on edge molding and in a uniform plane surface free from warp, twist and dents.

B. Neatly cut panels which are pierced to receive items furnished under other Sections.

C. Install hold-down clips for lay-in units adjacent to recessed troffer lights and edge mold, except omit where access is specifically indicated in such areas. Install four clips per panel at midpoint of

each side. In areas where excessive panel movement is caused by differences in room pressure from HVAC system, hold-down clips should be installed throughout the ceiling except at access points.

3.02 CLEAN-UP PROTECTION

A. Clean exposed surfaces of ceiling panels and suspension systems in accordance with manufacturer's instructions. Remove and replace units and members which are damaged or cannot be cleaned.

B. Protect ceilings from damage or deterioration after installation and until acceptance of the work.

END OF SECTION

SECTION 09660 – RESILIENT TILE FLOORING

PART I – GENERAL

1.01 WORK INCLUDED

A. This Section includes resilient tile floor, base, and related items.

1.02 REFERENCES

A. Industry standards governing this work are of the latest issue at the date of this Specification release, except as otherwise noted:

1. Federal Specifications [FS]:

FSSS-T-312	Tile, Floor: Asphalt., Rubber, Vinyl. Vinyl Composition.
FSSS-W-40	Wall Base: Rubber and Vinyl Plastic.

1.03 SUBMITTALS

A. Samples: Two of each type and color of tile and accessory.

B. Manufacturer's installation instructions.

C. Manufacturer's maintenance instructions.

1.04 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in manufacturer's original unopened containers marked with manufacturer's brand name, color and pattern numbers, and production color code.

B. Exercise care to prevent damage and freezing during shipping, handling, and storage.

C. Store products at job site complying with manufacturer's directions and recommendations.

1.05 PROJECT/SITE CONDITIONS

A. Environmental Requirements:

1. Maintain temperature of not less than 70deg. F and not more than 85deg. F in building day and night while resilient work is being installed and for a period of at least 48 hours before and after installation. Thereafter, maintain a minimum temperature of 60deg. F.

2. Store materials at site for at least 48 hours before installation, at same temperature as area where resilient work is to be installed.

3. Installation shall not begin until all other trades, including painting, have been completed.

4. Spaces in which resilient flooring is being laid shall be closed to traffic and to other work until flooring is firmly set

B. Inspect job for conditions which would prevent execution of this work as specified. Do not proceed until such conditions are corrected.

C. It is the responsibility of this Design-Build Entity to verify that liquid curing agent used to cure concrete floor slab will be compatible with resilient tile and adhesive. If it is found that curing agent is not compatible with flooring materials, consult ASEM/Owner's Representative and do not apply resilient flooring until unsatisfactory conditions are corrected.

PART II – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Acceptable Manufacturers Subject to Compliance with this Specification:

1. Resilient Tile:

a. Armstrong Cork Company/"Excelon" Series, "Imperial Texture".

b. Azrock Floor Products/"Custom Cortina".

c. GAF Corporation/"Gafstar Architectural Regency".

d. Kentile Floors/Solid Vinyl Tile- Antique Marble".

2. Stair Treads, Rubber Risers and Landing Tile:

a. RC. Musson Rubber Co.

b. The Biltrite Corp.

c. RCA Rubber Co.

2.02 MATERIALS- GENERAL

A. Materials shall be uniform in thickness and size, with straight cut square edges; pre-molded edges shall be uniform and straight

B. Materials within each area shall be from one production run as indicated by cartons bearing same manufacturer's color code.

C. Colors shall match approved samples.

2.03 TILE

A. Material Vinyl composition

B. Referenced Tile: Armstrong "Excelon" "Imperial Texture".

C. Standard: FSSS-T-312, Type IV.

D. Size: Twelve inches by twelve inches.

E. Thickness: 1/8 inch.

F. Colors: As selected from manufacturer's standard colors.

2.04 ACCESSORIES

A. Base:

1. Material: (Vinyl).
2. Standard: FSFS-W-40.
3. Thickness: 1/8 inch.
4. Height
5. Type: (Cove).
6. Color: As Selected from manufacturer's standard colors.
7. Corners: Pre-molded external and internal comers matching base types.

B. Edge Strip:

1. Material: Vinyl
2. Type: One inch wide, beveled or flat, as required.
3. Thickness: Same as tile.
4. Color: As selected from manufacturer's standard colors.

C. Stair Treads:

1. Material: Molded rubber.
2. Referenced Type: R.C Musson No. 612, Molded Rubber Diamond Safety Design. with a curved nose.
3. Thickness: 3/16 inch at nosing edge wearing surface.
4. Turned Down Depth: Not less than 1-1/2inches.
5. Color: As selected from manufacturer's standard colors.

D. Stair Risers:

1. Material: Molded rubber.
2. Referenced Type: RC. Musson No. SOSCR with 5/8-inch toe.
3. Thickness: 1/8 inch.
4. Color: As selected from manufacturer's standard colors.

E. Landing Tile:

1. Referenced Tile: R.C.Musson No. 1000Tsmooth rubber tile.
2. Standard.: FSS> T-312B.
3. Size: Twelve inches by twelve inches.
4. Thickness: 1/8 inch.
5. Color: As selected from manufacturer's standard colors.

2.05 PRIMERS, ADHESIVES, CLEANER, AND WAX

A. Primers: Comply with adhesive manufacturer's instructions.

B. Adhesive= Comply with manufacturer's instructions for a waterproof asphalt emulsion non-flammable type, containing no organic solvents, and suitable for use with slabs on grade.

C. Cleaner: Neutral cleaning material, acceptable to floor tile manufacturer.

D. Wax: High grade water emulsion, non-slip type, acceptable to floor manufacturer.

2.06 PATCHING COMPOUND

A. Material: Water resistant, non-shrinking, non-crumbling compound recommended by ·tile manufacturer.

2.07 MAINTENANCE MATERIALS

A. Maintenance Materials: Provide packaged maintenance materials of each type and color of resilient tile products used, and adhesive, in amount of 2% of quantity installed.

B. Stair Treads: Provide maintenance treads and adhesive in the amount of 5% of quantity installed.

PART III – EXECUTION

3.01 PRELIMINARY WORK

A. Floors shall be cleaned of foreign material smooth and dry.

B. Moisture test concrete floors on which resilient work is to be applied as follows: After concrete floor has been cleaned, spread small patches of adhesive over small primed areas in several locations in each area and allow to dry overnight If adhesive can be peeled from sub-floor, indicating no bond, test shall be repeated at intervals until adhesive bonds to floor. Do not install tile until adhesive adheres to concrete floor.

C. Prime cement surfaces complying with manufacturer's instructions.

3.02 APPLICATION OF ADHESIVE

A. Mix and apply adhesive complying with manufacturer's instructions. Spread adhesive evenly and only over area which can be covered with resilient material within working time of adhesive. Remove adhesive that dries or films over.

B. Apply adhesive with a notched trowel. Clean and rework trowel notches to achieve even distribution of adhesive. Spread adhesive in quantity to provide uniform coverage and bonding of resilient product laid without rising through joints.

C. Do not soil adjacent materials or areas with adhesive. Promptly remove all spillage.

3.03 LAYOUT

A. Arrange tile symmetrically about centerlines of area. Edge tiles of field on opposite sides of area shall be of uniform width and not less than 1/2 tiles

except where irregularly shaped spaces make it impossible.

B. Lay tile fields in checkerboard fashion with grain reversed in alternate tile.

C. Extend flooring into toe spaces, door reveals, closets, and recesses.

D. Provide base at walls, columns, pilasters, returns, casework, and other permanent fixtures in rooms and areas where base is scheduled.

E. Provide edge strips at exposed edges of resilient flooring.

3.04 WORKMANSHIP

A. Lay resilient work with uniform hairline joints and aligned.

B. Cut resilient work to fit around pipes and projections.

C. Resilient work that does not sit in a level plane may have heat applied locally and rolled to level of surrounding floor; otherwise, the out of level work shall be replaced.

D. Resilient work showing broken comers, fracture lines, warps, and buckles shall be warmed and removed, and work of same color, thickness, and size shall be substituted.

3.05 INSTALLATION OF ACCESSORIES

A. General:

1. Install in as long lengths as practicable.

2. Joints shall be uniform tight joints.

3. Embed accessory items in an even application of adhesive to achieve uniform bond.

B. Base:

1. Use pre-molded units at external and internal corners.

2. Scribe base at abutting projections to provide a uniform hairline joint

3. Base shall align on top each side of joint.

C. Edge Strip:

1. Strip shall flush with adjacent resilient flooring.

2. At door openings, unless otherwise noted, locate strip centered under door.

D. Stair Treads:

1. If joints are necessary, locate in a symmetrical manner and with center rails or other stair features.

2. Flush treads at landings and floors with adjacent finish floor.

3.06 PROTECTION, CLEANING, AND WAXING

A. Allow no traffic on freshly laid floors until adhesive has set

B. Protect new floors with heavy paper where walking over floor is unavoidable.

C. Clean floors of adhesive smears and dirt with neutral cleaner.

D. Rinse, dry and apply one coat of wax.

E. 48 hours after first waxing, dry or damp mop floors and base, apply another coat of wax and . buff with power machine.

3.07 ADJUSTMENT

A. Approximately 30 days after installation, inspect floor and base and replace damaged material

B. Ensure that tile and base is properly seated.

C. Clean, wax and polish replaced tile and base.

END OF SECTION

SECTION 09900 – PAINTING

PART I – GENERAL

1.01 WORK INCLUDED

A. This Section includes paints, coatings, primers, sealers, and other related materials necessary for application of painting systems shown on drawings, Finish Schedules, and specified.

B. This Section also includes preparation of surfaces to receive specified painting systems and application of paint and finish materials.

1.02 WORK EXCLUDED

A. The following items and surfaces are excluded from the work covered under this Section:

1. Non-ferrous metals, except as noted otherwise.

2. Walls and ceilings in areas scheduled as unpainted.

3. Resilient tile.

4. Pre-finished metal surfaces.

5. Concrete floors, unless otherwise scheduled.

6. Warning: Do not paint moving parts of operating units, mechanical and electrical parts, such as valve and damper operators, contacts, linkages, sensing devices, motor and fan shafts, and fire sprinkler heads. Provide covering and tape in place during spray painting operations unless otherwise indicated.

7. Do not paint over code-required labels such as Underwriters' Laboratories, Inc. and Factory Mutual, or equipment identification, performance rating, name, or nomenclature plates.

B. Work to be done by others under appropriate Sections:

1. Patching and filling defects in drywall.

1.03 QUALITY ASSURANCE

A. The Painting Schedule in *this* Section is intended to list the various types of coating systems to be applied to specific materials. The coating Design-Build Entity shall be responsible for using applicable coating

systems as listed, conforming to coatings or finishes shown on Finish Schedule of Drawings.

B. Proper surface preparation, manner and technique of application, adherence to manufacturer's stated spreading rate, and number of coats applied shall be the painting Design-Build Entity's responsibility. Compliance with these spreading rates will be checked on the Project with a dry mil thickness gauge by ASEM/Owner's Representative.

C. Field Sample Panels: Prior to beginning painting application, prepare and obtain from ASEM/Owner's Representative approval of a sample panel of each color to be used.

1. Apply sample coatings on representative areas of actual job surfaces and locate as directed by the ASEM/Owner's Representative. Leave sample panels in place until painting work is completed and accepted. Refinishing sample panels after painting work is accepted.

2. Sample Panel Size: Minimum of four feet square.

3. Panels will be checked for texture, color, mil thickness, and conformity with this Section.

4. Approved field samples shall serve as minimum acceptable standards for finished painting work.

D. Qualifications of Applicator: An authorized representative of the materials manufacturer or an applicator approved by ASEM/Owner's Representative and materials manufacturer.

E. Field Inspections: A representative of materials manufacturer shall be on jobsite before and during a portion of application for consultation and to inspect surfaces to which materials are being applied and way in which materials are being applied.

F. Finish Schedules: The Design Professional of Record will furnish Finish Schedules to the Design-Build Entity before starting painting work. Color and Finish Schedules will indicate locations and surface types where painting materials are to be applied.

G. The Design-Build Entity shall provide every facility for inspection of the work by ASEM/Owner's Representative, whenever required.

1.04 SUBMITTALS

A. Color Chips: Reviewed by ASEM/Owner's Representative before materials are

ordered.

1. Submit two color chips of each color, representative of finish of actual colors to be used.

B. Materials Proposed: Submit for review by Design Professional of Record/Engineer, before award of Contract, a list showing the manufacturer's name, brand name, and types of painting materials proposed, the type of surface to receive each coating and showing the quantities per square foot which will be used on the complete project. The quantity of materials used on this Project shall not be less than as specified or as recommended by materials manufacturer and approved by Design Professional of Record.

1. Review of submittals shall not relieve Design-Build Entity of his responsibility to fulfill the requirements of the Specifications and Drawings, unless the Design-Build Entity enumerates deviations and obtains written approval from Owners Representative to use those deviations.

2. No substitution of material will be permitted, except by written authority from the ASEM/Owner's Representative.

C. Manufacturer’s Specifications: Furnish the painting Design-Build Entity with painting specifications including detailed instructions for application of types of painting materials to be used.

1. Manufacturer's specifications shall be furnished after the proposed materials have been reviewed by Design Professional of Record and ASEM/Owner.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Delivery:

1. Deliver painting materials to the Project site in manufacturer's original labeled and sealed containers, bearing manufacturer's name, brand designations, and printed application instructions.

2. Maintain seals unbroken until after inspection and acceptance of materials by ASEM/Owner's Representative.

3. Do not deliver materials until color chips are reviewed by ASEM/Owner's Representative.

B. Storage and Handling:

1. Provide suitable storage for exclusive use of paint storage and paint mixing. No space will be allowed inside the building for these purposes.

2. Store materials in a suitable dry and ventilated area, and protect from damage, deterioration, and contamination.

3. Store materials in manufacturer's original unopened containers until ready for use at minimum ambient temperature of 45 deg. F.

4. Comply with regulations for storage, mixing, and use of paint. Post necessary safety signs required by local and state codes and in conformity with good practice.

1.06 ENVIRONMENTAL CONDITIONS

A. Painting will not be permitted while dust, lint, or a harmful number of insects are in the air.

B. Apply paint materials under conditions favorable to drying, with no moisture present, no moisture expected within the following 48 hours, and a relative humidity of less than 85%.

C. Apply paint materials to dry and cured surfaces.

D. Provide adequate ventilation to areas in which paint materials are being applied.

1.07 SCHEDULING

A. Deliver materials in ample quantities sufficiently in advance of the time of need in order to avoid delays or interruptions in the work due to lack of proper materials.

PART II – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. The referenced manufacturer, unless otherwise specified, is BLP Mobile Paints, Inc., and is named to establish a standard of quality acceptable.

B. Other manufacturers furnishing equivalent materials considered acceptable:

1. Mobile Paints

2. Glidden

3. Sherwin Williams

4. Duochem, Inc. (acceptable)

C. Provide paint materials from one source unless otherwise approved by Design Professional of Record/Engineer.

2.02 PAINTING MATERIALS

A. Painting materials shall be the type as specified in the Painting Schedule, Article 3.10.

1. Provide paints well ground and easily mixed with no hard settling or caking in containers.

2. Paints shall be readily broken up with a paddle to a smooth uniform paint of good brushing consistency and shall dry hard to a smooth finish without streaking, running, or sagging.

3. Provide primers, sealers, and undercoating's for paint work of same manufacturer as brand of paint used in this Section, unless specified otherwise.

4. Colors: As shown on the Finish Schedule and matching approved color chips and field sample panels.

5. The Design Professional of Record reserves the right to vary color or finish of various surfaces to obtain desired effect without increasing cost to ASEM/Owner.

PART III - EXECUTION

3.01 INSPECTION

A. Before starting to paint or finish a room, space, or area, thoroughly examine underlying and adjoining work and conditions. Report in writing to ASEM/Owner's Representative conditions which might adversely affect the work. Do not apply paint materials until defective conditions are rectified.

1. No "Waiver of Responsibility" for incomplete, inadequate, or defective underlying or adjoining work will be considered unless notice of unsatisfactory conditions has been filed and agreed upon, in writing, by 0\,\111er's Representative before the painting Design-Build Entity begins the work in question.

2. Application of first field coat will be construed as evidence that painting

Design-Build Entity accepts such underlying surfaces as being in proper condition for the application of this work.

B. Where there is question of dryness of surfaces, test surfaces in the presence of ASEM/Owner's Representative. No paint shall be applied to masonry or concrete surfaces when moisture content exceeds 8% as indicated by a reliable electronic moisture meter.

3.02 SAFETY PRECAUTIONS AND CONTRACTOR'S EQUIPMENT

A. Safety: Perform painting under conditions and in a manner dictated by safe practice, using materials, tools, and rigging of safe character.

1. Comply with recognized safety rules and practices necessary to permit safe working conditions for workmen and prevent hazards to others who may be in the vicinity of the work.

2. Do no painting on or in a vicinity of energized electrical lines or rotating equipment apparatus, without the approval of the ASEM/Owner's Representative, and then only in accordance with applicable laws, rules, or regulations.

B. Ladders, Scaffolding, and Staging: Furnish, erect, maintain, and promptly remove, necessary ladders, scaffolding, and staging required under this Section, upon completion of the painting and finishing work. Arrangements shall be made to cause the least possible interference with the work of other trades. -

1. Be responsible for damage caused by the erection or removal of above-mentioned equipment.

2. Should it become necessary to remove scaffolding, staging, ladders, or other similar equipment to permit installation of work of other trades, these items shall be moved as required without additional expense to ASEM/Owner. Coordinate work to avoid conflict with other trades.

C. Combustible Materials:

1. Store paint, varnish, enamel, oil, turpentine, and other combustible or flammable materials within building, in receptacles with tightly dozed covers each night or after each work period. Limit storage of paint materials inside the building to quantity used in one day's work

2. Remove oil or paint saturated cloths, rags, or waste from building after each day's work.

3. Refer to Article 1.05 for paint material storage.

3.03 SURFACE PREPARATION

A. Sand interior work and trim smooth with the grain, and never across it. Correct surface blemishes and dean room and wood surface of dust before proceeding with finishing coats. After the priming coat has been applied, fill nail holes, breaks and crevices with putty.

B. Scrape knots and pitch streaks, then coat with shellac before priming coat is applied. Fill nail holes or small openings with putty.

C. Wire-brush masonry surfaces and remove loose materials and extraneous matter. Use solvents to remove grease and oil. Exercise care to prevent application of paint to surfaces where free lime has not been neutralized. Where necessary, surfaces may be washed down with a solution composed of three pounds of zinc sulphate per gallon of water. Brush off crystalline residue after the surface has thoroughly dried.

D. Prepare metal surfaces for *final* painting in accordance with paint manufacturer's recommendations and Design Professional of Record's specifications.

1. Clean painted cast metal surfaces of detrimental foreign matter such as oil, grease, soil, and cutting compounds by use of solvents.

2. Clean unpainted cast metal surfaces by wire-brushing. Repair surface defects with an iron filler.

3. Clean unprimed steel, such as miscellaneous rolled shapes, bulk purchased floor plates, and field-fabricated shapes for painting by wire-brushing. Shop-primed metal surfaces, except as noted below, shall be inspected to determine the adhesion of primer to steel before cleaning. If the bond is poor, clean surface thoroughly. Where bond is satisfactory, clean surface by wire-brushing or by solvent cleaning.

4. Treat galvanized metal surfaces that are to be painted as specified in the Painting Schedule, under Galvanized Metals.

E. Remove mildew by scrubbing with solution of bi-sodium phosphate and bleach. Rinse with clean water and allow surface to dry completely before paint material application.

3.04 MIXING AND THINNING PAINT MATERIALS

A. Mixing: Mix paint materials only at Project site, with exception of factory-

mixed materials. Provide new non-rusting containers of suitable size for mixing of painting materials at Project. Mixing will not be permitted outside of these containers.

1. Thoroughly mix and stir paint materials, both before and during use, to obtain uniformity of color and finish.

B. Thinning of Paint Materials, if Required: Conform to manufacturer's directions, using only thinning agents in quantities recommended. Adulteration will not be permitted. If excess thinning is done and finished work using the number of coats specified is not satisfactory, the painting Design-Build Entity shall apply additional coats as required, to meet approval of ASEM/Owner's Representative without additional cost to ASEM/Owner.

3.05 PAINTING APPLICATION

A. General: Apply paint materials in accordance with paint materials manufacturer's specifications and this Specification.

1. Do not exceed the spread per gallon specified or recommended by paint manufacturer.

2. Film thicknesses, where indicated, are expressed in dry film thickness (DFT).

B. Apply painting finishes of the highest grade, executed by skilled, experienced' workmen. Careless or incompetent persons will not be allowed on the job.

C. Apply painting materials by spray, roller, or brush in accordance with the manufacturer's recommendation for type of surfaces to receive painting materials.

D. Maintain brushes, rollers, and spray equipment clean and in proper condition.

E. Apply materials to completely cover surfaces evenly and to dry uniformly to color and sheen specified, free from runs, sags, wrinkles, shiners, streaks, and brush marks. Apply each coat smoothly, work out evenly, and allow them to dry before the subsequent coat is applied.

F. Paint shall not be floated on, that is, not applied in thick heavy coats.

G. Thoroughly brush the priming coat into pores and crevices.

H. Make edges of paint adjoining other materials or colors, sharp and clean without overlapping.

I. Between succeeding coats, notify ASEM/Owner's Representative before proceeding with the work so that it may be inspected, if necessary, and credited as an applied coat. Failure to do so may result in recoating and painting Design-Build Entity's expense.

J. Before applying each coat, make certain the previous coat is ready to receive the next specified coat. Previous coating shall be thoroughly cured. Allow suggested drying time and check film with fingernail to be certain that it is cured. Remove noncompatible and non-adherent materials from the previous coat. Surface and ambient temperature shall be within minimum and maximum recommended by manufacturers. Stop exterior work sufficiently early to perm.it film to set up before condensation and moisture caused by night temperature drops occur.

K. Sand enamel and varnish undercoats smooth prior to recoating.

L. Paint top and bottom of doors. Paint cutouts for hardware.

M. Painting or finish surfaces left purposely unfinished to meet the requirements of other trades as part of the work under this Section, only after previous work requiring unfinished surfaces is completed and approved.

N. Apply painting systems in number of coats at the rate and for a minimum dry film thickness specified under the Painting Schedule.

O. Where prime coats are not compatible with special coatings or finish paint coats, apply a proper barrier coating prior to application of special coatings or finish paint coats, as recommended by the materials' manufacturer. An example of this condition occurs when any epoxy paint is to be applied over an alkyd primer. The alkyd paint is not compatible with the strong solvents in epoxy pa.int. Also, sprayed fireproofing is sometimes not compatible with prime coats.

3.06 PROTECTION DURING APPLICATION

A. Take necessary precautions for protection from pa.int spattering and droppings on installed plumbing fixtures, hardware, electrical switchgear, transformers, bus ducts, panel boards, factory painted equipment, lighting fixtures, fittings, glass, doors, equipment, instruments, and similar items to the extent of removing and replacing those parts as necessary.

B. Furnish, hang or spread, and maintain necessary drop cloths, tarpaulins,

and other means of protecting work and work of other trades, either installed or in process of installation. Remove such protection at completion of work. Be responsible for damage resulting from the work under this Section and arrange with involved trades to restore such damaged work to its original condition at their own expense.

C. Hang tarpaulins over openings to spaces being painted or finished, in spaces that are not otherwise enclosed, and which are subject to excessive dust conditions due to adjacent operations or other trades. When and where it becomes necessary for the painting Design-Build Entity to remove coverings placed by other trades, he shall replace them in the original position after he has executed the work which required removal.

3.07 CLEAN-UP AND REPAIR

A. Clean-Up: During construction and up to completion of the construction work, clean-up and remove from the premises, as may be necessary or directed by ASEM/Owner's Representative, surplus materials, tools, appliances, empty cans, cartons, and rubbish resulting from the painting and finishing work. Leave rooms and spaces clean. Remove paint and oil spattering, drippings, and stains resulting from painting work from painted surfaces and from work of other trades.

B. Repair: Repair paint work which has become damaged or defaced during course of construction and completion of the Project, and leave painting and finishing in clean, neat, and perfect condition, as acceptable to ASEM/Owner's Representative. Replace broken glass and damaged material directly attributed to painting work under this Section.

3.08 PROTECTION OF COMPLETED WORK

A. Protect coated surfaces until the Project has been accepted by the ASEM/Owner.

3.09 MAINTENANCE PAINTING SCHEDULE

A. Furnish to ASEM/Owner's Representative, after completion of painting work, a Maintenance Painting Schedule for ASEM/Owner's use in maintenance painting, indicating description (type, color, mil thickness, etc.) of each type of paint material used and location where used.

3.10 PAINTING SCHEDULE

A. Surfaces to be painted, painting systems, and the number of coats to be applied shall be in accordance with the Painting Schedule as outlined below

and the manufacturer's printed instructions. Spread rates indicated are theoretical.

B. Coating Systems:

1. Exposed Structural Steel and Miscellaneous Metals, Steel Channel Door, and Wall Opening Frames:

   a. Touch-up or one coat Prymall 22 Red Lead Primer, spread rate 487 square feet per gallon, 2.0 mils DFT.

   b. Two coats10 Series Rus-Kill Enamel, spread rate 400 square feet per gallon, 1.5 mils per coat DFT.

2. Handrails, Stairs, Ladders, Cages and Pipe Guards:

   a. Touch-up or one coat Prymall 22 Red Lead Primer, spread rate 487 square feet per gallon, 2.0 mils DFT.

   b. Two coats10 series Rus-Kill Enamel, spread rate 400 square feet per gallon, 1.5 mils per coat DFT.

3. Hollow Metal Doors and Frames:

   a. Touch-up or one coat Prymall 22 Red Lead Primer, spread rate 487 square feet per gallon, 2.0 mils DFT.

   b. Two coats 10 Series Rus-Kill Enamel Gloss Finish, spread rate 400 square feet per gallon, 1.5 mils per coat DFT.

4. Hollow metal doors [on rooms with epoxy painted walls].

   a. One coat Mopoxy HB Primer Doors

   b. Two coats Mopoxy HB Gloss Epoxy 40-AW-B spread rate 395 sq. ft. per gal.8.0 mils DFT.

5. Exposed Piping [Uninsulated, not subject to condensation):

   a. Carbon steel:

      1) One coat QD 58 Quick Dry Modified Alkyd Primer, spread rate 320 square per gallon,.2.0 mils DFT.

      2) Two coats 58 Series Acrylic Enamel Gloss Finish, spread rate 302 square feet per gallon, 2.0 mils per coat DFT.

b. Cast Iron:

1) One coat QD 58 Quick Dry Modified Alkyd Primer, spread rate 320 square feet per gallon, 2.0 mils DFT.

2) Two coats 58 Series Acrylic Enamel Gloss Finish spread rate 302 square feet per gallon, 2.0 mils per coat DFT.

6. Exposed Structural Steel Columns, Girts and Miscellaneous Metals:

a. Gloss finish:

1) Touch-up Prymall 22 Red Lead Alkyd Primer.

2) Two coats 10 Series Rus-Kill Enamel spread rate 400 square feet per gallon, 1.5 mils per coat DFT.

7. Exposed Galvanized Steel [Other than Roof Deck]:

a. Gloss Finish:

1) One coat Series 9-42 Vinyl Wash Metal Primer, spread rate 252 square feet per gallon, 0.5 mils DFT.

2) Two coats 10 Series Rus-Kill Enamel spread rate 400 square feet per gallon, 2.0 mils per coat DFT.

8. Gypsum Drywall:

a. Semi-Gloss Finish:

1) One coat Series Stop Stain Primer/Sealer White 19-15, spread rate 361 square feet per gallon, 1.5 mils OFT.

2) Two coats 1335 Series Coventry Latex Semi-Gloss Enamel spread rate 345 square feet per gallon, 1.5 mils per coat DFT.

9. Gypsum drywall [on areas to receive epoxy paint]:

a. One coat series stop primary Sealer White 19-15, Spread Rate 361sq. ft./ga1., 2.0 mils DFT.

b. Two coats Mopoxy, HB Epoxy Gloss 40-AW-13, Spread Rate 395 sq. ft./gal., 8.0 mils DFT.

c. Antibacterial additives shall be used on Surgical & Delivery Rooms.

10. Concrete Unit Masonry (New Construction):

    a. Semi-Gloss Finish:

        1) One coat 60-07 Block-Fill Latex Block Filler spread rate 85-100 square feet per gallon.

        2) Two coats 135 Series Coventry Latex Semi-Gloss Enamel spread rate 345 square feet per gallon, 2.0 mils per coat DFT.

10a. Concrete Unit Masonry (on areas to receive epoxy paint):

    b. One coat series stop primary sealer white 19-15, spread rate 361 sq. ft./gal., 2.0 mils DFT.

    c. Two coats Mopoxy, HB Epoxy Gloss 40-AW-13, spread rate 395 sq. ft/gal., 8.0 mils DFT.

    d. Antibacterial additives shall be used on Surgical & Delivery Rooms.

11. Pressed Metal Frames, and Steel Channel Frames:

    a. Gloss Finish:

        1) Touch-up or one coat Prymall 22 Red Lead Primer, spread rate 487 square feet per gallon, 2.0 mils DFT.

        2) Two coats 10 Series Rus-Kill Enamel Gloss spread rate 400 square feet per gallon, 2.0 mils per coat DFT.

12. Fire Sprinkler System (Painted Red):

    a. One coat Prymall 22 Red Lead Primer, spread rate 487 square feet per gallon, 2.0 mils DFT.

    b. Two coats 10 Series Rus-Kill Gloss Enamel, spread rate 400 square feet per gallon, 2.0 mils DFT.

13. Steel Pipe Guards:

    a. One coat Mopoxy HB Epoxy Primer 40-DR-5.

    b. Two coat Mopoxy HB Epoxy Gloss Epoxy 40-AW-13 spread rate 395 square feet per gallon, 6.0 mils DFT

14. Galvanized Conduit and Galvanized Carbon Steel Pipe: [Exposed and as per color coding]

a. One coat 9-42 Vinyl Wash Primer, spread rate 485square feet per gallon, 2.0 mils DFT.

b. One coat 10 Series Rus-Kill Enamel Gloss Finish, spread rate 400 square feet per gallon, 2.0 mils per coat DFT.

15. Exposed Piping [Uninsulated] [Carbon Steel, Ductile Iron, and Copper] [as per color coding]:

a. One coat 10 Prymall 22 Red Lead Primer, spread rate 487square feet per gallon, 2.0 mils DFT.

b. Two coats 10 Series Rus-Kill Enamel Gloss spread rate 400 square feet per gallon, 2.0 mils per coat DFT.

16. Exposed piping insulated with Aluminum Jacket]: unpainted.

17. Interior Safety Area Stripes: Located as directed by ASEM/Owner and required by OSHA:

a. One coat White or yellow Traffic Paint, spread rate 300 square feet per gallon. Color and location as directed by ASEM/Owner.

C. Piping Color: unless otherwise noted, Paint exposed piping, conduit, etc., the same color as the substrate to which it is attached. Use paint systems as defined in this Section for interior and exterior piping.

END OF SECTION

SECTION 10260 – CORNER GUARDS, JAMB GUARDS, AND COLUMN COVERS

PART I – GENERAL

1.01 WORK INCLUDED

A. This Section includes corner guards, jamb guards and column covers.

1.02 RELATED WORK

A. Related Work in Other Sections:

04220	Concrete Unit Masonry
	Structural Steel
	Standard Steel Frames
09260	Gypsum Drywall System

1.03 REFERENCES

A. Industry standards governing this work are of the latest issue at the date of this Specification release, except as otherwise noted.

1. American Society for Testing and Materials [ASTM]:

ASTM A - 167	Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip
ASTM A - 269	Seamless and Welded Austenitic Stainless-Steel Tubing for General Services.
ASTM A - 512	Specification for Seamless Stainless Steel Mechanical Tubing

1.04 SUBMITTALS

A. Submit manufacturer's product literature including materials and installation instructions.

B. Submit two samples of material with finish as selected.

PART II – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Comer Guards:

1. Kydex by GE (referenced manufacturer)
2. Life Science Products, Inc.
3. Tubular Specialties Mfg., Inc.
4. Wilkinson Company, Inc.

B. Jamb Guards:

1. We Science Product, Inc.

C. Column Covers:

1. Construction Specialties, Inc. [referenced manufacturer]
2. Custom Enclosures, Inc.
3. Pittcon Industries, Inc.

D. Wall Guards:

1. Pawling Corporation (referenced manufacturer)
2. Balco, Inc.

2.02 MATERIALS

A. Comer Guards:

1. Type 304stainless steel in minimum 16 gauge with No.4 finish.
    a. Size: 4 inch by 4 inch by 6 foot 8 inches high unless otherwise indicated on drawings.
2. Attachment:
    a. Masonry: Silicone adhesive and drive pins.

B. Jamb Guard:

1. Inner Tube: 7/8 inch outside diameter, 18 gage wall, roundd mechanical

tubing, type ClOl0/1020, ASTM A-513.

2. Outer Tube: One inch outside diameter, 18 gage wall, type 304 stainless steel, ASTM A-269 in No. 4 finish.

3. Bracket Three, 1/8 inch thick by 1 inch by 1-inch right angles with two 1/4 inch diameter through holes on each side of 18-8 stainless steel type 302 - 304, annealed condition in No. 4 finish.

4. Each guard shall be six feet long with plastic cap at each end of tube.

C. Column Covers:

1. Custom formed covers from 16 gage, type 304stainless steel with No. 4 finish.

   a. Fabricate in 2 or more sections with ceiling, intermediate horizontal and base reveal type joints, and vertical joints to be butt joints.

2. All exposed accessories shall be stainless steel with finish to match covers.

3. All concealed support structure and accessories shall be galvanized steel.

D. Wall Guard:

1. Pro-Tek bumper guard 8" x ¾" rigid PVC Model WG-8.

2. Install with aluminum retainer and screw system at 2'-0" O.C. and 3'-6" AFF.

PART III – EXECUTION

3.01 Installation

A. Install corner guards, jamb guards and wall guards in accordance with manufacturer's instructions.

B. Install column covers and accessories in accordance with manufacturer's instructions.

1. Install column covers plumb and level.

2. Protect from damage by other trades after installation.

END OF SECTION

SECTION 10800 – TOILET AND BATH ACCESSORIES

PART I – GENERAL

1.01 WORK INCLUDED

A. This Section includes toilet accessories and related hardware

1.02 SUBMITTALS

A. Shop Drawings shall include:

1. Installation details.

2. Elevations.

3. Mounting heights. Conform to Building Code requirements for unit mounting heights for the handicapped.

4. Gauges.

5. Anchoring details.

B. Manufacturer's literature for each item.

1.03 DELIVERY, STORAGE, AND HANDLING

A. Deliver accessories in manufacturer's original unopened protective packaging.

B. Store to protect items from damage.

C. Handle items to prevent damage to finish surfaces.

D. Protection:

1. Maintain protective covers on all items until installation is complete.

2. Remove protective covers at final clean-up of installation.

1.04 PROJECT/SITE CONDITIONS

A. Verify:

1. That spacing of plumbing fixtures and toilet partitions is satisfactory for installation of accessories.

2. That room door and toilet compartment door swings do not interfere with the location of accessories indicated.

B. Inspect job for conditions which would prevent execution of this work as specified. Do not proceed until such conditions are corrected.

PART II – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Acceptable Manufacturers Subject to Compliance with this Specification:

1. Bobrick Washroom Equipment, Inc. [referenced manufacturer].

2. Bradley Corporation.

3. Accessory Specialties, Inc.

2.02 FASTENINGS AND ANCHORS

A. Use concealed fasteners wherever possible.

B. Fasteners and Anchors: Stainless steel.

C. Anchor type shall be suitable for substrate fastened to as indicated.

2.03 KEYS AND LOCKS

A. Locks for a given item shall be keyed alike; coin locks shall be keyed separately.

B. Turn over to ASEM/Owner four keys for each type of lock.

2.04 LIST OF ACCESSORIES

A. See the Toilet Accessories Schedule.

PART III – EXECUTION

3.01 INSTALLATION

A. Install complying with reviewed Shop Drawings and manufacturer's instructions.

B. Remove protective coverings from accessory surfaces and clean exposed surfaces.

C. Check hinged, latched, and locked items to see that they operate properly. Verify that coin dispensers operate as indicated.

END OF SECTION

2.0 CIVIL PRELIMINARY TECHNICAL SPECIFICATIONS

CIVIL PRELIMINARY TECHNICAL SPECIFICATIONS

RFP / DESIGN-BUILD USE NOTICE

These civil technical specifications are issued as RFP/Design-Build bridging performance criteria for selection of the Design-Build Entity for the New Puerto Rico Trauma Hospital. They establish the Owner's minimum civil, site-development, utility-infrastructure, durability, quality, performance, and coordination requirements. They communicate design intent and minimum standards only and are not final permit documents or construction specifications.

The selected Design-Build Entity shall, through its Puerto Rico-licensed Civil Engineer of Record and other required professionals, complete all investigations and final civil design. Responsibilities include a certified existing-conditions and topographic survey; utility location and verification; supplemental geotechnical investigation as required; final demolition, grading, drainage, roadway, pavement, water, sanitary, stormwater, excavation-support, dewatering, erosion-control, and site-utility design; signed and sealed permit and construction documents; agency coordination; and all approvals required to construct a complete and operational Project.

References to "Contractor" or "Design-Build Entity" mean the selected Design-Build Entity after award. "Civil Engineer of Record" means the Design-Build Entity's Puerto Rico-licensed civil engineer responsible for the final design, calculations, signed and sealed documents, and construction-phase professional services. "ASEM/Owner" and "ASEM/Owner's Representative" mean the Owner and its designated reviewers. ASEM review, comment, acceptance, or lack of comment does not transfer design responsibility from the Design-Build Entity or its professionals of record.

The Project will be executed within the active ASEM Puerto Rico Medical Center campus. The Design-Build Entity shall protect adjacent institutions, occupied facilities, emergency and ambulance access, circulation, and utilities to remain. Staging, phasing, shutdowns, tie-ins, and access restrictions require ASEM's written approval. Named products, materials, and methods are minimum benchmarks to be retained or exceeded in the final project-specific specifications.

CIVIL TABLE OF CONTENTS - RFP / DESIGN-BUILD BRIDGING CRITERIA

For RFP use, Sections identify minimum design-build performance criteria to be advanced, coordinated, signed and sealed by the selected Design-Build Entity's licensed design professionals of record.

Table Contents

SECTION 31 22 40 - SOIL EROSION STABILIZATION 41
SECTION 31 22 72 - GABION WALL CONSTRUCTION 46
SECTION 32 25 21 - CONCRETE CURBS & SIDEWALKS 49
SECTION 32 25 55 - ASPHALT CONCRETE PAVEMENT 53
SECTION 32 25 80 - PAVEMENT MARKING 60
SECTION 32 28 31 - CHAIN LINK FENCES & GATES 66
SECTION 33 26 60 - PRESSURE TRANSMISSION AND DISTRIBUTION PIPING 73
SECTION 33 26 83 - DISINFECTION OF WATER SYSTEMS 94
SECTION 33 27 00 - STORM DRAIN, SANITARY & DRAINAGE PIPING 101
SECTION 33 27 21 - CATCH BASINS AND INLETS 115
SECTION 33 27 26 – MANHOLES 118

SECTION 01 50 50 - MOBILIZATION AND CLEANUP

PART 1 GENERAL

3.01 WORK INCLUDED

A. This Section establishes minimum requirements for mobilization, staging, temporary facilities, protection, cleanup, and restoration within the active ASEM campus. Maintain hospital operations, emergency and ambulance access, circulation, adjacent-facility access, and utilities designated to remain.

PART 2 PRODUCTS

3.02 GENERAL

A. Provide all materials and equipment required to accomplish the Work as specified.

B. Provide approved containers for material disposal.

C. The Design-Build Entity shall enforce quality-control criteria consistent with the RFP Bridging Documents and final Design-Build Agreement. Internal determinations do not limit ASEM/Owner's contractual rights.

D. Each Subcontractor is responsible to the Design-Build Entity for its materials, equipment, protection, installation, testing, and completion. The Design-Build Entity remains fully responsible to ASEM/Owner for the complete civil scope.

PART 3 EXECUTION

3.03 GENERAL

A. Clean equipment, vehicles, tools, and materials before entering the ASEM campus. Prevent mud, debris, invasive vegetation, and pollutants from reaching campus roads, occupied areas, drainage systems, or public rights-of-way.

B. Submit mobilization, logistics, phasing, traffic-control, utility-protection, environmental, and safety plans to ASEM/Owner before affected Work. Identify approved staging, protected, contaminated, excavation, stockpile, dewatering, waste, emergency-access, and high-hazard areas. Do not exceed approved limits or disturb suspected contamination until required procedures are authorized.

C. Use only ASEM-approved staging areas. Bridging locations are preliminary and shall be verified by the Design-Build Entity. Licensed professionals shall locate borings, test pits, monitoring points, and exploratory work in coordination with ASEM to avoid active utilities, structures, access routes, and hospital operations.

D. Existing-condition information is not represented as complete. Before proposal and construction, inspect and survey the site, locate utilities, verify obstructions, and reconcile field conditions. Include required removal, relocation, protection, and restoration, with ASEM approval where existing facilities or utilities are affected.
E. Require subcontractor and supplier due diligence. Their failure to review available information does not relieve the Design-Build Entity or create entitlement against ASEM/Owner except as expressly stated in the Design-Build Agreement.

3.04 CLEANUP OF CONSTRUCTION AREAS

A. Avoid contamination of the project area. Do not dump waste oil, rubbish, or other hazardous or non-hazardous materials on the ground. Restore site, as nearly as possible, to original condition.
B. After Work in each area, remove temporary facilities, unused materials, waste, and debris; restore disturbed surfaces; and leave the area safe. Contain waste and prohibit liquid discharge except by an authorized method approved by ASEM. Repair damage and obtain ASEM/Owner acceptance of restoration.
C. Upon leaving the site at the completion of the Work, the applicable Subcontractor shall decontaminate any equipment that requires it.

3.05 WASTE DISPOSAL

A. The Design-Build Entity is responsible for lawful characterization, segregation, handling, transport, recycling, and disposal of waste. Use authorized facilities and maintain records for ASEM/Owner.
B. Manage potentially contaminated material under a qualified professional’s environmental work plan. Use approved containers, required secondary containment, complete labels, and secure weather-protected storage.
C. The Design-Build Entity shall prevent contaminated liquids, sediment-laden water, concrete washout, fuels, and other pollutants from entering surface water, drainage channels, existing storm systems, or occupied campus areas.
D. A qualified environmental professional shall sample, classify, and document potentially contaminated material under applicable regulations and disposal-facility criteria. Obtain agency approval when required.
E. Remove characterized waste promptly within regulatory limits. Storage shall not interfere with campus operations, emergency access, drainage, or progress.

PART 4 PERSONNEL

3.06 PERSONNEL REQUIREMENTS

A. Provide at all times, during the performance of Work, experienced and competent crews. Additional personnel shall be provided as required during all operations to support the type of Work being conducted.

END OF SECTION

SECTION 31 20 10 - SUBSURFACE INVESTIGATION

PART 1 GENERAL

3.07 SUBSURFACE DATA:

A. Engage a Puerto Rico-licensed geotechnical engineer to review available data, perform required supplemental investigation and testing, and issue project-specific recommendations coordinated with the Civil and Structural Engineers of Record.

B. Treat ASEM-provided preliminary geotechnical information as reference data. Before final design and earthwork, verify its adequacy and complete supplemental investigation required for foundations, excavation, shoring, dewatering, pavements, utilities, and site design.

3.08 USE OF DATA:

A. Available reports establish conditions only at the investigated locations and dates. They do not warrant uniform conditions or replace the Design-Build Entity's responsibility for investigation, interpretation, final design, or means and methods.

B. Incorporate verified geotechnical criteria into final signed and sealed documents and construction procedures. Submit coordinated revisions to the bridging concept to ASEM/Owner under the RFP and Design-Build Agreement.

3.09 REPRESENTATIONS:

A. ASEM/Owner and the preparers of reference investigations do not warrant uniform subsurface or groundwater conditions.

B. The Design-Build Entity and its professionals of record are responsible for interpretations, assumptions, design values, and conclusions, subject to the final Design-Build Agreement.

3.10 PRECEDENCE OF DOCUMENTS:

A. Apply the order of precedence in the RFP and Design-Build Agreement. Read the Bridging Documents as complementary and identify conflicts or omissions before final design or construction.

B. Where subsurface data conflict with these criteria or field conditions, the geotechnical and Civil/Structural Engineers of Record shall resolve and document the condition and submit the resolution to ASEM/Owner before affected Work proceeds.

END OF SECTION

SECTION 31 20 50 – DEMOLITION

PART 1 GENERAL

3.11 GENERAL

A. The RFP Bridging Drawings identify preliminary civil demolition intent and may not show every pavement, structure, utility, foundation, obstruction, or appurtenance requiring removal, relocation, abandonment, or protection. During proposal due diligence and final design, the Design-Build Entity shall survey and verify conditions, coordinate with ASEM, and prepare a complete signed and sealed demolition plan and sequence for the Project.

3.12 SUBMITTALS

A. Demolition plan and schedule identifying full and selective demolition, sequencing, temporary protection, utility cutovers, shutdowns, traffic and pedestrian controls, salvage, debris routes and storage, environmental controls, and restoration. Coordinate the plan with the overall Design-Build schedule and ASEM campus operations.

1. Methods, equipment, temporary supports, monitoring, dust/noise/vibration controls, and protection measures proposed for each demolition activity, including measures for adjacent occupied healthcare facilities and utilities to remain.
2. Copies of any authorizations and permits required to perform Work.

PART 2 EXECUTION

3.13 PREPARATION

A. Utilities:

1. Do not interrupt, disconnect, cap, relocate, or abandon any utility until the service has been positively identified, the final disposition is shown in the coordinated Design-Build documents, and the shutdown or cutover has been approved in writing by ASEM and the serving utility or authority. Provide temporary services and contingency measures where required to maintain hospital operations.
2. Remove utility lines exposed by demolition excavation.
3. Remove only electrical, communications, water, sanitary, storm-drainage, and other utilities specifically verified and designated for removal in the final coordinated demolition documents. Protect and maintain all utilities designated to remain, including services to adjacent institutions.

4. Excavate utility lines serving buildings to be demolished and provide a permanent leak-proof closure for water and gas lines.
5. Plug sewer lines at locations shown or at limits of excavation if not shown with concrete length of plug, to prevent groundwater infiltrating sewer systems.

B. Existing Pavement:
1. Work will be done in accordance with the requirements of the authorities having jurisdiction, including trimming, line cutting and all other incidental work required for the installation of pipelines and other utilities, construction of structures, road widening, etc.
2. Restore pavement disturbed by demolition or utility work to the lines, grades, drainage, structural capacity, surface quality, and traffic loading established in the final Design-Build documents and required by the authority having jurisdiction. Temporary and permanent repairs shall maintain safe campus circulation and emergency access.

C. Provide temporary repairs, decking, barriers, detours, and traffic-control measures as required to maintain safe circulation. Coordinate work affecting public rights-of-way with DTOP or the applicable authority and work affecting the ASEM campus with ASEM/Owner before implementation.

D. Removal and Storage of Equipment for Reuse:

E. Do not remove, dispose of, relocate, or reuse equipment or materials identified for possible salvage until ASEM/Owner issues written disposition instructions.

F. Properly store and maintain equipment and materials in same condition as when removed.

G. Except for items designated by ASEM/Owner for salvage, reuse, return, or regulated disposal, removed materials become the Design-Build Entity’s responsibility upon removal and shall be legally transported, recycled, or disposed of offsite.

H. The RFP Bridging Drawings define minimum demolition intent. The Design-Build Entity shall establish final limits and use controlled removal methods that avoid damage beyond those limits. Repair unauthorized over-demolition and damage to retained work at no additional cost to ASEM/Owner.

I. Core drill floor slabs, catch basins, and other concrete improvements to remain in place below ground, or break holes at structure's lowest point to allow water to freely migrate through.

J. Remove piping from areas to be backfilled. Pipe, valves, and fittings adjacent to those to be removed may also be removed as salvage.
K. Remove all materials associated with existing equipment that is to be removed or relocated.
L. Cut off concealed or embedded conduit, boxes, or other materials a minimum of 3/4 inch below final finished surface.
M. Extract existing piling, which conflict with new piles, prior to driving new piles.

3.14 DISPOSAL

A. Dispose of debris and other non-salvaged materials as specified in Section 31 21 00, SITE PREPARATION.

3.15 BACKFILLING

A. Backfill Demolition areas to existing ground level.
B. Conform to Section 31 22 20, FILL AND BACKFILL.
C. Do not use demolition debris as backfill material.

END OF SECTION

SECTION 31 21 00 - SITE PREPARATION

PART 1 GENERAL

3.16 DEFINITIONS

A. Interfering or Objectionable Material: Trash, rubbish, and junk; vegetation and other organic matter, whether alive, dead, or decaying; topsoil.
B. Clearing: Removal of interfering or objectionable material lying on or protruding above ground surface.
C. Grubbing: Removal of vegetation and other organic matter including stumps, buried logs, and roots greater than 2 inches caliper to a depth of 6 inches below sub-grade.
D. Scalping: Removal of sod without removing more than upper 3 inches of topsoil.
E. Stripping: Removal of topsoil remaining after applicable scalping is completed.
F. Project Limits: Areas, as shown or specified, within which Work is to be performed, however some work may be required to be performed outside the project limits.

3.17 SUBMITTALS

A. Shop Drawings: Drawings clearly showing clearing, grubbing, and stripping limits.

3.18 QUALITY ASSURANCE

A. Obtain Civil Engineer of Record's approval of staked clearing, grubbing, and stripping limits, prior to commencing clearing, grubbing, and stripping.

3.19 SCHEDULING AND SEQUENCING

A. Prepare site only after adequate erosion and sediment controls are in place. Limit areas exposed uncontrolled to erosion during installation of temporary erosion and sediment controls to maximum of 1 acre.
B. The Design-Build Entity shall identify, obtain, and comply with all permits, authorizations, environmental plans, notifications, and agency conditions required for clearing, grubbing, earth disturbance, vegetation removal, erosion and sediment control, waste handling, and work in public rights-of-way before beginning affected Work.

PART 2 EXECUTION

3.20 GENERAL

A. Clear, grub, and strip areas actually needed for waste disposal, borrow, or site improvements within limits shown or specified.
B. Do not injure or deface vegetation that is not designated for removal.

3.21 LIMITS

A. As follows, but not to extend beyond Project limits.
   1. Excavation: Excluding Trenches: 5 feet beyond top of cut slopes.
   2. Trench Excavation: 4 feet from trench centerline, regardless of actual trench width.
   3. Fill:
      a. Clearing and Grubbing: 5 feet beyond toe of permanent fill.
      b. Stripping and Scalping: 2 feet beyond toe of permanent fill.
   4. Waste Disposal:
      a. Clearing: 5 feet beyond perimeter.
      b. Scalping and Stripping: Not required.
      c. Grubbing: Around perimeter as necessary for neat finished appearance.
   5. Structures: 15 feet outside of new structures.
   6. Roadways: Clearing, grubbing , scalping, and stripping 30 feet from roadway shoulders.
   7. Overhead Utilities:
      a. Clearing and Grubbing: Entire width of easements and rights-of-way.
      b. Scalping and Stripping: Wherever grading is required.
   8. Other Areas: As shown on drawings.

B. Remove rubbish, trash, and junk from entire area within Project limits.

3.22 TEMPORARY REMOVAL OF INTERFERING PLANTINGS

A. Remove and store, as specified in the Reforestation Plan shrubs and trees that are not designated for removal but do interfere with construction or could be damaged by construction activities.

B. Photograph and document plants prior to their removal if not included in the Reforestation Plan.

3.23 CLEARING

A. Clear areas within limits shown or specified.

B. Fell trees so that they fall away from facilities and vegetation not designated for removal.

C. Cut stumps not designated for grubbing flush within 6 inches of ground surface.

D. Cut off shrubs, brush, weeds, and grasses to within 2 inches of ground surface.

3.24 GRUBBING

A. Grub areas within limits shown or specified.

3.25 SCALPING

A. Do not remove sod until after clearing and grubbing is completed and resulting debris is removed.

B. Scalp areas within limits shown or specified.

3.26 STRIPPING

A. Do not remove topsoil until after scalping is completed.
B. Strip areas within limits to minimum depths shown or specified. Do not remove subsoil with topsoil.
C. Stockpile strippings for topsoil, separately from other excavated material.

3.27 TREE REMOVAL OUTSIDE CLEARING LIMITS

A. Remove Within Project Limits:
    1. Dead, dying, leaning, or otherwise unsound trees that may strike and damage Project facilities in falling.
    2. Trees designated by the Civil Engineer of Record
B. Cut stumps off flush with ground, remove debris, and if disturbed, restore surrounding area to its original condition.

3.28 TREE TOPPING

A. Top trees designated by adjacent to Project rights-of-way and easements for overhead utilities so remaining portion will not strike facilities in falling. Where topping will remove more than 1/2 of a tree's crown, remove entire tree.
B. Consult project arborist to treat wounds resulting from topping.

3.29 SALVAGE

A. Logs, timber, and other potentially salvageable material shall be inventoried and submitted to ASEM/Owner for written disposition instructions. No sale, reuse, or removal for private benefit is permitted without ASEM authorization.
B. Sod or vegetation with potential reuse value shall be protected, stockpiled, transplanted, or disposed of as directed in the final landscape/site plan and approved by ASEM/Owner.

3.30 DISPOSAL

A. Clearing and Grubbing Debris:
    1. Dispose of debris offsite.
    2. Do not bury clearing, grubbing, demolition, or construction debris onsite. Remove material to an authorized recycling or disposal facility unless a specifically engineered and permitted reuse is shown in the final Design-Build documents and approved in writing by ASEM/Owner.
    3. Burning of debris onsite will not be allowed.
    4. Open burning is prohibited on the Project site. Remove combustible debris promptly using legal transport and disposal or approved recycling methods.
    5. Limit temporary debris stockpiles to approved locations and durations. Protect stockpiles from fire, wind, runoff, pests, and unauthorized access, and do not obstruct emergency routes, drainage, utilities, or campus operations.
    6. Dispose of unburned and noncombustible debris offsite.

7. Remove noncombustible debris offsite for legal recycling or disposal. Onsite burial is prohibited unless expressly included in the final permitted design and authorized in writing by ASEM/Owner.
8. Woody debris may be chipped for approved landscape reuse only when clean, suitable, and incorporated into the final landscape plan. Obtain ASEM/Owner approval for onsite reuse; remove excess or unsuitable chips to an authorized facility.
9. Limit offsite disposal of clearing and grubbing debris to locations that are approved by federal, Puerto Rico, and local authorities, and that will not be visible from Project.

B. Scalping: As specified for clearing and grubbing debris.

C. Stripping:
1. Dispose of stripped material unsuitable for reuse, or in excess of Project needs, at authorized offsite facilities. Stockpile reusable topsoil only in approved locations and protect it from contamination and erosion.
2. Stockpile topsoil in sufficient quantity to meet Project needs. Dispose of excess stripping as specified for clearing and grubbing.

END OF SECTION

SECTION 31 21 60 - EXCAVATION SUPPORT SYSTEMS

PART 1 GENERAL

3.31 SUBMITTALS

A. Shop Drawings:
   1. Excavation support plan.
   2. Movement monitoring plan.
   3. Trench excavation Plan

B. Quality Control Submittals: Movement measurement and data and reduced results indicating movement trends.

3.32 QUALITY ASSURANCE

A. Provide a preconstruction condition survey and an engineered movement-monitoring program for adjacent buildings, utilities, roadways, and other critical facilities. Establish baseline readings before excavation and submit monitoring data, trends, threshold exceedances, and corrective actions to the Civil and Structural Engineers of Record and ASEM/Owner.

PART 2 EXECUTION

3.33 GENERAL

A. The Design-Build Entity shall design, permit, install, monitor, maintain, and remove excavation support and dewatering systems for the approximately 22- to 28-foot-deep basement excavation and related utility trenches. Systems shall be engineered and signed and sealed by Puerto Rico-licensed professionals and shall prevent instability, settlement, vibration damage, groundwater impacts, or interruption of adjacent occupied ASEM facilities, access routes, utilities, and completed Work.

3.34 EXCAVATION SUPPORT PLAN AND TRENCH EXCAVATION PLAN

A. Prepare coordinated excavation-support, dewatering, trench-safety, and monitoring plans addressing the following topics and incorporating the geotechnical report, structural design, construction sequence, adjacent-facility protection, and emergency response procedures:
   1. Details of shoring, bracing, sloping, or other provisions for worker protection from hazards of caving ground.
   2. Design assumptions and calculations.
   3. Methods and sequencing of installing excavation support.
   4. Proposed locations of stockpiled excavated material.
   5. Minimum lateral distance from the crest of slopes for vehicles and stockpiled excavated materials.
   6. Anticipated difficulties and proposed resolutions.

3.35 MOVEMENT MONITORING PLAN

A. Prepare movement monitoring plan addressing following topics:
   1. Survey control.
   2. Locations of monitoring points.
   3. Plots of data trends.
   4. Monitoring frequency, alert and action thresholds, notification protocol, stop-work criteria, emergency stabilization measures, and reporting format. Increase monitoring when trends approach established thresholds or when directed by the responsible professional.

3.36 REMOVAL OF EXCAVATION SUPPORT

A. Remove excavation support in manner that will maintain support as excavation is backfilled or leave voids in backfill.

B. Do not remove or abandon excavation-support elements until the responsible licensed professional verifies that permanent construction and backfill can safely carry all loads and that removal will not damage adjacent facilities, utilities, completed Work, or property. Obtain ASEM approval before work affecting campus operations or retained facilities.

3.37 TRENCHES

A. Provide adequate safety system meeting requirements of applicable Puerto Rico and local construction safety orders, and federal requirements, specially current OSHA requirements.

END OF SECTION

SECTION 31 22 05 – EXCAVATION

PART 1 GENERAL

3.38 DEFINITIONS

A. Common Excavation: Removal of material not classified as rock excavation.

B. Rock Excavation:

1. General: Removal of solid material which by actual demonstration cannot, in Civil Engineer of Record's opinion, be reasonably loosened or ripped by single-tooth, hydraulically operated ripper mounted on crawler tractor in good condition and rated at minimum 300 flywheel horsepower; and which must be systematically drilled and blasted or broken by power-operated hammer, hydraulic rock breaker, expansive compounds, or other similar means prior to removal.
2. Trench: Removal of solid material which by actual demonstration cannot, in Civil Engineer of Record's opinion, be reasonably excavated with minimum 135 hp backhoe in good condition and equipped with manufacturer's standard boom, two rippers, and rock points or similar approved equipment; and which must be systematically drilled and blasted or broken by power-operated hammer, hydraulic rock breaker, expansive compounds, or other similar means prior to removal.
3. Term "rock excavation" indicates removal of solid material, as specified above, and does not necessarily correspond to "rock" as implied by names of geologic formations.
4. Removal of boulders larger than 1/2 cubic yard will be classified as rock excavation, if drilling and blasting or breaking them apart with power-operated hammer, hydraulic rock breaker, expansive compounds, or other similar means is both necessary and actually used for their removal.

3.39 SUBMITTALS

A. Shop Drawings:

1. Excavation Plan, Detailing:
   a. Methods and sequencing of excavation.
   b. Proposed locations of stockpiled excavated material.
   c. Proposed onsite and offsite spoil disposal sites.

3.40 QUALITY ASSURANCE

A. Provide adequate survey control to avoid unauthorized over-excavation.

3.41 WEATHER LIMITATIONS

A. Material excavated during inclement weather shall not be used as fill or backfill until after material drains and dries sufficiently for proper compaction.

3.42 SEQUENCING AND SCHEDULING

A. Clearing, Grubbing, and Stripping: Complete applicable Work specified in Section 31 21 00, SITE PREPARATION, prior to excavating.

B. Dewatering: The Design-Build Entity shall have its geotechnical and Civil/Structural Engineers of Record design and coordinate a dewatering and groundwater-control plan before excavation. Address discharge permitting, settlement risk, adjacent foundations and utilities, monitoring, standby capacity, storm events, and uninterrupted campus operations.

C. Excavation Support: Design, install, monitor, and maintain systems specified in Section 31 21 60, EXCAVATION SUPPORT SYSTEMS, and coordinate them with excavation sequencing, dewatering, foundations, utilities, temporary access, and protection of adjacent occupied facilities.

PART 2 EXECUTION

3.43 GENERAL

A. Excavate to the lines, grades, dimensions, tolerances, working clearances, and temporary slopes established in the final signed and sealed Design-Build documents. Coordinate excavation with foundations, waterproofing, utilities, dewatering, support systems, survey control, and geotechnical verification. Do not rely on preliminary bridging dimensions as final excavation limits.

B. Do not over-excavate beyond final design limits without written direction from the Civil or Structural Engineer of Record. Document the condition and provide an engineered repair or replacement procedure before proceeding.

3.44 UNCLASSIFIED EXCAVATION

A. Excavation is unclassified. Complete all excavation regardless of the type, nature, or condition of the materials encountered.

3.45 CLASSIFIED EXCAVATION

A. Excavation is classified; see Article DEFINITIONS for classifications. Notify Civil Engineer of Record whenever rock is encountered.

B. Before beginning rock excavation, comply with following requirements:

1. Remove overlying material as common excavation and expose rock surface for examination by Civil Engineer of Record.

2. Demonstrate that removal of remaining material classifies as rock excavation unless waived by Civil Engineer of Record.
3. Document rock elevations, quantities, methods, photographs, and survey data for the Design-Build Entity's quality records and for any contractual consideration expressly permitted by the final Design-Build Agreement.

C. Blasting is prohibited unless the Design-Build Entity demonstrates that nonexplosive methods are impracticable, obtains all permits and written ASEM approval, and submits a signed and sealed blasting, vibration-monitoring, protection, and emergency plan. Where approved, establish the top-of-rock line and method by a controlled test program acceptable to the geotechnical and Civil/Structural Engineers of Record.
   1. Pre-drill, blast, and excavate initial 100-foot long test section.

D. Excavate minimum of two 20-foot long trenches to apparent rock line immediately adjacent to predrilled section for comparison.

E. Where rock limits are uncertain, perform additional correlation trenches as directed by the geotechnical engineer. Stop pre-drilling or blasting when accurate limits cannot be established or monitoring indicates unacceptable risk. Contractual treatment of differing conditions is governed solely by the Design-Build Agreement.

3.46 TRENCH WIDTH

A. Minimum Trench Width: As established in the final Design-Build construction documents and required for pipe installation, compaction, worker safety, and excavation support. The Design-Build Entity shall determine and include required widths during final design and proposal development.

B. Maximum Trench Width: Unlimited, unless otherwise shown or specified, or unless excess width will cause damage to existing facilities, adjacent property, or completed Work.

3.47 PIPE BEDDING GROOVES FOR NONPERFORATED DRAIN LINES

A. Semicircular, trapezoidal, or 90-degree-V.

B. Excavated or plowed into trench bottom. Forming groove by compaction will not be acceptable.

3.48 EMBANKMENT AND CUT SLOPES

A. Shape, trim, and finish cut slopes to conform with lines, grades, and cross-sections shown, with proper allowance for topsoil or slope protection, where shown.

B. Remove stones and rock that exceed 3-inch diameter and that are loose and may roll down slope. Remove exposed roots from cut slopes.

C. Round tops of cut slopes in soil to not less than a 6-foot radius, provided such rounding does not extend offsite or outside easements and right-of-ways, or adversely impacts existing facilities, adjacent property, or completed Work.

3.49 STOCKPILING EXCAVATED MATERIAL

A. Stockpile excavated material that is suitable for use as fill or backfill until material is needed.

B. Post signs indicating proposed use of material stockpiled. Post signs that are readable from all directions of approach to each stockpile. Signs should be clearly worded and readable by equipment operators from their normal seated position.

C. Confine stockpiles to approved work areas and lawful easements or rights-of-way. Do not obstruct emergency access, ambulance routes, campus roads, sidewalks, drainage, fire department access, utilities, or access to adjacent institutions.

D. Do not stockpile excavated material adjacent to trenches and other excavations unless excavation side slopes and excavation support systems are designed, constructed, and maintained for stockpile loads.

E. Do not stockpile excavated materials near or over existing facilities, adjacent property, or completed Work, if weight of stockpiled material could induce excessive settlement.

3.50 DISPOSAL OF SPOIL

A. Dispose of excavated materials, which are unsuitable or not needed for fill or backfill, in designated spoil disposal areas.

B. Dispose of debris resulting from removal of organic matter, trash, refuse, and junk as specified in Section 31 21 00, SITE PREPARATION, for clearing and grubbing debris.

END OF SECTION

SECTION 31 22 10 - BORROW PITS

PART 1 GENERAL

3.51 SUBMITTALS

A. Source Plan: Identify proposed permitted offsite borrow sources, material classifications, testing, hauling routes, environmental approvals, and source-reclamation obligations. Onsite borrow pits are prohibited unless expressly authorized in writing by ASEM/Owner and included in the final permitted Design-Build documents.

3.52 WEATHER LIMITATIONS

A. Except as approved by Civil Engineer of Record, do not operate borrow pits when borrow is too wet to achieve required compaction.

3.53 SEQUENCING AND SCHEDULING

A. Demolition: Complete applicable Work specified in Section 31 20 50, DEMOLITION, prior to borrow pit development.

B. Clearing, Grubbing, and Stripping: Complete applicable Work specified in Section 31 21 00, SITE PREPARATION, prior to borrow pit development.

C. Install and operate dewatering systems.

PART 3 EXECUTION

3.54 BORROW PIT OPERATION

A. The Civil Engineer of Record and geotechnical engineer shall review and accept each borrow source and material before use. Obtain required agency approvals and submit changes in source, operation, or material characteristics before implementation.

B. Always keep borrow pits neat and orderly, and work them in systematic manner. Continuously keep borrow pits graded to drain, and take necessary precautions to control erosion and prevent offsite sediment releases. Dewater as necessary to develop, operate, and reclaim each borrow pit.

C. Do not excavate more borrow material than required for Work. Leave surplus material in place.

D. Limit excavations at borrow pits to depth, which will permit completed area to drain to surrounding area after completion of Work.

3.55 OBSTRUCTIONS

A. Consult the Civil Engineer of Record prior to removing or protecting any obstructions.

3.56 RECLAMATION

A. Grade borrow pits and replace topsoil to drain without ponding surface water and to blend graded surfaces neatly with surrounding terrain at completion of borrow operations.
B. Final Slopes:
    1. Maximum: Two horizontal to one vertical.
    2. Minimum: 2 percent.
C. Do not use borrow pits for disposal, unless otherwise specified or shown.
D. Consult project arborist to prepare topsoil and reestablish vegetation.

END OF SECTION

SECTION 31 22 15 - SUBGRADE PREPARATION

PART 1 GENERAL

3.57 REFERENCES

A. The following is a list of standards which may be referenced in this section:
   1. American Society for Testing and Materials (ASTM):
      a. D698, Standard Test Methods for Moisture-Density Relations of Soils and Soil Aggregate Mixtures Using 5.5-pound (2.49 kg) Rammer and 12-inch (305 mm) Drop.
      b. D1557, Standard Test Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures Using 10-pound (4.54 kg) Rammer and 18-inch (457 mm) Drop.

3.58 DEFINITIONS

A. Optimum Moisture Content: As defined in Section 31 22 20, FILL AND BACKFILL.
B. Prepared Ground Surface: Ground surface after completion of clearing and grubbing, scalping of sod, stripping of topsoil, excavation to grade, and scarification and compaction of sub-grade.
C. Relative Compaction: As defined in Section 31 22 20, FILL AND BACKFILL.
D. Relative Density: As defined in Section 31 22 20, FILL AND BACKFILL.
E. Sub-grade: Layer of existing soil after completion of clearing, grubbing, scalping of topsoil prior to placement of fill, roadway structure or base for floor slab.
F. Proof-Rolling: Testing of sub-grade by compactive effort to identify areas that will not support the future loading without excessive settlement.

3.59 SEQUENCING AND SCHEDULING

A. Complete applicable Work specified in Sections 31 21 00, SITE PREPARATION; and 31 22 05, EXCAVATION, prior to sub-grade preparation.

3.60 QUALITY ASSURANCE

A. Notify Civil Engineer of Record when sub-grade is ready for compaction or proof-rolling or whenever compaction or proof-rolling is resumed after a period of extended inactivity.

PART 2 EXECUTION

3.61 GENERAL

A. Keep sub-grade free of water, debris, and foreign matter during compaction or proof-rolling.

B. Bring sub-grade to proper grade and cross-section and uniformly compact surface.
C. Do not use sections of prepared ground surface as haul roads. Protect prepared sub-grade from traffic.
D. Maintain prepared ground surface in finished condition until next course is placed.

3.62 COMPACTION

A. Under Earthfill: Two passes with three-wheeled power roller weighing approximately 10 tons.
B. Under Pavement Structure Compact the upper 6 inches to minimum of 95 percent relative as determined in accordance with ASTM D1557

3.63 MOISTURE CONDITIONING

A. Dry Sub-grade: Add water, then mix to make moisture content uniform throughout.
B. Wet Sub-grade: Aerate material by blading, discing, harrowing, or other methods, to hasten drying process.

3.64 TESTING

A. Proof-roll sub-grade with equipment specified in Article COMPACTION to detect soft or loose sub-grade or unsuitable material, as determined by Civil Engineer of Record.

3.65 CORRECTION

A. Soft or Loose Sub-grade:
    1. Adjust moisture content and re-compact, or
    2. Over excavate as specified in Section 31 22 05, EXCAVATION, and replace with suitable material from the excavation, as specified in Section 31 22 20, FILL AND BACKFILL.
B. Unsuitable Material: Over excavate as specified in Section 31 22 05, EXCAVATION, and replace with suitable material from the excavation, as specified in Section 31 22 20, FILL AND BACKFILL.

END OF SECTION

SECTION 31 22 20 - FILL AND BACKFILL

PART 1 GENERAL

3.66 REFERENCES

A. The following is a list of standards which may be referenced in this section:
B. American Society for Testing and Materials (ASTM):
C. C117, Standard Test Method for Materials Finer Than 75-□m (No. 200) Sieve in Mineral Aggregates by Washing.
D. C136, Standard Method for Sieve Analysis of Fine and Coarse Aggregates.
E. D75, Standard Practice for Sampling Aggregates.
F. D1556, Standard Test Method for Density of Soil in Place by the Sand-Cone Method.
G. D1557, Standard Test Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures Using 10-pound (4.54 kg) Rammer and 18-inch (457 mm) Drop.
H. D2922, Standard Test Methods for Density of Soil and Soil-Aggregate in Place by Nuclear Methods.
I. D4253, Standard Test Methods for Maximum Index Density of Soils Using a Vibratory Table.
J. D4254, Standard Test Methods for Minimum Index Density of Soils and Calculation of Relative Density.

3.67 DEFINITIONS

A. Relative Compaction:
B. Ratio, in percent, of as-compacted field dry density to laboratory maximum dry density as determined in accordance with D1557.
C. Apply corrections for oversize material to either as-compacted field dry density or maximum dry density, as determined by Civil Engineer of Record.
D. Optimum Moisture Content:
E. Determined in accordance with ASTM Standard specified to determine maximum dry density for relative compaction.
F. Determine field moisture content on basis of fraction passing 3/4-inch sieve.
G. Relative Density: Calculated in accordance with ASTM D4254 based on maximum index density determined in accordance with ASTM D4253 and minimum index density determined in accordance with ASTM D4254.
H. Prepared Ground Surface: Ground surface after completion of required demolition, clearing and grubbing, scalping of sod, stripping of topsoil, excavation to grade, and sub-grade preparation.
I. Completed Course: A course or layer that is ready for next layer or next phase of Work.

J. Lift: Loose layer of material.
K. Well-Graded:
L. A mixture of particle sizes with no specific concentration or lack thereof of one or more sizes.
M. Does not define numerical value that must be placed on coefficient of uniformity, coefficient of curvature, or other specific grain size distribution parameters.
N. Used to define material type that, when compacted, produces a strong and relatively incompressible soil mass free from detrimental voids.
O. Influence Area: Area within planes sloped downward and outward at 60-degree angle from horizontal measured from:
P. 1-foot outside outermost edge at base of foundations or slabs.
Q. 1-foot outside outermost edge at surface of roadways or shoulder.
R. 0.5-foot outside exterior at spring line of pipes or culverts.
S. Borrow Material: Material from required excavations or from designated borrow areas on or near site.
T. Selected Backfill Material: Materials available onsite that Civil Engineer of Record determines to be suitable for specific use.
U. Imported Material: Materials obtained from sources offsite, suitable for specified use.
V. Structural Fill: Fill materials as required under structures, pavements, and other facilities.
W. Embankment Material: Fill materials required to raise existing grade in areas other than under structures.

3.68 SUBMITTALS

A. Quality Control Submittals:
B. Catalog and manufacturer's data sheets for compaction equipment.
C. Certified test results from independent testing agency.

3.69 QUALITY ASSURANCE

A. Notify Civil Engineer of Record when:
B. Soft or loose sub-grade materials are encountered wherever embankment or site fill is to be placed.
C. Fill material appears to be deviating from Specifications.

3.70 SEQUENCING AND SCHEDULING

A. Complete applicable Work specified in Sections 31 21 00, SITE PREPARATION; 31 22 05, EXCAVATION; and 31 22 15, SUBGRADE PREPARATION, prior to placing fill or backfill.
B. Backfill against concrete structures only after concrete has attained the applicable CAST-IN-PLACE CONCRETE requirements. Obtain Civil Engineer of Record’s acceptance of concrete work and attained strength prior to placing backfill.
C. Do not place granular base, sub-base, or surfacing until after sub-grade has been prepared as specified in Section 31 22 15, SUBGRADE PREPARATION.

PART 2 PRODUCTS

3.71 SOURCE QUALITY CONTROL

A. Gradation Tests:
B. As necessary to locate acceptable sources of imported material.
C. During production of imported material, test as follows:
D. Granular Fill:
E. Sand:
F. Granular Drain Material:
G. Base Course Rock:
H. Samples: Collected in accordance with ASTM D75:
I. During production of imported material, provide Samples as follows:
J. Granular Fill:
K. Sand:
L. Granular Drain Material:
M. Base Course Rock:
N. Clearly mark to show source of material and intended use.

3.72 EARTHFILL

A. Excavated material from required excavations and designated borrow sites, free from rocks larger than 3 inches, from roots and other organic matter, ashes, cinders, trash, debris, and other deleterious materials.
B. Provide imported material of equivalent quality, if required to accomplish Work

3.73 GRANULAR FILL

A. 1-inch minus crushed gravel or crushed rock.
B. Free from dirt, clay balls, and organic material.
C. Well-Graded from coarse to fine and containing sufficient fines to bind material when compacted, but with maximum 8 percent by weight passing No. 200 sieve.

3.74 SAND

A. Free from clay, organic matter, or other deleterious material.
B. Gradation as determined in accordance with ASTM C117 and C136:

Sieve Size	**Percent Passing by Weight**
1/4 inch	100
No. 4	95—100
No. 200	0—8

3.75 GRANULAR DRAIN MATERIAL

A. As specified in Section 31 22 25, TRENCH BACKFILL.

3.76 WATER FOR MOISTURE CONDITIONING

A. Free of hazardous or toxic contaminates, or contaminants deleterious to proper compaction.

3.77 BASE COURSE ROCK

A. As specified in Section 31 22 36, BASE COURSES.

PART 3 EXECUTION

3.78 GENERAL

A. Keep placement surfaces free of water, debris, and foreign material during placement and compaction of fill and backfill materials.
B. Place and spread fill and backfill materials in horizontal lifts of uniform thickness, in a manner that avoids segregation, and compact each lift to specified densities prior to placing succeeding lifts. Slope lifts only where necessary to conform to final grades or as necessary to keep placement surfaces drained of water.
C. During filling and backfilling, keep level of fill and backfill around each structure.
D. If pipe,or conduit, is to be laid within fill or backfill:
E. Fill or backfill to an elevation 2 feet above top of item to be laid.
F. Excavate trench for installation of item.
G. Install bedding, if applicable, as specified in Section 31 22 25, TRENCH BACKFILL.
H. Install item.
I. Backfill envelope zone and remaining trench, as specified in Section 31 22 25, TRENCH BACKFILL, before resuming filling or backfilling specified in this section.
J. Tolerances:
K. Final Lines and Grades: Within a tolerance of 0.1-foot unless dimensions or grades are shown or specified otherwise.
L. Grade to establish and maintain slopes and drainage as shown. Reverse slopes are not permitted.
M. Settlement: Correct and repair any subsequent damage to structures, pavements, curbs, slabs, piping, and other facilities, caused by settlement of fill or backfill material.

3.79 BACKFILL UNDER AND AROUND STRUCTURES

A. Consult with the Geotechnical Civil Engineer of Record for other compaction requirements specify herein with, as determined in the subsoil investigation study
B. Under Facilities: Within influence area beneath structures, slabs, pavements, curbs, piping, conduits, and other facilities, backfill with granular fill, unless otherwise shown. Place granular fill in lifts of 6-inch maximum thickness and compact each lift to minimum of 95 percent relative compaction as determined in accordance with ASTM D1557
C. Subsurface Drainage: Backfill with granular drain material, where shown. Place granular drain material in lifts of 6-inch maximum thickness and compact each lift to minimum of 90 percent relative density.

D. Other Areas: Backfill with earth fill to lines and grades shown, with proper allowance for topsoil thickness where shown. Place in lifts of 6-inch maximum thickness and compact each lift to minimum percent relative compaction as determined in accordance with ASTM D1557
E. Outside Influence Areas Beneath Structures, Pavements, Curbs, Slabs, Piping, and Other Facilities: Unless otherwise shown, place earthfill as follows:
F. Allow for 6-inch thickness of topsoil where required.
G. Maximum 8-inch thick lifts.
H. Place and compact fill across full width of embankment.
I. Compact to minimum 95 percent relative compaction as determined in accordance with ASTM D1557. Method based on average of most recent four tests on like material. If any two of the four most recent tests falls below 95 percent or any one of the four preceding tests falls below 93 percent, additional compactive effort will be required.
J. Dress completed embankment with allowance for topsoil, crest surfacing, and slope protection, where applicable.

3.80 SITE TESTING

A. Gradation:
B. One sample from each 1,500 tons of finished product or more often as determined by Civil Engineer of Record, if variation in gradation is occurring, or if material appears to depart from Specifications.
C. If test results indicate material does not meet Specification requirements, terminate material placement until corrective measures are taken.
D. Remove material placed in Work that does not meet Specification requirements.
E. Consult with the geotechnical Civil Engineer of Record regarding In-Place Density Tests: In accordance with ASTM D2922. During placement of materials, test as follows:
F. Granular Fill:
G. Sand:
H. Granular Drain Material:
I. Base Course Rock:

3.81 GRANULAR BASE, SUBBASE, AND SURFACING

A. Place and Compact as specified in Section 31 22 36, BASE COURSES.

3.82 PLACING OVEREXCAVATED MATERIAL

A. Replace excavation carried below grade lines shown or established by Civil Engineer of Record as follows:
B. Beneath Fill or Backfill: Same material as specified for overlying fill or backfill.
C. Beneath Slabs-On-Grade: Granular fill.
D. Trenches:

E. Unauthorized Over-excavation: Either trench stabilization material or granular pipe base material, as specified in Section 31 22 25, TRENCH BACKFILL.
F. Authorized Over-excavation: Trench stabilization material, as specified in Section 31 22 25, TRENCH BACKFILL.
G. Permanent Cut Slopes (Where Overlying Area is Not to Receive Fill or Backfill):
H. Flat to Moderate Steep Slopes (3:1, Horizontal Run: Vertical Rise or Flatter): Earthfill.
I. Steep Slopes (Steeper than 3:1):
J. Correct over-excavation by transitioning between overcut areas and designed slope adjoining areas, provided such cutting does not extend offsite or outside easements and right-of-ways, or adversely impacts existing facilities, adjacent property, or completed Work.
K. Backfilling over-excavated areas is prohibited unless, in Civil Engineer of Record's opinion, backfill will remain stable, and over-excavated material is replaced as compacted earth fill.

3.83 SUBSTATION SITE SURFACING

A. Finish Grade:
B. A 3-inch layer.
C. Installed over base course.
D. Finish grade layer shall not be compacted..

3.84 ACCESS ROAD SURFACING

A. Place and compact as specified in Section 31 22 36, BASE COURSES.

END OF SECTION

SECTION 31 22 25 - TRENCH BACKFILL

3.86 DEFINITIONS

A. Base Rock: Granular material upon which manhole bases and other structures are placed.
B. Bedding Material: Granular material upon which pipes, conduits, cables, or duct banks are placed.
C. Imported Material: Material obtained by the Design-Build Entity from source(s) offsite.
D. Lift: Loose (uncompacted) layer of material.
E. Pipe Zone: Backfill zone that includes full trench width and extends from prepared trench bottom to an upper limit above top outside surface of pipe, conduit, cable or duct bank.
F. Prepared Trench Bottom: Graded trench bottom after stabilization and installation of bedding material.
G. Relative Compaction: The ratio, in percent, of the as-compacted field dry density to the laboratory maximum dry density as determined by ASTM D1557 or ASTM D698. Corrections for oversize material may be applied to either the as-compacted field dry density or the maximum dry density, as determined by the Civil Engineer of Record.
H. Relative Density: As defined by ASTM D4253 and ASTM D4254.
I. Selected Backfill Material: Material available onsite that the Civil Engineer of Record determines to be suitable for a specific use.
J. Well-Graded: A mixture of particle sizes that has no specific concentration or lack thereof of one or more sizes producing a material type that, when compacted, produces a strong and relatively incompressible soil mass free from detrimental voids. Well-Graded does not define any numerical value that must be placed on the coefficient of uniformity, coefficient of curvature, or other specific grain size distribution parameters.

3.87 SUBMITTALS

A. Shop Drawings: Manufacturer's descriptive literature for marking tapes.
B. Samples:
    1. Trench stabilization material.
    2. Bedding and pipe zone material.
    3. Granular drain.
    4. Granular backfill.
    5. Earth backfill.
    6. Sand(s).
C. Quality Control Submittals: Catalog and manufacturer's data sheets for compaction equipment.
    1. Certified Gradation Analysis: Submit not less than 30 days prior to delivery for imported materials or anticipated use for excavated materials, except for trench stabilization

material that will be submitted prior to material delivery to site.

2. Controlled Low Strength Material: Certified mix design and test results. Include material types and weight per cubic yard for each component of mix.

PART 2 PRODUCTS

3.88 MARKING TAPE

A. Plastic:
   1. Inert polyethylene, impervious to known alkalis, acids, chemical reagents, and solvents likely to be encountered in soil.
   2. Thickness: Minimum 4 mils.
   3. Width: 12 inches.
   4. Identifying Lettering: Minimum 1-inch high, permanent black lettering imprinted continuously over entire length.
   5. Manufacturers and Products:
      a. Reef Industries; Terra Tape.
      b. Allen; Markline.

B. Metallic:
   1. Solid aluminum foil, visible on unprinted side, encased in a protective high visibility, inert polyethylene plastic jacket.
   2. Foil Thickness: Minimum 5.5 mils.
   3. Width: 12 inches.
   4. Identifying Lettering: Minimum 1-inch high, permanent black lettering imprinted continuously over entire length.
   5. Joining Clips: Tin or nickel-coated, furnished by tape manufacturer.
   6. Manufacturers and Products:
      a. Reef Industries; Terra ”D”.
      b. Allen; Detectatape.

C. Color: In accordance with APWA Uniform Color Code for Temporary Marking of Underground Facilities.

Color[a]	Facility
Red	Electric power lines, cables, conduit, and lightning cables
Orange	Communicating alarm or signal lines, cables, or conduit
Yellow	Gas, oil, steam, petroleum, or gaseous materials
Green	Sewers and drain lines
Blue	Water, irrigation, and slurry lines

[a]As specified in ANSI Z53.1, Safety Color Code.

3.89 TRENCH STABILIZATION MATERIAL

A. Base Rock:
   1. Clean, hard, durable 3-inch minus crushed rock or gravel, or pit run, free from clay balls, other organic materials, or debris.
   2. Uniformly graded from coarse to fine, less than 8 percent by weight passing the 1/4-inch sieve.

B. Granular Backfill:
   1. Clean gravel or crushed rock, reasonably well-graded from coarse to fine.
   2. Maximum Particle Size: 1 inch
   3. Dry sand, accepted by Civil Engineer of Record, may be provided for trenches above maximum groundwater level.

3.90 BEDDING MATERIAL AND PIPE ZONE MATERIAL

A. Friable, and no clay balls, roots, or other organic material.

B. Clean or gravelly sand with less than 5 percent passing No. 200 sieve, as determined in accordance with ASTM D1140, or gravel or crushed rock within maximum particle size and other requirements as follows unless otherwise specified.
   1. Duct Banks: 3/4-inch maximum particle size.
   2. PVC Irrigation System Piping, and Ductile Iron Pipe with Polyethylene Wrap: 3/8-inch maximum particle size.
   3. Pipe Under 18 Inches Diameter: 3/4-inch maximum particle size, except 1/4-inch for stainless steel pipe, copper pipe, tubing, and plastic pipe under 3 inches diameter.
   4. Pipe Greater than 18 Inches Diameter: 1-1/2-inch maximum particle size for ductile iron pipe, concrete pipe, welded steel pipe, and pretensioned or prestressed concrete cylinder pipe.
   5. Perforated Pipe: Granular drain material.
   6. Conduit and Direct-Buried Cable:

C. Sand, clean or clean to silty, less than 12 percent passing the No. 200 sieve.

D. Individual Particles: Free of sharp edges.
   1. Maximum Size Particle: Pass a No. 4 sieve.

E. If more than 5 percent passes No. 200 sieve, the fraction that passes No. 40 sieve shall be nonplastic as determined in accordance with ASTM D4318.

3.91 EARTH BACKFILL

A. Soil, loam, or other excavated material suitable for use as backfill.

B. Free from roots or organic matter, refuse, boulders and material larger than 1/2 cubic foot, or other deleterious materials.

3.92 GRAVEL SURFACING ROCK

A. As specified in Section 31 22 36, BASE COURSE.

3.93 TOPSOIL

A. As specified in the applicable SOIL PREPARATION requirements.

3.94 SOURCE QUALITY CONTROL

A. Perform gradation analysis in accordance with ASTM C136 for:
   1. Earth backfill, including specified class(es).
   2. Trench stabilization material.
   3. Bedding and pipe zone material.

B. Certify Laboratory Performance of Mix Designs:
   1. Controlled low strength fill.
   2. Concrete.

PART 3 EXECUTION

3.95 TRENCH PREPARATION

A. Water Control:
   1. Promptly remove and dispose of water entering trench as necessary to grade trench bottom and to compact backfill and install manholes, pipe, conduit, direct-buried cable, or duct bank. Do not place concrete, lay pipe, conduit, direct-buried cable, or duct bank in water.
   2. Remove water in a manner that minimizes soil erosion from trench sides and bottom.
   3. Provide continuous water control until trench backfill is complete.

B. Remove foreign material and backfill contaminated with foreign material that falls into trench.

3.96 TRENCH BOTTOM

A. Firm Subgrade: Grade with hand tools, remove loose and disturbed material, and trim off high areas and ridges left by excavating bucket teeth. Allow space for bedding material if shown or specified.

B. Soft Subgrade: Where unsuitable subgrade is encountered, notify the Civil Engineer of Record and geotechnical engineer. They shall determine the required limits of overexcavation, stabilization, replacement material, and compaction before pipe installation proceeds.

3.97 TRENCH STABILIZATION MATERIAL INSTALLATION

A. Rebuild trench bottom with trench stabilization material.

B. Place material over full width of trench in 6-inch lifts to required grade, providing allowance for bedding thickness.

C. Compact each lift so as to provide a firm, unyielding support for the bedding material prior to placing succeeding lifts.

3.98 BEDDING

A. Furnish imported bedding material where, in the opinion of the Civil Engineer of Record, excavated material is unsuitable for bedding or insufficient in quantity.

B. Place over the full width of the prepared trench bottom in two equal lifts when the required depth exceeds 8 inches.
C. Hand grade and compact each lift to provide a firm, unyielding surface.
D. Minimum Thickness: As follows, except increase depths listed by 2 inches in areas of rock excavation:
    1. Pipe, 15-inch and Smaller: 4 inches.
    2. Pipe, 18-inch to 36 inch: 6 inches.
    3. Pipe, 42-inch and Larger: 8 inches.
E. Check grade and correct irregularities in bedding material. Loosen top 1 to 2 inches of compacted bedding material with a rake or by other means to provide a cushion before laying each section of pipe,
F. Install to form continuous and uniform support except at bell holes, if applicable, or minor disturbances resulting from removal of lifting tackle.
G. Bell or Coupling Holes: Excavate in bedding at each joint to permit proper assembly and inspection of joint and to provide uniform bearing along barrel of pipe

3.99 BACKFILL PIPE ZONE

A. Upper limit of pipe zone shall not be less than following:
    1. Pipe:12 inches, unless shown otherwise.
B. Restrain pipe, as necessary to prevent their movement during backfill operations.
C. Place material simultaneously in lifts on both sides of pipe and, if applicable, between pipes, installed in same trench.
    1. Pipes 10 Inches and Smaller Diameter: First lift less than or equal to 1/2 pipe-diameter.
    2. Pipes Over 10 Inches Diameter: Maximum 6-inch lifts.
D. Thoroughly tamp each lift, including area under haunches, with handheld tamping bars supplemented by “walking in” and slicing material under haunches with a shovel to ensure that voids are completely filled before placing each succeeding lift.
E. After the full depth of the pipe zone material has been placed as specified, compact the material by a minimum of three passes with a vibratory plate compactor only over the area between the sides of the pipe and the trench walls.
F. Do not use power-driven impact compactors to compact pipe zone material.

3.100 MARKING TAPE INSTALLATION

A. Continuously install marking tape along centerline of all buried piping, on top of last lift of pipe zone material. Coordinate with piping installation drawings.
    1. Metallic Marking Tape: Install with nonmetallic piping and waterlines.
    2. Plastic Marking Tape: Install with metallic piping.

3.101 BACKFILL ABOVE PIPE ZONE

A. General:
   1. Process excavated material to meet specified gradation requirements.
   2. Adjust moisture content as necessary to obtain specified compaction.
B. Do not allow backfill to free fall into the trench or allow heavy, sharp pieces of material to be placed as backfill until after at least 2 feet of backfill has been provided over the top of pipe.
C. Do not use power driven impact type compactors for compaction until at least 4 feet of backfill is placed over top of pipe.
D. Backfill to grade with proper allowances for topsoil, crushed rock surfacing, and pavement thicknesses, wherever applicable.
E. Backfill around structures with same class backfill as specified for adjacent trench unless otherwise shown or specified.
F. Class A Backfill:
   1. Place in lifts of suitable thickness.
   2. Mechanically compact each lift prior to placing succeeding lifts.
G. Determine proper lift thickness, type of compaction equipment, method to use, and amount of compaction necessary to prevent settlement.
H. Class C Backfill:
I. Backfill with earth backfill.
J. Leave trench with backfill material neatly mounded across the entire trench width, but not more than 6 inches above the adjacent ground surface.
K. In lawn, garden, or similar type areas, maintain trench level with the existing adjacent grade.
L. At Other Locations:
M. Estimate and provide amount of backfill material required so that after normal settlement, the settled surface will match the adjacent ground surface.
N. Neatly windrow material over trench, and remove excess.
O. Correct excess or deficiency of backfill material apparent after settlement and within correction period by regrading, and disposing of excess material or adding additional material where deficient.
P. Class E Backfill:
Q. Backfill trench above pipe zone with granular backfill to a depth of 9 inches below original ground surface.
R. Fill remainder of trench with gravel surfacing rock over entire trench width.
S. Compact gravel surfacing rock by at least five passes with the wheels of a loaded 10-yard dump truck or other approved

equipment over entire trench surface as necessary to prevent settlement.

T. Finish completed backfilled surface at same level as original surface.
U. Concrete Backfill:
V. Place above bedding.
W. Minimum Concrete Thickness: 6 inches on top and sides of pipe.
X. Do not allow dirt or foreign material to become mixed with concrete during placement.
Y. Allow sufficient time for concrete to reach initial set before additional backfill material is placed in trench.
    1. Prevent flotation of pipe.
Z. Begin and end concrete backfill within 4 inches of a pipe joint on each end.
AA. Do not encase pipe joints except within the limits of the concrete backfill.
BB. Controlled Low Strength Fill:
    1. Discharge from truck mounted drum type mixer into trench.
CC. Place in lifts as necessary to prevent uplift (flotation) of new and existing facilities.

3.102 REPLACEMENT OF TOPSOIL

A. Replace topsoil in top 12 inches of backfilled trench.
B. Maintain the finished grade of topsoil even with adjacent area and grade as necessary to restore drainage.

3.103 MAINTENANCE OF TRENCH BACKFILL

A. After each section of trench is backfilled, maintain the surface of the backfilled trench even with the adjacent ground surface until final surface restoration is completed.
B. Gravel Surfacing Rock: Add gravel surfacing rock where applicable and as necessary to keep the surface of the backfilled trench even with the adjacent ground surface, and grade and compact as necessary to keep the surface of backfilled trenches smooth, free from ruts and potholes, and suitable for normal traffic flow.
C. Topsoil: Add topsoil where applicable and as necessary to maintain the surface of the backfilled trench level with the adjacent ground surface.
D. Other Areas: Add excavated material where applicable and keep the surface of the backfilled trench level with the adjacent ground surface.

3.104 SETTLEMENT OF BACKFILL

A. Settlement of trench backfill, or of fill or facilities constructed over trench backfill will be considered a result of defective compaction of trench backfill.

END OF SECTION

SECTION 31 22 36 - BASE COURSE

PART 1 GENERAL

3.105 REFERENCES

A. The following is a list of standards which may be referenced in this section:
B. American Association of State Highway and Transportation Officials (AASHTO):
   1. T 89, Standard Method for Determining the Liquid Limit of Soils.
C. T 90, Determining the Plastic Limit and Plasticity Index of Soils.
D. T 96, Standard Method for Resistance to Abrasion, of Small Size Course Aggregate by Use of the Los Angeles Machine.
E. T 99, Standard Methods of Test for the Moisture-Density Relations of Soils Using a 5.5 pound (2.5 kg) Rammer and a 12-inch (305 mm) Drop.
F. T 180, Standard Methods of Test for the Moisture-Density Relations of Soils Using a 10 pound (4.54 kg) Rammer and an 18-inch (457 mm) Drop.
G. T 191, Standard Method of Test for Density of Soil In-Place by the Sand-Cone Method.

3.106 DEFINITIONS

A. Completed Course: Compacted, unyielding, free from irregularities, with smooth, tight, even surface, true to grade, line, and cross-section.
B. Completed Lift: Compacted with uniform surface reasonably true to cross-section.

3.107 SUBMITTALS

A. Samples: Submit for specified materials 20 days prior to delivery to site.
B. Quality Control Submittals:
C. Certified Test Results on Source Materials: Submit copies from commercial testing laboratory 20 days prior to delivery of materials to project.
   1. Certified Results of In-Place Density Tests from independent testing agency.

PART 2 PRODUCTS

3.108 BASE COURSE ROCK

A. Maximum Size: 1-1/2 inches, containing enough fines to bind material when compacted.
B. Clean, hard durable, pit run gravel or crushed stone graded from course to fine.
C. Physical Qualities:
   1. Abrasion, AASHTO T 96: 35 percent maximum wear.
   2. Fractured Face: 75 percent minimum particles.

3. Liquid Limit, AASHTO T 89: Maximum 30 percent.
4. Plasticity Index, AASHTO T 90: Maximum 6 percent.

3.109 LEVELING COURSE, TOP COURSE AND GRAVEL SURFACING ROCK

A. Maximum Size: 3/4-inch.
B. Clean, tough, uniform quality, durable fragments of crushed rock, free from flat, elongated, soft or disintegrated pieces, or other objectionable matter occurring either free or as coating on stone.
C. Gradation: As shown above.
D. Physical Qualities: Same as for base course.

3.110 SOURCE QUALITY CONTROL

A. Design-Build Entity: Perform tests necessary to locate acceptable source of materials meeting specified requirements.
B. Final approval of aggregate material will be based on material's test results on installed materials.
C. Should separation of coarse from fine materials occur during processing or stockpiling, immediately change methods of handling materials to correct uniformity in grading.

PART 3 EXECUTION

3.111 GENERAL

A. As specified in Section 31 22 20, FILL AND BACKFILL.
B. Obtain Civil Engineer of Record's acceptance of sub-grade before placement of base course rock.

3.112 EQUIPMENT

A. Compaction Equipment: Adequate in design and number to provide compaction and obtain the specified density for each layer.

3.113 HAULING AND SPREADING

A. Hauling and Spreading: As specify by the Civil Engineer of Record
B. Hauling Materials:
    1. Do not haul over surfacing in process of construction.
    2. Loads: Of uniform capacity.
    3. Measure capacity of truck to determine vehicle load and quantity.
    4. Maintain consistent gradation of material delivered; loads of widely varying gradations will be cause for rejection.
C. Spreading Materials:
    1. Distribute material to provide required density, depth, grade and dimensions with allowance for subsequent lifts.
    2. Produce even distribution of material upon roadway without segregation.
    3. Should segregation of coarse from fine materials occur during placing, immediately change methods of handling materials to correct uniformity in grading.

3.114 CONSTRUCTION OF COURSES

A. General: Complete each lift in advance of laying succeeding lift to provide required results and adequate inspection.
B. Base Course:
    1. Maximum Completed Lift Thickness: 6 inches
    2. Completed Course Total Thickness: As shown.
    3. Spread lift on preceding course to required cross-section.
    4. Lightly blade and roll surface until thoroughly compacted.
    5. Add keystone to achieve compaction and as required when aggregate does not compact readily due to lack of fines or natural cementing properties, as follows:
        a. Use leveling course or surfacing material as keystone.
        b. Spread evenly on top of crushed base course, using spreader boxes or chip spreaders.
C. Roll surface until keystone is worked into interstices of crushed base course without excessive displacement.
D. Continue operation until course has become thoroughly keyed, compacted, and will not creep or move under roller.
    1. Blade or broom surface to maintain true line, grade, and cross-section.
E. Top Course:
    1. Maximum Completed Lift Thickness 2 inches
    2. Completed Course Total Thickness: As shown.
F. Spread on roadway or preceding course to depth, grade, and cross-section shown.
G. Lightly blade surface and roll until thoroughly compacted to line and grade shown.
H. Provide water as necessary to achieve compaction and to prevent loss of fines during processing.
I. Gravel Surfacing:
    1. Maximum Completed Lift Thickness: 6 inches.
    2. Completed Course Total Thickness: As shown.]
    3. Spread on preceding course in accordance with cross-section shown.
    4. Blade lightly and roll surface until material is thoroughly compacted.

3.115 ROLLING AND COMPACTION

A. Commence rolling at outer edges of surfacing and continue toward center; do not roll center of road first.
B. Apply water as needed to obtain densities.
C. Place and compact each lift to required density before succeeding lift is placed.
D. Bind up preceding course before placing leveling course. Remove floating or loose stone from surface.

E. Blade or otherwise work surfacing as necessary to maintain grade and cross-section at all times, and to keep surface smooth and thoroughly compacted.
F. Surface Defects: Remedy surface defects by loosening and re-rolling. Re-roll entire area, including surrounding surface, until thoroughly compacted.
    1. Finished Surface: True to grade and crown before proceeding with surfacing.

3.116 SURFACE TOLERANCES
A. Finished Surface of Base Course and Leveling Course: Within plus or minus 0.04-foot of grade shown at any individual point.
B. Compacted Surface of Leveling Course: Within 0.04-foot from lower edge of 10-foot straightedge placed on finished surface, parallel to centerline.

3.117 DRIVEWAY RESURFACING
A. Replace gravel surfacing on driveways, which were gravel surfaced prior to construction.
B. Provide compacted gravel surfacing to depth equal to original, but not less than 6 inches.
C. Leave each driveway in as good or better condition as it was before start of construction.

3.118 FIELD QUALITY CONTROL
A. In-Place Density Tests:
    1. Construct base course so areas shall be ready for testing.
    2. Allow reasonable length of time for testing laboratory to perform tests and obtain results during normal working hours.
    3. Show proof that areas meet specified requirements before requesting that Civil Engineer of Record identify density test locations

3.119 CLEANING
A. Remove excess material; clean stockpile areas of aggregate.

END OF SECTION

SECTION 31 22 40 - SOIL EROSION STABILIZATION

PART 1 GENERAL

3.120 REFERENCES

A. The following is a list of standards which may be referenced in this section:
   1. American Society for Testing and Materials (ASTM):
      a. D1682, Breaking Load and Elongation of Textile Fabrics.
      b. D3776, Mass Per Unit Area (Weight) of Woven Fabric.
      c. D3786, Hydraulic Bursting Strength of Knitted Goods and Nonwoven Fabrics-Diaphragm Bursting Strength Tester Method.
      d. D4355, Deterioration of Geotextiles from Exposure to Ultraviolet Light and Water (Xenon-Arc Type Apparatus).
      e. D4632, Grab Breaking Load and Elongation of Geotextiles.

3.121 DEFINITIONS

A. Maintenance Period: Begin maintenance immediately after each area is planted and continues for a period of 8 weeks after all planting under this section is completed.
B. Satisfactory Stand: Grass or section of grass that has:
   1. No bare spots larger than 3 square feet.
   2. Not more than 10 percent of total area with bare spots larger than 1 square foot.
   3. Not more than 15 percent of total area with bare spots larger than 6 square inches.

3.122 SUBMITTALS

A. Administrative Submittal: Sub-schedule of drainage, erosion, and sedimentation control.
B. Shop Drawings:
   1. Product Data: Commercial products.
C. Quality Control Submittals:
   1. Construction Period Drainage and Erosion/Sedimentation Control Plan and Procedures.
   2. Manufacturer's Installation Instructions: Commercial products.
   3. Seed certifications.
   4. Copies of delivery invoices or other proof of quantities of mulch and fertilizer.

3.123 DELIVERY, STORAGE, AND PROTECTION

A. Seed:
   1. Furnish in standard containers with seed name, lot number, net weight, percentages of purity, germination,

and hard seed and maximum weed seed content, clearly marked for each container of seed.

2. Keep dry during storage.

3.124 SEQUENCING AND SCHEDULING

A. The Design-Build Entity's Civil Engineer of Record shall prepare or approve the construction-period drainage and erosion/sediment-control plan. Obtain all required permits and ASEM acceptance before earth disturbance, and maintain controls continuously through stabilization and closeout.

B. Prepare topsoil as specified in the applicable SOIL PREPARATION requirements, before starting Work of this section.

C. Complete soil preparation, seeding, fertilizing, mulching, and matting within 10 days after final grades have been reached.

D. Notify Civil Engineer of Record at least 3 days in advance of:

1. Materials delivery.
2. Start of planting activity.

E. Seeding: Perform under favorable weather conditions during seasons that are normal for such Work as determined by accepted local practice.

3.125 MAINTENANCE

A. Operations:

1. Inspect, repair, and replace as necessary all erosion control measures during the time period from start of construction to completion of construction.

PART 2 PRODUCTS

3.126 FERTILIZER

A. Commercial, uniform in composition, free-flowing, suitable for application with equipment designed for that purpose.

3.127 SEED

A. Fresh, clean new-crop seed that complies with the tolerance for purity and germination established by Official Seed Analysts of North America.

3.128 MULCH

A. Wood Cellulose Fiber Mulch:

1. Specially processed wood fiber containing no growth or germination inhibiting factors.
2. Dyed a suitable color to facilitate inspection of material placement.
3. Manufactured such that after addition and agitation in slurry tanks with water, the material fibers will become uniformly suspended to form a homogenous slurry.
4. When hydraulically sprayed on ground, material will allow absorption and percolation of moisture.

B. Straw:
   1. Suitable for spreading with mulch blower equipment.
   2. Average Stalk Length: 6 inches.
   3. Seasoned before baling or loading.

3.129 EROSION CONTROL MATTING

A. Excelsior mat or straw blanket; staples as recommended by matting manufacturer.

3.130 REINFORCED PLASTIC COVERING

A. Co-extruded, copolymer laminate reinforced with a no woven grid of high strength nylon cord submersed in a permanently flexible adhesive media allowing for equal tear resistance in all directions.
B. Black in color and ultraviolet stabilized.
C. Physical Requirement (Minimum Average Roll Values):
   1. Tear Strength: 130 pounds.
   2. Elongation: 620 percent.
D. Manufacturers:
   1. Reef Industries, Inc., Houston, TX.
   2. Griffolyn Co., Houston, TX.

3.131 CLEARING LIMIT FENCE

A. Ultraviolet stabilized polyethylene or polypropylene safety fence, 3 feet in height, and yellow or orange in color.
B. Pervious Sheet: Polyester, polypropylene, or nylon filaments, woven into a uniform pattern, distinct and measurable openings.
   1. Filaments: Resistant to damage from exposure to ultraviolet rays and heat.
   2. Material Edges: Finish so that filaments retain their relative positions under stress.
C. In accordance with requirements of Table No. 1:

Table No. 1 - Filter Fence

Physical Property	Required Value	Test Method
Weight, pz/sq yd, min.	4	ASTM D3776
Equivalent Opening Size, max.	50-70	U.S. Standard Sieve
Grab Tensile Strength, lb, min.	160	ASTM D4632
Elongation, % max.	25	ASTM D1682
Mullen Burst Strength, psi, min.	350	ASTM D3786

Ultraviolet Radiation Resistance, % Strength Retention	70	ASTM D4355

D. Manufacturers:
   1. Polyfelt, Evergreen, AL.
   2. Dupont Co., Wilmington, DE.
   3. Mirafi, Inc., Charlotte, NC.

3.132 STRAW BALES

A. Machine baled clean salt hay or straw of oats, wheat, barley, or rye, free from seed of noxious weeds, using standard baling wire or string.

PART 3 EXECUTION

3.133 SOIL PREPARATION

A. Before start of hydro-seeding, and after surface has been shaped and graded, and lightly compacted to uniform grade, scarify soil surface to minimum depth of 1 inch.

3.134 SEEDING

A. Prepare 1-inch depth seed bed; obtain Civil Engineer of Record's acceptance prior to proceeding.
B. Apply by hydro-seeding method on moist soil, but only after free surface water has drained away. Prevent drift and displacement of mixture into other areas.

3.135 REINFORCED PLASTIC COVERING

A. Place on areas where hydro-seeding and erosion control matting have not controlled erosion.
B. Install in single thickness, strips parallel to direction of drainage.
C. Maintain tightly in place by using sand bags on ropes with a maximum 10-foot grid spacing in all directions.
D. Tape or weight down full length, overlap seams at least 12 inches.
E. Remove temporary covering when permanent stabilization is established and removal is authorized by the Civil Engineer of Record and ASEM/Owner. Restore disturbed areas and dispose of materials legally.

3.136 CLEARING LIMIT FENCE

A. Install in accordance with manufacturer's standard instructions and before beginning clearing and grubbing operations.

3.137 SOIL STOCKPILES

A. Protect from erosion with geotextile and support fence.

3.138 FIELD QUALITY CONTROL

A. At completion of the maintenance period, the Design-Build Entity's Civil Engineer of Record shall inspect and document whether the specified satisfactory stand and permanent

stabilization have been achieved and shall submit the determination to ASEM/Owner.

B. Where stabilization is deficient, the Design-Build Entity shall repair, reseed, and maintain affected areas until the Civil Engineer of Record verifies compliance and ASEM/Owner accepts the completed restoration.

END OF SECTION

SECTION 31 22 72 - GABION WALL CONSTRUCTION

PART 1 GENERAL

3.139 REFERENCES

A. The following is a list of standards which may be referenced in this section:
   1. American Association of State Highway and Transportation Officials:

B. ASTM D698-78, Moisture-Density Relations of Soils and Soil Aggregate Mixtures Using 5.5-pound (2.49 kg) Rammer and 12-inch (305 mm) Drop.

3.140 WORK INCLUDED

A. This section covers the work necessary for the gabion wall construction, complete.

PART 2 PRODUCTS

3.141 GABIONS

A. Heavy-duty wire mesh galvanized gabions as manufactured by Maccaferri Gabions, Inc., New York, NY, or equivalent. Sizes shall be as shown on the Drawings.

3.142 BINDING WIRE

A. U.S. 13-1/2-gauge galvanized wire or as recommended by the manufacturer.

3.143 GABION FILL MATERIAL

A. Clean, hard cobbles or crushed rock; 8-inch maximum particle size, 3-inch minimum particle size.

3.144 EARTH BACKFILL

A. Material from the excavations or designated borrow site, free from roots, debris, organic material, or other deleterious materials.

3.145 TOPSOIL

A. As specified on drawings

3.146 UNCLASSIFIED EXCAVATION

A. All excavation is unclassified. Complete all excavation, regardless of the type, nature, or condition of the materials encountered. The Design-Build Entity shall make

B. own estimate of the kind and extent of the various materials to be excavated in order to accomplish the work.

PART 3 EXECUTION

3.147 STRUCTURAL EXCAVATION

A. Perform all excavation, regardless of the type, nature, or condition of the material encountered. The method of excavation used is optional; however, no equipment shall be operated within 5 feet of existing structures or newly completed construction.

B. Excavation that cannot be accomplished without endangering existing or new structures shall be done with hand tools.

3.148 LIMITS OF EXCAVATION

A. Excavate to the depths and widths required to accomplish the construction. Cuts below grade shall be corrected by replacing with compacted earth backfill, compacted to a minimum of 90 percent of the maximum dry density as determined by ASTM D698. The Design-Build Entity shall bear all costs for correcting over-excavated areas.

3.149 GABION ASSEMBLY

A. Place the first layer of gabion to the line and grades shown on the Drawings. Gabion edges shall be continuously wired together, using binding wire specified hereinbefore. Adjoining gabions shall be wired together along their vertical edges. Empty gabions shall be stretched and held in place while filling as recommended by the manufacturer. Empty gabions stacked on filled gabions shall be wired to the filled gabions at the front and back.

3.150 GABION CONSTRUCTION

A. Place gabion fill in layers not thicker than 1 foot. Along all exposed gabion faces, place the outer layer of stone by hand in order to provide a neat, compact, square surface. In addition to the gabion fill, within 1 foot from the exposed face, the rock interstitial voids shall be filled with topsoil to permit establishing a vegetative cover. After each 1-foot lift is completed, one binding wire connecting tie shall be placed in each direction, across the fill surface, connecting opposite faces. The connecting wire shall be looped at least twice around two nonadjacent meshes of the gabion wall, then the free end wrapped back around the standing end of the wire to form a snug connection. At no time allow any gabion to be filled to a depth of more than 1 foot above the adjoining gabions. After the gabion is filled to the top and leveled off, fold the lid shut and wire it to the ends, sides, and diaphragms using binding wire.

3.151 SHORING, SHEETING, AND BRACING

A. Furnish and install all shoring, sheeting, and bracing required to support adjacent earth banks and structures, and for the protection and safety of all personnel working in the excavations. All shoring, sheeting, and bracing shall conform to the requirements of the federal, Puerto Rico, and local authorities having jurisdiction having jurisdiction over such matters.

B. Remove shoring, sheeting, and bracing in a manner that will protect or prevent caving of banks or damage to property as the excavations are backfilled.

3.152 EARTH BACKFILL

A. Remove all form materials and trash from the excavation prior to placing any backfill. Place earth backfill in all areas not designated on Drawings to be backfilled with other materials. Deposit material in horizontal layers and compact each lift to a minimum of 90 percent of the maximum dry density as determined by ASTM D698. Backfill to the specified grade.

3.153 TOLERANCE

A. The following tolerances shall be maintained for the gabion wall construction:
   1. Horizontal alignment plus or minus 4 inches, not to exceed 2 inches in any 5-foot length.
   2. Slope face tilt not to deviate by more than 1 inch per foot when measured at the top and bottom gabion edges.

END OF SECTION

SECTION 32 25 21 - CONCRETE CURBS & SIDEWALKS

PART 1 GENERAL

3.154 REFERENCES

A. The following is a list of standards which may be referenced in this section:
   1. American Society for Testing and Materials (ASTM):
      a. C94, Ready Mixed Concrete.
      b. C309, Liquid Membrane-Forming Compounds for Curing Concrete.
   B. D994, Preformed Expansion Joint Filler for Concrete (Bituminous Type).
   C. American Association of State Highway and Transportation Officials (AASHTO): T 99, The Moisture-Density Relations of Soils Using a
      1. **5.5 pound (2.5 kg) Rammer and a 12-inch (305 mm) Drop.**
      2. American Concrete Institute (ACI): ACI 304R, Guide for Measuring, Mixing, Transporting, and Placing Concrete.
      3. Standard Specification: State of Puerto Rico

3.155 SUBMITTALS

A. Shop Drawings:
   1. Form Material: Information on metal forms, if used, including type, condition, surface finish, and intended function.
   2. Complete data on concrete mix, including aggregate gradations and admixtures in accordance with requirements of ASTM C94.
B. Quality Control Submittals:
   1. Curing Compound: Manufacturer's Certificate of Compliance and application instructions.
   2. Ready-mix delivery ticket for each truck in accordance with ASTM C94.

3.156 QUALITY ASSURANCE

A. Regulatory Requirements: Conform to the Puerto Rico Standard Specifications for Highway Construction.

PART 2 PRODUCTS

3.157 MATERIALS

A. Conform to the requirements of the referenced Standard Specification.

3.158 EXPANSION JOINT FILLER

A. 1/2-inch thick, preformed asphalt-impregnated, expansion joint material meeting ASTM D994.

3.159 CONCRETE

A. Ready-mixed meeting ASTM C94, Option A, with compressive strength of 3,000 psi at 28 days.
B. Maximum Aggregate Size: 1-1/2-inch.
C. Slump: 2 to 4 inches.

3.160 CURING COMPOUND

A. Liquid membrane-forming, clear or translucent, suitable for spray application and meeting ASTM C309, Type 1.

PART 3 EXECUTION

3.161 INSTALLATION

A. Perform Work in accordance with the referenced Standard Specification.

3.162 FORMWORK

A. Lumber Materials:
   1. 2-inch dressed dimension lumber, or metal of equal strength, straight, free from defects that would impair appearance or structural quality of completed curb and sidewalk.
   2. 1-inch dressed lumber or plywood may be used where short-radius forms are required.
B. Metals: Steel in new undamaged condition.
C. Setting Forms:
   1. Construct forms to shape, lines, grades, and dimensions.
   2. Stake securely in place.
D. Bracing:
   1. Brace forms to prevent change of shape or movement resulting from placement.
   2. Construct short-radius curved forms to exact radius.
E. Tolerances:
   1. Do not vary tops of forms from gradeline more than 1/8-inch when checked with 10-foot straightedge.
   2. Do not vary alignment of straight sections more than 1/8-inch in 10 feet.

3.163 PLACING CONCRETE

A. Prior to placing concrete, remove water from excavation and debris and foreign material from forms.
B. Place concrete as soon as possible, and within 1-1/2 hours after adding cement to mix without segregation or loss of ingredients, and without splashing.
C. Place, process, finish, and cure concrete in accordance with applicable requirements of ACI 304, and this section. Wherever requirements differ, the more stringent shall govern.
D. To compact, vibrate until concrete becomes uniformly plastic.

3.164 CURB CONSTRUCTION

A. Construct ramps at pedestrian crossings.

B. Expansion Joints: Place at maximum 45-foot intervals and] at the beginning and end of curved portions of curb and at connections to existing curbs. Install expansion joint filler at each joint.
C. Curb Facing: Do not allow horizontal joints within 7 inches from top of curb.
D. Contraction Joints:
    1. Maximum 15-foot intervals in curb.
    2. Provide open joint type by inserting thin, oiled steel sheet vertically in fresh concrete to force coarse aggregate away from joint.
    3. Insert steel sheet to full depth of curb.
    4. Remove steel sheet with sawing motion after initial set has occurred in concrete and prior to removing front curb form.
    5. Finish top of curb with steel trowel and finish edges with steel edging tool.
E. Front Face:
    1. Remove front form and finish exposed surfaces when concrete has set sufficiently to support its own weight.
    2. Finish formed face by rubbing with burlap sack or similar device to produce uniformly textured surface, free of form marks, honeycomb, and other defects.
    3. Remove and replace defective concrete.
    4. Apply curing compound to exposed surfaces of curb upon completion of finishing.
    5. Continue curing for minimum of 5 days.
F. Backfill curb with earth upon completion of curing period, but not before 7 days has elapsed since placing concrete.
G. Backfill shall be free from rocks 2 inches and larger and other foreign material.
    1. Compact backfill firmly.

3.165 SIDEWALK CONSTRUCTION

A. Thickness:
    1. 4 inches in walk areas.
    2. 6 inches in driveway areas.
B. Connection to Existing Sidewalk:
    1. Remove old concrete back to an existing contraction joint.
    2. Clean the surface.
    3. Apply a neat cement paste immediately prior to placing new sidewalk.
C. Expansion Joints: Place in adjacent curb, where sidewalk ends at curb, and around posts, poles, or other objects penetrating sidewalk. Install expansion joint filler at each joint.
D. Contraction Joints:
    1. Provide transversely to walks at locations opposite contraction joints in curb.
    2. Dimensions: 3/16-inch by 1-inch weakened plane joints.

3. Construct straight and at right angles to surface of walk.

E. Finish:
   1. Broom surface with fine-hair broom at right angles to length of walk and tool at edges, joints, and markings.
   2. Mark walks transversely at 5-foot intervals with jointing tool; finish edges with rounded steel edging tool.
   3. Apply curing compound to exposed surfaces upon completion of finishing.
   4. Protect sidewalk from damage and allow to cure for at least 7 days.

END OF SECTION

SECTION 32 25 55 - ASPHALT CONCRETE PAVEMENT

PART 1 GENERAL

3.166 REFERENCES

A. The following is a list of standards which may be referenced in this section:

1. American Standard of Testing Materials (ASTM):
   a. D1559, Standard Test Method for Resistance to Plastic Flow of Bituminous Mixtures Using Marshall Apparatus.
   b. D2041, Standard Test Method for Theoretical Maximum Specific Gravity and Density of Bituminous Paving Mixtures.
   c. E699, Criteria for Evaluation of Agencies Involved in Testing, Quality Assurance, and Evaluating Building Components in Accordance with Test Methods Promulgated by ASTM Committee (1984).

3.167 DEFINITIONS

A. Combined Aggregate: All mineral constituents of an asphalt concrete mix, including mineral filler and separately sized aggregates.

3.168 SUBMITTALS

A. Shop Drawings: Job-mix formula for pavements.

B. Samples:

1. Mix Constituents: Representative Samples of materials to be incorporated into Work.
   a. Adequate in Quantity for Job-Mix Design Tests:
      1) Aggregate: 110 pounds.
      2) Asphalt Cement: 3 gallons.
      3) Antistripping Additive: 1 pint.

C. Quality Control Submittals:

1. Manufacturer's Certificate of Compliance for the following materials:
   a. Aggregate: Gradation.
   b. Asphalt for Binder: Type and grade.
   c. Prime Coat: Type and grade of asphalt.
   d. Tack Coat: Type and grade of asphalt.
   e. Mixes: Conforms to job-mix formula.
2. Manufacturer's Certificate of Proper Installation.
3. Statement of qualification for independent testing laboratory.
4. Test Results:
   a. Mix Design:
      1) Aggregate gradation.
      2) Asphalt content.

3) Stability number.
4) Asphalt cement for binder

3.169 ENVIRONMENTAL REQUIREMENTS

A. Temperature Limitations:
1. Do not apply asphalt materials or place asphalt mixes when ground temperature is lower than 50 degrees F, air temperature is lower than 40 degrees F or application surface is wet
2. Measure ground and air temperature in shaded areas away from heat sources or wet surfaces

PART 2 PRODUCTS

3.170 AGGREGATE

A. As specified in Standard Specification for hot plant mix bituminous pavement of the Department of Public Works (DPW)

3.171 MINERAL FILLER

A. As specified in Standard of DPW Specifications.

3.172 PRIME COAT

A. Liquid asphalt, Grade conforming to Standard of DPW Specifications.
B. Emulsified asphalt, Grade conforming to Standard Of DPW Specifications.

3.173 TACK COAT

A. Conforming to Standard of DPW Specifications.

3.174 BLOTTER MATERIAL

A. As specified in Standard of DPW Specifications.

3.175 ASPHALT CONCRETE MIXTURE

A. Asphalt Concrete: as specified in Standard of DPW Specifications.

3.176 ASPHALT CEMENT

A. Asphalt cement to be used in the asphalt concrete mixture shall be Grade as specified in Standard of DPW Specifications.

PART 3 EXECUTION

3.177 GENERAL

A. Application Equipment: In accordance with Standard of DPW Specifications.
B. Shoulders: Construct to lines, grades, and cross-sections shown.
C. Traffic Control: Minimize inconvenience to traffic, but keep vehicles off freshly treated or paved surfaces to avoid pickup and tracking of asphalt. Keep at least one lane in each direction open to traffic at all times.
D. Traffic Control: Design-Build Entity shall be solely responsible for traffic control and for meeting all federal, Puerto Rico, and local requirements for such.

3.178 CONTROL OF LINE AND GRADE

A. Provide and maintain intermediate control, independent of the underlying base to meet finish surface grades and minimum thickness.

3.179 PRIME COAT

A. Do not apply when moisture content of upper 3 inches of base exceeds optimum moisture content of base, or if free moisture is present.
B. Application: Apply prime coat uniformly to base. Avoid overlapping of applications. Touch up missed or lightly coated surfaces. Remove or redistribute excess material.
C. Application Rate: Minimum 0.15 to maximum 0.40 gallons per square yard of surface area.
D. Curing: If cutback liquid asphalt is used, allow a minimum of 5 full days for curing before placing asphalt concrete over primed surface.
E. Maintenance:
    1. Sweep primed surface until free of dirt, dust, or other foreign matter immediately before placing asphalt concrete.
    2. Blot excess prime material with an approved clean sand prior to paving.
    3. Patch holes in primed surface with asphalt concrete before placing asphalt concrete.

3.180 SURFACE PREPARATION FOR OVERLAYS

A. Cleaning: Remove fatty asphalt, grease drippings, dust, and other deleterious matter.
B. Portland Cement Concrete Joints: Remove joint filler to minimum 1/2-inch below surface.
C. Tack Coat: As specified in Article TACK COAT.
D. Surface Depressions: Fill with asphalt concrete mix, and thoroughly compact.
E. Damaged Areas: Remove broken or otherwise deteriorated asphalt concrete and patch as specified in Article PATCHING.

3.181 TACK COAT

A. Do not apply more tack coat than necessary for the day's paving operation.
B. Application: Apply tack coat uniformly to clean dry surfaces. Avoid overlapping of applications. Touch up missed or lightly coated surfaces and remove excess tack coat.
C. Cutback Asphalt: Heat, as specified in Standard Specifications of the Department of Public Works for the type required, prior to application.

3.182 ASPHALT CONCRETE PAVEMENT PLACEMENT

A. Lay asphalt concrete over prepared base in Standard Specifications of the Department of Public Works for the type required
B. Collect and dispose of segregated aggregate from raking process. Do not scatter material over finished surface.
C. Apply tack coat to pavement surface prior to placing succeeding pavement lift.

3.183 CONNECTIONS WITH EXISTING FACILITIES

A. Where asphalt concrete pavement connects to an existing roadway surface, bridge, railway crossing, or other facility, modify existing roadway profile to produce a smooth riding connection to existing facility.
B. Modifying Existing Surfaces: Burn or chip existing paved surfaces to provide meet lines and surfaces. Allow for sufficient depth of removal to reinstall a minimum thickness of 1-inch of asphalt concrete.
C. Meet Lines: Lines straight and edges vertical.
D. Edges of Meet Line Cuts: Paint with tack coat prior to placing pavement.
    1. Sealing Meet Line: After placement of pavement, by painting with liquid asphalt or emulsified asphalt, cover immediately with clean, dry sand.
E. Paint edges of contact surfaces (curbs, manhole frames), before laying pavement, with tack coat or paving asphalt cement to provide watertight joints. Do not stain adjacent surfaces not intended to be coated.

3.184 PAVEMENT OVERLAY

A. Place and compact asphalt concrete in one or more layers.
B. Place the first layer to include widening of pavement and leveling of irregularities in the surface of adjacent existing pavement.
C. Place layers so final wearing layer is of uniform thickness and meets grades and cross-sections shown.

3.185 JOINTS

A. Offset edge of each layer a minimum of 6 inches so joints shall not be directly over those in underlying layer.
B. Offset longitudinal joints in roadway pavements, so longitudinal joints in wearing layer coincides with pavement centerlines and lane divider lines.
C. Form transverse joints by cutting back on previous day's run to expose full vertical depth of layer.

3.186 PATCHING

A. Patch Thickness: 3 inches or thickness of adjacent asphalt concrete, whichever is greater.
B. Preparation:

1. Remove damaged, broken, or unsound asphalt concrete adjacent to patches. Trim to straight lines exposing smooth, sound, vertical edges.
2. Prepare patch sub-grade as specified in Section 31 22 15, SUBGRADE PREPARATION.

C. Construction:
1. Place asphalt concrete mix across full width of patch in layers of equal thickness.
2. Spread and grade asphalt concrete with hand tools or mechanical spreader, depending on size of area to be patched.
3. Finished surface of patch shall be flush with adjacent surface and match grade, slope, and crown of adjacent surface.

D. Compaction:
1. Roll patches with power rollers capable of providing compression of 200 to 300 pounds per linear inch. Use hand tampers where rolling is impractical.

E. Begin rolling top course at edge of patches, lapping adjacent asphalt surface at least 1/2 the roller width. Progress toward center of patch overlapping each preceding track by at least 1/2 the width of roller. Make sufficient passes over entire area to remove roller marks and to produce desired finished surface.

F. Seal and Cover Coat:

G. Apply seal coat to patched surfaces.

H. Extend seal coat minimum 6 inches beyond edges of patches.

I. Surface Smoothness of Replaced Pavement: New pavement shall not deviate more than plus 1/4-inch or minus 0 inches when a straightedge is laid across patched area between edges of new pavement and surface of old surfacing.

3.187 ASPHALT CONCRETE DRIVEWAYS

A. Repave driveways from which pavement was removed. Leave driveways in as good or better condition than before start of construction.

3.188 COMPACTION

A. Uniformly compact each course until there is no further evidence of consolidation and roller marks are eliminated. When the placement rate exceeds 100 tons per hour, operate at least two rollers for compaction.

B. Roll until roller marks are eliminated and minimum percent compaction stated in referenced Standard DPW Specifications for the type required.

C. Compaction Control-Target Density Method:

D. Construct control strip approximately 400 square yards in area and at location that will become a portion of completed paved area.
E. Thickness of Strip: Typical of thicknesses to be paved on remainder of Project.
F. Select a test point located near center of a normal roller pass, but no closer than 2 feet from edge of mat and 50 feet from either end of control strip. Mat thickness at this point shall be at least the depth of finished pavement.
G. Rollers Used for Compaction:
H. Steel Wheel Rollers: Weight minimum 10 tons, and exert minimum 250 pounds of pressure per linear inch of width of drive or compression wheel, on bituminous surface.
I. Pneumatic Rollers: Capable of exerting pressure of 80 psi on bituminous surface.
J. Vibratory Rollers: Weight minimum 6 tons, equipped with amplitude and frequency control specifically designed for compaction of bituminous mixtures.
K. Compact bituminous mat, using a standard rolling pattern that covers entire control strip.
L. Continue rolling until no further compaction can be obtained as determined by field density testing.
M. Temperature and condition of bituminous mat must be considered workable when further compaction can no longer be obtained.
    1. Target Density: Final density at the test point.
    2. Establish new target density if a change is made in:
        a. Mix design.
        b. Nominal depth of mat being placed.
        c. Aggregate source or properties of material.

3.189 JOINT COMPACTION

A. Place top or wearing layer as continuously as possible.
B. Pass roller over unprotected end of freshly laid mixture only when laying of layer is discontinued long enough to permit mixture to become chilled.
C. Cut back previously compacted mixture when Work is resumed to produce a slightly beveled edge for full thickness of layer.
D. Cut away waste material and lay new mix against fresh cut.

3.190 TOLERANCES

A. Conduct measurements for conformity with crown and grade immediately after initial compression. Correct variations immediately by removal or addition of materials and by continuous rolling.
B. Tolerance Measurements:

1. Completed Surface of Top or Wearing Layer: Uniform texture, smooth, and uniform to crown and grade.
2. Completed surface shall not vary more than 1/8-inch from lower edge of 10-foot straightedge placed on surface parallel to centerline.
3. Transverse slope of completed surface shall not vary more than 1/4-inch in 10 feet from the rate of transverse slope shown.
4. Finished grade shall not vary more than 0.02 feet.

C. Correct deviations in excess of specified tolerances by addition of asphalt concrete mixture to low places or removal of material from high places.

D. Wearing surface may be removed and replaced to achieve a satisfactory finish surface, if surface of completed pavement deviates by more than twice the specified tolerances.

END OF SECTION

SECTION 32 25 80 - PAVEMENT MARKING

PART 1 GENERAL

3.191 REFERENCES

A. The following is a list of standards which may be referenced in this section:
   1. American Society for Testing and Materials (ASTM):
      a. D792, Standard Method of Test for Density and Specific Gravity (Relative Density) and Density of Plastics by Displacement.
      b. D4280, Extended Life Type, Non-plowable, Prismatic, Raised, Retroreflective Pavement Markers.
      c. E28, Standard Method of Test for Softening Point by Ring-and-Ball Apparatus.
   2. American Association of State Highway and Transportation Officials (AASHTO):
      a. M247, Standard Specification for Glass Beads Used in Traffic Paint.
      b. M248, Standard Specification for Ready-Mixed White and Yellow Traffic Paints.
      c. M309, Standard Specification for White and Yellow Fast-Dry Traffic Paint.
      d. M249, Standard Specification for White and Yellow Reflective Thermoplastic Striping Material (Solid Form).
   3. Federal Specifications:
      a. TT-P-115, (Rev F) Paint, Traffic (Highway, White, and Yellow).
      b. TT-P-1952, Paint, Water Base, Traffic (Highway, White and Yellow).

3.192 SUBMITTALS

A. Shop Drawings:
   1. Product Data:
      a. Paint.
      b. Thermoplastic compounds and primers.
   2. Glass Beads: Proposed gradation.
   3. Description of proposed methods for removal of drips, over-spray, improper markings, paint and thermoplastic material tracked by traffic, and existing markings.

B. Samples:
   1. Glass Beads: 2 pounds.
   2. Portland Cement Concrete Primer: 1 quart.

C. Quality Control Submittals: Manufacturer's Certificate of Compliance for products specified in this section.

1. Equipment List: Proposed equipment to be used, including descriptive data.
2. Manufacturer's Instructions:
    a. Application of preformed tape.
    b. Application of portland cement concrete primer.

PART 2 PRODUCTS

3.193 PAINT

A. White or yellow traffic paint meeting the requirements of PRHA.
B. White or yellow traffic paint in accordance with AASHTO M248, AASHTO M309, FS-TT-P115, G: FS-TT-P1952 and shall
C. be homogeneous, easily stirred to smooth consistency, and show no hard settlement or other objectionable characteristics during a storage period of 6 months.

3.194 THERMOPLASTIC STRIPING MATERIALS

A. White or yellow thermoplastic striping material meeting the requirements of PRHA
B. White or yellow thermoplastic striping material in accordance with AASHTO M249.

3.195 RAISED REFLECTIVE MARKERS

A. Furnish either metallic or nonmetallic markers of button or prismatic reflector type. Markers shall be of permanent colors retaining color and brightness under action of traffic.
B. Markers shall have rounded surfaces presenting a smooth contour to traffic. Pavement markers and adhesive epoxy in accordance with ASTM D4280.

3.196 GLASS BEADS

A. Reflective media in accordance with AASHTO M247.

PART 3 EXECUTION

3.197 GENERAL

A. Surface Preparation, Application, and Protection: Perform in accordance with Section of the Standard Specifications.

3.198 SURFACE PREPARATION

A. Cleaning:
    1. Thoroughly clean surfaces to be marked before application of pavement marking material.
    2. Remove dust, dirt, and other granular surface deposits by sweeping, blowing with compressed air, rinsing with water or a combination of these methods.
    3. Completely remove rubber deposits, surface laitance, existing paint markings, and other coatings adhering to pavement with scrapers, wire brushes, sandblasting, approved chemicals, or mechanical abrasion.

4. Scrub areas of old pavement affected with oil or grease with several applications of tri-sodium phosphate solution or other approved detergent or degreaser, and rinsed thoroughly after each application.
5. After cleaning, oil-soaked areas shall be sealed with cut shellac to prevent bleeding through the new paint.
6. Allow pavement surfaces to dry, when water is used for cleaning, prior to striping or marking.
7. Re-clean surfaces when Work has been stopped due to rain.

B. Cleaning Existing Pavement Markings:
1. Do not place markings over existing pavement marking patterns.
2. Remove existing pavement markings that interfere with or conflict with newly applied marking patterns.
3. Do not apply new preformed and thermoplastic pavement markings over existing preformed or thermoplastic markings.
4. Perform grinding, scraping, sandblasting or other operations so finished pavement surface is not damaged or left in a pattern that is misleading or confusing.

C. Layout of Markings: Unless previously applied markings are present to serve as a guide, layout markings in advance of paint application.

D. Pretreatment for Early Painting: Where early painting is required on rigid pavements, a pretreatment with an aqueous solution containing 3 percent phosphoric acid and 2 percent zinc chloride shall be applied to prepared pavement areas prior to painting.

E. Cleaning Concrete Curing Compounds:
1. On new portland cement concrete pavements, do not begin cleaning operations until a minimum of 30 days after placement of concrete.

F. Clean new concrete pavements by either sandblasting or water blasting. When water blasting is performed, thermoplastic and preformed markings shall be applied no sooner than 24 hours after blasting has been completed.

G. Clean and prepare extent of blasting work as follows:

H. There is no visible evidence of curing compound on peaks of textured concrete surface.

I. There are no heavy puddled deposits of curing compound in valleys of textured concrete surface.

J. Remaining curing compound is intact; loose and flaking material is removed.

K. Peaks of textured pavement surface are rounded in profile and free of sharp edges and irregularities.
1. Surface shall be dry before marking.

3.199 APPLICATION

A. Paint:
    1. General:
B. Thoroughly mix pigment and vehicle together prior to application, and keep thoroughly agitated during application.
C. Do not add thinner.
D. Apply to clean, dry surfaces, and only when air and pavement temperatures are above 40 degrees F and less than 95 degrees F. Maintain paint temperature within these same limits.
E. Allow new asphalt pavement and portland concrete cement surfaces to cure for period of not less than 30 days before applications of paint.
    1. Provide guide lines and templates to control paint application.
F. Take special precautions in marking numbers, letters, and symbols.
G. Apply paint only to pavement surfaces that are unfrozen, dry, and clean.
    1. Edges of markings shall be sharply outlined.
H. Rate of Application: Apply paint in two coats at uniform rate between 105 and 115 square feet per gallon per one coat, without running or spattering.
    1. Reflective Markings:
I. Apply pigmented binder evenly to pavement area at a rate of 105 plus or minus 5 square feet per gallon.
    1. Apply glass spheres uniformly at a rate of 6 plus or minus
        a. **0.5 pounds of glass spheres per gallon of paint.**
J. Non-reflective Markings: Apply paint evenly to pavement surface at a rate of 105 plus or minus 5 square feet per gallon.
K. Drying:
L. Provide maximum drying time of paint to prevent undue softening of bitumen, pickup, displacement, or discoloration by tires of traffic.
M. If there is a delay in drying of markings, discontinue painting operations until cause of slow drying is determined and corrected.
N. Thermoplastic Compounds:
    1. General:
        a. Place thermoplastic pavement markings upon dry pavement.
O. At time of application, pavement surface temperature shall be minimum of 40 degrees F and rising.
    1. Apply thermoplastics free from dirt or tint.
P. Thermoplastic reflectorized pavement marking compound shall be extruded or sprayed in a molten state.

Q. Following a surface application of glass beads and upon cooling to normal pavement temperatures, marking shall be an adherent reflectorized strip that is capable of resisting deformation by traffic.
R. Longitudinal Markings:
S. Apply centerline, skipline, edgeline, and other longitudinal type markings with a mobile applicator.
T. Place special markings, crosswalks, stop bars, legends, arrows, and similar patterns with a portable applicator, using extrusion method.
U. Primer General:
V. After surface preparation has been completed prime asphalt or concrete pavement.
W. Apply primer with spray equipment.
X. Allow primer to “set-up” prior to application of thermoplastic composition.
Y. Asphalt Concrete Primer:
Z. Apply to pavements at a wet film thickness of 0.005 inch, plus or minus 0.001 inch.
AA. Allow asphalt concrete primer to dry to a tack-free condition.
    1. To shorten curing time of epoxy resins an infrared heating device may be used on concrete primer.
    2. Portland Cement Concrete Primer:
        a. Applied to pavements at a wet film thickness of between 0.04 to
        b. **0.05 inch.**
BB. Allow portland cement concrete primer to dry in accordance with thermoplastic manufacturer's instructions.
CC. Markings:
DD. Apply thermoplastic after primer has “set-up” at temperatures no lower than 375 degrees F nor higher than 425 degrees F at point of deposition.
EE. Immediately after installation of marking, mechanically apply drop-on glass spheres so spheres are held by and imbedded in the surface of the molten material at the rate of 1 pound per 20 square feet of compound.
FF. Extruded Markings: Apply thermoplastic markings at a thickness of not less than 0.125-inch and not more than 0.190 inch.
GG. Preformed Tape:
    1. Pavement surface temperature shall be minimum of 60 degrees F and ambient temperature minimum of 60 degrees F and rising.
    2. Place preformed markings in accordance with manufacturer's instructions.

HH. Reflective Media:
1. Apply immediately following application of pigmented binder.
2. Ensure drop-on application of glass spheres is evenly distributed after application of paint.
3. Rate: 10 pounds per gallons.

3.200 PROTECTION
A. Protect markings from traffic until paint is thoroughly dry.
B. Protect surfaces from disfiguration by paint spatters, splashes, spills, or drips.

3.201 CLEANUP
A. Remove paint spatters, splashes, spills, or drips.

END OF SECTION

SECTION 32 28 31 - CHAIN LINK FENCES & GATES

PART 1 GENERAL

3.202 REFERENCES

A. The following is a list of standards which may be referenced in this section:
   1. American Society for Testing and Materials (ASTM):
      a. A392, Standard Specification for Zinc-Coated Steel Chain-Link Fence Fabric.
      b. A491, Standard Specification for Aluminum-Coated Steel Chain-Link Fence Fabric.

M. Institute of Electrical and Electronic Engineers (IEEE), Inc.: C2, National Electrical Safety Code.

N. National Electrical Manufacturers Association (NEMA): 250, Enclosures for Electrical Equipment (1,000 volts max.).

3.203 DEFINITIONS

A. Terms as defined in ASTM F552.

3.204 SUBMITTALS

A. Shop Drawings:
   1. Detailed information and specifications for materials, finishes, and dimensions.
B. Samples: Approximately 6 inches square, or 6 inches long of posts, rails, braces, fabric, wire, ties, and fittings.
C. Quality Control Submittals:
   1. Manufacturer's recommended installation instructions.
   2. Evidence of Supplier and installer qualifications.

3.205 QUALITY ASSURANCE

A. Qualifications:
   1. Gate Operator System Supplier: 5 years' experience in gate operator systems.
   2. Gate Operator System Installer: 3 years' experience and approved by system Supplier.

3.206 SCHEDULING AND SEQUENCING

A. Complete necessary site preparation and grading before installing chain link fence and gates.

PART 2 PRODUCTS

3.207 GENERAL

A. Match style, finish, and color of each fence component with that of other fence components.

3.208 CHAIN LINK FENCE FABRIC

A. Height: 78 inches, unless otherwise shown.
B. Wire Gauge: 9 covered with PVC.
C. “Note: The gage No. 9 only considers the steel, not the PVC covering it.”
D. Pattern: 2-inch diamond-mesh.
E. Diamond Count: Manufacturer's standard and consistent for fabric furnished of same height.
F. Loops of Knuckled Selvages: Closed or nearly closed with space not exceeding diameter of wire.
G. Wires of Twisted Selvages:
   1. Twisted in a closed helix three full turns.
H. Cut at an angle to provide sharp barbs that extend minimum 1/4-inch beyond twist.

3.209 POSTS

A. General:
   1. Strength and Stiffness Requirements: ASTM F669, Heavy Industrial Fence, except as modified in this section.
   2. Steel Pipe: ASTM F1083.

3. Roll-Formed Steel Shapes: Roll-formed from ASTM A570, Grade 45, steel.
4. Lengths: Manufacturer's standard with allowance for minimum embedment below finished grade of 22 inches plus 3 inches for each 1 foot of fence height greater than 4 feet.

B. Line Posts:
1. Steel Pipe:
a. Outside Diameter: 2.375-inch.
2. Roll-Formed Steel C Shape:
a. Outside Dimensions: 2.25-inch by 1.625-inch.
b. Weight: 2.70 pounds per foot.]

C. End, Corner, Angle, and Pull Posts:
1. Steel Pipe:
a. Outside Diameter: 2.875-inch.
b. Weight: HI: 5.79 pounds per foot.
c. Weight: 5.10 pounds per foot.

D. Posts for Removable Fence Panels: As specified for end, corner, angle, and pull

E. posts.

F. Posts for Swing Gates:
1. ASTM F900.
2. Roll-formed steel shapes may be substituted for steel pipe posts for gate leaf widths up to 6 feet and fabric heights up to 8 feet.
a. Outside Dimensions: 3.5-inch by 3.5-inch.
b. Weight: 4.85 pounds per foot.

G. Posts for Swing Gates Over 8 Feet High: As recommended by fence manufacturer.

3.210 TOP RAILS AND BRACE RAILS

A. Galvanized steel pipe or roll-formed steel C shapes

B. Protective Coatings: As specified for posts.

C. Strength and Stiffness Requirements: ASTM F669, Top Rail, Heavy or Light Industrial Fence.

D. Steel Pipe:
1. ASTM F1083.
2. Outside Diameter: 1.66-inch.
3. Weight: 2.27 pounds per foot.

E. Roll-Formed Steel C Shapes:
1. Roll formed from ASTM A570, Grade 45.
2. Outside Dimensions: 1.625-inch by 1.25-inch.
3. Weight: 1.40 pounds per foot.

3.211 FENCE FITTINGS

A. General: In conformance with ASTM F626, except as modified by this article.
B. Post and Line Caps: Designed to accommodate passage of top rail through cap, where top rail required.
C. Tension and Brace Bands: No exceptions to ASTM F626
D. Tension Bars:
    1. One-piece
    2. Equal in length to full height of fabric.
E. Truss Rod Assembly: 3/8-inch diameter.

3.212 TENSION WIRE

A. Aluminum-coated steel marcelled tension wire conforming to ASTM A824

3.213 GATES

A. General:
    1. Gate Operation: Opened and closed easily by one person.
    2. Welded Steel Joints: Paint with zinc-based paint.
B. Chain Link Fabric: Attached securely to gate frame at intervals not exceeding 15 inches.
C. Swing Gates: ASTM F900.
D. Hinges:
    1. Furnished with large bearing surfaces for clamping in position.
E. Designed to swing either 180 degrees outward, 180 degrees inward, or 90 degrees in or out, as shown, and not twist or turn under action of gate.
    1. Latches: Plunger bar arranged to engage stop, except single gates of openings less than 10 feet wide may each have forked latch.
    2. Gate Stops: Mushroom type or flush plate with anchors, suitable for setting in concrete.
    3. Locking Device and Padlock Eyes: Integral part of latch, requiring one padlock for locking both gate leaves of double gates.
    4. Hold-Open Keepers: Designed to automatically engage gate leaf and hold it in open position until manually released.
F. Rolling Gates:
    1. Track Rollers: Malleable iron or heavy pressed steel with provision for grease lubrication.
    2. Ground Rollers: Malleable iron or heavy pressed steel with provision for grease lubrication.
    3. Support Posts: Spaced on maximum 7 foot centers.
    4. Gates more than 8 feet in height shall have three tracks.
    5. Frames: ASTM F1184, Type I.
    6. Gate Accessories: ASTM F1184.

3.214 SLIDING GATE OPERATOR SYSTEMS

A. Description: Systems that open and close sliding gate when properly activated by card access system.
B. Design, supply of equipment and components, installation, and on-call service shall be product of individual company with record of installations meeting requirements specified in this article.
C. Electrical Components: UL listed.
D. Gate Operators:
    1. Heavy-duty, high frequency, electrical models designed to open and close sliding gates provided. For each gate, supply manufacturer of gate operator with complete details of gate, hardware, track rollers, adjacent
    2. fence posts, and fence construction for development and detailing of gate operator.
    3. Furnish with following features:
        a. Metal enclosure with finish and design suitable for exterior installation in all-weather environment.
        b. Minimum 1 hp motor, 208V ac, three-phase, 60-Hz electric power, reversible.
        c. Electric motor driven hydraulic power pack with hard rubber wheels in contact with drive rail secured to gate. Transmission of opening or closing forces to gate shall be by rotation of wheels against rails.
E. Positive limit switches that sense position of gate and provide control to prevent damage to gate operator.
    1. NEMA 250, Type 12 enclosure for all motor control components.
        a. Motor Overload Protection: Industrial quality with manual reset.
F. 24V ac control circuit to power remote control gate activation devices.
G. Manual operation feature or disconnect, without use of tools, for easy operation during power failure, malfunction, or emergency.
H. Aluminum drive rail designed for attachment to sliding gate in manner that reinforces gate assembly.
    1. Gate Travel Speed:
        a. Minimum 1 foot per second.
I. Speed adjusting feature that provides range of appropriate speeds for slide gate operation is acceptable but not required.
J. Component parts of operator, including attachments, shall be constructed with materials or plated, coated, or finished as necessary to provide reliable service in exterior all-weather environment.
    1. Compatible with gate operator control devices provided.
K. Manufacturers:
    1. Hy-Security Gate Operator, Seattle, WA.

a. Automated Equipment Co., Seattle, WA.
b. Stanley.
c. Richards Wilcox, Aurora, IL.

3.215 CONCRETE

A. Provide as specified in Section, CAST-IN-PLACE CONCRETE.

3.216 CONCRETE

A. Reinforcing Steel: ASTM A615, Grade 60 deformed bars.
B. Welded Wire Fabric: ASTM A497.
C. Formwork: Plywood earth cuts may be used.
D. Mix: ASTM C94, Option A.
   1. Cement: ASTM C150, Type II
   2. Coarse Aggregate Size: 3/4 inch(es).
   3. Design for Minimum Compressive Strength at 28 Days: 3,000 psi.

3.217 CONCRETE

A. Materials: ASTM C387 packaged, dry, combined ingredients with Type I cement.
B. Mixing: In a clean metal container, mix entire package of dry materials by hand or machine. Following manufacturer's instructions, add clean water in sufficient quantity to produce a slump of 2 to 3 inches.

PART 3 EXECUTION

3.218 GENERAL

A. Install chain link fences and gates in accordance with ASTM F567, except as modified in this section, and in accordance with fence manufacturer's recommendations, as approved by Civil Engineer of Record. Erect fencing in straight lines between angle points.
B. Provide all necessary hardware for a complete fence and gate installation.
C. All fence components, including foundation must be constructed entirely within the project property limits.

3.219 PREPARATION

A. Establish locations of fence lines, gates, and terminal posts.

3.220 POST SETTING

A. Driven posts are not acceptable.
B. Post Hole Depth:
   1. Minimum 3 feet below finished grade.
   2. 2 inches deeper than post embedment depth below finish grade.
C. Backfill postholes with concrete to 2 inches above finished grade.
D. Set posts with minimum embedment below finished grade of 22 inches plus 3 inches for each 1 foot of fence height greater than 4 feet, and with top rail at proper height above finished grade. Brace posts, as necessary, to maintain correct position and plumb ness until concrete sets.

E. Before concrete sets, crown and finish top of concrete to readily shed water.

3.221 BRACING

A. Brace gate and corner posts diagonally to adjacent line posts to ensure stability.

3.222 TOP RAILS

A. Install top rail sleeves with springs at 105 feet maximum spacing to permit expansion in rail.

3.223 GATES

A. Hang gates and adjust hardware so gates operate satisfactorily from open or closed position.

B. Set gate stops in concrete to engage center drop rod or plunger bar.

3.224 GATE OPERATOR SYSTEMS

A. Install gate operator systems in accordance with manufacturers recommendations.

B. Furnish with equipment and accessories necessary for complete installation.

3.225 ELECTRICAL GROUNDING

A. Ground fences in accordance with applicable requirements of IEEE C2, National Electrical Safety Code.

3.226 FIELD QUALITY CONTROL

A. Gate Tests: Prior to acceptance of installed gates and gate operator systems, demonstrate proper operation of gates under each possible open and close condition specified.

END OF SECTION

SECTION 33 26 60 - PRESSURE TRANSMISSION AND DISTRIBUTION PIPING

PART 1 GENERAL

3.227 REFERENCES

A. The following is a list of standards which may be referenced in this section and any supplemental Data Sheets:
   1. American Association of State Highway and Transportation Officials (AASHTO):
   2. American Concrete Institute (ACI): 301, Specifications for Structural Concrete for Buildings.
   3. American National Standards Institute (ANSI):
   4. American Water Works Association (AWWA):
   5. American Society of Mechanical Engineers (ASME):
   6. American Society for Nondestructive Testing (ASNT): SNT-TC-1A, Recommended Practice for Nondestructive Testing Personnel Qualifications.
   7. American Society for Testing and Materials (ASTM):
   8. American Welding Society (AWS): QC1, Standard for AWS Certification for Welding Inspectors.

3.228 DEFINITIONS

A. Buried Piping: Underground in trenches and backfilled.
B. Encased Piping: Encased in concrete underground and backfilled.
C. Embedded Piping: Embedded in the walls or slabs of concrete structures.
D. Exposed Piping:
   1. Aboveground.
   2. Inside structures including vaults

3.229 DESIGN REQUIREMENTS

A. Where pipe diameter, thickness, pressure class, pressure rating, or thrust restraint is not shown or specified, design piping system for maximum stress determined based on combinations of the following loads:
   1. Pressure Testing = Operating pressure x 1.50.
   2. Earth loads, as applicable.
   3. H20-S16 traffic load with 1.5 impact factor, AASHTO Standard Specifications for Highway Bridges, as applicable
   4. Thrust Restraints:
      a. Design for test pressure shown in Piping Schedule. All pressure pipes must have thrust restraints.

b. Allowable Soil Pressure: 400 pounds per square foot per foot of depth not to exceed 3,000 pounds per square foot.
c. Low Pressure Pipelines:
1) When bearing surface of the fitting against soil provides an area equal to or greater than area required for thrust restraint, concrete thrust blocks will not be required.
2) Determine bearing area for fittings without thrust blocks by projected area of 70 percent of internal diameter multiplied by chord length for fitting centerline curve.

B. When line of lower pressure connects to a line of higher pressure, requirements for higher pressure rating prevails up to and including the first block valve in the line carrying the lower pressure, unless otherwise shown.
C. See Data Sheets for additional design requirements.

3.230 SUBMITTALS

A. Shop Drawings:
1. Shop Fabricated Piping:
a. Detailed pipe fabrication or spool drawings showing special fittings and bends, dimensions, coatings, and other pertinent information.
b. Layout drawing showing location of each pipe section and each special length; number or otherwise designate laying sequence on each piece.
2. Pipe Wall Thickness: Identify wall thickness and rational method or standard applied to determine wall thickness for each size of each different material, including exposed, submerged, buried, and concrete-encased installations, for Design-Build Entity-designed piping.
3. Thrust Restraint for Restrained Joints: Details including materials, sizes, assembly ratings, and pipe attachment methods.
4. Thrust Blocks: Concrete quantity, bearing area on pipe, and fitting joint locations.
5. Dissimilar Buried Pipe Joints: Joint types and assembly drawings.

B. Quality Control Submittals:
1. Manufacturer's Certification of Compliance.
2. Laboratory Testing Equipment: Certified calibrations, manufacturer's product data, and test procedures.
3. Certified welding inspection and test results.

4. Qualifications:
    a. Weld Inspection and Testing Agency: Minimum 5 years and five references for proposed independent testing laboratory.
    b. Welding Inspector: Certification and qualifications.
    c. Welders:
        1) List of qualified welders and welding operators.
        2) Current test records for qualified welder(s) and weld type(s) for factory and field welding.
5. Weld Procedures: Records in accordance with ASME Boiler and Pressure Vessel Code, Section IX for weld type(s) and base metal(s).
6. Nondestructive inspection and testing procedures.
7. Manufacturer's Certification of Compliance:
    a. Pipe and fittings.
    b. Welding electrodes and filler materials.
    c. Factory applied linings and coatings.
8. Certified weld inspection and test reports.
9. Test logs.
10. Coal-tar epoxy applicator certification.

3.231 QUALIFICATIONS

A. Independent Inspection and Testing Agency:
    1. 10 years' experience in field of welding and welded pipe and fittings testing required for this Project.
    2. Calibrated instruments and equipment, and documented standard procedures for performing specified testing.
    3. Certified in accordance with ASNT SNT-TC-1A for testing procedures required for this Project.
    4. Testing Personnel: Qualified for nondestructive test methods to be performed.
    5. Inspection Services: Qualified welding inspector.
B. Welding Inspector:
C. AWS certified, AWS QC1 qualified, with prior inspection experience of welds specified.
    1. Duties include, but are not limited to, the following:
        a. Job material verification and storage.
        b. Qualification of welders.
        c. Certify conformance with approved welding procedures.
        d. Maintenance of records and preparation of reports in a timely manner.

e. Notification to Civil Engineer of Record of unsatisfactory weld performance within 24 hours of weld test failure.

D. Welder and Welding Operator Qualifications:
1. Qualified by accepted inspection and testing agency before starting Work in accordance with Section IX, Article III of the ASME Boiler and Pressure Vessel Code.
2. Qualified to perform groove welds in Positions 2G and 5G for each welding process and pipe material specified.
3. Qualification tests may be waived by Civil Engineer of Record based on evidence of prior qualification.
4. Retesting: Upon Civil Engineer of Record's written request, retest qualified welder(s).

3.232 QUALITY CONTROL

A. The Design-Build Entity shall provide an independent qualified inspection and testing agency for welding operations unless the final Design-Build Agreement expressly assigns a specific test to ASEM/Owner. Owner-provided testing, when any, does not replace the Design-Build Entity’s quality-control responsibilities.

3.233 DELIVERY, STORAGE, AND HANDLING

A. In accordance with the applicable MATERIAL AND EQUIPMENT requirements, and:
1. Flanges: Securely attach metal, hardboard, or wood protectors over entire gasket surface.
2. Threaded or Socket Welding Ends: Fit with metal, wood, or plastic plugs or caps.
3. Cement Linings and Coatings: AWWA C205, Section 6. Pipe ends shall be tightly closed with a 10-mil polyethylene plastic wrap for protection of the cement-mortar lining during shipment. Keep plastic wrap on the pipe until the time of installation.
4. Cold Weather Storage: Locate products to prevent coating from freezing to ground.
5. Interior Bracing: Leave in place until pipe zone material has been placed and completely compacted.
6. Handling: Use heavy canvas or nylon slings to lift pipe and fittings.
7. Rubber Gaskets:
a. Store in a cool, well-ventilated area.
b. Do not expose to the direct rays of the sun.
c. Do not allow contact with oils, fuels, or petroleum solvents.

PART 2 PRODUCTS

3.234 PIPING

A. As specified on Data Sheet(s) and Piping Schedule located at the end of this section as Supplement and on Piping Schedule located on Drawings.

B. Diameters Shown:
   1. Standardized Products: Nominal size.
   2. Fabricated Steel Piping (Except Cement-Lined): Outside diameter, ANSI/ASME B36.10M.
   3. Cement-Lined Steel Pipe: Lining inside diameter.
   4. Pretensioned Concrete Cylinder Pipe: Lining inside diameter.

C. Identification Marking: Mark with nontoxic paint on each end both inside and outside the pipe. The minimum size of the lettering shall be 4 inches. The number marking on each spool shall correspond to the Shop Drawings.

3.235 JOINTS

A. Grooved End System:
   1. Rigid, except where joints are used to correct misalignment, to provide flexibility, or where shown, furnish flexible type.
   2. Flanges: When required, furnish with grooved type flange adapters of same manufacturer as grooved end couplings.

B. Flanged Joints:
   1. Flat-faced carbon steel or alloy flanges when mating with flat-faced cast or ductile iron flanges.
   2. Higher pressure rated flanges as required to mate with equipment when equipment flange is of higher pressure rating than required for piping.

C. Thrust Tie Assemblies:
   1. Tie-rod attachments relying on clamp friction with pipe barrel to restrain thrust are unacceptable.
   2. Anchoring of retainer glands or thrust ties with set screws is unacceptable.

D. Mechanical Joint Anchor Gland Follower:
   1. Ductile iron anchor type, wedge action, with break off tightening bolts.
   2. Manufacturer and Product: EBAA Iron Inc.; Megalug.

3.236 COUPLINGS

A. Steel Middle Rings and Followers:
   1. Fusion bonded epoxy-lined and coated in accordance with the applicable PAINTING AND PROTECTIVE COATINGS requirements, System No. 29. AWWA C213.

2. Pressure tested beyond yield point, for pressure piping.

B. Flexible Couplings:
   1. Manufacturers and Products:
      a. Steel Pipe:
         1) Dresser; Style 38.
         2) Smith-Blair; Style 411
      b. Ductile Iron Pipe:
         1) Dresser; Style 153
         2) Smith-Blair; Style 411

C. Transition Couplings:
   1. Manufacturers and Products:
      a. Dresser; Style 162
      b. Smith-Blair; Style 413

D. Flanged Coupling Adapters:
   1. Manufacturers and Products:
      a. Steel Pipe:
         1) Smith-Blair; Series 913
         2) Dresser Industries, Inc.; Style 128.
      b. Ductile Iron Pipe:
         1) Smith-Blair; Series 912.
         2) Dresser Industries, Inc.; Style 127

E. Bolting:
   1. Exposed and Concrete-Encased Installations: Zinc-plated nuts and bolts; however, high-strength, low-alloy steel, in accordance with AWWA C111/A21.11, may be substituted for use on cast iron and ductile iron couplings.
   2. Buried and Submerged Installations: Provide Type 304 stainless steel bolts and nuts.

3.237 ANCILLARY MATERIALS

A. Gasket Lubricant: As supplied by pipe manufacturer; no substitute or “or-equal” will be allowed.

B. Thrust Block Concrete: As specified in CAST-IN-PLACE and the applicable REINFORCED CONCRETE requirements.

3.238 CONCRETE FOR THRUST BLOCKS

A. Reinforcing Steel: ASTM A615/A615M, Grade 60 deformed bars.

B. Welded Wire Fabric: ASTM A497 Rev B.

C. Formwork: Plywood earth cuts may be used.

D. Mix: ASTM C94, Option A, as depicted by the designer.
   1. Cement: ASTM C150, Type I and/or II with maximum alkyl content of 0.606 percent.
   2. Coarse Aggregate Size: 1-1/2 and/or 3/4- inch(es).
   3. Design for Minimum Compressive Strength at 28 Days: 2,500 and/or 3,000 psi.

3.239 VENT AND DRAIN VALVES

A. Pipelines 2-1/2-inch Diameter and Larger: 3/4-inch vent, 1-inch drain, unless shown otherwise.
B. Pipeline 2-inch Diameter and Smaller: 1/2-inch vent, 1-inch drain, unless shown otherwise.
C. Valve Type:
    1. As shown and as specified in the applicable VALVES AND OPERATORS requirements.
    2. Where valve types are not shown provide Type 300.

3.240 SERVICE SADDLES

A. Ferrous Metal Piping (Except Stainless Steel):
    1. Double-strap design rated 150 psi minimum working pressure.
    2. Run diameter compatible with the outside diameter of the pipe on which the saddle is installed.
    3. Taps with iron pipe threads.
    4. Malleable or ductile iron bodies and galvanized steel straps, steel hex nuts with washers, and neoprene seals.
    5. Manufacturers and Models:
        a. Smith-Blair, Inc.; Series 313 or 366.
        b. Dresser; Style 91.

3.241 SLAB, FLOOR, WALL, AND ROOF PENETRATIONS

A. Ductile Iron Wall Pipe:
    1. Diameter and Ends: Same as connecting ductile iron pipe.
    2. Thickness: Equal to or greater than remainder of pipe in line.
    3. Fittings: In accordance with the applicable Data Sheet.
    4. Provide taps for stud bolts in flanges set flush with wall face.
    5. Seep Ring:
        a. Provide for wall pipes to prevent water seepage.
        b. Material and Construction:
            1) Ductile iron cast integral with wall pipe wherever possible.
            2) Fabricate by welded attachment of ductile iron seep ring to pipe where casting impossible.
                a) Perform in pipe manufacturer's shop by qualified welders as specified herein.
                b) Welds: Electric arc welds of ductile iron with NI-55 or FC-55, nickel-iron-carbon weld rod.
                c) Continuously weld on each side all around.
    6. Manufacturer: American Cast Iron Pipe Co.

B. Steel Wall Pipe: Fabricate of same material and thickness as connecting pipe or as shown, whichever is thicker; however, minimum thickness of 1/4-inch is required.
   1. Lining: Same as connecting pipe.
   2. Seep Ring:
      a. Provide for all wall pipes to prevent water seepage.
      b. Continuously fillet welded on each side all around.

C. Pipe Sleeves: Fabricate of 3/16-inch minimum thickness steel pipe.
   1. Above-grade in Non-submerged Areas: ASTM A153 Hot-dip galvanized after fabrication.
   2. Below grade or in Submerged or Damp Environments: Lined and coated after fabrication with System No. 2 as specified in the applicable PAINTING AND PROTECTIVE COATINGS requirements.
   3. Seep Ring:

D. Provide 3/16-inch minimum thickness center flange for water stoppage on sleeves in exterior or water-bearing walls.
   1. Continuously fillet weld on each side all around.
   2. Existing Walls: Holes drilled with a rotary drill may be provided in lieu of sleeves.

E. Modular Mechanical Seal:
   1. Type: Interconnected synthetic rubber links shaped and sized to continuously fill annular space between pipe and wall sleeve opening.
   2. Assemble interconnected rubber links with Type 316 stainless steel bolts, nuts, and pressure plates.
   3. Size modular mechanical seals according to manufacturer's instructions for the size of pipes shown to provide a watertight seal between pipe and wall sleeve opening.

3.242 INSULATING FLANGES, COUPLINGS, AND UNIONS

A. Dielectric Flange and Union Manufacturers:
   1. Epco Sales, Inc.
   2. Capitol Insulation Unions.

B. Insulating Coupling Manufacturers:
   1. Dresser; STAB-39.
   2. R. H. Baker; Series 216.

3.243 WELD LEAD OUTLETS

A. Outlets for welding leads, if used, shall be as shown on the Drawings. The number and locations of these outlets shall be at the Design-Build Entity's option and shall be indicated on the Shop Drawings.

B. Plugs used for closing the weld lead outlets shall be suitable for the internal pressure and shall allow zero leakage. Joint

compound shall be as recommended by the plug manufacturer and as approved by the Civil Engineer of Record.

3.244 PIPE FABRICATION

A. Flanged pipe shall be fabricated in the shop, not in the field, and delivered to the site with flanges in place and properly faced. Threaded flanges shall be individually fitted and machine tightened on matching threaded pipe by the manufacturer.
B. Fabricate outlets and bends in appropriate lengths so that, when installed, they will be located as shown on laying drawings.
C. Pressure taps and stubs required for hydrostatic testing shall be factory installed on the pipe.
D. Mark each pipe length on outside:
    1. Size or diameter and class.
    2. Manufacturer's identification and pipe serial number.
    3. Location number on laying drawing.
    4. Date of manufacture.
E. Code markings according to approved Shop Drawings.

3.245 FINISHES

A. Factory prepare, prime, and finish coat in accordance with Data Sheet(s) and Piping Schedule.

PART 3 EXECUTION

3.246 EXAMINATION

A. Verify size, material, joint types, elevation, horizontal location, and pipe service of existing pipelines to be connected to new pipelines or new equipment.
B. Inspect size and location of structure penetrations to verify adequacy of wall pipes, sleeves, and other openings.
C. Welding Electrodes: Verify proper grade and type, and free of moisture and dampness, and coating is undamaged.

3.247 PREPARATION

A. Notify Civil Engineer of Record at least 2 weeks prior to field fabrication of pipe or fittings.
B. Damaged Coatings and Linings: Repair using original coating and lining materials in accordance with manufacturer's instructions.
C. Furnish feeler gauges of the proper size, type, and shape for use during installation for each type of pipe furnished.

3.248 WELDING

A. In accordance with AWWA C206.
B. Weld Identification: Mark each weld with symbol identifying welder.
C. Pipe End Preparation:
    1. Machine Shaping: Preferred.
    2. Oxygen or Arc Cutting: Smooth to touch, true, and slag removal by chipping or grinding.
    3. Beveled Ends for Butt Welding: ANSI B16.25.
D. Surfaces:
    1. Clean and free of paint, oil, rust, scale, slag, or other material detrimental to welding.
    2. Clean stainless steel joints with stainless steel wire brushes or stainless steel wool prior to welding.
    3. Prior to deposition of each additional layer of weld metal, thoroughly clean each layer of deposited weld metal, including final pass, with a power-driven wire brush.
E. Alignment and Spacing:
    1. Align ends to be joined within existing commercial tolerances on diameters, wall thickness, and out-of-roundness.
    2. Root Opening of Joint: As stated in qualified welding procedure.
    3. Minimum Spacing of Circumferential Butt Welds: Minimum four times pipe wall thickness or 1 inch, whichever is greater.
F. Climatic Conditions:

1. Do not perform welding if there is impingement of any rain, snow, sleet, or high wind on the weld area, or if the ambient temperature is below 32 degrees F.

G. Thermal Stress Control Joints:
   1. Provide joints with a minimum lap of 3 inches approximately every 350 feet on piping.
   2. Install pipe zone material within 50 feet of the joint prior to welding.
   3. Leave unwelded until such time as the pipe temperature is the coldest (such as early in the morning).
   4. Provide inside fillet weld and an outside seal weld.

H. Tack Welds: Performed by qualified welder using same procedure as for completed weld, made with electrode similar or equivalent to electrode to

I. be used for first weld pass, and not defective. Remove those not meeting requirements prior to commencing welding procedures.

J. Surface Defects: Chip or grind out those affecting soundness of weld.

K. Weld Passes:
   1. Pipe 4 Inches and Under: Minimum of full root and second pass.
      a. Pipe Sizes 6 Inches and Larger: Minimum of three weld passes.

L. Weld Quality: Free of cracks, incomplete penetration, weld undercutting, excessive weld reinforcement, porosity slag inclusions, and other defects in excess of limits shown in applicable piping code.

3.249 INSTALLATION-GENERAL

A. Join pipe and fittings in accordance with manufacturer's instructions, unless otherwise shown or specified.

B. Inspect pipe and fittings before installation, clean ends thoroughly; remove foreign matter and dirt from inside.

C. Flanged Joints:
   1. Install perpendicular to pipe centerline.
   2. Bolt Holes: Straddle vertical centerline, aligned with connecting equipment flanges or as shown.
   3. Use torque-limiting wrenches to ensure uniform bearing and proper bolt tightness.
   4. Plastic Flanges: Install annular ring filler gasket at joints of raised-face flange.
      a. Raised-Face Flanges: Use flat-face flange when joining with flat-faced ductile or cast iron flange.

D. Threaded and Coupled Joints:
   1. Conform with ANSI B1.20.1.
   2. Produce sufficient thread length to ensure full engagement when screwed home in fittings.

3. Countersink pipe ends, ream and clean chips and burrs after threading.
4. Make up connections full, with not more than three threads exposed.
5. Lubricate male threads only with thread lubricant or tape as specified on Data Sheets.

E. Couplings:
1. Install in accordance with manufacturer's written instructions.
   a. Metallic Piping Systems: Flexible couplings, transition couplings, and flanged coupling adapters specified.
   b. Nonmetallic Piping Systems: Teflon bellows connector.
   c. Concrete Encased Couplings: Sleeve type coupling.
   d. Corrosive Service Piping: Elastomer bellows connector.
2. Service Saddles:
   a. Ferrous Metal Piping (except stainless steel): Double-strap iron.
   b. Plastic Piping: Nylon-coated iron.
3. Installation:
   a. Before coupling, clean pipe holdback area of oil, scale, rust, and dirt.
   b. Do not remove pipe coating. If damaged, repair before joint is made.
   c. Clean gaskets before installation.
   d. If necessary, lubricate with gasket lubricant for installation on pipe ends.
   e. Tighten coupling bolts progressively, drawing up bolts on opposite sides a little at a time until all bolts have uniform tightness.

F. Insulating Flanges, Couplings, and Unions:
1. Install between copper and ferrous metal piping connections and where shown.
2. Drill flanges oversize to accommodate insulating sleeves through the drilling using standard bolt sizes.

G. Penetrations:
1. Watertight Penetrations:
   a. Provide wall pipes with thrust collars.
   b. Provide taps for stud bolts in flanges to be set flush with wall face.
2. Nonwatertight Penetrations:
   a. Pipe sleeves with seep ring.

H. Pipe sleeves with modular mechanical seal may be provided where fabrication of seep ring on pipe sleeve is impractical.
1. Existing Walls:
   a. Pipe sleeve with modular mechanical seal.

b. Rotary drilled holes may be provided in lieu of sleeves in concrete walls.

2. New Concrete Walls:
   a. Isolate embedded metallic piping from concrete reinforcement using coated pipe penetrations as specified in the applicable PAINTING AND PROTECTIVE COATINGS requirements, System No. 27
   b. Support wall pipes securely by formwork to prevent contact with reinforcing steel and tie wires.

I. PVC Piping:
   1. Provide Schedule 80 threaded nipple where necessary to connect to threaded valve or fitting.
   2. Use strap wrench for tightening threaded plastic joints. Do not over tighten fittings.
   3. Do not thread Schedule 40 pipe.

J. Ductile Iron Piping:
   1. Cutting Pipe: Cut pipe with milling type cutter, rolling pipe cutter, or abrasive saw cutter. Do not flame cut.
   2. Dressing Cut Ends:
      a. General: As required for the type of joint to be made.
      b. Rubber Gasketed Joints: Remove sharp edges or projections.
      c. Push-On Joints: Bevel, as recommended by pipe manufacturer.
      d. Flexible Couplings, Flanged Coupling Adapters, and Grooved End Pipe Couplings: As recommended by the coupling or adapter manufacturer.

K. Cement Mortar Lined or Coated Welded Steel and Pretensioned Concrete Cylinder Pipe:
   1. Interior Joints:
      a. Pipe Less Than 24-inch Diameter: AWWA C205 Appendix A, Paragraph A2.
      b. Pipe 24-inch Diameter and Larger: After the backfill has been placed at least to the top of the pipe zone, dampen the inside joint space with water or a neat cement slurry and fill by compacting into the joint a portland cement mortar composed of 1 part cement to not more than 2 parts fine aggregate with only sufficient water to form a stiff mix. The finished surface shall be a dense troweled surface, free of projections or depressions, and shall be flush with the interior surface of the pipe.
   2. Exterior Joints: AWWA C205, Appendix A, Paragraph A3.

3.250 INSTALLATION-EXPOSED PIPING

A. Flow Measuring Devices: Provide straight lengths upstream and downstream as required for accurate flow measurement.
B. Supports: As specified in the applicable PIPING SUPPORT SYSTEMS requirements.
C. Unions or Flanges: Provide between each blocking valve and equipment to facilitate installation and removal.
D. Install piping so that no load or movement in excess of that stipulated by equipment manufacturer will be imposed upon equipment connection; install to allow for contraction and expansion without stressing pipe, joints, or connected equipment.
E. Piping clearance, unless otherwise shown:
    1. Between Equipment or Equipment Piping and Adjacent Piping: Minimum 3 feet 0 inches, measured from equipment extremity and extremity of piping system including flanges, valve bodies or mechanisms, insulation, or hanger/support systems.
    2. From Adjacent Work: Minimum 1 inch(es) from nearest extremity of completed piping system including flanges, valve bodies or mechanisms, insulation, or hanger/support systems.
F. Valve Orientation:
    1. As shown where valve handwheels are shown.
    2. Where valve handwheels are not shown, orient to permit easy access to the valve operator, and to avoid interferences.
G. Pipe Identification: As specified in Section 31 22 25, TRENCH BACKFILL

3.251 INSTALLATION-BURIED PIPE

A. Joints:
    1. Dissimilar Buried Pipes:
        a. Provide flexible mechanical compression joints for pressure pipe.
        b. Provide concrete closure collar for gravity and low pressure (maximum 10 psi) piping or as shown.
    2. Concrete Encased or Embedded Pipe: Do not encase joints in concrete unless specifically shown.
B. Ductile Iron Pipe Corrosion Protection: As specified in the applicable PIPE CORROSION PROTECTION requirements.
C. Placement:
    1. Keep trench dry until pipe laying and joining are completed.
    2. Pipe Base and Pipe Zone: As specified in Section 31 22 25, TRENCH BACKFILL.

3. Exercise care when lowering pipe into trench to prevent twisting or damage to pipe.
4. Measure for grade at pipe invert, not at top of pipe.
5. Excavate trench bottom and sides of ample dimensions to permit proper joining, welding, visual inspection, and testing of entire joint.
6. Prevent foreign material from entering pipe during placement.
7. Close and block open end of last laid pipe section when placement operations are not in progress and at close of day's work.
8. In general, lay pipe upgrade with bell ends pointing in direction of laying.
9. Deflect pipe at joints for pipelines laid on a curve using unsymmetrical closure of spigot into bell. If joint deflection of standard pipe lengths will not accommodate horizontal or vertical curves in alignment, provide:
    a. Shorter pipe lengths.
    b. Special mitered joints.
    c. Standard or special fabricated bends.
10. Check gasket position with feeler gauge furnished by the pipe manufacturer, to assure proper seating.
11. After joint has been made, check pipe alignment and grade.
12. Place sufficient pipe zone material to secure pipe from movement before next joint is installed.
13. Prevent uplift and floating of pipe prior to backfilling.

D. PVC:
    1. Lay pipe less than 1-1/2-inch diameter snaking from one side of trench to other.
    2. Offset: As recommended by manufacturer for maximum temperature variation between time of solvent welding and during operation.
    3. Do not lay pipe when temperature is below 40 degrees F, or above 90 degrees F when exposed to direct sunlight.

E. Shield ends to be joined from direct sunlight prior to and during the laying operation.

F. Tolerances:
    1. Deflection From Horizontal Line: Maximum 2 inches.
    2. Deflection From Vertical Line: Maximum 1/2 inch(es).
    3. Joint Deflection: Maximum of 75 percent of manufacturer's recommendation.

4. Horizontal position of pipe centerline on alignment around curves maximum variation of 1.75 feet from position shown.
5. Pipe Cover: Minimum 3 feet, unless otherwise shown.

3.252 THRUST RESTRAINT

A. Location: At pipeline tees, plugs, caps, bends, and other locations where unbalanced forces exist.
B. Type: Restrained joints unless otherwise shown.
C. Thrust Ties: Anchoring of retainer glands or thrust ties with set screws is unacceptable.
D. Mechanical Joint Valve Restraint in Proprietary Restrained Joint Piping: Install pipe joint manufacturer's adapter gland follower and pipe end retainer, or thrust tie-rods and socket clamps.
E. Thrust Blocking:
   1. Place only where shown.
   2. Quantity of Concrete: Sufficient to cover bearing area on pipe and provide required soil bearing area as shown.
   3. Place blocking so that pipe and fitting joints will be accessible for repairs.
   4. Place concrete in accordance with CAST-IN-PLACE and the applicable REINFORCED CONCRETE requirements, ACI 301].
F. Welded joints shall consist of lap-welded slip joints, welded Carnegie joints, welded butt joints, or butt straps. The joints shall be installed in accordance with the detailed Drawings.
G. Mechanically restrained joints shall be as specified in the Data Sheets.
H. Ductile Iron Pipe: Restrained joint length for each location shall be
I. **3.6 times the total length shown on the Drawings, centered on the midpoint of the length shown on the Drawings.**

3.253 CORROSION PROTECTION

A. Buried Pipe: As specified in the applicable PIPE CORROSION PROTECTION requirements.
B. As specified in Piping Schedule, and as shown.
C. Notify Civil Engineer of Record at least 3 days prior to start of surface preparation, coating application, and corrosion protection work.

3.254 THREADED PIPE TAP CONNECTIONS

A. Ductile Iron Piping: Connect only with service saddle or at a tapping boss of a fitting, valve body, or equipment casting.
B. Welded Steel or Alloy Piping: Connect only with welded threadolet or half-coupling as specified on Data Sheet.
C. Limitations: Threaded taps in pipe barrel are unacceptable.

3.255 VENTS AND DRAINS

A. Vents and drains at high and low points in piping required for completed system may or may not be shown.
B. Install vents on high points and drains on low points of pipelines only where shown as shown at all low and high point locations.

3.256 CLEANING

A. Following assembly and testing, and prior to disinfection and final Design-Build acceptance, flush pipelines with water at 2.5 fps minimum flushing velocity until foreign matter is removed.
B. If impractical to flush large diameter pipe at 2.5 fps clean in-place from inside by brushing and sweeping, then flush or blow line at lower velocity.
C. Remove accumulated debris through drains 2 inches and larger or by removing spools and valves from piping.
D. Disinfection: As specified in Section 33 26 83, DISINFECTION OF WATER SYSTEMS.

3.257 FIELD QUALITY CONTROL

A. Pressure Leakage Testing: As specified in the applicable PIPING LEAKAGE TESTING requirements.
B. Required Examinations:
    1. Welding:
        a. Perform examinations in accordance with the Piping Code for Category M fluids, except that 25 percent of the circumferential butt welds shall be random radiographed.
        b. Perform examinations for every pipe thickness and for each welding procedure, progressively, for all piping covered by this section.
        c. Examine at least one of each type and position of weld made by each welder or welding operator.
        d. For each weld found to be defective under the acceptance standards or limitations on imperfections contained in the applicable Piping Code, examine two additional welds made by the same welder or welding operator that produced the defective weld. Such additional examinations are in addition to the minimum required above. Examine, progressively, two additional welds for each tracer examination found to be unsatisfactory.

END OF SECTION

Section 33 26 60.04 - WELDED STEEL PIPE AND FITTINGS	
Item	**Description**
Pipe	Carbon steel, black, ASTM A36 or ASTM A572, Grade 42, sheet or coil, electrically welded, in accordance with AWWA C200, straight or spiral seam, with not more than two longitudinal seams. Design thickness for 66 percent of minimum yield stress at hydrostatic test pressure, minimum 3/16-inch.
Linings	Cement Mortar: AWWA C205. Coal Tar Enamel: AWWA C203, Section A1.5, wrapped with kraft paper. Provide protection against heat from sun. Coal Tar Epoxy: AWWA C210 minimum two top coats. Applied by pipe manufacturer.
Coatings	Reinforced Cement Mortar: AWWA C205. Coal Tar Enamel: AWWA C203, Section A1.5, wrapped with kraft paper. Provide protection against heat from sun. Coal Tar Epoxy: AWWA C210 minimum two top coats. Polyethylene Bonded: As specified in the applicable PAINTING AND PROTECTIVE COATINGS requirements. Applied by pipe manufacturer.
Interior Bracing	60 degree spiders set 2 feet from each end and at the one-third point capable of withstanding backfill loadings. Bracing at one-third point not required for sections less than 10 feet in length.

Joints	Sized Bell and Spigot Rings: AWWA C303, Section 2.6 and 3.3. Maximum Pipe Size: 57-inch diameter. Spigot Rings: Carnegie M3516 for cylinder thickness 3/8-inch or less. Carnegie M3818 for cylinder thickness over 3/8-inch. Double fillet weld lap joint. Bell Ring Thickness: Not less than 3/16-inch or cylinder thickness. Expanded Bell and Spigot Rings: AWWA C303, Section 2.6 and 3.3. Maximum Pipe Size: 57-inch diameter and maximum cylinder thickness 5/16-inch. Spigot Rings: Carnegie M3516. Bell Ring Thickness: Not less than 3/16-inch or cylinder thickness. Rolled Spigot and Expanded Bell: AWWA C200. Maximum pipe size

Section 33 26 60.04 - WELDED STEEL PIPE AND FITTINGS

Item	**Description**
	30-inch diameter and maximum cylinder thickness 1/4-inch. Welded: AWWA C200. Required for all restrained joints and for pipe over 57-inch diameter. Optional for pipe 30-inch diameter and larger. Butt welded or lap welded using bell-and-spigot or butt strap. Flexible Couplings: Maximum Pipe Size: 57-inch diameter. Thicken pipe walls near joints to 3/8-inch minimum. Grooved-End: AWWA C606, Type B, C, or D. Victaulic coupling for pipe 24-inch or less in diameter. Thicken pipe walls near joints to 3/8-inch minimum.
Fittings	Fabricated: Carbon steel fabricated from pipe in accordance with AWWA C208; elbows to have a 22.5 degree maximum miter section angle, minimum of three sections; wyes, tees, crosses, and outlets to be reinforced in accordance with AWWA Manual M-11. Thickness not less than adjoining pipe. Provide weldolets for taps.

Flanges	AWWA C207, Class D, 150 psi or less; Class E, 150 to 250 psi; or Class F, 250 to 275 psi hub or ring type.
Bolting	Carbon steel ASTM A307, Grade A hex head bolts and ASTM A563, Grade A hex head nuts.
Gaskets	Bell-and-Spigot Joints: Synthetic rubber conforming to AWWA C303. Flanged, Water, Sewage, and Air Services: 1/16 inch thick, compressed inorganic fiber with nitrile binder, rated to 700 degrees F and 1000psi. Ring gaskets shall not be permitted. Blind flanges shall be gasketed covering the entire inside face with the gasket cemented to the blind flange.

Section 33 26 60.10
POLYVINYL CHLORIDE (PVC) PIPE AND FITTINGS (SCH 40 OR 80)

Item	Size	Description
Pipe	All	Schedule 40 or 80 PVC: Type I, Grade I or Class 12454-B conforming to ASTM D1784 and ASTM D1785. Threaded Nipples: Schedule 80 PVC.
Fittings	All	Schedule 40 or 80 PVC as Specified Under Pipe Above: ASTM D2466 and ASTM D2467 for socket-weld type and ASTM D2464 for threaded type.
Joints	All	Solvent socket-weld except where connection to valves and equipment may require future disassembly.
Flanges	All	One piece, molded hub type PVC flat face flange in accordance with Fittings above, 125 pound ANSI B16.1 drilling.
Bolting	All	Flat Face Mating Flange or In Corrosive Areas: ASTM A193 Type 316 stainless steel Grade B8M hex head bolts and ASTM A194 Grade 8M hex head nuts. With Raised Face Mating Flange: Carbon steel ASTM A307, Grade B square head bolts and ASTM A563, Grade A heavy hex head nuts.
Gaskets	All	Flat Face Mating Flange: Full faced 1/8-inch thick ethylene propylene (EPR) rubber. Raised Face Mating Flange: Flat ring 1/8-inch ethylene propylene (EPR) rubber, with filler gasket between OD of raised face and flange OD to protect the flange from bolting moment.
Solvent Cement	All	As recommended by the pipe and fitting manufacturer conforming to ASTM D2564.
Thread Lubricant	All	Teflon tape.

SECTION 33 26 83 - DISINFECTION OF WATER SYSTEMS

PART 1 GENERAL

3.258 REFERENCES

A. The following is a list of standards which may be referenced in this section:
   1. American Water Works Association (AWWA):
      a. B300, Hypochlorites.
      b. B301, Liquid Chlorine.
      c. B303, Sodium Chlorite.
      d. C651, Disinfecting Water Mains.
      e. C652, Disinfection of Water-Storage Facilities.
      f. C653, Disinfection of Water Treatment Plants.
      g. C654, Disinfection of Wells.

3.259 QUALITY CONTROL SUBMITTALS

A. Procedures and plans for disinfection and testing.
B. Type of disinfecting solution and method of preparation.
C. Training records for employees working with concentrated chlorine solutions or gas.
D. Qualifications: Independent testing agency.
E. Testing Agency:
F. Equipment: Certified calibrations, manufacturer's product data, and test procedures.
   1. Sample Collection and Analysis Procedures for:
      a. Bacteriological Samples.
      b. Chlorine Samples.
G. Certified Bacteriological Test Results:
H. Facility(ies) tested is free from coliform bacteria contamination.
   1. Forward results directly to Civil Engineer of Record
I. Method of disposal for disinfecting wastewater.

3.260 QUALIFICATIONS

A. Independent Testing Agency Certified in Puerto Rico with 10 year's experience in the field of water sampling and testing required for this Project. Calibrated testing instruments and equipment, and documented standard procedures for performing specified testing.

3.261 SEQUENCING AND SCHEDULING

A. Commence initial disinfection after completion of following:
B. Completion and acceptance of internal painting of system(s).
C. Hydrostatic and pneumatic testing, pressure testing, functional and performance testing and acceptance of pipelines, pumping systems, structures, and equipment.

D. Disinfection of:
   1. Pumps and associated system piping.
E. Treatment plant basins and processes used to supply water to system.

PART 2 PRODUCTS

3.262 WATER FOR DISINFECTION AND TESTING
A. Clean, uncontaminated, and potable.
B. Design-Build Entity shall convey in disinfected pipelines or containers or use potable water from existing pipelines.

3.263 DESIGN-BUILD ENTITY'S EQUIPMENT
A. Furnish chemicals and equipment, such as pumps and hoses, to accomplish disinfection.

3.264 MIXING DISINFECTANT
A. Prepare “stock” solution by mixing any of following as described below. The purpose of the stock solution is to facilitate mixing and dilution to ensure a uniform disinfecting solution. The Design-Build Entity will not be required to mix a stock solution if a liquid chlorine gas feed system that can accurately feed a desired amount of chlorine to mix a final (dilute) disinfecting solution is used.
B. Liquid chlorine gas conforming to AWWA B301 and water mixture.
C. Dry chlorine gas conforming to AWWA B301.
   1. Calcium hypochlorite conforming to AWWA B300 or sodium hypochlorite conforming to AWWA B303 powder or liquid and water mixture.
D. Feed dry chlorine gas through devices to regulate the rate of flow and ensure uniform diffusion of gas into water within the pipe or vessel being treated. Chlorinating devices for feeding chlorine gas solution or the gas itself shall prevent backflow of water into chlorine cylinder.
E. Use following proportions of hypochlorite or chlorine to water:
F. Chlorine Gas or Liquid (100 Percent C1): 1 pound per 11.75 gallons water.
G. Apply liquid chlorine gas-water solution by means of a solution feed chlorinating device.
H. Calcium Hypochlorite (65 to 70 Percent C1): 1 pound per 7.5 gallons water.
I. If calcium hypochlorite is used, first mix dry powder with water to make a thick paste, then thin to a 1 percent solution (10,000 ppm chlorine).
J. Sodium Hypochlorite (5.25 Percent C1): 1 gallons water.

1. If sodium hypochlorite procedures is used, dilute the liquid with water to obtain a 1 percent solution.

PART 3 EXECUTION

3.265 GENERAL

A. Disinfect pumps, tanks, filters and pipelines installed or modified under this Project, intended to hold, transport, or otherwise contact potable water:
   1. Disinfect new pipelines that connect to existing pipelines up to the point of connection.
   2. Disinfect surfaces of materials that will contact finished water, both during and following construction using spray method described below. Disinfect prior to contact with finished water. Take care to avoid recontamination following disinfection.

B. Prior to application of disinfectants, clean the tank, equipments, and pipelines of loose and suspended material. Flush pipelines until clear of suspended solid and color. Use water suitable for flushing and disinfecting.

C. Conform to AWWA C651 for pipes and pipelines, C652 for tanks and reservoirs, and AWWA C654 for wells, except as modified in these Specifications.

D. Allow freshwater and stock disinfectant solution to flow into the pipe or vessel at a measured rate so that the chlorine-water solution is at the specified strength. Do not place concentrated commercial disinfectant in the pipeline or vessel before it is filled with water.

3.266 PIPING AND PIPELINES

A. Flushing:
   1. Before disinfecting, flush all foreign matter from pipeline. Provide hoses, temporary pipes, ditches, and other conduits as needed to dispose of flushing water without damage to adjacent properties. Flushing velocities shall be at least 2.5 fps. For large diameter pipe, where it is impractical or impossible to flush the pipe at specified velocity, clean the pipeline in-place from the inside by brushing and sweeping, then flush the line.

B. Flush pipelines through flushing branches and remove branches after flushing is completed. Operate valves during flushing process at least twice during each flush.

C. Flush service connections and hydrants. Flush distribution lines prior to flushing hydrants and service connections.

D. Disinfecting Solution: Chlorine-water solution having a free chlorine concentration of not less than 50 ppm.
E. Disinfecting Procedure: In accordance with AWWA C651, unless herein modified.
F. Point of Application:
    1. Inject chlorine mixture into pipeline to be treated at beginning of line through corporation stop or suitable tap in top of pipeline.
    2. Control water from existing system to flow slowly into pipeline during application of chlorine.
    3. Control rate of chlorine solution flow in proportion to rate of water entering pipe so that combined mixture shall contain not less than 50 ppm of free available chlorine.
    4. Prevent backflow of chlorine solution into line supplying water.
G. Retention Period:
    1. Retain treated water in pipeline for at least 24 hours to destroy all nonspore-forming bacteria. At end of 24 hour period, disinfecting
    2. solution shall contain at least 10 ppm of free chlorine or the pipeline shall be recleaned, disinfecting solution shall be reapplied, and specified procedure repeated.
    3. Operate valves, hydrants, and appurtenances during disinfection to ensure that disinfecting solution is dispersed into all parts of pipeline, including dead-ends and areas that otherwise may not be treated.
    4. After disinfection, flush water from the permanent source until water through the pipeline is equal chemically and bacteriologically to permanent source of supply.

3.267 PUMPS

A. Disinfecting Solutions: Minimum free chlorine concentration of 200 ppm.
B. Disinfecting Procedure: In accordance with AWWA C 653, unless herein modified.
C. Application:
    1. Inject the disinfecting solution into the pump and associated piping and circulate for a minimum 2 hour period of time. At the end of the 2 hour period, the solution shall have a strength of at least 100 ppm free chlorine.
    2. Operate valves and/or pump appurtenances during disinfection to ensure that the disinfecting solution is dispersed into all parts of the pumps and lines.

3. If the disinfecting solution contained in the pumps has a residual free chlorine concentration less than 100 ppm after the 2 hour retention period, reclean the pump, reapply disinfecting solution, and retest until a satisfactory test result is obtained.
4. After chlorination, flush the water from the pumps until the water through the units is chemically and bacteriologically equal to the permanent source of supply.

3.268 TANK

A. Cleaning:
B. Clean interior surfaces using water under pressure before sterilizing. Isolate tank from system to prevent contaminating materials from entering the distribution system. Cleaning shall:
   1. Remove all deposits of foreign nature.
C. Remove all biological growths.
   1. Clean the slopes, walls, top, and bottom.
      a. Avoid damage to the structure.
      b. Avoid pollution or oil deposits by workers and equipment.
D. Dispose of water used in cleaning in accordance with applicable regulations before adding disinfecting solution to the reservoir.
E. Alternatively, the other structures may be cleaned by scrubbing the walls and floor with solution containing at least 200 ppm of free chlorine, rinsing the walls and floor with a stream of water, and disposing of the rinse water. The structures shall then be filled with water containing at least 2 ppm of chlorine until 1 ppm of free chlorine remains after 24 hours' contact.
F. Disinfecting Procedure: In accordance with AWWA C652, unless herein modified.
   1. Disinfect interior surfaces of the tank and inlet and outlet pipelines by the application of chlorine. Wash and disinfect surfaces even though there may be no visible evidence of contamination.
   2. Adapt procedure in Article MIXING DISINFECTANT to obtain residual chlorine concentrations required.
   3. Disinfect in accordance with one of the following methods:
      a. Spray or brush a solution containing 200 ppm of free chlorine onto the interior surfaces of tanks and reservoirs. Apply solution from the bottom up and to the entire

b. structure. Allow to remain 3 hours or until dry before being rinsed off.

G. Fill tanks and reservoirs with water containing at least 50 ppm of free chlorine. Hold solution for at least 3 hours, drain the structure, and fill with potable water.

H. Drain previous chlorine solution and fill tanks and reservoirs with chlorinated water to produce a free chlorine residual of 5 ppm after a retention period of 24 hours. After holding for 24 hours, drain the reservoir and fill with potable water.

3.269 DISPOSAL OF DISINFECTING WASTEWATER

A. Do not allow flow into a waterway without neutralizing disinfectant residual.
   1. See AWWA C652 for acceptable neutralization methods.

3.270 TESTING

A. Test Equipment:

B. Clean containers and equipment used in sampling and assure they are free of contamination.

C. Obtain sampling bottles with instructions for handling from an independent testing laboratory.

D. Chlorine Concentration Sampling and Analysis:
   1. Sampling Frequency for Disinfecting Solution: 2 Samples per Day.
   2. Residual Free Chlorine Samples: 2 Samples per Day.

E. Dechlorinated Disinfecting Wastewater Residual Samples: 2 Samples per Day.

F. Sampling Locations: Selected by Independent Testing Agency and Approved by the Civil Engineer of Record.
   1. Analysis to be performed by an independent test laboratory. Samples will be analyzed using the amperometric titration method for free chlorine as described in the latest edition of Standard Methods for Examination of Water and Wastewater.

G. After tank, pumps, and pipelines have been cleaned, disinfected, and refilled with potable water, an independent laboratory will take water Samples and have them analyzed for conformance to bacterial limitations for public drinking water supplies. Samples shall be analyzed for coliform concentrations in accordance with the latest edition of Standard Methods for the Examination of Water and Wastewater.
   1. A minimum of two Samples on each of 2 consecutive days from each separable structure and every 2,000 feet of pipeline will be obtained and analyzed by standard procedures outlined by local regulatory agencies.
   2. Sampling points will be representative as accepted by ASEM/Owner.

H. If the minimum Samples required above are not bacterially negative, the disinfecting procedure and bacteriological testing shall be repeated on the respective facilities until bacterial limits are met.

I. After initial disinfection process has been completed, fill tanks and reservoirs with water containing at least 2 ppm of free available chlorine residual; after 24 hours' contact, 1 ppm of free available chlorine must remain.

END OF SECTION

SECTION 33 27 00 - STORM DRAIN, SANITARY & DRAINAGE PIPING

PART 1 GENERAL

3.271 REFERENCES

A. The following is a list of standards which may be referenced in this section and any supplemental Data Sheets:

B. American Association of State Highway and Transportation Officials (AASHTO):

1. American National Standards Institute (ANSI)
2. American Water Works Association (AWWA):
3. American Society for Testing and Materials (ASTM):

3.272 SUBMITTALS

A. Quality Control Submittals: Manufacturer's Certification of Compliance.

PART 2 PRODUCTS

3.273 PIPE AND FITTINGS

A. PVC

B. Concrete Pipe

C. Polyethelene

PART 3 EXECUTION

3.274 INSTALLATION OF PIPE, FITTINGS, AND APPURTENANCES

A. General:
   1. Pipe laying shall proceed upgrade with spigot ends pointing in direction of flow.
   2. Excavate bell holes at each joint to permit correct assembly and inspection of entire joint.
   3. Pipe invert may deviate from line or grade up to 1/2-inch for line and 1/4-inch for grade, provided that finished pipe line will present a uniform bore, and such variation does not result in a level or reverse sloping invert, or less than minimum slope shown.
   4. Pipe bedding shall form a continuous and uniform bearing and support for the pipe barrel between joints. Pipe shall not rest directly on the bell or pipe joint.
   5. Prevent entry of foreign material into gasketed joints.

B. Plug or close off pipes which are stubbed off for manhole, concrete structure, or for connection by others, with temporary watertight plugs.

C. Ductile Iron Pipe Corrosion Protection:
   1. Remove foreign material from the exterior of the pipe.

D. Wrap pipe with polyethylene encasement tub e 2 feet longer than the pipe section prior to laying pipe section

E. After assembling the pipe joint, overlap encasement tube with adjacent tube and seal joints with securing tape.
   1. Provide additional securing tape at 3-foot intervals along the pipe.

F. Repair rips, punctures, or other damage to the polyethylene with securing tape.

G. Fittings may be wrapped with a flat sheet or split tube provided all seams are securely taped.

H. Concrete Closure Collars: Only use concrete closure collars where shown or authorized by Civil Engineer of Record.

I. Square-End Underdrains: Cover top and sides of the joints with a strip of asphalt-saturated 30 pound roofing felt.

J. Perforated Underdrain: Lay with open joints and with perforations down.

3.275 PRESSURE TESTING

A. As specified in the applicable PIPING LEAKAGE TESTING requirements.

3.276 REPAIR AND RETESTING

A. Sections of pipe not meeting the pressure test requirements shall be replaced

B. Following repairs, sections shall be retested as specified.

3.277 SEWER CLEANING

A. Before final testing, video inspection where required, and acceptance, flush and clean the entire sewer and drainage system. Remove construction debris, rocks, gravel, sand, silt, and other foreign material at the nearest controlled downstream collection point without discharging debris into existing ASEM or public systems. Use mechanical cleaning methods where necessary and submit inspection and cleaning records.

END OF SECTION

Section 33 27 00.04 DUCTILE IRON PIPE AND FITTINGS	
Pipe	Material: ASTM A746 and ANSI/AWWA C151/A21.51. Centrifugally cast, Grade 60-42-10 iron.
Interior Lining	Cement-Mortar: ANSI/AWWA C104/A21.4, except cement shall conform to ASTM C150, Type II, with seal coat.] Polyethylene: 40-mil nominal ultraviolet-resistant compound consisting of a blend of high and low density polyethylene powder, complying with ASTM D1248, carbon black and inert filler. Fusion bond compound to the interior surface, in a furnace, from beveled end to the rear of the gasket socket. Coat ends and exterior of ends to a point 1-inch outside the gasket position with 8-mil dry film thickness coal-tar epoxy.
Exterior Encasement	Polyethylene Film: ANSI/AWWA C105/A21.5 with minimum nominal thickness of 8 mils and minus tolerance of 10 percent. Provide tubes for straight pipe and sheets for fittings or tees. Securing Tape: Thermoplastic material with minimum thickness 8 mils, width 1-inch and pressure sensitive adhesive face capable of bonding to metal, bituminous coating, and polyethylene.
Fittings	ANSI/AWWA C110/A21.10.
Joints	As shown.
Plugs	Removable. Removal shall provide a socket suitable for making a flexible jointed lateral connection or extension.
Source Quality Control	In accordance with specified reference standard.

Section 33 27 00.06 POLYVINYL CHLORIDE (PVC) PIPE AND FITTINGS (SCH 35)	
Pipe: 15-inch diameter and under	ASTM D3034: Standard dimension ratio less than 35, except that the cell classification shall be 12454-B or 12454-C as defined in ASTM D1784.
Joints	ASTM D3212 rubber gasketed.
Gaskets	ASTM F477. Lubricants: As approved by manufacturer.

Fittings	PVC, gasketed. Provide plug when service piping is not required.
Plugs	Removable. Removal shall provide a socket suitable for making a flexible jointed lateral connection or extension.
Source Quality Control Testing	In accordance with specified ASTM.

Section 33 27 00.10 REINFORCED CONCRETE PIPE AND FITTINGS	
Pipe	ASTM C76, Wall B, class as shown. Mark each joint with pipe class. Rotating packer or platform not allowed.
Cement	ASTM C150, Type II, or ASTM C150, Type I, with fly ash; maximum 12 percent Tricalcium Aluminate, or ASTM C595 Rev A, Type IP, with fly ash; Cement: ASTM C150. Minimum 564 pounds per cubic yard without fly ash. Minimum 479 pounds per cubic yard with fly ash.
Ratio: Water to Cementitious Materials	Not over 0.49.
Fly Ash	ASTM C618, Class C or Class F, Tables 1 and 2 modified as follows: Loss on Ignition: Maximum 3 percent Water Requirement: Maximum 100 percent of control Ratio Percent CaO/Fe_2O_3: Maximum 1.5 or test cement fly ash mix in accordance with ASTM C1012. Mix: Equal to or better than ASTM C150, Type II cement. 85 pounds per cubic yard minimum, 160 pounds per cubic yard maximum. Test: ASTM C311 and ASTM C618.
Joints	ASTM C443 Rev A. and/or C361 Captive gasket in groove.
Rubber Gaskets	ASTM C443 Rev A.
Tee Fittings	Reinforced concrete, rubber gasketed. Provide plug when service piping is not required.
Plugs	Removable. Removal shall provide a socket suitable for making a flexible jointed lateral connection or extension.
Circumferential Reinforcement	Not closer than 1-inch to inside surface of pipe. Area of outer circular reinforcing cage not less than 75 percent of inner cage.

Elliptical Reinforcement	Not allowed.
Section 33 27 00.10 REINFORCED CONCRETE PIPE AND FITTINGS	
Source Quality Control Testing	Load Bearing 0.01-inch Crack, Compressive Strength and Absorption: ASTM C76 Load Bearing Ultimate: ASTM C76 Permeability: ASTM C497. Voids: Longitudinally sawcut one pipe from each 100 lengths of pipe manufactured in half with saw that will not damage the concrete or reinforcing steel. Inspect for voids adjacent to circumferential bars. Voids will be considered continuous if a 1/16-inch diameter pin can be inserted 1/4-inch deep. If voids exist adjacent to more than 10 percent of the circumferential bars, two additional pipe shall be tested. If either of the two pipe fail, the entire 100 lengths will be rejected.

Section 33 27 00.11 PRESTRESSED CYLINDER CONCRETE PIPE	
Pipe	AWWA Standard, reinforced with a welded steel cylinder with steel joint rings welded to its ends. The steel cylinder shall de lined with concrete, wrapped with a high tensile strength wire under tension and coated with a dense covering of cement mortar. Each pipe shall be constructed with a self-centering expansion joint sealed with a rubber gasket and capable of caring for normal movement due to earth settlement and extremes of temperature.
Dimensions	The dimensions of the straight pipe shall be in accordance with the manufacture's recommendations. Special pipe for bends, reducers, closure pieces and other fittings may be made in shorter lengths, as required. The pipe should be round and true. The average internal diameter of the straight pipe shall not be less than the nominal diameter by more than ¼ inch for sizes 36" and smaller; by more than ½ inch for sizes 54" to 78"; or by more than ¾ inch for 84" or larger

Pipe Design	3.278 The diameter of prestress wire used, its centerline spacing and the tension under which it is wound around the core shall be such that the core will be sufficiently to produce the required prestress in the core. The elastic and inelastic deformations of the concrete and steel shall be taken into consideration. The gross wrapping stress in the high tensile wire shall not exceed 75% of the minimum tensile strength of the wire. The maximum centerline spacing shall be 1-1/2 inches. Minimum clear distance between wires shall be 3/16 inches and the minimum diameter of the wire used shall be No. 8 gage 3.279 Steel sheets and steel wire of qualities other than those indicated below may be used, provided the design of the pipe is based upon the respective physical properties of the materials 3.280 The core shall not be wrapped with wire until the concrete has reached the specified seven-day compressive strength. The initial compression induced in the concrete shall not exceed 55% of its compressive strength at the time of wrapping.

Section 33 27 00.11 PRESTRESSED CYLINDER CONCRETE PIPE

Pipe Joints	3.281 The joint shall be sealed by a rubber gasket in such a manner that it will remain tight under all conditions of service, including movements due to expansion, contraction and normal settlement. Each length of pipe shall be provided with bell and spigot ends formed by steel joint rings welded to the cylinder. The spigot ring shall be lined with concrete on its interior surface and the bell ring shall be covered with concrete on its exterior surfaces. Portions of the joint rings, which will be exposed after the pipe is manufactured, shall be protected from corrosion by an approved coating. The spigot ring shall have a groove for the purpose of receiving, holding and protecting the gasket. The joint surfaces shall be of such shape and dimensions that the joint will be self-centering when the pipe is laid so that the joint will not be required to support the weight of the adjoining pipe. 3.282 Steel of flat section for bell rings 3/16" thick shall be used on pipe sizes up to and including 36" and shall conform to "Standard Specification for Hot-Rolled Carbon Steel Sheets and Strip, Structural Quality", Grade C, ASTM Designation A-570. 3.283 Steel plate for bell ring 1/4" or more in thickness and special shapes for spigot joint rings shall conform to "Standard Specification for Carbon Steel Bars Subject to Mechanical Property Requirements", Grade 50, ASTM Designation A-306. 3.284 The gasket sealing the joint shall be made of a rubber having a texture to assure a watertight and permanent seal and shall be the product of a manufacturer having at least five years' experience in the manufacture of rubber gaskets for pipe joints. The gasket shall be a continuous ring, of suitable cross-section and of such size as to fill the groove on the spigot joint ring when the pipes are laid. The rubber gasket shall be the sole element depended upon to make the joint watertight and shall have smooth surfaces free from pitting, blisters, porosity and other imperfections. Each gasket shall be subjected to a stretched of 100% and examined for any defects whilw in the stretched condition Cement mortar or plastic materials used to finish the joints shall not be depended upon for watertightness. 3.285 Natural or synthetic isoprene rubber gaskets shall comply with the following physical requirements: Tensile Strength, min. psi.... 3000 Elongation at rupture, min. percent Compression set, max. percent..... 18

Section 33 27 00.11 PRESTRESSED CYLINDER CONCRETE PIPE	
Pipe Joints (continued)	Accelerated aging Tensile strength retained, min. percent of original..... 85 Elongation retained, min. percent of original... .....80 Water absorption Volume and weight increase, max percent... .....5 Durometer hardness, points ..... 60+/- 5 (6) The physical properties of the gaskets shall be determined in accordance with the following methods; **Tensile strength** "Tension Testing of Vulcanized Rubber" ASTM Designation D-412 Elongation "Tension Testing of Vulcanized Rubber" ASTM Designation D-412 **Compression Set** "Compression Set Vulcanized Rubber" ASTM Designation D-395 Method B, age 22 hours at 70 °C. **Accelerated Aging** "Oven Test for Aging of Rubber" ASTM Designation D-573 Age 96 hours at 70 °C. **Water Absorption** "Change in Properties of Elastomeric Vulcanizates Resulting from Immersion in Liquids", ASTM Designation D-471 age 48 hours at 70 °C. **Durometer Hardness** "Indentation Hardness of Rubber and Plastics By Means of a Durometer" Type A, ASTM Designation D-2240
Section 33 27 00.11 PRESTRESSED CYLINDER CONCRETE PIPE	

Steel Cylinder	1. The steel cylinder shall be made of steel sheets not lighter than No. 18 gage for 24" thru 48" diameter pipe and 16 gage for 54" and above, both U.S. Standard and conforming to the requirements of "Standard Specification for Hot-Rolled Carbon Steel Sheets and Strip, Structural Quality", Grade C, ASTM Designation A-570 or "Standard Specification for Steel, Cold-Rolled Sheet, Carbon, Structural", ASTM Designation A-611 2. Each completed cylinder, with joint rings welded to its ends, shall be subjected to hydrostatic test by closing the ends at the joint rings; filling with water in contact with welds at all points and raising the water pressure to produce a stress of 20,000 to 25,000 psi in the cylinder. While under pressure test, all welds shall be thoroughly inspected. If any leaks are found, they shall be repaired and the cylinder shall be retested. The cylinder, with joint rings attached, shall be watertight under the required test pressure. Welding shall be by an approved process and test welds shall be furnished from the work as required.
Steel Reinforcement	The wire used for prestressing shall conform to the requirements of "Standard Specification for Hard-Drawn Steel Mechanical Spring Wire", ASTM Designation A-227 and "Standard Specification for Steel Wire, Hard-Drawn for Prestressing Concrete Pipe". ASTM Designation A-648.
Section 33 27 00.11 PRESTRESSED CYLINDER CONCRETE PIPE	

Concrete	1. Cement shall fulfill the requirements of "Standard Specification for Portland Cement", ASTM Designation C-150. Concrete aggregates shall be composed of hard durable particles, clean and free from foam or organic particles. Water used in mixing the concrete shall be clean and free from deleterious amounts of acids, alkalis or organic materials. 2. The concrete used in the manufacture of the pipe shall consist of cement, sand and crushed stone or crushed or uncrushed gravel accurately proportioned for maximum density and specified strength. In no case shall the cement content be less than 564 lbs. (6 bags) per cubic yard in the finished product. 3. The concrete shall be placed in steel molds so constructed that the inner and outer forms, joint rings and cylinder shall be held in circular and concentric positions. The molds shall be vibrated during the placing of each batch of concrete. 4. The concrete shall have a minimum strength of 3000 psi at seven days and 4500 psi at 28 days as measured by 6" x 12" companion cylinder molded in accordance with the "Standard Method for Making and Curing Concrete Compression and Flexure Test Specimens in the Field", ASTM Designation C-31, and cured in the same manner and for the same duration as the pipe. To conform to the requirements in this section, the average of any ten consecutive strength tests of cylinders representing each type of concrete shall be equal to or greater than the specified strength and not more than 20 % of the strength tests shall have values less than the specified strength.

Section 33 27 00.11 PRESTRESSED CYLINDER CONCRETE PIPE

Curing the Concrete	1. The cores shall be cured by steam or by water. Water and steam curing may be used interchangeably on a time ratio basis of 4 hours of water curing to 1 hour of steam curing, except that water curing may be used only if the minimum ambient temperature exceeds 40 ⍰F. 2. Steam Curing- the cores shall be placed in the steam-curing chamber or otherwise covered by a suitable enclosure that will allow proper circulation of steam. A delay period of from 1 to 4 hours shall be allowed before moist steam is admitted in contact with the cores. The temperatures within the enclosure shall be gradually raised to at least 110⍰F and not more than 150⍰F for a period of at least 24 hours. The present time shall be included in the 24-hour period. Curing by steam shall be continuous, except during a period sufficient to remove the forms or supporting rings. 3. The forms or rings shall not be removed until at least 6 hours after the beginning of steam curing. Following this minimum period, curing shall be continued by either steam or water. 4. Water Curing- the core shall be kept moist by water spraying for a period of 32 hours. The forms or rings shall not be removed from the core until at least 12 hours after the beginning of curing. After being placed in the storage yard, the core shall be kept moist by intermittent sprinkling for a further period of three days.
Pipe Coating	The coating, either cement mortar or concrete, shall be applied to the cores after they have been wrapped under tension with high tensile wire.
Cement Mortar Coating	The mortar used for this coating shall consist of one part of cement to not more than 3 parts of fine aggregate measured by volume, The mortar shall be placed on the pipe by machine in which the mortar, previously mixed, is driven against the exterior surface of the core to produce a dense coating around the prestress wires. Concurrently with mortar coating a cement slurry consisting of 1 bag of cement per 8 gal. of water, shall be applied just ahead of the mortar coating. The thickness of coating, measured from the outer surface of the cylinder, shall not be less than specified.

Section 33 27 00.11 PRESTRESSED CYLINDER CONCRETE PIPE

Concrete Coating	The concrete used fore this coating shall be so proportioned that the cement content is no less than 658 lbs. (7 bags) per cubic yard. The concrete shall be placed in steel molds so constructed that the outer form and the core shall be held in circular and concentric positions. The molds shall be continuously vibrated during the placing of each batch of concrete. The thickness of the coating shall not be less than 1”.
Curing of Coating	Steam Curing - The coated pipe shall be placed in the curing chamber as soon as practicable after placing the coating and shall be steamed-cured as specified under Curing of Concrete for a period of at least 12 hours. The pipe shall be handled in such a manner as to avoid injury to the coating during transportation to and from the curing chamber. Water Curing - As soon as the coating has set sufficiently, it shall be kept moist by continuous water spraying or by intermittent spraying and burlap and canvas covering for period of at least 4 days.
Curves And Fittings	Curves of a long radius may by formed by the deflection of each joint, by the use of pipe on which the spigot joint rings are placed on a bevel or by bevel adapters. Fittings shall be designed to provide the same strength as the adjacent pipes. Elbows, tees, reducers and wyes shall be of non-prestressed steel cylinder type construction. Branch connections or opening such as manholes, air valves and blow offs may be incorporated in straight pipe and shall be suitably reinforced. Fittings shall be provided with joint rings corresponding to those on adjoining straight pipes. Special adapters shall be provided where required to connect to valves or pipes of other manufacturers.

SECTION 33 27 21 - CATCH BASINS AND INLETS

PART 1 GENERAL

3.286 REFERENCES

A. The following is a list of standards which may be referenced in this section:

1. American Society for Testing and Materials (ASTM):
   a. A36, Structural Steel.
   b. A48, Gray Iron Castings.
   c. A615, Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
   d. C94, Ready-Mixed Concrete.
   e. C387, Packaged, Dry Combined Materials for Mortar and Concrete.
   f. C478, Precast Reinforced Concrete Manhole Sections.
2. American Welding Society (AWS): Code for Welding in Building Construction.

PART 2 PRODUCTS

3.287 CONCRETE

A. Concrete shall be ready-mixed, conforming to ASTM C94, Alternate 2. Compressive field strength shall be not less than 2,500 psi at 28 days. Maximum size of aggregate shall be 1-1/2 inch. Slump shall be between 2 and 4 inches. Field strength shall be assumed as equal to 85 percent of the strength of laboratory-cured cylinders.

3.288 FORMS

A. Exposed surfaces shall be plywood, others shall be steel, matched boards, plywood, or other acceptable material. Form all vertical surfaces. Provide fillets on reentrant angles. Trench walls, large rock, or earth will not be acceptable form material.

3.289 REINFORCING STEEL

A. Reinforcing steel shall conform to ASTM A615, Grade 40, deformed bars.

3.290 PRECAST UNITS

A. [A: At the option of the Design-Build Entity, approved precast units may be substituted for cast-in-place units.] Precast units shall conform to ASTM C478 except that the dimensions shall be as shown. Concrete risers for

B. extensions shall be a maximum of 6 inches high and of the same quality as the sections. Risers shall be reviewed by Civil Engineer of Record before installation.

3.291 MORTAR

A. Standard premixed mortar conforming to ASTM C387, Type S, or proportion 1 part portland cement to 2 parts clean, well-graded

sand which will pass a 1/8-inch screen. Admixtures may be used not exceeding the following percentages of weight of cement: Hydrated lime, 10 percent; diatomaceous earth or other inert materials, 5 percent. Consistency of mortar shall be such that it will readily adhere to the concrete.

3.292 FRAMES AND GRATES

A. Frames and grates for catch basins and storm drain inlets shall be fabricated of steel conforming to ASTM A36 in accordance with the details shown. All connections shall be welded. Welding shall conform to requirements of current Code For Welding in Building Construction of the American Welding Society. Frames and grates shall be properly cleaned and given a shop coat of red lead paint.

3.293 FRAMES AND GRATINGS

A. Cast iron frames and gratings for catch basins and storm drain inlets shall be as indicated. Bearing surfaces shall be clean and shall provide uniform contact. Castings shall be tough, close-grained gray iron, sound, smooth, clean, free from blisters, blowholes, shrinkage, cold shuts, and all defects, and shall conform to ASTM A48, Class 30.

PART 3 EXECUTION

3.294 EXCAVATION AND BACKFILL

A. Excavation as required to accomplish the construction. Backfill shall be as specified for the adjoining pipe trench.

3.295 CONSTRUCTION OF CATCH BASINS AND INLETS

A. Construct inlets and catch basins at the locations shown and in accordance with the Drawings. Construct forms to the dimensions and elevations required. Forms shall be tight and well braced. Chamfer corners of forms.

B. Prior to placing the concrete, remove all water and debris from the forms. Moisten forms just prior to placing the concrete. Handle concrete from the transporting vehicle to the forms in a continuous manner as rapidly as practical without segregation or loss of ingredients. Immediately after placing, compact concrete with a mechanical vibrator. Limit the duration of vibration

C. to the time necessary to produce satisfactory consolidation without causing segregation.

D. Screed the top surface of exposed slabs and walls. When the initial water has been absorbed, float the surfaces with a wood float and lightly trowel with a steel trowel to a smooth finish free from marks or irregularities. Finish exposed edges with a steel edging tool. Remove forms and patch any defects in the

concrete with mortar mixed in the same proportions as the original concrete mix.

E. Cure concrete by preventing the loss of moisture for a period of 7 days. Accomplish with a membrane-forming curing compound. Apply the curing compound immediately after removal of forms or finishing of the slabs. Protect concrete from damage during the 7 day curing period.

3.296 PLACING PRECAST UNITS

A. Where trench-bottom material is unsuitable, provide foundation stabilization accepted by the Civil Engineer of Record and include it in the Design-Build scope. Set units to final lines and grades.

3.297 EXTENSIONS

A. Install extensions as shown. Lay risers in mortar with sides plumb and tops to grade. Joints shall be sealed with mortar, with interior and exterior troweled smooth. Prevent mortar from drying out and cure by applying a curing compound. Extensions shall be watertight.

3.298 INSTALLATION OF FRAMES AND GRATES

A. Set frames and grates at elevations indicated or as determined in the field and in conformance with the Drawings.

B. Frames may be cast in, or shall be set in mortar.

3.299 CLEANING

A. Upon completion, clean each structure of all silt, debris, and foreign matter.

5. Design of manhole frame to structure seals.

C. Quality Control Submittals:
   1. Proposed curing method for cast-in-place concrete structures.
   2. Precast Manhole Sections: Manufacturer's results of tests performed on representative sections to be furnished.
   3. Certified load test data for precast manhole steps.
   4. Design-Build Entity’s plan for diversion of flow during installation of manhole over existing piping.

PART 2 PRODUCTS

3.302 PRECAST MANHOLES

A. Riser Sections:
   1. Minimum 48 inches in diameter.
   2. Fabricate in accordance with ASTM C478-94.
   3. Minimum Wall Thickness: 4 inches or 1/12 times inside diameter, whichever is greater.
   4. Top and bottom shall be parallel.
   5. Joints: Tongue-and-groove or confined groove with mortar. Confined O-ring with rubber gaskets meeting ASTM C443 REV A-85.

B. Cone Sections:
   1. Provide concentric and/or eccentric cones as required by the design.
   2. Same wall thickness and reinforcement as riser section.

C. Base Sections and Base Slab:
   1. Base Sections: Base slab integral with sidewalls.
   2. Fabricate in accordance with ASTM C478-94.

D. Manhole Extensions:
   1. Concrete grade rings; maximum 6 inches high.
   2. Fabricate in accordance with ASTM C478-94.

E. Preformed Plastic Gaskets:
   1. Hamilton Kent Manufacturing Co., Box 178, Kent, OH 44240, Kent-Seal No. 2.

F. K. T. Snyder Co., Inc., Central National Bank Bldg., Houston, TX 77002, Ram-Nek.

G. Steps:

H. Fabricate from minimum 3/4-inch steel bar meeting ASTM A36/A36 REV B-93.

I. Minimum Width: 12 inches, center-to-center of legs, drop pattern with a 2-inch drop and 2-inch hook on the embedment end.

J. Make bends around a 1-inch radius minimum, 2-inch radius maximum mandrel.
   1. Galvanize to meet ASTM A123 REV A-89 after bending.
   2. Cast in manhole sections by manufacturer.

K. Load Test: Capable of withstanding ASTM C478-94 vertical and horizontal load tests.
L. Source Quality Control:
M. All test specimens shall be mat tested and meet the permeability test requirements of ASTM C14-94.
    1. Conduct tests at point of manufacture prior to delivery of any section.
    2. Sections to be tested will be selected at random from stockpiled material to be supplied for the project.

3.303 CAST-IN-PLACE MANHOLES

A. Reinforcing Steel: Furnish as specified in the applicable REINFORCING STEEL and REINFORCED CONCRETE requirements.
B. Concrete: Furnish as specified in the applicable CAST-IN-PLACE CONCRETE and REINFORCED CONCRETE requirements.

3.304 MANHOLE FRAMES AND COVER

A. Castings:
    1. Tough, close-grained gray iron, sound, smooth, clean, free from blisters, blowholes, shrinkage, cold shuts, and defects.
    2. Cast Iron: ASTM A48-94 Class 30B and/or 35B
    3. Ductile Iron: ASTM A536-84, Grade 60-40-12.
    4. Plane or grind bearing surfaces to ensure flat, true surfaces.
B. Cover: True and seat within ring at all points in 2-inch raised letters.
C. Watertight Covers: High temper phosphor bronze with 60,000 psi minimum tensile strength meeting ASTM B139-90.

3.305 WATERTIGHT FRAME FASTENERS

A. Galvanize after fabrication in conformance with ASTM A123 REV A-94.

3.306 MANHOLE FRAME TO STRUCTURE SEALS

A. Gasket:
    1. Extrude or mold from a high-grade rubber compound.
    2. Comply with materials test requirements of ASTM C923-94.
    3. Minimum Thickness: 3/16-inch.
    4. Minimum Unstretched Length: Sufficient to extend from the manhole frame, across a maximum of 12 inches of extension rings, to the manhole cone section.
    5. Fabricate bands for compressing sleeve against manhole from Type 304 stainless steel:
        a. Channeled Sheet: Minimum 16 gauge, ASTM A167-94.
        b. Round: 5/16-inch diameter, ASTM A240-94.
B. Screws, Bolts, or Nuts: Stainless steel conforming to ASTM F593-91 and ASTM 594-91, Type 304.
C. The internal gasket or its appurtenances shall not extend into the manhole opening to restrict entry into or exit from the manhole.

D. The gasket shall be made only of materials that have been proven to be resistant to the following exposures and conditions:
   1. Sanitary sewage.
   2. Corrosion or rotting under wet or dry conditions.
   3. Gaseous environment in sanitary sewers and at road surfaces including common levels of ozone, carbon monoxide, and other trace gases at the sites of installation.
   4. Biological environment in soils and sanitary sewers.
   5. Chemical attack by road salts, road oil, and common street spillages or solvents used in street construction or maintenance.
   6. Temperature ranges, variations, and gradients in the area of construction.
   7. Variations in moisture conditions and humidity.
   8. Fatigue failure caused by a minimum of 30 freeze-thaw cycles per year.
   9. Vibrations due to traffic loadings.
   10. Fatigue failure due to repeated variations of tensile, compressive and shear stresses, and repeated elongation and compression.
   11. Any combination of the above.
E. Materials used shall be compatible with each other and with the manhole materials.
F. Design gasket to meet the following requirements:
   1. Continuously prevent leakage of water from outside the manhole into the manhole at the joints between the manhole frame and the cone section.
   2. At the same time, seal shall remain flexible, allowing repeated vertical movements of the frame from 0 to 2 inches, or repeated horizontal movements of the frame with respect to the top of the extension or cone of from 0 to 1/2-inch due to pavement movements or other causes, or both types of movement occurring simultaneously at rates not exceeding 1/10-inch per minute.

3.307 MORTAR

A. Standard premixed in accordance with ASTM C387-87, or proportion 1 part portland cement to 2 parts clean, well-graded sand which will pass a 1/8-inch screen.
B. Admixtures: May be included but do not exceed the following percentages of weight of cement:
   1. Hydrated Lime: 10 percent.
   2. Diatomaceous Earth or Other Inert Material: 5 percent.
C. Mix Consistency:

D. Tongue-and-Groove Type Joint: Such that mortar will readily adhere to pipe.
E. Confined Groove (Keylock) Joint: Such that excess mortar will be forced out of groove and support is not provided for section being placed.

3.308 CLEANOUT FRAMES AND COVERS

A. Castings:
B. Tough, close-grained gray iron, sound, smooth, clean, free from blisters, blowholes, shrinkage, cold shuts, and defects.
    1. Cast Iron: ASTM A48-94, Class 30B and/or 35B
    2. Ductile Iron: ASTM A536-84, Grade 65-40-12.
    3. Plane or grind bearing surfaces to ensure flat, true surfaces.
C. Covers: True and seat within frame at all points.

3.309 IMPORTED PIPE BASE

A. Furnish as specified in Sections: 31 22 20, FILL AND BACKFILL and 31 22 25, TRENCH BACKFILL.

3.310 MANHOLE MARKER POSTS

A. Size and Type: 4 inches by 4 inches by 8 feet, S4S, cedar, pine, redwood, or fir, Construction Grade or better.
B. Prime the top (exposed) 3 feet, 8 inches, followed by two coats of safety orange enamel.
    1. Primer:
        a. Koppers; 625 Undercoater.
        b. Tnemec; 36-603 Undercoater.
    2. Enamel:
        a. Koppers; Glamortex 501 Enamel.
        b. Tnemec; Series 2 Tnemec Gloss.
C. Bottom (Buried) Portion:
    1. Treat the bottom 4 feet, 4 inches with a solution consisting of 5 percent by weight of pentachlorophenol dissolved with a petroleum solvent.
D. At Design-Build Entity's option, entire post may be treated provided 30 days elapse prior to painting.
E. Lettering:
    1. Stencil the letters on all sides of each post.
    2. Letters to be black enamel, 2 inches high.

3.311 FLEXIBLE JOINTS

A. Manufacturers:
    1. "Kor-N-Seal" flexible rubber boot with stainless steel accessories as manufactured by Kor-N-Seal Co. (NPC Systems, Inc.), Milford, New Hampshire 03055.
    2. "Z-Lok XP" or "A-LOK" flexible connectors as manufactured by A-Lok Products, Inc., Tullytown, Pennsylvania 19007.

PART 3 EXECUTION

3.312 GENERAL

A. Remove and keep all water clear from the excavation during construction and testing operations.

B. Place imported pipe base material on undisturbed earth; thoroughly compact with a mechanical vibrating or power tamper.

3.313 EXCAVATION AND BACKFILL

A. Excavation: As specified in Section 31 22 05, EXCAVATION.

B. Backfill: As specified in Sections 31 22 20, FILL AND BACKFILL and 31 22 25, TRENCH BACKFILL.

3.314 INSTALLATION OF PRECAST MANHOLES

A. Concrete Base:

1. Cast-In-Place:

B. Vibrate to densify concrete and screed so first precast manhole section to be placed has a level, uniform bearing for full circumference.

1. Deposit sufficient mortar on base to assure watertight seal between base and manhole wall, or place first precast section of manhole in concrete base before concrete has set. Properly locate and plumb first section.
2. Precast:
   a. Place on compacted imported base material.
   b. Properly locate, ensure firm bearing throughout, and plumb first section.

C. Sections:

1. Thoroughly clean ends of sections to be joined.
2. Thoroughly wet joint with water prior to placing mortar.
3. Locate precast steps in line with each other to provide a continuous vertical ladder.

D. Mortar Joints:

1. Place mortar on groove of lower section prior to section installation.
2. Fill joint completely with mortar of proper consistency.
3. Trowel interior and exterior surfaces smooth on standard tongue-and-groove joints.
4. Prevent mortar from drying out and cure by applying an approved curing compound or comparable approved method.
5. Do not use mortar mixed for longer than 30 minutes.
6. Chip out and replace cracked or defective mortar.
7. Completed Manholes: Rigid and watertight.

E. Preformed Plastic Gaskets (In lieu of mortar joints):

1. Carefully inspect precast manhole sections to be joined.

2. Do not use sections with chips or cracks in the tongue.
3. Use only pipe primer furnished by gasket manufacturer.
4. Install gasket material in accordance with manufacturer's instructions.
5. Completed Manholes shall be rigid and watertight.

F. Rubber Gasketed Joints: Install in accordance with manufacturer's instructions.

G. Extensions:
1. Provide on manholes in streets or other locations where a subsequent change in existing grade may be likely.
2. Install to height not exceeding 12 inches.
3. Lay grade rings in mortar with sides plumb and tops level.
4. Seal joints with mortar as specified for sections, and make watertight.

3.315 MANHOLE INVERT

A. Construct with smooth transitions to ensure an unobstructed flow through manhole. Remove sharp edges or rough sections which tend to obstruct flow.

B. Where full section of pipe is laid through manhole, break out top section as shown and cover exposed edge of pipe completely with mortar. Trowel mortar surfaces smooth.

3.316 CAST-IN-PLACE MANHOLE

A. Reinforcing Steel: Install as specified in the applicable REINFORCING STEEL and REINFORCED CONCRETE requirements.

B. Concrete: Install as specified in the applicable CAST-IN-PLACE CONCRETE and REINFORCED CONCRETE requirements.

C. Steps:
1. Install manhole steps at 16 inches on center, plus or minus 1/4-inch tolerance, and locate to provide a continuous vertical ladder.
2. Do not vary spacing between any two adjacent steps by more than 1/2-inch.
3. The distance between wall of manhole and center of rung, measured at the point of embedment, shall be not less than 4 inches nor more than 6-1/4 inches.
4. Minimum Embedment: 3 inches.

3.317 MANHOLE FRAMES AND COVERS

A. Set frames in bed of mortar with mortar carried over flange as shown.

B. Set tops of covers flush with surface of adjoining pavement or ground surface, unless otherwise shown or directed.

C. At locations shown, install exterior manhole frame to structure seals in accordance with manufacturer's instructions.

3.318 WATERTIGHT MANHOLES

A. Install frame fasteners at the locations shown.

3.319 MANHOLE PIPING

A. Drop Assembly:
   1. Extend pipe from the drop to a minimum of 3 feet beyond the manhole excavation into the trench, and connect to sewer pipe with an adapter.
   2. Support lower drop elbow with concrete monolithically-placed with manhole base.

B. Flexible Joints:
   1. Provide in all pipe not more than 1-1/2 feet from manhole walls.
   2. Where last joint of pipe is between 1-1/2 and 6 feet from manhole wall, provide a flexible joint in the manhole wall.

C. Stubouts For Future Connections:
   1. Provide same type and class of pipe as specified for use in service connection, lateral, main, or trunk sewer construction. Where there are two different classes of pipe at a manhole, use the higher strength pipe.
   2. Grout pipe in precast walls or manhole base to provide watertight seal or use flexible joints as specified herein.
   3. Maximum Length: 1-1/2 feet outside manhole wall.
   4. Construct invert channels as shown. Unless otherwise approved by Civil Engineer of Record, match inside top elevation of service connection pipe to inside top elevation of outlet pipe.
   5. Test Plugs:
      a. Install rubber-gasketed plugs in end of stubouts with gasket joints similar to sewer pipe being used.
      b. Plugs shall withstand internal or external pressures without leakage.
      c. Adequately brace plugs against all hydrostatic or air test pressures.

D. Permanent Plugs:
   1. Clean interior contact surfaces of pipes to be cut off or abandoned as shown, and construct plug as follows:
      a. Pipe 18 Inches or Less in Diameter: Concrete plug in end, minimum 8 inches in length.
      b. Pipe 21 Inches and Larger:
         1) Construct plugs of common brick, concrete block, or concrete.
         2) Plaster exposed face of block or brick plugs with mortar.
      c. Plugs shall be watertight and capable of withstanding internal and external pressures without leakage.

3.320 MANHOLES OVER EXISTING PIPING

A. Maintain flow through existing pipe lines at all times.

B. Plastic Pipe:

1. Use solvent recommended by pipe manufacturer to slightly soften the pipe wall.
2. Apply a dense coating of clean mortar sand over all areas that will be in contact with concrete.
3. Allow mortar to dry completely prior to placing concrete.

C. Concrete Pipe: Apply a bonding agent on all surfaces to be in contact with concrete.
D. Construct base under existing piping.
E. Construct manhole as specified.
F. Break out existing pipe within new manhole, cover edges with mortar, and trowel smooth.
G. Protect new concrete and mortar work for 7 days after placing concrete.

3.321 CONNECTIONS TO EXISTING MANHOLES

A. Break out existing manhole bases or grouting as necessary.
B. Clean all surfaces and apply a bonding agent.
C. Regrout to provide smooth flow into and through manholes.
D. Provide diversion facilities and perform work necessary to maintain flow during connection.

3.322 FIELD QUALITY CONTROL

A. Hydrostatic Testing:
   1. When, in Civil Engineer of Record's opinion, the groundwater table is too low to permit visual detection of infiltration leaks, hydrostatically test all project manholes.
   2. Procedure: Plug inlets and outlets and fill manhole with water to height determined by Civil Engineer of Record.
   3. A manhole may be filled 24 hours prior to time of testing, if desired, to permit normal absorption into the pipe walls to take place.
   4. Leakage in each manhole shall not exceed 0.1 gallon per hour per foot of head above the invert.
   5. Repair manholes that do not meet the leakage test, or do not meet specified requirements from visual inspection.
B. Testing Cast-In-Place Manhole Steps:
C. Test each step for a horizontal pullout load of 400 pounds with the load applied over a width of 3-1/2 inches and centered on the rung.
   1. Apply the load at a uniform rate until the required test load is reached.
   2. Provide suitable hydraulic jacks and gauges to perform the test.
D. Steps will be considered acceptable if they remain solidly embedded after application of the test load and if no cracking or fracture of the step nor spalling of the concrete, masonry, or mortar is evident.
E. Replace, or reset and retest, steps failing to withstand required load.

END OF SECTION

3.0 STRUCTURAL PRELIMINARY TECHNICAL SPECIFICATIONS

STRUCTURAL PRELIMINARY TECHNICAL SPECIFICATIONS

These structural technical specifications are issued as part of the RFP as **basis-of-design (bridging) documents**. They establish the Owner's minimum quality, materials, and performance standards for structural and structural-related work. They are **not** a final, permitted, construction-ready specification package.

These specifications implement the structural system established in the *Puerto Rico Trauma Hospital — Structural Systems Bridging Document*, which governs the selection of structural systems, seismic performance objectives, and design criteria for this Project. Where these technical specifications and the Narrative conflict, the Narrative governs system selection and performance criteria, and these specifications govern material quality, testing, and workmanship standards for the systems the Narrative establishes.

As part of the Design-Build scope of work, the selected Design-Build Entity's structural Engineer of Record (EOR) — licensed in the Commonwealth of Puerto Rico — shall:

1. Complete final structural design and produce fully coordinated construction documents based on these specifications, the Structural Design Intent Narrative, the RFP Design Criteria, drawings, and geotechnical data furnished by the Owner.
2. Resolve all bracketed selections [ ] and editor notes remaining in these sections, in accordance with the Puerto Rico Building Code (current adopted edition, based on the *International Building Code*), ASCE/SEI 7 (*Minimum Design Loads and Associated Criteria for Buildings and Other Structures*), ACI 318, TMS 402/602, and all other codes and standards referenced herein, in the Narrative, or otherwise applicable.
3. Design the facility as a Risk Category IV, essential facility including compliance with all applicable seismic, wind, flood, and continuity-of-operations requirements applicable in Puerto Rico, and any additional criteria issued by the Puerto Rico Health Facilities and Services Administration and other Authorities Having Jurisdiction, consistent with the Maximum Capacity Immediate Occupancy performance objective established in the Narrative.
4. Verify that all material strengths, exposure classes, durability requirements, and tolerances are adequate for a mission-critical healthcare facility located in a high-seismic, hurricane-prone coastal environment, and increase any requirement herein where necessary to meet code minimums, the Narrative's design criteria, or Owner's project requirements.
5. Submit design mixtures, shop drawings, and calculations sealed by the Puerto Rico-licensed Engineer of Record for Owner's review in accordance with the Conditions of the Contract and the applicable submittal procedures.

Nothing in these specifications relieves the Design-Build Entity of its responsibility to design and construct the Project in full compliance with all applicable codes, standards, the Structural Design Intent Narrative, and the Puerto Rico Building Code, as they may be more

stringent than the minimums indicated herein. The Design-Build Entity's Structural Engineer of Record shall independently verify that all requirements in these sections are appropriate to this Project's actual site conditions, seismic isolation system, foundation type, and loads, and shall not assume applicability of any detail, method, or criterion originating from the reference project without independent verification.

The proposed foundation system, footings, deep foundation, underpinning elements for adjacent structure protection; excavation, shoring, and dewatering; shall be in accordance with the Geotechnical Investigation and Soil Study.

GENERAL REQUIREMENTS FOR STRUCTURAL WORK

SECTION 01 45 00 — QUALITY ASSURANCE: STRUCTURAL TESTING AND INSPECTION

1. GENERAL

   A. Quality assurance is testing and inspection to assist the Owner in evaluating the Contractor's performance and quality control in the fabrication shop and field. It is not a substitute for the testing and inspection that are required as part of the Contractor's quality control program.

   B. Cost: Except as specifically noted otherwise, the testing agency for quality assurance shall be engaged and paid by the Contractor.

2. SCOPE

   See Section 03 30 00 and Structural Steel Framing.

   The term "Testing Agency" in this Specification section is defined as an independent testing and inspection service engaged by the Contractor for quality assurance testing and inspection of structural construction in accordance with applicable building code provisions and any additional activities listed in the Contract Documents.

   The term "Geotechnical Engineer" in this Specification section is defined as an independent geotechnical engineering service engaged by the Contractor for quality assurance testing and inspection of the actual soil conditions to verify compliance with the geotechnical conditions, recommendations and design values described in the Project Geotechnical Report and used as the basis of design for the most current Contract Documents.

A. Testing Agency shall provide qualified personnel at the site to test and inspect materials installed by and work performed by the Contractor

B. Refer to the drawings for Special Inspections requirements for the Project. The Special Inspections shown on the drawings may contain additional testing and inspection that is not listed in this specification section.

3. TESTING AGENCY QUALIFICATIONS

   A. Testing Agency shall be an independent agency with the experience and capability to conduct testing, inspection and sampling as indicated in accordance with ASTM E 329.

   B. Testing Agency shall be an agency approved by the local building official to perform Special Inspections and other related services as outlined in the governing project Building Code.

C. Testing, inspection, and sampling shall be done in accordance with the applicable ASTM standards.

D. Personnel performing visual inspection and non-destructive testing of welds shall meet the requirements of AWS D1.1 for weld inspectors and shall have current certification as an AWS Certified Welding Inspector.

4. TESTING AGENCY RESPONSIBILITIES

A. Provide qualified personnel at the site to test and inspect structural construction as the work progresses using the most current Contract Documents and approved shop drawings.

B. Provide additional testing and inspection as needed due to the following:

1. Work performed contrary to Drawings and Specifications

2. Work performed with improper supervision

3. Work performed without prior notice

C. Report deficiencies to Contractor, Owner, and Design Professionals within 24 hours.

D. Rejection: The Testing Agency has the right to reject any material at any time, when it is determined that the material or workmanship does not conform to the Contract Documents and shall immediately notify the Owner, Design Professionals, and Contractor of deficiencies. Failure to detect any defective work or material shall not prevent later rejection when such a defect is discovered nor shall it obligate Design Professionals for final acceptance.

E. Noncompliance Log: Indicate to the Contractor where remedial work must be performed and maintain a current log of work not in compliance with the Contract Documents. This noncompliance log shall be submitted to the Design Professionals and Owner on a weekly basis.

F. Reports: Prepare daily inspection, observation, and/or test reports as required herein and provide an evaluation statement in each report stating whether or not the work conforms to requirements of Specifications and Drawings and shall specif ically note deviations from them. The daily reports shall be collected and submitted for record to the Design Professionals and Owner weekly.

G. Certification: Upon completion of work and resolution of remedial items, certify in a letter to the Design Professionals and Owner that the installation is in accordance with the requirements of the Drawings and Specifications.

5. CONTRACTOR RESPONSIBILITIES

Testing Agency to assure that all test and inspection procedures required by the Contract

Documents and Public Agencies are provided. The Contractor shall cooperate fully with the Testing Agency in the performance of their work and shall provide the following:

1. The Contractor shall have sole responsibility for coordinating their work Information as to time and place of starting shop fabrication and field construction/erection, at least one week prior to the beginning of the work.
2. The most up to date construction schedule.
3. At least 24 hours advance notice of work requiring testing and inspection.
4. Access to areas as required for testing and inspection.
5. Site File: At least one copy of the most current Contract Documents and approved shop drawings shall be kept available in the contractor's field office. Drawings not bearing evidence of approval and release for construction by the Design Professionals shall not be kept on the job. Provide drawings for the work to be performed in the shop or field one week prior to the start of work.
6. Representative material samples requested by the Testing Agency for testing, if necessary.
7. Full and ample means of assistance for testing and inspection of material.
8. Facilities for proper storage of material samples as required.
9. Proper facilities, including scaffolding, temporary work platforms, safety equipment etc., for inspection of the work in shop and field.
10. Immediately notify the Contractor's Testing Agency and Design Professionals in writing of conditions that will adversely affect the work.
11. Materials and installed work may require testing and retesting at any time during progress of work, as directed by Design Professionals. Tests, including retesting of rejected materials for installed work will be done at Contractor's expense.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

1. GENERAL

    A. Testing Agency shall provide qualif ied personnel at site to test and inspect structural construction using the latest Contract Documents and approved submittals as indicated in the following sections.

2. CONCRETE FORMWORK

A. Quality Assurance:

1. Prior to placement of reinforcement, inspect formwork for grade, quality of material, absence of foreign matter, and other imperfections that might affect concrete placement and tolerances stated herein.

2. Inspect formwork for shape, location and dimensions of the concrete member being formed.

3. Inspect formwork for compliance with specified tolerances, block outs, camber, shoring ties and seal of form joints.

4. Verify condition of bond surfaces, locations and sizes of all accessories, embedment items, and anchorage for prevention of displacement.

5. Verify proper use/application of form release agents.

6. Verify in-situ concrete strength meets requirements for formwork removal in specification section 03 10 00 prior to removal of shores and formwork from beams and structural slabs.

7. Inspect concrete surfaces immediately after removal of formwork and prior to any patching or repair work.

3. CONCRETE REINFORCEMENT AND EMBEDDED ITEMS

A. Quality Assurance:

1. Prior to placement, inspect reinforcement and embeds for grade, quality of material, absence of foreign matter, and for suitable storage.

2. Provide continuous inspection of reinforcement and embedded assemblies during placement and immediately prior to concreting operations for: size, quantity, vertical and horizontal spacing and location, correctness of bends and splices, mechanical splices, clearances, compliance with specified tolerances, security of supports and ties, concrete cover, and absence of foreign matter.

3. Inspect epoxy-coated reinforcement for coating damage and required applied coatings.

4. Provide continuous inspection of adhesive anchors installed in horizontal or upwardly inclined orientations and those marked on the latest Drawings.

5. Adhesive anchors shall be proof tested in tension as follows:

    1. Testing Agency shall submit an adhesive anchorage proof testing plan to the SER for review and approval prior to performing the anchor proof testing. The anchorage testing plan shall meet the requirements as specified in this section and indicate which anchors have been selected for testing.

a) Proof testing shall be performed as a confined tension test in accordance with the guidelines of ASTM E488 and the requirements of ACI 355.4.

b) Testing shall be performed after the minimum curing period specified by the manufacturer.

c) 10 percent of each type and size of an adhesive anchor assembly and 100 percent of anchors marked shall be proof tested in tension by the Contractor's Testing Agency.

d) All anchors selected for proof testing shall be production anchors. Sacrificial anchors are not acceptable for inclusion in the proof testing plan unless specifically approved by the SER prior to performance of the testing.

e) The adhesive anchors proof tension loads shall be as specified in the general notes of the structural drawings.

f) Anchors shall have no visible indications of displacement or damage during or after proof load application. Concrete cracking in the vicinity of the anchor after loading shall be considered a failure.

g) If more than 10% of the tested adhesive anchors fail to achieve the specified proof load, 100% of the anchors of the same diameter and type as the failed anchor shall be proof tested, unless otherwise direct in writing by the SER. Immediately notify the SER of all failed proof tests.

    1. Mechanical post-installed anchors shall be proof tested as follows:

a) Testing Agency shall submit a mechanical anchorage proof testing plan to the SER for review and approval prior to performing the anchor proof testing. The anchorage testing plan shall meet the requirements as specified in this section and indicate which anchors have been selected for testing.

b) 10 percent of each type and size of mechanical anchor shall be proof tested by the Contractor's Testing Agency. The required proof test for the anchors is as follows:

c) For torque-controlled mechanical anchors, a proof torque shall be applied to the anchor using a calibrated torque wrench and the proof torque shall be achieved with no more than one-half turn of the anchor nut.

d) The required proof torque load for torque-controlled mechanical anchors shall be as specified in the general notes of the structural drawings.

e) All anchors selected for proof testing shall be production anchors. Sacrificial anchors are not acceptable for inclusion in the proof testing plan unless specifically approved by the SER prior to performance of the testing.

f) Concrete cracking in the vicinity of the anchor during or after proof torque load application shall be considered a failure.

g) If more than 10% of the tested mechanical anchors fail to achieve the specified proof torque load or set, 100% of the anchors of the same diameter and type as the failed anchor shall be proof tested, unless otherwise direct in writing by the SER. Immediately notify the SER of all failed proof tests.

1. Periodic inspection for post-installed adhesive and mechanical anchors shall be provided in accordance with the building code except that continuous inspection shall be provided for the conditions identified in section B.4. The inspector shall observe all aspects of the anchor installation and shall, at a minimum, verify the following items:

a) Hole drilling method in accordance with the Manufacturer's Published Installation Instructions (MPII) and these installation requirements.

b) Anchor spacing and edge distance.

c) Hole diameter and depth.

d) Hole cleaning in accordance with the MPII.

e) Anchor element type, material, diameter, and length.

f) For adhesive anchors, adhesive identification and expiration date.

g) For adhesive anchors, adhesive installation in accordance with the MPII.

h) For torque-controlled mechanical anchors, the number of turns required to achieve the anchor set torque per the MPII.

4. CAST-IN-PLACE CONCRETE

Source Quality Assurance: The Contractor's Testing Agency shall conduct concrete quality evaluations for compliance with Specifications as follows:

a) Review and test Contractor's proposed materials.

b) Review and test Contractor's proposed concrete mix designs.

c) Confirm production samples at plants or stockpiles are consistent with approved mix designs. Additionally confirm the following:

i. Test for free water in aggregate

ii. Confirm supplier's documentation of compliance with ASTM standards for mix components

iii. Aggregates are from a single source throughout the project for exposed concrete

iv. The same brand of Portland Cement is from a single source

d) Check batching and mixing operations to extent deemed necessary to assure compliance with ASTM C94

A. Quality Assurance:

1. Monitor concrete placement as follows:

a) Verify use of required design mix

b) Record location of point of concrete discharge of each batch truck tested, cross referenced to grid lines.

c) Record temperature of concrete at time of placement.

d) Record weather conditions at time of placement, including temperature, wind speed, relative humidity, and precipitation.

e) Record types and amounts of admixtures added to concrete at the project site.

f) Record amount of water added at the site and verify that total water content does not exceed amount specified in the mix design. Addition of water at the site is subject to prior approval by the Design Professional.

g) Monitor consistency and uniformity of concrete.

h) Monitor preparation for concrete operations, placement of concrete, and subsequent curing period for conformance with Specifications for following procedures:

i. Concrete curing.

ii. Hot weather concreting operations.

iii. Cold weather concreting operations.

1. Conduct tests of concrete as follows and in accordance with ASTM C 1077:

a) Testing frequency: Sample sets for all tests listed below of each concrete design mix placed each day shall be taken not less than once a day, nor less than once for each 100 cubic yards of concrete, nor less than once for each 5000 square feet of surface area for slabs or walls. Additional tests shall be performed if deemed necessary by

the Contractor's Testing Agency and Design Professionals. In addition, sample each truckload used for columns, regardless of other frequencies listed above.

b) Obtain each test sample from different batches selected on a strictly random basis before commencement of concrete placement. Record location in structure of sampled concrete.

c) Determine air content of normal weight concrete in accordance with either ASTM C 231 or ASTM C 138. Determine air content of lightweight concrete in accordance with ASTM C 173. Conduct one test for air content for each strength test required or for every 50 cubic yards of fly ash concrete placed, whichever is less.

d) Determine unit weight of lightweight concrete in accordance with ASTM C 567.

e) Test water content of freshly mixed concrete on a random basis, a minimum of once per 100 cubic yards or every 5000 square feet of concrete placement, during placement in accordance with AASHTO T 318 for the following concrete types:

    i. Hard troweled slabs exposed to view

    ii. Slab to receive a bonded finish floor material

    iii. Slabs with specified concrete compressive strength exceeding 5000 psi

f) Conduct slump tests in accordance with ASTM C 143.

g) Slump indicated in mix designs shall be achieved at point of placement. Correlation between slump at point of initial discharge from truck and point of placement must be established to determine amount of slump loss which occurs between initial discharge and point of placement. Adjustment may be necessary to achieve slump indicated in mix designs at point of placement.

h) Conduct slump tests for Self-Consolidating Concrete (SCC) as follows

    i. In accordance with ACI 237, where sec is used, perform slump flow and visual stability index tests in accordance with ASTM C1611 on the first batch of SCC, and then consecutive batches until two consecutively produced batches are within specification, sec with a visual stability index value of 2 or 3 shall be stabilized, where possible, with a viscosity modifying admixture or rejected at the discretion of the Engineer and Ready-Mix Quality Control Representative. The Ready-Mix Producer shall be responsible for adjusting the mix to provide desired flow and stability. After establishing the consistency of the SCC mix, testing shall continue in accordance with the requirements of the above parag raph.

i) Conduct strength tests of concrete as follows:

i. Secure sample sets in accordance with ASTM C 172.

ii. Mold cylinders in accordance with ASTM C 31 and cure under standard moisture and temperature conditions in accordance with ASTM C 31, Section 7. Quantity of cylinders listed below is based on a cylinder size of 4-inch diameter x 8 inches long. If 6-inch diameter by 12-inch-long cylinders are used, the total quantity of cylinders may be reduced by one with two cylinders instead of three tested at the age designated for determination of f'c.

iii. Test cylinders in accordance with ASTM C 39. For specified concrete strength of 5,000 psi and above, cylinders shall be ground and not capped.

iv. For 28-day mixes mold six cylinders. Test two cylinders at seven days and three cylinders at 28 days. The 28-day strength shall be the average of the three 28-day cylinders. One cylinder shall be retained in reserve for later testing if required.

v. For 56-day mixes mold seven cylinders. Test one cylinder at seven days, two cylinders at 28 days, and three cylinders at 56 days. The 56-day strength shall be the average of the three 56-day cylinders. One cylinder shall be retained in reserve for later testing if required.

vi. For 90 day mixes mold eight cylinders. Test one cylinder at seven days, one at cylinder at 28 days, two cylinders at 56 days, and three cylinders at 90 days. The 90 day strength shall be the average of the three 90 day cylinders. One cylinder shall be retained in reserve for later testing if required.

vii. When high early strength concrete is required by Contractor, additional cylinders shall be made and tested as required at Contractor's expense.

viii. If one cylinder in a test manifests evidence of improper sampling, molding or other damage, discard cylinder and base test results on that of remaining cylinder.

1. Evaluate concrete for conformance with Specifications as follows:

a) Slump:

Maintain a slump moving average, comprised of the average of all batches or most recent five (5) batches tested, whichever is fewer.

b) Strength test:

i. Maintain a compressive strength moving average, comprised of three (3) consecutive strength test results, for each mix design used in work.

ii. Strength level of concrete will be considered satisfactory provided averages of all sets of three (3) consecutive strength test results (i.e. moving average) equal or exceed specified 28-day strength, and no individual strength test result falls below specified 28-day strength by more than 500 psi.

iii. If strength tests fail to meet minimum requirements, concrete represented by such tests shall be considered questionable and shall, if deemed appropriate by the SER, be subject to further evaluation by core testing as specified herein or other testing methods.

iv. Maintain a log that contains the results of all concrete strength tests. The log shall include the results of each test performed, be in electronic spreadsheet format, and updated and submitted along with concrete test data. See example log attached at the end of this Specification Section.

c) Conduct core tests on questionable concrete in accordance with ACI 318 and ASTM C 42.

i. Location of cores shall be coordinated with Design Professionals so as to least impair strength of structure. Before testing cores, discard and replace any that show evidence of having been damaged subsequent to or during removal from structure or which have reinforcement present.

ii. Cores from structure exposed to soil or constant moisture in service (e.g. basement walls, retaining walls, slab -on-grade, piers, footings, etc.)shaII be tested in a fully saturated condition. Cores for all other concrete may be tested dry. Prior to commencement of coring, verify with Design Professionals whether cores are to be tested wet or dry.

iii. Fill core holes with low slump concrete or mortar with a strength equal to or greater than that specified for area cored.

d) Concrete in area represented by core test will be considered adequate if average strength of cores is equal to at least 85% of, and if no single core is less than 75% of specified strength.

1. Floor flatness and levelness tolerance compliance testing is to be performed within 72 hours of concrete placement by Testing Agency, and prior to the removal of shores and forms.

a) Testing Agency to test and report flatness (FF), levelness (FL) prior to shoring removal. For slabs that include camber, do not test for levelness (FL). Perform FFIFL testing in accordance with ASTM E 1155 requirements.

1. FOOTINGS

A. Quality Assurance by Geotechnical Engineer (or Testing Agency if the same entity):

1. Review Contractor's proposed footing installation methods, sequences, and procedures.

2. Verify bearing stratum and bearing capacity of each footing; verify levelness of footing end bearing surface.

3. Determine final bearing elevation at each footing location.

4. Observe, record, and report footing as-built plan location, footing size and final elevations of bottom (where possible) and top of completed footings.

5. Coordinate with Testing Agency.

B. Quality Assurance by Testing Agency:

1. Inspection of Batch Plant: As required to ensure that concrete delivered to job complies with Specifications and design mix. Batch plant inspection shall be required once at start of job and thereafter if concrete falls below Specifications.

2. Inspection of Reinforcement: Provide continuous visual inspection of site fabrication. Record the steel reinforcement bar sizes, grade, length, and number of bars.

3. Inspection of Concrete and Reinforcement Placement: Provide continuous visual inspection of installation of reinforcement and concrete placement including verification of laitance removal at top of footings.

4. Check ready mix delivery tickets for correct concrete mix desig n number. Record batch to placement time. Check slump, temperature, and batch to placement time for each set

5. Slump Tests: ASTM C143. Make one test from each truck.

6. Concrete Compressive Strength Tests: Testing agency will take a minimum of one sample set of concrete cylinders per 20 cubic yards of concrete. See CAST-IN-PLACE CONCRETE section of this specification for requirements. Cure cylinders to simulate same curing conditions as concrete in footings. Reports of cylinder tests shall state footing location(s), laboratory or site curing, compression strength, type of fracture, age at testing, concrete supplier, mix specification strength, any other pertinent information, test results, and conclusions.

7. Additional Tests: Perform additional testing if, in the opinion of the Design Professionals, concrete of poor quality has been placed based on cylinder strengths below Specification requirements or visual defects. Tests may be compression tests on cored cylinders, ASTM C42, and load tests as outlined in ACI 318, or as directed by the Design Professionals. Complete continuous

coring of footings will be required, at Contractor's expense, where verification of quality of concrete is not otherwise attainable.

END OF SECTION 01 45 00

EXISTING CONDITIONS AND STRUCTURAL DEMOLITION

SECTION 02 41 16 — STRUCTURE DEMOLITION

1. GENERAL
    1. SUBMITTALS
        A. Action Submittals:
            1. Demolition procedures.
        B. Closeout Submittals: Site plan Indicating locations and sizes of existing [pier] [pile] [____] foundations.
2. PRODUCTS

Not used

3. EXECUTION
    1. DEMOLITION
        A. Remove slabs and foundations to [full depth.] [depth indicated.]
        B. Remove tops of [pier] [pile] [____] foundations to [24] [__] inches below final grade. [Document remaining foundation locations and sizes.]
        C. Remove associated walks, paving, curbs, gutters, and site improvements.
        D. Remove underground utilities to locations indicated or to points agreed to with serving utility services. Flag underground utilities to remain.
        E. Backfill excavations [in maximum [10] [__] inch deep, loose, even, horizontal lifts, using clean soil. Uniformly compact each lift to density of existing soils.] [to requirements of Earth Moving.]
    2. MATERIAL DISPOSAL
        A. Store materials designated to remain property of Owner where directed.
        B. Remove other materials from Project site.
    3. SCHEDULES
        A. Existing Materials to be Removed and Retained by Owner:

1. [____.]
2. [____.]

B. Existing Materials to be Removed by [Contractor] [Construction Manager] [Design/Builder] for Owner's Use:

1. [____.]
2. [____.]

END OF SECTION

SECTION 02 41 19 — SELECTIVE DEMOLITION

1. GENERAL
    1. SUBMITTALS
        A. Action Submittals:
            1. Shop Drawings: Illustrate areas for demolition, demolition sequence, and materials salvaged for Owner's use.
2. PRODUCTS

Not used

3. EXECUTION
    1. DEMOLITION
        A. Remove existing construction to extent indicated.
        B. Protect work designated to remain.
        C. Plug ends of disconnected utilities. Protect and support utilities designated to remain.
    2. MATERIAL DISPOSAL
        A. Store materials designated to remain property of Owner where directed.
        B. Remove other materials from Project site.
    3. SCHEDULES
        A. Existing Materials to be Removed and Retained by Owner:
            1. [____.]
            2. [____.]
        B. Existing Materials to be Removed by [Contractor] [Construction Manager] [Design/Builder] for Owner's Use:
            1. [____.]
            2. [____.]

END OF SECTION

STRUCTURAL CONCRETE WORK

SECTION 03 01 30 — MAINTENANCE OF CAST-IN-PLACE CONCRETE

1. GENERAL
    1. SUMMARY
        A. Section Includes:
            1. Removal of deteriorated concrete and subsequent patching.
            2. Floor joint repair.
            3. Epoxy crack injection.
            4. Corrosion-inhibiting treatment.
            5. Polymer sealers.
    2. PREINSTALLATION MEETINGS
        A. Preinstallation Conference: Conduct conference at [**Project site**].
    3. ACTION SUBMITTALS
        A. Product Data: For each type of product.
        B. Samples: Cured Samples for each exposed product and for each color and texture specified.
    4. INFORMATIONAL SUBMITTALS
        A. Material certificates.
        B. Product test reports.
        C. Field quality-control reports.
    5. QUALITY ASSURANCE
        A. Concrete-Maintenance Specialist Qualifications: Engage an experienced concrete-maintenance firm that employs installers and supervisors who are trained and approved by manufacturer to apply [**packaged patching-mortar**] [**crack-injection adhesive**] [**corrosion-inhibiting treatments**] [**and**] [**polymer sealers**] to perform work of this Section. Firm shall have completed work similar in material, design, and extent to that indicated for this Project with a record of successful

in-service performance. Experience in only installing or patching new concrete is insufficient experience for concrete-maintenance work.

2. PRODUCTS

A. Source Limitations: For repair products, obtain each color, grade, finish, type, and variety of product from single source and from single manufacturer with resources to provide products of consistent quality in appearance and physical properties.

1. BONDING AGENTS

A. Epoxy-Modified, Cementitious Bonding and Anticorrosion Agent: Manufactured product that consists of water-insensitive epoxy adhesive, portland cement, and water-based solution of corrosion-inhibiting chemicals that forms a protective film on steel reinforcement.

B. Epoxy Bonding Agent: ASTM C881/C881M, bonding system [**Type II**], or [**Type V**], depending on the application and free of VOCs.

C. Latex Bonding Agent, Redispersible: ASTM C1059/C1059M, Type I[**for use at nonstructural and interior locations unless otherwise indicated**].

D. Latex Bonding Agent, Non-Redispersible: ASTM C1059/C1059M, Type II[**for use at structural and exterior locations and where indicated**].

2. PATCHING MORTAR

A. Patching Mortar Requirements:

1. Only use patching mortars that are recommended by manufacturer for each applicable horizontal, vertical, or overhead use orientation.

2. Color and Aggregate Texture: Provide patching mortar and aggregates of colors and sizes necessary to produce patching mortar[**where indicated**] that matches existing, adjacent, exposed concrete. Blend several aggregates if necessary to achieve suitable matches.

3. Coarse Aggregate for Patching Mortar: ASTM C33/C33M, washed aggregate, Size No. 8, Class 5S. Add to patching-mortar mix only as permitted by patching-mortar manufacturer.

B. Cementitious Patching Mortar: Packaged, dry mix for repair of concrete.

1. Compressive Strength: As minimum as provided by the product specified on drawings.

C. Polymer-Modified, Cementitious Patching Mortar: Packaged, dry mix for repair of concrete and that contains a[**non-redispersible**] latex additive as either a dry powder or a separate liquid that is added during mixing.

1. Compressive Strength: As minimum as provided by the product specified on drawings.

D. Polymer-Modified, Silica-Fume-Enhanced, Cementitious Patching Mortar: Packaged, dry mix for repair of concrete and that contains silica fume complying with ASTM C1240 and a[**non-redispersible**] latex additive as either a dry powder or a separate liquid that is added during mixing.

1. Compressive Strength: As minimum as provided by the product specified on drawings.

3. JOINT FILLER

A. Epoxy Joint Filler: Two-component, semirigid, 100 percent solids, epoxy resin with a Type A Shore durometer hardness of at least 80 according to ASTM D2240.

B. Polyurea Joint Filler: Two-component, semirigid, 100 percent solids, polyurea resin with a Type A Shore durometer hardness of at least 80 according to ASTM D2240.

C. Color: [**As selected by Architect/Engineer from the full range of industry colors**]

4. EPOXY CRACK-INJECTION MATERIALS

In "Epoxy Crack-Injection Adhesive" Paragraph below, Type I is for non-load-bearing applications and Type IV is for load-bearing applications.

A. Epoxy Crack-Injection Adhesive: ASTM C881/C881M, bonding system [**Type I,**], or [**Type IV,**] [**Type IV at structural locations and where indicated, Type I at other locations;**]

1. Capping Adhesive: Product manufactured for use with crack-injection adhesive by same manufacturer.

5. CORROSION-INHIBITING MATERIALS

A. Corrosion-Inhibiting Treatment: Waterborne solution of alkaline corrosion-inhibiting chemicals for concrete-surface application that penetrates concrete by diffusion and forms a protective film on steel reinforcement.

6. POLYMER-SEALER MATERIALS

    A. Epoxy Polymer Sealer: Low-viscosity epoxy, penetrating sealer and crack filler recommended by manufacturer for penetrating and sealing cracks in exterior concrete traffic surfaces; [**VOC content 100 g/L or less**]

        1. Color: [**As selected by Architect/Engineer from full range of industry colors**].

    B. Methacrylate Polymer Sealer: Low-viscosity, high-molecular-weight methacrylate**,** penetrating sealer and crack filler recommended by manufacturer for penetrating and sealing cracks in exterior concrete traffic surfaces; [**VOC content 100 g/L or less**].

1. Color: [**As selected by Architect/Engineer from full range of industry colors**].

7. MISCELLANEOUS MATERIALS

    A. Portland Cement: ASTM C150/C150M, Type I, II, or III unless otherwise indicated.

    B. Water: Potable.

8. MIXES

    A. General: Mix products, in clean containers, according to manufacturer's written instructions.

    B. Dry-Pack Mortar: Mix required type(s) of patching-mortar dry ingredients with just enough liquid to form damp cohesive mixture that can be squeezed by hand into a ball but is not plastic.

3. EXECUTION

    1. CONCRETE MAINTENANCE

        A. Have concrete-maintenance work performed only by qualified concrete-maintenance specialist.

        B. Comply with manufacturers' written instructions for surface preparation and product application.

    2. EXAMINATION

        A. Notify Architect/Engineer seven days in advance of dates when areas of deteriorated or delaminated concrete and deteriorated reinforcing bars will be located.

        B. Locate areas of deteriorated or delaminated concrete using hammer or chain-drag sounding and mark boundaries. Mark areas for removal

by simplifying and squaring off boundaries. At columns and walls make boundaries level and plumb unless otherwise indicated.

C. Pachometer Testing: Locate at least three reinforcing bars using a pachometer, and drill test holes to determine depth of cover. Calibrate pachometer using depth of cover measurements, and verify depth of cover in removal areas using pachometer.

D. Perform surveys as the Work progresses to detect hazards resulting from concrete-maintenance work.

3. PREPARATION

A. Ensure that supervisory personnel are on-site and on duty when concrete maintenance work begins and during its progress.

B. Protect persons, motor vehicles, surrounding surfaces of building being repaired, building site, plants, and surrounding buildings from harm resulting from concrete maintenance work.

1. Comply with each product manufacturer's written instructions for protections and precautions.

2. Contain dust and debris generated by concrete maintenance work and prevent it from reaching the public or adjacent surfaces.

3. Protect floors and other surfaces along haul routes from damage, wear, and staining.

4. Provide supplemental sound-control treatment to isolate removal and dismantling work from other areas of the building.

5. Neutralize and collect alkaline and acid wastes for disposal off Owner's property.

C. Existing Drains: Prior to the start of work in an area, test drainage system to ensure that it is functioning properly. Notify Architect immediately of inadequate drainage or blockage. Do not begin work in an area until the drainage system is in working order.

1. Prevent solids such as aggregate or mortar residue from entering the drainage system. Clean out drains and drain lines that become sluggish or blocked by sand or other materials resulting from concrete maintenance work.

2. Protect drains from pollutants. Block drains or filter out sediments, allowing only clean water to pass.

D. Preparation for Concrete Removal: Make explorations, probes, and inquiries as necessary to determine condition of construction to be removed in the course of repair.

1. Verify that affected utilities have been disconnected and capped.

2. Provide and maintain shoring, bracing, and temporary structural supports as required to preserve stability and prevent unexpected or uncontrolled movement, settlement, or collapse of construction being demolished and construction and finishes to remain. Strengthen or add new supports when required during progress of removal work.

E. Reinforcing-Bar Preparation: Remove loose and flaking rust from exposed reinforcing bars by [**high-pressure water cleaning**] [**or**] [**wire brushing**] until only tightly adhered light rust remains.

1. Where section loss of reinforcing bar is more than 1/16" bar diameter, cut bars and remove and replace as indicated on Drawings.

2. Remove additional concrete as necessary to provide at least 3/4-inch clearance at existing and replacement bars.

3. Splice replacement bars to existing bars according to ACI 318 (ACI 318M) by lapping, welding, or using mechanical couplings.

F. Preparation of Floor Joints for Repair: Saw-cut joints full width to edges and depth of spalls, but not less than specified on drawings or [**3/4 inch**] deep. Clean out debris and loose concrete; vacuum or blow clear with compressed air.

4. REMOVAL OF CONCRETE

A. Do not overload structural elements with debris.

B. Saw-cut perimeter of areas indicated for removal as specified on drawings or to a depth of at least [**1/2 inch**]. Make cuts perpendicular to concrete surfaces and no deeper than cover on reinforcement.

C. Remove deteriorated and delaminated concrete by breaking up and dislodging from reinforcement.

D. Remove additional concrete if necessary to provide a depth of removal of at least [**1/2 inch**] over entire removal area.

E. Where half or more of the perimeter of reinforcing bar is exposed, bond between reinforcing bar and surrounding concrete is broken, or reinforcing bar is corroded, remove concrete from entire perimeter of bar and to provide at least 3/4-inch clearance around bar.

F. Test areas where concrete has been removed by tapping with hammer, and remove additional concrete until unsound and disbonded concrete is completely removed.

G. Provide surfaces with a fractured profile of at least 1/8 inch that are approximately perpendicular or parallel to original concrete surfaces. At columns and walls, make top and bottom surfaces level unless otherwise directed.

H. Thoroughly clean removal areas of loose concrete, dust, and debris.

5. APPLICATION OF BONDING AGENT

A. Epoxy-Modified, Cementitious Bonding and Anticorrosion Agent: Apply to reinforcing bars [**and concrete**]. Apply to reinforcing bars in two coats, allowing first coat to dry two to three hours before applying second coat. Allow to dry before placing patching mortar.

B. Epoxy Bonding Agent: Apply to reinforcing bars[**and concrete**], leaving no pinholes or other uncoated areas.[**Apply to reinforcing bars in at least two coats, allowing first coat to dry before applying second coat.**] Place patching mortar while epoxy is still tacky. If epoxy dries, recoat before placing patching mortar.

C. Latex Bonding Agent, Type I: Apply to concrete by brush roller or spray. Allow to dry before placing patching mortar.

D. Latex Bonding Agent, Type II: Mix with portland cement and scrub into concrete surface. Place patching mortar while bonding agent is still wet. If bonding agent dries, recoat before placing patching mortar.

E. Slurry Coat for Cementitious Patching Mortar: Wet substrate thoroughly and then remove standing water. Scrub a slurry of neat patching mortar[**mixed with latex bonding agent**] into substrate, filling pores and voids.

6. INSTALLATION OF PATCHING MORTAR

A. Place patching mortar as specified in this article unless otherwise recommended in writing by manufacturer[**or where dry-pack mortar is indicated**].

1. Provide forms where necessary to confine patch to required shape.

2. Wet substrate and forms thoroughly and then remove standing water.

B. Pretreatment: Apply specified [**bonding agent**] [**slurry coat**] [**bonding agent and slurry coat**].

C. General Placement: Place patching mortar by troweling toward edges of patch to force intimate contact with edge surfaces. For large patches, fill edges first and then work toward center, always troweling toward edges of patch. At fully exposed reinforcing bars, force patching mortar to fill space behind bars by compacting with trowel from sides of bars.

D. Vertical Patching: Place material in lifts of not more than thickness recommended by manufacturer. Do not feather edge.

E. Overhead Patching: Place material in lifts of not more than thickness recommended by manufacturer. Do not feather edge.

F. Consolidation: After each lift is placed, consolidate material and screed surface.

G. Multiple Lifts: Where multiple lifts are used, score surface of lifts to provide a rough surface for placing subsequent lifts. Allow each lift to reach final set before placing subsequent lifts.

H. Finishing: Allow surfaces of lifts that are to remain exposed to become firm and then finish to a similar surface of adjacent concrete.

I. Curing: Wet-cure cementitious patching materials, including polymer-modified cementitious patching materials, for not less than seven days by water-fog spray or water-saturated absorptive cover.

7. INSTALLATION OF DRY-PACK-MORTAR

A. Use dry-pack mortar for deep cavities[**and where indicated**]. Place as specified in this article unless otherwise recommended in writing by manufacturer.

1. Provide forms where necessary to confine patch to required shape.

2. Wet substrate and forms thoroughly and then remove standing water.

B. Pretreatment: Apply specified [**bonding agent**] or [**mortar scrub coat**] as manufacturer recommended.

C. Place dry-pack mortar into cavity by hand, and compact tightly into place. Do not place more material at a time than can be properly compacted. Continue placing and compacting until patch is approximately level with surrounding surface.

D. After cavity is filled and patch is compacted, trowel surface to match profile and finish of surrounding concrete.

E. Wet-cure patch for not less than seven days by water-fog spray or water-saturated absorptive cover.

8. FLOOR-JOINT REPAIR

A. Cut out deteriorated concrete [**and reconstruct sides of joint with patching mortar**] as indicated on Drawings. Install joint filler in nonmoving floor joints where indicated and as specified in this article.

Joint depth is critical to successful joint-filler installation. For joint repairs where filler is supported on shoulders created by saw-cutting slabs, 3/4 to 1 inch is considered acceptable; for unsupported filler, 2 inches is required.

B. Depth: Install joint filler to a depth of at least [**1 inch**]. Use fine silica sand no more than 1/4 inch deep to close base of joint. Do not use sealant backer rods or compressible fillers below joint filler.

C. Top Surface: Install joint filler so that when cured, it is flush at top surface of adjacent concrete. If necessary, overfill joint and remove excess when filler has cured.

9. EPOXY CRACK INJECTION

A. Clean cracks with oil-free compressed air or low-pressure water to remove loose particles.

B. Clean areas to receive capping adhesive of oil, dirt, and other substances that would interfere with bond.

C. Place injection ports as recommended by epoxy manufacturer, spacing no farther apart than thickness of member being injected. Seal injection ports in place with capping adhesive.

D. Seal cracks at exposed surfaces with a ribbon of capping adhesive at least 1/4 inch thick by 1 inch wider than crack.

E. Inject cracks wider than 0.003 inch to a depth of 8 inches.

F. Inject epoxy adhesive, beginning at widest part of crack and working toward narrower parts. Inject adhesive into ports to refusal, capping adjacent ports when they extrude epoxy. Cap injected ports and inject through adjacent ports until crack is filled.

G. After epoxy adhesive has set, remove injection ports and grind surfaces smooth.

10. APPLICATION OF CORROSION-INHIBITING-TREATMENT

A. Apply corrosion-inhibiting treatment to [**surfaces indicated on Drawings].**

B. Apply by brush, roller, or airless spray in two coats at manufacturer's recommended application rate. Remove film of excess treatment before patching treated concrete[**or applying a sealer**].

11. APPLICATION OF POLYMER SEALER

A. Apply polymer sealer by brush, roller, or airless spray at manufacturer's recommended application rate.

B. Apply to traffic-bearing surfaces, including parking areas and walks.

12. FIELD QUALITY CONTROL

A. Testing Agency: [**Desing-builder will engage**] a qualified testing agency to perform tests and inspections.

Retain "Perform the following tests and inspections" Paragraph below to require Contractor to perform tests and inspections.

B. Perform the following tests and inspections:

1. Packaged, Cementitious Patching Mortar: <**3**randomly selected sets of samples for each type of mortar required, tested according to ASTM C928/C928M.

2. Joint Filler: Core-drilled samples to verify proper installation.

a. Testing Frequency: One sample for each 100 feet of joint filled.

b. Where samples are taken, refill holes with joint filler.

3. Epoxy Crack Injection: Core-drilled samples to verify proper installation.

a. Testing Frequency: [**Three samples from mockup and**]one sample for each 100 feet of crack injected.

b. Where samples are taken, refill holes with epoxy mortar.

C. Product will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

END OF SECTION 030130

SECTION 03 10 00 — CONCRETE FORMWORK

1. GENERAL

   Work of this Section shall conform to requirements of Drawings and general provisions of the Contract, including General and Supplementary Conditions and applicable General Requirements specifications.

2. SCOPE

   Provide all labor, materials, equipment, services and transportation for formwork and related accessories required to complete all cast-in-place concrete work as shown on Drawings, as specified herein, and as required by the job conditions.

3. RELATED WORK SPECIFIED IN OTHER SECTIONS

   Submittals Quality Control

   Quality Assurance: Structural Testing and Inspection Concrete Reinforcement and Embedded Assemblies Cast-In-Place Concrete

   Exposed-To-View Cast-In-Place Concrete Thermal and Moisture Protection

4. CODES AND STANDARDS

   Section 01 45 00

   Section 03 20 00

   Section 03 30 00

A. Building Code: Concrete work shall conform to the requirements of the Building Code identified on the Structural General Notes, and OSHA requirements, except where more stringent conditions or criteria occur in the standards referenced below and on the Drawings.

B. Standards:

   1. ACI 117 — Standard Specifications for Tolerances for Concrete Construction and Materials.

   2. ACI 237 — Self Consolidating Concrete.

   3. ACI 301 —Specifications for Structural Concrete.

   4. ACI 318 — Building Code Requirements for Structural Concrete and Commentary.

5. ACI 347 — Guide to Formwork for Concrete.

6. ACI 347.2R — Guide for Shoring/Reshoring of Concrete Multistory Buildings

C. Definitions:

1. See Section 03 30 00.

5. CONTRACTOR QUALIFICATIONS

A. The work of this section shall be performed by a company specializing in the type of concrete formwork required for this Project, with a minimum of 10 years of documented successful experience and shall be performed by skilled workers thoroughly experienced in the necessary crafts.

B. Contractor's testing agency Services: Required as specified in General Requirements and herein.

C. Materials and installed work may require testing and retesting at any time during progress of work, as directed by Design Professionals. Tests, including retesting of rejected materials for installed work will be done at Contractor's expense.

6. SUBMITTALS

A. Required Submittals - Where the SUBMITTALS section of this Specification is in conflict with the applicable submittal requirements, the more stringent requirements for the Contractor apply. Required submittal items are listed here; see below for detailed requirements. Do not submit items not requested.

(1) Submittal Schedule

(2) Shop Drawings

(3) Shoring/Reshoring Calculations

(4) Product Data

(5) Samples

(6) Compatibility Certification

(7) Hazardous Materials Notification

1. **Submittal Schedule:** See Section 03 30 00.

Shop Drawings:

1. Submit for action: Formwork shop drawings sealed and signed by a Professional Engineer licensed in Puerto Rico. Shop drawings shall clearly indicate but not be limited to the following:

1. Size, type and quality of form materials including conditions at tops and ends of walls. (If wood is used, indicate species.)

2. Form construction indicating structural stability and jointing including special form joints or reveals required by Contract Documents

3. Location and pattern of form tie placement, and other items that affect the appearance of concrete that will remain exposed to view.

4. Form finish clearly indicating proper locations and full coordination with concrete finishes required by Contract Documents.

5. Layout, procedures, and sequencing of shoring and reshoring that correlates with the information contained in the shoring/reshoring calculations described below.

6. Locations and dimensions of openings in structural members including floor slab, shear walls, columns and beams. See SUBMITTALS Section of Specification 03 30 00.

7. Location of proposed construction joints in walls, floors, slabs, and beams. See SUBMITTALS Section of Specification 03 30 00.

2. **Shoring/Reshoring Calculations:** Submit for record. Calculations sealed and signed by a Professional Engineer licensed in Puerto Rico. Calculations shall clearly address but not be limited to the following:

   a. Shoring removal and reshoring installation procedure including timing and sequencing.

   b. Concrete age and strength at the time of each shoring/reshoring operation.

   c. Description of construction loads assumed including concrete, formwork, and construction live load in accordance with ACI 347.

   d. Description of the distribution of construction loads between the shored/reshored levels.

   e. The total construction load imposed on all levels supporting shoring/reshoring at each stage of the shoring/reshoring cycle.

   A written statement by the Professional Engineer that the total construction load imposed on any level supporting shoring/reshoring, at all stages of the shoring/reshoring cycle, accounting for concrete age and relative strength at time of loading, meets the requirement of Section 3.2.

3. Product Data: Submit for action copies of manufacturers' product data and installation instructions for proprietary materials used in exposed concrete work, including form liners, release agents, manufactured form systems, ties, and accessories.

4. Samples: At request of Architect, submit for record samples of form ties and spreaders.

5. **Compatibility Certification:** Submit for record a written statement certifying that form release agent used is compatible with subsequent architectural finish materials applied to concrete surfaces. Submit along with manufacturer's data.

6. **Hazardous Materials Notification:** Submit for record. In the event no product or material is available that does not contain hazardous materials as determined by the Owner, a "Material Safety Data Sheet" (MSDS) equivalent to OSHA Form 20 shall be submitted for that proposed product or material prior to installation.

A. Submittal Process: See Section 03 30 00.

B. SER Submittal Review: See Section 03 30 00.

C. Substitution Request: See Section 03 30 00.

D. Request for Information (RFI): See Section 03 30 00.

1. FORMWORK DESIGN

   A. Design of Formwork, Shoring/Reshoring, and its removal is the Contractor's responsibility.

   B. Design, erect, support, brace and maintain formwork so that it will safely support vertical and lateral loads per SEI/ASCE 37-02 that might be applied, until such loads can be supported by the concrete structure.

   C. Design Requirements:

1. Forms shall be designed for fabrication and erection in accordance with Design Professionals' requirements and recommendations of ACI 301, 318 and 347.

2. Design formwork in a manner such that the total construction load does not at any time exceed the total design load of new or existing construction and accounts for concrete age and relative strength at time of loading. See Section 3.2 Shoring/reshoring requirements.

3. Design formwork for loads and lateral pressures outlined in Section 2.2, ACI 347, and wind and seismic loads as specified by SEI/ASCE 37-02 unless otherwise controlled by local building code.

4. Design formwork to include loads imposed during construction, including weight of construction equipment, concrete mix, height of concrete drop, rate of filling of formwork, vibrator frequency, ambient temperature, foundation pressures, lateral stability, temporary imbalance or discontinuity of building components, and other factors pertinent to safety of structure during construction.

5. The use of flowing concrete (8” to 10” slump) of Self-Consolidating Concrete requires a review of the formwork design based on the rate of placement and setting time of the mix. Unless shown to be sufficient otherwise, formwork design shall conform to the requirements of ACI 237.

2. DELIVERY, STORAGE, AND HANDLING

    A. Comply with General Conditions and General Requirements, including the following:

        1. Store forms and form materials clear of ground and protect from damage.

3. QUALITY ASSURANCE BY CONTRACTOR'S TESTING AGENCY

    A. See Section 01 45 00.

4. QUALITY CONTROL BY CONTRACTOR

    A. See Section 03 30 00.

5. OBSERVATIONS AND CORRECTIONS BY DESIGN PROFESSIONALS

    A. See Section 03 30 00.

6. PERMITS AND WARRANTY

    A. Permits: See Section 03 30 00.

    B. Warranty: See Section 03 30 00. Failures include but are not limited to the following:

        1. Discoloration of concrete scheduled to remain exposed to view.

        2. Damage of concrete finishes caused by forms.

        3. Damage of concrete caused by form stripping.

        4. Non-compliance with form finishes required for designated architectural finishes.

        5. Non-compatibility of form release agent with subsequent architectural finish materials applied to concrete surfaces.

        6. Excessive and/or noticeable bowing in placed concrete members caused by deflection of formwork during concrete placement.

PART 2 - PRODUCTS

1. FORMWORK REQUIREMENTS

    A. General Requirements:

1. Formwork shall meet construction safety regulations for the state where the project is located.

2. Forms shall be removable without impact, shock or damage to concrete surfaces, the structure and adjacent materials.

3. Forms shall be tight-fitting, designed and fabricated for required finishes and to withstand concrete weight and maintain tolerances as specified in ACI 117 for the following designations: (See architectural drawings for locations).

    a. Class A — For surfaces prominently exposed to public view where appearance is of special importance.

    b. Class B — Coarse-textured concrete-formed surfaces intended to receive plaster, stucco or wainscoting.

    c. Class C — General Standard for permanently exposed surfaces where other finishes are not specified.

    d. Class D - Minimum quality surface where roughness is not objectionable, usually applied where surfaces will be concealed.

4. Furnish forms in largest practicable sizes to minimize number of joints and to conform to joint system shown on Drawings, using form materials with sufficient thickness to withstand pressure of newly-placed concrete without bow or deflection.

5. Butt Joints: Shall be solid and complete with backup material to prevent leakage of cement paste.

B. Form Finishes for Exposed Surfaces:

1. Type: Straight, smooth, free of cement paste leaks at butt-joints, surface imperfections and other irregularities detrimental to appearance of finished concrete, fully coordinated with requirements for required finish material.

2. Form exposed areas of columns, beams, ledges, balcony fascias to achieve true alignment and level soffit of edge beams and concrete edges. All such areas must be sharp, straight and true to line and level. Edge beams and concrete canopies and ledges must have adequate shoring to prevent any visible amount of sag and sufficient bracing to prevent any lateral movement during construction.

2. FORM MATERIALS

A. General: Plywood, fiberglass, metal, metal-framed plywood faced, or other acceptable panel-type materials.

1. Provide materials with sufficient strength to prevent warping.

B. Plywood: Of species and grade suitable for intended use, sound undamaged sheets with clean true edges, minimum 5/8" thick, complying with U.S. Product Standard PS-1

1. Other Acceptable Sheet Materials: 14 gauge sheet steel or fibrous glass reinforced resin.

C. Lumber: Construction grade or better consistent with calculation requirements, without loose knots or other defects.

1. Use only where entire width can be covered with one board 11-1/4" or less in width.

D. Forms for Cylindrical Columns and Supports: Metal, glass-fiber reinforced plastic, or paper or fiber tubes that will produce smooth surfaces without joint indications.

1. Provide units with sufficient wall thickness to resist wet concrete loads without deformation.

E. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to support weight of placed concrete without deformation.

F. Chamfer for Form Corners:

1. Types: Chamfer strips of wood, metal, PVC or rubber fabricated to produce smooth form lines and tight edge joints, 3/4" size, maximum possible lengths.

2. Required for all exposed corners of beam, walls and column forms.

G. Form Ties:

1. Type: Factory-fabricated metal, adjustable length, designed to prevent form deflection and to prevent spalling concrete upon removal.

2. Ties used for architecturally exposed concrete shall be galvanized.

3. Ties shall not leave metal closer than 1-1/2" to exposed surface.

4. When removed, ties shall not leave holes larger than 1" diameter in concrete surface.

5. Removable Ties: Use type with tapered cones, 1" outside diameter, for concrete walls which will remain exposed to view and scheduled for architectural finishes.

6. Snap-Off Ties: Use for concrete walls below grade and walls which will not remain exposed to view and are not scheduled for architectural finishes.

7. Wire Ties: Not acceptable.

H. Nails, Spikes, Lag Bolts, Thru-Bolts, Anchorages:

1. Type: Of size, strength and quality to meet the required quality of formwork.

I. Form Release Agent:

1. Type: Commercial formulation form release agent of non-emulsifiable type which will not bond with, stain, or adversely affect concrete surfaces. Form release agent shall not impair subsequent treatment of concrete surfaces requiring bond or adhesion, or impede the wetting of surfaces to be cured with water or curing compounds. Form release agent shall be compatible with subsequent architectural finish materials applied to concrete surfaces. Apply in compliance with manufacturers' instructions.

2. Form release agent shall meet, at a minimum, all federal and state requirements for volatile organic compounds (VOC's).

3. For Steel Forms: Non-staining rust-preventative type.

J. Reglets: Provide sheet metal reglets formed of same type and gauge as flashing metal, unless indicated otherwise on Drawings. Where resilient or elastomeric sheet flashing, or bituminous membranes are terminated in reglets, provide reglets of not less than 26 gauge galvanized sheet metal. Fill reglet or cover face opening to prevent intrusion of concrete or debris.

K. Coordinate with materials as specified in Section 03 20 00 Concrete Reinforcement and Embedded Assemblies.

PART 3 - EXECUTION

1. FORMWORK

A. General:

1. Inspect areas to receive formwork.

2. Construct forms to sizes, shapes, lines, and dimensions shown on Contract Documents, and to obtain accurate alignment, location, grades, level and plumb work in finished structures.

3. Provide formwork sufficiently tight to prevent leakage of cement paste during concrete placement. Solidly butt joints and provide backup material at joints as required to prevent leakage and fins, and to maintain alignment.

4. Provide for openings, offsets, sinkages, keyways, recesses, moldings, rustications, reglets, drips, bevels, chamfers, blocking, screeds, bulkheads, anchorages and inserts and other features required in the Work.

5. Comply with shop drawings, ACI 301, 318, 347 and Contract Documents.

6. Maintain formwork and finished work construction tolerances complying with ACI 301 and 117.

7. Provide shore and struts with positive means of adjustment capable of taking up formwork settlement during concrete placing operations, using wedges or jacks or a combination thereof.

8. Erect forms for easy removal without hammering or prying against concrete surfaces.

9. Provide crush plates or wrecking plates where stripping may damage cast concrete surfaces.

10. Provide top forms for inclined surfaces where slope is too steep to place concrete with bottom forms only.

11. Kerf wood inserts for forming keyways, reglets, recesses, and the like, to prevent swelling and for easy removal.

12. Chamfer exposed corners and edges as indicated on the architectural drawings, using wood, metal, PVC or rubber chamfer strips fabricated to produce smooth lines and tight edge joints.

13. Design, erect, support, brace and maintain formwork and shoring to support loads until such loads can be safely supported by the concrete structure.

14. Where specifically shown on the Contract Documents as monolithic, upturned beams, curbs and similar members in connection with slabs shall be formed so that they can be poured integrally with slabs.

B. Concrete Accessories and Embedded Items:

1. Install into forms concrete accessories, sleeves, inserts, anchor bolts, anchorage devices and other miscellaneous embedded items furnished by other trades or that are required for other work that is attached to or supported by cast-in-place concrete.

    a. Use setting drawings, diagrams, instructions and directions provided by suppliers of items to be attached.

2. Install reglets to receive top edge of foundation sheet waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, relieving angles, and other conditions.

3. Install dovetail anchor slots in concrete structures as indicated on drawings or required by other trades.

4. Forms for Slabs: Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and contours in finished surfaces.

5. Coordinate with CONCRETE REINFORCEMENT AND EMBEDDED

ASSEMBLIES Section in Specification 03 20 00.

6. Install accessories and embedded items straight, level, plumb and secure in place to prevent displacement by concrete placement.

C. Temporary Openings:

1. Locate temporary openings in forms at inconspicuous locations.

2. For clean-outs and inspection before concrete placement, locate temporary openings where interior area of formwork would otherwise be inaccessible.

3. For cleaning and inspections, locate openings at bottom of forms to allow flushing water to drain.

4. Securely brace temporary openings and set tightly in forms to prevent loss of concrete.

5. Close temporary openings with tight fitting panels, flush with inside face of forms, neatly fitted so that joints will not be noticeable on exposed concrete surfaces.

D. Provisions for Other Trades: Coordinate and provide openings in concrete formwork to accommodate work of other trades.

1. Determine size and location of openings, recesses, chases, offsets, openings, depressions, and curbs from information provided by trades requiring such items.

2. Accurately place and securely support items built into forms.

E. Cleaning:

1. Normal Conditions:

a. Thoroughly clean forms and adjacent surfaces to receive concrete.

b. Remove chips, wood, sawdust, dirt, standing water or other debris just before placing concrete.

c. Flush with water or use compressed air to remove remaining foreign matter.

d. Verify that water and debris can drain from forms through clean-out ports.

2. During Cold Weather:

a. Remove ice and snow from within forms.

b. Do not use de-icing salts.

c. Do not use water to clean out completed forms, unless formwork and concrete construction will proceed within heated enclosure.

d. Use compressed air or other means to remove foreign matter.

F. Form Release Agents

1. Before placing reinforcing steel and miscellaneous embedded items, coat contact surfaces of forms with an approved non-residual, low VOC form release agent in accordance with manufacturer's published instructions.

2. Do not allow release agent to accumulate in forms or come into contact with reinforcement or concrete against which fresh concrete will be placed.

a. Coat steel forms with nonstaining, rust-preventative material.

3. Remove form release agent and residue from reinforcement or surfaces not requiring form coating.

G. Before Placing Concrete:

1. Inspect and check completed formwork, shoring and bracing to ensure that work is in accordance with formwork requirements of this section and

Contract Documents, and that supports, fastenings, wedges, ties, and parts are secure.

a. Make necessary corrections or adjustment to formwork to meet tolerance requirements.

2. Retighten forms and bracing before concrete placement to prevent mortar leaks and maintain proper alignment.

3. Notify Testing Agency sufficiently in advance of placement of concrete to allow inspection of completed and cleaned forms.

H. During Concrete Placement:

1. Maintain a check on formwork to ensure that forms, shoring, ties and other parts of formwork have not been disturbed by concrete placement methods or equipment.

2. Use positive means of adjustment as required for formwork settlement during concrete placing operations.

I. Camber:

1. Provide camber in formwork as required for anticipated deflections due to weight and pressures of fresh concrete and construction loads.

2. Camber bottom forms where indicated on the drawings. Whenever forms are cambered, screeded levels for establishing top of concrete must be cambered to the same amount and to the same profiles such that scheduled depth of member is not reduced by lifting of forms. Check camber and adjust forms before initial set as required to maintain camber.

J. Surface Defects:

1. Install forms that will not impair the texture of the concrete and are compatible with the specified finish type.

K. Formwork Loads on Grade

1. Where loads from formwork bear on grade, provide suitable load-spreading devices for adequate support and to minimize settlement. In no event shall frozen ground or soft ground be utilized directly as the supporting medium.

L. Footings and Grade Beams:

1. Provide forms for footings and grade beams if soil or other conditions are such that earth trench forms are unsuitable.

2. When trench forms are used, provide an additional 1” of concrete on each side of the minimum design profiles and dimensions indicated.

M. For slabs-on-grade, secure edge forms in such a manner as to not move under weight of construction loads, construction and finishing equipment, or workers.

2. SHORES AND RESHORES

A. Comply with ACI 347.2R for shoring and reshoring in multistory construction, and as specified herein.

1. For non-post tensioned flat plate concrete structures of five supported levels or more, extend shoring/reshoring at least four levels below the floor or roof being placed (shore formwork, reshore three levels below)

2. For non-post tensioned flat plate concrete structures of less than five supported levels, extend shoring/reshoring to ground.

3. For all other concrete structures of four supported levels or more, extend shoring/reshoring at least three levels below the floor or roof being placed (shore formwork, reshore two levels below)

4. For all other concrete structures of less than four supported levels, extend shoring/reshoring to ground.

5. Reshores shall be placed as soon as practicable after stripping operations are complete but no later than the end of the working day in which the stripping occurs.

6. For shoring/reshoring placed on mud sills, adjustments shall be made by contractor to account for ground settlement.

7. Locate shores/reshores such that the factored (ultimate) construction load imposed onto any slab or beam at any time during the construction cycle does not exceed 90% of the factored (ultimate) design load for that slab or beam, scaled down to reflect effect on capacity of lower concrete strength at time of loading.

8. Construction load shall include the weight of wet concrete, total weight of formwork and shoring/reshoring, and a minimum construction live load of 50 psf (increase if construction operations will produce higher loading). Design load includes self-weight of the slab, and superimposed dead and live loads as indicated on the drawings.

9. For comparison of construction loads to design loads, compare factored (ultimate) construction loads to factored (ultimate) design loads. For construction dead and live loads, use the same load factors and load combinations as required by ACI 318 for design dead and live loads. The specified strength reduction factors from ACI 318 should

also be applied during the strength evaluation of the partially completed structure.

10. For flat plate or flat slab construction “backshores” or “preshores” as defined in ACI 347 shall be permitted only if appropriate calculations and construction sequences are provided demonstrating that the accumulation of shore loads will not overload any slab. In the absence of such calculations and construction sequences, shores must be removed and reshores installed in a sequence such that each floor is permitted to deflect and carry its own weight prior to the installation of reshores.

11. Reshores shall not be removed until the concrete has attained its specified 28 day strength.

3. REMOVING FORMS

A. Formwork not supporting the weight of concrete, such as sides of beams, walls, columns, and similar parts of the work, may be removed after cumulatively curing at not less than 50°F for 12 hours after placing concrete, provided concrete is sufficiently hard to avoid damage by form-removal operations, and provided curing and protection operations are maintained after removal of formwork.

B. Formwork supporting the weight of concrete, such as beam soffits, joists, slabs, and other structural elements, may not be removed until concrete has attained at least 75% of design compressive strength. If stripping occurs before 3 days, 100% strength must be achieved. For multistory buildings, enough shoring should be provided for a sufficient number of floors to be built to properly support the construction loading from reshoring.

C. Formwork supporting the weight of concrete for post-tensioned floor framing may not be removed until all post-tensioning operations have been completed and approved. For multistory buildings, enough shoring should be provided for a sufficient number of floors to be built to properly support the construction loading from reshoring. See General Notes in the drawings for the minimum compressive concrete strength required for stressing of tendons.

D. Where reshoring is required as part of the formwork removal process, refer to the Shores and Reshores section of this specification.

E. Determination of compressive strength of concrete at time of formwork removal shall be made by cylinder tests on specimens, field-cured the same as the concrete they represent or by the maturity method per ASTM C1074. If the maturity method is used, submit sufficient data using project materials to

demonstrate correlation of measurements on the structure with the compressive strength of laboratory-cured molded cylinders.

F. Remove formwork progressively using methods to prevent shock loads or unbalanced loads from being imposed on structure.

G. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against concrete surfaces.

H. Whenever formwork is removed during the curing period, the exposed concrete shall be cured per requirements of Section 03 30 00.

I. All wood formwork, including that used in void spaces, pockets and other similar places shall be removed.

J. Form tie holes shall be filled as per approved samples submitted to the Design Professionals.

K. The Contractor shall assume responsibility for all damage due to removal of the forms.

4. RE-USING FORMS

A. Before forms can be re-used, surfaces that will be in contact with freshly poured concrete must be thoroughly cleaned, damaged areas repaired, and projecting nails withdrawn.

1. Split, frayed, delaminated or otherwise damaged form-facing material will not be acceptable.

2. Apply new form release agent on re-used forms.

B. When forms are extended for successive concrete placement, thoroughly clean surfaces, remove fins and laitance, and tighten forms to close joints. Align and secure joints to avoid offsets.

C. Forms for exposed concrete may be reused only if the surfaces have not absorbed moisture and have not splintered, warped, discolored, stained, rusted or peeled, subject to acceptance by the Design Professionals. The Design Professionals reserve the right to require the Contractor to remove and reconstruct such formwork as will produce subsequent areas that are acceptable. Do not use "patched" forms for exposed concrete surfaces, unless approved by the Design Professionals.

5. CORRECTIVE MEASURES

A. Where the Contractor requests that the Design Professionals develop the corrective actions or review corrective actions developed by others, the

Design Professional shall be compensated as outlined in Part 3 — CORRECTIVE MEASURES section of Specification 03 30 00.

END OF SECTION

SECTION 03 20 00 — CONCRETE REINFORCEMENT AND EMBEDDED ASSEMBLIES

1. GENERAL

   Work of this Section shall conform to requirements of Drawings and general provisions of the Contract, including General and Supplementary Conditions and applicable General Requirements specifications.

2. SCOPE

   Provide all labor, materials, equipment, services and transportation for reinforcing steel, accessories, embedments and miscellaneous anchorage accessories, joint fillers, and waterstops for cast-in-place concrete work as shown on Drawings, as specified herein, and as required by the job conditions.

3. RELATED WORK SPECIFIED IN OTHER SECTIONS

   Submittals Quality Control

   Quality Assurance: Structural Testing and Inspection Concrete Formwork

   Cast-In-Place Concrete

   Exposed-To-View Cast-In-Place Concrete Thermal and Moisture Protection

4. CODES AND STANDARDS

   Section 01 45 00

   Section 03 10 00

   Section 03 30 00

A. Building Code: Concrete work shall conform to the requirements of the Building Code identified on the Structural General Notes, and OSHA requirements, except where more stringent conditions or criteria occur in the standards referenced below and on the Drawings.

B. Standards:

   1. ACI 117 — Standard Specifications for Tolerances for Concrete Construction and Materials.

   2. ACI 301 —Specifications for Structural Concrete.

   3. ACI 315 — Details and Detailing of Concrete Reinforcement.

4. ACI 318 — Building Code Requirements for Structural Concrete and Commentary.
5. ACI 355.2 — Qualification of Post-Installed Mechanical Anchors in Concrete and Commentary
6. ACI 355.4 — Qualification of Post-Installed Adhesive Anchors in Concrete and Commentary
7. American Society for Testing and Materials "ASTM Standards in Building Codes", various standards as referenced herein.
8. AWS D1.1 — Structural Welding Code-Steel.
9. AWS D1.4 — Structural Welding Code-Reinforcing Steel.
10. CRD C 572 — Specification for Polyvinylchloride Waterstops.
11. Concrete Reinforcing Steel Institute “Manual of Standard Practice”
12. ASTM D3963 Fabrication and Jobsite Handling of epoxy Coated Steel Reinforcing Bars.

C. Definitions:

1. See Section 03 30 00.

5. CONTRACTOR QUALIFICATIONS

A. The work of this section shall be performed by a fabricator specializing in the type of reinforcement fabrication required for this Project, with a minimum of 10 years of documented successful experience and shall be performed by skilled workmen thoroughly experienced in the necessary crafts.

1. Welders shall be qualified in accordance with applicable AWS Code within 12 months before starting the work.

a. Make qualification records available to the Design Professionals upon request.

B. Manufacturers shall specialize in manufacturing the types of concrete accessories required for cast-in-place concrete work, with a minimum of 10 years of documented successful experience and shall have the facilities capable of meeting all requirements of Contract Documents as a single-source responsibility and warranty for each type of accessory.

6. SUBMITTALS

A. Required Submittals - Where the SUBMITTALS section of this Specification is in conflict with the applicable submittal requirements, the more stringent

requirements for the Contractor apply. Required submittal items are listed here; see below for detailed requirements. Do not submit items not requested.

(1) Submittal Schedule

(2) Shop Drawings

(3) Product Data

(4) Mill Reports

(5) Reinforcement Strain Test

(6) Hazardous Materials Notification

1. **Submittal Schedule:** See Section 03 30 00.

2. **Shop Drawings:** Submit for action shop drawings that shall clearly indicate, but not be limited to:

    a. All details, dimensions and information required for fabrication and placement of concrete reinforcement in accordance with Contract Documents, prepared in accordance with ACI 315 recommendations.

    b. Elevations, plans, sections, and dimensions of concrete work with required reinforcement clearances.

    c. Ledges, brackets, openings, sleeves, anchor rods, embedments, prefabricated bent-in dowel keyway systems, electrical conduit and items of other trades including interference with reinforcing materials.

    d. Sizes, grade designations, spacing, locations, and quantities of wire fabric, reinforcement bars, temperature and shrinkage reinforcement dowels.

        i. Do not use dimensions scaled from Contract Drawings to determine bar lengths.

        ii. Hooks and bends not specifically dimensioned shall be detailed per ACI 318.

    e. Bending and cutting schedules, assembly diagrams, splicing and connection requirements, details, and laps.

    f. Each type of supporting and spacing devices, including miscellaneous accessories.

    g. Construction joint type, details, and locations. Contractor shall coordinate construction joint type, details, and locations with

concrete pour schedule. Submittal shall include details for each type of construction joint in accordance with Contract Documents.

h. Locations and dimensions of openings in structural members including floor slab, shear walls, columns and beams. See SUBMITTALS Section of Specification 03 30 00.

i. Concrete accessories and embedded items. See SUBMITTALS Section of Specification 03 30 00.

3. Product Data: Submit for action for each type of product identified in Part 2. Product Data shall be clearly marked to indicate all technical information which specifies full compliance with this section and Contract Documents, including published installation instructions and I.C.C reports, where applicable, for products of each manufacturer specified in this section.

4. **Mill Reports:** Submit for record.

5. **Reinforcement Strain Test:** For Grade 75 reinforcement, submit for record certification that steel has a yield strength of no less than 75 ksi as measured by both ASTM A615 and ACI 318 Section 3.5.3.2 procedures.

6. **Hazardous Materials Notification:** Submit for record. In the event no product or material is available that does not contain hazardous materials as determined by the Owner, a "Material Safety Data Sheet" (MSDS) equivalent to OSHA Form 20 shall be submitted for that proposed product or material prior to installation.

A. Submittal Process: See Section 03 30 00.

B. SER Submittal Review: See Section 03 30 00.

C. Substitution Request: See Section 03 30 00.

D. Request for Information (RFI): See Section 03 30 00.

1. DELIVERY, STORAGE, AND HANDLING

A. Comply with General Conditions and General Requirements, including the following:

1. Deliver reinforcing steel to Project site bundled, tagged and marked.

a. Use weatherproof tags indicating bar sizes, lengths and other information corresponding to markings shown on placement diagrams.

2. Deliver welded wire fabric in sheets. Do not deliver in rolls.

3. During construction period, properly store reinforcing steel and accessories to assure uniformity throughout the Project.
4. Deliver and store welding electrodes in accordance with AWS D1.4.
5. Immediately remove from site materials not complying with Contract Documents or determined to be damaged.
6. Store reinforcing steel above ground so that it remains clean.
    a. Maintain steel surfaces free from materials and coatings that might impair bond.
    b. Keep covered.
    c. Protect against corrosion or deterioration of any kind.

2. QUALITY ASSURANCE BY CONTRACTOR'S TESTING AGENCY
    A. See Section 01 45 00.
3. QUALITY CONTROL BY CONTRACTOR
    A. See Section 03 30 00.
4. OBSERVATIONS AND CORRECTIONS BY DESIGN PROFESSIONALS
    A. See Section 03 30 00.
5. PERMITS AND WARRANTY
    A. Permits: See Section 03 30 00.
    B. Warranty: See Section 03 30 00. Failures include but are not limited to the following:
        1. Bars with kinks or bends not indicated on Drawings or on approved shop drawings.
        2. Bars damaged due to bending, straightening or cutting.
        3. Bars heated for bending.

PART 2 - PRODUCTS

1. REINFORCEMENT
    A. Reinforcing Steel:
        1. Type: Deformed billet steel bars, ASTM A 706, Grade 60.

a. ASTM A615 Grade 60 may be substituted provided the following additional requirements are met per ACI 318-14:

Actual yield strength based on mill tests does exceed fy by more than 18,000 psi; and,

ii. Ratio of the actual tensile strength to the actual yield strength is at least 1.25;

iii. Minimum elongation in 8" shall be at least 14% for bar sizes No. 3 through No. 6, and at least 12% for bar sizes No. 7 through No. 11, and at least 10% for bar sizes No. 14 and No. 18

2. Size: As indicated on structural Drawings.

3. Where indicated on Drawings, reinforcing steel shall be hot-dipped galvanized after fabrication in accordance with ASTM A 767, Class II, with galvanizing material protected from embrittlement during galvanizing process in accordance with ASTM A 143.

   a. Galvanized finish shall meet the bend and shear test requirements of ASTM A 615.

4. Epoxy-Coated: ASTM A 775 where indicated on Drawings.

5. Weldable reinforcement: ASTM A 706 where indicated on Drawings.

B. Welded Wire Reinforcement:

   1. Type: steel wire, deformed, ASTM A 496.

   2. Size: As indicated on structural Drawings.

   3. Where indicated on Drawings, welded wire reinforcement shall be hot-dipped galvanized after fabrication in accordance with ASTM A 767, Class II, with galvanizing material protected from embrittlement during galvanizing process in accordance with ASTM A 143.

      a. Galvanized finish shall meet the bend and shear test requirements of ASTM A 615.

   4. Plain Steel Welded Wire Reinforcement: ASTM A 1064.

   5. Deformed Steel Welded Wire Reinforcement: ASTM A 497.

   6. Epoxy-Coated Welded Wire Reinforcement: ASTM A 884, Class A.

C. Headed Shear Stud Reinforcement At Slab-Column Connections:

   1. Type: Steel studrail or double headed stud assemblies for shear reinforcement at slab-column connections shall be in accordance with ASTM A 1044. Headed shear studs per AWS D1.1 are not an acceptable substitution for headed shear stud reinforcement. A

a. Shear studs shall be in accordance with ASTM A108, Grade C1010 through C1018.

b. Rails shall be low carbon steel Type 44W.

c. Studs shall be welded in accordance with AWS D1.1.

d. Acceptable Products:

Studrails by DECON

DSA by SureBuilt Manufacturing DSR by Dayton Superior

2. Size, quantity and spacing: As indicated on structural Drawings.

3. Installation: Per manufacturer's instructions.

4. Supports: Use plastic molded plastic chairs as provided by the manufacturer to maintain the bottom rebar cover as specified on the Drawings. Tie headed shear stud reinforcement to adjacent top bars to maintain vertical position.

D. Reinforcement Coating Repair Materials:

1.

2.

3.

2. ACCESSORIES

Apply repair coating in accordance with the manufacturer's written procedures. Galvanized Repair Coating: Zinc-based solder, paint containing zinc dust or sprayed zinc complying with ASTM A780.

Epoxy Repair Coating: Liquid, two-part, epoxy repair coating; compatible with epoxy coating on reinforcement and complying with ASTM A 775/ A 775M.

a) The maximum amount of repaired damaged areas shall not exceed 2% of the surface area in each linear foot of each bar. If more than 2% of the surface area in each linear foot of bar is damaged, bar shall be replaced.

A. Tie Wire:

1. Type: Minimum 16 gauge annealed steel wire, ASTM A 510 and ASTM A 853.

2. Wire Bar Type: Comply with CRSI.

B. Mechanical Splicing Systems:

1. Mechanical tension and compression splicing systems shall be used where indicated on Drawings or at contractor's option. For seismic

design categories D, E and F, in plastic hinge regions, only Type 2 mechanical splices are permitted.

2. Splices shall be installed in accordance with manufacturer's requirements.

3. Acceptable Products:

    a. Bartec Couplers by Dextra

    b. Griptec Couplers by Dextra

    c. Unitec Couplers by Dextra

    d. Lenton Couplers by Erico

    e. Lenton Cadweld by Erico

    f. Bar Lock Couplers by Dayton Superior

    g. Taper-Lock Couplers by Dayton Superior

    h. Grip-Twist by BarSplice

    i. ZAP Screwlok by BarSplice

    j. BPI Barsplicer by BarSplice

    k. BarGrip by BarSplice

    l. 400 and 500 Series by Headed Reinforcement Corp

4. Mechanical and welded tensile mechanical splicing systems shall be capable of developing 125% of the reinforcing steel ASTM specified minimum yield strength (Type 1) except where indicated as Type 2 (100% of specified tensile strength).

5. Mechanical compression splices shall be such that the compression stress is transmitted by end bearing held in concentric contact.

C. Headed Bars:

1. For bar sizes #11 (o36) or smaller where specifically detailed on Drawings, mechanical bar terminators shall be used.

2. Headed bars shall meet the requirements of ASTM A970, Class HA.

3. Acceptable Products:

    a. Headed Bars by Dextra

b. Lenton Terminator by Erico

c. Grip-Twist Doughnut by Bar-Splice

d. BPI ButtonHead by BarSplice

e. Zap T-Lok by BarSplice

f. Taper-Lock End Anchor Disc by Dayton Superior

g. 100, 550 and 670 Series by Headed Reinforcement Corp

D. Weldable Bar Couplers:

1. Acceptable Products:

a. Lenton Weldable Couplers by Erico

b. DBDI Weldable Coupler by Dayton Superior

c. BPI Structural Connector by BarSplice

E. Slip Dowel Bar/Plate Systems for Slab on Grade Joints

1. Acceptable Products:

a. Speed Dowel or Speed Plate by Sika Corporation

b. QuicDowel or QuicPlate by BoMetals, Inc.

c. Diamond Dowel System by PNA Construction Technologies

F. Supports for Reinforcement:

1. Types: Bolsters, chairs, spacers, clips, chair bars, and other devices for properly placing, spacing, supporting, and fastening the reinforcement, plastic, plastic protected steel, or epoxy coated to match supported reinforcement.

2. For Contact with Forms: Use types with not less than 3/32” of plastic between metal and concrete surface.

a. Plastic tips shall extend not less than /” on metal legs.

3. Individual and continuous slab bolsters and chairs shall be of type to suit various conditions encountered and must be capable of supporting 300 pound load without damage or permanent distortion.

4. Unless otherwise indicated on Drawings, bottom reinforcing bars in footings shall be supported by precast concrete bricks or individual high chairs with welded sand plates on bottom.

5. For Slabs on Grade: Use supports with sand plates or horizontal runners where base material will not support chair legs.

G. Deformed Bar Anchors:

1. Type: Automatic end welded, ASTM A 496 quality.

2. Size and Grade: As indicated on structural Drawings by Nelson Stud Welding.

H. Anchor rods and dowels:

1. Types and Sizes: Provide sizes and types of anchor rods and dowels as indicated on the Drawings. Each type of anchor shall be manufactured of structural quality steel, designed for cast-in-place concrete applications and be of sizes as indicated on Drawings, complete with washers, nuts, plates and miscellaneous accessories required to meet Contract Document requirements.

2. Adhesive Anchors for anchor rods and dowels in existing concrete: See Anchorage Accessories.

I. Prefabricated Bent-In Dowel Keyway Systems and Dowel Bar Replacements:

1. Type, Size and Grade as indicated on Drawings.

2. Dowels shall be installed in accordance with manufacturer's requirements

3. Acceptable Products:

a. Lenton Form Savers by Erico

b. Keyway Splice Box by Meadow Burke

c. Metalstrip by Dayton Superior

d. DBDI Splice System by Dayton Superior

e. D50 DBR Coupler System by Dayton Superior

f. BPI Barsplicer by BarSplice

g. 300 Series by Headed Reinforcement Corp

1. ANCHORAGE ACCESSORIES

A. General: Miscellaneous anchorage accessories for anchoring structural, architectural, electrical, and mechanical items to poured concrete shall include but not be limited to the following:

1. Concrete Anchors: Headed or bent studs ASTM A 108/Grade 1015 through 1020, minimum yield strength of 50,000 psi, minimum tensile strength of 60,000 psi.

2. Anchor Rods: ASTM F1554, Grade as noted on Drawings.

3. Shallow Embedment Internally Threaded Inserts with °/‹” maximum embedment.

    a. Acceptable Products:

        i. Mini Undercut + by DeWalt (for post-tensioned slabs and precast hollow core slabs)

        ii. HDI-P TZ by Hilti (for post-tensioned slabs)

4. Adhesive Anchors:

    a. Basis of Design: See General Notes

    b. Substitution Request: As anchor capacities vary by manufacturer, the following anchors will be considered as a Substitution Request. Refer to project specifications for Substitution Request procedure

        i. HIT-RE 500-V3 by Hilti, Inc.

        ii. Epcon C6+ by ITW Red Head

        iii. Epcon G5 by ITW Red Head

        iv. Pure 110+ by DeWalt

        v. SET-3G by Simpson Strong-Tie Co.

    c. The adhesive anchor system used for post-installed anchorage to concrete shall conform to the requirements of ACI 355.4 and commentary and shall possess a current ICC- ES report demonstrating compliance with ACI 318.

5. Expansion Anchors:

    a. Basis of Design: See General Notes

    b. Substitution Request: As anchor capacities vary by manufacturer, the following anchors will be considered as a Substitution Request. Refer to project specifications for Substitution Request procedure.

i. Power Stud+ SD1 or SD2 by DeWalt

ii. Power Stud + SD6 (SS) by DeWalt

iii. Trubolt by ITW CCNA

iv. Strong-Bolt 2 by Simpson Strong-Tie Co.

c. The expansion anchors used for post-installed anchorage to concrete shall conform to the requirements of ACI 355.2 and commentary and shall possess a current ICC- ES report demonstrating compliance with ACI 318.

6. Threaded Screw Anchors:

a. Basis of Design: See General Notes

b. Substitution Request: As anchor capacities vary by manufacturer, the following anchors will be considered as a Substitution Request. Refer to project specifications for Substitution Request procedure.

i. Screw-Bolt + by DeWalt

ii. Tapcon + by ITW Red Head

iii. Titan HD by Simpson Strong-Tie Co., Pleasanton, CA

7. Inserts and Coil Rods: Yield strength 65,000 psi, ASTM B 633, manufactured by Acrow-Richmond Limited or Dayton Superior

8. Welding Electrodes: AWS 5.5, Series E70.

9. Welded Deformed Bar Anchors: Welded by full-fusion process, as furnished by TRW Nelson Stud Welding Division or equivalent.

B. Dovetail Anchor Slots:

1. Type: Formed 22 gauge galvanized steel

2. Acceptable Manufacturers:

a. Heckmann Building Products

b. Hohmann and Barnard,

c. BoMetals, Inc..

2. JOINT FILLERS

Location of Use: Continuous installation of anchor slots, full height of masonry walls, where masonry walls abut poured concrete walls.

Fill slot with temporary filler or cover face opening to prevent intrusion of concrete or debris.

Finish: Hot-dip galvanized or zinc-plated steel. Stainless steel anchors are acceptable.

A. Permanent Compressible Joint Filler:

1. Acceptable Product: W.R. Meadows: “Ceramar” closed-cell expansion joint filler, ultraviolet stable, minimal moisture absorption, non-impregnated, nonstaining and nonbleeding, inert and compatible with cold-applied sealants.

2. Location of Use: Slabs and curbs as indicated on Drawings or required.

3. Thickness: As indicated on Drawings or required.

B. Temporary Compressible Joint Filler:

1. Type: White molded polystyrene beadboard.

2. Location of Use:

a. In slabs, curbs, and walls which must be removed prior to joint sealant installation.

b. Vertically to isolate walls from columns or other walls.

C. Semi Rigid Joint Filler:

1. Acceptable Product: Euclid Chemical Company “Euco 700" or”Euco QWlKjoint 200”

2. Acceptable Product: Sika Corporation “Sikadur 51 SL”

3. Acceptable Product: W.R. Meadows Sealtight “Rezi-Weld Flex”

D. Noncompressible Joint Filler:

1. Acceptable Product: Dow Chemical's "STYROFOAM 40" rigid closed-cell extruded polystyrene board, square edges, 40 psi compressive strength, ASTM C 578, Type IV.

2. Thickness: As indicated on Drawings.

3. Location of Use: As indicated on Drawings or required.

E. Asphalt-Impregnated Joint Filler:

1. Acceptable Product: W.R. Meadows Asphalt Expansion Joint Filler, preformed, ASTM D 994.
2. Thickness: /2" maximum, as indicated on Drawings or required.
3. Location of Use: Sidewalks at foundation walls and as indicated on Drawings or required.

F. Asphalt-impregnated fiberboard expansion joint filler for interior work:

1. Type: ASTM D1751.

G. Self-expanding cork board expansion joint filler for exterior work:

1. Type: ASTM D1752.

H. Construction Joints:

1. Type: Tongue and groove type profile of galvanized steel, with knock-out holes at 6" on center to receive dowelling, complete with anchorage.

3. WATERSTOPS

A. Preformed Swellable Waterproofing Strips especially formulated for concrete cold joints at footings, walls, or slabs.

1. Acceptable Products:

a. Volclay Waterstop RX by CETCO Building Materials Group

b. Adcor ES by GCP Applied Technologies

c. Hydrotite by Sika

2. Size: 3/4" by 3/8" strips minimum, 25 ft. long, and weighing at least 0.165 lbs/ft.
3. Location of Use: Concrete cold joints at footings, walls and slab joints.
4. Comply with manufacturer product application and installation instructions.

B. Polyvinyl Chloride Waterstops:

1. Type: PVC Waterstops for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections and directional changes.

U.S. Corp of Engineers Specification CRD C 572.

2. Acceptable Products:

a. PVC Waterstops” by BoMetals

b. Greenstreak by Sika

c. Sealtight PVC Waterstops by W.R. Meadows

PART 3 - EXECUTION

3. 1 FABRICATION

A. Reinforcing Steel Fabrication:

1. Fabricate in accordance with approved shop Drawings, ACI 315 and Contract Documents.

2. Heating of Reinforcement: Will be permitted only with specific prior approval of the SER.

3. Welding: Comply with ANSI/AWS D1.4; use E9018 electrodes or approved electrodes.

4. Tolerances: Comply with ACI 117.

5. Unacceptable Materials: Reinforcement with any of following defects will not be permitted in Work.

a. Bar lengths, depths, and bends exceeding ACI fabrication tolerances.

b. Bends or kinks not indicated on Drawings or final shop drawings.

c. Bars with reduced cross-section due to excessive rusting or other cause.

B. Welded Wire Reinforcement:

1. Type: As fabricated in accordance with CRSI, unless otherwise noted.

C. Templates:

1. Required for all footing and column dowels, and where required for proper alignment of reinforcing.

D. Assemblies:

1. Fabricate and assemble structural steel items in shop in conformance with AISC and AWS D1.1. Shearing, flame cutting, and chipping shall be done carefully and accurately. Cut, drill, or punch holes at right angles to the surface of the metal. Do not make or enlarge holes by burning. Holes shall be clean-cut without torn or ragged edges.

2. Welding of deformed bar anchors and headed stud anchors shall be installed by full-fusion process equivalent to TRW Nelson Stud Welding Division or KSM Welding Services Division, Omark Industries or Tru-Weld Stud Welding, Medina, OH.

3. Welding of reinforcement shall be done in accordance with AWS requirements. Welding shall be performed subject to the observance and testing by Testing Agency.

4. Galvanizing where required, shall be applied after fabrication and prior to casting concrete.

5. Welding of crossing bars (tack welding) for assembly of reinforcement is not permitted without use of weldable reinforcement and express written consent of SER.

2. INSTALLATION OF REINFORCEMENT

    A. General:

        1. Perform the work of this section in accordance with approved shop drawings, ACI 318 and CRSI recommended practice for “Placing Reinforcing Bars”, for details and methods of reinforcement placement and supports, and as specified.

        2. Before placing reinforcement steel, inspect forms for proper fitting and compliance with allowable tolerances.

        3. Reinforcement shall be free of form coatings, sealers, powdered and scaled rust, loose mill scale, earth, ice, and other materials which will reduce or destroy bond with concrete.

        4. Do not place concrete until the completed reinforcement steel work has been observed and accepted by Contractor's Testing Laboratory.

        5. Reinforcement steel is not permitted to be “floated into position”.

        6. Bend bars cold.

            a. Do not heat or flame cut bars.

            b. No field bending of bars partially embedded in concrete is permitted, unless specifically approved by the SER and tested by Testing Agency for cracks.

        7. Weld only as indicated.

            a. Perform welding per ANSI/AWS D12.1 and/or ANSI/AWS D1.4.

b. See structural Drawings for additional requirements.

8. Tag reinforcement steel for easy identification.

B. Placement of Reinforcement Bars:

1. Comply with approved shop drawings, ACI 318 and Contract Documents.

2. Accurately position, support and secure reinforcement in a manner to prevent displacement before and during placement of concrete.

a. Place reinforcement bars within tolerances specified in ACI 117.

b. Locate and support reinforcement by metal chairs, runners, bolsters, spacers, hangers and other accessories for fastening reinforcing bars and welded wire reinforcement in place.

3. If bars are displaced beyond specified tolerance when relocating the bars to avoid interference with other reinforcement or embedded items, immediately notify the Design Professionals for approval prior to concrete placement.

4. Avoid cutting or puncturing vapor retarder during reinforcement placement.

a. Repair damages before placing concrete.

5. Concrete Coverage: Maintain concrete cover around reinforcement as indicated on Drawings.

6. Bar Supports: Use type specified in this section.

7. Tie Wires: After cutting, turn tie wires to the inside of section and bend so that concrete placement will not force ends to be exposed at face of concrete.

C. Placement of Wire Reinforcement:

1. Install in lengths as long as practicable.

2. Support in position adequately to prevent bending of reinforcement between supports before and during placement of concrete.

3. Overlap the wire reinforcement 6” or one panel width + 2”, whichever is larger.

    a. Securely tie together with wire.
4. Offset laps of adjoining widths to prevent continuous laps in either direction.

5. Locate wire fabric in the top third of slabs, unless noted otherwise on structural Drawings.

D. At Construction Joints:

1. Reinforcement bars and wire reinforcement shall be continuous through construction joints, unless otherwise indicated on Drawings. See Drawings for scheduled lap splices.

E. At Expansion Joints:

1. Reinforcing bars and wire fabric shall NOT be continuous through expansion joints, unless otherwise indicated on Drawings.

F. Splicing:

1. Unless otherwise indicated on Drawings provide lap splices for bar sizes #11 (s36) and smaller by lapping ends, placing bars in contact, and tying tightly with wire in accordance with requirements of ACI 318 for lap lengths indicated on Drawings.

2. At all #14 (o43) and #18 (o57) bars and where mechanical splices are specifically indicated on Drawings, comply with requirements specified in this Specification section under “Mechanical Splicing Systems”.

3. Do not splice reinforcement except as indicated on structural Drawings.

4. Tension couplers may be used and installed per manufacturer's specifications where indicated on Drawings or as approved by Engineer.

G. Dowels in Existing Concrete:

1. Install dowels and dowel adhesive in accordance with manufacturer's recommendations.

2. Minimum embedment length shall be 12 bar diameters, unless noted otherwise.

3. INSTALLATION OF POST-INSTALLED ADHESIVE ANCHORS

A. General:

1. Post-installed adhesive anchors shall be installed in accordance with the Manufacturer's Printed Installation Instructions (MPII).

2. The adhesive anchors shall be supplied as an entire system. The contractor shall provide all equipment required to install the adhesive anchor in accordance with the MPII.

3. Anchors shall be installed in holes drilled with a rotary impact hammer drill with carbide bit. Contractor shall obtain prior written approval from SER before using rock drilling or core drilling installation methods.

4. Anchor holes shall be thoroughly cleaned and dry prior to adhesive injection, in accordance with the MPII. Anchors to be installed in the adhesive shall be clean, oil-free, and free of loose rust, paint, or other coatings.

5. Concrete shall have a minimum compressive strength of 2500 psi.

6. Concrete at time of adhesive anchor installation shall have a minimum of 21 days.

7. Concrete temperature at the time of adhesive anchor installation shall be at least equal to manufacture's requirements, or 50° F if no requirement exists.

8. Support the anchor and protect it from disturbance or loading for the full cure time stated by the manufacturer at that base material temperature.

9. Unless specified otherwise in the contract documents, anchors shall be installed perpendicular to the concrete surface. Anchors displaced or disturbed prior to the adhesive cure time shall be considered damaged and reported to the SER (see Observations and Corrections section of 03 30 00).

10. Locate, by non-destructive means, and avoid all existing reinforcement prior to installation of anchors. If existing reinforcement layout prohibits the installation of anchors as indicated in the drawings the contractor shall immediately notify the Design Professionals.

11. Reinforcement bars or all-threaded bars shall not be bent after being adhesively embedded in hardened, sound concrete, unless written approval is given by the SER.

12. All personnel installing anchors shall be trained by the manufacturer on proper installation techniques. Submit for record certificate from training documentation from the manufacturer for each installer on this Project

13. Installation of adhesive anchors horizontally or upwardly inclined and anchors that are designated with a (CERT) after the anchor call-out, shall be performed by personnel certified by the ACI/CRSlAdhesive Anchor Installer Certification program. Submit for record certificate from ACI-CRSI Adhesive Anchor Installation Certification Program for each certified installer on this Project.

4. INSTALLATION OF ACCESSORIES AND EMBEDDED ITEMS

A. Install concrete accessories in accordance with manufacturer's published instructions and Contract Documents.

1. Set and secure embedments, including embedded plates, bearing plates, and anchor rods, per approved setting drawings and in such a manner to prevent

movement during placement of concrete and to allow removal of formwork without damage.

2. Tolerances: Anchor rod and other embedded items placement tolerances shall comply with AISC 303, “Code of Standard Practice”, Section 7.5.

3. Inspect locations to receive concrete accessories.

4. Immediately notify the Design Professionals in writing of conditions that will adversely affect the Work or fail to meet Contract Document requirements.

5. Do not place concrete until reinforcement, accessories and other built-in items have been inspected and accepted by Testing Agency.

B. Construction and Contraction (Control) Joints:

1. Construction and contraction (control) joints indicated on Drawings are mandatory and must not be omitted.

a. Provide construction joints in accordance with ACI 318.

b. Roughen surface at construction joints as indicated on the drawings.

c. Where specifically indicated on drawings, provide 1-1/2” deep key type construction joints at end of each placement for slabs, beams, walls and footings.

i. Bevel forms for easy removal.

2. Provide waterstops in construction joints as indicated on the Contract Documents in sizes to suit joint.

3. Install waterstops to form continuous diaphragm in each joint.

4. Support and protect exposed waterstops during progress of Work.

5. Field-fabricate joints in waterstops according to manufacturer's printed instructions.

C. Coordinate the installation of pipes, bolts, hangers, anchors, flashing and other embedded items with the work of other trades.

5. CORRECTIVE MEASURES

A. Where the Contractor requests that the Design Professionals develop the corrective actions or review corrective actions developed by others, the Design Professional shall be compensated as outlined in Part 3 — CORRECTIVE MEASURES section of Specification 03 30 00.

END OF SECTION

SECTION 03 30 00 — CAST-IN-PLACE CONCRETE

1. GENERAL

Work of this Section shall conform to requirements of Drawings and general provisions of the Contract, including General and Supplementary Conditions and applicable General Requirements specifications.

2. SCOPE

Provide all labor, materials, equipment, services and transportation required to complete all concrete work as shown on Drawings, as specified herein, and as required by the job conditions. This Specification is not intended to address the particular requirements of Architectural Concrete.

3. RELATED WORK SPECIFIED IN OTHER SECTIONS

Submittals Quality Control

Quality Assurance: Structural Testing and Inspection Concrete Formwork

Concrete Reinforcement and Embedded Assemblies Exposed-To-View Cast-In-Place Concrete

Thermal and Moisture Protection

Section 01 45 00

Section 03 10 00

Section 03 20 00

4. CODES AND STANDARDS

A. Building Code: Concrete work shall conform to the requirements of the Building Code identified on the Structural General Notes, and OSHA requirements, except where more stringent conditions or criteria occur in the standards referenced below and on the Drawings.

B. Standards:

1. ACI 117 — Standard Specifications for Tolerances for Concrete Construction and Materials except as modified by more stringent requirements in the Project Specifications and/or Drawings.

2. ACI 237 — Self Consolidating Concrete.

3. ACI 301 — Specifications for Structural Concrete.
4. ACI 318 — Building Code Requirements for Structural Concrete and Commentary.
5. American Concrete Institute “Manual of Concrete Practice”, various committee reports as referenced herein.
6. American Society for Testing and Materials "ASTM Standards in Building Codes", various standards as referenced herein.
7. ASTM C1202 — Standard Test Method for Electrical Indication of Concrete's Ability to Resist Chloride Ion Penetration.
8. AASHTO T318 — Standard Method of Test for Water Content of Freshly Mixed Concrete Using Microwave Oven Drying.

C. Definitions:

1. The term “Contract Documents” in this Specification is defined as the design Drawings and the specifications.
2. The term “SER” in this Specification is defined as the Structural Engineer of Record for the structure in its final condition.
3. The term “Design Professionals” in this Specification is defined as the Owner's Architect and SER.
4. The term “Contractor” in this Specification is defined to include any of the following: General Contractor and their sub-contractors, Construction Manager, Concrete Contractor and their sub-contractors.
5. The term “Testing Agency” in this Specification is defined as an independent testing and inspection service engaged by the Owner for quality assurance testing and inspection of structural construction in accordance with applicable building code provisions and any additional activities listed in the Contract Documents.
6. The terms “for record” and “submit for record” in this Specification are defined as Contractor submittals that do not require a response from the Design Professionals.
7. The term “Working Days” in this Specification is defined as Monday through Friday, excluding federal or state holidays.
8. The term “Delegated Design” in this Specification is defined as a scope of work that meets performance and design criteria established in the

Contract Documents and is to be completed by the Contractor's licensed engineer.

5. CONTRACTOR QUALIFICATIONS

A. The work of this section shall be performed by a company specializing in the type of concrete work required for this Project, with a minimum of 10 years of documented successful experience and shall be performed by skilled workmen thoroughly experienced in the necessary crafts.

B. Contractor's testing agency services: Required as specified in General Requirements and herein.

6. SUBMITTALS

A. Required Submittals - Where the SUBMITTALS section of this Specification is in conflict with the applicable submittal requirements, the more stringent requirements for the Contractor apply. Required submittal items are listed here; see below for detailed requirements. Do not submit items not requested. Reproduction of structural drawings for shop drawings is not permitted.

(1) Submittal Schedule

(2) Mix Designs

(3) Concrete Travel Times to the Project Site

(4) Hot and Cold Weather Procedures

(5) Product Data

(6) Concrete Joint Locations

(7) Comprehensive Layout Drawings

(8) Preconstruction Survey

(9) Survey of Flat Plate or Flat Slab Concrete Floors during construction

(10) FF/FL Testing

(11) Structural Repairs

(12) Patching Defective Concrete Finishes

(13) Conduit and Pipes Embedded in Concrete

(14) Hazardous Materials Notification

1. **Submittal Schedule:** The contractor shall submit for action a schedule at least twenty (20) working days prior to commencing submittals.

    a. This schedule shall include a list, in order of date to be submitted, of all drawings and other required submittal items scheduled to be submitted. The schedule shall list the proposed submittals for each week, as well as their formats. Once shop drawing submissions have commenced any modification or addition to this schedule must be submitted for action at least twenty (20) working days before the modification or addition is proposed to take place.

    b. If at any time the total number of shop drawings received in any one week period exceeds the amount in the approved schedule by more than 10% for that week, the Design Professionals have the right to add two days to the average turnaround time for each 20% increment in excess of the scheduled quantity for that week's submissions. For example if the weekly total exceeds the schedule by 10% to 20%, two days may be added; if it is exceeded by 21% to 40%, four days may be added. The return dates for subsequent submittals may be extended based on the additional review time stated above.

    c. For the purposes of developing a schedule, assume the following review rate, Shop drawings — 10 full size sheets per week.

2. **Mix Designs:** Submit for action concrete mix designs for each type and strength of concrete required for this Project at least thirty (30) days before placing concrete.

    a. Mix designs shall be prepared or reviewed by an approved independent testing agency retained by the Contractor in accordance with requirements of ACI 301 and ACI 318, sealed and signed by a Professional Engineer licensed in the state where the project is located, and shall be coordinated with design requirements and Contract Documents.

    b. Before submitting to Testing Agency, submit complete mix design data for each separate mix to be used on the Project in a single submittal.

    c. Provide a completed “Concrete Mix Design Submittal Form” (attached to the end of this Specification Section) for each proposed concrete mix.

    d. Mix materials shall be from the same production facility that will be used for this Project.

    e. Mix Design data shall include but not be limited to the following:

i. Locations on the Project where each mix design is to be used corresponding to Structural General Notes on the Drawings.

ii. Design Compressive Strength: As indicated on the Drawings.

iii. Proportions: ACI 301 and ACI 318.

iv. Gradation and quality of each type of ingredient including fresh (wet) unit weight, aggregates sieve analysis.

v. Water/cementitious material ratio.

vi. Evaluation and classification fly ash in accordance with ASTM D 5759.

vii. Report of chemical analysis of fly ash in accordance with ASTM C 618.

viii. Classification of slag cement in accordance with ASTM C 989. Slump: ASTM C 143.

ix. Certification and test results of the total water soluble chloride ion content of the design mix - AASHTO T260 or ASTM C 1218 at age between 28 and 42 days.

x. Air content of freshly mixed concrete by the pressure method, ASTM C 231, or the volumetric method, ASTM C 173.

xi. Density of Concrete: ASTM C 138.

xii. Design strength at 28, 56 or 90 days, as indicated on Contract Documents: ASTM C 39.

(1) Document strength based on basis of previous field experience or trial mixtures per ACI 301. Proportioning by water-cement ratio alone, with no test results per the trial mixtures procedure is not permitted.

(2) Submit strength test records, mix design materials, conditions, and proportions for concrete used for record of tests, standard deviation calculation, and determination of required average compressive strength. Test records to support proposed mixtures shall be no more than 24 months old and use current cement aggregate sources. Test records to establish standard deviation may be older if necessary to have the required number of samples.

(3) If early concrete strengths are required, Contractor shall submit trial mixture results as required.

Manufacturer's product data for each type of admixture. Manufacturer's certification that all admixtures used are compatible with each other.

All information indicating compliance with Contract Documents including method of placement and method of curing.

Normalweight Concrete: Density per ASTM C 138. Design the mix to produce the strength, modulus of elasticity and density as indicated on the Contract Documents.

Lightweight Concrete: Density per ASTM C 138. Design the mix to produce the strength, modulus of elasticity and density as indicated on the Contract Documents.

Certification from a qualified testing agency indicating absence of potential for deleterious expansion of concrete due to alkali reactivity of the aggregate as determined by testing per ASTM C1260 in accordance with ASTM C 33. If potential for deleterious expansion exists, expansion reduction and mitigation measures per the guidelines of ASTM C1778 or US Army COE CRD-C662 shall be submitted for review by the SER.

1. **Concrete Travel Times to the Project Site:** Submit for record.

2. **Hot and Cold Weather Procedures:** Submit for record written procedures for placement of concrete in hot and cold weather conditions. Hot and Cold weather are as defined in the Concrete Placement section of this Specification.

3. Product Data: Submit for action product data clearly marked to indicate locations to be used and all technical information which specifies full compliance with this section and Contract Documents, including published application instructions, product characteristics, compatibility, and limitations for each of the following:

a. Bonding agents.

b. Curing compound and liquid sealer densifier. Submit for record to Design Professionals a written statement guaranteeing that the compound will not leave discoloration on concrete to be left exposed, or affect the bond for paint or other applied finishes. Include provision in written statement that in the event of failure of applied finishes to bond to membrane cured concrete, to remove the curing compound and leave suitable surfaces for bonding such finishes.

c. Absorptive covers and moisture retaining covers.

d. Vapor Retarder: See Thermal and Moisture Protection.

e. Self-leveling concrete topping.

f. Grout: Submittal of grout by manufacturers not listed herein must be accompanied by independent certification of ASTM C 1107 compliance without modification of standard methods.

g. Other products proposed by Contractor

4. **Concrete Joint Locations:** Submit for action plans indicating locations and details of construction joints, contraction joints, waterstops, sleeves, embedments, etc. that interact with the joints. Contractor to coordinate joint location with reinforcement shop drawings. Reinforcement shop drawings shall indicate additional reinforcement bars where required at construction joints.

Joint locations for concrete slabs to receive a terrazzo or similar finish subject to reflective cracking must be coordinated with layout of finish drawings.

5. **Comprehensive Layout Drawings:** Submit for action comprehensive layout drawings (a single drawing per area/element):

    a. Drawings shall show openings in structural members, including floor slab, shear walls, columns and beams.

    b. Drawings shall consolidate the work of all trades and shall be coordinated by the Contractor.

    c. Drawings shall show concrete accessories and embedded items, including fabrication details of items to be placed (exclusive of reinforcement).

    d. Submit with or prior to reinforcement and formwork submittals for same element/area.

6. **Preconstruction Survey:** Submit for record. Where interface with existing construction occurs, before related shop drawings are prepared survey the existing construction and submit the survey prepared by a professional surveyor employed by the Contractor to the Design Professionals.

7. **Survey of Flat Plate or Flat Slab Concrete Floors during construction:** Submit for record. Survey requirements are described on Drawings. Based on survey results, SER may propose adjustments to formwork and camber.

8. FF/FL Testing: Submit for record. Testing Agency to test and report flatness (FF), levelness (FL) prior to shoring removal. For slabs that include camber, do not test for levelness (FL). Perform FF/FL testing in accordance with ASTM E 1155 requirements.

9. Structural Repairs: Submit for action procedures, intended locations, and product information. Alterations to design shall be sealed and signed by a Professional Engineer licensed in the state where the project is located.

10. **Patching Defective Concrete Finishes:** Submit for action procedures, intended locations, and product information.

11. Conduit and Pipes Embedded in Concrete: Submit for action layout of embedded conduit and pipes.

12. **Hazardous Materials Notification:** Submit for record. In the event no product or material is available that does not contain hazardous materials as determined by the Owner, a "Material Safety Data Sheet" (MSDS) equivalent to OSHA Form 20 shall be submitted for that proposed product or material prior to installation.

A. Submittal Process

1. Submittal of shop drawings and other submittals by the Contractor shall constitute Contractor's representation that the Contractor has verified all quantities, dimensions, specified performance criteria, installation requirements, materials, catalog numbers and similar data with respect thereto and reviewed or coordinated each drawing with other Drawings and other trades. The Contractor shall place their shop drawing stamp on all submittals confirming the above.

2. Shop drawings: Submit in complete packages so that individual parts and the assembled unit may be reviewed together. This Specification Section and the applicable Drawings used in the development of the shop drawings shall be referenced on each shop drawing to facilitate checking.

3. The Contractor shall submit to the Design Professionals one (1) electronic copy for shop drawing review. The naming convention of each drawing must follow the submittal numbering system and include the submittal number, Specification number, revision number and drawing number in the prefix of the drawing name.

4. The Contractor shall allow at least [ten (10)] working days between receipt and release by the SER for the review of shop drawings and submittals.

5. All modifications or revisions to submittals and shop drawings must be clouded, with an appropriate revision number clearly indicated. The following shall automatically be considered cause for rejection of the modification or revision whether or not the drawing has been approved by the Design Professionals:

    a. Failure to specifically cloud modifications

    b. Unapproved revisions to previous submittals

    c. Unapproved departure from Contract Documents

6. Resubmittals: Completely address previous comments prior to resubmitting a drawing. Resubmit only those drawings that require resubmittal. Do not include new content not previously reviewed.

7. Resubmittals Compensation: The Contractor shall compensate the Design Professionals for submittals that must be reviewed more than twice due to

Contractors' errors. The Contractor shall compensate the Design Professionals at standard billing rates plus out-of-pocket expenses incurred at cost + 10%.

8. The Contractor shall deliver to the Design Professionals at the completion of the job two (2) copies of the electronic version of the final as-built shop drawings on a CD-ROM or other media acceptable to the Design Professionals.

B. SER Submittal Review

1. The Design Professionals' review and approval of shop drawings and other submittals shall be for general conformance with the design intent of the work and with the information given in the Contract Documents only and will not in any way relieve the Contractor or the Contractor's Engineer from:

    a. Conforming to the Contract Documents.

    b. Coordination with other trades.

    c. Responsibility for all required detailing and proper fitting of construction work.

    d. The necessity of furnishing material and workmanship required by Drawings and Specifications which may not be indicated on the shop drawings.

    e. Control or charge of construction means, methods, techniques, sequences or procedures, for safety precautions and programs in connection with the work.

2. TYPE 1 — Structural Submittal Review Stamp: For shop drawings for building elements designed by the SER, the responses on the shop drawing review stamp used by the SER require one of the following actions:

    a. APPROVED indicates that the SER has found that the information presented on the shop or erection drawing appears to conform to the requirements of the Contract Documents. Fabrication, manufacture or construction of the elements of work shown in the shop drawing may proceed, provided that work is in compliance with the Contract Documents.

    b. APPROVED AS NOTED indicates that the SER requires the shop or erection drawing to be corrected to reflect the notes and comments shown. Fabrication, manufacture or construction of the elements of work shown in the shop drawing may proceed, provided that work is in compliance with the notations shown on the shop drawings and the

Contract Documents. Promptly resubmit the corrected shop or erection drawing for record.

c. REVISE and RESUBMIT indicates that the SER requires resubmission of the shop or erection drawing after correction per notes and comments. None of the elements of work shown on the shop drawing shall be fabricated, manufactured or constructed until the Contractor has received a returned shop drawing marked Approved or Approved as Noted.

d. NOT APPROVED indicates that the shop or erection drawing does not conform to the Contract Documents and must be extensively revised before re-submittal. None of the elements of work shown on the shop drawing shall be fabricated, manufactured or constructed until the Contractor has received a returned shop drawing marked Approved or Approved as Noted.

3. TYPE 2 — Delegated Design Review Stamp: For submittals for building elements which are not designed by the SER but are delegated design items, or for items that do not form part of the completed structural system but impose loads on the structure, or for construction items or activities which have an effect on the final structure. The responses on the stamp used by the SER require one of the following actions:

   a. NO EXCEPTIONS indicates that the SER has found that the information presented on the submittal appears to conform to the requirements of the Contract Documents. Fabrication, manufacture or construction of the elements of work shown in the shop drawing may proceed, provided that work is in compliance with the Contract Documents.

   b. EXCEPTIONS NOTED indicates that the SER requires the submittal be corrected to reflect the notes and comments shown. Fabrication, manufacture or construction of the elements of work shown in the shop drawing may proceed, provided that work is in compliance with thenotations shown on the shop drawings and the Contract Documents. Promptly resubmit the corrected document for record.

   c. REJECTED indicates that the SER requires resubmission of the submittal after correction per notes and comments. None of the elements of work shown on the shop drawing shall be fabricated, manufactured or constructed. Contractor to revise and resubmit until SER response of No Exceptions or Exceptions Noted is received.

C. Substitution Request

1. Requests for any departure from Contract Documents must be submitted in writing by the Contractor and accepted in writing by the Design Professionals, prior to receipt of submittals.

2. All substitutions must be requested using the structural substitution request form included at the end of this section. Acceptance using the structural substitution request form indicates acceptability of the structural concept only. Contractor must submit shop drawings reflecting accepted substitutions for review in accordance with this Specification. The structural substitution request form, even if accepted, does not constitute a change order.

3. Accepted substitutions or modifications shall be coordinated and incorporated in the work at the sole expense of the Contractor.

4. The acceptance by the Design Professionals of a specific and isolated request by the Contractor to deviate from these requirements does not constitute a waiving of that requirement for other elements of, or locations in the project, unless specifically addressed as such and permitted by the Design Professionals in writing.

5. Compensation for Additional Services: Should additional work by Design Professionals such as design, documentation, meetings and/or site visits be required which are necessitated for the review and/or incorporation of the Contractor-requested substitution, including indirect effects on other portions of the work, the Contractor is responsible for paying for additional work performed by the Design Professionals at the standard billing rates plus out-of-pocket expenses incurred at cost + 10%. Additional costs for testing and inspection by the Contractor shall also be compensated by the Contractor.

6. Contractor is responsible for means and methods and any impacts on other portions of the work that may arise from this substitution.

D. Request for Information (RFI)

1. RFIs shall be submitted by the Contractor. RFIs submitted by other entities will be returned with no response.

2. Limit RFI to one subject.

3. Submit RFI immediately upon discovery of the need for interpretation or clarification of the Contract Documents. Submit RFI within timeframe so as not to delay the Construction Schedule while allowing the full response time described below.

4. The response time for answering an RFI depends on the category in which it is assigned.

    a. Upon receipt by the SER, each RFI will be assigned to one of the following categories:

        i. No cost clarification

        ii. Shown in Contract Documents

        iii. Change to be issued in future document revision

        iv. Previously answered

        v. Information needs to be provided by others.

        vi. Request for corrective field work

        vii. Request for substitution

b. RFIs in the first five categories listed above will be turned around by the SER on average of [five (5)] working days.

c. RFIs in the last two categories listed above will be immediately rejected and must be submitted as submittals or requests for substitution.

1. DELIVERY, STORAGE, AND HANDLING

    A. Comply with General Conditions and General Requirements.

    B. Storage:

        1. Store materials in accordance with ACI 304R.

        2. Store cement in weather-tight buildings, bins or silos that will exclude moisture and contaminates.

        3. Store admixtures to avoid contamination, evaporation, damage, and in accordance with manufacturer's temperature and other recommendations.

        4. Keep packaged material in original containers with seals unbroken and labels intact until time of use.

    C. Handling:

        1. Handle fine and coarse aggregates as separate ingredients.

2. Arrange aggregate stockpiles to avoid excessive segregation, and prevent contamination with other materials or with other sizes of like aggregates.

3. Do not use frozen or partially frozen aggregates.

4. Allow sand to drain until it has reached relatively uniform moisture content before use.

5. Protect liquid admixtures from freezing and temperature changes that would adversely affect characteristics, and in accordance with manufacturer's recommendations.

2. PRE-CONCRETE CONFERENCE

A. At least 30 working days prior to the start of concrete construction, the Contractor shall hold a meeting to review the proposed concrete mix designs and to determine the procedures for producing proper concrete construction. The Contractor shall notify the Design Professionals of the meeting and require responsible representatives of every party who is concerned with the concrete Work to attend the conference, including but not limited to the following:

1. Contractor's superintendant.

2. Testing Agency representative responsible for field quality control

3. Concrete subcontractor.

4. Ready-mix concrete producer.

5. Admixture manufacturer(s).

6. Architect

7. Structural Engineer

B. Minutes of the meeting shall be recorded and distributed by the Contractor to all parties concerned within five working days of the meeting. One copy of the minutes shall also be furnished to the following:

1. Design Professionals.

2. Owner's Representative.

C. The minutes shall include a statement by the concrete contractor and admixture manufacturer(s) indicating that the proposed mix design and placing, finishing, and curing techniques can produce the concrete properties and quality required by these Specifications.

3. QUALITY ASSURANCE BY CONTRACTOR'S TESTING AGENCY

    A. See Section 01 45 00.

4. QUALITY CONTROL BY CONTRACTOR

    A. The Contractor shall provide a program of quality control to ensure that the minimum standards specified herein are attained.

    B. The Owner's general review during construction and activities of the Testing Agency are undertaken to inform the Owner of performance by the Contractor but shall in no way replace or augment the Contractor's quality control program or relieve the Contractor of total responsibility for quality control.

    C. The Contractor shall immediately notify the Design Professionals of any deficiencies in the work which are departures from the Contract Documents. The Contractor shall propose corrective actions and their recommendations in writing and submit them for review by the Design Professionals. After proposed corrective action is accepted by the Design Professionals and Owner, the Contractor shall correct the deficiency at no cost to the Owner. Where the Contractor requests that the Design Professionals develop the corrective actions or review corrective actions developed by others, the Design Professional shall be compensated as outlined in the OBSERVATIONS AND CORRECTIONS BY DESIGN PROFESSIONALS section of this Specification.

    D. Where SCC is used, the Ready Mix Producer shall have a Quality Control Representative on site during placements until mix consistency and stability is established.

5. OBSERVATIONS AND CORRECTIONS BY DESIGN PROFESSIONALS

    A. Observations: The Design Professionals will observe the construction for general compliance with the provisions of the Contract Documents during various phases of construction.

    B. Corrections by Design Professionals: See Part 3 - CORRECTIVE MEASURES section of this Specification.

6. PERMITS AND WARRANTY

    A. Permits: The Contractor shall apply for, procure, renew, maintain, and pay for all permits required by City, State, or other governing authorities, necessary to execute work under this Contract. Contractor shall furnish copies of all permits to the Owner.

B. Warranty: Comply with General Conditions, agreeing to repair or replace specified materials or work that has failed within the warranty period. Failures include but are not limited to the following:

1. Oily, waxy or loose residue which may interfere with the bonding or discoloration of various applied Architectural finish materials.

2. Discoloration of concrete surfaces scheduled to remain exposed as a finish.

3. Areas which show surface failure or defects.

4. Areas which puddle water.

5. Areas which are not properly prepared to receive Architectural finish materials. If necessary, the Contractor, at his own expense, shall have the Testing Agency perform appropriate tests for bond and discoloration.

6. Patches that become crazed, cracked or sound hollow when tapped.

7. Self-leveling concrete topping that has cracked, spalled and/or not performed in accordance with manufacturer's design criteria.

PART 2 - PRODUCTS

1. CONCRETE MATERIALS AND PRODUCTION

A. Portland Cement:

1. ASTM C150, Type I or Type II

2. ASTM C150, Type III, High-early Strength Portland Cement may be used subject to review and approval of the SER. The specified 28-day concrete compressive strength shall occur within 7 days for concrete using Type III Portland Cement.

3. Provide the same brand of Portland Cement produced in the United States from a single source throughout the project, as required to meet Design Professionals' requirements.

4. Provide Portland Cement that is uniform in color.

B. Aggregates for Normalweight Concrete:

1. ASTM C 33

2. Fine Aggregate: Natural sand, or sand prepared from stone or gravel, clean, hard, durable, uncoated and free from silt, loam and clay.

3. Provide aggregates from a single source throughout the project for exposed concrete.

4. The acceptability of aggregates for the work will depend on proof that their potential alkali reactivity is not deleterious to the concrete.

5. Do not use fine or coarse aggregates that contain substances that cause spalling.

6. Maximum coarse aggregate size shall conform to the requirements as specified in ACI 301 but shall not exceed the following:

   Size no. 57 for footings, drilled piers and caissons Size no. 67 for all other locations

   Size no. 467 or 457 for non-reinforced concrete at locations noted on Drawings.

7. Contractor shall furnish concrete with maximum 3/8" aggregate at no additional cost to the Owner if areas of high reinforcement density require it for placement and consolidation.

C. Aggregates for Lightweight Concrete:

1. ASTM C 330: Except aggregates prepared by processing natural materials, such as pumice, scoria, or tuff.

2. Classification of Aggregates: As required to meet Design Professional's requirements.

3. Provide aggregates from a single source throughout the project for exposed concrete.

4. Aggregate shall contain the minimum absorbed moisture content recommended by the manufacturer for the project prior to batching.

5. Maximum coarse aggregate size shall conform to the requirements as specified in ACI 301

D. Water: ASTM C 1602. Clean, and free from injurious amounts of oil, acids, alkali, salts, organic material, or other deleterious materials.

E. Supplementary Cementitious Material

1. Fly Ash:

   a. ASTM C 618, Class C or Class F.

   b. Shall only be used as part of an approved mix design.

c. Slag Cement

d. ASTM C 989.

e. Shall not be used unless part of an approved mix design.

2. Silica Fume (Microsilica):

a. ASTM C 1240

b. Acceptable Products:

i. Force 10,000 D by GCP Applied Technologies, Inc.

ii. Eucon MSA by Euclid Chemical Company

iii. MasterLife SF 100 by BASF Coroporation

iv. Sikacrete 950 DP by Sika Corporation

3. Metakaolin:

a. ASTM C 618, Class N

b. Accetpable Products:

i. MetaMax by BASF Kaolin, part of BASF Corporation

ii. HRMK 100 by GCP Applied Technologies, Inc.

iii. Sikacrete M-100 by Sika Corporation

4. For concrete subject to Exposure Class F3 conditions as defined in ACI 318, limit the maximum content of supplementary cementitious materials to values shown in ACI 318.

5. The exact percentages used shall be based on successful test placement on site. Resubmit mix design if percentages change based on test placement.

6. The fly ash or natural pozzolan supplier shall have an effective quality control program in place to guard against contamination of the fly ash and assure compliance with Specifications.

7. Fly ash and slag cement used shall be from one source throughout the project. Substitution of sources will be acceptable only if testing of concrete mixes containing the substituted material show similar test results and if the color of concrete produced with the substituted material matches the color of previously poured concrete to the satisfaction of the Architect.

F. Ready Mixed Concrete:

1. Shall be batch-mixed and transported in accordance with ASTM C

G. Self-Consolidating Concrete:

1. Produce in accordance with ACI 237R.

2. Perform the following tests and provide report prior to submitting mix design:

a. Resistance to Segregation: Achieve a maximum static segregation percentage of 15% when tested according to ASTM C 1610 with a VSI index of 1 maximum.

b. Slump Flow: ASTM C1611 within a range of 20”-30”.

c. Passing Ability: ASTM C1621 with a maximum difference of 2" between testing with and without the J-Ring.

2. CONCRETE MIX DESIGN

A. Concrete Strength:

1. Shall be as indicated on the Structural Drawings

B. Concrete Density (Unit Weight):

1. Shall be as indicated on the Structural Drawings

C. Air Entrainment

1. For concrete exposed to freeze/thaw cycles and/or deicing chemicals (ACI 318 Exposure Classes F1, F2, F3), and concrete intended to be watertight, provide entrained air content of 6% + 1.5%, unless specified otherwise. This includes, but is not limited to, concrete at the following locations:

a. Concrete at the exterior of the structure with at least one surface exposed to weather, such as exterior face of grade beams, foundation walls, exterior walls and parapets, exposed columns and edge beams.

b. Floor framing and ramps in parking garages.

c. Loading docks.

d. Balconies and terraces with no waterproofing membrane.

2. For lightweight concrete less than 120 pcf density, air content may be up to 7% regardless of exposure condition.

3. For concrete with a specified compressive strength (f'c) greater than 5000 psi, required air content may be reduced to 5% + 1.5%.

4. Entrained air content noted above shall occur at point of delivery.

5. No entrained air content is required for foundations with no surface exposed to weather.

6. All interior steel trowel finished, normalweight slabs shall have a maximum air content of 3%.

D. Water-Cementitious Materials Ratio (w/cm) for Normalweight Concrete

1. Concrete used in slab on grade shall have a maximum w/cm ratio of 0.45.

2. All concrete used in exterior applications, including foundations, shall have a maximum w/cm of 0.40.

3. Absent the above conditions, all concrete with required strength of 4000 psi or higher shall have a maximum w/cm of 0.50.

4. The water-cementitious materials ratio shall not exceed values indicated, including any water added to meet specified slump in accordance with the requirements of ASTM C 94.

5. Weight of fly ash and other pozzolanic materials shall be included with the weight of cementitious materials used to determine the water-cementitious materials ratio.

E. Slump

1. Concrete design mixes shall be proportioned to meet the following slump limitations. Slump should be measured as described in the Testing Agency responsibilities:

a. Concrete with high range or mid range water-reducing admixture: Concrete slump prior to addition of high range water-reducing admixture shall not exceed 3" +/- 1” for normalweight concrete and 4" +/- 1” for lightweight concrete. After addition of water-reducing admixture, the concrete shall have a maximum slump of 9" +/- 1” unless otherwise approved by the SER.

b. Concrete without a water-reducing admixture: Slump shall not exceed 4” +/- 1”.

F. Self-Consolidating Concrete Slump/Flow: Use for concrete exposed to view and heavily reinforced areas where indicated on the plans, and where conventional mixtures do not provide adequate consolidation. Minimum slump/flow diameter of [20"] or as required by the successful test placement onsite, which shall verify proper

workability, finish, and setting time. All self-consolidating concrete shall contain the specified high range water-reducing admixture. All self-consolidating concrete shall contain viscosity modifying admixture as required unless proper quantity and grading of fines can be achieved.

G. Shrinkage Limit

1. At all locations required to be watertight, proportion concrete for a maximum allowable length change of 0.04%, measured at 28 days, unless a lower shrinkage limit is indicated on the drawings.

H. Chloride Ion Content

1.

2.

3. ADMIXTURES

The total water-soluble chloride ion content of the mix including all constituents shall not exceed 0.15 percent by weight of cement unless corrosion inhibiting admixtures are added to the mixture to offset the additional chloride.

If the specified level of water-soluble chloride ion content cannot be maintained, appropriate level of corrosion inhibiting admixture shall be added to the mix in accordance with the manufacturer's recommendation to offset the excess amount of chloride at no additional cost to the Owner.

A. General:

1. Admixtures specified below can be used only when established in the mix design with Design Professionals' prior written approval.

2. Each admixture approved by Design Professionals shall be used in strict compliance with manufacturer's published instructions.

3. Concrete supplier shall certify all admixtures to be compatible with each other. (See Submittals Section in Part 1)

B. Air Entraining Admixture:

1. ASTM C 260

2. Acceptable Products:

a. MasterAir Series by BASF Corporation

b. Darex Series or Daravair Series by GCP Applied Technologies, Inc.

c. EUCON AEA —92 or EUCON Air Series by Euclid Chemical Company

d. AIR Series or AEA-14 by Sika Corporation

c. Water-Reducing Admixture:

1. ASTM C 494, Type A

2. Acceptable Products:

a. MasterPozzolith Series by BASF Corporation

b. EUCON NW or EUCON WR 91 by Euclid Chemical Company

c. WRDA Series, Zyla Series or Mira Series by GCP Applied Technologies, Inc.

d. Plastocrete Series by Sika Corporation

D. Retarding Admixture:

1. ASTM C 494, Type B

2. Acceptable Products:

a. MasterSet R Series or MasterSet DELVO Series by BASF Corporation

b. EUCON RETARDER 100 by Euclid Chemical Company

c. Daratard 17 by GCP Applied Technologies, Inc.

d. Plastiment Series by Sika Corporation

E. Non Corrosive Accelerating Admixture:

1. ASTM C 494, Type C

2. Acceptable Products:

a. MasterSet FP 20 or MasterSet NC 534 by BASF Corporation

b. ACCELGUARD 80, ACCELGUARD NCA or ACCELGUARD 90 by

Euclid Chemical Company

c. Daraset" Series, Polarset, or DCI by GCP Applied Technologies, Inc.

d. Sikaset Series or Rapid-1 by Sika Corporation

F. Water-Reducing and Retarding Admixture:

1. ASTM C 494, Type D

2. Acceptable Products:

a. MasterSet R Series or MasterSet DELVO Series by BASF Corporation

b. EUCON RETARDER 75 or EUCON DS by Euclid Chemical Company
c. Daratard 17 or Recovery Series by GCP Applied Technologies, Inc.
d. Plastiment Series by Sika Corporation

G. Water-Reducing and Accelerating Admixture:
1. ASTM C 494, Type E
2. Acceptable Products:
a. MasterSet FP 20 by BASF Corporation
b. ACCELGUARD 80 or ACCELGUARD 90 by Euclid Chemical Company
c. Libricon NCA by GCP Applied Technologies, Inc.
d. Sikaset NC by Sika Corporation

H. Mid-Range Water-Reducing Admixture:
1. ASTM C 494, Type A
2. Acceptable Products:
a. MasterPolyheed Series by BASF Corporation
b. Daracem or Mira by GCP Applied Technologies, Inc.
c. Sikaplast Series or Sikament Series by Sika Corporation
d. Eucon MR or Eucon MRX by Euclid Chemical Company

I. High-Range Water-Reducing Admixture:
1. ASTM C 494, Type F
2. Acceptable Products:
a. MasterGlenium Series by BASF Corporation
b. EUCON 37 or PLASTOL SERIES by Euclid Chemical Company
c. Daracem or ADVA Series by GCP Applied Technologies, Inc.
d. Viscocrete Series or Sikament Series by Sika Corporation

J. High-Range Water-Reducing Admixture for production of Control Flow Concrete:
1. ASTM C494 Type A and F and ASTM C1017 Type I

2. Acceptable Product:
    a. CONCERA SA8080 by GCP Applied Technologies, Inc.

K. High-Range Water-Reducing and Retarding Admixture:
1. ASTM C 494, Type G
2. Acceptable Products:
    a. EUCON 537 by Euclid Chemical Company
    b. Daracem Series or Adva Series by GCP Applied Technologies, Inc.

L. Workability Retaining Admixture:
1. ASTM C494, Type S
2. Acceptable Products:
    a. MasterSure Z-60 by BASF Corporation
    b. Visco Flow-2020 by Sika Corporation

M. Permeability-Reducing Admixture:
1. ASTM C494, Type S
2. Shall be a Portland cement based crystalline capillary waterproofing admixture that reacts in concrete to form non-soluble crystalline hydration products in the capillary pores of concrete,
3. Acceptable Products:
    a. MasterLife 300D by BASF Corporation
    b. Eucon Vandex AM-10 by Euclid Chemical Company
    c. Admix C-Series by Xypex

N. Viscosity Modifying Admixture (VMA) for Self-Consolidating Concrete (SCC):
1. ASTM C 494, Type S
2. Acceptable Products:
    a. MasterMatrix VMA Seriesby BASF Corporation
    b. V-MAR3 by GCP Applied Technologies, Inc.
    c. EUCON ABS or EUCON WO or VISCTROL by Euclid Chemical Company

d. Sika Stabilizer-4R by Sika Corporation

O. Corrosion Inhibiting Admixtures:

1. Calcium Nitrite Based: ASTM C 1582 and ASTM C 494, Type C, 30% + 2% solution

a. Acceptable Products:

i. DCI or DCI-Sby GCP Applied Technologies, Inc.

ii. MasterLife CI 30 by BASF Corporation

iii. EUCON CIA by Euclid Chemical Company

iv. Sika-CNl by Sika Corporation

2. Amine Carboxylate Based: ASTM C 1582, which includes ASTM C-494 amine carboxylate

a. Acceptable Product:

i. MCI 2005, MCI 2005 NS, MCI 2006 or MCI 2006 NS by Cortec Corporation

3. Amino Alcohol Based:

a. Acceptable Product:

i. FerroGard 901 by Sika Corporation

ii. MasterLife CI 222 by BASF Corporation

P. Shrinkage Reducing/Compensating Admixtures:

1. ASTM C 494, Type S

2. Acceptable Products:

a. Eclipse Floor 200 or Eclipse 4500 (for use with air-entrained concrete) by GCP Applied Technologies, Inc.

b. Conex or EUCON SRA Floor or EUCON SRA-XT (for use with air-entrained concrete) by Euclid Chemical Company

c. MasterLife SRA Series or MasterLife CRA 007 by BASF Corporation

d. SikaControl 75 by Sika Corporation

e. PREVent-C by PremierCPG

Q. Alkali-Silica Reaction Inhibiting Admixture:

1. ASTM C 494, Type S
2. Shall contain a nominal lithium nitrate content of 30 percent.
3. Dosage to be determined in accordance with US Army COE CRD-C662
4. Acceptable Products:
    a. MasterLife ASR 30 by BASF Corporation
    b. Eucon Integral ARC by Euclid Chemical Company
    c. RASIR by GCP Applied Technologies

R. Porosity Inhibiting Admixture:

1. ASTM C494, Type S
2. Sodium silicate free
3. Manufacturer must be able to provide a flooring adhesion guarantee and life of the concrete vapor transmission warranty. In order to obtain warranty, product must be installed in compliance with the manufacturer's published data sheet including but not limited to proper on-site representation, mix design review, concrete testing and installation of vapor retarder for slabs on ground.
4. Acceptable Products:
    a. Barrier One by Concrete Moisture Solutions, Inc.

S. Carbon Dioxide (C02) Mineralization:

1.

2.

3.

1. ADHESIVES

Where called for on the drawings or when approved by the SER, provide concrete that has undergone carbonization treatment with carbon dioxide (C02) during mixing, such that C0z is chemically mineralized into the concrete.

C02 injected into the mix must be post-industrial C02 sourced from a nearby emitter. Provide concrete producer's certificate outlining quantity, location and supplier of C02.

Acceptable Product:

a. Carbon Cure by CarbonCure Technologies.

A. Epoxy Bonding Agent for bonding hardened concrete to hardened concrete (existing concrete damp or dry, at least 28 days old, no surface water):

1. ASTM C 881 Type IV, Grade 1, 2 or 3, Class B or C as appropriate for field temperature conditions.

2. Acceptable Products:

a. Acceptable Product: Dural 452 Series by Euclid Chemical Company

b. Rezi-Weld 1000 by W.R. Meadows

c. Sure Bond J58 by Dayton Superior

B. Epoxy Bonding Agent for bonding freshly mixed concrete to hardened concrete (existing concrete damp or dry, less than 28 days old, no surface water):

1. ASTM C 881, Type V, Grade 1, 2, or 3, Class B or C as appropriate for field temperature conditions.

2. Acceptable Products:

a. Dural 452 Gel or 452 MV by Euclid Chemical Company

b. Sikadur 32 Hi-Mod by Sika Corporation

c. Rezi-Weld 1000 by W.R. Meadows

d. Sure Bond J58 by Dayton Superior

C. Anti-Corrosive Epoxy Modified Cementitious Bonding Compound and Corrosion Protection of Reinforcement (bonding agent for existing concrete saturated surface dry, no surface water):

This adhesive shall be a water-based epoxy/cementitious compound for adhesion and corrosion protection of reinforcing members.

1. Acceptable Products:

a. DURALPREP AC by Euclid Chemical Company

b. ARMATEC 110 EpoCem by Sika Corporation

c. MasterEmaco P124 by BASF Corporation

d. Perma Prime 3C by Dayton Superior

2. 5 CURING COMPOUNDS AND SEALERS

A. Interaction with finishes:

1. See architectural Drawings for finish material applied over concrete.

2. Use only curing and sealer compounds that are compatible with finish, waterproofing or roofing material.

B. Curing and Sealing Compound (VOC Compliant, 350 g/l):

1. ASTM C1315, Type I, Class A and/or ASTM C 309, Type 1, Class A or B

2. Water based acrylic, clear, 25% solids curing and sealing compound.

3. Acceptable Products:

a. Super Diamond Clear VOX by Euclid Chemical Company

b. Cure & Seal 1315 J22WB by Dayton Superior

c. VOCOMP-25 by W.R. Meadows

d. Dress & Seal WB 30 or Lumiseal WB by Laticrete International, Inc.

C. Curing Compound-Dissipating/Strippable (VOC Compliant, 350 g/l):

1. ASTM C 309, Type I, Class A or B

2. Water based resin, clear curing compound that begins to dissipate when exposed to UV light and traffic.

3. Acceptable Products:

a. Kurez DR VOX by Euclid Chemical Company

b. Clear Resin Cure J11W by Dayton Superior

c. 1100 by W.R. Meadows

D. Surface Applied Vapor Emission Mitigation

1. Shall conform to state and federal VOC regulaions with zero VOC content.

2. Shall provide a 15 year warranty against flooring failure due to negative-side moisture vapor migration of moisture-born alkalinity.

3. Acceptable Products:

a. CS2000 by Creteseal

E. Liquid Densifier/Sealer:

1. The liquid densifier compound shall be a silicate based compound that penetrates and chemically hardens concrete surfaces.
2. Acceptable Products:
    a. Euco Diamond Hard by Euclid Chemical Company
    b. Acceptable Product: Dayton Superior “Densifier J13"
    c. MasterKure HD 200WB by BASF Corporation
    d. Liqui-Hard by W.R. Meadows

F. Evaporation Retarder:

1. Acceptable Products:
    a. MasterKure ER50 by BASF Corporation
    b. Eucobar by Euclid Chemical Company
    c. Sika Film by Sika Corporation
2. 6 DRY SHAKE HARDENERS

A. Mineral Aggregate Hardener:

1. The specified mineral aggregate hardener shall be a factory-blended mixture of specially processed graded non-metallic aggregate.
2. Acceptable Products:
    a. Euclid Chemical Company, "Surflex" to be used with “Kurez DR VOX”
    b. MasterTop 100 to be used with "MasterKure CC 200WB by BASF Corporation
    c. Quartzplate FF to be used with Dress & Seal WB 30 by Laticrete International, Inc.

B. Non-Oxidizing Metallic Hardener:

1. The specified non-oxidizing metallic floor hardener shall be a mixture of specially processed non-rusting aggregates.
2. Acceptable Products:
    a. Euclid Chemical Company, “Diamond-Plate” to be used with “Kurez DR VOX”

b. MasterTop 210COR to be used with “MasterKure CC 200WB by BASF Corporation

c. Emeryplate FF to be used with Lumiseal WB by Laticrete International, Inc.

7. MISCELLANEOUS CONCRETE AND CONCRETE RELATED PRODUCTS

A. Cementitious Non-Shrink Grout:

1. Provide pre-packaged high-precision, non-shrink, non metallic grout.

2. See General Notes for grout minimum compressive strength.

3. ASTM C 1107

4. Acceptable Products:

a. MasterFlow 928 by BASF Corporation

b. Dry Pack Grout or HI-FLOW GROUT by Euclid Chemical Company

c. Five Star Grout by Five Star Products

d. Sikagrout 328 by Sika Corporation

e. Duragrout by Latticrete International, Inc.

B. Self-Leveling Concrete Topping - Underlayment for Interior Applications:

1. Use self-leveling underlayment concrete formulated to level concrete floors without shrinking, cracking or spalling, and capable of being placed from feathered edge to 1" thickness without aggregate in one pour. If greater than 1" thickness is required, aggregate shall be extended with aggregate in accordance with manufacturer's requirements. Appropriate primer shall be utilized for all underlayment applications.

2. Acceptable Products:

a. K-15 by Ardex

b. FIo-Top or Super FIo-Top by Euclid Chemical Company

c. Sika Level Series by Sika Corporation

C. Moisture-Retaining Covers:

1. ASTM C171
2. A naturally colored, non-woven polypropylene fabric with a non-perforated reflective polyethylene coating containing stabilizers to resist degradation from ultraviolet light. Fabric shall exhibit low permeability and high moisture retention.
3. Acceptable Products:
    a. Hydracure S-16 by PNA Construction Technologies, Inc.
    b. Transguard 4000 by Amorlon a Division of Reef Industries, Inc.
    c. UltraCure NCF by Sika Corporation
    d. Top Cure by Transhield

D. Expanded Polystyrene (EPS) used as Fill - Geofoam

1. Material: Rigid, closed cell polystyrene blocks formed by expansion of polystyrene beads by steam.
2. Comply with the requirements of ASTM D 6817
3. Unless noted otherwise on the drawings, provide the following types of EPS:
    a. Fill between a lower slab and a raised slab area: EPS12 - 2.2 psi compressive resistance minimum at 1% deformation, 10 psi flexural strength minimum
    b. Fill below exterior floor slabs or slabs with truck loading: EPS19 - 5.8 psi compressive resistance minimum at 1% deformation, 30 psi flexural strength minimum
4. Thickness as indicated on Drawings.
5. Execution: Conform to manufacturer's instructions regarding preparation, installation and protection
6. Gripper plates shall be used as needed to restrain EPS from moving laterally in multi-layer applications
7. Contractor shall sequence soil or concrete topping placement to avoid EPS block shift or flotation.
8. Submit the following for review:

a. Manufacturer's product literature including physical properties in compliance with ASTM D 6817 and type specified

b. 10 year physical property warranty

c. Proposed plan layout of fill blocks showing gaps between blocks where required for stabilizing and/or load bearing reinforced concrete ribs as shown on drawings, in details or in notes.

9. Submit the following for record:

a. Summary of test compliance with specified performance characteristics and physical properties

b. Product Certificates showing evidence of third party quality control

10. Acceptable Manufacturers:

a. ACH Foam Technologies

b. Atlas EPS

c. Universal Construction Foam

E. Vapor Retarder: See Thermal and Moisture Protection

F. Non-Slip Aggregate:

1. Abrasive crushed and graded aggregate, high in aluminum oxidegregate which is unaffected by moisture or cleaning compounds.

2. Acceptable Products:

a. Non-Slip Aggergate by Euclid Chemical Company

b. Emery Non-Slip by Dayton Superior

c. A-H Emery Emerundum by Anti-Hydro International, Inc.

8. CONCRETE REPAIR MATERIALS

A. Polymer-Modified Repair Mortar

1. The following patching mortars may be used when color match of the adjacent concrete is not required. Prior approval by the Design Professionals is required.

2. Acceptable Products-Horizontal Surfaces:
    a. Tammspatch II or Tamms Thin Patch by Euclid Chemical Company
    b. Sikatop 122 Plus by Sika Corporation
    c. Meadow-Patch T1 or T2 or Meadow-Crete GPS by W. R. Meadows
    d. Duracrete by Laticrete International, Inc.
3. Acceptable Products-Vertical and Overhead Surfaces:

a)

b)

c)

B. Crack Repair:

MasterEmaco N400 by BASF Corporation

Verticoat, Vertacoat Supreme or Dualtop Gel by Euclid Chemical

Company

SikaTop 123 Plus by Sika Corporation Meadow-Crete GPS by W.R. Meadows

a) Euco Qwikstitch or Dural 50 LM by Euclid Chemical Company

b) MasterSeal 630 by BASF Corporation

c) T78 Methyl Methacrylate Crack Sealer by Transpo Industries, Inc.

A. High Strength Flowing Repair Concrete:
    1. For forming and pouring large volume repairs, provide shrinkage compensated repair concrete with integral corrosion inhibitor.
    2. Minimum compressive strength 8000 psi @ 28-days
    3. Prior approval by the Design Professionals is required for cold weather applications
    4. Acceptable Products:
        a. Eucocrete by Euclid Chemical Company
        b. MasterEmaco S 466 CI by BASF Corporation
        c. Meadow-Crete FNP by W.R. Meadows

B. Epoxy Injection:

1. ASTM C881
2. Acceptable Products:
    a. Masterlnject 1380 by BASF Corporation
    b. Dural Injection Gel by Euclid Chemical Company
    c. Sikadur 35 LV LPL by Sika Corporation
    d. Rezi-Weld LV State by W. R.Meadows

C. Pressure-Injected Foam Resin:

1. Acceptable Products:
    a. De Neef Sealform PURe by GCP Applied Technologies
    b. Crack-Pac Flex-H2o by Simpson Strong-Tie
    c. SikaFix HH LV by Sika Corporation

D. Semi Rigid Joint Filler:

1. Acceptable Products:
    a. MasterSeal CR 190 by BASF Corporation
    b. Euco 700 or Qwikjoint UVR by Euclid Chemical Company
    c. MM-80 by Metzger/McGuire
    d. Rezi-Weld Flex by W. R, Meadows

E. Methyl Methacrylate (MMA)

1. Acceptable Products:
    a. MasterSeal 630 by BASF Corporation
    b. Transpo Industries, Inc. “T-78 Methyl Methacrylate Polymer Crack Healer/Sealer”
    c. MMA #884 by Epoxy Systems

F. Sealant:

1. Silicone or Polyurethane Sealant (as selected based on project requirements such as loading, traffic, bond, coatings, etc.).

2. Joint to be routed and cleaned per manufacturer's written directions.
3. Acceptable Products:
    a. MasterSeal Sealants by BASF Corporation
    b. Sikaflex-1C SL and Loadflex 524 EZ by Sika Corporation
    c. Pourthane NS by W.R. Meadows
    d. Eucolastic 1NS by Euclid Chemical Company

PART 3 - EXECUTION

1. TOLERANCES
    A. Work shall conform to all requirements of ACI 117 except as modified by more stringent requirements in the Project Specifications and/or Drawings.
2. PREPARATION
    A. Subgrade:
        1. Dampen subgrades not covered with membrane by sprinkling immediately before placing concrete.
            a. Omit when subgrade is already damp.
        2. Do not place on water-saturated subgrade unless placing can be done without damage to subgrade (surface is stable) and loading the subgrade does not drive free water to the surface.
        3. Do not place concrete on frozen ground.
    B. Forms:
        1. Coordinate with Section 03 10 00 Concrete Formwork.
        2. Remove dirt, sawdust, nails and other foreign material from formed space.
        3. Dampen wood forms by sprinkling immediately before placing.
        4. Cool metal forms by sprinkling immediately before placing.
    C. Concrete Accessories:
        1. Coordinate with Section 03 10 00 Concrete Formwork.
    D. Dewatering:
        1. Remove water from concrete formwork.

2. Divert any flowing water to sump and remove by pumping.

3. Refer to General Requirements for additional dewatering requirements.

E. Vapor Retarder Placement: See Thermal and Moisture Protection.

3. JOINTS IN CONCRETE

A. Locate construction and contraction joints as indicated on Drawings and on approved joint location submittal.

1. Do not use contraction joints in framed floors or composite slabs.

2. Locate and install construction joints so they do not impair strength or appearance of the structure, as acceptable to Design Professionals.

3. Coordinate location of construction and contraction joints with locations of joints in finish materials where they exist.

a. Construction and contraction joints in slabs or slab on grade with terrazzo finish must be reviewed and approved by the Design Professionals.

4. Maximum joint spacing is as indicated on Drawings.

B. Construction Joints:

1. Construction joints shall be located within the central third of the span. Any concrete spilling over or through the bulkhead shall be removed at the completion of the pour. All surfaces of the concrete shall have reinforcing extending through the joint.

2. Horizontal Joints: Horizontal construction joints other than those shown on the Drawings will not be permitted unless approved by the Architect.

3. Joint Preparation: Forms shall be removed in time to permit roughening of construction joints of structural members by chipping and wire brushing to remove all loose and foreign material and roughen as indicated on the Drawings. The existing concrete at joints shall either be (a) dampened to the point that the surface is saturated, but all standing water has been removed, promptly followed by placement and vibration of fresh concrete, or (b) not required to be dampened, with one of the specified bonding compounds applied as appropriate for the joint condition, following manufacturer recommendations, with placement and vibration of fresh concrete to follow while the epoxy

bonding agent is still tacky. Joints without epoxy bonding agent require fresh concrete with slump 7 inches or greater at horizontal joints, and fresh concrete confined to maintain pressure against the joint at vertical joints. Where such conditions are not present, or where applying water to dampen the surface is impractical, use epoxy bonding agent suitable for dry surfaces

C. Isolation Joints:

1. Interrupt structural continuity resulting from bond, reinforcement or keyway at points of contact between slabs-on-grade and vertical surfaces, such as column pedestals, foundation walls and other locations, as indicated.

D. Contraction Joints in Floor Slabs-on-Grade:

1. Maximum slab area controlled by jointing is 400 square feet.

2. Space joints at 36 times slab thickness unless a smaller spacing is indicated on the Drawings, located to conform to bay spacing wherever possible (at column centerlines, half bays, third bays).

3. Contraction joints can be provided by sawcuts, formed joints or appropriately detailed construction joints.

4. Sawcuts shall be made as soon as possible after slab finishing as may be safely done without dislodging aggregate. The Soff-Cut saw shall be used to a depth of '/‹ of slab thickness immediately after final finishing. Conventional saw shall be used as soon as possible after final finish without raveling to a depth as indicated on the Drawings.

5. Where contraction joints coincide with construction joints, detail joint as indicated on Drawings.

E. Joint Fillers: Coordinate with Section 03 20 00 Concrete Reinforcement and Embedded Assemblies and Thermal and Moisture Protection requirements.

4. MIXING

A. Measurement of Materials: Conforming to ASTM C 94.

B. Mixing: All concrete shall be ready-mixed conforming to ASTM C 94 except as follows:

1. Provide concrete materials, proportions and properties as herein specified in lieu of ASTM C 94.

2. Water, beyond that required by the mix design, shall not be added at the Project site. Addition of water at the Project site shall be made only in the presence of the Testing Agency.

3. Furnish delivery ticket with each load of concrete delivered to the site to the Contractor conforming to the requirements of ASTM C 94.

C. High range water reducing agents (superplasticizer), if added at the batch plant, may be added again at the Project site.

1. If superplasticizers are added at the batch plant, the concrete mix design must account for the delivery time, workability, finishability, and setting time required on the jobsite for proper placing and finishing procedures.

2. If the superplasticizer is redosed at the jobsite in air entrained concrete, air content must be checked after mixing.

D. Discharge of the concrete shall be completed within 1-1/2 hours, after the introduction of the mixing water to the cement and aggregates or the introduction of the cement to the aggregates. If the 1-1/2 hour limit cannot be achieved due to project location or other project specific conditions, hydration control measures to extend the proper workability up to 4 hours maximum can be proposed for approval by the SER. The increased time period along with redosing of the high range water reducer and/or use of hydration controlling/workability retaining admixtures should be agreed upon at the pre-concrete conference.

5. CONCRETE PLACEMENT

A. Prior to Concrete Placement:

1. Mechanical vibrators are required and must be available for placing concrete.

2. Remove debris from space to be occupied with concrete.

3. Notify Design Professionals and Testing Agency 48 hours prior to starting concrete placement.

4. Approved mix designs must be maintained on file in Contractor's Field Office.

5. Reinforcement and accessories shall be in proper locations, clean, free of loose scale, dirt or other foreign coatings that may reduce bond to concrete, and in accordance with Section 03 20 00 and Drawings.

6. Fog spray forms, reinforcing steel, and subgrade just before pouring concrete.

7. Do not place concrete having a slump outside of allowable slump range.

8. Place concrete before initial set has occurred, but in no event after it has been discharged from the mixer more than 30 minutes. All concrete shall be placed upon clean, damp surfaces, free from puddled water, or upon properly consolidated fills or upon Controlled Low-Strength Material with a strength between 50 and 1200 psi. Placement upon soft mud or dry earth is not permitted.

9. Unless adequate protection is provided, concrete shall not be placed during rain.

10. Rain water shall not be allowed to increase mixing water or to damage the surface finish.

11. At surfaces left exposed to view, do not use equipment in placing and finishing concrete that contain aluminum in the finishing edges that come in contact with the concrete surface.

12. Keep subgrade moisture uniform without puddles or dry areas.

13. Place vapor retarder directly below slabs on grade as specified in Contract Documents.

B. For Conduits and Pipes Embedded in Concrete:

1. For concrete slab, wall, beam or column, conform to requirements of ACI 318. For variations from these requirements, submit a written request for Design Professionals' review and response.

2. Conduits and pipes shall not be embedded in concrete slabs on steel deck without approval of Design Professional.

3. Provide sleeves for pipes passing vertically through concrete.

4. Do not embed aluminum materials.

5. Do not cut, bend or displace the reinforcement to facilitate placement of embedded pipes and conduits.

C. Pumping: Pumping shall be done in strict accordance with ACI 304.2R.

D. Placing Concrete in Forms:

1. Clean and prepare forms as specified in Section 03 10 00/Concrete Formwork.
2. Place concrete continuously without interruption between predetermined construction and contraction joints in walls.
3. Deposit concrete in forms in horizontal layers no deeper than 24” and in a manner to avoid inclined construction joints.
4. Where placement consists of several layers, place each layer while preceding layer is still plastic to avoid cold joints.
5. Consolidate placed concrete by mechanical vibrating equipment supplemented by hand-spading, rodding or tamping.
    a. Use equipment and procedures for consolidation of concrete in accordance with ACI 309R.
6. Do not use vibrators to move fresh concrete laterally inside forms from discharge point; shift discharge point as needed.
7. Insert and withdraw vibrators vertically at uniformly spaced locations no farther than the visible effectiveness of the machine.
8. Place vibrators to rapidly penetrate placed layer and at least 6" into preceding layer.
9. Do not insert vibrators into lower layers of concrete that have begun to set.
10. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing segregation of mix.
11. Do not vibrate Self-Consolidating Concrete (SCC).

E. Placing Concrete Slabs:

1. Place concrete continuously without interruption between predetermined construction and contraction joints in floors.
    a. Place slabs on grade by the long strip cast method. Refer to ACI 302.1R for recommended methods of placement.
2. Deposit and consolidate concrete slabs in a continuous operation, within limits of construction joints, until completing placement of a panel or section.

3. Consolidate concrete during placing operations so that concrete is thoroughly worked around reinforcement, other embedded items and into corners.

4. Bring slab surfaces to correct level with a straightedge and strike off.

    a. Use highway straight edges, bullfloats or darbies to smooth surface free of humps or hollows.

    b. Do not disturb slab surfaces prior to beginning finishing operations.

5. Maintain reinforcing in proper position on chairs during concrete placement.

6. Do not place materials on slabs or impose loads during period of setting.

F. Placing Concrete on Steel Decks

1. Exercise care during concrete placement on steel decks to prevent concentrated loads or high pile-ups of concrete and to avoid impacts caused by dumping or dropping of concrete on steel decks.

2. Do not use buggies on unprotected areas of deck. If buggies are used to place concrete, furnish and install planked runways to protect deck from damage.

G. Placing Concrete at Construction Joints:

1. To secure full bond at construction joints, surfaces to receive concrete in a subsequent placement shall be left in a roughened state or intentionally roughened by raking while plastic or brushing and chipping immediately after removal.

2. Before new concrete is placed in contact, surfaces of hardened concrete already placed shall be thoroughly cleaned of foreign materials and laitance.

3. At hardened concrete at joints where no bonding agents are used, dampen concrete to achieve a saturated surface dry condition. Leave no standing water. Place and vibrate concrete (slump 7 inches or greater) against horizontal joints. Place and vibrate flowing concrete (slump 8 to 10 inches) while maintaining pressure against vertical joints by confinement.

4. At hardened concrete with joints not meeting conditions required for no bonding agents, apply appropriate specified bonding agent for

conditions present including age and moisture per manufacturer's specifications. Place new concrete while the bonding agent is still tacky.

H. Cold-Weather Placement:

1. Protect concrete work from physical damage or reduced strength which could be caused by frost, freezing actions, or low temperatures, in compliance with ACI 306R and as specified in this section.

2. When air temperature has fallen to or is expected to fall below 40°F, uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50°F, and not more than 80°F, at point of placement.

3. Do not use frozen materials or materials containing ice or snow.

    a. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.

4. Remove frost, snow and ice from forms, reinforcement and other embedments immediately prior to concrete placement.

5. Use only the specified non-corrosive accelerating admixture previously approved as part of the cold weather mixture. Addition of calcium chloride, salt, thiocyanates or admixtures containing more than 0.05 percent chloride ions is not permitted.

6. Freeze Resistant Concrete per ASTM C1622 and Chapter 9 of ACI 212.3R may be used if approved by SER. The contractor shall prepare a plan for placing, finishing and curing procedures that assure the specified hardened properties are achieved.

I. Hot-Weather Placement:

1. Hot weather is defined as air temperature which exceeds 90°F or any combination of high temperature, low humidity and/or high wind velocity which causes a rate of evaporation in excess of 0.2 pounds per square feet per hour as determined by ACI 305R.

2. When hot weather conditions exist that would impair quality and strength of concrete, place concrete in compliance with ACI 305R and as specified in this section.

3. Cool ingredients before mixing to maintain concrete temperature at time of placement below [95°F].

4. Mixing water may be chilled, or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water.

5. Use of liquid nitrogen to cool concrete is Contractor's option.

6. When concrete placement will occur late in the day and reinforcing steel will be heated by the sun, cover reinforcing steel with water-soaked burlap so that steel temperature will not exceed ambient air temperature immediately before embedding in concrete.

7. When concrete operations must be performed in direct sun, wind, high temperatures, low relative humidity, or other adverse placing conditions, the specified evaporation retarder shall be applied one or more times during the finishing operation to prevent plastic cracking.

6. CONCRETE FINISHES

A. General:

1. Comply with recommendations for concrete finishing established by ACI 302.1R and ACI 304R.

2. Comply with dimensional tolerance limitations given by ACI

3. For shored floor or slab on grade construction: Floor flatness/floor levelness tolerance compliance testing is to be performed prior to the removal of shores and forms but not later than [72] hours of concrete placement by Testing Agency.

4. See architectural Drawings for locations of the various finishes listed below.

5. Comply with the specified overall SOFF and SOFL values listed below:

a. The specified overall area shall be each individual floor.

b. FF/FL shall be measured in accordance with ASTM E 1155.

c. The specified minimum local values of MLFF/MLFL shall be 3/5 of the SOFF/SOFL values listed below.

d. If an individual test section measures less than either of the specified minimum local MLFF/ MLFL numbers, that section may be rejected and remedial measures may be required as specified in CONCRETE SURFACE REPAIRS.

e. If the composite value of the test surface measures less than either of the specified overall SOFF/SOFL numbers, then the entire slab may be rejected and remedial measures may be required.

f. FL numbers shall only apply to supported slabs if the tested with all of the original shoring in place, prior to shoring removal/reshoring.

g. FL numbers shall not apply to unshored slabs or shored slabs with camber.

B. Finish for monolithic slab surfaces to receive concrete floor topping or mortar setting beds for tile and other bonded applied cementitious finish flooring material, as indicated on architectural Drawings:

1. Scratch Finish.

a. Finish surface to overall value of SOFF=20 and SOFL'15.

b. Slope surfaces uniformly to drains where required.

c. After leveling, roughen surface before final set with stiff brushes, brooms, or rakes.

c. Finish for monolithic slab surfaces to be covered with membrane or elastic waterproofing, membrane or elastic roofing, sand-bed terrazzo as indicated on architectural Drawings:

1. Float Finish.

a. After screeding, consolidating, and leveling concrete slabs, do not work surface until ready for floating.

b. Begin floating, using float blades or float shoes only, when surface water has disappeared, or when concrete has stiffened sufficiently to permit operation of power-driven floats, or both.

c. Consolidate surface with power-driven floats or by hand-floating if area is small or inaccessible to power units.

d. Finish surfaces to overall value of SOFF=20 and SOFL-15.

e. Cut down high spots and fill low spots.

f. Uniformly slope surfaces to drains.

g. Immediately after leveling, refloat surface to a uniform, smooth, granular texture.

D. Finishes for Pedestrian Sidewalks and Ramps, Exterior Platforms, Steps, as indicated on architectural Drawings:

    1. Sidewalks and Curbs: Light-to-medium broom finish applied with fiber-bristle broom perpendicular to direction of main traffic route immediately after float finishing.

    2. Ramps: Scored finish as applied perpendicular to direction of main traffic route immediately after float finishing.

    3. Finish surface to overall value of SOFF=20 and SOFL-15.

    4. Texture shall be approved by the Design Professionals from sample panels.

E. Finish for interior floor slab surfaces exposed to view and slab surfaces to be covered with resilient flooring, carpet, paint or another thin film-finish coating system, as indicated on architectural Drawings:

    1. Trowel Finish.

        a. After floating, begin first trowel-finish operation using a power-driven trowel.

        b. Begin final troweling when surface produces a ringing sound as trowel is moved over surface.

        c. The final hand-troweling operation shall result in a smooth surface, free of trowel marks, uniform in texture and appearance.

        d. Grind smooth any surface defects that would telegraph through applied floor covering system.

    2. Finish surface to overall value of SOFF=25 and SOFL-20.

    3. Floor Slopes: Where drains occur, slope floor slabs uniformly to drains, maintaining scheduled slab thickness.

    4. Floor Edges at Expansion Joints: Tool edges minimum 3/8".

    5. Defects: Remove defects of sufficient magnitude to show through floor covering by grinding.

    6. Floor Hardener: Use only where scheduled and in accordance with manufacturer's published instructions.

    7. Dry Cement: Shall not be used during finishing.

F. Finish for thin set ceramic tile or thin set epoxy terrazzo, as indicated on architectural Drawings:

1. Trowel and Fine Broom Finish:
    a. Apply a trowel finish as specified.
    b. Immediately follow by slightly scarifying the surface with a fine broom.
2. Finish surface to overall value of SOFF=35 and SOFL-25.

G. Finishes for Parking Garage Deck, Ramps, Loading Docks:

1. Highway straight edge immediately after screeding concrete.
2. Finish surface to overall values of SOFF=20 and SOFL-15.
3. For Slabs Not Receiving Deck Coating: Medium broom finish with ridges not to exceed 1/8" in height. Texture shall be as approved by the Design Professionals from sample panels.
4. For Slabs Scheduled to Receive Deck Coating: Smooth floated finish which must be verified with coating manufacturer before finishing the slab.
    a. Coordinate with deck coating specified under Thermal and Moisture Protection.
5. Auto Ramps: Rough texture applied perpendicular to direction of traffic. Texture shall be as approved by the Design Professionals from sample panels.

H. Finishes Equipment and Housekeeping Pads

1. Coordinate finish surface to meet equipment manufacturer requirements, if any, for flatness and levelness.

I. Tolerances at Slab Discontinuities

1. Within 2 ft of slab boundaries, construction joints, isolation joints, block-outs, penetrations or other similar discontinuities, where required for travel paths, installation of finishes and partitions, or any other requirements indicated in the Contract Documents, the following equivalent straightedge tolerances shall apply:
    a. Specified local MLFF = 12, use '/‹” over 4 ft, no offset greater than 1/16”
    b. Specified local MLFF = 15, use 1/8” over 4 ft, no offset greater than 1/32"

J. Dry Shake Finish:

1. Non-slip aggregate where indicated on Drawings.
2. Non-oxidizing metallic hardener on loading docks at a rate of 1.5 lbs. per sq. ft. and in other locations so noted on the Drawings.

3. Mineral aggregate hardener at a rate of 1.2 lbs. per sq. ft. where noted on the Drawings.

4. Final finish type, method and tolerance as applicable by location and use.

5. Dry shake finish will be applied only where scheduled and in accordance with the manufacturer's published instructions and the methods and procedures agreed upon at the pre-installation conference.

K. Rough Formed Finish:

1. Acceptable for formed concrete surfaces not exposed-to-view in the finish work or by other construction, unless otherwise indicated.

2. Concrete surface shall have texture imparted by form-facing material used, with tie holes and defective areas repaired and patched, and fins and other projections exceeding 1/4” in height rubbed down or chipped off.

L. Architectural Concrete Finish:

1. Using self-consolidating concrete, provide smooth, uniform finish upon form removal with no patching, stoning or other form of repair except washing permitted unless otherwise noted for walls, columns and other surfaces exposed to view. The surface shall match the approved jobsite mock-up panel.

M. Smooth Formed Finish:

1. Required for formed concrete surfaces exposed to view, or scheduled to be covered with a coating material applied directly to concrete, or a covering material applied directly to concrete, such as waterproofing, dampproofing, veneer plaster, painting, or other similar system, as indicated on architectural Drawings:

2. Surface is an as-cast concrete surface obtained with selected form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams.

3. Repair and patch tie holes and defects. Remove fins and other projections completely.

N. Smooth Rubbed Finish:

1. "Smooth Rubbed" finish shall consist of a finish free of fins, joint marks smoothed off, blemishes removed and surfaces left smooth and unmarred.

2. Provide smooth rubbed finish to scheduled concrete surfaces, as indicated on architectural Drawings, which have received smooth form finish treatment not later than one day after form removal.

3. Moisten concrete surfaces and rub with carborundum brick or other abrasive until a uniform color and texture is produced.

    a. Do not apply cement grout other than that created by the rubbing process.

O. Grout-Cleaned Finish:

1. Provide grout-cleaned finish on scheduled concrete surfaces, as indicated on architectural Drawings, that have received smooth-formed finish treatment.

2. Combine one part Portland Cement to one and one-half parts fine sand by volume, and a 50:50 mixture of acrylic or styrene butadiene-based bonding admixture and water to form the consistency of thick paint.

3. Blend standard Portland Cement and white Portland Cement in amounts determined by trial patches so that final color of dry grout will match adjacent surfaces.

4. Thoroughly wet concrete surfaces, apply grout to coat surfaces, and fill small holes.

5. Remove excess grout by scraping and rubbing with clean burlap.

6. Keep surface damp by fog spray for at least 36 hours after rubbing.

P. Unformed Surfaces:

1. At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike-off smooth and finish with a texture matching adjacent formed surfaces.

2. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces, unless otherwise indicated.

1. CURING AND PROTECTION

    A. Normal Conditions:

        1. Protect concrete from premature drying, excessive hot or cold temperature, and damage.

        2. Concrete shall be kept continuously moist and above 50°F for seven days (ASTM C150 Type I cement) or for 10 days (ASTM C150 Type II cement). High early strength concrete usage shall be maintained over 50°F for three days.

        3. Concrete and concrete patching materials shall be cured according to manufacturers published recommendations.

4. Begin curing as soon as free water has disappeared from concrete surface and finishing has been completed.

5. Curing Methods: Cure concrete by curing compound, moist curing, moisture-retaining cover curing, or by combining these methods, as specified. Under extreme hot/dry or windy/dry conditions, moist curing and/or moisture-retaining cover curing should be used.

    a. Curing compound is an acceptable form of curing if all of the following requirements are met:

i. Apply curing compound to concrete slabs as soon as final finishing operations are complete (within 2 hours and after surface water sheen has disappeared). In accordance with all manufacturer's instructions.

ii. Apply uniformly in continuous operation by power spray or roller according to manufacturer's directions.

iii. Recoat areas subjected to heavy rainfall within 3 hours after initial application.

iv. Maintain continuity of coating and repair damage during curing period.

v. Use curing and sealing compounds that will not affect surfaces to be covered with finish materials applied directly to concrete.

vi. Floors to receive covering shall be cleaned thoroughly using a power scrubber and industrial strength detergent.

vii. Hand-brooming and sweeping is not sufficient.

viii. Strippable curing compound may be used in lieu of a moist curing method when approved by the Design Professionals.

    a. Provide moist curing by the following methods:

Keep concrete surface continuously wet by covering with water. Use continuous water-fog spray.

Cover concrete surface with specified absorptive cover, thoroughly saturate cover with water, and keep continuously wet. Place absorptive cover to provide coverage of concrete surfaces and edges, with a 4” lap over adjacent absorptive covers.

b. Provide moisture-retaining cover curing as follows:

Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width with sides and ends lapped at least 3” and sealed by waterproof tape or adhesive.

(1) Immediately repair any holes or tears during curing period using cover material and waterproof tape

1. Cure slabs on grade, concrete toppings, concrete pour strips, supported slabs, walls and columns, not subject to conditions of hot or cold weather concreting, in accordance with ACI 308.

2. Cure surfaces exposed to deicing salts, brackish water, etc., such as loading dock slabs, parking garage slabs and ramps in accordance with ACI 308 recommendations for moist curing.

3. Curing Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces, by leaving forms in place for the full curing period (equivalent to moist curing).

    a. If forms are removed prior to completion of full curing period, continue curing by methods specified above for Unformed Surfaces, as applicable.

A. Cold-Weather Protection:

    1. When concrete is placed under conditions of cold weather concreting (defined as a period when the mean daily temperature drops below 40°F for more than 3 successive days), take additional precautions as specified in ACI 306R when placing, curing, monitoring and protecting the fresh concrete.

B. Hot-Weather Protection:

    1. When concrete is placed under conditions of hot weather concreting, provide extra protection of the concrete against excessive placement temperatures and excessive drying throughout the placing and curing operations with an evaporation retarder.

        a. Apply according to manufacturer's instructions after screeding and bull floating, but before power floating and troweling.

    2. Hot weather curing is required if hot weather conditions occur within a 24-hour period after completion of concrete placement.

C. Floor surfaces, wherever indicated by weather conditions, shall be sprinkled during the interval between finishing operation and the start of curing to positively ensure against the possibility of surface drying.

1. CONCRETE REPAIRS

    A. Perform patching and repairs in accordance with ACI 301.

    B. Contractor shall submit patching and repair methods and materials for review by Design Professionals.

    C. When complete, all patches and repairs shall match color and texture of adjoining surfaces.

D. At surfaces that are exposed to view, prepare test areas at inconspicuous locations for review by Design Professionals to verify repair color and texture match before proceeding with repair.

E. Apply all patching and repair materials in accordance with manufacturer's specifications.

F. Repairing Cracks In Formed and Unformed Surfaces:

1. Contractor shall notify Design Professionals of all cracks wider than 0.02” and all cracks wider than 0.01” that occur in a group of at least three cracks within twelve inches, in concrete. If Design Professionals deem repairs necessary, Contractor shall be responsible for repairing all such cracks per Design Professionals recommendation at no expense to the Owner. Repairs will generally require one or more of the following: Epoxy Injection, Semi-Rigid Epoxy, Pressure Injected Foam Resin, Methyl Methacrylate and/or Sealant with joint routed and cleaned. See Concrete Repair Materials section of this Specification for acceptable products

G. Repairing Formed Surfaces

1. Immediately after stripping forms, patch all honeycombing, defective joints, voids, etc. before the concrete is thoroughly dry.

2. Remove all burrs, fins, and ridges before the concrete is thoroughly dry.

3. Remove stains from rust, grease and oils, from release agents, etc.

4. Remove and replace concrete having defective surfaces if defects cannot be repaired to satisfaction of the Design Professionals.

a. Surface defects, include color and texture irregularities, cracks as defined above, spalls, air bubbles, honeycomb, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.

b. Chip away defective areas, honeycomb, rock pockets, voids over 1/4" in any dimension and holes left by tie rods and bolts, down to solid concrete but in no case to a depth less than 1" and saw-cut edges to prevent feather edging of fill material.

5. Repair concealed formed surfaces, where possible, containing defects that affect the durability of concrete. If defects cannot be repaired, remove and replace concrete.

6. Clean out form tie holes and fill with dry pack mortar or precast cone plugs secured in place with bonding agent.

7. If honeycombing exposes reinforcement, chip to provide clear space at least 3/4" wide all around steel to allow proper bond.

H. Repairing Unformed Surfaces:

1. High and Low areas in concrete surfaces which are in excess of specified tolerances shall be leveled or ground-smooth.

a. Correct high areas by grinding after concrete has cured at least 14 days.

b. Correct low areas by applying leveling material. Finish leveling material as specified in this section.

2. Repair surfaces containing defects that affect durability of concrete.

a. Surface defects include crazing, cracks as defined above, spalling, popouts, honeycombs, rock pockets, and other objectionable conditions.

3. Repair defective areas, except random cracks and single holes not exceeding 1" in diameter, by cutting out and replacing with fresh concrete.

a. Remove defective areas with clean, square cuts and expose reinforcing steel with at least 3/4" clearance all around.

I. Filling In: Fill in holes and openings left in concrete for passage of work by other trades, unless otherwise shown or directed, after work of other trades is in place.

2. EVALUATION AND ACCEPTANCE OF CONCRETE

A. In accordance with ACI 301, except where otherwise specified.

B. If, at any time during construction, the concrete resulting from the approved mix design deviates from Specification requirements for any reason, such as lack of workability, or insufficient strength, the Contractor shall have his laboratory verify the deficiency and modify the mix design, until the specified concrete is obtained. Modified mix to be submitted for approval per Part 1 - SUBMITTALS.

3. CORRECTIVE MEASURES

A. Conflicts: The Contractor shall be solely responsible for errors of detailing, fabrication, and placement of reinforcement steel; placement of inserts and other embedded items; and the structural adequacy of all formwork.

B. Compensation for Additional Services: Should additional work by Design Professionals such as design, documentation, meetings and/or site visits be

required which are necessitated by failure of the Contractor to perform the work in accordance with the Contract Documents either developing corrective actions or reviewing corrective actions developed by others, the Contractor is responsible for paying for additional work performed by the Design Professionals at their standard firm-wide billing rates plus out-of-pocket expenses incurred at cost + 10%. Additional costs for testing and inspection by the Contractor shall also be compensated by the Contractor.

SECTION 03 37 13 — SHOTCRETE

1. GENERAL
    1. SUBMITTALS
        A. Action Submittals:
            1. Shop Drawings: Illustrate products, installation, and relationship to adjacent construction.
    2. QUALITY ASSURANCE
        A. Installer Qualifications: Firm specializing in work of this Section, with minimum [2] [__] years' experience.
        B. Perform Work in accordance with ACI 506.2.
1. PRODUCTS
    1. MATERIALS
        A. Cement: ASTM C150, Type I, gray.
        B. Fly Ash: ASTM C618.
        C. Aggregate: Maximum 3/8 inch.
        D. Additives: As required by mix design.
        E. Lightweight Aggregate: ASTM C330.
        F. Metal Lath: ASTM C847, flat rib, 3/8 inch high, galvanized, 3.4 pounds per square yard.
        G. Mixes:

1. Minimum 28 day compressive strength: [3,000] [__] PSI.
2. Air entrainment: [4 to 6] [__ to __] percent by volume.
3. Slump: 1/2 to 1-1/2 inches.

2. EXECUTION

1. INSTALLATION

A. Build up shotcrete thickness in multiple passes.

B. Allow each layer to take initial set before applying succeeding layers.

C. Finish surfaces uniform, free of voids and protrusions.

D. Maintain surfaces wet for minimum of 7 days or apply curing compound.

END OF SECTION

STRUCTURAL MASONRY WORK

SECTION 04 05 13 — MASONRY MORTARING

1. GENERAL
    1. SUBMITTALS
        A. Action Submittals:
            1. Samples: [Selection samples.] [Verification samples.]
        B. Informational Submittals:
            1. Test reports: Mortar compressive strength.
2. PRODUCTS
    1. MATERIALS
        A. Portland Cement: ASTM C150, Type [I.] [__.]

**** OR ****

B. Masonry Cement: ASTM C91, Type [N.] [S.] [M.]

C. Firebrick Mortar: ASTM C199.

D. Aggregate: ASTM C144, standard masonry type.

E. Lime: ASTM C207, Type [S.] [SA.]

F. Colorant: Pure mineral oxide type.

G. Water: Potable.

2. MIXES
    A. Mortar Mixes: ASTM C270 using the [Property] [Proportion] Method.
        1. Brick unit masonry: Type [M,] [S,] [N,] [O,] [white] [gray] [____] color.
        2. Concrete unit masonry: Type [M,] [S,] [N,] [O,] [white] [gray] [____] color.
        3. Glass unit masonry: Type [M,] [S,] [N,] [O,] [white] [gray] [____] color.
        4. Stone: Type [M,] [S,] [N,] [O,] [white] [gray] [____] color.
        5. Cast stone: Type [M,] [S,] [N,] [O,] [white] [gray] [____] color.

6. Simulated stone: Type [M,] [S,] [N,] [O,] [white] [gray] [____] color.
7. Brick unit paving: Type [M,] [S,] [N,] [O,] [white] [gray] [____] color.
8. Stone paving: Type [M,] [S,] [N,] [O,] [white] [gray] [____] color.

B. Firebrick Mortar: Mix in accordance with manufacturer's instructions.

3. EXECUTION

1. INSTALLATION

A. Perform Work in accordance with TMS 402/602.

B. Follow requirements specified in other sections.

END OF SECTION

SECTION 04 05 16 — MASONRY GROUTING

1. GENERAL
    1. SUBMITTALS
        A. Informational Submittals:
            1. Test reports: Grout compressive strength and slump.
2. PRODUCTS
    1. MATERIALS
        A. Portland Cement: ASTM C150, Type [I.] [__.]
        B. Aggregate: ASTM C404.
        C. Lime: ASTM C207, Type [S.] [SA.]
        D. Water: Potable.
    2. MIXES
        A. Grout Mix:
            1. ASTM C476, [fine] [coarse] grout.
            2. Compressive strength: Minimum [2500] [__] psi at 28 days.
            3. Slump: [7 to 8] [__ to __] inches.
3. EXECUTION
    1. INSTALLATION
        A. Perform Work in accordance with TMS 402/602.
        B. Follow requirements specified in other sections.

SECTION 04 22 00 — CONCRETE UNIT MASONRY

1. GENERAL
    1. SUBMITTALS
        A. Action Submittals:
            1. Product Data: Manufacturer's descriptive data and product attributes for accessories.
            2. Samples: [Selection samples.] [Verification samples.]
    2. QUALITY ASSURANCE
        A. Installer Qualifications: Firm specializing in work of this Section, with minimum [2] [__] years' experience.
        B. Mockup: [4] [__] feet high x [8] [__] feet wide. Approved mockup [may] [may not] remain as part of the Work.
2. PRODUCTS
    1. MANUFACTURERS
        A. Masonry Accessories: Following manufacturers are acceptable if products meet specified requirements:
            1. Blok-Lok. www.blok-lok.com
            2. Heckmann Building Products. www.heckmannbuildingprods.com
            3. Hohmann and Barnard. www.h-b.com
            4. Prosoco. www.prosoco.com
        B. Substitutions: [Refer to the applicable substitution requirements.] [Not permitted.]
    2. MATERIALS
        A. Concrete Masonry Units:
            1. Type: ASTM [C90, [hollow] [solid] load bearing,] [C129, [hollow] [solid] non-load bearing,] [light] [medium] [normal] weight.

2. Size: Nominally [8] [__] inches high x [16] [__] inches long x [[8] [__] inches thick.] [thickness indicated.]

3. Special shapes: [Lintels] [Bond beams] [Solid units] [____].

4. Surface finish: [Split.] [Ground and polished.] [[Two] [four] [__] vertical ribs.] [____.]

**** OR ****

5. Surface finish: ASTM C744 resinous surfacing.

6. Color: [____.] [Custom.] [To be selected from manufacturer's full color range.]

3. ACCESSORIES

A. Mortar: Specified in Section 04 05 13.

B. Grout: Specified in Section 04 05 16.

C. Horizontal Joint Reinforcement: ASTM A951/A951M, [hot-dip galvanized] [stainless] steel.

D. Veneer Ties: Corrugated steel sheet, [7/8] [__] inch wide, minimum [28] [__] gage, hot dip galvanized, ASTM A153/A153M, [B2] [__] coating class.

**** OR ****

E. Veneer Ties: Formed steel wire, [[9] [__] gage] [3/16] [__] inch] thickness, [eye and pintle type,] [two piece adjustable type [with backing plate],] [with barrel screw],] hot dip galvanized, ASTM A153/A153M, Class B.

**** OR ****

F. Veneer Ties: Dovetail anchor type, hot dip galvanized finish to ASTM A153/A153M, [B2] [__] coating class.

G. Fasteners: [Hot-dip galvanized] [Stainless] [Fluoropolymer coated] steel.

H. Reinforcing Bars: ASTM A615/A615M.

I. Flashings: Polyvinyl chloride sheet, minimum [20] [30] [__] mils thick.

**** OR ****

J. Flashings: Rubberized asphalt laminated to plastic film, release paper facing, self-adhering.

**** OR ****

K. Flashings: Copper sheet, ASTM B370, minimum [0.21] [0.27] [__] inch thick.

**** OR ****

L. Flashings: Copper foil laminated on both sides with treated glass fabric, weighing minimum [5] [__] ounces per square foot.

**** OR ****

M. Flashings: Galvanized steel, ASTM A653/A653M, [G60] [G90] [G185] coating class, [26] [__] gage core steel, [pre-coated with PVDF coating, [____] color [to be selected].

**** OR ****

N. Flashings: Stainless steel, ASTM A666, Type [304,] [316,] [____,] minimum [0.015] [0.018] [__] inch thick.

O. Weeps: [Preformed plastic tubes [filled with cotton wicks.] [Prefinished galvanized steel vents with sloping louvers, [____] color [to be selected.]] [Cotton rope.] [Preformed plastic mesh, [____] color [to be selected.]]

P. Mortar Dropping Control: Preformed plastic mesh type.

Q. Joint Sealer: Specified in Joint Sealants.

3. EXECUTION

1. INSTALLATION

A. Perform Work in accordance with TMS 402/602.

B. Lay masonry in [running] [stack] [____] bond [unless otherwise indicated]. Course one masonry unit and one mortar joint to equal [__] inches.

C. Horizontal Reinforcement: install at maximum [16] [__] inches on center vertically, at topmost course, and at first two courses above and below openings.

D. Veneer Ties: Place at rate of one tie per [2.67] [__] square feet at maximum spacing of [32] [__] inches on center horizontally.

E. Tooling Exposed Joints: [Concave] [Flush] [____] profile.

F. Integral Flashings: Install with outer edge flush with outside face of masonry; extend up backup [8] [__] inches minimum and [build into masonry.] [seal.]

G. Weeps: Locate in head joints in first course above flashings at maximum [32] [__] inches on

H. Mortar Dropping Control: Install continuously in cavities above flashings.

I. Control Joints: Install joint backing and joint sealer at control joints in accordance with the Joint Sealants requirements.

J. Installation Tolerances:

1. Alignment of faces of adjacent units: Plus or minus [1/8] [__] inch.

2. Vertical alignment of head joints: Plus or minus [1/2] [__] inch in 10 feet.

3. True plane of wall: Plus or minus [1/4] [__] inch in 10 feet and [1/2] [__] inch in 20 feet or more.

4. Plumb: Plus or minus [1/4] [__] inch in 10 feet noncumulative; [1/2] [__] inch in 20 feet or more.

5. Level coursing: Plus or minus [1/8] [__] inch in 3 feet; [1/4] [__] inch in 10 feet; [1/2] [__] inch in 30 feet.

6. Joint thickness: Plus or minus [1/8] [__] inch.

7. Cross sectional thickness of multi-wythe walls: Plus or minus [1/4] [__] inch.

END OF SECTION

STRUCTURAL METAL WORK

SECTION 05 50 00 — METAL FABRICATIONS

1. GENERAL
    1. SUBMITTALS
        A. Action Submittals:
            1. Shop Drawings: Illustrate products, installation, and relationship to adjacent construction.
        B. Informational Submittals:
            1. Certificate of Compliance: Certification that installed products meet specified design requirements.
    2. SYSTEM DESCRIPTION
        A. Minimum Design Loads:
            1. Vehicular loading:
            2. Uniform load of [500] [__] PSF.
            3. Concentrated load of [2000] [__] pounds.
            4. Maximum deflection under loading: [L/180.] [L/240.]
            5. Guard rails and handrails:
            6. [50] [__] pounds per linear foot applied in any direction at top, transferred via attachments and supports to building structure.
            7. Concentrated [200] [__] pound load applied in any direction at any point along top, transferred via attachments and supports to building structure.
            8. Maximum deflection under loading: [L/120.] [__.]
            9. Ladders:
            10. Ladder assembly: Minimum of two [250] [__] pound loads concentrated between any two consecutive attachments.
            11. Individual rungs: Minimum [250] [__] pound load applied in middle of rung.

12. Ladder fall protection system: Minimum [500] [__] pound load in free fall of 18 inches.
13. Other pedestrian loading:
14. Uniform load of [100] [__] PSF.
15. Concentrated load of [300] [__] pounds.
16. Maximum deflection under loading: [L/180.] [L/240.]
17. System design to be performed by qualified professional engineer licensed in State of [____].

3. QUALITY ASSURANCE

A. Fabricate guard rails and handrails in accordance with ASTM E985.

2. PRODUCTS

1. MATERIALS

A. Steel:

1. Shapes: ASTM A36/A36M.
2. Plate: ASTM A283.
3. Checkered plate: ASTM A1011/A1011M, [diamond] [____] pattern.
4. Sheet: ASTM A1008/A1008M.
5. Pipe: ASTM A501.
6. Tube: ASTM A500.
7. Bars: ASTM A108.

B. Cast Iron: ASTM A48/A48M or ASTM A47/A47M.

C. Aluminum:

1. Extrusions: ASTM B221.
2. Sheet: ASTM B209.
3. Pipe: ASTM B241.

D. Stainless Steel: ASTM A276/A276M or ASTM A666, Type [304] [or] [316].

E. Bar Gratings:

1. Formed steel sheet for [welding:] [riveting:] [pressure locking:] ASTM A1011/A1011M.
2. Steel rod for cross bars: ASTM A510.
3. Aluminum for [riveting] [pressure locking]: ASTM B221.

2. FABRICATION

A. Fit and shop assemble items in largest practical sections, for delivery to site.

B. Fabricate items with joints tightly fitted and secured.

C. Welding:

1. Use welds for permanent connections where possible.
2. Grind exposed welds smooth.
3. Tack welds prohibited on exposed surfaces.
4. Steel shapes, plate, pipe, and tube: Conform to AWS D1.1/D1.1M.
5. Steel sheet: Conform to AWS D1.3/D1.3M.
6. Stainless steel: Conform to AWS D1.6/D1.6M.

3. FINISHES

A. [Exterior] Ferrous Metal: Galvanized; ASTM A123/A123M, to [1.3] [2.0] ounces per square foot.

B. [Interior] Ferrous Metal:

1. Shop painted except steel to be encased in concrete and surfaces to be welded.
2. Surface preparation: SSPC [SP2 - Hand Tool Cleaning or SP3 - Power Tool Cleaning.] [SP6 - Commercial Blast Cleaning.] [____.]

C. Aluminum: Mill finish.

**** OR ****

D. Aluminum: AAMA 611; Architectural Class [I] [II] anodized, clear, [light bronze.] [medium bronze.] [dark bronze.] [black.]

**** OR ****

E. Aluminum: AAMA 2605 fluoropolymer coating containing minimum 70 percent PVDF resins, [custom] [____] color [to be selected from manufacturer's full color range].

**** OR ****

F. Aluminum: AAMA 2604 fluoropolymer coating containing minimum 50 percent PVDF resins, [custom] [____] color [to be selected from manufacturer's full color range].

**** OR ****

G. Aluminum: AAMA 2603 thermosetting modified acrylic enamel coating, [custom] [____] color [to be selected from manufacturer's full color range].

H. Stainless Steel: NAAMM AMP 503; [No. 4 satin.] [No. 8 mirror polished.] [____.]

3. EXECUTION

    1. INSTALLATION

        A. Install items in accordance with approved Shop Drawings.

        B. Welding:

            1. Use welds for permanent connections where possible.

            2. Grind exposed welds smooth.

            3. Tack welds prohibited on exposed surfaces.

            4. Steel shapes, plate, pipe, and tube: Conform to AWS D1.1/D1.1M.

            5. Steel sheet: Conform to AWS D1.3/D1.3M.

            6. Stainless steel: Conform to AWS D1.6/D1.6M.

    2. SCHEDULE

        A. Guard Rails and Handrails: Fabricate from [aluminum] [steel] [stainless steel] [pipe] [or] [tube] stock of sizes [and types] indicated.

        B. Ladders: Fabricate in accordance with ANSI A14.3.

        C. Ladder Fall Protection System:

            1. Meet OSHA CFR 1910.

            2. Include vertical rail with end stops, rung clamps, fall arrester, and attachment hardware.

        D. Bar Grating:

1. NAAMM MBG 531, [welded] [riveted] [pressure locked] type.
2. Top surface: [Non slip.] [Serrated.] [Raised lug.] [____.]

E. Nosings for Exterior Concrete Steps: Cast [iron,] [aluminum,] cross hatched [abrasive] surface, [1/4] [1] [__] inch nosing, [3] [4] [6] [__] inches deep x step width less [6] [__] inches.

F. Bollards: Fabricate from steel pipe of sizes indicated.

END OF SECTION

SEISMIC ISOLATION AND CONTROL SYSTEMS

SECTION 13 48 13 — SEISMIC ISOLATION AND CONTROL SYSTEMS

1. GENERAL
    1. SUMMARY
        A. Section Includes:
            1. Seismic isolator units and associated bearing assemblies located at the seismic isolation plane.
            2. Isolator base plates, sole plates, and anchorage to the supporting concrete structure.
            3. Prototype and production quality control testing of isolator units.
            4. Temporary shipping restraints, installation aids, and isolator protection during construction.
        B. Related Requirements:
            1. Section 03 30 00 “Cast-In-Place Concrete” for isolator pedestals, isolation-level diaphragms, and anchorage embeds.
            2. “Post-Tensioned Concrete” for isolation-level transfer girders, where applicable.
            3. General Requirements for submittal procedures, quality requirements, and Owner-retained independent peer review.
    2. DEFINITIONS
        A. Isolator Unit: A discrete mechanical bearing assembly that uncouples the superstructure from the substructure and/or foundation, permitting relative horizontal displacement while supporting the full gravity load of the isolated structure above.
        B. Isolation Plane (Isolation Interface): The horizontal structural zone, located as indicated on the Drawings, containing the isolator units and separating the fixed-base substructure from the isolated superstructure.
        C. MCER: Risk-Targeted Maximum Considered Earthquake, per ASCE 7.

D. DBE: Design Basis Earthquake, per ASCE 7/ASCE 41, equal to two-thirds of the MCER ground motion unless a site-specific study indicates otherwise. Not to be confused with “Design-Build Entity,” a defined term used elsewhere in the Project’s RFP and Contract Documents; this Section uses “DBE” exclusively in its seismic engineering sense.

E. Total Maximum Displacement: The maximum considered horizontal displacement of the isolation system, including torsional effects, per ASCE 7 Section 17.5.3.

3. PERFORMANCE REQUIREMENTS

A. General: The isolation system shall be designed on a performance basis. Isolator units from any qualified manufacturer meeting the minimum criteria of this Section may be proposed, subject to design by the Design-Build Entity’s structural Engineer of Record and acceptance by the Owner’s independent peer reviewer. This Section does not specify or imply a particular isolator technology (e.g., sliding/pendulum-type, elastomeric, or lead-rubber); the Design-Build Entity’s Engineer of Record shall select an isolator technology and configuration that satisfies the performance criteria herein and the Structural Design Intent Narrative.

B. Risk Category: IV (essential facility), per ASCE 7 Table 1.5-1.

C. Seismic Hazard Basis: Site-specific MCER and DBE ground motion, per ASCE 7 Sections 11.4.8 and 17.3, as established by the Design-Build Entity’s site-specific seismic hazard analysis. Preliminary spectral parameters, where available from the Owner, are for planning reference only and shall be confirmed by the Engineer of Record.

D. Design Displacements: Each isolator unit shall be sized for the Design Displacement (DD) and Maximum Displacement (DM), including additional displacement due to torsion, per ASCE 7 Section 17.5.

E. Vertical Load Capacity: Each isolator unit shall support the full range of gravity, live, and seismic vertical loads delivered to it, including net uplift or tension where applicable, without loss of function, as determined by the Engineer of Record’s analysis.

F. Performance Objective: The isolation system shall be designed to achieve the seismic performance objective established in the Structural Design Intent Narrative for this Project (Maximum Capacity Immediate Occupancy, or successor Owner-elected objective), verified using the acceptance criteria referenced therein.

G. Service-Level Wind Restraint: The isolation system shall provide sufficient initial stiffness or a supplemental wind-restraint mechanism such that the isolated superstructure does not displace under service-level wind loads, per ASCE 7 Section 17.2.4.4.

H. Rated Rotation Capacity: Each isolator unit shall accommodate the angular rotation demand of the top bearing surface relative to the bottom surface, about any horizontal axis, determined by the Engineer of Record, without loss of the required vertical and shear load capacities.

I. Fire Resistance: Isolator units and their means of support shall be substantiated for a fire-resistance rating not less than [2] [3] [___] hours, by fire testing or by a recognized calculation methodology acceptable to the Authority Having Jurisdiction.

4. ACTION SUBMITTALS

A. Product Data: For each isolator type and size proposed, including load-displacement (force-displacement) properties, effective stiffness, effective damping, and manufacturer's standard materials of construction.

B. Shop Drawings: Isolator layout plan referenced to column and wall lines; isolator dimensions, base plate and anchorage details; isolation-plane clearances; and coordination with the isolation-level diaphragm and transfer framing.

C. Design Calculations: Isolator sizing calculations, including Design Displacement, Maximum Displacement, torsional amplification, vertical load capacity check, and rotation demand, sealed by the Engineer of Record.

D. Manufacturer Qualification Data: Evidence of ISO 9001 (or equivalent) quality management certification for isolator design, manufacture, and testing; a minimum of [5] [__] prior installations of comparable isolator type and scale on Risk Category III or IV structures; and evidence of compliance with a recognized seismic isolation product qualification standard acceptable to the Engineer of Record and independent peer reviewer.

5. INFORMATIONAL SUBMITTALS

A. Prototype Test Reports: Per Article 2.5.

B. Production Quality Control Test Reports: Per Article 2.5, for 100 percent of production isolator units, prior to shipment.

C. Material Certifications: Mill certificates or equivalent for structural steel, stainless steel, and elastomeric or sliding-surface materials used in isolator construction.

D. Installation and Field Quality Control Reports: Per Part 3.

E. Independent Peer Review Acceptance: Written acceptance of the isolation system design by the Owner-retained independent peer reviewer, prior to fabrication.

6. QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm regularly engaged in the design, manufacture, and testing of seismic isolation bearings for building structures, certified to ISO 9001 (or equivalent quality management standard) for the design and manufacture of seismic isolation bearings, with a minimum of [10] [__] years of documented experience supplying isolators for Risk Category III or IV buildings.

B. Independent Peer Review: The isolation system design shall be subject to independent structural peer review by a qualified peer reviewer retained directly by the Owner, per ASCE 7 Section 17.2.6 and the Structural Design Intent Narrative. The Design-Build Entity shall incorporate all peer reviewer comments prior to fabrication.

C. Installer Qualifications: A firm with not fewer than [3] [__] prior projects installing seismic isolation bearings of comparable type and scale, or supervised by a manufacturer's field representative for the duration of isolator installation.

D. Substitutions: Where a Design-Build Entity proposes an isolator technology, manufacturer, or product differing from the basis-of-design concept referenced in the Structural Design Intent Narrative, the substitution shall be submitted for review in accordance with the applicable substitution procedures, and shall demonstrate equal or better seismic performance, reliability, and durability, substantiated by equivalent product testing and analysis acceptable to the Engineer of Record and independent peer reviewer.

7. DELIVERY, STORAGE, AND HANDLING

A. Deliver isolator units with manufacturer's temporary shipping restraints in place; do not remove until immediately prior to permanent installation.

B. Store isolator units in a manner that prevents damage to sliding, sealing, or elastomeric surfaces, and protects units from moisture,

dirt, and temperature extremes outside the manufacturer's recommended range.

C. Handle isolator units using manufacturer-approved lifting points and methods; do not lift or support units by their sliding or elastomeric working surfaces.

8. WARRANTY

A. Special Warranty: Manufacturer's standard warranty against defects in materials and workmanship for isolator units, for a period of not less than [2] [__] years from date of Substantial Completion.

2. PRODUCTS

1. MANUFACTURERS

A. Subject to compliance with requirements, provide isolator units from a manufacturer meeting the qualification requirements of Part 1, using an isolator technology accepted by the Engineer of Record and independent peer reviewer as satisfying the performance requirements of this Section.

B. Basis-of-Design Product: Where a specific manufacturer's isolator has been used as the basis for the Owner's preliminary structural concept, that product's performance characteristics are provided for reference only and do not restrict competition; other manufacturers' isolators of equal or better performance, complying with Part 1, are acceptable subject to Engineer of Record and peer reviewer approval.

2. MATERIALS

A. Structural Steel Components (plates, housings, connection hardware): ASTM A36, ASTM A572, or ASTM A588, as appropriate to the component and manufacturer's design.

B. Stainless Steel Sliding or Bearing Surfaces, where applicable: ASTM A240, Type 304 or better.

C. Elastomeric Components, where applicable: Manufacturer's standard compound, formulated and tested for the service life, temperature range, and ozone/UV exposure applicable to this Project's installed condition.

D. Sliding Interface / Bearing Liner Materials, where applicable: Low-friction, self-lubricating composite material with documented long-term friction stability and wear resistance, substantiated by the manufacturer's product qualification testing.

E. Fasteners and Anchor Rods: ASTM F1554 or ASTM A354, grade as required by the Engineer of Record's connection design.

F. Corrosion Protection: Exposed ferrous metal surfaces, other than designated sliding or elastomeric working surfaces, shall be hot-dip galvanized or provided with a zinc-rich primer and high-performance coating system rated for the Project's coastal/tropical exposure, consistent with Section 03 30 00.

3. PERFORMANCE CRITERIA

A. Design Displacement, Maximum Displacement, effective period, and effective damping at the Design Displacement and Maximum Displacement levels: as determined by the Engineer of Record's site-specific analysis, and confirmed by the Owner's independent peer reviewer, in accordance with ASCE 7 Chapter 17.

B. Vertical Load Capacity: as determined by the Engineer of Record for the governing load combinations of ASCE 7 Section 17.2.4.6, including the maximum and minimum vertical loads concurrent with maximum horizontal displacement.

C. Property Modification Factors: The effects of aging, contamination, environmental exposure, temperature, cumulative travel, and loading rate ("scragging" or equivalent, where applicable to the selected technology) shall be incorporated into the isolator property modification factors used in design, per ASCE 7 Section 17.2.8.4.

4. FABRICATION

A. Fabricate isolator units in accordance with the manufacturer's ISO 9001 (or equivalent) quality program and the design calculations accepted by the Engineer of Record and independent peer reviewer.

B. Provide temporary shipping/erection restraints on each isolator unit, removable without damage to the unit, to maintain unit geometry and prevent premature engagement during transport and installation.

5. SOURCE QUALITY CONTROL

A. Prototype Testing: Prior to production, test a minimum of two full-scale prototype units of each isolator type and size proposed for the Project, per ASCE 7 Section 17.8, including cyclic testing at Design Displacement and Maximum Displacement levels and at the range of vertical loads anticipated in service. Prototype units subjected to testing shall not be installed in the Work unless permitted by ASCE 7 and accepted by the Engineer of Record.

B. Production Quality Control Testing: Test 100 percent of production isolator units at a vertical test load and minimum number of displacement cycles established by the Engineer of Record, confirming that friction, stiffness, and damping properties fall within the upper-bound and lower-bound property envelope established by prototype testing. Submit test reports for each unit prior to shipment.

C. Independent Testing Agency: Where prototype or production testing is not performed at the manufacturer's own ISO-accredited test facility, testing shall be performed or witnessed by an independent testing agency acceptable to the Owner.

3. EXECUTION

1. EXAMINATION

A. Verify that isolator pedestals, sole plates, and anchorage embeds are constructed within tolerance, level, and free of defects that would impair isolator installation or performance, before installing isolator units.

B. Do not proceed with installation until unsatisfactory conditions have been corrected.

2. INSTALLATION

A. Install isolator units in the locations and orientations indicated on the accepted shop drawings, in accordance with the manufacturer's written instructions.

B. Set isolator units level and plumb, within the manufacturer's specified installation tolerances, using shims or leveling devices as required.

C. Provide anchorage of isolator base plates and sole plates to the supporting concrete in accordance with the Engineer of Record's connection design, using anchors qualified for the applicable load and displacement demands.

D. Remove temporary shipping restraints only when directed by the manufacturer's field representative and only after the isolator unit is in its final, permanently supported condition.

E. Protect installed isolator units from construction traffic, debris, welding spatter, and incompatible chemical exposure until Substantial Completion.

3. FIELD QUALITY CONTROL

   A. Special Inspection: Provide special inspection of isolator installation, including verification of isolator type, size, and orientation; base plate and anchorage installation; level and plumb tolerances; and clearance to the seismic gap, in accordance with the Puerto Rico Building Code and ASCE 7 Chapter 17.

   B. Manufacturer's Field Services: Provide a manufacturer's field representative to inspect and verify correct installation of isolator units at intervals sufficient to confirm compliance with the manufacturer's installation requirements.

   C. Post-Installation Verification: Verify and document as-installed isolator elevations, orientation, and clearance to the seismic gap at all perimeter and interior locations.

4. PROTECTION

   A. Protect the isolation plane, seismic gap, and installed isolator units from accumulation of construction debris, mortar droppings, or rigid materials that could compromise the design displacement capacity, for the duration of construction.

   B. Coordinate with mechanical, electrical, and plumbing trades to ensure that no rigid element is installed across the isolation interface without the flexible or sliding connection required by Section [__] and the Structural Design Intent Narrative.

END OF SECTION 13 48 13

EARTHWORK AND FOUNDATION WORK

SECTION 31 61 00 — FOOTINGS

1. GENERAL

   Work of this Section shall conform to requirements of Drawings and general provisions of the Contract, including General and Supplementary Conditions and applicable General Requirements specifications.

2. SCOPE

   The work covered by this Section shall include all labor, material, equipment, permits, engineering and other services necessary for the fabrication and installation of footings and related work, complete, in accordance with the Drawings and as specified herein.

3. RELATED WORK SPECIFIED IN OTHER SECTIONS

   Submittals Quality Control

   Quality Assurance: Structural Testing and Inspection Concrete Reinforcement and Embedded Assemblies Cast-In-Place Concrete

   Thermal and Moisture Protection

4. CODES AND STANDARDS

   Section 01 45 00

   Section 03 20 00

   Section 03 30 00

A. Building Code: Footing work shall conform to the requirements of the Building Code identified on the structural General Notes, and OSHA requirements, except where more stringent conditions or criteria occur in the standards referenced below and on the Drawings.

B. Standards:

   1. ACI 117 — Standard Specifications for Tolerances for Concrete Construction and Materials.

   2. ACI 301 — Standard Specifications for Structural Concrete.

   3. ACI 315 — Details and Detailing of Concrete Reinforcement.

4. ACI 318 — Building Code Requirements for Reinforced Concrete.
5. American Concrete Institute “Manual of Concrete Practice”, various committee reports as referenced herein.
6. American Society for Testing and Materials "ASTM Standards in Building Codes", various standards as referenced herein.
7. AWS D1.4 — Structural Welding Code-Reinforcing Steel.

C. Definitions:

1. See Section 03 30 00.
2. The term Contractor's Geotechnical Engineer in this Specification is defined as the Contractor's representative specifically authorized to perform the responsibilities defined herein.

5. CONTRACTOR QUALIFICATIONS

A. The Footing Installer shall be a company which specializes in installing footings, with a minimum of 10 years of documented successful experience. Installation shall be performed by skilled workmen thoroughly experienced in the necessary execution.

B. The Contractor's Field Supervisor shall have 10 years of experience in installing footings and provide full-time supervision.

C. The Contractor's Professional Surveyor shall have 10 years of previous experience in laying out foundation locations to perform surveys, layouts, and measurements for footing work. The Contractor's Professional Surveyor shall be licensed in the state where the project is located. Conduct layout work for each footing to lines and levels required before excavation, and actual measurements of each footing's horizontal location, top elevations, deviations from specified tolerances, and other required data.

6. SUBMITTALS

A. Required Submittals - Where the SUBMITTALS section of this Specification is in conflict with the applicable submittal requirements, the more stringent requirements for the Contractor apply. Required submittal items are listed here; see below for detailed requirements. Do not submit items not requested.

(1) Submittal Schedule

(2) Footing Construction Methods

(3) Installer Qualifications

(4) Shop drawings

(5) Construction Log

(6) Contractor's Survey Report

(7) Submittals required by Related Documents

(8) Mill Certificates

(9) Contractor's Concrete Testing Agency Reports

(10) Product Data

1. **Submittal Schedule:** See Section 03 30 00.

2. **Footing Construction Methods:** Submit for record, footing construction procedures developed by the Footing Contractor.

3. **Installer Qualifications:** Submit proof of qualifications as stated in the CONTRACTOR QUALIFICATIONS section of this Specification.

Shop drawings in accordance with 03 20 00 and 03 30 00, and as noted.

a. Concrete mix designs in accordance with Section 03 30 00.

b. Footing reinforcement in accordance with Section 03 20 00 and 03 30 00.

c. Footing layout drawing showing the location of each footing (with respect to building gridlines), size and depth of footing, and top of footing elevation.

4. Construction Log: Testing Agency shall document, sign, and submit for record, a record of each footing construction, including:

   a. Footing designation, top and where possible bottom elevation, and size of footing.

   b. Size, length, and location of installed reinforcement.

   c. Deviation of centerline plan location.

   d. Actual allowable soil bearing capacity

   e. Inspection and testing

   f. Method of concrete placement, time of beginning and ending concrete discharge for each truck, (including any delays in concreting and location of construction joints in shafts) and any deviation from planned construction methods.

g. Volume of concrete supplied to footing and ratio of actual volume to theoretical volume.

5. Contractor's Survey Report: Submit for record plans sealed and signed by a Professional Surveyor licensed in the state where the project is located, indicating as built plan locations of footing centerlines (with respect to building gridlines), top and where possible bottom elevations, and identifying deviations of footing centerlines from design plan locations. Footings that are outside of specified tolerances shall be specifically identified on the plan.

Submittals required by Related Documents.

6. **Mill Certificates:** Per Specification section 03 20 00, submit for record certified reports for physical and chemical properties of following materials:

   a. Reinforcement bars.

7. **Contractor's Concrete Testing Agency Reports:** Submit for record

   a. Reports of field observations.

   b. Reports of field quality control tests, as related to concrete and reinforcement.

   c. Immediately notify the Design Professionals of any deviations from the Drawings.

8. Product Data: Submit for record for each type of product identified in Part 2. Product Data shall be clearly marked to indicate all technical information which specifies full compliance with this section and Contract Documents, including published installation instructions and ICC reports, where applicable, for products of each manufacturer specified in this section.

A. Submittal Process: See Section 03 30 00.

B. SER Submittal Review: See Section 03 30 00.

C. Substitution Request: See Section 03 30 00.

D. Request for Information (RFI): See Section 03 30 00.

1. DELIVERY, STORAGE, AND HANDLING

   A. See Sections 03 20 00 and 03 30 00.

2. PRE-INSTALLATION CONFERENCE

   A. Conduct meeting at Project Site to comply with applicable General Requirements.

3. PROJECT SITE CONDITIONS

A. Geotechnical Information: Contractor to examine site, records of test borings, soil samples, and Geotechnical Reports that are available from the Owner. Soil boring test results are provided by the Owner for information. Soil boring test results are not intended as representations or warranties of the continuity of the reported conditions. It is expressly understood that the Owner will not be responsible for interpretation or conclusions drawn by Contractor from the Geotechnical Report. At no additional cost to the Owner, evaluate the available data and provide additional test borings and other investigations as necessary for installing footings.

B. Site Survey: Survey of site, existing utilities, and existing construction available from the Owner represent conditions known to Owner. Other obstructions may be encountered.

4. QUALITY ASSURANCE BY CONTRACTOR'S TESTING AGENCY

A. See Section 01 45 00.

5. QUALITY CONTROL BY CONTRACTOR

A. See Section 03 30 00.

B. The Contractor's Geotechnical Engineer shall be qualified to perform the type of work required by the Project. The Engineer shall be a Licensed Professional Engineer in Puerto Rico. The engineer shall develop a site dewatering plan and advise on footing construction techniques, including assistance in the development of construction procedures and the development of solutions to construction problems.

6. OBSERVATIONS AND CORRECTIONS BY DESIGN PROFESSIONALS

A. See Section 03 30 00.

7. PERMITS AND WARRANTY

A. Permits: See Section 03 30 00.

Drawings and calculations prepared by the Contractor's Licensed Professional Engineer in Puerto Rico for temporary shoring and/or earth retention shall be submitted to the City, State, or other governing authority for review.

B. Warranty: See Section 03 30 00.

PART 2 - PRODUCTS

1. CONCRETE

A. See Section 03 30 00.

2. REINFORCEMENT

A. See Section 03 20 00.

PART 3 - EXECUTION

1. PROTECTION OF EXISTING UTILITIES AND STRUCTURES

    A. Before installing footings adjacent to known existing utilities, notify utility owner to ensure that protective work will be coordinated and performed by Contractor in accordance with requirements of the owner of utility or building. If any existing service lines, utilities, and utility structures to remain in service are uncovered or encountered during work, protect the uncovered element from damage and provide support where necessary.

    B. Should uncharted or incorrectly charted piping or other utilities be encountered during footing excavation, immediately notify the Owner, Design Professionals and utility owner. Cooperate with Owner and utility owner in keeping their respective services, utilities and facilities in operation. Repair damaged utilities to entire satisfaction of Owner and utility owner concerned.

    C. Do not interrupt existing utility service facilities occupied and used by Owner and others, except when permitted in writing by the Design Professionals and then only after acceptable temporary utility services have been provided.

    D. Protect structures, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, vibration, and other hazards created by footing operations.

2. SITE DEWATERING

    A. Before installing footings, provide site dewatering based on the Contractor's site dewatering plan.

    B. Provide and maintain pumping equipment to keep excavations free of water before placing concrete. If excessive water is encountered and drilling operations must be halted, consult the Geotechnical Engineer before using alternate methods of construction.

    C. If excessive seepage is coming in from below the bottom of the footing excavation, removal by pumping within the excavation is inappropriate, as this may loosen the bearing soils and reduce the bearing soil capacity; therefore, an alternate means of dewatering will be required.

3. GENERAL FOOTING EXCAVATION

    A. Tolerances: Plan location tolerance is 2% of footing dimension but no greater than 2 inches, whichever is greater, If indicated tolerances are exceeded, see “Footing Corrective Measures” in Part 3.

    B. Forming Sides of Footings:

1. Provide forms for footings and grade beams if soil or other conditions are such that earth trench forms are unsuitable.

2. When trench forms are used, provide an additional 1” of concrete on each side of the minimum design profiles and dimensions indicated.

C. Cleanup of Footing Bottom: Excavate bottom to a level plane. Remove loose materials or free water as determined by Contractor's Geotechnical Engineer.

D. Bottom of adjacent footings that are at different elevations should never result in an excavation slope between footings greater than 1.0 vertical to 1.5 horizontal unless otherwise noted in the drawings or geotechnical engineering report. If steeper slopes occur, the EOR should be notified before any concrete is placed.

4. ADDITIONAL EXCAVATION AND FOOTING DEPTH

A. Do not excavate below elevations noted by Contractor's Geotechnical Engineer without prior review by Contractor's Geotechnical Engineer.

B. Where Contractor's Geotechnical Engineer determines that soil encountered at design bearing elevation is not capable of providing minimum design bearing capacity, perform additional excavation as recommended by Contractor's Geotechnical Engineer.

C. If obstructions are encountered that interfere with new construction, remove such existing elements or develop corrective methods. The Contractor shall propose corrective actions and their recommendations in writing and submit them for review by the Design Professionals. Efforts shall be made to address obstructions at no additional cost to the Owner.

5. DISPOSAL OF EXCAVATED MATERIALS

Dispose excavated materials off site in a manner that will not interfere with other construction activities. Keep construction site at all times clean and free of soil and other debris that could affect progress of other construction activities.

6. FOOTING REINFORCEMENT

A. Fabrication in accordance with 03 20 00 from approved shop drawings.

7. FOOTING BEARING STRATA

A. Footing Bearing Stratum Criteria and Verification

1. Footings shall be founded on soil strata with bearing capacity indicated on Drawings. Footings shall not be excavated until test results by Contractor's Geotechnical Engineer confirm allowable bearing values indicated on Drawings, but shall be excavated immediately thereafter.

2. Each footing bearing strata must be inspected and be acceptable to the Contractor's Geotechnical Engineer before placing concrete

3. Footing excavations to acceptable bearing strata shall not be left exposed to weather for more than 48 hours before footing concrete is placed.

8. CORRECTIVE MEASURES

A. If unforeseen field conditions require corrective installation methods, immediately notify the Design Professionals.

1. Where a change to the construction installation method result in an as-built footing in compliance with the Contract Documents, submit installation method for record.

2. Where the as-built footing does not meet the design intent of the Contract Documents. The Contractor shall propose corrective actions and their recommendations in writing and submit them for review by the Design Professionals.

B. If footings are installed outside allowable tolerances, develop and provide corrective methods at no extra cost to the Owner including calculations based on actual locations of footings, taking into account eccentricity between final centerline of footing and design location of column centerline. The Contractor shall propose corrective actions and their recommendations in writing and submit them for review by the Design Professionals. Calculations shall be sealed and signed by a Professional Engineer licensed in Puerto Rico.

END OF SECTION

4.0 ELECTRICAL PRELIMINARY TECHNICAL SPECIFICATIONS

ELECTRICAL PRELIMINARY TECHNICAL SPECIFICATIONS

RFP / DESIGN-BUILD USE NOTICE

These electrical preliminary technical specifications are revised for use as RFP/bridging performance criteria for the selection of a Design-Build Entity for the New Puerto Rico Trauma Hospital. They establish minimum architectural requirements, quality criteria, design intent and coordination expectations, and are not issued as final permit or construction specifications by themselves.

The selected Design-Build Entity shall verify existing and proposed conditions, coordinate all disciplines, perform required engineering and code analysis, prepare and submit the final permit and construction documents, and obtain all required approvals through Puerto Rico licensed design professionals of record.

References in these sections to “Contractor” mean the selected Design-Build Entity after award. References to “Architect,” “Engineer,” “A/E,” “Resident Engineer,” or similar review parties mean the applicable Design Professional(s) of Record and/or ASEM/Owner review representative, as applicable under the RFP and final Design-Build Agreement.

Named products, manufacturers and details are minimum quality benchmarks unless the RFP expressly states otherwise. Proposed equals, substitutions, delegated design items, shop drawings, product data and samples shall demonstrate compliance with the RFP Bridging Documents, applicable codes, healthcare requirements and the final Design-Build Agreement.

ELECTRICAL TABLE OF CONTENTS - RFP / DESIGN-BUILD BRIDGING CRITERIA

For RFP use, sections identify minimum design-build performance criteria to be advanced, coordinated, signed and sealed by the selected Design-Build Entity's licensed design professionals of record.

SECTION 16100 BASIC ELECTRICAL MATERIALS AND METHODS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: General administrative, procedural, and material requirements applicable to all electrical work under this Contract, including but not limited to raceways and fittings, outlet and junction boxes, wire and cable, supporting devices, cable tray, electrical identification, grounding and bonding materials, surge protection devices, firestopping, corrosion-resistant and hurricane-rated materials, concrete equipment pads, and the general execution, coordination, and testing requirements that apply across all electrical systems described in the Bridging Document.

B. Related Sections: The following Sections build upon the basic materials and methods established in this Section and govern system-specific design and installation requirements. Where a conflict exists between this Section and a system-specific Section, the more stringent requirement shall govern.

1. Section 16112 - Raceways and Conduits
2. Section 16120 - Wire and Cable
3. Section 16131 - Outlet, Pull and Junction Boxes
4. Section 16140 - Wiring Devices
5. Section 16155 - Motor Power and Control Wiring
6. Section 16200 - Fire Alarm System
7. Section 16300 - Nurse Call System
8. Section 16440 - Disconnect Switches
9. Section 16470 - Panelboards
10. Section 16511 - Lighting Fixtures
11. Section 16550 - 38 kV Power Transformers
12. Section 16600 - Double-Ended Substation
13. Section 16700 - Automatic Transfer Switches
14. Section 16742 - Telephone and Data Raceway System
15. Section 16800 - Paralleling Switchgear
16. Section 16900 - Diesel Engine-Driven Generators

C. Project Description: The Project consists of a new 215,880 SF, ten-story acute care trauma facility (Basement, Ground/1st through 9th Levels, Interstitial Level, and Roof/Heliport) to be constructed on the campus of the Puerto Rico Medical Center (Centro Médico), San Juan, Puerto Rico, for Owner ASEM - Puerto Rico Health Care

Foundation. The facility has a licensed capacity of 110 beds with surge capacity to 182 beds and will be structurally and functionally integrated with the existing ASEM Central Services Building at three levels. The Project is delivered under a Design-Build (D&B) method, with this Section and the referenced Bridging Document serving as the Owner's Basis of Design (BOD) performance criteria.

D. This is a performance specification. Specific equipment ratings, quantities, and configurations identified herein reflect the Owner's Basis of Design as established in the Bridging Document and are provided to establish minimum performance, quality, and capacity requirements. The D&B Contractor's Engineer of Record shall verify all ratings and quantities by complete engineering calculation and shall be responsible for the final design.

1.02 REFERENCES

The publications listed below form a part of this Specification to the extent referenced. The D&B Contractor is responsible for determining any additional codes, amendments, or local requirements adopted in Puerto Rico at the time of permit application. Where conflicts exist among referenced codes and standards, the most stringent requirement shall govern.

A. Federal and Local Codes and Agencies:

1. Puerto Rico Building Code (PRBC), incorporating the 2018 International Building Code (IBC), 2018 International Fire Code (IFC), and 2018 International Energy Conservation Code (IECC), each with Puerto Rico amendments, latest editions adopted in Puerto Rico
2. Puerto Rico Department of Health (PRDOH) - Hospital Licensure Regulations, including Regulation 9184
3. Puerto Rico Electric Power Authority (PREPA) manuals, standards, and regulations, including the Reglamento Complementario al Código Eléctrico Nacional
4. LUMA Energy - utility interconnection, metering, and service requirements
5. Junta Reglamentadora de Telecomunicaciones de Puerto Rico (JRTC) - telecommunications point-of-connection endorsement
6. Colegio de Ingenieros y Agrimensores de Puerto Rico (CIAPR) - professional engineering licensure and standing
7. Americans with Disabilities Act (ADA) - 2010 ADA Standards for Accessible Design
8. Federal Aviation Administration (FAA) Advisory Circular AC 150/5390-2 - Heliport Design

B. NFPA Standards:

1. NFPA 70 - National Electrical Code (NEC), latest edition adopted in Puerto Rico
2. NFPA 99 - Health Care Facilities Code

3. NFPA 72 - National Fire Alarm and Signaling Code
4. NFPA 101 - Life Safety Code
5. NFPA 110 - Standard for Emergency and Standby Power Systems
6. NFPA 20 - Standard for the Installation of Stationary Pumps for Fire Protection
7. NFPA 780 - Standard for the Installation of Lightning Protection Systems
8. NFPA 30 and NFPA 37 - Flammable and Combustible Liquids Code; Stationary Combustion Engines
9. NFPA 90A - Standard for the Installation of Air-Conditioning and Ventilating Systems
10. NFPA 70E - Standard for Electrical Safety in the Workplace

C. NEC / NEMA / IEEE / Industry Standards:

1. NEC Article 517 - Health Care Facilities; Articles 700/701/702 - Emergency, Legally Required Standby, and Optional Standby Systems; Article 230 - Services; Article 240 - Overcurrent Protection; Article 250 - Grounding and Bonding; Article 310 - Conductors
2. IEEE 241 (Gray Book), IEEE 142 (Green Book), IEEE 1100 (Emerald Book), IEEE 80 (Substation Grounding), IEEE C37.2, IEEE 1584, IEEE 1247
3. NEMA MG-1 (Motors and Generators); NEMA PB-1 (Panelboards)
4. ANSI/TIA-569 (Telecommunications Pathways and Spaces)
5. ASHRAE 90.1 - Energy Standard for Buildings
6. IEC 62040-3 (UPS Performance)
7. UL 96A, UL 924, UL 1449, UL 1584 listings as applicable to specific equipment
8. ACI 318 - Building Code Requirements for Structural Concrete (duct bank and manhole design)
9. UL 1008 (Transfer Switch Equipment), UL 1558 (Metal-Enclosed Low-Voltage Power Circuit Breaker Switchgear), UL 2200 (Stationary Engine Generator Assemblies)
10. ASCE 7 - Minimum Design Loads (wind and seismic criteria)

D. Healthcare Facility Guidelines: Facility Guidelines Institute (FGI) Guidelines for Design and Construction of Hospitals, latest edition; Joint Commission Environment of Care standards; IES RP-29-20 (Lighting for Hospitals and Healthcare Facilities).

1.03 DEFINITIONS

AHJ Authority Having Jurisdiction.

ATS Automatic Transfer Switch.

BOD Basis of Design - the Owner's Bridging Document establishing minimum performance and design criteria for the D&B Contractor.

CIAPR Colegio de Ingenieros y Agrimensores de Puerto Rico - the professional licensing body for Puerto Rico engineers.

D&B Design-Build - the project delivery method under which the Contractor is responsible for both the design and construction of the Work.

EES Essential Electrical System - the NFPA 99 Category 1 emergency power system comprising the Life Safety, Critical, and Equipment System branches.

IPP Isolated Power Panel - an ungrounded power distribution panel serving life-critical patient care equipment in an operating room, per NEC 517.160.

LIM Line Isolation Monitor - continuously monitors an isolated power system for total hazard current.

PEGP Patient Equipment Grounding Point - a dedicated bonding point at a patient care station for portable equipment grounding.

PE Professional Engineer licensed in the Commonwealth of Puerto Rico and an active member in good standing of CIAPR.

SPD Surge Protective Device, UL 1449 listed.

1.04 DESIGN REQUIREMENTS

A. All electrical distribution equipment serving both essential (Life Safety, Critical, and Equipment System branches) and non-essential (Optional Standby) building loads shall be designed with a minimum 10% spare capacity for future load growth.

B. This Bridging Document-based Basis of Design shall be used by the D&B Contractor, together with all referenced codes and standards, as the minimum performance criteria for the electrical systems. The D&B Contractor's Engineer of Record shall perform complete engineering calculations (load calculations, short-circuit and protective device coordination studies, arc flash hazard analysis, voltage drop calculations, and fault current studies) to confirm and finalize all equipment ratings.

C. Design Submission Phases: The D&B Contractor shall submit design documents for Owner review at Schematic Design (SD), Design Development (DD), and Construction Documents (CD) phases. Fault current studies shall be submitted at DD phase; arc flash hazard analysis shall be completed prior to energization and labeling of equipment.

D. Seismic Isolation: The building incorporates a seismic isolation plane at the Interstitial Level. All electrical conduits, cable trays, and equipment crossing this plane shall be designed and installed with flexible connections and seismic loops to accommodate differential movement between the isolated and non-isolated structure (see Part 2).

E. Hurricane and Coastal Environment: All outdoor and exposed electrical equipment shall be designed for a minimum 180 mph design wind speed (Category 5 hurricane) per ASCE 7 and the PRBC, and for the applicable seismic loads per the PRBC. All exterior enclosures shall be corrosion-resistant (NEMA 3R stainless steel or fiberglass, as scheduled) suitable for Puerto Rico's coastal/tropical marine environment.

F. Heliport Airspace: All rooftop electrical equipment (antenna masts, generator exhaust stacks, and similar projections) shall comply with FAA heliport obstruction clearance requirements per AC 150/5390-2 and shall not obstruct the heliport approach/landing zone.

1.05 SUBMITTALS

A. Action Submittals:

1. Product data for raceways, boxes, wire and cable, supporting devices, cable tray, electrical identification products, grounding and bonding components, surge protection devices, and firestop systems
2. Shop drawings showing equipment layout, dimensions, clearances, and connection details for all major equipment referenced in the Electrical Systems Sections
3. Coordination drawings showing raceway and cable tray routing, seismic isolation plane crossings, and clearances coordinated with structural, mechanical, and fire protection systems
4. PE-sealed calculations: load calculations, voltage drop calculations, short-circuit study, protective device coordination study, and arc flash hazard analysis, each signed and sealed by the Puerto Rico-licensed Engineer of Record

B. Informational Submittals:

1. Qualification data for the Engineer of Record, testing agency, and specialty subcontractors
2. LUMA-endorsed drawings for the utility interconnection, prior to commencing site work related to the utility service
3. JRTC-endorsed drawings for the telecommunications point of connection, prior to commencing telecommunications rough-in work
4. Field quality-control test reports (see Part 2)
5. Manufacturer's installation instructions

C. Closeout Submittals: Operation and maintenance (O&M) manuals; record (as-built) drawings; final test reports; warranty documentation; training documentation.

1.06 QUALITY ASSURANCE

A. Engineer of Record: The D&B Contractor shall engage licensed Professional Engineers for all electrical systems. The Engineer of Record responsible for the electrical design shall be a Professional Engineer licensed to practice in the Commonwealth of Puerto Rico and an active member in good standing of CIAPR. All design documents and drawings shall be signed and sealed by the Puerto Rico-licensed PE.

B. Regulatory Requirements: Work shall comply with PREPA(LUMA), PRDOH, PRBC, and AHJ requirements. The D&B Contractor is responsible for all permits, inspections, and regulatory approvals for electrical systems.

C. Installer Qualifications: Electrical work shall be performed by licensed electricians under the direct supervision of a licensed Master Electrician, experienced in healthcare facility construction of similar scope and complexity.

D. Testing Agency Qualifications: Field testing (insulation resistance, ground resistance, protective device coordination field settings, and arc flash verification) shall be performed by a qualified testing agency independent of the installing contractor, with personnel certified in accordance with NETA (InterNational Electrical Testing Association) standards or equivalent.

E. Pre-Installation Conference: Convene a pre-installation conference prior to commencing work on each major system (substation, generators, switchgear, fire alarm) to review coordination requirements, seismic isolation plane crossings, and interface with the existing ASEM Central Services Building.

1.07 DELIVERY, STORAGE, AND HANDLING

Deliver materials and equipment in original, undamaged, factory packaging with manufacturer's labels intact. Store materials in a clean, dry, ventilated space protected from Puerto Rico's high ambient humidity, direct sun exposure, and potential storm/flood conditions. Elevate materials above grade during storage. Protect equipment with sensitive electronic components from moisture and condensation using manufacturer-recommended space heaters or equivalent means until permanently energized. Do not install moisture-damaged or corroded materials.

1.08 PROJECT CONDITIONS

A. Site Environment: The Project site is located in a tropical, coastal, hurricane- and seismic-prone environment. All design and installation shall account for high ambient temperature and humidity, salt-air corrosion exposure, elevated lightning ground flash density, and the potential for extended utility outages during storm events.

B. Existing Facility Interface: The Project is structurally and functionally integrated with the existing, occupied ASEM Central Services Building at three levels. The D&B Contractor shall coordinate all electrical interfaces and interconnections with ASEM

facilities management and shall ensure no interruption to active electrical, fire alarm, or life safety services in the existing hospital during construction. Work affecting existing ASEM systems shall be scheduled and sequenced with ASEM's written approval.

1.09 COORDINATION AND SEQUENCING

A. Utility Coordination: The D&B Contractor shall initiate the LUMA 38 kV interconnection process immediately upon contract award. LUMA approval of the utility interconnection and substation design shall not be allowed to become the critical path of the Project schedule, given the potentially significant lead time associated with utility review and approval.

B. Telecommunications Coordination: The D&B Contractor shall coordinate evaluation and endorsement of the telecommunications point of connection with JRTC and the corresponding service provider(s).

C. Interdisciplinary Coordination: Coordinate electrical raceway, cable tray, and equipment locations with structural (equipment pads, seismic isolation plane, penetrations), mechanical (VFD-driven equipment, duct smoke detectors, fire/smoke damper actuation), fire protection (waterflow/tamper switch monitoring), and the Owner's structured cabling contractor (rough-in pathway sizing and room provisioning only).

D. Owner-Furnished / Owner-Installed Systems: Coordinate rough-in provisions (conduit, backboxes, cable pathways, and room/space provisioning) for systems furnished and installed by others, including structured cabling, public address devices, CCTV and access control devices, and surgical field lighting.

1.10 WARRANTY

Provide a minimum one-year warranty against defects in materials and workmanship for all electrical work under this Section, commencing at Substantial Completion. Extended warranty periods for specific major equipment (e.g., emergency generators, UPS batteries, switchgear) are specified in the applicable system-specific Section.

1.11 OWNER TRAINING

The D&B Contractor shall provide training of the Owner's facilities staff on all electrical systems, with a minimum of 8 hours of hands-on training per major system (including, at minimum, emergency generators and paralleling switchgear, normal and emergency power switchgear, fire alarm system, lighting control system, and UPS systems). Training shall be conducted by manufacturer-certified or factory-trained personnel and documented on video for the Owner's future reference.

PART 2 - EXECUTION

2.01 EXAMINATION

Verify site, structural, and existing-facility conditions, including the location of the seismic isolation plane, structural pad locations, and the interface points with the existing ASEM Central Services Building, before commencing installation. Notify the Owner's Representative in writing of any discrepancies between the Contract Documents and field conditions before proceeding.

2.02 INSTALLATION - GENERAL

A. Install raceways, boxes, wire, and cable per manufacturer's instructions and NEC requirements, maintaining the minimum 10% spare capacity required by Section 1.4.A in all distribution equipment.

B. Maintain physical and electrical separation between the Essential Electrical System (Life Safety, Critical, and Equipment System branches) and the Optional Standby (non-essential) system throughout, per NEC 700.10 and NFPA 99; Life Safety Branch and Critical Branch wiring shall not be combined on a single automatic transfer switch or share raceway with each other except as specifically permitted by NEC 517.

C. Conductor and raceway routing shall avoid routing above patient care spaces where not required, and shall avoid electrical rooms serving as a pass-through for unrelated systems' piping (no water piping above electrical equipment; floor drains not permitted in electrical rooms).

D. Minimum bend radii for raceways and medium-voltage cable shall conform to NEC and manufacturer's requirements; conductors shall not be pulled with a tension exceeding cable manufacturer's rating.

E. The D&B Contractor shall provide all required interconnection control wiring between the paralleling switchgear, the double-ended substation, and the emergency generators, complete and functional, including all synchronizing, status, metering, and interlocking control circuits necessary for the automatic transfer, automatic bus transfer, and generator paralleling schemes to operate as a fully coordinated system.

2.03 UNDERGROUND DUCT BANK AND MANHOLE INSTALLATION

Install concrete-encased PVC duct banks for all underground electrical distribution per NEC and PREPA underground standards. Provide separate, physically independent manholes for each of the two 13.2 kV feeders between the outdoor substation yard and the Building Basement substation, with no shared manhole between the two feeders, to maintain source redundancy. Provide a minimum of one spare conduit per medium-voltage feeder duct bank. Seal all conduit entries into the building with fire-stopped sleeves.

2.04 SEISMIC ISOLATION PLANE CROSSINGS

At the Interstitial Level, install all conduits, cable trays, bus connections, and equipment crossing the seismic isolation plane with flexible connections and seismic loops, engineered and installed to accommodate the full design differential movement of the isolation system without damage, loss of continuity, or loss of grounding integrity. Coordinate exact crossing locations and required movement capacity with the structural Engineer of Record.

2.05 GROUNDING AND BONDING INSTALLATION

A. Install a copper building ground grid or ring below grade around and beneath the building footprint, connected to ground rods per NEC 250.50 and IEEE 142; install a separate outdoor substation ground grid designed per IEEE 80, with combined grid resistance not to exceed the value required by LUMA and IEEE 80 for the available fault current; install an indoor substation ground ring interconnected to the building ground ring.

B. Bond all metallic equipment enclosures, raceways, cable trays, transformer tanks, and generator housings to the building grounding system.

C. In all Category 1 patient care spaces (operating rooms, ICU rooms, Trauma Stabilization cubicles, patient rooms), bond all exposed conductive surfaces within the patient care vicinity to the reference grounding point per NFPA 99 and NEC 517.13; install a Patient Equipment Grounding Point at the head wall/bed location in each ICU, operating room, and Trauma Stabilization station.

D. Do not ground the isolated (ungrounded) secondary of any operating room isolated power panel; connect the IPP equipment enclosure to the reference grounding point per NEC 517.160 and NFPA 99.

E. Install surge protective devices at the required locations; verify SPD installation is coordinated with the lightning protection system down-conductor and grounding network.

2.06 IDENTIFICATION AND LABELING

Install nameplates, wire markers, and panelboard directories at completion of each system's installation. Perform arc flash hazard analysis at DD phase per Section 1.4.C, update the analysis to reflect final as-built equipment and protective device settings, and install arc flash labels on all switchgear and panelboard compartments prior to energization, per NFPA 70E and IEEE 1584.

2.07 FIRESTOPPING INSTALLATION

Install firestop systems at all fire-rated penetrations per the listed system's installation instructions, immediately following installation of the penetrating raceway, cable, or cable tray. Do not conceal penetrations until inspected and accepted.

2.08 FIELD QUALITY CONTROL

A. General: Notify the Owner's Representative and testing agency a minimum of 5 working days prior to each required field test. Correct deficiencies and retest before proceeding to subsequent construction phases.

B. Insulation Resistance Testing: Perform insulation resistance (megger) testing on all feeders and medium-voltage cables prior to energization, per manufacturer's and NETA guidelines.

C. Ground Resistance Testing: Perform fall-of-potential ground resistance testing of the building ground grid and the substation ground grid per IEEE 80 and LUMA requirements; document and submit results.

D. Continuity and Functional Testing: Perform continuity testing of all grounding and bonding connections; perform functional testing of automatic transfer switches, the automatic bus transfer scheme at the double-ended substation, and all associated interlocking schemes.

E. Protective Device Coordination: Field-set all protective devices per the short-circuit and protective device coordination study; verify selective coordination between main breakers, tie breaker, and downstream feeder breakers.

F. Submit written test reports for all field quality-control testing as part of the closeout submittals required by Section 1.5.C.

2.09 CLEANING AND PROTECTION

Protect installed electrical materials and equipment from construction dust, moisture, and physical damage until Substantial Completion. Clean equipment interiors and exteriors of construction debris prior to energization. Repair or replace, at no cost to the Owner, any materials or equipment damaged or corroded due to inadequate protection during construction.

2.10 DEMONSTRATION AND CLOSEOUT

Provide Owner training. Submit record (as-built) drawings, O&M manuals, final test reports, and warranty documentation prior to Substantial Completion, as required by Section 1.5.C.

END OF SECTION 16100

SECTION 16112 RACEWAYS AND CONDUITS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Rigid galvanized steel conduit (GRS), rigid nonmetallic (PVC) conduit, electrical metallic tubing (EMT), flexible and liquid-tight flexible metal conduit, conduit fittings, conduit supports, conduit coatings, surface raceways, wireways and auxiliary gutters, and underground concrete-encased duct banks and manholes for the medium-voltage feeders, forming a complete, integrally grounded raceway system for the Project.

B. Related Sections: Section 16100 - Basic Electrical Materials and Methods (general material, seismic, and corrosion-resistance requirements applicable to this Section).

1. Section 16120 - Wire and Cable (conductors installed in the raceways of this Section, including the 13.2 kV feeder cable installed in the duct banks and manholes of this Section).
2. Section 16131 - Outlet, Pull and Junction Boxes (termination points for the raceway system).
3. Section 16550 - 38 kV Power Transformers (underground medium-voltage duct banks/manholes within the substation yard).
4. Section 16600 - Double-Ended Substation (13.2 kV feeder duct banks and manholes terminating at the Building Basement substation).
5. Section 16742 - Telephone and Data Raceway System (related pathway/conduit provisioning for structured cabling and other low-voltage systems).

1.02 DEFINITIONS

A. Duct Bank: An assembly of two or more conduits encased together in concrete, used to route underground electrical feeders between structures or between yard equipment and a building.

B. Manhole: An underground precast or cast-in-place concrete structure providing access for pulling, splicing, and maintaining underground feeder cables at duct bank junctions, direction changes, and required length intervals.

1.03 SYSTEM DESCRIPTION

A. Performance Requirements: Materials shall bear Underwriters Laboratories (UL) labels.

B. The raceway system shall form a complete, mechanically and electrically continuous, integrally grounded pathway for conductors from service entrance to outlets, sized and constructed with sufficient strength and capacity to permit installation, pulling-in, splicing, and future replacement of conductors without strain or injury to the raceway or the conductors.

1.04 SUBMITTALS

A. Product Data: Manufacturer's literature, including printed installation instructions and recommendations, before starting work. Submit samples if requested.

B. Shop Drawings: Coordination/routing drawings for underground duct bank and manhole layout, including manhole locations, dimensions, and duct bank structural design calculations, signed and sealed by a Puerto Rico-licensed engineer, for duct banks and manholes designed per ACI 318 for the Project's seismic design category; routing drawings for raceways crossing the Interstitial Level seismic isolation plane, coordinated with the structural Engineer of Record.

C. Certificates: UL listing documentation for all raceway products, fittings, and firestop systems; test reports for mandrel testing and pull-rope installation of underground ducts prior to cable installation.

1.05 QUALITY ASSURANCE

A. Regulatory Requirements: Work shall comply with NFPA 70 - National Electrical Code (NEC), latest edition adopted in Puerto Rico, and with the Puerto Rico Building Code (PRBC), and all applicable PREPA, PRDOH, and AHJ requirements.

B. Electrical Component Standard: Components and installation shall comply with NFPA 70 - National Electrical Code (NEC), latest edition adopted in Puerto Rico.

1.06 DESIGN REQUIREMENTS

A. Spare Capacity: Raceway systems shall be sized to provide the minimum 10% spare capacity for future load growth required by the Bridging Document and Section 16100.

B. Underground 13.2 kV Feeder Duct Banks and Manholes: Two independent 13.2 kV feeder duct bank and manhole runs shall be provided between the 38 kV substation yard and the Building Basement double-ended substation, one per feeder; each feeder's duct bank and manhole run shall be physically independent of the other feeder's run, with no shared manhole between the two feeders, to maintain separation and redundancy between the two sources per the Bridging Document, Section 4.3. A minimum of one spare conduit shall be provided in each medium-voltage feeder duct bank for future use.

C. Seismic Isolation Plane: All raceways crossing the building's Interstitial Level seismic isolation plane shall include flexible connections and engineered seismic loop

assemblies sized for the maximum design differential displacement of the seismic isolation system, per the Bridging Document.

PART 2 - PRODUCTS

2.01 EQUIPMENT

A. Conduit shall be sized according to the NEC, unless otherwise noted. Feeders and home runs shall not be less than 3/4 inch diameter.

B. Rigid Conduit:

1. Galvanized Rigid Steel Conduit (GRS): Hot-dip galvanized or electro-galvanized, with corrosion-resistant coating on the inside, threaded, standard-weight steel conduit complying with ANSI C80.1 (latest edition) and NEC Article 344 (Rigid Metal Conduit).
2. Rigid Nonmetallic Conduit: Schedule 40 PVC, rated 90 degrees C, complying with ANSI/UL 651 (latest edition) and NEC Article 352 (Rigid Polyvinyl Chloride Conduit).

C. Electrical Metallic Tubing (EMT):

1. Galvanized steel tubing with a smooth interior coat of lacquer enamel or zinc coat.
2. Complying with ANSI C80.3 (latest edition), UL 797, and NEC Article 358 (Electrical Metallic Tubing).

D. Flexible Metal Conduit:

1. Steel: Flexible galvanized steel conduit ("Greenfield") complying with UL 1 and NEC Article 348 (Flexible Metal Conduit).
2. Liquid-Tight: Flexible galvanized steel conduit with an oil- and water-resistant overall plastic sheath, complying with UL 1 and NEC Article 350 (Liquidtight Flexible Metal Conduit).
3. Minimum size for flexible metal conduit is 1/2 inch, except 3/8 inch where allowed by NEC Article 348 for connections to lighting fixtures.

E. Conduit Fittings:

1. Rigid Steel Conduit: Zinc- or cadmium-plated steel, or galvanized malleable iron, complying with ANSI C80.1 and C80.3. Fittings shall be threaded type. Die-cast zinc alloy fittings are not allowed.
2. Rigid PVC Conduit: 90 degrees C, PVC fittings, UL listed. Fittings shall match the conduit and comply with ANSI/UL 651 (latest edition).
3. EMT Fittings: Zinc- or cadmium-plated steel, or malleable iron, of the compression type, or stainless steel multiple-point locking (set-screw) type.

Connectors shall have insulated throats. Fittings shall comply with ANSI C80.3 (latest edition). Die-cast zinc alloy fittings are not allowed.

4. Flexible Metal Conduit Fittings: Steel or malleable iron only, with insulated throat, complying with Federal Specification W-F-406B. Die-cast zinc alloy fittings are not allowed.
5. Bushings and connectors shall incorporate an insulating insert of at least 150 degrees C-rated plastic or 105 degrees C-rated nylon. Conduit bushings made entirely of nonmetallic material are not allowed. Grounding and bonding bushings shall have a clamp-type terminal for the copper conductor.
6. Expansion Fittings and Sealing Fittings: UL listed, with ground continuity means.

F. Conduit Supports:

1. Straps: Formed, zinc-coated steel or malleable iron one-hole pipe straps or conduit clamps, sized for the conduit or tubing.
2. Fastenings: Zinc-coated or cadmium-plated steel screws, bolts, toggles, and expansion anchors as required.
3. Electrical steel channels shall be equivalent to Unistrut P-3000 Series. Provide trapeze, clamps, supports, and concrete inserts, galvanized steel or plated steel, with galvanized conduit clamps and threaded 1/4 inch diameter minimum suspension rods.
4. For individual branch-circuit EMT or flexible metal conduit concealed above accessible hung ceilings only, spring-steel "caddy clip" conduit clamps may be used.

G. Conduit Coatings: Steel conduit buried directly in the earth shall receive a factory-applied PVC coating or two coats of fibrated emulsion conduit coating, complying with the manufacturer's application recommendations.

H. Surface Raceways: Provided only where specifically indicated. UL listed, complying with Federal Specification W-C-582 and NEC Article 386 (Surface Metal Raceways) and Article 388 (Surface Nonmetallic Raceways).

1. Manufacturers: Walker (Division of Butler Manufacturing Co.); Wiremold.
    a. Walker, Division of Butler Manufacturing Co.
    b. Wiremold.
2. Pull Wires: Galvanized steel or nylon rope of sufficient strength to pull the maximum-size conductors through the trade-size conduit; minimum strength 200 lbs.
3. Fire Stopping: Material shall be UL labeled and FM approved for fire ratings consistent with the penetrated barriers; sleeves shall be Schedule 40, welded, black steel pipe, sized as indicated.

a. Material shall be UL labeled and FM approved for fire ratings consistent with the penetrated barriers.

b. Sleeves: Schedule 40, welded, black steel pipe sleeves, sizes as indicated.

4. Warning Signs: Lettering 1-1/2 inch high, black on yellow background, with the legend "WARNING! NOT TO BE USED AS WALKWAY, LADDER, OR SUPPORT FOR LADDERS OR PERSONNEL." Materials and fastening per the Identifying Devices specification.

I. Wireways and Auxiliary Gutters:

1. Hot-dip galvanized, code-gage sheet steel, complete with knockouts, enclosures, and removable covers unless indicated as hinged. Manufacturers: Hoffman; Lee Products; Keystone; Square D.

a. Hoffman.

b. Lee Products.

c. Keystone.

d. Square D.

2. Exterior locations shall have weathertight, gasketed covers, joints, and drip-proof rain shields; paint after installation with exterior enamel paint.

3. Wireways and gutters shall comply with NEC Article 376 (Metal Wireways) and Article 366 (Auxiliary Gutters).

J. PVC-Coated Rigid Steel Conduit (Coastal/Corrosion-Resistant Applications): 40-mil factory-bonded PVC coating over hot-dip galvanized rigid steel conduit, with matching PVC-coated fittings, for exterior, corrosive, and coastal-exposed locations in lieu of uncoated GRS, per the corrosion-resistance and hurricane-environment requirements of Section 1.6.D.

2.02 UNDERGROUND DUCT BANKS AND MANHOLES FOR MEDIUM-VOLTAGE FEEDERS

A. Concrete-Encased Duct Banks: Schedule 40 PVC conduit (per Section 2.1.B.2) encased in a reinforced concrete envelope with a minimum 3-inch concrete cover, designed as per PREPA underground manual. Separate, physically independent duct banks shall be provided for each of the two 13.2 kV feeders routed from the 38 kV substation yard to the Building Basement double-ended substation, with no shared duct bank or manhole between the two feeders, per Section 1.6.B.

B. Spare Conduits: A minimum of one spare conduit shall be provided in each medium-voltage feeder duct bank for future use.

C. Manholes: Precast or cast-in-place reinforced concrete manholes, sized as per PREPA standards for the conductors, bends, and pulling tensions contained; separate manholes shall be provided for each of the two feeders, with no manhole

shared between the two feeders. Each manhole shall be provided with pulling irons, cable racks, a sump, ladder rungs, and a gasketed, traffic-rated cover; all metallic manhole hardware shall be bonded to the building grounding system per Section 16100.

D. Building Wall Penetration: Conduit entry into the Building Basement Main Electrical Room shall be made via a sleeve with a fire-stopping seal.

E. Warning Tape: Continuous warning tape identifying the buried electrical/medium-voltage service shall be installed above all underground duct banks per the NEC and applicable utility requirements.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Do not proceed with the work of this Section until conditions detrimental to the proper and timely completion of the work have been corrected in an acceptable manner.

3.02 INSTALLATION

A. Provide, where indicated and where required, ducts, conduits, tubing, wireways, and gutters to form a complete and integrally grounded raceway system. The system shall be installed according to the NEC and local code requirements. Components of the system shall be of sufficient size, strength, and capacity to allow for placement, pulling-in, or other installation of conductors, wires, cables, splices, taps, and terminations, whether included in this Contract or for future use, without strain or injury to those items being installed.

B. Provide pull wires in empty raceways where no conductors are installed under this Contract. Allow 10 inches minimum slack at each end of the pull wire and securely caulk in place.

C. The minimum size of rigid conduit and flexible metallic conduit shall be according to the NEC except as follows:

1. Unless otherwise specified under Part 2 - Products or shown on the Drawings.
2. Unless otherwise shown on the Drawings, telephone conduits shall be not less than 1 inch trade size.
3. Feeders and home runs shall not be less than 3/4 inch diameter.

D. Check sizes of raceways to determine that the green equipment grounding conductor specified, shown, or required can be installed in the same raceway with the phase and neutral conductors according to the percentage-of-fill requirements of the NEC. If necessary, increase the duct, conduit, tubing, or raceway sizes shown or specified to accommodate the conductors without additional cost to the Owner.

E. Raceway and Conduit Use Locations: Unless indicated otherwise, the conduit types specified shall be used in the locations below. Any deviation from this schedule shall be submitted for approval, with corresponding price adjustments, before installation. Any conduit installed that is not of the specified type shall be removed and replaced with the specified type at no additional cost to the Owner.

1. Exterior Raceways:
    a. Below-grade, concrete-encased: Schedule 40 PVC.
    b. Flexible conduit: PVC-jacketed, with liquid-tight fittings.
    c. Conduit exposed to the weather: GRS (PVC-coated GRS per Section 2.1.J in coastal/corrosive exposures).
    d. Gutters, wireways, and troughs shall be of the gasketed, raintight type.
2. Interior Raceways:
    a. Under slabs on grade: Schedule 40 PVC.
    b. Embedded in concrete walls or floors on or below grade: Schedule 40 PVC.
    c. Embedded in concrete walls or floors above grade: Schedule 40 PVC.
    d. For exposed work: GRS.
    e. Concealed in drywall: EMT.

F. Raceway and Conduit Installation:

1. Conduit Routing:
    a. Route feeders, home runs, and conduits as indicated, except for minor deviations as accepted.
    b. Maintain a minimum separation of 12 inches between conduits containing emergency feeders and conduits containing normal feeders.
    c. The routing of conduit shown on the plans is general.
    d. Before installing any work, examine the working layouts of all other trades to determine exact locations and clearances.
    e. Where equipment is installed by other trades requiring connection as specified in this Section, determine exact conduit entry locations from the approved shop drawings.
    f. Modifications to conduit runs shown on the electrical drawings, based on this Section, shall be made without additional cost to the Owner, and shall be subject to the Owner's Engineer's approval.
    g. In determining clearances, conduit shall not be run within 6 inches of any heated pipe or duct; if unavoidable, the conduit must be kept at least 1 inch from the outer covering.

2. Conduits Penetrating Waterproof Membranes Under Floor Slabs on Grade:
    a. Coordinate installation of conduits before installation of the waterproof membrane.
    b. The membrane shall be sealed watertight to the conduits before the slab is poured over the membrane.
    c. Provide Schedule 40 galvanized steel pipe sleeves for conduits penetrating floor slabs.
3. Conduits Penetrating Waterproof Membranes on Walls: Provide properly coordinated Schedule 40 galvanized steel pipe sleeves for conduits in concrete forms. The membrane shall be sealed watertight to the conduits.
4. Conduit Embedded in Concrete:
    a. Conduit embedded in poured concrete shall be of the specified type, unless otherwise indicated.
    b. EMT shall not be installed underground, in slabs on grade, in wet locations, in hazardous areas, or for circuits operating at more than 600 volts.
    c. The outside diameter of any conduit buried in concrete shall not exceed one-third of the thickness of the structural slab, wall, or beam in which it is placed. The conduit shall be located entirely within the middle third of the member whenever possible.
    d. Lateral spacing of conduits buried in concrete slabs shall be not less than three diameters, except where the drawings indicate the concrete slab has been specially designed to accommodate a closer spacing of conduits entering signal or electric closets, panelboards, etc., or the arrangement is accepted by the Owner's Engineer.
    e. In general, conduits shall not be run through beams, except where clearly indicated on the Drawings, specified, or allowed by the Owner's Engineer.
    f. No vertical conduit passing through horizontal concrete beams shall interfere with reinforcing. Where accepted by the Owner's Engineer, horizontal conduit may pass through beams, provided it is not closer than 6 inches clear and is confined to the upper half of the beam section.
    g. Properly support conduit to be embedded to maintain correct location and spacing during concreting operations. If necessary, provide suitable metal supports for this purpose.
    h. Where a concrete-embedded conduit passes through an expansion or contraction joint in the structure, install the conduit at right angles to the joint and provide an approved conduit expansion fitting at the joint, installed according to the manufacturer's instructions. Paint the conduit

with an approved bituminous compound for 1 foot on either side of the expansion joint.

i. At any one point, not more than two lines of conduit shall intersect in any portion of a slab; any additional conduit shall be rerouted through other areas, or run under the slab and stubbed through the slab at required locations. Conduits and pipes shall have a minimum cover of 1 inch of concrete; conduit shall not be installed in slabs 3 inches thick or less; aluminum conduit shall not, under any conditions, be buried in concrete slabs; slab-installed conduit shall be stubbed within the webbing of block and extended vertically concurrently with the laying of block, with the centerline of block partitions determined from column centerlines.

5. Conduit Bending, Cutting, and Placement:

a. Conduit bends and offsets shall be avoided where possible.

b. Required bends shall be made with standard benders designed for the purpose, with a minimum radius of 6 times the internal conduit diameter.

c. Make conduit bends according to the NEC unless otherwise shown on the Drawings. Use of a pipe tee or vise for bending conduit is not allowed.

d. Conduit that is crushed or deformed shall not be installed.

e. Bends shall be free from dents or flattening. Bends totaling more than 360 degrees are not allowed in conduit between any two terminations or pull boxes.

f. Make no bends in surface raceways; use factory-formed fittings for surface raceways.

g. Raceways shall not contain more than two 90-degree bends or the equivalent. Provide additional junction or pull boxes to meet this requirement.

h. The ends of conduit shall be carefully reamed out free from burrs before installation and after threading; cuts shall be made square; coupling of conduits by means of running threads is not allowed; where it is impossible to run the conduit and coupling sections together, an Erickson coupling or other accepted combination coupling shall be used; joints shall be made up tight; joints in conduits concealed in slab, floor fill, earth, etc., shall be made using approved silicone paint on the threads.

i. Prevent lodgement of plaster, dirt, or trash in raceways, boxes, fittings, and equipment during the course of construction. Clogged raceways shall be entirely freed of obstructions or replaced.

j. During installation of conduit, unfinished runs and terminations in pull boxes, cabinets, etc., shall be capped until conductors are installed.

k. Plastic caps designed for this specific purpose shall be used to cover and align conduits before concrete pours, and shall remain on conduit stub-ups until the conduit is extended. Caps shall have self-aligning, interlocking male or female wings molded on each side; duct or electrical tape and wire are unacceptable.

6. Conduit Connections:

a. Conduit runs shall be mechanically and electrically continuous . Unless otherwise specified, each conduit shall enter and be securely connected to a cabinet, junction box, pull box, or outlet box by means of a locknut on the outside and a bushing on the inside, or by means of a liquid-tight, threaded, self-locking, cold-weld-type wedge adapter. Where the nominal circuit voltage exceeds 250 volts, rigid conduit shall have one inside and one outside locknut; EMT or flexible metal conduit shall have one wrench-tight locknut; locknuts shall be the bonding type with sharp edges for digging into the metal wall of the enclosure; locknuts and bushings or self-locking adapters are not required where conduits are screwed into tapped connections; protect vertical runs of conduit terminating in the bottoms of wall boxes or cabinets, etc., from the entrance of foreign material before conductors are installed.

b. Plastic conduit joints shall be made by brushing plastic solvent cement on the inside of the plastic coupling fitting and on the outside of the conduit ends; slip the conduit and fitting together, until seated, with a slight twist to set the joint tightly, then rotate the conduit one-half turn to distribute the cement evenly. Remove excess cement built up on the conduit surface.

c. The end of each conduit 1 inch and smaller shall be provided, where it enters a junction box, outlet box, cabinet, etc., with a locknut and bushing. For conduits 1-1/4 inch and larger, use insulated bushings with a ground stud; if fully insulated bushings are used, provide additional locknuts inside the box or cabinet before installing the bushing. Provide conduit entering main distribution switchboard feeder pull boxes with an insulated bushing with a ground stud regardless of size.

d. Install the conduit system complete before any conductors are drawn in. Each run of conduit shall be blown through and swabbed after plaster is finished and dry, and before conductors are installed.

e. Install conduit to drain any collected moisture to the nearest outlet or pull box, where possible.

f. Where metallic conduit is exposed to different temperatures, seal the conduit to prevent condensation and passage of air from one area to another.

g. Light and power conduit shall run from a permanent and continuous ground return back to the service ground connection point. Conduits used on systems entirely isolated from the light and power distribution system shall be electrically continuous and grounded in an approved manner. Ground cable trays to the conduit system.

7. Conduit Penetrations and Supports:

   a. Sleeves, conduits, or other pipes passing through floor slabs, beams, or walls shall be located so as not to impair the strength of the structure.

   b. Conduits penetrating walls or smoke partitions shall be fire-stopped (sealed). Filling materials for openings in floors shall be fire-resistive and finished to prevent the passage of water, smoke, and fumes. Filling material for openings in walls shall be fire-resistive where it occurs in firewalls and shall be installed to prevent the passage of air, smoke, or fumes. Where conduit and wiring pass through fire walls or floor slabs, the Contractor shall fill the opening with fireproof sealant.

   c. Roof penetrations shall be made using approved flashings and counter-flashings. Do not penetrate cant strips or expansion joint covers with conduits. Do not run conduits up through the roof nearer than 12 inches from the toe of the cant strip. Where conduits penetrate exterior walls near flashings, the penetration shall be at least 3 inches above the flashing reglet.

   d. Where conduits passing through openings are exposed in finished rooms, the finishes of the filling materials shall match and be flush with the adjoining floor, ceiling, or wall finishes.

   e. Where unused sleeves or slots are provided for future installation of conduit, etc., they shall be suitably identified if not readily recognizable.

   f. Run conduits exposed in unfinished spaces, mechanical equipment spaces, where specifically indicated on the Drawings, or with the express permission of the Owner's Engineer. Feeder conduits shall be run exposed or in hung ceilings, except as noted; exposed conduits shall be run parallel to building walls or partitions, using approved conduit fittings, and shall be securely supported with malleable iron pipe straps, angle iron pipe straps, angle iron or steel channel racks, or other approved means as required for clearance of other piping or ductwork; wood hangers and perforated sheet metal hanger straps are not allowed; spacing of conduit supports shall not exceed 7 feet; horizontal feeder conduit banks shall have their hangers fastened to the building structure by approved means; hangers for banks consisting of 1 or 2 conduits may be fastened from inserts in the slab; auxiliary steel for fastening shall be furnished and installed under this Section.

g. Support individual conduits not larger than 1-1/2 inch diameter by means of one-hole pipe straps or individual pipe hangers. Support individual horizontal conduits larger than 1-1/2 inch diameter by individual pipe hangers.

h. Conduit located in hung ceilings shall be supported in an approved manner similar to exposed conduits.

i. Branch-circuit conduits above suspended ceilings may be supported from the floor construction above or from the main ceiling support members; the finished installation shall not interfere with the removability of ceiling panels. Individual branch conduits above suspended ceilings with removable panels may be supported from the ceiling suspension wires, provided the load imposed on any individual wire is not greater than 64 lbs, including the ceiling weight.

j. Unsupported vertical drops over 10 feet from bus ducts or at motors shall be in rigid steel conduit. For vertical drops of less than 10 feet, EMT may be used. Brace conduit to prevent swaying.

k. Space conduits installed against concrete or masonry surfaces away from the surface by clamp backs or other approved means.

l. In dry locations, spring-steel fasteners, clips, or clamps specifically designed for supporting exposed single conduits may be used instead of pipe straps or pipe hangers. Hanger rods used with spring-steel fasteners shall be not less than 1/4 inch diameter steel with a corrosion-resistant finish; spring-steel fasteners shall be specifically designed for supporting single conduits or EMT; type, size, and spacing of spring-steel fasteners with accessories shall be approved by the Owner's Engineer and the Contractor, with applicable load and rating data submitted for approval; wire shall not be used for support, and nails are not allowed for the support of conduit.

m. Where 2 or more horizontal conduits or EMT run parallel and at the same elevation, they shall be supported on multiple trapeze pipe hangers. Each conduit or EMT shall be secured to the horizontal hanger member by a U-bolt, one-hole strap, or other suitably designed and approved fastener.

n. U-bolts, clamps, attachments, and other hardware necessary for hanger assembly, and for securing hanger rods and conduits, shall be provided. Each multiple hanger shall be designed to support a load equal to or greater than the sum of the weights of the conduits, wires, and hanger, plus 200 lbs. Hardware shall be hot-dip galvanized after fabrication.

8. Fittings:

a. Expansion Fittings: Each buried conduit, or conduit rigidly secured to the building construction on opposite sides of a building expansion joint, and each long run of exposed conduit that may be subject to excessive

stresses, shall be provided with an expansion fitting. Expansion fittings shall be made of hot-dip galvanized malleable iron and shall have a factory-installed packing that prevents the entrance of water, a pressure ring, and a grounding ring.

b. In addition to the grounding ring, a separate external copper bonding jumper, secured by grounding straps on each end of the fitting, shall be provided.

c. Sealing Fittings: Sealing fittings for use with rigid steel conduits shall be of the threaded, zinc- or cadmium-coated, cast or malleable iron type. Fittings used to prevent the passage of water vapor shall be of the continuous-drain type.

d. Sealing fittings shall be installed and sealed according to the manufacturer's recommendations at suitable, approved, accessible locations. In concealed work, each fitting shall have an access door or panel to allow access to the fitting.

e. Compression fittings shall be made up tight according to the manufacturer's recommendations. Screw-type fittings are not allowed.

9. Conduit Fastening: Fasten raceways as follows:

a. To wood: Wood screws, sheet metal screws, or screw-type nails.

b. To hollow masonry: Toggle bolts or expansion bolts as required; unused holes shall not be filled.

c. To concrete or solid brick masonry: By expansion bolts, in holes drilled to a depth of more than 1-1/2 inch.

d. To steel work: Machine screws, welded threaded studs, or spring-tension clamps. Raceways or pipe straps shall not be welded to steel structures.

e. To light steel construction partitions: Sheet metal screws. Bar hangers may be attached with saddle ties of 16-gage double-strand zinc-coated steel wire.

f. Nail-type nylon anchors with lock washers and nuts may be used instead of expansion bolts or machine screws.

g. Explosive charge-setting devices are not allowed for any type of fastening on the Project.

h. Conduits, tubing, or raceways shall be continuous from outlet to outlet, cabinet, junction box, or pull box.

i. Surface wireways and auxiliary gutters shall be fastened according to the manufacturer's directions, with fastenings appropriate for the surface as specified.

j. Cable supports in vertical raceways shall be provided according to NEC Article 300.19.

10. Flexible Conduit:
    a. Flexible conduit shall be used for connections to motors and other electrical equipment subject to movement, vibration, misalignment, or cramped quarters, or where noise transmission is to be eliminated or reduced. Flexible conduit used for these purposes shall be of the liquid-tight type where installed in exterior locations; in a moisture- or humidity-laden atmosphere where condensation may accumulate; in corrosive atmospheres; where water or spray from wash-down operations is frequent or possible; or wherever there is a possibility of seepage or dripping of oil, grease, or water.
    b. Flexible conduit shall be used for short connections to control devices, recessed fixtures, and similar items, with enough slack to avoid tension. The connection between the structure and the first point of attachment to vibrating equipment shall be flexible.
11. Empty Conduits: Where empty conduit or tubing is indicated for wiring to be installed in the future, install the conduit or tubing according to the preceding requirements, with the following additional requirements:
    a. No length of run shall exceed 75 feet for 3/4 inch size, or 150 feet for 1 inch or larger sizes.
    b. Raceways shall not contain more than two 90-degree bends or the equivalent.
    c. Install additional pull or junction boxes to comply with the above limitations, whether or not indicated.
    d. Inside radii of bends in conduits of 1 inch or larger shall be not less than 10 times the nominal diameter.
    e. Provide a pull wire in empty raceways.

3.03 UNDERGROUND DUCT BANK AND MANHOLE INSTALLATION

A. Install underground duct banks and manholes per Section 2.2, maintaining minimum separation between duct banks and from other underground utilities per the NEC, PREPA and maintaining the physically independent, separate routing of the two 13.2 kV feeder duct bank and manhole runs required by Section 1.6.B.

B. Install manholes at the spacing required for cable-pulling tension and at all required direction changes, per the manufacturer's and Section 16120 requirements.

C. Seal all conduit entries into the building with fire-stopped, watertight sleeves per Section 2.2.D.

D. Mandrel-test and pull a rope through all underground ducts prior to cable installation by others under Section 16120.

3.04 SEISMIC ISOLATION PLANE CROSSINGS

Install flexible connections and seismic loop assemblies at all raceways crossing the Interstitial Level seismic isolation plane, per Section 1.6.C, coordinated with the structural Engineer of Record for exact crossing locations and required movement capacity.

3.05 FIELD QUALITY CONTROL

A. Inspect all raceway for damage, proper support, grounding continuity, and firestopping prior to concealment; correct deficiencies before proceeding.

B. Verify that empty raceways have been fitted with pull wires with the required slack, and that unfinished conduit runs and terminations remain capped until conductors are installed.

C. Verify that underground ducts have been mandrel-tested and fitted with a pull rope prior to cable installation, per Section 3.3.D.

END OF SECTION 16112

SECTION 16120 WIRE AND CABLE

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Copper building wire and cable, 600 volt AC and below, for all light, power, and control circuits; and 15 kV-class medium-voltage shielded power cable for the two 13.2 kV underground feeders between the outdoor yard substation and the Building Basement double-ended substation; together with all conductor identification, splicing, termination, and testing requirements associated with this Section's products.

B. Related Sections:

1. Section 16100 - Basic Electrical Materials and Methods
2. Section 16112 - Raceways and Conduits
3. Section 16131 - Outlet, Pull and Junction Boxes
4. Section 16140 - Wiring Devices
5. Section 16155 - Motor Power and Control Wiring
6. Section 16440 - Disconnect Switches
7. Section 16470 - Panelboards
8. Section 16511 - Lighting Fixtures
9. Section 16550 - 38 kV Power Transformers
10. Section 16600 - Double-Ended Substation
11. Section 16700 - Automatic Transfer Switches
12. Section 16800 - Paralleling Switchgear
13. Section 16900 - Diesel Engine-Driven Generators

1.02 REFERENCES

NFPA 70 (National Electrical Code), latest edition adopted in Puerto Rico; NEC Article 310 (Conductors for General Wiring), Article 250 (Grounding and Bonding), and Article 517 (Health Care Facilities); NEMA WC 70/ICEA S-95-658 (600 V nonshielded power cable) and UL 44/UL 83 (thermoset- and thermoplastic-insulated wires) - these current designations supersede the previously referenced NEMA WC-5, NEMA WC-7, IPCEA S-61-402, and IPCEA S-66-524, all of which have been withdrawn; ICEA S-93-639 and AEIC CS8 (5 kV-46 kV shielded medium-voltage power cable); IEEE 400 (field testing of shielded power cable systems after installation); IEEE 383 and IEEE 1202 (cable flame test); NFPA 99 (Health Care Facilities Code) ; PREPA Standards.

1.03 SYSTEM DESCRIPTION

A. Performance Requirements: Materials shall bear Underwriters Laboratories (UL) labels.

1.04 SUBMITTALS

A. Submit product data and descriptive literature before starting work.

B. Medium-Voltage Cable Submittals: For the 13.2 kV feeder cable, submit cable pulling calculations, manufacturer's ampacity and minimum bending radius data for the duct bank/manhole configuration, and factory test reports (partial discharge and AC high-potential withstand) prior to shipment to the site. Submit a fault current, ampacity, and voltage-drop calculation confirming cable sizing, signed and sealed by the Engineer of Record and coordinated with the fault current study required at Design Development phase per the Bridging Document, Section 4.3.

1.05 QUALITY ASSURANCE

A. Medium-voltage cable terminations and splices shall be performed only by personnel certified by the cable/termination kit manufacturer or otherwise qualified and acceptable to the Owner.

B. All calculations and design documents required under this Section shall be signed and sealed by the Engineer of Record, a Professional Engineer licensed to practice in the Commonwealth of Puerto Rico and a member in good standing of the Colegio de Ingenieros y Agrimensores de Puerto Rico (CIAPR), per the Bridging Document.

1.06 DESIGN REQUIREMENTS

A. Conductors shall be copper only. Aluminum conductors are not permitted for branch circuit, feeder, service, or medium-voltage cable applications, consistent with the copper-conductor Basis of Design established throughout the Bridging Document (copper transformer windings, copper switchgear bus, copper building ground grid).

B. Conductor and cable ampacity shall be sized per NEC Article 310, coordinated with the short-circuit withstand rating established by the fault current study, and shall include not less than 10 percent spare capacity for future load growth, per Section 16100 and the Bridging Document.

C. Voltage drop limits are established in Section 3.2.C of this Section.

PART 2 - PRODUCTS

2.01 EQUIPMENT

A. Wire and Cable:

1. Wire and cable shall be soft annealed 98 percent conductivity copper with 600 volt AC thermoplastic insulation unless otherwise noted.

2. Wire and cable shall be new and manufactured not more than 12 months before installation.
3. Each coil or reel shall bear UL label and wire marked with AWG or circular mil wire size, voltage rating, insulation type, type stranding, and the manufacturer's name.
4. Unmarked wire found installed shall be replaced at no additional cost to the Owner.
5. Wiring shall comply with NEMA WC 70/ICEA S-95-658 (600 V nonshielded wire and cable), UL 44/UL 83, and NEC Article 310.

B. Light and Power Wiring Circuit Conductors:

1. Light and power wiring circuit conductors may be stranded in sizes No. 10 AWG and smaller, and concentric strand Class B for conductors No. 8 AWG and larger.
2. Stranded copper conductors may be used for final connections to individual recessed lighting fixtures, devices, and for control and signal circuit wiring only with crimp-on type terminations.

C. Wiring Insulation shall be as follows:

1. THWN-2, 90°C.

D. Color Coding:

1. Wire of Size No. 8 and smaller shall be factory color coded 600 volt, THWN-2. Sizes larger than No. 8 may be factory color coded or color coded with 3M tape or accepted equivalent. Should tape be used, it shall cover not less than 6 inches of cable within the enclosure.
2. Colors to be used in coding shall be: 120/208 Volt System - Neutral White, Phase A Black, Phase B Red, Phase C Blue, Ground Green; 277/480 Volt System - Neutral Gray, Phase A Brown, Phase B Orange, Phase C Yellow, Ground Green. Isolated ground conductors shall be green with a continuous yellow stripe, per NEC 517.160. Electrical grounding and static conductors may be bare wire only where allowed by the NEC; within patient care spaces, NEC 517.13 requires an insulated copper equipment grounding conductor - not bare wire - run with the branch circuit conductors in addition to the metallic raceway.
3. All other colors (violet, traced, etc.) shall only be used for switch legs, control, or communication circuits.
4. Conductors for control wiring shall be color coded, using different color coding than the energy conductor coding specified above. Control wires shall be numbered.

E. Minimum Wire Size: Use No. 12 AWG for control over 200 feet, unless otherwise noted. Control wiring may be No. 14 AWG if distance is less than 200 feet.

1. Fire alarms and intrusion systems shall have cable and wiring according to manufacturer's specifications or as specified.

F. Wire and Cable Connectors and Terminations:

1. For splices in branch circuit conductors solid or stranded size No. 10 AWG and smaller, use UL listed soft plastic wire nut with sharp self-cutting interior threads, 3M Scotchlok, Ideal Supernut, or T&B Piggy of the size to match the wire.
2. For terminations of stranded or solid wire in size No. 10 AWG and smaller at equipment terminals, use UL listed, tin-plated copper, 600 volt vinyl insulated compression type ring or fork type equivalent to T&B "Sta-Kon" or Burndy "Vinylug".
3. For No. 8 AWG and Larger: T&B "Locktite" connectors, Burndy "Versitap" connectors, or OZ-Gedney solderless connectors, with insulating covers, tape, or heat shrink insulation system.
    a. Terminations and splices in feeders may be made with solderless pressure type connectors complete with composition insulating covers, field insulating tape, or heat shrink insulation system.
    b. Connectors and lugs for 250 mcm cable and larger shall be of the 2-hole type and for compression type shall have at least 2 indents.
    c. Compression lugs and connectors shall be tin plated wrought copper, of size to match the cable.
4. Splices in underground exterior wiring shall be made fully waterproof by potting or encapsulating.
5. Insulating tapes shall be of a type approved for the application and shall be flame retardant. Tapes shall be as manufactured by 3M or Bishop Electric.
6. Cable Ties: T&B "Ty-Rap" or Burndy "Unirap".
7. Cable Identification: Branch circuits wire markers 3M "Scotch Code" or accepted equivalent. For feeder sizes, non-ferrous metal stencil tags.
8. Thermal Fusion Connections: "Catalytic thermal weld" by Cadweld or accepted equivalent.

2.02 MEDIUM-VOLTAGE POWER CABLE (15 KV CLASS)

A. General: Provide 15 kV-class, single-conductor, shielded copper power cable for the two independent 13.2 kV underground feeders routed from the outdoor yard substation 15 kV primary switchgear (Section 16550) to the duplex primary switch and fuse assemblies at the Building Basement double-ended substation (Section 16600), per the Bridging Document, Section 4.3.

B. Conductor: Soft-drawn, stranded copper; one conductor set per phase per feeder; sized by the D&B Contractor based on load calculation, voltage drop (2 percent

maximum, per Section 3.2.C), and short-circuit withstand rating per the fault current study; ampacity per NEC Article 310 and the manufacturer's engineering data for the actual duct bank configuration, number of conductors, and soil/duct bank thermal resistivity.

C. Insulation and Shielding: Tree-Retardant Cross-Linked Polyethylene (TRXLPE) insulation, 15 kV class, 133 percent insulation level extruded semiconducting conductor and insulation shields; copper tape or concentric wire neutral/shield, continuously grounded at both ends and at every splice; overall jacket rated for direct-burial and duct bank service, moisture- and corrosion-resistant for Puerto Rico's underground coastal environment.

D. Configuration: Single-conductor cable sets, installed as two independent, physically separated feeder cable sets - one per underground duct bank/manhole run - so that damage to or loss of one feeder cannot affect the other, per the Bridging Document, Section 4.3.

E. Standards Compliance: ICEA S-93-639, AEIC CS8, and NEC Article 310; UL listed where a UL product category exists.

F. Acceptable Manufacturers: Okonite, General Cable, Southwire, Prysmian, or approved equal

PART 3 - EXECUTION

3.01 INSPECTION

A. Do not proceed with the work of this section until conditions detrimental to the proper and timely completion of the work have been corrected in an acceptable manner.

3.02 INSTALLATION

A. Wire and Cable Installation:

1. Wire and cable shall be suitably protected from weather or damage during storage and handling and shall be in first-class condition when installed.
2. Conductors shall not be pulled into conduit until raceway system is substantially complete. Wiring shall be continuous within conduit runs. Splices will be allowed only at outlet and junction boxes. Joints shall be mechanically and electrically secure.
3. Pulling lubricants, if used, shall comply with UL requirements for the type of conduit material and cable insulation being used.
4. Care shall be taken to prevent cutting and abrasion of cable insulation during the pulling of feeders.

a. Ropes used for pulling of feeders shall be made of polyethylene or other suitable nonmetallic material.

b. Pulling lines shall be attached to conductor cables by means of either woven basket grips or pulling eyes attached directly to the conductors.

c. Rope hitches shall not be used.

d. Cables to be installed in a single conduit shall be pulled in together.

e. Where polyethylene insulation is used and a pulling lubricant is required, the lubricant shall be certified by the manufacturer to be non-injurious to such insulation.

5. Do not bend cables during installation, either permanently or temporarily, to radius less than 12 times the outer diameters, except where conditions make the specified radius impracticable and shorter radii are allowed by the NEC and NEMA Standards. Medium-voltage shielded cable shall additionally comply with the manufacturer's minimum bending radius per Section 3.3.B.
6. Neatly and securely bundle conductors located in branch circuit panelboards, cabinets, control boards, switchboards, and motor control centers. Use nylon bundling straps.
7. Provide suitable installation equipment to prevent cutting or distortion of conduits during the pulling of feeders. Use masking or other means to prevent obliteration of cable identification when solid color coating or colored tracers are used.
8. Control wiring color codes shall be of type as required by its equipment manufacturer. Interconnections of control wiring shall be on numbered terminal strips.
9. Where 2 neutrals are installed in same conduit, their sets of wiring shall be grouped and clearly identified by permanent tags or other means.
10. At each outlet, a loop or end of wire not less than 9 inches long shall be left for connection to lead.
11. Leading end of each conductor pulled shall be carefully examined for damage to jacket. If damage is evident, cable shall be extended and further checked for damage, with good cable only to remain.
12. Cables in junction and pull boxes shall be properly trained and racked.
13. Branch circuit wiring in panelboard gutters shall be installed vertically in the gutter with a 90-degree bend at the supply circuit breaker; wire shall enter the circuit breaker lug horizontally.
14. Install cable supports and boxes at vertical feeders and according to the schedule in the NEC. Boxes shall be built of heavy steel plates not less than No. 10 USS gage fastened to an angle iron frame with removable covers secured by

brass machine screws. The cable support shall be of the split wedge type that clamps each conductor firmly and tightens due to the weight of the conductor.

B. Wire and Cable Splicing and Terminations:

1. Splices and terminations of conductors shall be made using specified materials and methods installed according to the manufacturer's recommendations.
2. Splices in branch circuit wiring shall be made by stripping conductor insulation, twisting conductors until mechanically secure, and installing a self-threading insulated type connector. Splices are not allowed within panelboards.
3. Conductors shall be squarely cut and fully inserted into the lug barrel or connector. Insulation shall be stripped without cutting the conductor or removing strands, exposing the conductor for the minimum distance required for connection. Splice connectors shall be of a type and be so installed that the conductor is fully insulated by a skirt of such design, or taped so cold flow of the conductor insulation will not be induced when the conductor is positioned in its final operating position.
4. Do not combine conductors under the same lug. Provide individual lugs for individual conductors. Re-tighten bolt type connectors 24 to 48 hours after initial installation and before taping.
5. Connectors shall be insulated by approved type, integral or separate cover, or by means of taping with approved plastic or rubber and friction tapes to provide insulating value equal to that of the conductors being joined. The number and size and combinations of conductors allowed by UL as listed on manufacturers' packaging of connector shall be strictly complied with.
6. Terminations at equipment terminal blocks shall be made using compression type connectors suitable to match terminal type.
7. Continuity of neutral on multi-wire branch circuits shall not be made on any device at terminal blocks, but shall be spliced and a tap brought out, thereby assuring no openings of the neutral in the replacement of a device.
8. Feeders shall be identified by means of nonferrous tags or pressure-sensitive labels securely fastened to all cables, feeders, and power circuits in vaults, pull boxes, manholes, switchboard rooms, terminations of cables, etc. Tags or labels shall be stamped or printed to include the feeder number, source, and equipment supplied. If suspended type tags are provided, they shall be attached by nylon cable ties or other nonconductive permanent means.
9. Branch circuit conductors shall be identified at supply circuit breakers, with the circuit number using pressure sensitive adhesive wire markers.
10. Circuiting work shall comply with the following:
    a. Loads on panel busses shall be balanced on phases as evenly as possible.

b. No neutral conductor shall be common to more than 1 circuit conductor connected to the same phase leg of the supply system.

c. Circuiting of panelboards shall allow breakers to be grouped logically by functions.

C. Voltage Drops:

1. Total Allowable Drop for Service Source to Load: Limit to a maximum drop of 5 percent. Increase wire size, where necessary, to comply with this requirement.

a. Branch Circuits: Limit to a maximum drop of 3 percent.

b. Service Source to Individual Panelboards: Limit to a maximum drop of 2 percent.

c. 13.2 kV Medium-Voltage Feeders (Building Substation): Limit to a maximum drop of 2 percent, per the Bridging Document, Section 4.3.

3.03 MEDIUM-VOLTAGE CABLE INSTALLATION

A. Install the two 13.2 kV feeder cable sets in the separate, independent underground duct banks and manholes specified in Section 16112, maintaining physical separation between the two feeders for their entire routing from the 15 kV primary switchgear (Section 16550) to the Building Basement double-ended substation (Section 16600); no shared manhole or duct bank between the two feeders.

B. Do not bend medium-voltage shielded cable to a radius less than that recommended by the cable manufacturer for the cable's construction; do not exceed the cable manufacturer's maximum pulling tension or sidewall bearing pressure.

C. Terminate medium-voltage cable only with factory-engineered stress-cone or molded termination and splice kits, installed only by personnel certified by the termination kit manufacturer, per Section 1.5.A.

D. Before energizing, perform insulation resistance (megger) testing and an AC high-potential or very-low-frequency (VLF) withstand/partial discharge test per IEEE 400 on each completed feeder run; submit signed and dated test reports to the Owner as a condition of Substantial Completion.

3.04 FIELD QUALITY CONTROL

A. Perform insulation resistance (megger) testing on all 600 V feeders and branch circuits prior to energization.

B. Perform continuity and phase-rotation verification on all three-phase circuits prior to energization.

C. Document and submit all test results, including the medium-voltage acceptance test reports required by Section 3.3.E, as part of Project closeout.

END OF SECTION 16120

SECTION 16131 OUTLET, PULL AND JUNCTION BOXES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Outlet boxes, device boxes, pull boxes, and junction boxes for power and lighting circuits, and rough-in boxes for communications, nurse call, fire alarm, public address, CCTV, and access control systems, complete as shown on the Drawings and specified herein.

B. Related Sections:

1. Section 16100 - Basic Electrical Materials and Methods.
2. Section 16112 - Raceways and Conduits.
3. Section 16140 - Wiring Devices.
4. Section 16200 - Fire Alarm System (pull station and horn/visual boxes).
5. Section 16300 - Nurse Call System (device rough-in boxes).
6. Section 16511 - Lighting Fixtures (fixture outlet boxes).
7. Section 16742 - Telephone and Data Raceway System (data/voice outlet box rough-in).

1.02 REFERENCES

NFPA 70 - National Electrical Code (NEC), latest edition adopted in Puerto Rico, including Article 314 (Outlet, Device, Pull, and Junction Boxes, Conduit Bodies, and Fittings) and Article 517 (Health Care Facilities); NEC Article 406.12 (Tamper-Resistant Receptacles); UL 514A (Metallic Outlet Boxes); UL 514B (Conduit, Tubing, and Cable Fittings); UL 514C (Nonmetallic Outlet Boxes, Flush-Device Boxes, and Covers); UL 50 and NEMA 250 (Enclosures for Electrical Equipment - Environmental Ratings, including NEMA 3R and 4X); ASCE 7 and the Puerto Rico Building Code (PRBC) for wind and seismic design loads; NFPA 99 - Health Care Facilities Code, latest edition.

1.03 SYSTEM DESCRIPTION

A. Performance Requirements:

1. Materials shall bear Underwriters Laboratories (UL) labels for the intended application and location.
2. Box size shall comply with NEC 314.16 for the number and size of conductors, devices, and fittings contained in each box.
3. Box size shall comply with NEC 314.28 for the number and size of conduits entering and exiting each pull or junction box, and for the bending space required for the conductors contained.

4. Boxes serving Category 1 patient care spaces shall additionally comply with NEC Article 517 and NFPA 99.

1.04 DESIGN REQUIREMENT

A. Seismic Design: Boxes and their conduit connections crossing the building's seismic isolation plane at the Interstitial Level shall be provided with flexible connections/seismic loops coordinated with Section 16112 to accommodate differential seismic movement; box supports elsewhere shall be designed and anchored for the seismic loads required by the PRBC

1.05 SUBMITTALS

A. Submit manufacturer's literature and technical data for each box type before starting work.

B. Submit a mounting height schedule for outlet, device, and rough-in boxes, coordinated with the Owner's Representative, architectural drawings, and applicable accessibility requirements.

1.06 QUALITY ASSURANCE

All boxes shall be UL listed/labeled for the intended location and installation method. Boxes for exterior, damp, or wet locations shall be listed for that environment per UL 514A/UL 50/NEMA 250. Boxes serving patient care areas shall be sized and installed in accordance with NEC Article 517 and NFPA 99.

PART 2 - PRODUCTS

2.01 OUTLET BOXES - GENERAL

A. Provide outlet boxes at required locations, where shown on the Drawings, and as specified.

1. Fixture studs shall be securely fastened in an acceptable manner.
2. Plaster covers shall have depths suitable to the finish being applied to the walls.
3. Sheet steel boxes shall be properly drilled and tapped.
4. There shall be no more holes in any outlet box than are required for the entering conduits.
5. Depth of boxes shall allow for easy wire pulling and proper installation of wiring devices.

B. Outlet boxes shall be galvanized steel or corrosion-resistant malleable iron alloy, UL 514A listed for the intended location.

2.02 OUTLET BOX SCHEDULE BY APPLICATION

A. For Recessed Ceiling Fixtures: 4-inch square sheet steel box with blank cover and suitable hanger bar; box to be fastened to ceiling suspension members in an acceptable manner not more than 1 foot from the fixture opening.

B. For Surface or Stem-Mounted Ceiling Fixtures from Slab with Concealed Conduit: 4-inch sheet steel octagon concrete ring of a depth suitable to the construction and furnished with a top cover having a 3/8-inch fixture stud.

C. For Ceiling and Wall Bracket Outlets on Exposed Conduit in Dry Locations: 4-inch octagon sheet steel box with 3/8-inch fixture stud.

D. For Surface-Mounted Ceiling Fixtures or Hung Ceilings: 4-inch octagon sheet steel hung-ceiling box with suitable hanger bars and 3/8-inch fixture stud, fastened to the ceiling suspension in an acceptable manner.

E. For Surface-Mounted Wall Bracket Fixtures with Concealed Conduit: 4-inch square sheet steel box with round opening plaster cover and 3/8-inch fixture stud.

F. For Ceiling and Wall Bracket Outlets on Exposed Conduit at Damp or Wet Locations: Corrosion-resistant, gasketed cast box (feraloy, aluminum, or equivalent) or fiberglass (FRP) box, NEMA 3R or better; plain cast iron is not acceptable in Puerto Rico's coastal/marine climate.

G. For Switches and Receptacles in Tile, Plastered, or Gypsum Board Walls: 4-inch square sheet steel box or multi-gang box with proper plaster covers as required; two gangs may be provided by means of a 4-inch square box with a two-gang plaster cover.

H. For Switches and Receptacles in Enameled or Face Brick Walls, Unfinished Walls, and Woodwork: Single or multi-gang sheet steel utility boxes as required.

I. For Switches and Receptacles on Exposed Exterior Conduit Work: Type FS or FD cast device box, NEMA 3R (or better) with stainless steel, fiberglass, or other corrosion-resistant construction and hardware, rated for the project's 180 mph design wind speed per ASCE 7/PRBC where exposed to wind-borne debris.

J. For Telephone or Data Outlets: 4-11/16-inch square by 2-1/2-inch deep box with single- or double-gang plaster/mud ring as required, sized for the conductor and pathway fill specified in Section 16742.

2.03 FIRE ALARM, SIGNAL, AND SPECIALTY BOXES

Boxes for fire alarm or signal systems, pilot lights, nurse call, and other specialty equipment shall be as recommended by the manufacturer of the enclosed equipment, coordinated with Section 16200 and Section 16300, and sized per NEC 314.16/314.28.

2.04 WET AND DAMP LOCATION BOXES

A. Provide gasketed, weathertight, screw-cover, code-gage boxes with weatherproof conduit hubs for pull boxes with multiple conduit entries; boxes and hubs shall be stainless steel, hot-dip galvanized steel, or fiberglass (FRP) - corrosion-resistant materials suitable for the Puerto Rico coastal/marine climate - rather than unprotected ferrous materials.

B. Provide cast metal hub-type fittings, corrosion-treated or stainless steel, with gaskets for individual conduit runs.

C. All exterior and exposed junction/pull boxes shall be NEMA 3R minimum per Section 1.4.A of this Section, rated for the project's 180 mph design wind speed.

2.05 EXTENSION RINGS

A. Do not use extension rings to increase the volume of boxes, except where necessary due to multiple conduit run conflicts.

1. Where such conflicts occur, an extension ring may be allowed for changes in direction of conduit to make necessary clearances.
2. Not more than one extension ring may be used for each box where necessary.

2.06 PULL AND JUNCTION BOXES

A. Where indicated on the Drawings or where necessary for compliance with NEC 314.28 for cable installation, install junction and pull boxes of the proper size for conduits over 1 inch trade size. Pull and junction boxes shall be of adequate size to accommodate installation of conductors without excessive bending that could damage insulation.

B. Pull and junction boxes shall be of all-steel construction, spot- or seam-welded at joints, hot-dip galvanized after fabrication, and UL listed/labeled per UL 50 and NEMA 250 (superseding the legacy Fed. Spec. WJ-800 reference in the original project boilerplate, which has been withdrawn).

C. Boxes shall be drip-proof with screw-attached covers. Each box shall have a turned-in lip welded at the joint to develop full strength. The lip shall be drilled and tapped for 1/8-inch or 3/16-inch round-head screws, symmetrically placed. To provide adequate length of thread, nuts shall be tack-welded on the inside of the lip, or the lip shall be made double thickness.

D. Pull and junction boxes shall be sufficiently rigid to withstand moderate twisting strains. Steel boxes shall comply with the following gage schedule:

1. 100 cubic inches or less: No. 14 gage steel.
2. Between 101 and 8,500 cubic inches: No. 12 gage steel.
3. Larger boxes: No. 10 gage steel.
4. Barriers and reinforcing angles shall be supplied as required.

E. Exterior and exposed pull and junction boxes shall additionally comply with the corrosion-resistance and wind-rating requirements of Section 2.4 of this Section.

2.07 PATIENT CARE AREA BOXES

A. Boxes serving Category 1 patient care spaces (Operating Rooms, Trauma ICU, Trauma Stabilization, ED, and similar spaces) shall be sized to accommodate hospital-grade receptacles (NEMA 5-20R) and isolated-ground receptacles per Section 16140, without exceeding NEC 314.16 box-fill limits.

B. Isolated-ground device boxes shall be identified in accordance with Section 16140 (orange isolated-ground devices) and installed to preserve the equipotential grounding and bonding required by NFPA 99 and NEC 517.13.

C. Boxes for tamper-resistant receptacles in pediatric patient care rooms, corridors, waiting rooms, and similar areas shall be sized per NEC 406.12 and Section 16140 device requirements.

2.08 ROUGH-IN BOXES FOR COMMUNICATIONS AND LIFE SAFETY SYSTEMS

A. Data/Voice Outlets: Provide a minimum of two (2) outlet boxes and conduit stub-outs per patient room, per workstation, and per nursing station location, with additional locations at imaging, Operating Rooms, and special areas per program, sized per Section 16742. Faceplates, jacks, and cable terminations are furnished and installed by the Owner's structured cabling contractor.

B. CATV Outlets: Provide outlet boxes and conduit stub-outs at waiting areas and patient rooms. Coaxial cabling, splitters/taps, and head-end equipment are furnished and installed by the Owner's structured cabling/CATV contractor.

C. Public Address, CCTV, and Access Control: Provide backboxes and conduit pathways only; devices and equipment are furnished and installed by others and coordinated with the Owner's Representative.

D. Nurse Call: Provide device rough-in boxes coordinated with Section 16300 for the complete nurse call system, including wiring and equipment furnished under that Section.

PART 3 - EXECUTION

3.01 INSPECTION

Do not proceed with the work of this Section until conditions detrimental to the proper and timely completion of the work have been corrected in an acceptable manner.

3.02 INSTALLATION

A. Locations of outlets shown on the electrical Drawings are approximate only.

1. Do not scale drawings.

2. Consult architectural plans, sections, elevations, and details for exact locations of outlets, equipment, rooms, and spaces having furring or hung ceilings.
3. Verify door swings on architectural drawings for properly locating light switches.
4. Coordinate wall outlet locations with cabinets and equipment. Offset and adjust as required at no additional cost to the Owner.

B. Determine the proper position of outlets and receptacles. Relocate any outlet or receptacle without additional cost to the Owner if improperly located.

C. The owners engineer reserves the right to change the location of any outlet, apparatus, or equipment up to the time of rough-in without additional cost to the Owner, provided conduit runs are not substantially increased.

D. Fasten and secure boxes to the building structure independent of the conduit. Provide acceptable plaster stops for boxes to be set in plastered walls and ceilings.

E. Boxes and supports shall be fastened as follows:
1. To concrete or brick: Bolts and expansion shields.
2. To hollow masonry: Toggle bolts, or bolts and expansion shields.
3. To steel work: Machine screws or welded studs.
4. Explosive charge-setting devices are not allowed.

F. Recessed wall outlets shall be flush with the wall surface. Install box in wall with cover to allow the block or wall surface to fit tight against the lip of the cover.

G. Where shown together on the plans, switches shall be ganged in one outlet.
1. Switches and receptacles shall be ganged together only where the plans specifically indicate such combinations.

H. Outlets for duplex receptacles shall be arranged for vertical mounting of the receptacles except as specifically indicated on the plans.

I. Barriers shall be provided as necessary to isolate voltage classes.

J. Under no circumstances shall outlet boxes for adjoining spaces be placed back to back in partition walls.

K. Circuit breakers and switches shall not be grouped or ganged in outlet boxes unless arranged so that the voltage between exposed live metal parts of adjacent switches does not exceed 300 volts. Provide barriers between 120-volt and 277-volt switches where ganged together.

L. Align rows of outlet boxes for ceiling lights.

M. Unless noted, specified, or directed otherwise, wall outlets shall be centered above the finished floor as follows:

1. Convenience outlets: 18 inches to bottom of box.
2. Utility outlets: 18 inches to bottom of box.
3. Exit lights: 6 inches over doorway.
4. Switch outlets: 46 inches to bottom of box.
5. Special purpose outlets: as directed.
6. Telephone/data outlets: 18 inches to bottom of box.
7. Fire alarm visuals, with or without horns: 78 inches to bottom of box.
8. Fire alarm horns: 6 inches minimum below adjacent surface, but not less than 8 feet 6 inches nor greater than 10 feet 0 inches above finished floor.
9. Fire alarm pull stations: 46 inches to bottom of box.

N. Refer to architectural drawings for additional mounting heights, and to accessibility requirements applicable to the Project.

O. Pull and junction boxes shall be provided at locations required to reduce the length of cable pull or reduce the number of elbows between outlets.

P. Provide blank covers for outlet boxes where devices or wiring have been removed or are not installed.

Q. Paint exposed boxes to match the color of the wall or ceiling to which they are mounted.

R. Where several feeders pass through a common pull box, tag each feeder to clearly indicate electrical characteristics, circuit number, and panel designation.

S. Color code covers of each box and panel, except for the normal power system, for identification as follows:

1. Emergency power: Red.
2. Fire alarm: Orange.
3. Security alarm: Blue.
4. Telephone/data: Green.
5. Controls: Purple.

3.03 SEISMIC AND WIND PROTECTION

A. Provide flexible connections/seismic loops at all box-to-conduit connections crossing the building's seismic isolation plane at the Interstitial Level, coordinated with Section 16112.

B. Anchor exterior and exposed boxes and supports for the project's 180 mph design wind speed per ASCE 7 and the PRBC.

3.04 FIELD QUALITY CONTROL

Verify box fill in accordance with NEC 314.16, grounding continuity, corrosion-resistant construction at exterior/wet locations, and secure, plumb mounting prior to closing walls or ceilings.

END OF SECTION 16131

SECTION 16140 WIRING DEVICES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Wiring devices throughout the facility, including specification-grade snap switches; hospital-grade duplex convenience receptacles; ground fault circuit interrupter (GFCI) receptacles; isolated ground receptacles for patient care and sensitive electronic equipment locations; tamper-resistant (TR) receptacles; special purpose receptacles; isolated power system receptacles at Operating Room isolated power panels; and associated cover plates. All wiring devices in patient care areas shall comply with NEC Article 517 and NFPA 99 for a Category 1 healthcare occupancy.

B. Related Sections:

1. Section 16100 - Basic Electrical Materials and Methods
2. Section 16112 - Raceways and Conduits
3. Section 16120 - Wire and Cable
4. Section 16131 - Outlet, Pull and Junction Boxes
5. Section 16470 - Panelboards (branch circuit panelboards and Operating Room Isolated Power Panels (IPPs) feeding devices specified in this Section)

1.02 REFERENCES

NEMA WD 6 (Wiring Devices - Dimensional Requirements); NEC (NFPA 70), latest edition adopted in Puerto Rico, including Article 406 (Receptacles, Cord Connectors, and Attachment Plug Caps), Article 410, Article 517 (Health Care Facilities), and Section 406.12 (Tamper-Resistant Receptacles); NFPA 99 (Health Care Facilities Code), latest edition, including Section 517.16/6.3.4 equivalent isolated ground and isolated power system provisions; UL 498 (Attachment Plugs and Receptacles); UL 514A (Metallic Outlet Boxes); UL 514C (Non-metallic Outlet Boxes); Federal Specification W-S-896E (switches); Puerto Rico Building Code (PRBC).

1.03 SUBMITTALS

A. Submit properly identified manufacturer's literature and data before starting work, including catalog data for hospital-grade, isolated ground, GFCI, and tamper-resistant device types, clearly identifying device color, ampere/voltage rating, and NEC/NFPA 99 compliance.

1.04 QUALITY ASSURANCE

A. Comply with the following:

1. Convenience outlets installed within 6 feet of water supplies, wet locations, patient bathrooms, scrub sinks, janitor rooms, and toilet rooms shall have ground fault circuit interrupter (GFCI) protection per NEC and NFPA 99.
2. Outdoor outlets shall be weatherproof outdoor GFCI type.
3. Outlets, switches, and boxes located adjacent to cooling towers or in other corrosive environments shall be rated NEMA 4X.
4. Hospital-grade duplex receptacles (NEMA 5-20R) are required at all receptacles serving patient care areas (Operating Rooms, Trauma ICU, Trauma Stabilization, Emergency Department, and all Category 1 patient care spaces) per NEC Article 517 and NFPA 99, and per the Bridging Document minimum receptacle count and circuit spacing criteria of the FGI Guidelines.
5. Isolated ground receptacles (orange) are required at nursing stations, imaging equipment locations, and other sensitive electronic equipment locations as required by the Bridging Document and NEC 517.16.
6. Tamper-resistant (TR) receptacles are required in pediatric patient care rooms/areas, corridors, waiting rooms, and similar public/patient-accessible areas per NEC 406.12.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Wiring devices shall be as manufactured by Hubbell, Bryant, Leviton, or Pass and Seymour.

2.02 SWITCHES

A. Comply with NEMA WD 6 and NEC (NFPA 70).
   a. Comply with Fed. Spec. W-S-896E, specification grade, quiet type.
   b. Rated at 20 amps, 277 volts AC, horsepower rated for 1 HP at 120 volts.
   c. Provide for back (not push-in) or side wiring.
   d. Key type switches shall be keyed identically.
   e. Manufacturers: Hubbell CSB 120 Series or accepted equivalent by Bryant, Leviton, or Pass and Seymour.

2.03 DUPLEX CONVENIENCE RECEPTACLES

   a. Comply with NEMA 5-20R as applicable, be of hospital grade, back (not push-in) and side wired, U-slotted grounding type, 3-wire, rated 20 amp, 125 volts AC.
   b. Double Duplex: Consist of 2 receptacles under a common plate. Single receptacles shall be similar to duplex receptacles.

c. Manufacturers: Hubbell or accepted equivalent by Bryant, Leviton, or Pass and Seymour.

2.04 GROUND FAULT (GFCI) RECEPTACLES

a. NEMA 5-20R type, hospital grade, rated at 20 amps, 120 volts, with 5 +/- 1 mA trip threshold and UL nominal trip time of 0.025 sec.

b. Provide at all locations listed in Article 1.4 (within 6 feet of water supplies, wet locations, patient bathrooms, scrub sinks, janitor rooms, toilet rooms, and exterior locations), and elsewhere as indicated on Drawings.

c. Manufacturers: Hubbell, Pass and Seymour, or accepted equivalent by Bryant or Leviton.

2.05 ISOLATED GROUND RECEPTACLES

A. Provide isolated ground (IG) duplex receptacles at nursing stations, imaging equipment locations, and other sensitive electronic equipment locations as indicated on Drawings or as required by the Bridging Document, per NEC 517.16.

B. Comply with NEMA 5-20R, hospital grade, back (not push-in) or side wired, 20 amp, 125 volts AC, with an insulated (isolated) grounding terminal connected by an insulated equipment grounding conductor back to the applicable panelboard ground bus, independent of the branch circuit box/conduit ground path.

C. Isolated ground receptacles shall be orange in color (or shall bear a distinctive orange triangle marking) to distinguish them from standard grounding-type receptacles, per NEC and industry convention.

D. Manufacturers: Hubbell IG series (or equivalent isolated ground hospital-grade device) by Bryant, Leviton, or Pass and Seymour.

2.06 TAMPER-RESISTANT RECEPTACLES

A. Provide tamper-resistant (TR) duplex receptacles, NEMA 5-20R, hospital grade where located in pediatric patient care rooms/areas, corridors, waiting rooms, and similar patient/public-accessible areas per NEC 406.12.

B. TR receptacles shall incorporate integral spring-loaded shutters requiring simultaneous insertion of both blades to open, and shall otherwise comply with the applicable device article of this Section (Duplex Convenience Receptacles, Ground Fault Receptacles, or Isolated Ground Receptacles) for the location served.

C. Manufacturers: Hubbell, Bryant, Leviton, or Pass and Seymour tamper-resistant series.

2.07 SPECIAL PURPOSE RECEPTACLES

a. Comply with NEMA 5-20R, of hospital grade, back (not push-in) or side wired.

b. Provide ratings and type as indicated on Drawings.

2.08 ISOLATED POWER SYSTEM RECEPTACLES - OPERATING ROOMS

A. Each of the five (5) Trauma Operating Rooms is served by two (2) dedicated Isolated Power Panels (IPPs) per NFPA 99 and NEC 517.160, specified under Section 16470 - one fed from the Optional Standby (Non-Essential) branch and one fed from the Critical Branch, each with its own Line Isolation Monitor (LIM).

B. Receptacles fed from each OR isolated power circuit shall be NEMA 5-20R, hospital grade, and shall be clearly and permanently labeled by source branch - "Optional Standby IPP" or "Critical Branch IPP" - so that life-critical patient care equipment can be readily distinguished and connected to the Critical Branch IPP receptacles.

2.09 WIRING DEVICE COLORS

A. Wiring devices shall be ivory color for non essential and red for critical loads unless noted otherwise.

B. Isolated ground receptacles shall be orange per Article 2.5.C of this Section.

2.10 COVER PLATES

A. Plates to be stainless steel 304.

B. Underwriters Laboratories (UL) requirements:

1. Metallic Outlet Boxes: UL 514A.
2. Non-metallic Outlet Boxes: UL 514C.

C. Outlets in kitchenettes shall have brushed stainless steel plates.

D. Provide ganged switches to a maximum of three. If more are required on Drawings, provide in multiples of two or three.

E. Provide weatherproof receptacles with cast aluminum, spring loaded dock-type gasketed wet location cover, suitable for Puerto Rico's coastal/tropical exterior environment.

PART 3 - EXECUTION

3.01 EXAMINATION

Do not proceed with the work of this section until conditions detrimental to the proper and timely completion of the work have been corrected in an acceptable manner.

3.02 INSTALLATION

A. Install wiring devices according to manufacturer's recommendations.

B. Verify location of wiring devices before rough-in of outlet boxes and conduit with Architectural Drawings for door swings and furniture details. Duplex receptacles in finished areas shall be vertically mounted.

C. Boxes mounted back-to-back are not allowed.

D. Install devices tightly within box with screws provided. Do not rely upon plate for device alignment and support to assure devices are grounded to box. In receptacles, use self-grounding screws, separate ground conductor or bond wire to box.

E. Isolated ground receptacles shall be wired with an insulated equipment grounding conductor routed with the branch circuit conductors back to the isolated ground bus of the serving panelboard, kept separate from the box/conduit grounding path, per NEC 517.16

END OF SECTION 16140

SECTION 16155 MOTOR POWER AND CONTROL WIRING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Complete power circuit wiring and control circuit wiring and connections for all permanent mechanical and electrical equipment requiring motor power and/or control supply, including but not limited to air handling units (AHUs), cooling tower fans, chilled water and condenser water pumps, booster pumps, sump pumps, DOAS units, fire pump, medical gas compressors and vacuum pumps, non-life-safety elevator motor loads, and other motor-driven equipment shown on the Drawings or scheduled in the mechanical, plumbing, fire protection, or vertical transportation documents. Work of this Section extends from the load side of the panelboard, motor control center, disconnect switch, or variable frequency drive (VFD) up to and including the connections at the motor or controller terminals, together with all associated control circuit wiring, interlock wiring, and connections to control devices.

B. Related Sections:

1. Section 16100 - Basic Electrical Materials and Methods.
2. Section 16112 - Raceways and Conduits.
3. Section 16120 - Wire and Cable.
4. Section 16131 - Outlet, Pull, and Junction Boxes.
5. Section 16140 - Wiring Devices (horsepower-rated toggle switches used as control or fractional-horsepower disconnecting devices).
6. Section 16200 - Fire Alarm System (fan shutdown, smoke control interlocks, and elevator recall interlocks with motor control wiring of this Section).
7. Section 16440 - Disconnect Switches (fusible and non-fusible safety switches and VFD/motor disconnect means; this Section covers the power and control wiring and connections to and beyond those disconnects, not the disconnect switches themselves).
8. Section 16470 - Panelboards (source panelboards feeding motor branch circuits).
9. Section 16700 - Automatic Transfer Switches (normal/emergency source connections for motor loads assigned to the four load categories).

1.02 REFERENCES

NEC Article 430 (Motors, Motor Circuits, and Controllers); NEC Article 440 (Air-Conditioning and Refrigerating Equipment); NEC Article 695 (Fire Pumps); NEC Article 517 (Health Care Facilities) and Articles 700/701/702 (Emergency, Legally Required Standby, and Optional

Standby Systems); NFPA 20 (Stationary Pumps for Fire Protection); NFPA 92 (Smoke Control Systems); NFPA 70E (arc flash); NFPA 99 (Health Care Facilities Code); NEMA MG-1 (Motors and Generators); NEMA ICS 2 (Industrial Control Devices, Controllers, and Assemblies); UL 508 (Industrial Control Equipment); Puerto Rico Building Code (PRBC), latest edition adopted in Puerto Rico, for seismic and wind load anchorage of motor control equipment.

1.03 SYSTEM DESCRIPTION

A. Materials shall bear Underwriters Laboratories (UL) labels.

B. Motor power and control wiring materials shall be as specified in Section 16100, Section 16112, and Section 16120, and shall be coordinated with the disconnect switches and VFD/motor disconnects specified in Section 16440 and the panelboards specified in Section 16470.

1.04 SUBMITTALS

A. Submit manufacturer's literature and technical information for motor starters, motor control centers, and control devices before starting work. Refer to temperature control and Building Management System (BMS) suppliers.

B. Submit an equipment/feeder schedule cross-referencing each motor, VFD, and controller to its source panelboard or motor control center, feeder/branch circuit designation, disconnect switch (Section 16440), and load category assignment (Normal, Life Safety, Critical, Equipment System, or Optional Standby), coordinated with the Mechanical Contractor's VFD submittals and the Section 16700 ATS load calculation.

C. Submit control wiring diagrams and sequence of operations for motor interlock schemes (fan/pump interlocks, smoke control, fire alarm shutdown, and elevator recall), coordinated with the Temperature Control Section, the Building Management Section, and Section 16200.

1.05 QUALITY ASSURANCE

Motor starters, motor control centers, and control devices shall be UL listed/labeled and rated for the horsepower, voltage, and duty of the equipment served per NEC Article 430 and NEMA MG-1/ICS 2. Fire pump motor controller wiring and connections shall comply with NFPA 20 and NEC Article 695. Motor power and control equipment installed outdoors or in exposed/coastal locations shall be coordinated with the corrosion-resistant, hurricane-rated enclosure requirements of Section 16100 and Section 16440.

1.06 DESIGN REQUIREMENTS

A. Emergency and Standby Power Coordination: Motors and motor control equipment serving loads assigned to the Life Safety Branch, Critical Branch, Equipment System, or Optional Standby (Non-Essential) System shall be connected to their designated normal and emergency sources as indicated on the Drawings and per Section 16700. Large motor loads (e.g., elevators within the Equipment System category, large HVAC

equipment such as chillers within the Optional Standby System) may be served by their own dedicated, individually-sized Automatic Transfer Switch rather than a single shared ATS; where so served, this Section's control wiring shall include the time-delay and sequencing controls required to prevent generator overload upon retransfer or cold-start reacceleration of multiple motors.

B. Variable Frequency Drives: VFDs for chilled water pumps, condenser water pumps, cooling tower fans, AHU fans, DOAS units, and booster pumps are furnished by the Mechanical Contractor. Power feeders from the source panelboard to each VFD, and from each VFD to its motor, shall be sized and installed under this Section per the VFD manufacturer's input/output current requirements, coordinated with the input/output line reactors and harmonic mitigation filters furnished with the VFD, and with the disconnect means specified in Section 16440.

C. Seismic and Hurricane Considerations: Conduits and cables serving motor power and control circuits that cross the building's seismic isolation plane at the Interstitial Level shall be provided with flexible connections/seismic loops to accommodate differential movement, per the project's seismic isolation design. Motor control equipment mounted on angle iron racks or free-standing supports shall be anchored per PRBC seismic and wind load requirements (Category 5 hurricane, 180 mph design wind speed).

D. Minimum 10% spare capacity per Section 16100, Section 1.4.A shall be maintained in motor control center bus and starter bucket space provisions.

PART 2 - PRODUCTS

2.01 EQUIPMENT - GENERAL

Materials for the power and control circuit wiring system shall be as specified in the applicable Sections of the Specifications (Section 16112 - Raceways and Conduits; Section 16120 - Wire and Cable; Section 16131 - Outlet, Pull, and Junction Boxes).

2.02 HORSEPOWER-RATED TOGGLE SWITCHES

Horsepower-rated toggle switches used as control or fractional-horsepower disconnecting devices shall be 20 or 30 ampere type as specified in Section 16140 - Wiring Devices. Disconnect switches for motors, VFDs, and other equipment requiring a NEC Article 430/440 disconnecting means, including fire pump and mechanical equipment disconnects, shall be as specified in Section 16440 - Disconnect Switches.

2.03 MOTOR STARTERS AND MOTOR CONTROL CENTERS

A. Individually mounted combination motor starters: NEMA-rated (not IEC-rated unless specifically indicated), with thermal overload protection sized for the actual motor nameplate full-load current, control power transformer (fused primary and

secondary) for 120 V control circuits, and horsepower-rated disconnect per Section 16440.

2.04 VARIABLE FREQUENCY DRIVE POWER AND CONTROL WIRING INTERFACE

VFDs are furnished by the Mechanical Contractor. Under this Section, provide the power feeder from the source panelboard (Section 16470) through the disconnect means (Section 16440) to each VFD, the power wiring from each VFD to its motor (using VFD-rated cable where required by the manufacturer to limit motor terminal voltage reflection), and the control/interlock wiring between each VFD and the associated temperature control/BMS points, including run/stop, speed reference, status, and fault contacts.

PART 3 - EXECUTION

3.01 INSPECTION

Do not proceed with the work of this Section until conditions detrimental to the proper and timely completion of the work have been corrected in an acceptable manner.

3.02 INSTALLATION - MOTOR POWER

A. Provide, as shown on the Drawings and/or required by actual site conditions, complete power circuit and control wiring and connections for permanent mechanical equipment requiring electrical power and control supply.

B. Power circuit wiring under these Specifications shall encompass work up to and including connections at motor terminals, unless specific indications to the contrary. References to motors and motor starters in this Section apply equally to electric heaters and controllers.

C. In addition to providing all runs of power circuiting, the following specific items of work are required under this Section:

1. Receive from other trades at grade level, handle, and provide storage for motor starters and control equipment, if required.
2. Install and connect individually mounted motor starters, including thermal overload switches, from fractional horsepower motors.
3. Provide suitable angle iron racks, anchored per PRBC seismic and wind load requirements, for mounting such starters where the Drawings indicate them to be standing free from walls, columns, or wherever field conditions may require such mounting.

D. Furnish and install power circuit safety switches as shown on the Drawings and as required by the NEC (see Section 16440 for disconnect switch products). Verify other locations according to mechanical contractors and Shop Drawings.

E. Assume responsibility for the safe and proper operation of motorized equipment to the extent that it is affected by work included in this Section.

1. Cooperate with the other trades in making tests required to assure safe and proper operation is achieved. Any special electrical equipment necessary for these tests shall be made available as specified. Provide proper phasing for the correct rotation of motors.

F. Provide power feeders and connections for VFD-driven equipment (chilled water pumps, condenser water pumps, cooling tower fans, AHU fans, DOAS units, booster pumps) per Section 2.4 of this Section, coordinated with the Mechanical Contractor's VFD furnishing and the disconnect means of Section 16440.

3.03 INSTALLATION - MOTOR CONTROL

A. Provide control circuit wiring and connections for mechanical equipment as indicated and scheduled on the plans and as specified, and according to approved engineering Drawings submitted under the Temperature Control Section and the Building Management Section of these Specifications. Coordinate HVAC control drawings and specifications.

B. Other trades shall present control devices and wiring work as follows:

1. When delivered by other trades, motor starter actuating devices required in starter covers shall be mounted as part of the starters.

2. Devices for remote actuation of motor starters requiring air, water, pneumatic, or other non-electrical piping connections, and devices to be mounted in tanks and ducts, will be provided in place by other trades.

3. Devices for remote actuation of motor starters, which are not required in starter covers, and that only require electrical connections, such as push button stations and electrical contacting thermostats, shall be delivered by other trades in suitable enclosures and ganged together in single enclosures where required. These devices shall be installed and wired under this Section.

C. In addition to providing general runs of power and control circuiting throughout the Project as shown on the plans and/or as required by field conditions, control shop drawings, and as specified, comply with the following specific items of motor control circuit wiring:

1. Provide connections at motor starter actuating devices and starters with necessary accessories.

2. Mount motor starter actuating devices not indicated above as being set in place by other trades.

3. Modify factory internal wiring of motor starters if and where required by the indicated control schemes, including fan interlocks for the fire alarm system per Section 16200.
4. Provide wiring for interlocks between fans, pumps, and other equipment forming part of a common HVAC system according to control schemes indicated, including the following:
    a. Interlocks between supply and exhaust fans forming part of a common air system, as required, such that shutdown of one fan initiates coordinated shutdown or reduced-speed operation of the other per the approved control sequence.
    b. Smoke control fan shutdown, restart, and speed-override interlocks per NFPA 92, with the fire alarm system (Section 16200) serving as the life-safety control interface for smoke control functions (fan shutdown, fire/smoke damper actuation, and stair pressurization fan start); the Building Management System shall monitor smoke control fan status but shall not control life-safety smoke control functions.
    c. Elevator recall interlock wiring between the fire alarm system (Section 16200) and elevator controllers, to initiate elevator recall to the designated floor upon smoke detection at elevator lobbies or the elevator machine room, per NFPA 72 and ASME A17.1; coordinate final connections with the elevator equipment supplier.

D. Include in the work any modifications to the control wiring made necessary by variations due to differences between the manufacturers of mechanical and control equipment, or due to other project conditions, without additional cost to the Owner.

E. Accept responsibility for providing complete electric control circuit wiring required for the permanent equipment furnished by the trades involved in the Project and the Owner, without additional cost to the Owner.

3.04 COORDINATION WITH EMERGENCY AND STANDBY POWER

A. Coordinate the load category assignment (Life Safety, Critical, Equipment System, or Optional Standby) of each motor load with Section 16700, so that the corresponding Automatic Transfer Switch feeds the correct branch.

B. Where a large motor load (e.g., an elevator or major piece of Equipment System or Optional Standby equipment) is served by its own dedicated ATS rather than a shared ATS, provide time-delay and sequencing control wiring to stagger motor starting/reacceleration and prevent generator overload upon transfer or retransfer, consistent with the generator load-add/load-shed scheme.

C. Coordinate motor nameplate full-load and locked-rotor (starting inrush) current data with the Section 16700/generator plant load calculation, so that motor starting inrush is properly accounted for in emergency source sizing.

3.05 FIELD QUALITY CONTROL

A. Verify correct phase rotation at each motor prior to initial start-up; correct wiring as required to achieve the proper direction of rotation.

B. Functionally test all fan/pump interlocks, smoke control interlocks, and elevator recall interlocks with the fire alarm system and Building Management System, per the approved control sequence, prior to Substantial Completion.

C. Verify VFD power and control wiring, including harmonic mitigation reactor/filter connections, with the Mechanical Contractor prior to VFD start-up.

D. Perform insulation resistance testing on motor power feeders and record thermal overload settings for each motor starter, coordinated with the motor nameplate data, prior to energization.

END OF SECTION 16155

SECTION 16200 FIRE ALARM SYSTEM

PART 1 - GENERAL

1.01 RELATED SECTIONS

A. Related Sections: Section 16100 - Basic Electrical Materials and Methods; Section 16112 - Raceways and Conduits; Section 16120 - Wire and Cable; Section 16131 - Outlet, Pull and Junction Boxes.section 16300 Nurse Call system.

1.02 SUMMARY

A. Section Includes:

1. This specification describes an addressable Fire Detection and alarm signaling system. The control panel shall be intelligent device addressable, analog detecting, low voltage and modular, with digital communication techniques, in full compliance with all applicable codes and standards. The features and capacities described in this specification are required as a minimum for this project and shall be furnished by the successful contractor.
2. The system shall include all required hardware, raceways, interconnecting wiring and software to accomplish the requirements of this specification and the contract drawings, whether or not specifically itemized herein.
3. All equipment furnished shall be new and the latest state-of-the-art products of a single manufacturer, engaged in the manufacturing and sale of analog fire detection devices for over ten years.
4. The system as specified shall be supplied, installed, tested and approved by the local Authority Having Jurisdiction, and turned over to the owner in an operational condition.
5. In the interest of job coordination and responsibilities, the installing contractor shall contract with a single supplier for fire alarm equipment, engineering, programming, inspection and tests. The installing contractor shall be capable of providing a "UL Listing Certificate" for the complete system.
6. The system specified shall be that of Cerberus® PRO Fire Safety or other owners approved equal.
7. The system shall support approved smart-infrastructure integration (SII) and be capable of bi-directional data exchange with other building systems where required.
8. This project is a ten-story acute care trauma hospital. The system shall comply with all applicable high-rise fire alarm provisions of NFPA 101 and the Puerto Rico Building Code (PRBC), including fire command center provisions and communication with the fire department, and shall provide floor-by-floor and

zone-by-zone alarm annunciation throughout the entire facility, from Basement through Roof Level, per the project's Basis of Design.

9. The new Trauma Hospital fire alarm system shall be coordinated and integrated with the existing fire alarm system serving the adjacent ASEM Central Services Building, including provision of a dedicated fire alarm zone, with its own initiating devices, for the Level 2 corridor connector between the two buildings.

1.03 DEFINITIONS

A. ASME: American Society of Mechanical Engineers.

B. Broadcast Media: The speakers, radio, cell phone, and other media that will carry the selected message to the selected audience.

C. FACP: Fire alarm control panel.

D. NAC: Notification Appliance Circuit. A circuit used to monitor and activate notification appliances or devices.

E. FM: FM Global (Factory Mutual).

F. Furnish: To supply the stated equipment or materials.

G. Install: To set in position and connect or adjust for use.

H. LED: Light-emitting diode.

I. NFPA: National Fire Protection Association. Definitions in NFPA 72 apply to fire alarm terms used in this Section.

J. NICET: National Institute for Certification in Engineering Technologies.

K. Provide: To furnish and install the stated equipment or materials.

L. UL: Underwriters Laboratories.

M. AHJ: Authority Having Jurisdiction. Local authority (such as a fire marshal), presiding over the occupancy of the building(s).

N. Cerberus DMS: Cerberus Danger Management Station.

O. VESDA: Very Early Smoke-Detection Apparatus.

P. ASSD: Air Sampling Smoke Detection.

Q. VEWFD: Very Early Warning Fire Detection.

R. ISOtechnology™: Devices with built-in isolation.

S. NRTL: Nationally Recognized Testing Laboratory (UL, ULC, FM, ETL, etc.).

1.04 SYSTEM DESCRIPTION

A. Basic Cerberus® PRO Fire Safety -- The system shall be a complete, electrically supervised fire detection and notification system, with a microprocessor-based operating system having the following capabilities, features, and capacities:

1. The local system shall provide status indicators and control switches for all of the following functions:
    a. Audible and visual notification alarm circuit zone control.
    b. Status indicators for sprinkler system water-flow and valve supervisory devices.
    c. Any additional status or control functions as indicated on the drawings, including but not limited to; emergency generator functions, fire pump functions, door unlocking and security with bypass capabilities.

B. Cerberus® PRO Fire Safety Intelligent Voice Communication -- The system shall be complete, electrically supervised evacuation system using one-way communication with microprocessor-based operating system having the following capabilities, features and capacities:
    1. Listed for emergency and non-emergency use.
    2. Listed for MNS from any control point to 'Request/Grant/Deny' and integrated with FC922-924 and FV922-924 (no separate MNS panel).
    3. Ability to support one internal and up to four remote microphone stations per FV922-924 control panel for one-way paging, and up to 160 microphones in a voice network.
    4. Ability to provide manual voice control.
    5. Two channel message player supporting 300 messages (38 pre-recorded). The system shall support MP3 and WAV files.
    6. Minimum of (1) simultaneous audio channel for each networked panel.
    7. Amplifiers shall be rated for 25V or 70.7V RMS, 50 watts. Voice amplification shall be supervised and backed up with like amplifiers. Back up shall be one or two per node.
    8. Ability to provide separate booster amplifier. Amplifiers shall be rated for 25V or 70.7V RMS, 100 watts.
    9. Amplifiers shall be approved for transmission of 520Hz audio signal used in sleeping accommodations.
    10. Multiple nodes shall provide peer-to-peer voice capability in order to eliminate a single point of failure.
    11. Audio shall be synchronized between nodes in order to take into account common areas.
    12. Speakers shall have the ability to play coded audio tones.
    13. The system shall provide status indicators and control switches for all of the following functions:
        a. Audible and visual notification alarm circuit zone control.

b. Speaker circuit zone control.

c. Status indicators for sprinkler system water flow and valve supervisory devices.

d. Any additional status or control functions as indicated on the drawings, including but not limited to: emergency generator functions, fire pump functions, door unlocking and security with bypass capabilities.

14. Emergency voice/alarm communication messages shall achieve a minimum Speech Transmission Index (STI) of 0.7 in all occupied areas per NFPA 72, consistent with the intelligibility criteria established for the facility's public address system, and shall override all public address system functions upon fire alarm activation.

1.05 PERFORMANCE REQUIREMENTS

A. General Performance: System devices shown shall comply with NFPA 72 and all contract documents and specification requirements.

B. All interconnections between this system and the monitoring system shall be arranged so that the entire system can be UL-Certificated.

C. The system shall have Class B (former Style 4) circuits for each floor. The system shall operate in the alarm mode upon actuation of any alarm initiating device. The system shall remain in the alarm mode until all initiating device(s) are reset and the fire alarm control panel is manually reset and restored to normal.

D. The system shall be capable of the following configurations. Both configurations are permitted on the same network.

1. The system shall support up to 252 addressable devices, which may be divided in any ratio on one, two, three, or four separate, isolated Class B circuits.

2. The system shall support two loops of 252 addressable devices, each of which may be divided in any ratio on one, two, three, or four separate, isolated Class B circuits.

E. The system shall support H-series devices and Cerberus® PRO series devices.

F. The system shall support X-Series I/O modules and X-Series manual pull stations with built-in isolation capability with ISOtechnology™.

G. The system shall have an optional digital alarm communication transmitter.

H. The system shall provide an off-normal warning prior to reset for all active devices.

I. The system shall be capable of remote monitoring via Cerberus Remote, a proprietary software system that provides a graphical representation of the fire alarm control panel at a remote PC when connected via Ethernet to the system. The display will show the exact state of the panel, including blinking LEDs, and with menu buttons for control.

J. The system shall be capable of being configured via a PC Tool.

K. The system shall provide the following functions and operating features:

1. The FACP and auxiliary power panels shall provide power, annunciation, supervision and control for the system.
2. Provide Class B (formerly style 4) initiating device circuits.
3. Provide Class B (formerly style 4) notification appliance circuits. Arrange circuits to allow individual, selective, and all-call voice and visual notification by zone. Notification Appliance circuits shall be zoned to correspond with the building fire barriers and other building features.
4. NACs shall be synchronized throughout the entire building.
5. Provide electrical supervision of the primary power (AC) supply, presence of the battery, battery voltage, and placement of system modules within the control panel.

L. The system shall provide a field test function where one person can test the complete system or a specific area while maintaining full operational function of other areas not being tested. Alarms, supervisory signals, trouble signals shall be logged in system history during the walk-test.

M. Alarm functions shall override trouble or supervisory functions. Supervisory functions shall override trouble functions.

N. Fire alarm signal initiation shall be by one or more of the following devices:

1. Manual pull station.
2. Heat detector.
3. Addressable area smoke detectors.
4. Addressable multi-criteria, dual optical smoke detectors.
5. Addressable multi-criteria smoke detectors with built-in Carbon Monoxide (CO) sensor.
6. Standard addressable duct smoke detector.
7. Specialized duct smoke detector.
8. Projected beam detector.
9. Automatic sprinkler system water flow switch.

O. Activation of any system fire, supervisory, trouble, or status initiating device shall cause the following actions and indications at all network Person Machine Interfaces using an LCD display with multiple detail screens.

1. Fire Alarm Condition:

a. Sound an audible alarm and display a custom message defining the building in alarm and the specific alarm point initiating the alarm on an LCD display.

b. Log into the system history archives all activity pertaining to the alarm condition.

c. Sound the ANSI 117-1 signal with synchronized audible notification appliances and synchronized strobes throughout the facility.

d. Audible signals shall be silenced from the fire alarm control panel by an alarm silence switch. Visual signals shall be programmable to flash until system reset or alarm silencing, as required.

e. A signal dedicated to sprinkler system water flow alarm shall not be silenced while the sprinkler system is flowing at a rate of flow equal to a single head.

f. Activation of any smoke detector in a single elevator lobby or an elevator equipment room shall, in addition to the actions described, cause the recall of that bank of elevators to the 1st floor and the lockout of controls, per NFPA 72 and ASME A17.1. In the event of recall initiation by a detector in the first-floor lobby, the recall shall be to the alternate floor as determined by the AHJ.

g. Where indicated on drawings, heat detectors in elevator shaft and machine rooms shall activate an elevator power shunt trip breaker. The heat detectors shall be rated at a temperature below the ratings of the sprinkler heads in respective locations to ensure that the power shall be shut off before activation of the sprinkler system.

h. System-operated duct detectors, as coordinated with local requirements, shall accomplish HVAC shutdown and fire/smoke damper actuation; see Article 1.05.S below for the complete smoke control coordination requirements.

i. Magnetic door holders on smoke barrier and corridor doors normally held open shall release upon alarm; other door closure devices shall operate by floor or by local requirements.

2. Supervisory Condition:

a. Display the origin of the supervisory condition report at the local fire alarm control panel LCD display.

b. Activate supervisory audible and dedicated visual signal.

c. Audible signals shall be silenced from the control panel by the supervisory acknowledge switch.

d. Record within system history the initiating device and time of occurrence of the event.

3. Trouble Condition:
    a. Display at the local fire alarm control panel LCD display, the origin of the trouble condition report.
    b. Activate trouble audible and visual signals at the control panel and as indicated on the drawings.
    c. Audible signals shall be silenced from the fire alarm control panel by a trouble acknowledge switch.
    d. Trouble conditions that have been restored to normal shall be automatically removed from the trouble display queue and not require operator intervention. This feature shall be software selectable and shall not preclude the logging of trouble events to the historical file.
    e. Trouble reports for primary system power failure to the master control shall be automatically delayed for a period of time equal to 25% of the system standby battery capacity to eliminate spurious reports as a result of power fluctuations.
    f. Record within system history, the occurrence of the event, the time of occurrence and the device initiating the event.

P. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

Q. Initiating Device Locations: Addressable manual pull stations shall be provided at all exit doors and exit stairwell entries per NFPA 72; In addition manual pull stations to be spaced no further than a travel distance of 200 ft along the route of egress. All inititation devices requires access for inspection, testing and periodic maintenance. Duct detectors must be accessible for inspection testing and maintenance as per NFPA90A; addressable photoelectric smoke detectors shall be provided in all corridors, lobbies, common areas, waiting areas, electrical/mechanical rooms, telecommunications rooms, and storage rooms; heat detectors shall be provided in kitchens, laundry, and other spaces inappropriate for smoke detectors; duct smoke detectors shall be provided on all HVAC supply air ducts with a capacity of 2,000 CFM or greater, per NFPA 90A. Final initiating device locations shall be directed and confirmed in accordance with IBC 2018 (as adopted by the Puerto Rico Building Code) and NFPA 101.

R. Notification Appliance Locations: Addressable speaker/strobe combination appliances, with ADA-compliant candela ratings, shall be provided in all corridors, public areas, common areas, and mechanical rooms. Visual-only strobes (without audible sounder) shall be provided in Operating Rooms, ICU rooms, and other spaces where audible alarms may be clinically inappropriate, coordinated with the Owner; see for the corresponding product requirement.

S. Smoke Control Coordination: The fire alarm system shall serve as the control interface for all HVAC smoke control functions per NFPA 92, including air handling

unit/fan shutdown, fire and smoke damper actuation, and stair pressurization fan start. Coordination with the Building Management System (BMS) is required: the fire alarm system shall exercise life-safety smoke control, while the BMS shall provide status monitoring only, per the project's Basis of Design.

T. Sprinkler System Integration: Waterflow switches and tamper (post indicator valve, PIV) switches from the automatic sprinkler (fire protection) system shall be monitored and integrated into the fire alarm system per NFPA 72 and NFPA 13. Tamper switches shall report as distinct supervisory signals, separate from waterflow alarm signals.

U. Off-Site Monitoring: The system shall be monitored 24 hours a day, 7 days a week, by a UL-listed central station per NFPA 72, with not less than two (2) independent primary and secondary communication paths (telephone line, cellular, and/or IP network), per Article 2.06 below.

V. Essential Power and Standby Duration: Primary power to the FACP shall be furnished from the Essential Electrical System Life Safety Branch per NFPA 99 and NEC Articles 700 and 517. Secondary standby battery power shall provide not less than 24 hours of supervisory (standby) capacity followed by not less than 15 minutes of full system alarm/in-alarm voice evacuation load, per NFPA 72, in addition to the spare-capacity allowances of Articles 1.05.K.5, 1.06.B.3, and 1.06.B.5 of this Section.

1.06 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories. Complete manufacturer's catalog data including supervisory power usage, alarm power usage, physical dimensions, and finish and mounting requirements.

B. Power calculations. Battery capacity calculations. Battery size shall be a minimum of 125% of the calculated requirement. Provide the following supporting information:

1. Supervisory power requirements for all equipment.
2. Alarm power requirements for all equipment.
3. Power supply rating justification showing power requirements for each of the system power supplies. Power supplies shall be sized to furnish the total connected load in a worst-case condition plus 25% spare capacity.
4. Voltage drop calculations for wiring runs demonstrating worst-case condition.
5. NAC circuit design shall incorporate a 20% spare capacity for future expansion.

C. Submit manufacturer's requirements for testing Signaling Line Circuits and device addresses prior to connecting to control panel. At a minimum the following tests shall be required: device address, the usage (Alarm, Supervisory, etc.), environmental compensation, temperature ratings for thermal detectors and smoke

detector sensitivities. This requirement shall need approval before any wiring is connected to the control panel.

D. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.
3. Complete drawings covering the following shall be submitted by the contractor for the proposed system:
    a. Floor plans in a CAD compatible format at a scale of 1/8" = 1'-0" showing all equipment and raceways, marked for size, conductor count with type and size, showing the percentage of allowable National Electric Code fill used.
    b. Provide a fire alarm system function matrix as referenced by NFPA 72, Figure A-7-5.2.2(9). Matrix shall illustrate alarm input/output events in association with initiation devices. Matrix summary shall include system supervisory and trouble output functions. Include any and all departures, exceptions, variances or substitutions from these specifications and/or drawings at time of bid.
4. Installation drawings, shop drawings, and as-built drawings shall be prepared by an individual experienced with the work specified herein.
5. Incomplete submittals shall be returned without review, unless with prior approval of the Engineer.

E. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:

1. Light fixtures.
2. HVAC registers.
3. Fire protection equipment interfaces.
4. Special suppression system interfaces.

F. Qualification Data: For qualified Installer, Applicator, manufacturer, fabricator, professional engineer, testing agency, and factory-authorized service representative.

G. Source quality-control reports.

H. Field quality-control reports.

I. Operation and Maintenance Data: For all fire alarm equipment, to include in operation and maintenance manuals.

J. Software and Firmware Operational Documentation:

1. Software operating and upgrade manuals.
2. Program Software Backup: On magnetic media or compact disk, complete with data files.
3. Device address list.
4. Printout of software application and graphic screens.

K. Final Device Locations: Final locations of all manual pull stations, smoke detectors, heat detectors, and duct smoke detectors shall be submitted for confirmation of compliance with IBC 2018 (as adopted by the Puerto Rico Building Code) and NFPA 101, and coordinated with the Owner's Representative prior to rough-in, per Article 1.05.Q above.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualifications: The publications listed below form a part of this publication to the extent referenced. The publications are referenced in the text by the basic designation only. The latest version of each listed publication shall be used as a guide unless the authority having jurisdiction has adopted an earlier version.

1. FM Global (Factory Mutual (FM)): FM Approval Guide.
2. National Fire Protection Association (NFPA):
    a. NFPA 70 National Electrical Code.
    b. NFPA 72 National Fire Alarm and Signaling Code.
    c. NFPA 90A Standard for the Installation of Air Conditioning and Ventilating Systems.
    d. NFPA 101 Life Safety Code.
    e. NFPA 720 Standard for the Installation of Carbon Monoxide (CO) Detection and Warning Equipment.
    f. NFPA 92 Standard for Smoke Control Systems (fan shutdown, damper actuation, and stair pressurization coordination).
    g. NFPA 13 Standard for the Installation of Sprinkler Systems (waterflow and tamper switch interface coordination).
3. Underwriters' Laboratories, Inc. (UL) equipment standards, latest edition:
    a. UL Fire Protection Equipment Directory.
    b. UL Electrical Construction Materials Directory.
    c. UL 38 -- Manually Actuated Signaling Boxes for Use with Fire Protection Signaling Systems.
    d. UL 228 -- Door Holding Devices.
    e. UL 268 -- Smoke Detectors for Fire Protective Signaling Systems.

f. UL 268A -- Smoke Detectors for Duct Application.
g. UL 464 -- Audible Signal Appliances.
h. UL 497A -- Secondary Protectors for Communications Circuits.
i. UL 521 -- Heat Detectors for Fire Protective Signaling Systems.
j. UL 864 -- Control Units for Fire Protective Signaling Systems.
k. UL 1283 -- Electromagnetic Interference Filters.
l. UL 1449 -- Transient Voltage Surge Suppressors.
m. UL 1971 -- Signaling Devices for the Hearing Impaired.
n. UL 2075 -- Gas and Vapor Detectors and Sensors.
o. UL 2572 -- Mass Notification Systems.

4. International Code Council:
   a. International Building Code.
   b. International Fire Code.
   c. Puerto Rico Building Code (PRBC) -- incorporates the above ICC codes by reference, with 2018-edition Puerto Rico-specific amendments (or the latest edition adopted in Puerto Rico at time of permit application), which shall govern over the base ICC editions where more stringent.
5. State and Local Building Codes as adopted and/or amended by the Authority Having Jurisdiction; 2010 ADA Standards for Accessible Design, and/or Puerto Rico local equivalency standards as adopted by the Authority Having Jurisdiction.
6. Puerto Rico Department of Health (PRDOH) -- Hospital Licensure Regulations, including Regulation 9184; Cuerpo de Bomberos de Puerto Rico (Puerto Rico Fire Department), as the local Authority Having Jurisdiction for fire alarm system approval, permitting, and final acceptance.
7. The manufacturer shall have a minimum of 15 years production experience in the manufacture and design of high sensitivity air sampling-type smoke detection systems.
8. ISO 9001 (successor to ISO 9002).

B. Supplier Qualifications:
   1. The manufacturer of the supplied products must utilize multi-channel product distribution on a national basis to be considered for this bid. The manufacturer must have factory branches as well as independent distributors to allow the end user with the ability to utilize factory trained and authorized competitive service providers after system installation and commissioning.
   2. Provide the services of a factory trained and certified representative or technician, experienced in the installation and operation of the type of system

provided. The representative shall be licensed in the Commonwealth of Puerto Rico if required by law.

3. The technician shall supervise installation, software documentation, adjustment, preliminary testing, final testing and certification of the system. The technician shall provide the required instruction to the owner's personnel in the system operation and maintenance.
4. The suppliers shall furnish evidence they have an experienced service organization, which carries a stock of spare and repair parts for the system being furnished.
5. The equipment supplier shall be authorized and trained by the manufacturer to calculate, design, install, test, and maintain the air sampling system and shall be able to produce a certificate stating such upon request.

C. Installer Qualifications:

1. Before commencing work, submit data showing that the manufacturer has successfully installed fire alarm systems of the same scope, type and design as specified.
2. The contractor shall submit copies of all required licenses and bonds as required by the Authority Having Jurisdiction in Puerto Rico.
3. The manufacturer representative shall employ on staff a minimum of one NICET certified designer, technician and/or a professional engineer, licensed in the Commonwealth of Puerto Rico and a CIAPR member, as required by the AHJ.
4. The contractor shall be qualified by UL for certifying fire alarm systems.
5. Contractors unable to comply with the provisions of Qualification of Installers shall present proof of engaging the services of a subcontractor qualified to furnish the required services.

D. Testing Agency Qualifications: Qualified for testing indicated.

E. Source Limitations for fire alarm equipment: Obtain fire alarm equipment from single source.

F. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 50 or less.
3. Combustion Characteristics: ASTM E 136.

G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

H. Pre-installation Conference: Conduct conference at Project site.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to project site in original, unopened packages with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, and shelf life if applicable.

B. Store materials inside, under cover, above ground, and kept dry and protected from physical damage until ready for use. Remove from site and discard wet or damaged materials.

1.09 PROJECT CONDITIONS

A. Installed products or materials shall be free from any damage including, but not limited to, physical insult, dirt and debris, moisture, and mold damage.

B. Environmental Limitations: Do not deliver or install products or materials until spaces are enclosed and weather-tight, wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire alarm equipment that fail(s) in materials or workmanship within specified warranty period.

1. Warranty Period: 1 year from date of Substantial Completion.

1.11 SERVICE AGREEMENT

A. Technical Support: Beginning with Substantial Completion, provide software support for 1 year.

B. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software shall include operating system. Upgrade shall include new or revised licenses for use of software.

1. Provide 30 days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements.

1. Siemens, or other owner-approved equal.

2.02 CONTROL PANEL

A. The fire alarm control panel shall be microprocessor based using multiple microprocessors throughout the system providing rapid processing of smoke detector and other initiation device information to control system output functions.

B. There shall be a watchdog circuit, which shall verify the system processors and the software program. Problems with either the processors or the system program shall cause the panel to activate a trouble signal, and reset the panel.

C. The system modules shall communicate with an RS-485 network communications protocol. All module wiring shall be to terminal blocks.

D. The Cerberus® PRO Fire Safety FC and FV922 system shall be capable of the following configurations. Both configurations are permitted on the same network.

1. The system shall support up to 252 addressable devices, which may be divided in any ratio on one, two, three, or four separate, isolated Class B circuits.
2. The system shall support two loops of 252 addressable devices, each of which may be divided in any ratio on one, two, three, or four separate, isolated Class B circuits.

E. The Cerberus® PRO Fire Safety FC and FV924 system shall be capable of supporting the following configurations. Both configurations are permitted on the same network.

1. The system shall support up to 504 addressable devices, which includes a second SLC configuration and each may be divided in any ratio on one, two, three, or four separate, isolated Class B circuits.
2. The system shall support 504 addressable devices, each of which includes a second SLC configuration and each may be divided in any ratio on one, or two separate, isolated Class A circuits.

F. The system shall be capable of supporting unshielded wiring applications.

G. The system shall be compliant with the requirements of NFPA 720 as a Carbon Monoxide Detection Control Unit and shall meet the UL 2075 listing requirements. All inputs from CO sensors shall be indicated visually and audibly at the control panel. CO sensor inputs shall be distinct and descriptively annunciated from other signals.

H. System Components:

1. The System Periphery board shall be capable of 252 intelligent devices distributed between one, two, three, or four Class B SLC circuits. Any trouble on one circuit shall not affect the other circuit. This module controls the signaling from the initiation devices reporting alarms and troubles to the control panel. This module shall also provide the signaling to the field devices for controlling the output of specific initiation devices. The on-board microprocessor provides the periphery board with the ability to function even if the main microprocessor fails. LEDs on the board shall provide annunciation

for the following: Power, Gnd. Fault, Alarm, Trouble. This board is integral to the system. The board shall be model number FCI2016-U1.

2. The system periphery board shall be capable of supporting two system drivers of 252 intelligent devices distributed between one, two, three, or four Class B SLC circuits for each driver, for a total panel capacity of 504 addressable devices. Any trouble on one circuit shall not affect the other circuit. This module controls the signaling from the initiation devices reporting alarms and troubles to the control panel. This module shall also provide the signaling to the field devices for controlling the output of specific initiation devices. The on-board microprocessor provides the periphery board with the ability to function even if the main microprocessor fails. LEDs on the board shall provide annunciation for the following: Power, Gnd. Fault, Alarm, and Trouble. This board is integral to the system. The board shall be model number FCI2017-U1.
3. The voice-system card cage (Model VCA2002-A1) supports the mounting and field wiring for cards used on a Model FV922/FV924 FACP.
4. The voice system CPU card (Model VCC2001-A1) is a central-processing unit (CPU) card that controls and monitors all modules and functions for Cerberus® PRO Fire Safety intelligent voice-communication FACPs.
5. The In/Out Voice System Card (Model VCC2002-A1) is the Input/Output card for the Cerberus® PRO Fire Safety intelligent voice-communication system.
6. The Voice Amplifier (25/70V) Card, used in 'real time' emergency communication, the 50W amplifier card (Model VCI2001-U1), provides AC power between a Model FV922/FV924 panel and a site's speaker system. Up to four (4) Model VCI2001 amplifiers are supported in a 3-to-1 backup, or 1-to-1 backup schematic on a single Cerberus® PRO Fire Safety intelligent voice-communication system, configured as one (1), two (2) or three (3) main amplifiers, and one (1) or two (2) optional backup amplifiers.
7. The MoNET connection module is used for communication between a Model FCM20-series operating unit and a Voice CPU card (Model VCC2001-A1) in a given Cerberus® PRO Fire Safety intelligent voice communication panel. MoNET (Model FCA2031-A1) can additionally provide system integration between an operating unit and a Modular Ethernet Switch (Model FN2012-A1) in each Cerberus® PRO Fire Safety, non-voice FACP.
8. The Microphone Option Module (Model VTO2004-U3) is used to provide live, non-pre-recorded voice communication on a Cerberus® PRO Fire Safety intelligent voice communication panel. Model VTO2004-U3 can serve either as a main microphone installed in the main-system enclosure, or as a remote microphone in a remote enclosure. Up to two (2) Model VTO2004-U3 microphones are supported for each Model FV922/FV924 FACP.
9. The Switch Option Module (Model VTO2001-U3) is a series of front-end, illuminated and programmable pushbuttons primarily mounted in the middle

inner door of each Cerberus® PRO Fire Safety intelligent voice-communication FACP. Each Model VTO2001-U3 module has 24 group-switches, totaling 48 LEDs, and consists of up to 96 multi-color LED-status indicators. Each LED switch-group is assigned specific functionality during the configuration process. A pushbutton for each affected zone will illuminate to acknowledge the command has been received at the Voice System CPU Card, Model VCC2001-A1. Additionally, if no microphone is used, up to eight (8) Model VTO2001-U3 switch-option modules can be used in a given three-height-unit (3HU) enclosure (Model FHD2007-U3/R3).

10. As an option, the Model EBA2004-A1 Booster Amplifier is a main board that allows for expansion of speaker zones for additional power to a Cerberus® PRO Fire Safety intelligent voice communication system.
11. The Signal Line Circuits (SLC) shall be tested for opens, shorts and communications with all addressable devices installed before connection to the control panel. Systems without this capability shall have a test panel installed for initial testing to eliminate any possible damage, short term or long term, to the control panel. After initial testing, replace the test panel and proceed with complete testing.
12. The standard Operator Interface shall have the ability to view events, acknowledge, silence, and reset the system and any networked Cerberus® PRO Fire Safety control panels, when configured as a global PMI. The standard operator interface can acknowledge, silence, and reset all panels via Global PMI.
13. The LED Operator Interface shall have the ability to view events, acknowledge, silence, and reset the system and any networked Cerberus® PRO Fire Safety control panels, when configured as a global PMI. Additionally, the operator interface provides twelve multicolored configurable LEDs for annunciating system status.
14. The System Periphery Board shall contain 2 Class B NAC circuits rated at 3 amps each with power-limited outputs. The zones shall be isolated and independently supervised. There shall be at least 6 unique codes/signals for each circuit based on system logic. These signals shall be Temporal Code 3 (Evacuation), Steady, Temporal Code 4 (for CO alarms), March Time 120ppm, March Time 60ppm, and March Time 30ppm. The card shall have the following LEDs to provide troubleshooting and annunciation: Power, Gnd. Fault, Zone Activation or Trouble. This functionality shall be integral to the system. The card shall be model number FCI2016-U1/FCI2017-U1.
15. The control panel shall be equipped with four Form C relays for alarm, trouble, supervisory, and programmable output. The system shall provide the mounting of all system cards, field wiring, and panel inter-card wiring. All power-limited field wiring shall be separated from all non-power-limited internal wiring. The card shall be model number FCI2016-U1/FCI2017-U1.

I. System response time from alarm to output shall comply with UL requirements.

J. All system cards and modules shall have Flash memory for downloading the latest module firmware.

K. Passwords:

1. Technician Level Password -- There shall be an 8-character password that a user must enter into the control panel in order to perform such maintenance- and control-related functions at the panel as:
    a. Arming and disarming devices.
    b. Activating, deactivating or modifying detector ASD and sensitivity settings.
    c. Activating and deactivating the History Log function, and deleting obsolete entries.
    d. Changing the system time and date.
2. Maintenance Level Password -- There shall be an 8-character password that a user must enter into the control panel in order to access the panel's reporting functions and walktest functions.
3. Acknowledge Silenceable Reset Access -- There shall be a key required to open a locked cabinet that a system user must use in order to acknowledge events, turn silenceable audibles and visuals on and off, and perform panel resets.

L. Software Modifications: The system structure and software shall place no limit on the type or extent of software modifications on-site. Modification of software shall not require power-down of the system or loss of system fire protection while modifications are being made. Systems that require the use of external programmers or change of EPROMs are not acceptable.

M. Logic: The fire alarm system shall support generic functions that deal with binary states (True/False, high/low), and produce desired outputs from one or more binary inputs (for example, alarm outputs from detector or manual station inputs). AND, OR, NOT, and Delay Timer are examples of generic functions. Generic functions can be used as inputs to other functions. The system shall support 500 logic functions.

N. History: The system shall store 10,000 events in history. Trouble warnings will occur when the History buffer is full.

O. Reports:

1. The system shall have the ability to provide configuration, status, queue and history reports.
2. Configuration reports shall provide the following information:
    a. Custom Messages.
    b. Database Information.

c. Entity Type.
d. Zone usage.
e. Device Category.
f. Firmware revision.

3. Status reports shall provide the following information:
   a. Disarmed cards and devices.
   b. ASD settings.
   c. Sensitivity in %/foot.
   d. Alarm threshold in %/foot.
   e. Temperature in degrees F.
   f. Walktest.
4. Queue reports shall provide the following information:
   a. Alarm events with custom message and event time.
   b. Mass notification events with custom message and event time.
   c. Gas alarm events with custom message and event time.
   d. Supervisory events with custom message and event time.
   e. Trouble events with custom message and event time.
   f. Status events with custom message and event time.
   g. Information events.
5. History reports shall provide Address, History Type, Description, Time & Date, and Custom Message. The following event types shall be reported:
   a. Alarm events.
   b. Gas alarm events.
   c. Supervisory events.
   d. Status changes.
   e. Alarm verification.
   f. Output activation from logic.
   g. System reset.
   h. Event acknowledgements.
   i. Block acknowledgements.
   j. Audible silence system flag changes.
   k. Sensitivity changes.
   l. Arm/disarm commands.

m. Arm/disarm by logic.

n. Manual output overrides.

o. Output overrides by logic.

p. Time changes.

q. Menu logins.

r. ASD changes.

s. Walktest.

t. Device input to logic activations/deactivations.

P. Location and Power: The FACP shall be located in a dedicated, secured fire alarm room or closet adjacent to the main entrance or the security/nursing station. Primary power shall be furnished from the Essential Electrical System Life Safety Branch per NFPA 99 and NEC Articles 700 and 517, with a minimum 24-hour secondary standby battery capacity per NFPA 72, sized per Article 1.06.B of this Section.

2.03 POWER SUPPLY

A. The system Power Supply shall be a 170 Watt, 6.5-amp unit that provides 24VDC power for system operation. The power supply shall be filtered and regulated. The power supply provides power for all system operation, including signaling line circuits, notification appliance circuits, auxiliary power, battery charger, and all optional modules. The power supply shall be rated for 120/240VAC 50/60Hz. The module shall be model number FP2011-U1.

B. The system Power Supply FP2012-U1 shall be a 300 Watt, 11.5-amp unit that provides 24VDC power for system operation. The power supply provides power for all system operation, including signaling line circuits, notification appliance circuits, auxiliary power, battery charger, and all optional modules. The power supply shall be rated for 120/240VAC 50/60Hz. The module shall be model number FP2012-U1.

C. For applications requiring greater than 300W of power, the Model FP2013-U1 power supply can optionally power a Model FV922 or FV924 system. Model FP2013-U1 consists of two (2) power supply units and one (1) interconnection cable, in order to balance the power from Model FP2013-U1. Consequently, this power-supply configuration can provide up to 600W at 24VDC.

D. The battery charger shall be able to charge system batteries up to 100AH. Battery charging shall be microprocessor controlled and programmed to select battery sizes.

E. Transfer from AC to battery power shall be instantaneous when AC voltage drops to a point where it is not sufficient for normal operation.

2.04 SYSTEM ENCLOSURE

A. Provide the enclosure as specified. Provide the color to comply with local AHJ requirements.

B. Provide three-height-unit backbox as part of the Cerberus® PRO Fire Safety intelligent voice-communication system hardware for use with 3HU system enclosures. Specifically, each backbox is used to fasten with a 3HU outer door.

C. Provide black cabinet enclosure.

2.05 REMOTE ANNUNCIATOR

A. LED annunciator panel: Provide Siemens model FT2008 (16-zone), or FT2009 (32-zone) LED annunciator as indicated on the drawings. Each LED annunciator shall provide the LED indicators for each zone including alarm, supervisory, and trouble per zone. System status LEDs shall also be provided indicating Reset, Audibles On, Silenced, Acknowledge, Ground Fault, System Fault, and Power. Key-switch lock protected buttons shall provide system control for Reset, Silence/Un-silence, Acknowledge, and Lamp Test. Both versions of the LED annunciator shall be available with red and black housings.

B. Minimum Locations: Provide not less than two (2) remote LED annunciator panels per Article 2.05.A above: one located at the Disaster Control and Monitoring Operations Center (Level 9) and one located at the main security desk (Ground Level), consistent with the project's Basis of Design.

2.06 DIGITAL COMMUNICATOR

A. The Multi-Point Digital Alarm Communicator FCA2015-U1 shall be UL864 listed to provide point identification of alarm, supervisory, security and trouble events to a Central or Remote Receiving Station. The DACT shall support the following:

1. Ademco Contact ID or SIA protocol.
2. Ademco Contact ID selection shall provide the ability to transmit events for up to 999 individual zones.
3. SIA selection shall provide the ability to transmit events for up to 10,000 individual points.
4. Programming of accounts and phone numbers.
5. Cellular connectivity.
6. Line fault monitoring.
7. Automatic 24-hour test.
8. The DACT supports configurable alarm, alarm restoral, trouble, trouble restoral, supervisory, supervisory restoral, and reset events.
9. The DACT supports Ademco Contact ID alarm event codes for general alarm, smoke detector alarm, waterflow alarm, duct alarm, and manual alarm events.
10. Optionally, the DACT can be programmed to report events by event queue only.
11. In addition to the telephone line and cellular paths, the DACT shall support an IP (Internet Protocol) network communication pathway, so that the system

provides not less than two (2) independent primary and secondary communication paths to a UL-listed central station, monitored 24 hours a day, 7 days a week, per NFPA 72.

2.07 INTELLIGENT INITIATING DEVICES

A. General:

1. All initiation devices shall be insensitive to initiating loop polarity. Specifically, the devices shall be insensitive to plus/minus voltage connections. Except when built-in isolation with ISOtechnology™ is used, polarity sensitivity is required for the devices configured in isolation mode.

B. Smoke Detectors -- Advanced Addressable OOH-Series:

1. The detectors shall be guaranteed in writing not to false alarm when configured by the factory trained certified technician. The detectors must provide at least 19 different environmental algorithms that allow the detector to provide superior false alarm immunity without the need for additional alarm verification delays.
2. The detectors shall have a tri-color LED to streamline system maintenance/inspection by plainly indicating detector status as follows: green for normal operation, amber for maintenance required, red for alarm.
3. Detectors shall utilize state-of-the-art forward/backward light scattering technology, with improved detection for smoldering and flaming fire signatures. The detectors shall replace the need for ionization detectors due to improved response characteristics to flaming fires.
4. When required, the detectors shall incorporate an addressable Carbon Monoxide (CO) sensor. The CO sensor of the OOHC941 has a 10-year lifetime from the date of installation. The CO sensor shall be selectable as an input to the multi-criteria fire detector algorithm and as an independent life-safety CO gas detector (in compliance with NFPA 720).
5. Detectors shall provide pre-alarm signal at 0.2% obs/ft. and a full alarm at 1.0% obs/ft. to meet the performance requirements of NFPA 76, Fire Protection of Telecommunications Facilities, as a Very Early Warning Fire Detector (VEWFD).
6. The forward/backward light scattering technology shall provide improved immunity to spurious activation (deceptive phenomena). The detectors shall have a "No False Alarm Guarantee".
7. The detectors shall be RoHS-compliant: they shall meet standards for Reduction of Hazardous Substances (RoHS) by reduction in lead content and other restricted substances.
8. The multi-criteria detector with CO input shall be UL 2075 compliant as a gas and vapor detector.

9. The multi-criteria fire detectors shall be an intelligent digital photoelectric detector with a programmable heat detector. Detectors shall be listed for use as open area protective coverage, in-duct installation and sampling assembly installation and shall be insensitive to air velocity changes. The detectors' communications shall allow the detectors to provide alarm input to the system and alarm output from the system within four (4) seconds. So as to minimize the effort required by the installing and maintenance technician to appropriately configure the detector to ensure optimal system design, the detectors shall be programmable as application specific. Application settings shall be selected in software for a minimum of 19 environmental fire profiles unique to the devices' installed location.
10. The detectors shall be designed to eliminate the possibility of false indications caused by dust, moisture, RFI/EMI, chemical fumes and air movement while factoring in conditions of ambient temperature rise, obscuration rate changes and hot/cold smoke phenomenon into the alarm decision to give the earliest possible real alarm condition report.
11. The detectors shall be capable of being field programmed for simultaneous and/or independent functionality, depending on the application. For example, the detectors shall be capable of utilizing the optical, heat, and/or CO sensors together for enhanced fire detection (multi-criteria) and simultaneously provide independent outputs for CO gas life-safety, smoke, and heat detection. Any combination of the sensors is possible.
12. The detectors shall be UL listed for operation in a 95% relative humidity (RH) environment.
13. The detectors shall be designed to eliminate calibration errors associated with field cleaning of the chamber.
14. The detectors shall support the use of a relay, or LED remote indicator without requiring an additional software address. Low profile, white case shall not exceed 2.5 inches of extension below the finish ceiling.
15. The detectors shall support the use of an ambient temperature warning signal at the panel. This temperature shall be user-configurable for the set temperature of the warning and the event type generated by the warning. This event can be used to trigger system logic.
16. The multi-criteria detector with CO sensor shall support the use of an ambient Carbon Monoxide (CO) warning signal at the panel. This ambient CO level shall be user-configurable in parts per million (PPM) for the set threshold of the warning and event type generated by the warning. This event can be used to trigger system logic.
17. CO sensor shall have a 10-year lifetime.
18. For the detectors where required, there shall be available a locking kit and detector guard to prevent unauthorized detector removal.

19. UL Listed as "direct in-duct" mounting.
20. Detectors shall include optional built-in short circuit isolation, ISOtechnology.
21. Available models:
    a. OOH941. Multi-Criteria incorporating 2 Optical sensors and 2 Thermal sensors with an operating temperature range of 32°F to 120°F (0°C to 49°C). Nineteen selectable profiles. Polarity insensitive installation wiring. Three-color LED.
    b. OOHC941. Multi-Criteria incorporating 2 Optical sensors, 2 Thermal sensors, and Carbon Monoxide sensing technologies with an operating temperature range of 32°F to 120°F (0°C to 49°C). Twenty-five selectable profiles. Polarity insensitive installation wiring. Three-color LED. CO sensor may be programmed as part of the multi-criteria algorithm, or may be an independent CO detector.

C. Smoke Detectors -- Standard Addressable Detectors:

1. The smoke detectors must provide at least 3 environmental parameter sets to assist in device sensitivity configuration.
2. The detectors shall have a tri-color LED to streamline system maintenance/inspection by plainly indicating detector status as follows: green for normal operation, amber for maintenance required, red for alarm.
3. The detector shall be RoHS-compliant: it shall meet standards for Reduction of Hazardous Substances (RoHS) by reduction in lead content and other restricted substances.
4. The detectors shall be UL listed for operation in a 95% relative humidity (RH) environment.
5. The detectors shall be designed to eliminate calibration errors associated with field cleaning of the chamber.
6. The detectors shall support the use of a relay, or LED remote indicator without requiring an additional software address. Low profile, white case shall not exceed 2.5 inches of extension below the finish ceiling.
7. For the detectors where required, there shall be available a locking kit and detector guard to prevent unauthorized detector removal.
8. Detectors shall include optional built-in short circuit isolation, ISOtechnology.
9. Available models:
    a. OH921. Multi-Criteria incorporating 1 Optical sensor and 1 Thermal sensor with an operating temperature range of 32°F to 100°F (0°C to 38°C). Available in four parameter sets. Polarity insensitive installation wiring. Three-color LED.

b. OP921. Photoelectric smoke detector with an operating temperature range of 32°F to 120°F (0°C to 49°C). Available in three parameter sets. Polarity insensitive installation wiring. Three-color LED.

D. Heat Detectors -- Addressable:

1. Thermal Detectors shall be rated at 135°F (57°C) fixed temperature and 15°F (8.3°C) degrees per minute rate of rise. Detectors shall be constructed to compensate for the thermal lag inherent in conventional type detectors due to the thermal mass, and alarm at the set point of 135°F (57°C). The choice of alarm reporting as a fixed temperature detector or a combination of fixed and rate of rise shall be made in system software and be changeable at any time without the necessity of hardware replacement.
2. The detectors furnished shall have a listed spacing for coverage up to 2,500 square feet and shall be installed according to the requirements of NFPA 72 for open area coverage. The thermal detector shall be model number HI921.
3. Detectors shall include optional built-in short circuit isolation, ISOtechnology.
4. Model HI921 heat detector shall have the following temperature settings:
    a. Fixed temperature at 135°F (57°C), 145°F (63°C), 155°F (68°C), 165°F (74°C), 174°F (79°C).
    b. Rate of Rise at 15°F/min (8.3°C) at 135°F (57°C).
    c. Rate of Rise at 15°F/min (8.3°C) at 174°F (79°C).
    d. Low temperature warning at 40°F (4.4°C).

E. Duct Smoke Detectors -- Addressable:

1. For duct detector applications, the smoke detector shall be an intelligent digital photoelectric detector. Detectors shall be listed for use as open area protective coverage, in-duct installation and sampling assembly installation and shall be insensitive to air velocity changes.
2. The detector communications shall allow the detector to provide alarm input to the system and alarm output from the system within four (4) seconds. The detector shall be mounted in a duct detector housing listed for that purpose. The duct detector shall support the use of a remote test switch, relay or LED remote indicator. The duct detector shall be supplied with the appropriate sampling tubes to fit the installation.
3. Where duct detectors are exposed to the weather a weatherproof enclosure shall be available. A NEMA-3R and NEMA-4X option shall be available. The duct housing cover shall include a test port for functional testing of the detector without cover removal. The duct housing shall include a cover removal switch capable of indicating cover removal status to the fire alarm control panel.
4. The intelligent duct detector shall have a model number from the FDBZ-Series. Where required there shall be available a duct housing with an on-board relay.

Also, where required, there shall be a standalone housing available with its own power supply and test/reset switch that does not require connection to a fire alarm control panel. It shall be model FBZ492-PR.

5. Duct smoke detector housing shall allow use in duct systems with air velocity ranging from 100 to 4,000 ft/min (0.51 to 20 m/s), within temperature ranges of 32°F to 120°F (0°C to 49°C), and with relative humidity ranging from 0 to 95%.
6. Detectors shall include optional built-in short circuit isolation, ISOtechnology.
7. Duct Housings and Accessories:
    a. FDBZ492-Global Air Duct Housing for Conventional and Addressable Detectors.
    b. FDBZ492-HR Global Air Duct Housing for Addressable P2 Detectors with Relay Application.
    c. FDBZ492-R Global Air Duct Housing for Conventional Detectors with Relay Application.
    d. FDBZ492-RP Global Air Duct Housing for Conventional Detectors with Relay Application and Built-in Power Source.
    e. FDBZ-WP Weather-Proof housing to accommodate all versions of Global Air Duct Housings.
    f. FDBZ-RTL Remote Test Lamp for Conventional Detectors.
8. Duct smoke detectors shall be provided on all HVAC supply air ducts with a capacity of 2,000 CFM or greater, per NFPA 90A, per the project's Basis of Design. Exact quantities and locations shall be coordinated with the Mechanical Contractor and indicated on the drawings, per Article 1.05.Q above.

F. Detector Bases -- Addressable:

1. Detector bases shall be low profile twist lock type with screw clamp terminals and self-wiping contacts. Bases shall be installed on an industry standard, 4-inch square or octagonal electrical outlet box.
2. Multi-Criteria Fire Detector Model OOHC941 shall be listed as providing CO detection in duct application.
3. The model number for the standard base shall be DB-11 -- 6-inch version.
4. The model number for the standard base shall be DB-11E -- 4-inch version.

G. Manual Pull Stations -- Addressable:

1. Provide addressable manual stations where shown on the drawings, to be flush or surface mounted as required. Manual stations shall contain the intelligence for reporting address, identity, alarm and trouble to the fire alarm control panel. The manual station communications shall allow the station to provide alarm

input to the system and alarm output from the system within less than four (4) seconds.

2. The manual station shall be equipped with terminal strip and pressure style screw terminals for the connection of field wiring. Surface mounted stations where indicated on the drawings shall be mounted using a manufacturer's prescribed matching red enamel outlet box.
3. The double action pull station shall be model number XMS-D. It shall provide built-in isolation capability with ISOtechnology™. The operator display shall indicate which specific device has detected a wiring fault on the data communication line.
4. Where required, there shall also be available pull stations with break glass, capable of explosion proof installation, capable of weatherproof installation, reset key operation, and metal housings.
5. Pull stations shall include optional built-in short circuit isolation, ISOtechnology.

H. Addressable Interface Devices:

1. Addressable Interface Devices shall be provided to monitor inputs (contacts) and control outputs (relays) to and from the fire alarm system and associated devices. These interface devices shall be able to monitor single or dual contacts. An address will be provided for each contact. Where remote supervised relay is required the interface shall be equipped with a SPDT relay rated for 4 amps resistive and 3.5 amps inductive. The addressable interface modules shall be model FDCIO Series, XTRI Series, ILED-X Series, TSM-1X or HCP series.
2. Where needed, a Conventional Zone Module shall connect to the Signal Line Circuit, which will allow the use of conventional initiation devices. This module shall have the ability to support up to 15 conventional smoke detectors and an unlimited number of contact devices. The module shall be model HZM.
3. Model XTRI Series shall provide input and outputs as needed by specific model number. The device shall also provide built-in isolation capability with ISOtechnology™. The operator display shall indicate which specific device has detected a loop short on the data communication line.
4. Model FDCIO422 device shall provide built-in isolation capability with ISOtechnology™. The addressable input/output module shall be insensitive to polarity except when built-in isolation ISOtechnology™ is used, in which case polarity sensitivity is required for the devices configured in isolation mode. Additionally, the FDCIO422 shall have the capability for up to 4 separate inputs (Class B) or 2 separate Class A inputs and 4 separate outputs (Class B).

5. Model ILED-X addressable remote LED alarm indicators shall provide a visual notification for remote or concealed initiating devices. The device shall also provide built-in isolation capability with ISOtechnology™.
6. Model TSM-1X addressable remote test switch shall provide an addressable normally open (N.O.) momentary switch with a tricolor light-emitting diode (LED) indicator. The LED indicator shall provide visual notification of the status of the tested device. The device shall also provide built-in isolation capability with ISOtechnology™.
7. Model HCP addressable control point shall provide remote, independent control of a single device.
8. Monitoring applications include (but are not limited to):
    a. Water-flow switches.
    b. Tamper switches.
    c. PIV switches.
    d. Damper position -- all 3 states on one input.
    e. Conventional devices (e.g., smoke detectors, beam detectors, flame detectors, etc.).
    f. Duct detectors.
9. Control applications include (but are not limited to):
    a. Notification appliance circuits (NAC).
    b. Telephone zones.
    c. Speaker zones.
    d. Damper position.
    e. Solenoids for sprinklers.
10. Where applicable, all interface devices shall meet NFPA 72 Class X requirements for survivability.
11. Waterflow and tamper (PIV) switch monitoring points shall be coordinated with the automatic sprinkler (fire protection) system per NFPA 13, and integrated per NFPA 72, per Article 1.05.T above.

2.08 DEVICE PROGRAMMING UNIT

A. Device Programming Unit: The programming tool shall program the intelligent devices with addresses. The unit shall test the device to respond to its address. Dipswitches and rotary switches shall not be acceptable. The programmer shall be model DPU with carrying case.

2.09 CONVENTIONAL NOTIFICATION APPLIANCES (LED BASED)

A. ACEND Series SC-SP Speakers and SC-SS Speaker/Strobes:

1. The high fidelity speaker appliances shall be Siemens SC-SP Speaker and SC-SS Speaker/Strobes.
2. The speakers shall be UL Listed under UL 1480 for Fire Protective Service.
3. Speakers equipped with strobes shall be listed under UL 1971 for Emergency Devices for the Hearing-Impaired.
4. In addition, the speaker/strobes shall meet the requirements of FCC Part 15.
5. All speakers shall be designed for a field selectable input of either 25 or 70 VRMS, with selectable power taps from 1/8 watt to 2 watts.
6. All models shall have listed sound output of up to 87dB at 10ft (3.05m) and a listed frequency response of 300 to 8000Hz.
7. All inputs shall employ terminals that accept #12 to #18 AWG wire sizes.
8. The series SC-SS Speaker/Strobe appliances shall produce a flash rate of one (1) flash per second over the 16-33 VDC Special Application Voltage Range and shall incorporate a Light Emitting Diode (LED) as the light source for both wall and ceiling mount applications.
9. The LED strobe flash duration shall be 20ms.
10. Where Multi-Candela appliances are specified, the strobe intensity shall have field selectable settings at 15, 30, 75, 110, 135, and 185 candela for both wall and ceiling mount applications.
11. The selector switch for selecting the candela shall be tamper resistant.
12. Appliances with candela settings shall show the candela selection in a visible location at all times when installed.
13. The series SC-SP and SC-SS shall be designed for indoor surface or flush mounting.
14. Mounting options shall include standard 4-inch square, 2-1/8-inch deep backboxes.
15. The speaker and speaker/strobes shall incorporate a speaker mounting and included jumper for pre-test of wiring prior to installation of the appliance.
16. All notification appliances shall be backwards compatible with at least two generations of Siemens' legacy notification appliances.
17. The SC-SP and SC-SS models shall have a low profile.
18. The speaker shall be listed to the low frequency requirements of UL 464 (520Hz) to meet NFPA's 520Hz tone requirements for sleeping areas.

19. Synchronization is possible when using the Cerberus PRO® Compact panels including FC922, FC924, FV922, FV924, or PAD-3, PAD-4, or PAD-5 series power supply with built-in sync protocol.
20. The strobes shall not drift out of synchronization at any time during operation. If the sync protocol fails to operate, the strobe shall revert to a non-synchronized flash rate and still maintain (1) flash per second over its UL listed voltage range.
21. The appliance shall also be designed so that the audible signal may be silenced while maintaining strobe activation.
22. All appliances shall be able to utilize a locking screw that secures the appliance to the mounting plate and thus reduces risk of tampering.
23. The appliances shall be compatible with separately orderable and field installable Mass Notification Text Covers and Colored Lenses.

B. Notification appliances, including Strobes, Horns, Horn-Strobes, Speakers, Speaker-Strobes, Low Frequency Sounders, and Low-Frequency Sounder-Strobes shall be compatible with optional text covers/plates including:

1. ALERT.
2. AGENT.
3. BLANK (No Text).
4. House of Fire image (International symbol).
5. EMERGENCY.

C. Visual-Only Appliances: Where indicated on the drawings for Operating Rooms, Intensive Care Unit (ICU) rooms, and other clinically sensitive spaces where audible alarm signals may be clinically inappropriate, notification appliances shall be visual-only strobes (without an integral audible sounder or speaker), coordinated with the Owner, per Article 1.05.R above and the project's Basis of Design.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Perform work in accordance with the requirements of NFPA 70, NFPA 72 and NECA 1-2006, Standard of Good Workmanship in Electrical Contracting.

B. Fasten equipment to structural members of building or metal supports attached to structure, or to concrete surfaces.

C. In the event that limited energy cable installation is allowed, all cable runs shall be run at right angles to building walls, supported from structure at intervals not exceeding 3ft (1m) and, where installed in environmental air plenums, be rated for such use and tied/supported by components listed for environmental air plenum installation.

D. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Conceal raceway and cables except in unfinished spaces.

E. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

F. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

G. Provide primary power for each panel from the Essential Electrical System Life Safety Branch (per NFPA 99 and NEC Articles 700 and 517) as indicated on the Electrical Power Plans. Power shall be 120 VAC service, transformed through a two-winding, isolation type transformer and rectified to low voltage DC for operation of all circuits and devices.

H. Coordinate all fire/smoke damper actuation, air handling unit shutdown, and stair pressurization fan start points with the Mechanical Contractor and the Building Management System (BMS) integrator per NFPA 92; the fire alarm system shall serve as the control interface for these life-safety smoke control functions, with the BMS providing status monitoring only, per Article 1.05.S above.

3.03 BOXES, ENCLOSURES AND WIRING DEVICES

A. Boxes shall be installed plumb and firmly in position.

B. Extension rings with blank covers shall be installed on junction boxes where required.

C. Junction boxes served by concealed conduit shall be flush mounted.
